

Chess **Evolution**

Weekly Newsletter

Issue 1

2nd of March 2012

Editorial Preface

Chess Evolution Weekly Newsletter (CEWN) is here!

In the beginning of February, during my stay in Budapest, I had a few nice dinners with my “old” friend Balogh Csaba. In our talks about the Chess Evolution books, and what changes could be made in the future for their improvement, we came to the idea to create a “light version” product for a larger audience, aiming to help the chess development of the “chess lovers” of all levels.

This is how the idea of CEWN was born. Of course the road from an idea to a complete product was long, it required a lot of work and will require even more in the future as it has to be updated every week. But we are both very enthusiastic about CEWN and we truly believe it is going to be a great addition to any chess player’s daily fun! For that we promise our readers a full dedication, bringing you the most exciting read in your email every week. You can judge for yourself whether our efforts are worthy by yourselves after the first issue of CEWN J

To make it especially enjoyable for our readers, we decided to start with six different languages, as we believe that reading in the mother language is a lovely extra for every chess fan.

In our weekly newsletter we will try to be creative and not only present “dry” chess material, but interesting articles, making the reading experience enjoyable for all. Readers will be able to find four of the most interesting games from the past week, a rare game from a World Champion

combined with a nice puzzle section, plus endgame lectures and a surprise section that will change every week.

Enjoy!

The most important events of the Chess Week

1. German Bundesliga, rounds 11 to 15

My club Baden-Baden continues its domination in the German Bundesliga with 1 point lead ahead of Bremen. Next weekend, March 17th and 18th, will take place the clash between the two teams and we can expect a very exciting battle for the pole position. The surprising team of Eppingen, which has been sharing until the last round the 2nd place with Bremen, lost surprisingly to the team of Hamburg and is now without chances to reach the golden medals.

1. OSG Baden-Baden 20
2. Werder Bremen 19
3. SC Eppingen 17
4. SG Solingen 15
5. SF Katernberg 15
6. SG Trier 13
7. SV Wattenscheid 13
8. SV 1930 Hockenheim 11
9. SF Berlin 11
10. Mülheim Nord 10
11. Turm Emsdetten 8
12. SK König Tegel 7
13. Hamburger SK 6
14. SC Hansa Dortmund 5

15. USV TU Dresden 4
16. SC Remagen 2

2. Polish Championships 2012

A particularly exciting event with a dramatic finish came to an end. Mateusz Bartel and Bartłomiej Macieja shared the first place with the amazing score of 7 out of 9. In the tiebreak luck was on the side of Bartel, who makes with this result his hat-trick at the Polish Championship. Just a few weeks ago Mateusz managed to win the Aeroflot Open and qualified with it for the Super Tournament in Dortmund. An amazing year for the Polish GM!! For that we have dedicated a special featured game by the champion in this first edition of CEWN.

The clear 3rd place in the tournament was taken by Miton Kamil with 6,5 and 4th is Radosław Wojtaszek with 6 points.

- 1-2. GM Bartel Mateusz 2658 and GM Macieja Bartłomiej 2617 — 7.0
3. GM Miton Kamil 2623 — 6.5
4. GM Wojtaszek Radosław 2706 — 6.0

In the female section the first place was shared as well. Rajlich Iweta and Majdan-Gajewska Joanna finished with 6 points from 9, the 3rd place went to Zawadzka Jolanta with 5,5.

- 1-2. IM Rajlich Iweta 2428 and WGM Majdan-Gajewska Joanna 2387 — 6.0
3. WGM Zawadzka Jolanta 2358 — 5.5

- 4-7. WGM Jaracz Barbara 2281, WIM Worek Joanna 2234, WFM Kulon Klaudia 2238 and WGM Szczepkowska-Horowska Karina 2377 — 5.0
8. WFM Iwanow Anna 2180 — 3.5
- 9-10. Chrzęszcz Malvina 2074 and WIM Matras-Clement Agnieszka 2305 — 2.0

Arkadij Naiditsch

4 best games of the past week

(1) Naumann,Alexander (2546) – Rapport,Richard (2547) [E62]

Schachbundesliga 2011/2012 (11), 26.02.2012

[Balogh Csaba]

After checking numerous games, Arkadij and I agreed without any doubts, that the following game was the best of the week. The White player is a solid GM from Germany, Alexander Naumann, while Black is the 2nd youngest grandmaster in the World, Richard Rapport! He is currently the prodigy of Hungary, and is only 16 years old. In a very complicated and difficult middlegame, both players found the strongest moves and the game finished with a spectacular perpetual check. Let's get it on!

1.d4 ♘f6 **2.c4** g6 **3.♗f3** ♙g7 **4.g3** 0–0 **5.♙g2** d6 **6.0–0** ♘c6 **7.♘c3** The starting position of the King's Indian defence, 4.g3 system. Black has many different setups, from which, the main move is 7... a6, with the same idea as the text move, preparing for queenside action with b5.

7...♖b8 **8.h3** After preventing ♙g4, White wants to occupy the center with e4. [8.e4 ♙g4]

8...♙f5 A very rare move! According to my database, only 9 times it has been tried before. The idea is simply to stop e4. [The main move is 8...a6 9.e4 b5 with very long theory, and hundreds of games.]

9.d5 ♘a5 **10.♘d2** Logical reaction by White. He sends the knight to the edge of the board, where in general it is poorly placed, and at the same time, he wants to push e4

with tempo. **10...c5!** Black prepares for counterattack on the queenside with a6 and b5. He tries to give a role for his knight on a5.

11.e4 ♙d7 **12.♙c2** a6 **13.b3!** For White it is necessary to hold the c4 pawn. If Black could force him to take on b5, then he would achieve big advantage. However, if White manages to keep his structure, then the a5 knight will be out of the game forever.

13...b5 **14.♖b1** ♘h5 **15.♙b2** e5! After White successfully stabilized the queenside pawn structure, Black is forced to find another plan. Rapport finds an excellent way to do this, he organizes his play on the kingside.

16.♘e2 f5! **17.f4!**

The tension has grown to the maximum! All the pawns and pieces have prepared for the battle. So it is time for immediate action!

17...bxc4 **18.bxc4**

18... ♖xb2!! A fantastic intuitive exchange sacrifice by Rapport! He wants to clarify the situation and opens up the center for his bishops, in order to launch a mating attack. The value of the King's Indian bishop on g7 will be much higher than the rook on b2.

19. ♖xb2 exf4 20. gxf4 fxe4 21. ♘xe4 ♔h4!? Black could have reset the material equality, but he prefers to save his bishop for the attack! [21... ♗xb2 22. ♔xb2 would lead to more or less balanced position in both lines. 22... ♔e7 (22... ♘xc4 23. ♔c3 ♘b6 24. ♘xd6) 23. ♔c3 ∞]

22. ♖bb1 Naumann tries to save his exchange advantage for the future, but with this he gives an important tempo to his opponent. **22... ♗xh3 23. ♗xh3 ♔xh3** Only the a5 knight seems to be out of the game, but it has a very important role, to prevent White from playing ♖b3, bringing in this way an important defender around his king.

24. ♖f2! The only move! Tries to protect the king. **24... ♔e3!?** Very talented and resourceful idea. He had to foresee his 26th move and, and also the consequences of it.

25. ♔g2 White threatens to trap the queen with ♖f3, however, Rapport had this idea in mind.

25... ♗d4! [25... ♘xf4+? 26. ♘xf4 ♖xf4 27. ♖b8+ suddenly Black king would get into danger.]

26. ♖f3 Seems like, Black can resign, but...

26... ♘xc4!! Lightning from a clear sky! White cannot accept any of the hanging pieces because he would lose more material. However, he also comes up with a brilliant idea!

27. ♘xd6!! Naumann tries to lure the knight, if he manages then the queen could be taken. Meanwhile, he threatens to take on c4 with both pieces, since e4 is not hanging anymore. So, Black needs to act urgently! [27. ♔xc4? ♔xe4--+; 27. ♖xe3?? ♘xe3+++]]

27...♖xf4!! Amazing! Another sacrifice!! Let's count! From White's point of view, his rook and knight are hanging, while on the other side queen, rook, and knight are in the air.

28.♘xf4! White chooses to take the right piece!

28...♘xf4+ 29.♖xf4 ♕xf4 30.♘xc4 ♕g4+! And after a plenty of only moves by both sides, White ended up with a rook more, but Black can give perpetual check with the cooperation of his remaining pieces.

31.♔h2 [31.♔f1 White cannot escape this way 31...♕g1+ 32.♔e2 ♕f2+ 33.♔d1 ♕f1+ 34.♔d2 ♕f2+ 35.♔c1 (35.♔d3 ♕f5+=) 35...♕e1+ 36.♕d1 ♕c3+ 37.♕c2=]

31...♕h4+ 32.♔g2 ♕g4+ 33.♔h2 ♕h4+ 34.♔g2 ♕g4+

Draw! A very exciting game, where both players deserved to get the full point, but unfortunately it was not possible for any of the sides, they had to share it. My experience strangely shows that in games likes this, when all the pieces are hanging, there is very high percentage for draws. But in any case a fantastic game, truly deserving to win the title game of the month! **1/2**

(2) Lauber,Arnd (2464) – Baramidze,David (2591) [E50]

BL 2011/2012 (11), 26.02.2012

[Arkadij Naiditsch]

1.d4 We do not witness often a win for black in “Nimzo” in 24 moves! For this help from White is needed and of course a great play by Black. In the current game White problems are starting by being greedy with 9. dxe5 e 10. ♖xe5. On this Black reacts with the right idea, but a wrong concrete play giving White a chance for a great tactical blow 12. ♗xf7!!.. Instead White is choosing the wrong 12. ♗xd7 and getting very quickly under deadly attack. Let’s see details of how the game developed.

1...♗f6 2.c4 e6 3.♗c3 ♕b4 4.e3 More usual is the move order 4...0–0, and at 5. ♗f3 c5. In the current game it makes no difference, but in general it could...

4...c5 Back to the main lines, another option for White is

5.♗f3 [5.♗ge2 cxd4 6.exd4 0–0 7.a3 ♕e7 8.♗f4∞]

5...0–0 6.♕d3 ♕xc3+?! I don’t think this can be the right desicion. Black is giving away his bishop and White has not even asked Black for it by playing a3. We can find thousands of games played after [6...d5 7.0–0 ♗c6].

7.bxc3 d6 8.e4 White is too impatient. Better is first to wait for the Black knight to come out to c6 and then play e4, and at Black’s e5 to have d5 with a tempo. [8.0–0 ♗c6 9.e4 e5 (9...cxd4 10.cxd4 e5 11.d5 ♗b4 12.c5!± a very important move, in case Black would have managed to play ♗d7 and made the blockade on c5, Black would have been the one smiling) 10.d5 ♗e7 11.♗h4! In this type of

positions it is usually important to start first some action on the king side. 11...♗g6 12.♗xg6 hxg6 13.♕g5±]

8...e5 9.dxe5?! This is a very concrete play, but a serious mistake. Better would have been of course to move 9.d5 and White might be still a bit better. [9.0–0?! cxd4 10.cxd4 ♕g4 And only Black can be better; 9.d5 ♗bd7 10.0–0 ♗h5∞]

9...dxe5 10.♗xe5

Who said A must say B. [10.0–0 ♗c6 still probably with more or less equal position.]

10...♖e8?! The most logical, but not the correct one. Here we see a clear example of how vast the game of chess is. Probably almost all of us would have played here the move that we see in the game and eventually would have ended up with a 0 instead of having a stable advantage and push for a full point. [10...♔d6! a hard move to find over the board. 11.f4

a) 11.♗f3 ♖d8! Here we can see the idea of 10...♔d6 12.♕e2 (12.e5 ♔xd3 13.♔xd3 ♖xd3 14.exf6 ♖xc3± con With a big and clear advantage in the endgame) 12... ♔xd1+ 13.♕xd1 ♗xe4 14.♕c2 ♖e8 15.♕e3 ♗c6 16.0–

0 b6± White's position is really unpleasant and probably the pawn on c3 will fall soon. Not often we can see the case when the combination of ♖+♘ is dominating against ♖+♖, of course White's horrible pawn structure is heping that.

b) 11. ♖f4 ♖e8 12. ♖c2

12...♖c7! A silent but very strong move. White cannot save the exchange of two light pieces against the Black's rook, which gives Black a clear advantage 13.0-0 ♖xe5 14. ♖xe5 ♖xe5 15. ♖d8+ ♖e8 16. ♖fd1 ♘c6 17. ♖c7 ♖g4 18.f3 ♖c8±; 11...♘c6 Black needs to act very quickly, not giving White a "free" move to castle. 12.0-0 (12.♘xc6 ♖xc6 13.0-0 ♘xe4±) 12...♘xe5 13.fxe5 ♖xe5 14. ♖e1 g5!± Amazing move! Not often we can see moves like that, but in the concrete situation it is giving Black a stable advantage. With the move 14...g5 Black is not letting White's bishop out of c1 to f4, which is disturbing White's development. Black's idea is easy, to be safe on the king-side and by playing ♖d7-c6, ♖ae8 eat away White's pawn on e4. But of course a move like "g5" is clearly a move from the category "don't try this at home".

11.f4 [11. ♖f4 ♖c7±]

11...♘bd7

12.♘xd7? Giving away a sudden chance. [12.♘xf7!

A fantastic move! White is giving away a piece for just a pawn, but getting in exchange enough time to castle and now be the one with dangerous threats! 12...♖xf7 13.0-0 Due to many tactical threats, Black is not able to keep a piece up, even to give it back for 2 pawns. Now we can feel clearly the power of White's bishop pair combined with White's central pawns! 13...♖g8 14.e5 b6± It might be that Black has chances for escaping, but White is doing clearly much better.]

12...♖xe4! A great move based on exact calculation. [12... ♖xd7? 13.e5 and White is just a pawn up.]

13. ♘e5 Probably better chances for escape would give [13.0-0 ♙xd7 14. ♖e1 ♙c6+ White's position is very bad, but still not lost.]

13... ♚h4+ 14.g3 ♘xg3 15.hxg3 [15. ♖g1 ♘e4++]

15... ♙xh1+ 16. ♔d2 ♙xd1+! The most simple win.
17. ♙xd1

17...f6! The key move of Black's idea started with 12... ♘xe4! White's knight does not have other squares for escape than to go back to f3, which is giving enough time to create deadly threats.

18. ♘f3 ♙g4 19. ♙e2 ♖ad8+ 20. ♙d2

20... ♖d7! White is not able to defend one of his bishops, which is leading to immediate loss of the game.

21. ♖b1 ♖de7 22. ♘g1 ♙xe2+ 23. ♘xe2 ♖xe2 24. ♖xb7 ♖g2 0-1

(3) Bartel,Mateusz (2658) – Markowski,Tomasz (2612) [B40]

Polish-ch Warsaw POL (9), 26.02.2012

[Balogh Csaba]

The second game that we will look into this edition of CEWN is from the last round of the Polish individual Championship. Bartel had to win, in order to win the event. His opponent was the strong and experienced GM Tomasz Markowski. Bartel played the game with huge self-confidence because he has just won the strongest open of the season - Aeroflot Open in Moscow. Let's enjoy the game!

1.e4 c5 2.♘f3 e6 3.♘c3 a6 4.g3 White decides to play a non-theoretical position to force his opponent into thinking right from the start of the game.

4...b5 5.♙g2 ♙b7 6.d3 d6 7.0-0 ♘f6 [Practice shows that it is better to start with 7...♙e7 to prevent White's next move.]

8.♘g5! White lunches immediate attack, frees the way for his f-pawn.

8...♘c6 9.f4 ♙e7 10.♘e2 White wants to occupy the center with his pawns. He is intending to play c3 and then d4.

10...0-0 11.c3 d5 Markowski wants to open up the position, but of course Bartel is not partner in this plan. White has to keep the center closed, in order to attack on the flank. This is an important rule!

12.e5! ♘d7 13.d4 Prevents Black from pushing d4 by doing it himself.

13...b4 Both sides have their plans. White needs to concentrate on kingside attack, while Black must try to find counterplay on the queenside, with a5, ♙a6 ideas.

14.h4! Protects the knight and But in any case a fantastic game, truly deserving to win the title game of the month that way creates the dangerous threat of f5! It forces Black to send away the attacker from g5, but with this he weakens his own kingside.

14...h6 15.♘h3 a5 16.f5! The attack is coming anyway, even if it is less dangerous than with the knight on g5. Now the knight might appear on f4, and later on h5 with potential sacrifices. White wants to play f6!, this forces Black to take on f5.

16...exf5! 17.♖xf5 bxc3 [In my opinion, here Black should have chosen a different direction for his bishop with 17...♘b6 18.♖f2 ♙c8! 19.♘ef4 (19.♘hf4 ♙g4!) 19... bxc3 20.bxc3 cxd4 21.cxd4 ♙f5! with double-edged position.]

18.bxc3 cxd4 19.cxd4 ♙a6 White protects his knight on e2, attacks the d5 pawn, and brings another piece into the attack. However, it might seem, that he closes the way back for his rook on f5, where it could be trapped.

20. ♖hf4! ♘b6 [interesting tactical lines arise after 20... g6!? 21. ♘xg6! fxg6 22. ♕xd5+ ♔h7 23. ♖xf8 (23. ♖d2 ♕g5!) 23... ♘xf8 24. ♕xc6 ♕xe2 25. ♖xe2 ♖xd4+ 26. ♖e3! ♕c5! (26... ♖xa1 27. ♖xh6+ ♔g8 28. ♕d5+ ♘e6 29. ♕xe6#) 27. ♔h2! which favours for White at the end.]

21. ♖b1!! Bartel prepares for a sacrifice with both of his rooks. Now, he is ready to take on b6, and then on d5.

21... g6? [21... ♕c8 22. ♖xb6! ♖xb6 23. ♘xd5 ♖d8 24. ♖f2 would have given more than enough compensation for White, but still, this should have been the way for Black to play.]

22. ♘xg6! The fireworks begin with an intuitive knight offer which destroys the defenders of the king! **22... fxg6** **23. ♖xf8+ ♕xf8** **24. ♘f4!** Bartel is not in a hurry! He is a piece down and plays a quiet move. However, this kind of quiet moves are sometimes the most unpleasant. In one move White has created so many threats (♘xg6, ♘e6, ♖c2, ♖g4, ♖xb6) that Black is unable to defend himself. **24... ♖b8** [Even the computer's most stubborn move gives no chance to save the game: 24... ♕c8 25. ♘xg6! ♕f5 26. ♘xf8 ♕xb1 27. ♕xh6! ♖xb1, and ♖g4 threats 27... ♕f5 28. ♖f3! ♘xd4 29. ♖f2+-]

25. ♖g4 [25. ♖c2! was more precise, according to the computer as well 25... ♘e7 26. ♘xg6+- with winning attack.]

25... ♖e8 **26. ♘xg6 ♕g7** This allows White to finish the game beautifully. [26... ♔h7! would have been the only move, but still after 27. ♘f4 White has only a small material disadvantage (2 pawns for the piece), yet his strong attack continues. (27. h5!? also very interesting. 27... ♕d3 28. ♖xb6! ♖xb6 29. ♘f4 Despite being a rook down, the threat of ♘xd3 and ♘xd5 gives white better position.)]

27. ♖xb6!! After eliminating the defender of the d5 pawn, White's bishop enters the battle and decides the outcome of the game.

27... ♖xb6 28. ♗xd5+ ♔h7

29. ♔f5!! [29. ♔f5 and Black resigned because after 29... ♔xg6 (otherwise ♗f8+ double check and then ♔h7 mate) 30. ♗g8+! ♔xg8 31. ♔xg6+- and Black cannot do anything against the threats ♗xh6 and d5. Great victory from Bartel, who continued his winning streak! Right after winning the Aeroflot open, he became Polish Champion as well!] **1-0**

(4) Lenic,Luka (2641) – Zherebukh,Yaroslav (2580) [E81]

BL 2011/2012 (10), 25.02.2012

[Arkadij Naiditsch]

We are facing a very interesting and exciting game with many culmination moments! It seems like the opening battle was won by Black, who managed to get a nice position. Afterwards in a very complex position Black made a mistake, instead of 23...♖e6 ? Black should have played the 23...♙xd4 with a better position. Then we see a rare position where White is material down, but is totally dominating the board. A great example of a typical game of a Kings-indian defence! Let's get it on!

1.d4 ♘f6 2.c4 g6 3.♘c3 ♙g7 4.e4 d6 5.f3 0-0 6.♙e3 c6 [6...c5 This is the main move of the theory.]

7.♖d2 a6 a relatively rare continuation. Black is avoiding a concrete play against White center for a while-instead they are trying first to create some pressure by playing b5 and only after to continue with e5 or c5 moves.

8.a4 a radical action against Black's plan, but it is leaving a whole on the b4 square and probably leaving White without any opening advantage. [8.♙d3 b5 9.♘ge2 is another way for White to continue the game.]

8...a5 [Why not 8...♘bd7 9.♙d3 e5, and the answer is because is probably because of the 10.d5! (10.♘ge2 exd4 11.♙xd4 ♘c5!? an interesting tactical try to get immediately a comfortable positions. (11...a5 this would lead us to a similar position as we can see later in the game) 12.♙c2 ♖b6! (Black is not in time to get the ideal posi-

tion after 12...a5 a 13.e5!) 13.a5 now Black wanted to play a5 13...♖b4∞)]

9.♙d3 [9.g4 ♘a6 10.h4 (10.♙h6?! ♙xh6 11.♖xh6 ♖b6 12.0-0-0 ♖b3!) 10...h5 11.g5 ♘d7 12.0-0-0 With a very sharp play and chances on both sides. White will try to create an attack by pushing the f pawn forward, Black instead will search his counter chances by playing c5 or trying a break through by playing b5.]

9...♘a6 10.♖d1 A profilactical move against the Blacks threat ♘b4. [10.♘ge2 ♘b4 11.♙b1 To exchange the bishop for black's knight is not an option for White. After the exchange Black will do perfectly fine 11...e5= And White's rook on a1 is out of play.]

10...e5 11.♘ge2 ♖e7 To me this move is looking a little strange. Why not to choose the 11...exd4 or 11...♘d7, both of these moves seem to be more logical. **12.0-0 exd4 13.♙xd4** [13.♘xd4 ♘d7 and due to the weak field on b4, Black is doing well.]

13...♖e8

14.♙h1 White is putting the king on the safe square h1 and preparing for the future attack by plaining f4-f5.

14... ♖f8 Black is trying to get the knight to c5 without exchanging the bishops. A dangerous plan because it costs Black at least a tempo and White is fully prepared to start a strong play on the kingside. More safe was. [14... ♘d7 15. ♗xc5 ♗e5 20. ♖xe5 ♘e6 even if the position is still super complicated, it looks like Black's chances are not worse than of his opponent.) 19...dxc5 20.e5 White is trying their last hope, to bring the ♘ to f6, but it seems that White is too slow for that. 20... ♗e6 21.b3 (21. ♘ge4 ♖ed8 22. ♖e2 ♘xc2 23. ♘f6+ ♗h8 24. ♖xc2 ♖d4 and Black is dominating the game.) 21... ♖ad8 22. ♖f2 f5! a very important move, often used as a "blocker" against the White attacking attempts.]

15. ♖de1 in my opinion an "over preparation" from White, it was time to start some action by playing [15. ♘g3 ♘d7 16.f4 and we are having a very unclear position. The first assessment says Black's position is looking very passive and dangerous, but Black's position has also many pluses. In case Black manages to develop pieces like: ♘dc5, ♘b4, ♗h6 Black will create a strong pressure on White's center, and each movement in the center will generate a hole in it which Black immediately would make use of. In fact, here we are facing a very typical king indian position with very good chances for both sides. May the stronger player win :)] **15... ♘d7 16.f4** Finally White is starting to march forward. **16... ♗h6 17. ♘g3**

17... ♘ac5?! [17... ♘dc5! letting also the bishop on c8 to participate in the game 18. ♗c2 ♘b4 and here we can clearly see why White should have not played 8.a4. 19. ♗xc5 (19.e5 dxe5 20. ♖xe5 ♘e6 even if the position is still super complicated, it looks like Black's chances are not worse than of his opponent.) 19...dxc5 20.e5 White is trying their last hope, to bring the ♘ to f6, but it seems that White is too slow for that. 20... ♗e6 21.b3 (21. ♘ge4 ♖ed8 22. ♖e2 ♘xc2 23. ♘f6+ ♗h8 24. ♖xc2 ♖d4 and Black is dominating the game.) 21... ♖ad8 22. ♖f2 f5! a very important move, often used as a "blocker" against the White attacking attempts.]

18. ♗c2 b6! absolutely correct play by Black, he needs to try to be as solid as possible in the center, and wait for the White's break through hoping to have enough resistance against it.

19. ♖f2 ♖f8

20.e5 White had enough of moving around and starts the concrete action — finally!

20...dxe5 21.fxe5 ♗g7 The culmination of the game. There is not a single major exchange until now, all pieces except a few pawns are on the board, and White has a

very wide range of attacking possibilities. It is very hard to take the right decision over the board.

22. ♖ce4?! White is choosing the wrong knight move [a very interesting sacrifice was 22. ♖f5!? gxf5 23. ♔xf5 ♖f6 24. ♔f4 ♖g4 25. ♖e4 ♖xe4 26. ♔xe4 With a strong attack.]

22... ♔xe5

And here White goes for a very spectacular move **23. ♖d6!?** Probably the decisive mistake of the game.

[Also 23. ♖xc5 would bring White no winning chances after 23... ♔xd4 (23... bxc5 24. ♔xe5 ♖xe5 25. ♖e4∞ for a pawn White has a strong initiative due to Black's bad

development.) 24. ♖xd7 ♖xe1 25. ♔xd4 ♖xf1+ 26. ♖xf1 ♔xd7 27. ♔xd7 ♔c5 In this a bit unusual position, probably only Black is the one who can fight for a win due to the bad White pawn structure plus very uncoordinated position of White pieces. In case Black manages somehow to get out the rook from a8 to d or e file, the position of White could get from dangerous into bad.]

23... ♖e6? [23... ♔xd4! would have been the correct reply, Black needs to change pieces and the more the better, for it the main goal is to reduce White's attacking power. 24. ♔xd4 ♖xe1 25. ♖xe1 ♖e6 We can see that Black is doing now very solid again. 26. ♔d2 ♔a6 27. b3 (27. ♖df5 ♖b4!) 27... ♖dc5 and it is quite unclear if White has anything for the pawn. Black is doing clearly better!]

24. ♖xf7 ♖f6

[24... ♔xd4 25. ♔xd4 and the mate on h8 is deadly.]

25. ♖xe5! Great play by White. White will be material down, having only Rook + piece against the Black queen, but the open position of the Black's monarch plus the under development of the ♖a8+♔c8 gives White enough time to create a deadly net around Black's King [Too

passive way to bring Black into trouble is 25. ♔e3?! ♖xf7
26. ♕xe5 ♘xe5 27. ♔xe5 ♕e6∞]

25... ♖xf2 26. ♖xf2 ♔e7 [26... ♔d6 This move is giving
White a chance for a very beautiful finish

27. ♘g4! ♔xd4 28. ♖e8+ ♔g7 29. ♘h5+! gxh5 30. ♖e7+
♔g8 31. ♘h6+ ♔h8 32. ♖xh7#]

27. ♖fe2 ♘xe5 [27... ♔d6 28. ♘xc6 ♔xc6 29. ♖e8+ ♘f8
30. ♖1e7 ♘ce6

31. ♘h5!!±]

28. ♖xe5+-

Black is hopeless against the White attack.

28... ♘e6 Best way to fight in a lost position, more quickly the game would end after. [28... ♔d6 29. ♖e8+ ♔f7
30. ♕e5 ♔d2 31. ♕c3! With a deadly attack on the naked king.] **29.c5** a pretty move, White wants to bring an extra piece into the attack by playing ♕b3, but White's position is already strong enough to end the game even without it. [29. ♕c3 and the next White move is ♘e4 after which White threat will lead to a loss of some material for Black and the loss of the game consecutively.] **29...bxc5 30. ♕c3 c4** The only move to block the ♕ [immediately losing is 30... ♖b8 31. ♕d3! The bishop is reaching his final destination, the diagonal a2-g8] **31. ♘e4 ♔f8**

32. ♖b1 White is bringing the bishop to a2 where Black will not be able to protect his c4 pawn. [Another move with the same idea would have been 32. ♖d1 Black cannot defend against the multiple White threats like ♖g4 or ♖e2 and in case of 32... ♖c7 33. ♖e2 ♖d5 (33... ♖a6 34. ♖f1+-) 34. ♖xc4 ♖a6 35. ♖xd5 ♖xc4 36. ♖d7+- White is obviously winning.]

32... ♖c7 33. ♖a2 ♖d5 This move is losing immediately. [White would have a chance for a pretty combination now 33... ♖a6 34. ♖xa5 ♖d5 35. ♖xa6! a very typical, but anyway beautiful sacrifice 35... ♖xa6 36. ♖xc4 Black is a queen up for only 2 light White pieces, but nothing can save Black from a 0 in the tournament table 36... ♖xa4 37. ♖f6+ ♖f7 (37... ♖xf6 38. ♖xd5+ With just a piece up for White) 38. ♖xd5 ♖xc4 (38... cxd5 39. ♖xd5# a very nice mate!!) 39. ♖f1+ ♖e8 40. ♖xf8+ ♖xf8 41. ♖f6+-]

34. ♖xc4 ♖b7

35. ♖g5 This move doesn't change much, but why not to finish the game immediately by playing [35. ♖f1! ♖h6 36. ♖f6+ ♖h8 37. ♖xd5+-]

35...h6 36. ♖e4 We can rarely see such a domination of the White pieces over the Black ones. Even losing

2 tempos in the last 2 moves doesn't help Black to have a chance for an escape.

36... ♖d8 37.h3 [37. ♖f1 Again the same winning move would end the game instantly, probably such an inaccuracy can be only explained by the deep time trouble.]

37... ♖d7 38. ♖e6 ♖g7 39. ♖f6+ ♖f7 40. ♖xd5

Too much is too much, Black resigns **1-0**

Endgame section

(15)

[Balogh Csaba]

In the first month, we will study theoretical rook endgames. It is really useful to remember all these examples because despite the small amount of pieces on the board, we can very often meet these situations in practice! **1...♖h6** Occupying the 6th rank is a very important defensive method. This is the so-called Philidor position. White's only try to improve his position is to push his pawn, but then the king will have no shelter against the vertical checks, and Black holds the draw. **2.e6 ♖h1= 1/2**

(16)

[Balogh Csaba]

In case the defensive side had no possibility to take the active position, and gives perpetual check vertically, then White has a winning position, if he has e- or f-pawn.

1.♖g7+ ♔f8 2.♖h7! The winning technique! Because of the mate threat, Black is forced to move into the f7 check, but then he quickly loses his rook. **2...♔g8 3.f7+ ♔f8 4.♖h8+ ♔e7 5.♖xb8 1-0**

(17)

[Balogh Csaba]

In contrast to the previous example, in case of g- and h-pawns, Black can hold the draw, even with passive defense. **1.♖g7+ ♔h8 2.♖h7+ ♔g8** White's only winning chance could be ♖i7, however the chess board is not wide enough to make this move. **1/2**

(18)

[Balogh Csaba]

Useful to know, if White has 2 g-pawns, and Black is forced to defend passively, then White can convert his advantage into winning. **1. ♖a6!** Very precise move to avoid stalemate! [After 1.g7? Black would survive in spectacular way 1... ♜c6+ 2.g6 ♜xg6+! 3. ♔xg6 stalemate] **1... ♜b8 2.g7!** This time, there is no danger of giving stalemate. **2... ♜c8 3. ♜f6! ♜b8 4. ♜f8+!** The 2nd g-pawn gets its role. This is the only way to win! **4... ♜xf8 5.gxf8Q+ ♔xf8 6. ♔h7 1-0**

have 5 pawns on the same file, against the Philidor defense, he could not win the game. **1/2**

(19)

[Balogh Csaba]

If Black has the chance to defend with the Philidor method, he holds the draw even against doubled pawns. White could have double e- or f-pawns as well, against the right defense, he can not win the game. **1.g6 ♜b1!** And, as we already know, Black holds the draw with vertical checks. **2. ♔h6 ♜h1+ 3. ♔g5 ♜b1 4.g7 ♜b6 5. ♔h5 ♜c6 6.g5 ♜b6 7.g6 ♜b1** The funny thing is, White could

Clash of the Titans

(20) Alekhine, Alexander — Opocensky, Karel [D10]

Paris Paris, 1925

[Balogh Csaba]

I would like to present you a game played by the 4th World Chess Champion, Alexander Alekhine. The game was played in 1925, when he was 43 years old. Two years later he won the Title against Capablanca. Alekhine played this game in his usual tactical style, bringing all his pieces into the attack, and when the moment arrived he made a final decisive blow.

1.d4 d5 2.c4 c6 3.♘c3 ♘f6 4.e3 ♖f5 An inaccuracy in the Slav defence. Because of this, Black loses the fight for the center. Alekhine finds the best way to exploit it.

5.cxd5! ♞xd5 By taking with the knight, Black admits his mistake in the previous move, and enters a slightly worse position. [Still it is a better decision than taking with the pawn since after 5...cxd5 which would be the necessary reaction, if Black wants to equalize in the opening, White quickly attacks the weak b7 ♖ with 6.♙b3 and the typical defence with 6...♙b6 would not work, because of 7.♞xd5! ♙xb3 8.♞xf6+! check, and White wins a pawn.]

6.♖c4 e6 7.♞ge2! The right development of the knight. White's plan is to push e4 in the next move, since then after ♞xc3, he can take back with the knight, controlling the e4 square. **7...♞d7 8.e4 ♞xc3 9.♞xc3 ♖g6 10.0-0 ♙h4?!** Hard to explain this move, Black starts kingside action with his queen. However, he loses important time in development, which Alekhine effectively exploits. [10...

♙e7 should have been played, but still after 11.♙b3 0-0 12.♙e3 ♞f6 13.f3, White has a small advantage, thanks to his nice central pawns.]

11.d5!! The World Champion immediately opens the files on Black's king, which is stuck into the center. **11...exd5 12.g3!** This subtle in-between move is needed before taking back on d5, in order for the bishop on c4 not to hang **12...♙f6 13.exd5 ♖c5** Black decides to find shelter for his king on f8. [We will see, if he wants to castle, it would not help as well. 13...♙e7 14.♙e1 ♞e5 (14...0-0 15.dxc6!+-)]

15.♙f4! very nice temporary piece sacrifice 15...♞xc4 16.d6 0-0-0 (16...0-0 17.dxe7 ♙fe8 18.♙d7±)

Black has serious problems with activating his pieces, due to the e7 pawn.) 17.♘d5!! In order to be able to take on e7, White must first close the d-file. 17...cxd5 18.dxe7 ♖de8 19.♙xd5+- and mate is coming soon, all the lines are open in front of the Black king. Alekhine would definitely find all these hard moves, this kind of play was in his vain.]

14. ♖e1+ ♔f8 15. ♕f4! Developing, and defending the f2 square at the same time.

15... ♘b6 16. ♕b3 [16.dxc6!? bxc6 17.♘e4 ♕xe4 18.♖xe4 ♘xc4 19.♖xc4+- Would lead to big advantage for White, but Alekhine prefers to keep many pieces on board, in order to mate his opponent.]

16...h5 Black tries to push h4, trying to create some attack on the h-file. At the same time he opens the h7 square for his king. If he could reach there, then he could make some kind of artificial castling and connect the rooks. [16...♖d8 17.♙e2 ♘xd5 18.♘xd5 cxd5 19.♖ad1+-]

17.h4! Alekhine does not give any counterplay to Black.

17...♔g8 18. ♖c1! Great move, brings the last unemployed piece into the fight. This is a typical sign of a great player!

18... ♕d4 19.dxc6 bxc6

20. ♘e4! Forces Black to give up his defending bishop on g6. Of course, our hero happily sacrifices his b2 little pawn.

20... ♕xe4 21. ♖xe4 c5 [21... ♕xb2 22.♖c5+-]

22. ♙e2! Small, but brutal move. White wants to penetrate on the e-file with his rook. ♖e7 and ♖e8+ are the main threats, this forces Black to make another weakening around his king.

22...g6 23. ♕g5 ♙d6 24. ♙f3! White lunches decisive attack against the Black king, by attacking the f7 and g6 pawn. **24... ♙f8**

[24...♖h7 25.♖f4 ♖f8 26.♙h6! not the only possible win, but definitely the nicest 26...♖xh6 27.♖xf7 and the pin decides the game 27...c4 28.♖xc4!! to keep open the diagonal for the bishop on b3. 28...♖xf7 (28...♘xc4 29.♙xc4+- Black is a rook up, but simply unable defend his king from the mating attack.) 29.♖c8+! ♘xc8 30.♙xf7+ ♔h8 31.♙g8# A picturesque mate!]

25.♖xd4! White destroys the main defender, and opens the file for the other rook to finish the game. At this moments, we can realize how great was the Grandmaster's 18th move.

25...cxd4 26.♖c6!! The final blow. The rook unexpectedly stops on c6! Probably Black was waiting for ♖c7, which is also winning, but the text move is much stronger.

26...♔h7 [26...♖h7 27.♖xg6+ ♖g7 28.♙xh5+-]

27.♙xf7 ♖c8 28.♖xg6 and ♙xh5 is coming with mate, so Black resigned. A beautiful crush by Alekhine, who showed in this game again how fantastic tactical abilities the great Champion had. **1-0**

Editorial Preface

A warm welcome to our premium subscribers of Chess Evolution Weekly Newsletter!

First of all, we would like to thank you for investing your trust into CEWN, we promise that we will be working hard to make it even better! We will also be very happy about any kind of feedback, we highly appreciate your opinion! First steps are not easy, but we are working hard to make out of our content a superb and useful combination of chess material.

In the current issue, we have a very nice study in the “surprising section”! In case You manage to solve it, it means You have quite nice tactical and imaginal skills!

In the end of the current issue are the solutions for the previous puzzle section that You can find in CEWN Nr 1.

With the slogan “less words-more chess” enjoy our CEWN Nr 2!!

4 best games of the past week

(1) Volokitin, Andrei (2695)
— Jobava, Baadur (2704) [B12]

1. Bundesliga 2011/2012 (4), 01.03.2012

[Balogh Csaba]

This game was played between two great fighters, the Ukrainian GM Andrei Volokitin, and the Georgian GM Baadur Jobava. Both players like tactical struggles, so we could expect a very sharp duel. Right after the opening, the game entered into unreal complications, where both players could use their abilities! After a very nice battle, the position was simplified to a drawish endgame. Let's see the details from this exciting encounter.

1.e4 c6 2.d4 d5 3.e5 ♘f5 4.♗f3 e6 5.♙e2 Lately the most popular setup against the Caro-kan defence, both players are considered to be big experts of the variation.

5...c5 6.♙e3 cxd4 7.♗xd4 ♗e7 8.♗d2 ♗bc6 9.♗2f3 ♙e4 10.0–0 Until this moment there are plenty of games in the database, but here Black tries a really fresh idea, which has been played only once before.

10...♔d7!? Black's problem is his king, which is stucked into the center. White wants to play c4 now or in the near future, to open up the position. In general, the complications favour him. Therefore, Black's plan is to prepare for the fight in the center and bring his rook to d8, which could be very useful.

11.c4 Volokitin plays in his style, and goes into the complications. [It would also be interesting to see Jobava's

improvement on the previous game, where Bologan played in positional manner, and easily outplayed his opponent. 11.♖c1 ♖d8 12.c3 ♙xf3 (12...♗g6 could hardly be the Jobava's idea, since after 13.♗g5 ♗gxe5 14.f4 ♗g6 15.♗xe4 dxe4 16.f5 exf5 17.♗xf5± White gets very strong compensation for the sacrificed pawn.) 13.♗xf3 ♗g6 14.♔b3 ♗gxe5 15.♗xe5 ♗xe5 16.♙xa7± and White was slightly better, thanks to the pair of bishops in Bologan-Krush, Gibraltar 2012.]

11...♖d8 12.♗b5! White finds the most challenging move! He has to act urgently, before Black finishes development. Created double threats with ♗d6 and ♗xa7.

12...♗f5 Jobava gives a pawn for activity! [The passive defence with 12...♗c8 would lead to nice advantage for White after 13.♗g5! a6 14.♗xe4 dxe4 (14...axb5 15.cxd5 ♔xd5 16.♔c2 ♔xe5 17.♖ad1± and ♗c5 is coming in the next move, Black will be punished for being undeveloped.) 15.♗c3 ♗xe5 16.♗xe4±]

13.cxd5! [The immediate 13.♙xa7 would lead to very strong compensation for Black after 13...♗xa7 14.♗xa7 ♙c5 15.♗b5 0–0]

13...♗xe3 [However, on 13...♙xd5 White can already take the pawn with 14.♙xa7 since after 14...♗xa7 15.♗xa7 he has the very unpleasant threat of ♙b5!]

14.dxc6!? After long calculation, Volokitin chooses the most concrete way. [However, I think it was better to play simple 14.fxe3! to open the f-file for the rook, and launch an attack against the f7 square 14...♙xd5 15.♗g5! ♗xe5 (15...♙c5

16. ♔c1! defends and attacks in the same time! (on 16. ♘xf7 Black has a nice response with 16... ♙xe3+ 17. ♖h1 ♔xf7! 18. ♗xf7 ♙xg2+ 19. ♖xg2 ♗xd1 20. ♗xd1 ♖xf7 21. ♗d7+ ♖g6=) 16... ♔e7 17. ♘xf7 0-0 18. ♘xd8 ♗xd8 19. ♘c3±) 16. ♔d4! Black's position is falling apart, the main line is beautiful! 16... ♙d6 (16... ♘c6 17. ♔c3±; 16... f6 17. ♙h5+! g6 18. ♗xf6!+-)

17. ♗ad1! very difficult move to find, but the idea is simple. White wants to push e4 and win a piece. 17... ♙b8 (17... 0-0 18. ♘xd6 ♗xd6 19. e4±) 18. ♘xf7!! ♘xf7 19. ♗xg7 ♙e5 (19... ♗f8 20. ♙h5+-)

20. ♘d6+!! A fantastic sacrifice! The kamikadze knight! 20... ♙xd6 21. ♙b5!! ♙c6 22. ♙xc6 bxc6

23. ♗xd6!! like in giveaway chess. :) 23... ♘xd6 24. ♔xh8+ ♖e7 25. ♗f6+ ♖e8 26. ♗f8#]

14... ♔xd1! [14... ♗xc6 would be a mistake because of 15. ♔a4! ♘xf1 16. ♘c7+! ♖e7 (16... ♖d7 17. ♙b5+-)

17. ♖b5! ♜c5 (17... ♜xc7 18. ♜b4+-) 18. ♜c1! ♜xc1
19. ♜b4+-]

15. ♜fxd1 ♞xd1 16.c7! This was the point of the 14th move!

16... ♞xb2!? Jobava preffers to give up the rook and save his knight, in order to get rid of the dangerous c7 pawn. [16... ♜c8 17. ♜xd1 ♞d5 18. ♞d6+ ♞xd6 19. exd6 ♞d7 20. ♞e5+ ♞xd6 21. ♞xf7+ ♞xc7 22. ♞xh8 ♜xh8= would lead to equality.]

17. ♞g5!? in the next moves, White simply ignores the rook. [17. ♞xa7 ♞xf3 18. ♞xf3 ♞c5 19. cxd8Q+ ♞xd8=]

17... ♞g6 18. ♞xa7!? Volokitin sets an amazing trap, but Black finds the only moves to survive!

18... ♞c5!

19. ♜c1! This is the point, seems like White is winning, but Jobava finds a very nice way to survive.

19... ♞a4! The only move! [19... ♞xa7 20. c8Q!± instead of taking the rook, he promotes queen, and so the h8 is also falling.]

20. cxd8Q+ Finally, he took it! [20. ♞b5+ ♞e7 21. cxd8Q+ ♜xd8 22. ♞xa4 ♞xa7=]

20... ♞xd8 21. ♞b5 b6 The position got simplified, they ended up in an even situation.

22. h4 Volokitin does not give up the fight for the advantage and finds a very nice trick. However, Jobava does not fall into it and finds the best defence again!

22... h6! [22... h5 23. ♞d1! ♞b2 24. ♞c2! this is the idea of the 22nd move. 24... ♞e7 25. ♞xg6 and Black cannot take back with the h-pawn. 25... fxc6 26. ♜c3↑ White could have still hope for some initiative.]

23. h5! ♞xh5 24. ♞xe6+ fxe6 25. ♞xh5 ♞e7 26. ♜c4 ♞b2 27. ♜f4 ♜f8 28. ♜xf8 ♞xf8 and after plenty of precise moves by both sides, the position became dead draw. The fight continued, but the rest is not interesting anymore because of the opposite colored bishops.

29. ♞e2 ♞e7 30. g3 g5 31. ♞g2 h5 32. ♞c3 h4 33. ♞e4 hxc3 34. fxc3 ♞d4 35. ♞xg5 ♞xe5 36. ♞g4 ♞a4 37. ♞xe6 ♞f6 38. ♞b3 ♞xg5 39. ♞xa4 ♞d4 Draw agreed! A very interesting game, full of beautiful ideas! Both players deserve congratulations! 1/2

(2) Negi,P (2639) – Wirig,A (2481) [C11]

Cappelle la Grande Helsinki (4), 05.03.2012

[Balogh Csaba]

The young Indian GM Negi Parimarjan (19 years old) has won a very nice game against his French GM opponent. We will see a very deep strategical idea in the opening, combined with nice tactical play and mating attack in the middlegame! Let's enjoy it!

1.e4 e6 2.d4 d5 3.♘c3 ♘f6 4.e5 ♘fd7 5.f4 c5 6.♘f3 ♘c6 7.♙e3 Lately we see this position often, even on the highest level. Black has a number of different setups, all with very complicated fight.

7...cxd4 8.♘xd4 ♙c5 9.♙d2 0-0 10.0-0-0 ♙xd4 11.♙xd4 ♙a5 This move belongs to the very original Russian GM Vadim Zvjaginsev, who is famous for his weird openings. (For example, he beat some top players with 1. e4 c5 2.♘a3) He played this move successfully in 2010 against top GMs. After that, this variation enjoyed many followers. Let's understand the point of this move! First of all, Black's main problem is his bishop on c8. They call it „the bad French bishop”. In many systems Black would have a perfect position, if he could do something with his bishop. So, in the current position, the idea is to play ♖b8, followed by b5, b4 and then ♙a6 to exchange the bad piece.

12. ♙f2 White prepares for his next move. We will see the point soon. [Most of the games continued with 12.♙b1 ♖b8] **12...♖b8 13. ♙b5!** Very deep strategical idea by Negi! After the 11th move, we got familiar with Black's

ideas. After that, it is already very easy to understand this move. White stops the only plan of his opponent, to push b5. Black, has no choice, he must play a6, in order to continue his plan, but then after the bishop retreats to d3, the b5-b4 and ♙a6 idea is not working anymore since the pawn occupies the square!

13...a6 14. ♙d3 b5 15.♙b1 b4 16.♘e2 Here we are! The bishop is stuck on c8! It would cost too much time for Black to move away with his queen, then push a5, and prepare for ♙a6.

16...♘c5 17.h4! Negi took away his opponent's counterplay and launches kingside attack!

17...♙d7 [17...♘xd3 18.cxd3± This structure is always better for White. He can occupy the c-file with his rooks, and later the d4 square with the knight.]

18.b3 [It was time to make a defensive move against ♘a4-c3, however I preferred 18.♘c1!± with the idea of ♘b3 and cxb3 or just continuing the attack on the kingside. The text move weakens the c3, a3 squares.]

18...♖fc8 This loses an important tempo! [18...♘a7 was the right move to use the inaccuracy of the previous mistake.]

19.h5 ♘a7

20. ♖xc5 [Negi should have kept his bishop on the board, as it is very useful in the following lines: 20.h6! g6 (20... ♘b5 21.hxg7) 21.f5! exf5 (21... ♘b5 leads to an incredible mate 22.fxg6 fxg6 23. ♖xc5 ♖xc5 24. ♖xg6! hxg6

25. ♖g5! leads to forced mate, but unexpectedly, White gives it! 25... ♘a3+ 26. ♖a1! ♘xc2+ 27. ♖b2! ♖a3+ 28. ♖b1+- and the king dances out from the checks, so mate is coming in the next moves.) 22.e6! in almost all the lines, Black's main problem is on the g1–a7 diagonal, where one of the knights is always hanging. 22...fxe6

a) 22... ♖xe6 23. ♖g5! ♘d7 (23... ♖d8 24. ♖xd8+ ♖xd8 25. ♖xc5+-) 24. ♖xa7+-;

b) 22... ♘xe6? 23. ♖xa7; 23. ♖g5 ♖f7 (23... ♖d8 24. ♖xd8+ ♖xd8 25. ♖xc5+-) 24. ♖d4±]

20... ♖xc5 21.f5! White intuitively sacrifices a pawn in order to open up the position of the king.

21...exf5 22.h6 g6 23. ♖e3!? The Indian wants to play e6, to free the e5 square for the queen. [However 23.g4 was even better 23...fxg4 24. ♖f4 ♖d8 25.e6! such sacrifices people should play by heart. The quantity of the pawns does not matter much. It frees the e5 square for

the queen, and opens the e-file for the rooks. 25... ♖xe6 (25...fxe6 26. ♖xg6! hxg6 27.h7+ ♖g7 28. ♖df1 is the easiest mate.) 26. ♘d4 with incredible dangerous attack! Too many threats, ♖xg6 is just one of them.]

23... ♖e6 Wirig tries to block the pawn, but Negi has another way to access to the king! [Computer's recommendation 23... ♘c6 does not save Black neither, because of 24.g4! ♖e8 (24...fxg4 25. ♖f2! and ♖d8 does not prevent ♖f6, since the c5 rook is hanging.) 25.gxf5 ♘xe5 26. ♖he1! very difficult move to find for a human, which is directed against the opponent's back rank. Here even the machine admits that the attack will break through.]

24.g4! fxg4 25. ♖f2! And the point is the same as in the 23... ♘c6 line, the ♖d8 defence against ♖f6 is not working because c5 is in the air! Wirig finds the only move to avoid mate immediately, but he cannot save the game anyway.

25...f5 26.exf6 [26. ♘d4 was easier way to win 26... ♖e8 27. ♘xe6 ♖xe6 28. ♖xf5! gxf5 29. ♖xf5 with mating attack!]

26... ♖f7 27. ♘d4 ♘c6

28. Rde1! After the e- file has been opened, the White rook immediately occupies it. It might appear on e7 and support the coming move.

28... Kb6 [28... Nxd4 was the only move, but it does not give big chance to survive neither. 29. Rxd4 Kb6 30. Re7±]

29. Ne6! Negi transfers his knight to g5, from where it will help more in the attack! **29... Rc3** [29... Qxe6 30.f7+! Qxf7 31. Qf6]

30. Qf4! Mate is coming soon, too many threats are in the air. **30... a5** instead of resignation. White gets a chance to finish the game in style.

31. Qxg6! [31. Ng5 was also winning, but the text move is nicer!]

31... Qxe6 [31... Qxg6 32.f7+ Qxf7 33. Qf6+-; 31... hxg6 32.h7+ Qh8 33. Qh6+-]

32.f7+ and Black resigned, in view of 32... Qf8 33. Rxe6. An instructive game, where in the case of opposite side castling White was clearly faster in the attack! **1-0**

(3) Naiditsch, Arkadij – Kula, Robert [C61]

Dziedzic Memorial (3), 04.03.2012

[Arkadij Naiditsch]

It is a recent game from my rapid tournament in Poland, so please no hard judgment about the mistakes on both sides:) It was an exciting game with chances on both sides and a pretty mating attack for White

1.e4 e5 2. Nf3 Nc6 3. Bb5 Nd4 my opponent is choosing a rare line in Spanish, which actually was played few times on a very high level by players like Radjabov or Morozevich

4. Nxd4 exd4 5. 0-0 Qc5

6.b4!? I like this move a lot and I think it fits quite well into the type of position. White is better developed and should try to make use out of it. [More often White is choosing here 6.d3 c6 7. Qc4 d5 8.exd5 cxd5 9. Qb5+ Qd7 10. Qxd7+ Qxd7 11. Nd2 Ne7 12. Nb3 Qb6 13. Qg5 With maybe a little bit better position for White]

6... ♖xb4 Most critical move, in my game against Rapport Black played more carefully [6... ♖b6 7. ♘a3! White's idea is to take away Black's bishop on b6, after which after the move ♖b2 the pawn on d4 is going to be very hard to protect 7...a6 8. ♖d3 ♘e7 9.e5 0-0 10. ♘c4 ♖a7 11.a4 Of course I didn't want to allow Black playing b5 11...d5 (11...b5 12.axb5 axb5 13. ♖e4± and the bishop on a7 is falling due to the open a-file) 12.exd6 cxd6 13. ♖a3± and I been clearly better]

7. ♖b2 ♖c5 8.c3! Here is the key of the White's move 6.b4 The current idea with sacrificing on b4 followed by ♖b2 and c3 taking control over the center is nothing new. For example in the Italian opening we have it as well 1.e4 e5 2. ♘f3 ♘c6 3. ♖c4 ♖c5 4.b4!?

8...c6 Black is deciding to give immediately away the extra pawn, it would be bad idea to keep the pawn by playing [8...dxc3?! 9. ♘xc3 and I have reached exactly what I wanted, my all pieces are developed for „just“ a pawn down 9...c6 10. ♘d5! leading to a very dangerous position for Black; 8... ♖f6 9. ♖h5! It is important to have the Queen on h5 before playing cxd4, and soon we see why... 9... ♖b6 10.cxd4 ♖xd4? (10...c6 11.e5 and White is doing clearly better) 11.e5 ♖b6

12.e6! and White is totally winning after this beautiful move]

9.cxd4 now pawns are equal and it is clear that Black didn't solve the opening problems

9... ♖e7 the idea of Black is to sort of „blockade“ the White Bishop on b2 by playing d5 move and then fulfill the development with ♘f6 and O-O.

10. ♖a4 [another choice is to play here 10. ♖d3 but it seems this move is too slow to give White any advantage 10...d5 11.e5 ♘h6 12. ♖c2 g6 and I think Black is doing fine here]

10...d5 11.exd5 looks ugly, but probably good play. During the game I was very happy with my position

11... ♖xd5 12. ♘c3! Of course! The continuation of the idea „no mercy for the undeveloped one“ :)

12... ♖xd4 this move I played very quickly, too quickly.

13. ♖f3?! a logical move, I wanted to continue doing moves that should target something in the Blacks position, now it is the pawn on c6 plus I always have the idea of playing ♘d5 in hand. [13. ♖e1! was the right one to continue White's initiative, Black is totally paralyzed, at

13...♙e6 14.♙b3! is very strong, White is taking the only protection figure of the e-file with a little hidden threat of playing ♘a4 and pawn on g7 is now a target 14...♚d7 15.♙xe6 fxe6 16.♚h5+ and it is obvious that just for a pawn White is achieving a very dangerous attack]

13...♚f6?! [13...♙g4! a very strong move based on an exact calculation 14.♙xc6+ ♚f8 15.♚e4 ♚xe4 16.♙xe4 ♘f6! The key idea of Black which me and my opponent both have missed. White is not able to take the pawn on b7 because of ♖b8, and after a 17.♙c2 ♖d8 Black is doing fine. The position is probably around equal]

14.♚g3 again not the best, stronger was 14.♚e3 with attack

14...♙d6 the move I was hoping for, but Black had a very hidden defence resource [14...♘h6! after this super strong move the game would be open again 15.♙c2 (15.♘d5 ♚xb2 16.♘c7+ (16.♖ae1 0-0 17.♘xe7+ ♙h8) 16...♙d7 17.♘xa8 ♙d6 and it seems that White's attack is coming to an end, Black is doing better) 15...♘f5 16.♙xf5 ♙xf5 17.♖fe1 ∞]

15.♖ae1+

15...♚f8 [15...♘e7 16.♘e4! Finally the Knight is joining the attack 16...♙xg3 17.♘xf6+ gxf6 18.♙xf6±]

16.♚e3 again not the best, stronger was [16.♚d3! and Black is almost helpless against the Whites next move ♘e4]

16...♙e6 17.♘e4 This move I played very quickly again and actually exactly following the line that I calculated, but Black had a big improvement on the way... [17.♙b3 was clearly objectively the better move for White. The evaluation of the position would stay the same, Black is a pawn up but White has a strong initiative for that]

17...♚xb2 18.♘xd6 ♚b4 My opponent played this move very fast, maybe thinking I had blundered

19.♚e5 but this is what I was hoping for and answered almost instantly

19...♚xa4? logical play, especially for rapid chess, but a decisive mistake. What we again missed is another Black's move [19...♖d8! 20.♘f5 ♙xf5 21.♚xf5 g6! and Black is doing much better. How fast things can change in chess and what kind of difference a single move can make is amazing!]

20. ♖f5! now all my ideas are coming true! The Pawn g7 is hanging.

20... ♔g4 [and after 20... ♖f6 21. ♔d6+ ♔g8 22. ♖e7+ ♔f8 23. ♖g6+ ♔g8 24. ♔f8+ ♖xf8 25. ♖e7# game would end with a very beautiful check-mate] **21. ♔c5+** [21. ♔d6+ ♔e8 22. ♖xe6+ fxe6 23. ♔xe6+ ♔f8 would not bring White more than a draw]

21... ♔e8 22. ♖e4! White is bringing both rooks into the attack!

22... ♔g6 23. ♖b1! Black is hopeless against the White threats.

23... ♖b8 probably is losing on the spot, but what else to play? As a chess saying goes „in a bad position there are no good moves“.

24. ♔e5 ♖d8 25. ♖xb7 ♖f6 26. ♔c5 ♖d5 27. ♖e7+! a pretty finish of an exiting, not very high level but instructive game **1–0**

(4) Ragger,Markus (2655) – Bromberger,Stefan (2513)

(4.1), 01.03.2012

[Arkadij Naiditsch]

An interesting and fighting game was played in the Austrian league between the local number 1 and a German GM. After the opening Black was not accurate and got quickly into deep trouble. White played a great game until move 24 where instead of making a full point Markus Ragger let the advantage slowly slip away. From a strategic point of view, a very nice example of how to play this kind of structures with White.

1. ♖f3 ♖f6 2. c4 g6 3. g3 ♖g7 4. ♖g2 0–0 5. 0–0 d6 6. ♖c3 now it was the last chance for White to go into the main lines of the closed Kings indian by paying 6.d4. It seems like White is not very ambitious about the opening and wants to try to overplay the 150 ELO points lower opponent in the later parts of the game **6...e5** [6...c5 7.d4 cxd4 8. ♖xd4 and we are in a well known Maroczy structures]

7.d3 ♖c6 the most standard way of developing the pieces. Another possibility for Black is to play c6, h6, ♖e6, ♖bd7

8. ♖b1

White's plan is quite clear-try to develop a play on the Queen side **8...a5!** Absolutely good decision. By playing a5 Black is gaining an open a-file, as well an exchange of one pawn which can be useful in the future **9.a3 ♖d7** [9... ♘d4 is definitely an option as well for Black 10. ♙g5 h6 11. ♙e3 ♘g4 with a very fighting position]

10.b4 axb4 11.axb4 ♔c8!? A good multi-functional move! Black is doing two things in one - preparing the move ♙h3 with the exchange of the white square bishops and defending the pawn on b7

12.b5 ♘d4 13. ♙g5 the first critical moment of the game. Black is having a safe position, but to find the right way to play is not that simple.

13...♖e8 [13...♘e6 could be the other Black's choice 14. ♙e3 ♖e8∞ (14...♘g4?! would be a typical way for Black to go wrong 15. ♙d2 f5 16. ♘g5! and White is doing better)]

14.♘d2 keeping the position complicated [a bit simple, but not a bad choice is now 14. ♘xd4!? exd4 15. ♙xf6 ♙xf6 16. ♘d5 ♙d8 (16... ♙g7 17.b6!±) 17. ♔d2 and White is keeping hopes for a small advantage]

14...♘g4?! Black's play is too aggressive [14... ♙g4 15. ♖e1 ♘d7∞ would have been a much safer way]

15.e3! strong move [15. ♘d5 an interesting position appears after 15...h6 (the logical 15...f6 is getting countered by 16.e3! fxg5 17.exd4 exd4 18. ♘e4 with very good play for White) 16. ♘e7+ ♖xe7 17. ♙xe7 ♘f5 18.h3 ♘xf2 19. ♖xf2 ♘xe7 20. ♙h2 the position still remains very unclear, but probably the preference should be on the White's side]

15...h6 16.exd4 hxg5

17.b6! an excellent play by White. With the 17.b6 White is crushing all Black's pawn structure which is making White's knights super dangerous. A very typical example of how to play this type of positions with the White pieces

17...c6?! [also to a worse position for Black leads 17...exd4 18. ♘d5 c6 19. ♘c7 ♙f5 20. ♘xa8 ♔xa8 21. ♖a1 ♔b8 (21... ♔d8 22. ♙xc6!) 22. ♘f3 and White is better, but Black remains with chances to save the game]

18.♘de4 ♔b8 19.d5 a great play by White until now, Black's position is getting more and more dangerous.

19...f5!? under pressure Black is making a decision to go into complications rather than continue to be passive.

[19...c5 20.♘b5! ♕xb5 21.♙xg4 ♕a4 22.♘xg5±]

20.♘xg5 [20.h3 was maybe a bit more accurate choice, now Black has to move back their only active piece, the knight on g4 20...♘f6 (20...fxe4? 21.hxg4 exd3 22.♙xd3 ♖a3 23.dxc6 bxc6 24.♙d2 and White is close to a win) 21.♘xg5± White is a clear pawn up]

20...e4! in a bad position Black is searching for chances in the complications. Absolutely right decision. [20...♕h6 21.dxc6 bxc6 22.h4±]

21.dxc6 [21.♙b3 would lead to a much better position for White as well... 21...♕xc3 22.♙xc3 ♙d8 23.h4 e3 24.c5 exf2+ 25.♖xf2 ♘xf2 26.♙c4!]

21...bxc6 22.♙b3 e3 23.c5+ ♔h8 White's position is totally dominating. An extra pawn plus a free pawn on b6 and a weak Black king is giving White almost a winning advantage.

24.f3? a very passive move, exactly what Black was hoping for [much more in the style of the position would be 24.cxd6! exf2+ 25.♔h1 ♕f6 26.b7 ♖a7 27.♙f7 ♕xg5 28.♙xd7 and White is totally winning]

24...e2 25.fxg4 exf1Q+ 26.♖xf1 dxc5 still Black's position is dangerous but he is an exchange up and position is far away from „easy playing“ one **27.gxf5?!** another inaccuracy [27.b7! this move would have put big problems in front of Stefan Bromberger 27...c4 (27...♖a7 28.♙f7 ♖xb7 29.♙xg6 ♕d4+ 30.♔h1 ♖e7 31.♘d5!+-) 28.♙xc4 ♙xb7 29.♙f7±; 27.♙f7 ♙d6∞]

27...c4! Black is fighting very well and is back in the game [after 27...♕xf5 would lead to a better position for White after 28.♕xc6 c4 29.♙xc4 ♙xb6+ 30.♔g2±]

28.♙xc4? White is totally out of the position and making a „final“ inaccuracy after which position is equal. [better was 28.♙b4! a very difficult move to make during the game, but a very strong one as well 28...gxf5 29.♔h1! this prophylactical move is the key to White's success. White is preparing an attack on the Black's king 29...♕f6 30.♘ce4! bringing the last White piece into the attack 30...fxe4 31.♖xf6 ♖a1+ 32.♕f1→]

28...♙xb6+ 29.♔h1

29...♙d4! another good move by Black! White has nothing more than a perpetual check **30.♘f7+** [30.♙f7 ♕xf5 31.♖xf5 gxf5 32.♙h5+ ♔g8 33.♙f7+ ♔h8 34.♙h5+ would be just another way of making a draw] **30...♔g8 31.♘h6+ ♔h8 32.♘f7+ ♔g8 33.♘h6+ ♔h8 34.♘f7+ 1/2**

Endgame section

(15)

[Balogh Csaba]

This week we will study the kind of rook endgames where White's pawn has already reached the 7th rank and Black's king is squeezed out from behind the pawn. As we will see, the defensive side can only hold the draw, if his king stands on the „shorter” side of the board, and he gives checks with his rook from the „longer” side. 1... ♖a8+ 2. ♔d7 ♜a7+ 3. ♔d6 ♜a6+ 4. ♔d5 ♜a5+ 5. ♔c6 ♜a6+ 6. ♔b7 ♜e6= 1/2

(16)

[Balogh Csaba]

If the defensive side has not managed to set up the right defensive method, and his king gets to the „longer” side, then the „short” side is not wide enough for the rook to give checks. 1... ♖h8+ 2. ♔f7 ♜h7+ 3. ♔f6 ♜h8 4. ♔g7 ♜a8 5. ♔f7 1-0

(17)

[Balogh Csaba]

Black to move. Seemingly, he got the ideal setup, but his rook stands only on the b-file, which is not far enough for checks. **1... ♖b8+** [1... ♖a2 2. ♜f7+ ♔g8 (2... ♔g6 3. ♔f8+-) 3. ♜f8+ We often can see that in rook endgames with small number of pawns, to occupy the 8th rank with the rook is the key to win the game. 3... ♔g7 4. ♔d7 ♜a7+ 5. ♔d6 ♜a6+ 6. ♔c5+-] **2. ♔d7 ♜b7+** **3. ♔d6 ♜b8** [3... ♜b6+ 4. ♔c7 ♜e6 5. ♔d7+-] **4. ♔c7 ♜a8 5. ♜a1!**

Very important motif, the only way to win! White achieves, that the rook has to leave the „long” side. **5... ♜e8 6. ♔d7 1-0**

(18)

[Balogh Csaba]

In case Black wants to cut the king's way out from behind the pawn, White wins the game with the so-called „bridge building” method. **1. ♜f4!** We will see the idea of this great move soon! **1... ♜d2 2. ♜g4+ ♔h7** [2... ♔f6 3. ♔f8+-] **3. ♔f7 ♜f2+** **4. ♔e6 ♜e2+** **5. ♔f6 ♜f2+** **6. ♔e5 ♜e2+** **7. ♜e4** And the bridge has been built up. **1-0**

Clash of the Titans

(19) Geller, Efim P — Spassky, Boris V [C79]

Moscow zt Moscow, 1964

[Balogh Csaba]

This week I would like to show you a game between two fantastic chess players! On the White side is the great Geller Efim, he has never been World Champion, but has positive score against Botvinnik and Smyslov, and finished even against Petrosian! Boris Spassky was leading the Black army. The 10th World Champion of the chess world! The game was played in 1964 when Boris was 27 years old. 5 years later he defeated Petrosian for the crown, and was wearing it until 1972, when he lost his match against Fischer. In this game Black did not play the opening part well and White achieved some advantage, but after small mistakes by Geller, Spassky took the initiative and won in a beautiful style.

1.e4 e5 2.♘f3 ♘c6 3.♙b5 The Spanish opening, which is the most popular line by White against Black's 1...e5 move for more than 100 years, thanks to the complex positions which arise in all the lines!

3...a6 4.♙a4 d6 This is the so-called Steinitz system, which gets its name after the 1st World Champion, Wilhelm Steinitz. He played this line in 1894!

5.0-0 ♙g4 [But here, Steinitz preferred to develop with 5...♙d7 and then g6, ♙g7, which is a very solid system even nowadays. The move played by Spassky leads to sharper positions.]

6.h3 ♙h5 7.c3 ♘f6 8.d4 White threatens to play d5, forces Black to push b5, unpin his Knight, but with this he weakens his queenside pawn structure.

8...b5 [8...♘xe4? is taboo, because of 9.d5 b5 10.♙c2! winning a piece.]

9.♙b3 ♙e7 [9...♘xe4? is still taboo, because of 10.♙d5!]

10.♙e3 Geller develops his pieces to the best squares. Before bringing the Knight to d2, he protects his d4 pawn.

10...0-0 11.♘bd2 White obtained a small advantage from the opening. He could stabilize his pawn center, and after the knight arrives to d2, he can move out with the Queen from the annoying pin of the h5 Bishop.

11...d5!? Spassky realized, that he should take some immediate actions, otherwise White simply will have a very comfortable advantage. Now the game gets very interesting! Great players always find a way to make complications, where they could outplay their opponents!

12.g4! Excellent reaction by Geller! Unpins his knight with tempo, and after the bishop retreats to g6, the exchanges in the center will favour for him. Other moves

led to very unclear positions. [12.exd5 ♘xd5; 12.dxe5 ♘xe4 13.♘xe4 dxe4 14.♔d5!? exf3 15.♔xc6 fxg2]

12...♗g6 13.dxe5?! but here, White makes a mistake. He was pinning his hopes to the next move, aiming to win the pawn on d5. However, Black finds a great idea to counter White's plan. [13.♘xe5 should have been played 13...♘xe5 14.dxe5 ♘xe4 15.♘xe4 dxe4 16.♔xd8 ♖fxd8 17.a4± would have led to a small, but comfortable advantage for White. Suddenly the bishop on g6 is out of the game, and it is not easy at all to bring it back. Practically, it plays a role of a pawn right now.]

13...♘xe4 14.♘b1!? Very unnatural idea, going back with a developed piece to its initial square. Normally, we can say, that such moves are never good, but the point here is that Black cannot defend his d5 pawn and then his position is falling apart! But the great Champion finds a nice way to create counterplay.

14...♔c8! Freeing the d8 square for the rook, where it causes big problems for the White queen, in case he takes on d5.

15.♘d4 After Black's nice move, White changes his mind and instead of taking on d5, starts to play against the

g6 bishop. His idea is simply to play f4-f5, creating another difficult problem to solve for the Champion! [15.♗xd5 ♖d8! White cannot solve the problem on the d-file. 16.♔b3 ♘a5!; 15.♔xd5 ♘a5! and suddenly ♖d8 threatens to trap the queen! 16.♔d1 ♖d8 17.♘bd2 h5! and here we can see the other point of the 14th move! The g4 move becomes a big weakening. Black would have more than enough compensation for the pawn.]

15...♘xe5! Spassky's excellent tactical abilities pay off again! At first sight White can play f4 with tempo, and when the knight goes away, f5 wins a piece. But our hero has seen more!

16.f4 [16.♗xd5 c6±]

16...c5! What a counterattack! Instead of taking care of his own knight, Spassky counters the opponent's pieces. Amazingly resourceful idea!

17.fxe5 [17.♘e2 ♘xg4! 18.hxg4 ♔xg4+ 19.♔h2 ♗f5! and White's unharmonic pieces are unable to defend the king, despite being a piece up.; 17.♘c2 c4 traps the B.(17...♘g3!?)]

17...cxd4 18.cxd4 ♔d7 Suddenly White's king became very weak. The idea of Black is to play f6 and open up the position for all the pieces. Before this, he had to defend his d5 pawn.

19.♘d2 f6! Dark clouds are coming over the ♔!

20.♖c1 [20.exf6 ♖xf6 21.♖xf6 ♙xf6=]

20...♔h8 Very patient! Black wants to use his queen in the coming complications, but the bishop taking on d5 with check was always too annoying.

21.♙f4?! Geller probably misses the 23rd move of his opponent, but anyway his position was very unpleasant.

21...fxe5 22.♙xe5 ♙g5! The bishop arrives to the battle, but it had to be very well calculated because Geller had something in his mind!

23.♖c7 When White made his 21st move, probably he stopped his analyses at this moment. He attacks the queen and if it goes away, then simply takes on g7 and wins the game. However, when you play against a World Champion life is not so easy.

23...♙xc7!! Fantastic queen sacrifice, after which Black's minor pieces dominate the whole board. Let us enjoy the way they do this!

24.♙xc7 ♙e3+! Forces the king to move into a vulnerable square.

25.♔g2 ♘xd2 26.♖xf8+ ♖xf8 We can see now, that the rook might arrive to f2 with check, just as the bishop on e4, thanks to the 24th move.

27.♙xd5 ♖f2+ 28.♔g3 Geller decided to go into mating net, otherwise he would have lost his queen and the game as well. [28.♔h1 ♖f1+ 29.♙xf1 ♘xf1-+]

28...♘f1+! Hunting the king! White's queen has no chance to enter into the battle!

29.♔h4 h6! Creating the threat of ♙g5 mate!

30.♙d8 ♖f8! and White resigned, in view of the fact that he cannot prevent ♙f2 mate! Beautiful "team work" of the pieces. A fantastic victory for Boris Spassky who has mated many opponents in this same style. He is one of the biggest Masters of attacking chess! **0-1**

Editorial Preface

So we are already in the 3rd CEWN! We hope you have enjoyed the first editions and we continue with our promise to make every next edition better.

A few technical details in front for our readers:

For those who don't receive the email immediately on Friday evening: a small amount of emails are getting blocked by "spam" filters. In case somebody is not receiving the CEWN Nr 3 until Friday night — no panic, please write us an email and we will send it immediately one more time.

Puzzle section: thanks to valuable feedback, a few modifications were made, so now everything should be more easily visible and handier.

Starting next week we will play in the European Individual Championship in Plovdiv. Let's hope we will play some good games and we could also comment something from the "first person" perspective, which is of course the most valuable one.

*Arkadij Naiditsch

4 best games of the past week

(1) Cmilyte,Viktorija – Muzychuk,Anna

European Women's Championship GAZIANTEP, 12.03.2012

[Arkadij Naiditsch]

A decisive battle between the former European Champion of 2011, Viktorija Cmilyte and the new bronze medalist Anna Muzychuk. Anna is leading the tournament with a half a point ahead and only 2 rounds till the end, so it is clear, it is going to be a sharp game. White needs the full point. And indeed, in a very complicated position White is getting her chance to make a full point with a fantastic tactical blow-but White is missing it and missing also the chance on the next move still to do better. In the second half of the game, probably being very happy to survive such "turbulences" Black is playing just great!

1. Nf3 d5 2. d4 Nf6 3. c4 c6 4. Nc3 lately the move 4... dxc4 got very popular here 4... e6 5. Bg5 h6 6. Bh4 dxc4 7. e4 g5 8. Bg3 b5

Diagram # so we are in the main line of the Moscow variation. White got a wide choice of continuations here 9. Be2 the main move [9. Ne5 ; 9. h4 are the 2 other main choices of White]

9... Bg7 a relatively rare line [You can find hundreds of games been played on the highest level in this position 9... Bb7]

10. Qc2 probably not the best. Seems like White been a bit surprised by Blacks move 9... Bg7 [a great game been played after 10. e5!? Nh5 11. a4 Nd7 12. axb5 Nxc3 13. hxg3 c5 14. Ne4 g4

15. dxc5! gxf3 16. Nd6+ Kf8 17. Bxf3 Bb8 18. Rxa7+ Maletin,P 2617-Najer,E 2672 Ch-RUS 2010]

10... Nh5 a logical move, but now the break d5 is getting more effective [maybe 10... Na6 !? trying to make use out of the position of the White Q on c2]

11. Rd1 and of course White is playing for the d5 push! Now the question is will Black have enough time for consolidation to be prepared for the d5 move, or Blacks position will fall apart like a card house...

11...♘xg3 again I think it been good time to play 11...♘a6 [11...♘a6 12.a3 (12.d5 ♘xg3 13.hxg3 cxd5 14.exd5 ♘b4 15.♔d2 ♘xd5 and Black is doing good) 12...♘xg3 13.hxg3 ♙b7 and Black sort of half a tempo with by including the moves ♘a6-a3]

12.hxg3 g4

13.♘h2?! this is not the right direction for winning the game!! [13.♘e5 h5 (13...♙xe5 14.dxe5 ♔c7 15.♙xg4 ♔xe5 16.♔d2) 14.b3! with a very complicated position]

13...f5? [why not the simple 13...h5! White N on h2 is dead now, so White is having one piece less for the future attack which is a very positive news for Black]

14.exf5 exf5 15.d5! finally we see the move d5! now we can also feel a big difference between the Black pawn on f7 and f5. Black king is now feeling himself very "naked"

15...♔f6?! in a very complicated position Black is making a mistake [15...♔c7 this move would lead to a crazy position, which is very hard to play with out the metal friend... 16.dxc6 ♘xc6! 17.0-0 (17.♘xb5 ♔a5+ 18.♘c3 ♙e6! hard to imagine, but it seems to be truth. Black is doing very

good here) 17...♔b8 18.♔fe1 ♙f8 (18...0-0? 19.♘xb5!+-) 19.♔c1! and position is not clear at all]

16.dxc6 Blacks position is falling apart. White got only one problem, the knight on h2, but here it is not playing any role, White got enough pieces to create deadly threats

16...♔xc6 [a very cool computer move is also not saving Blacks position any more 16...a6

17.♘xg4!! fxg4 18.♘d5 ♔xc6 19.♔e4+ with a deadly attack]

17.0-0?! White is missing their chance! [17.♘xg4! fxg4

18.♘xb5!! this is just an amazing combination! A double knight sacrifice on different parts of the board. This

kind of things we dont see very often 18...0-0 (18...♔xb5 19.♔g6+ ♕f8 20.♖d8+ ♖e7 21.♔d6+ ♕f7 22.♔c7+-) 19.♖d6 ♕f5 20.♖xc6 ♕xc2 21.♖xc4 ♕f5 22.♘c7± in case Viktorija would find this, she would truly deserve to be the winner of the European Championship!]

17...a6! bravo for Black, this move is showing good nerves and has a hidden idea in itself **18.♘d5** [18.a4! been the last chance for White to stay in the game 18...0-0 19.axb5 axb5 20.♘xb5 ♕b7 21.♔xc4+ ♖h8 22.♔xc6 ♘xc6 White is better, but Black got good drawing chances due to their bishop pair plus the knight on h2 who is completely out of game]

18...♖a7! and here we see it. Suddenly the rook from a8 came into the game with a very important effect, protection of the square e7, Black is doing better now

19.b3 c3 20.♖d3 White is getting greedy at the wrong moment. Whites chances are in the active play... [20.♖fe1 0-0 21.♘f1 followed by ♘fe3 next been still an option to continue the game in more or less unclear position]

20...0-0 from this moment Black is playing a great game!

21.♖c1 ♕e6 22.♘xc3 ♖c8 White won the pawn back but position is very bad. Blacks bishop pair is totally dominating the board and it is not easy for White to avoid immediate material losses

23.b4?! [23.♔d2 ♖d7 24.♕f1! would still give White some chances to fight for half a point]

23...♖d7! 24.♖e3 ♖dc7 25.♔d2 ♘d7 White got no moves... Black knight is comming into game and the end is near...

26.♕d1 ♘e5 27.♘e2 ♘c4 28.♔e1 ♔d6! Black is playing excellent

29.♖b3 ♘b2 30.♖xc7 ♖xc7 31.♘f4 ♖c1! precise till the end!

32.♔xe6+ ♔xe6 33.♘xe6 ♖xd1+ 34.♘f1

34...♘c4 and it is time for White to resign. White can not avoid a loss of a knight on f1, next Black move is ♘d2

35.♘xg7 ♔xg7 36.♖c3 ♘d2 37.♖c7+ ♕f8 38.♖c6 ♘xf1 39.♖xh6 ♘xg3+ 0-1

(2) Brodsky,M (2558) – Jojua,D (2507) [D31]

Cappelle la Grande, 09.03.2012

[Balogh Csaba]

In the following game, we will see an interesting strategical pawn sacrifice in the opening, which might be very unpleasant for Black in future. The experienced Ukrainian GM, Mikhail Brodsky, got really nice compensation, lead in development, powerful centre and a dangerous attack against the Georgian GM's king.

1.d4 d5 2.c4 e6 3.♘c3 ♕e7 Black plays the rock-solid Queen's Gambit, which is recently, definitely the most popular opening against 1.d4 on the highest level.

4.cxd5 exd5 5.♖f4 c6 [5...♘f6 is the other mainline.]

6.e3 ♖f5

7.g4 This great move belongs to Botvinnik, who tried it 3 times in the World Championship match against Petrosian, back in 1963. White is planning queenside castling, when he must organize his play on the kingside, and the centre.

7...♖e6 In the aforementioned match, Botvinnik played 8.h3, however in 1970, he came up with a new idea against

Spassky: **8.h4!?** White continues the plan, started in the previous move.

8...♘d7 [Accepting the sacrifice would be a mistake, because of 8...♖xh4 9.♔b3 and ♔b6 does not work anymore, due to the h4 bishop. Black is forced to weaken his queenside decisively. 9...b6 10.♘f3 ♖e7 11.♘e5 with more, than enough activity for the pawn.]

9.g5 A beautiful strategical idea, introduced by Morozevich in 2012, instead of the 9.h5 line! At first sight, the text move seems to be a mistake, since after 9...h6 10.gxh6 ♘xh6, White only created weakness on h4, and helped Black to finish the development. As we will see, White has a different idea!

9...h6

10.g6! Shocking move! The idea is to create a stronghold on e5 for a minor piece. Lures the pawn from the f-file, when the attack in the centre with e4 will be very dangerous. In addition, if Black accepts the sacrifice, he must defend passively to keep his advantage.

10...fxg6 [Because of the last reason I mentioned before, Giri decided to not take on g6, rather to finish the development. In my opinion, this is the right approach from

Black point of view. 10...♘gf6 11.gxf7+ ♕xf7 12.♕d3 ♘h5 with an unclear position in Morozevich-Giri, Reggio Emilia 2012.]

11.♕d3 ♘f8 12.♖c2 g5 The most logical move, to get rid of the doubled pawns. [12...♕xh4 13.♕xg6+ ♘xg6 14.♖xg6+ ♕f7 15.♖xg7 ♕f6 16.♖g2 ♘e7 17.♘f3 and the e5 square yield White a comfortable advantage.; In an other game between two GMs, Barsov tried different move, but had no success for equalizing. 12...♕f6 13.0-0-0 ♘e7 14.♘ge2 ♕f5 15.e4 dxe4 16.♘xe4 ♕xe4 17.♕xe4± Peralta-Barsov, Catalunya 2012]

13.hxg5 ♕xg5 14.♕g3 [14.♕e5 was an alternative 14...♕f6 15.0-0-0 and the centre starts to march.]

14...♕f6 15.♘ge2 It is difficult to say, which development of the g1 knight was more advisable. Both has very big pluses, without minuses. The text move prepares for ♘f4 and e4. [15.♘f3 with the idea of ♘e5 has also guaranteed an edge.]

15...h5 Black wants to save his bishop pair, which he would have lost after the normal 15...♘e7 [15...♘e7 would strongly met by 16.♘f4 ♕f7 17.♘h5! getting the pair of bishops 17...♕xh5 18.♖xh5±]

16.0-0-0 h4

17.e4! Using the pin on the h-file. Brodsky does not waste time on bishop moves, and immediately opens up the center ahead of the king...

17...♘h6 18.♕f4 g5 [On 18...dxe4 I generally prefer 19.♕xe4 which helps White in further opening of the center with d5.; The computer's suggestion 18...♘g4 strongly met by 19.♖hf1! g5 20.exd5 ♕xd5 21.f3! when, even the machine realizes how bad his position is.]

19.♕d2 [19.exd5 led to promising positions as well. 19...♕xd5 20.♘xd5 cxd5 (20...♖xd5 21.♘c3) 21.♕e5±]

19...dxe4 20.♕xe4 Just as in the 18th move, I prefer the bishop take, in order to push d5 in the near future. Black must make a difficult decision, about where to put his king. As we will see, both ♖f7, or playing for 0-0-0, have their problems.

20...♖f7 The Georgian GM, decides to find shelter for his king on the kingside, where he has not too many pawns, but can use his minor pieces for defending. The next moves are all about d5! White wants to push it, while Black must prevent is at any cost. [20...♖c7 with the idea of 0-0-0 21.f4! g4 22.f5 ♕f7 23.♕f4 and d5 is coming in the next move; 20...♖d7 21.♖he1 ♖f7 has a nice refutation with diagram (21...0-0-0 22.d5!) 22.d5! cxd5 23.♘xd5 ♕xd5 24.♕c3!+-]

21.♕e3 ♖c8 Black pins two pieces in one move, White has to lose some time to refresh the threat.

22.♖b1 ♖d7 23.♖d2! ♖g8 24.♕c2! After the queen left the g5 without her protection, White rightly changes his mind, and frees the e4 square for the knight, which will attack the g5 pawn and f6 bishop in the same time.

[Black prepared a cold-blooded idea against 24.d5 cxd5 25.♘xd5 ♘f5! after which, it is not that easy to break through.]

24...♙f5 25.♘e4 ♘e6 [25...♙xe4 26.♙xe4 without the white squared bishop, the d5 move is even more decisive!]

26.♘2g3! Parade of the knights!

26...♙e7 [26...hxg3 27.♖xh6+-]

27.♘xf5 ♘xf5

28.♙b3! It is clear, that Black has lost this battle. He can only wait, how his opponent is going to finish him. In the

following moves, White uses all the light squares, which became vulnerable after the bishop is taken.

28...♙f8 29.♙e2! heading to f3 or h5, in addition frees the way for the d1 rook, when d5 becomes even more crucial.

29...♖g6 30.d5 [30.♙f3 was also winning]

30...♘eg7 31.♘c5 ♙c7 [31...♙xc5 32.♙xc5+ ♘d6

33.f4! Opening the f-file. Not so nice position for players who prefers to knights to bishops.]

32.dxc6 bxc6 33.♙c4 and mate is coming soon! A great game by Mikhail Brodsky. It will be interesting to see, what the big guys, like Aronian, Kramnik and the others will find out against the 10.g6! move. In my opinion, they will search for new ideas in the other mainline with 5... ♘f6. **1-0**

(3) Hou,Yifan (2639) – Stefansson,Hannes (2531) [C26]

Reykjavik Reykjavik, 11.03.2011

[Balogh Csaba]

In our next example, we can enjoy a nice positional game with a neat finish by the current Women World Champion, Hou Yifan!

1.e4 e5 2.♘c3 ♘f6 3.g3 This is the so-called Mieses variation. Black can decide now the character of the game. The text move leads to an opened position, while the ♙c5, d6 setup is rather for positional players.

3...d5 4.exd5 ♘xd5 5.♙g2 ♘xc3 6.bxc3 ♙d6 7.♘f3 0-0 8.0-0 ♘d7

9.d4 So far, Black played the most common moves of the variation, which is a bit strange to me, since I already don't see the way, how he could equalize.

9...c6 10.♖e1 exd4 [Black could not hold the tension in the center with 10...♖e8 since after 11.dxe5 he is losing material.]

11.cxd4 ♘b6 Logical play by the Icelandic GM. He tries to create a blockade on c4 with ♙e6. If he manages to do so, he would be fine. However, Hou Yifan finds a very nice idea, which allows her to push c4, before Black could set up his ideal position.

12.♙d3! A positional double threat! The main idea, what Black must parry is ♘g5, but after that, White is in time to play the important c4 move!

12...h6 [12...♙e6? 13.♘g5] **13.c4±** White achieved a small advantage from the opening. She has the better pawn structure, and more space, which gives her the possibility for more comfortable piece play.

13...♙b4 14.♙d2 By exchanging the dark squared bishops, White keeps the initiative, but in the same time eases Black's defending task. [The principled move was 14.♖e2± to keep all the pieces on board, since it is very hard for Black to coordinate them.]

14...♙xd2 15.♘xd2 ♙f6

16.a4! We must remember on this move, it is very typical for this pawn structure! White would like to play a5-a6, creating weaknesses on the queenside, where she is clearly better. The b7 and c6 pawns are too much vulnerable, Black can not hope in equality.

16...♗f5 17.♔c3 The human move, keeping the strong bishop on board. [However an interesting plan was suggested by the computer: 17.♕e4 after exact hanging the strong bishop, the knight arrives to the center with a tempo, and it can quickly create serious problems on the d6 square. 17...♕xe4 18.♘xe4 ♔g6 19.a5 ♘d7

20.♔a3!± very subtle move. ♘d6 is going to be really annoying for Black.]

17...♖ad8 18.a5 ♘c8 19.♘b3 [19.♖e5± came into consideration]

19...b6 Black would like to exchange some pawns on the queenside, but he can not get rid of all of them! [19...♖fe8 was better chance]

20.♖e5! c5 This was the point of the previous move, White can not take on c5...

21.♖ae1 [21.dxc5? ♖d3]

21...cxd4 22.♘xd4 ♕d7 23.c5! bxc5

24.♔xc5 The a7 pawn remained on board, which actually causes all the problems of Black's positions. He can not escape to any kind of endgames, since a7 pawn might be hardly defendable. In addition, the c8 knight is forced into passivity.

24...g6 [24...♖fe8 25.♖xe8+ ♕xe8 26.♘c6 ♕xc6 27.♕xc6±]

25.h4 Opening the back rank, and trying to weaken the kingside.

25...h5

26. ♖e2! Very nice play by Hou Yifan! She transfers her knight to f4, where it might be sacrificed on g6 and on h5 with different kind of mating attacks, and also wants to jump to d5, when the f6 check could be decisive. [26. ♘c6!? was an alternative]

26... ♜fe8 [26... ♛d6 27. ♖f4 ♛xc5 28. ♜xc5 The exchange of the queens would only save Black from getting mated, but the endgame will be still lost for him.]

27. ♖f4 ♜xe5 28. ♜xe5 ♛d6 29. ♛c3? This a mistake, which gives Black a chance to survive. [29. ♛e3! should have been played, when Black is simple paralyzed. He has no useful move, while ♖d5 is coming.]

29... ♖e7! Thanks to the mistake in the last move, Black can finally activate his knight. Stefansson starts to find the only moves.

30. ♖d5 ♘e6! [30... ♖xd5? 31. ♜xd5 ♛e7 32. ♛d4 the pin would be deadly for Black.]

31. ♖f6+ ♜f8 32. ♖h7+ ♜g8 Probably, White was in time trouble, so now and in the next move, she repeats two times, to approach to the 40th move.

32... ♜g8 33. ♖f6+ ♜f8 34. ♜c5 White opens the diagonal for the queen, so she creates hidden threats after different knight jumps.

34... ♖f5? Black is aiming for further activation of the knight by jumping to d4, but it was already necessary for him to take care of his king, by offering exchange of the queens. [34... ♛d1+ 35. ♜h2 ♛d4 36. ♛xd4 ♜xd4 37. ♜c7 ♜d2 Black could have good chance to save the game.]

35. ♖h7+ ♜g8 36. ♖f6+ ♜f8

37. ♖d5!? [37. ♘d5! was even better 37... ♖e7 only move, but still after (37... ♘xd5 38. ♜xd5 ♛e7 39. ♖xh5+-) 38. ♘xe6 ♛xe6 39. ♖h7+ ♜g8 40. ♖g5! ♜d1+ (40... ♛d6 41. ♛c4 ♛f6 42. ♜c7+-; 40... ♛e2 41. ♛f6 ♜d1+ 42. ♜h2) 41. ♜h2 ♛e1 42. ♛xe1 ♜xe1 43. ♜c7 a6 44. ♜a7 the endgame must be winning.]

37... ♜g8?! This move allows to the World Champion to finish the game beautifully! [37... ♖e7 would have been the only move, which is practically impossible to find for a human. The position remains difficult for him anyway. 38. ♖f4!?

38. ♖c6! ♜b8 [38... ♜f8 39. ♘f6+ ♔h8 40. ♘xh5+ (40. ♖c7!?) 40... ♘d4 41. ♘f4±]

39. ♖f6+ ♔f8

40. ♖xe6 [Pretty finish! In the last move of the time trouble, when people usually commits the most foolish mistakes, Hou Yifan finds a brilliant way to finish the game. Black resigned immediately, seeing the line 40. ♖xe6!! fxe6 (40... ♖b1+ 41. ♖e1) 41. ♘d7+! ♖xd7 42. ♖h8+ ♔e7 43. ♖xb8+- An instructive game, about how to handle this pawn structure. In my opinion, Black is more clever, if he chooses the closed system against the Mieses variation with 3... ♟c5 and d6.] **1-0**

(4) Avrukh,Boris (2591)
— Navara,David (2700) [D76]

Reykjavik Open 2012 Reykjavik (4.2), 09.03.2011

[Arkadij Naiditsch]

We are facing an interesting game from one of the biggest opens in the world, the Reykjavik Open. The second seed David Navara is coming out with a slightly worse position out of the opening, due to a very interesting idea 11. ♔c2!?, I guess, we will see more often this move in the future games. Unexpectedly, White is losing the control over the game from move 19 and getting quickly in a lost position by a very nice tactic by Black

1.d4 ♘f6 2.c4 g6 3.g3 ♙g7 4.♙g2 d5 5.cxd5 ♘xd5
6.♘f3 ♘b6 7.♘c3 ♘c6 8.e3 0-0 9.0-0 ♖e8 10.♖e1 a5
we are still in the opening part. Actually only in the be-
ginning of it!!

11.♔c2!? Avrukh is a very well prepared player and one more time he is showing it with his interesting idea 11.♔c2!? This move is almost a novelty!! [11.♔e2 is the main continuation for White 11...♙e6 (11...e5 12.dxe5 ♘xe5

13. ♖xe5 ♙xe5 14.e4 is the another main line) 12. ♘d2 ♘b4 13. ♖d1 c6 14.a3 ♘d4 15. ♘ce4 with a fighting position]

11...e5 a standard reply in this kind of positions **12. ♘xe5 ♘xe5 13.dxe5 ♙xe5 14.e4 c6** a move with a hidden trap [14... ♙e6 15.f4 ♙d4+ 16. ♙e3 ♙xe3+ 17. ♖xe3 ♙d4 18. ♙f2 and maybe White is doing little better]

15. ♙h6 [now 15.f4?! is not working cause of 15... ♙d4+ 16. ♙e3 ♙xe3+ 17. ♖xe3 ♘c4 18. ♖d3 ♙b6+! the key is the check on b6 that is now possible after Black played 14...c6]

15... ♙e7 Black continues to play against f4, to make it less effective **16.f4** [16. ♖ad1 ♙g4 17.f3 ♙e6 18.f4 ♙c5+ 19. ♙h1 ♙xc3 (19... ♙d4 20.f5!, typical break through for White) 20.bxc3 ♘c4 with a very complicated position]

16... ♙c5+ 17. ♙h1 ♙xc3 18.bxc3 [18. ♙xc3?! exchange of Queens is a bad idea for White 18... ♙xc3 19.bxc3 ♘a4! usually all the endgames are fine for Black]

18... ♘c4 [18... ♙h5 19. ♙g5 ♘c4 20. ♙h4 and again White is in time to avoid ♙h3 move]

19. ♖ad1?! a too standard play, White should have been more careful [right would be 19. ♙g5! to avoid Blacks ♙

coming to h5 19... ♙e6 (19... ♙g4 20.h3 ♙e6 21. ♙f6 ♙h5 22. ♙h2 and White is doing better) 20. ♙f6 ♙h5 21. ♙g1! ♙h3 22. ♙h1 and White is in time to avoid the exchange of the bishops].

19... ♙h5! Black is using their sudden chance! A high class player like Navara, You don't need to ask twice

20. ♙g5 ♙h3 21. ♙f2?! quite a senseless move, White lost totally control over the position [much more solid has been 21. ♙f6 ♙xg2+ 22. ♙xg2±]

21...h6?! A very important moment in the game! White got 2 options, to take on h3 first and then to play ♙f6, or to continue with immediate ♙f6 [21... ♙xg2+! the correct move order for Black! 22. ♙xg2 (22. ♙xg2 ♘e3) 22... h6! (22... ♖xe4 23. ♖xe4 ♙xd1 24. ♖d4!) 23. ♖d4 (23. ♙f6 ♖xe4!± see the game) 23...hxg5 24. ♖xc4 gxf4 With a clear advantage for Black]

22. ♙f6? a blunder [22. ♙xh3! would be the right move 22... ♙xh3 23. ♙f6 ♙e6 24.e5 b5 25. ♖d4± Position is quite hard for an evaluation. White is controlling the d-file, what is of course super important and in case White manages to create any threats on the king side, it could get really dangerous for Black. On the other hand, Black

managed to exchange the White squared bishops, which is very good. The knight on c4 is having a great position. But what to do next for Black — this is hard to say... that's why the evaluation of the position should be with a small advantage for White]

22... ♗xg2+ 23. ♔xg2

23... ♖xe4! a very nice tactical trick!

24. ♖xe4 ♕xd1 25. ♖d4 ♖h5! probably White blundered this move. White again can not take the knight on c4

26. ♕e1?! [26.f5! the last chance to fight, and probably a good one!! 26... ♕xf5 27. ♕xf5 ♘e3+ 28. ♔f3 ♘xf5 29. ♖d7 ♖b8 30.c4! with good chances for a draw]

26... ♕f5 27. ♗h4? [27. ♕e7 ♘e3+! 28. ♕xe3 ♕xf6 29. ♖d7+ Whites position is bad, he is a pawn down, but still Black will have a long way to win this position. White always got the idea of playing ♕e5 after which a rook endgame is arising, and as we know, in rook endgames the drawing chances are increasing!]

27...b5! now Whites hopes are almost down to 0 to save the game. Black is not only a healthy pawn up, but having

a better knight against Whites bad bishop, which is taking a horrible position on h4

28. ♕e7 Maybe White is in a time trouble... anyway it would probably not make anymore a big difference

28... ♔g7 29. ♕e2

29...c5! a nice finishing move [29...g5 30.fxg5 hxg5 31.g4! Black is still much better, but White didn't loose the bishop]

30. ♖e4 g5! 31.fxg5 hxg5 32.a4 [now at 32.g4 ♕d5 is simply winning, that's why Black needed to include 29...c5]

32... ♖d8 [32...gxh4 would win of course as well]

33. ♖f4 gxf4 34. ♗xd8 f3+! easy but pretty

35. ♕xf3 ♕xf3+ 36. ♔xf3 bxa4 0-1

Endgame section

(15)

[Balogh Csaba]

This week, we study rook endgames with a- or h-pawns! In these cases has the defensive side the biggest drawing chances. However, in this example, Black's king is too far, and White's rook has enough time to rescue the king from the corner. Black king should stay on e7, in order to make a draw, as we will see in the next diagram. **1. ♖c2 ♔e7 2. ♜c8** This is the winning technique! **2... ♔d7** [2... ♔d6 3. ♜b8 ♜a1 4. ♔b7 ♜b1+ 5. ♔c8 ♜c1+ 6. ♔d8 ♜h1 Black's trickiest try, but it does not save him. 7. ♜b6+ ♔c5

8. ♜c6+! ♔d5 (8... ♔b5 9. ♜c8 ♜h8+ 10. ♔c7 ♜h7+ 11. ♔b8+-) **9. ♜a6 ♜h8+ 10. ♔c7+-** **3. ♜b8 ♜a1 4. ♔b7 ♜b1+ 5. ♔a6 ♜a1+ 6. ♔b6 ♜b1+ 7. ♔c5 1-0**

(16)

[Balogh Csaba]

In practice, we can very often meet with this endgame. Black's king is now close enough to the corner, White has no winning chance at all. **1. ♜h2** [1. ♜d3 ♜b2; 1. ♜c2 ♔d7] **1... ♔d7 2. ♜h8 ♔c7 3. ♜b8 ♜a1** White has managed to send away the rook from the b-file, but Black king has just arrived, and the king will remain squeezed into the corner. **1/2**

(17)

[Balogh,Csaba]

This is the so-called Vancura position. By attacking the pawn from the side, Black does not allow White to activate his rook, and get out from the corner. And when the white king is trying to approach to the pawn, he could not hide himself against the side checks. **1.♔d5** [1.a7 ♖a6 2.♔d5 ♜a1 If the pawn is pushed to a7, then Black can hold the draw with vertical checks, if his king is on g7 or h7! 3.♔c6 ♜c1+ 4.♔b6 ♜b1+ 5.♔c7 ♜c1+ 6.♔d6= (With rook on b8 and pawn on b7, the outcome is the same)] **1...♜f5+ 2.♔c4 ♜f6 3.♔b5 ♜f5+ 4.♔c6 ♜f6+ 5.♔b7 ♜f7+** If White does not push his pawn until a7, and so, keeps a square on a7 for his king against vertical checks, Black holds the draw, by giving horizontal checks. **1/2**

(18)

[Balogh,Csaba]

White pawn has reached the 7th rank, but there is no time for vertical checks, because of the bad position of Black's king. **1...♜g7+** [1...♜d1+ 2.♔c6 ♜c1+ 3.♔d5 ♜d1+ 4.♔e4 ♜e1+ 5.♔d3 ♜d1+ 6.♔e2 ♜a1 7.♜h8+-] **2.♔c6 ♔g5!!** Black hides his king behind his own rook from the treating check! [2...♔h7? 3.♜h8+-] **3.♔b6 ♜g6+ 4.♔b5 ♜g7 1/2**

Clash of the Titans

(19) Tal, Mihail – Gurgeni, Bukhuti [B15]

URS-ch36 Alma-Ata, 1968

[Balogh Csaba]

The next game, I would like to present, is played by the “magician of Riga”! Yes, yes, the 8th World Champion, Mikhail Tal! His amazing fantasy for combinations, has put him to the top of the chess world. He won the title against Botvinnik in 1960, when he was only 24 years old! Unfortunately for him, Botvinnik took a revenge on him in the next year, and he was not able to win back his crown, but anyway we will never forget his fantastic victories, from which I would like to show you one. His victim was Bukhuti Gurgeni, Grandmaster from Georgia.

1.e4 c6 2.d4 d5 3.♘c3 b5 A rare move in the Caro-kann defense, which the Georgian grandmaster has tried several times.

4.a3! White reacts precisely, after stopping his opponent's idea to push b4, the c5 square becomes a weakness in Black's camp.

4...dxe4 5.♘xe4 ♙f5 6.♙d3!? Typical Tal! He does not care about losing a pawn in the opening, if he gets 2 tempi for that. Gurgeni respected his opponent, and did not accept the “gift”.

6...♙xe4 [6...♙xd4 7.♘f3 ♙d5 8.♙e2 White gets very strong initiative for the pawn, Black's pieces are completely undeveloped.]

7.♙xe4 Black could not be too happy with his opening. He gave up his bishop pair, and weakened his queenside pawn structure might be a problem in the future.

7...♘f6 8.♙d3!? Amazing! I think, almost everybody would have retreated the bishop on f3, and developed with ♘e2, to make pressure against the weakened c6 pawn, and having a better position. However, Tal was always thinking about giving mate. He played ♙d3, offering the same “gift” on d4, and he expects his opponent to castle short side, when his d3 bishop will eye dangerously on the h7 square. [8.♙f3±]

8...e6 [In my opinion, the sacrifice should have been accepted for the 2nd time. 8...♙xd4 9.♘f3 ♙d8 10.0-0 e6 11.♙e1 ♙e7 12.a4 b4 13.♘e5 when, White definitely gets strong compensation, but at least, Black could have said, that he was a pawn up!]

9.♘f3 ♙e7 10.♙e2 ♘bd7 11.0-0 0-0 12.♙e1 ♙e8 13.♘e5! After both players have developed their pieces to their logical places, it is time to have some action! Tal scares his opponent with the possibility of the sacrifice on f7.

13...♘xe5 14.dxe5 ♘d5 15.♙g4! Of course, the pieces are going into the attack. Where also could have they gone, if Tal is leading them?! :-)

15...a5

16.h4!! What?! A blunder from the World Champion? Of course not! It is an intuitive pawn sacrifice, just as the d4 pawn in the opening phrase. This time, the Georgian decides to take it, otherwise h5, and the king is under mating attack.

16... ♟xh4 17.g3 ♟e7

18. ♔g2!! And here we get the point of the sacrifice! The magician just wanted to get rid of his h-pawn, in order to use the h-file for mating with the rook.

18...g6 Black must try to close the diagonal of the d3 bishop.

19. ♖h1 ♟f8 Gurgienidze tries to bring defenders around his king, but he is just too late.

20. ♟g5! Developing with tempo, and opens the 1st rank for the a1 rook, to join into the attack.

20... ♔c7

21. ♖h7!! Tal does not want to waste time on doubling the rooks on the h-file. He is crushing immediately.

21... ♔xe5 [If Black takes the rook 21... ♔xh7 22. ♖h1+ ♔g8 23. ♖h4 ♟g7 24. ♟f6! ♖h8! threats with mate 24... ♟xf6 25.exf6 now ♖h7 threats with forced mate 25... ♔f8 26. ♖h8+! ♟xh8 27. ♖xh8# would have been another nice finish!]

22. ♖xf7!! When the Magician starts to sacrifice, then it is really hard to stop him! This time, Black has no other choice, must take the rook. [22. ♖ah1 ♟g7 would not be so easy.]

22... ♔xf7

23...♔g8 If the bishop is taken now or in the next move, Black loses his queen. [23...♔xg6 24.♕f4+ ♔f6 25.♖h4+! ♔f7 26.♕xe5+-]

25. ♖d7 [25. ♖xc6+-]

25...  **c7** **26.**  **xc6** Black has managed to not be mated, but he ended up with 2 pawns down and lost position. The rest is matter of technique.

26...♖f8 27.♔d1 ♕c5 28.♙f3 ♕xc2 29.♖d7 ♖f7
30.♖d8+ ♗f8 31.♙f6! Even is completely winning position, Tal is playing for the spectators!

31... ♖h7 32. ♙e4 ♖h6 33. ♙g5 ♕h8 The queen is pursued into the corner.

34. ♖d7 and Black resigned. Typical victory by Tal! When he had a good day, he won all his games in this style. And he had quite often a good day, luckily for chess fans! :-)
1-0

Editorial Preface

The most interesting moment of the week was the match between Baden-Baden and Werder Bremen in the German Bundesliga. The two strongest teams played together for the first place and they arrived with their heavy artillery. Baden-Baden won the battle to 4.5-3.5, with a decisive victory of Michael Adams over Laurent Fressinet. On the first board, spectators could enjoy a fantastic game, Anand drew against Eljanov, a game that is also central for this issue of CEWN.

Other games included in this edition are the fascinating finish of the Reykjavik Open between the young stars Caruana and Yifan Hou, the Efimenko-Gonda encounter from Schachbundesliga, and the EIWCC decisive game Gunina-Muzychuk.

The classic game is by the great Smyslov, while in the puzzle section you will find out how sometimes a silent move can be much stronger than an eye-catcher.

Meanwhile the European Individual Championship has just begun. We are playing there, so expect a nice report from the venue with the most interesting games in the weekly newsletter.

As usual, we wish you fun, and hope you will enjoy the new issue of CEWN!

4 best games of the past week

(1) Anand,Viswanathan (2817)
— Eljanov,Pavel (2683)

Schachbundesliga 2011/2012 (12.1), 17.03.2012

[Arkadij Naiditsch]

We are in the 12th round of Bundesliga, in the decisive match between the teams of Baden-Baden and Werder Bremen. Both teams arrived with an almost full line up. Anand-Eljanov was the most interesting and spectacular game of the round. The World Champion had a clear advantage after the opening, but slowly Eljanov managed to come back into the game and even had a chance to make a full point after the first time control.

1.d4 d5 2.c4 c6 Another game in the Slav defense, which recently enjoys high popularity.

3.♘f3 ♘f6 4.♘c3 dxc4 5.a4 e6 currently a very fashionable line

6.e4 ♗b4

7.e5!? Not the main move here. Much more often we can see 7.♗xc4 or 7.♗g5

7...♘d5 8.♗d2 b5! Black needs to hold the c4 pawn!

9.axb5 ♗xc3 10.bxc3 cxb5 11.♘g5 h6 this move is almost a novelty [11...♘c6 12.♙h5 ♙e7 13.h4!? is the usual continuation here with a very sharp and unclear play]

12.♙h5 g6?!N this is already a novelty, but hard to say if Eljanov really prepared it... [in the game of the fresh woman European Champion Gunina.V happened: 12...0-0 13.♘e4 ♘c6 14.♗xh6 (14.h4!? with the idea ♗h3-g3 could bring Black in quite some danger) 14...gxh6 15.♙xh6 f5 16.♙g6+ with a draw]

13.♙h3 f5 Black needs to act quickly. It cannot let White play ♘e4

14.exf6

14...e5?! Black is trying to continue active play, but blundering one of the opportunities for White [more solid been 14...♘c6 15.g4 ♙xf6 16.♘e4 ♙e7 17.♗g2 with a strong initiative for the pawn]

15.f7+? White is missing his chance! Even the World Champions sometimes make a mistake :) [the right choice

would be 15.g4! Black cannot do anything against the deadly threat ♖g2... for example 15...exd4 16.♗g2 ♘c6 17.0-0 ♔f8 18.♞fe1 with a deadly attack]

15...♔f8 16.♘e6+ ♔e7! probably this move White underestimated [16...♗xe6 17.♞xe6 exd4 18.♞xg6 Would lead of course to a winning position for White]

17.♘xd8 ♗xh3

We are facing a “crazy” position. Everything is totally unbalanced and the position is very hard to play. Every move White and Black have several choices how to continue and “the choice” is one of the hardest things in a chess game. Objectively speaking, White should still do better here

18.gxh3 [18.f8Q+!? pretty move, even if it is very unclear if it is the strongest one 18...♞xf8 19.♗xh6 ♞f5 20.gxh3 ♔xd8 (20...exd4 21.♘b7 ♞e5+ 22.♔d2 ♘c6 23.♗g2 dxc3+ 24.♔c1 in this very complex position probably White still has better chances) 21.dxe5 ♞xe5+ 22.♔d2 Black has a better pawn structure, but the White’s bishop pair plus the better development should bring them some edge.]

18...♞xd8 19.dxe5 ♔xf7 20.♗g2 ♘c6

21.0-0! strong play by White. In case Black manages to put: a5, ♔e6, ♘ce7, ♘f5 Black will be doing well. White needs to try to open the position as fast as possible to give the bishops space to act. Also the Black’s king position will be very open and dangerous.

21...♘xe5 Black accepts the battle! [more careful would be 21...a5!? 22.f4 ♔e6 23.h4! White needs to destroy the blockade pawn on g6 at any costs 23...b4 24.h5 bxc3 25.♗xc3 ♘xc3 26.♗xc6 ♞a6 and it is hard to say even who is doing better here]

22.f4 a very human move [22.♞fb1! would be a choice of the computer. Black cannot hold the b5 pawn 22...a6 23.♞xb5 axb5 24.♞xa8 ♞d6 25.♔f1 and finally we have a “human” position. White is having a bit more pleasant endgame]

22...♘d3 23.f5 gxf5? this is a serious mistake by Black. Now White is getting what he was hoping for. A very open play where the bishop pair is turning into a deadly weapon [23...g5! Black needed to keep the position closed 24.♞a6 ♘3f4 25.♗xf4 gxf4 26.♞fa1 and again we continue to facing a very unbalanced game. One thing is sure, it is very hard for Black to play in such a position.]

24.♞xf5+ [24.♞a6 f4!]

24...♔e6 25.♖h5 a5 26.♖xh6+ ♔e5

27.♗e1! another great move by the World Champion. White is bringing the bishop to g3. Black king is standing “naked” in the middle of the board, this cannot end well for him....

27...♘5f4 28.♗g3 ♔f5 29.♖f1! there is no reason for White to win the exchange by playing [29.♗xa8 ♖xa8 30.♖f1 ♔e4 and Black has some drawing chances because of the b4 push that will leave Black with very dangerous pawns...]

29...♔g5 30.♖b6 ♖ab8 31.♖a6 it is hard to give Black an advice here. And to play this position with out a “computer” help is almost impossible. From the human point of view, White position looks close to winning.

31...♖f8 32.h4+! ♔g4 33.♗f3+ ♔h3 Black king trapped, pieces are hanging and it seems that nothing could save Black anymore... but game of chess is unpredictable even at the highest level

34.♗d1? a big mistake, probably based on a miscalculation [the simple 34.♖xa5 ♖b6 (34...b4 35.♖g5) 35.♔h1 ♖g8 36.h5 and it is clear, this game will not last for a long time. White is winning] 34...♖g8 35.♖f3

35...♖bd8! short on time, Black finds great defensive moves

36.♔f1? another big mistake by White [36.♔h1 ♘e5 37.♖f1 ♖xg3 38.hxg3 ♘d5 with a very unclear position]

36...♘e5! suddenly Black is the one who is doing better!

37.♖xf4 ♖xd1+ 38.♔e2 ♖gd8 39.♖xa5 ♖1d2+ 40.♔e3 ♘g4+ 41.♔e4 The time trouble is over. It is easy to see that Black is doing better, but it is by far not easy to convert this advantage

41...♖e8+

[41...b4! 42.cxb4 c3 43.♖c5 c2-- and probably Black would have won the game. The bad position of the White

king, plus the c2 pawn is giving Black decisive advantage. Funny to see that for the last 20 moves the Black king was on a run and all White pieces were around him, now the situation has changed and the White king is the one under attack in the centre of the board]

42.♔f5 ♘e3+? [still here it was not too late for the b4 push 42...b4 43.cxb4 c3 44.♖c5 ♘e3+ 45.♔g6 c2 and Black is keeping some winning chances]

43.♔g6 ♘d5 44.♖xb5! a nice idea to escape. White is giving the exchange, but getting rid of the dangerous b pawn. The position of the King on g6 plus the bishop, which will protect the White's king from checks plus will hold the Black's c pawn, is giving White almost a draw

44...♘xf4+ 45.♙xf4 ♖d3 [last try to play for a win been 45...♖f2!? 46.♙g5 ♖e6+ 47.♔g7 ♖a2 probably the position is close to a draw, but Black could still keep on trying...]

46.h5! last technical move. The white pawn is as dangerous as the Black c pawn, and as we know, a bishop on a long diagonal is as good as a rook in such endgames.

46...♖xc3 47.h6 ♖b3 a very exiting and interesting game! **1/2**

(2) Gunina,Valentina (2511)

– Muzychuk,Anna (2583) [D43]

European Women's Championship GAZIANTEP, 13.03.2012

[Balogh Csaba]

The following battle was the decisive game of the European Individual Women's Chess Championship in 2012 in Turkey. It was played in the last round, when Anna Muzychuk was a full point ahead of competition and just a draw was enough for her to secure the victory in the tournament. Her opponent was Valentina Gunina from Russia, who had the chance with this win not only to catch the leader, but to become champion with better tiebreak! So the stake was amazingly high and the players started a real fight!

1.d4 d5 2.c4 c6 3.♘f3 ♘f6 4.♘c3 e6 5.♙g5 h6 Anna is following the "old rule", if you need to make a draw, you must play actively, playing for the draw often leads to punishment...

6.♙xf6 White avoids the very sharp Moscow variation with 6.♙h4, the text move leads the game into more calm waters.

6...♙xf6 7.e3 ♘d7 8.♙d3 dxc4 9.♙xc4 g6 10.0-0 ♙g7 Nothing new so far, you can find hundreds of games in the database.

11. ♖e1 This move used to be a rare sideline, only GM Miso Cebalo played it a few times in the 90s. Then in 2010, Leko tried it against Gelfand, and achieved a comfortable advantage, which brought many high-class followers to the line. The move has a very subtle point (typical for Leko), what we can understand, if we take a look at the 11.e4 variation. [On 11.e4 Black's standard reaction is 11...e5 12.d5 ♘b6 13. ♕b3 ♕g4 when he takes on f3, swaps the queens, worsens the pawn structure, and with the help of the opposite color bishops makes a draw. With 11. ♖e1, White prepares for this plan to be able to play ♖e3 after ♕g4! In that way he could keep the queens on board, and achieve an edge due to the strong d5 pawn.]

11...0-0 12.e4 e5 13.d5 ♖d8 The whole fight is around the d5 square. White would like to install a piece there, while Black should try to force his opponent to take back with the e4 pawn. [13... ♘b6 14. ♕b3 ♕g4 15. ♖e3!± As we mentioned, this is the whole idea behind the 11th move.]

14. ♖e3 An interesting novelty to 14.h3. The rook stands well on e3, it might be doubled on the d- or c-file in the future, and prevents the ♕g4 counter plays forever.

14...b5! Very strong response! Black wants to play ♘b6, with the threat of b4 confusing the pieces around the d5 pawn.

15.dxc6! This is the only way to have a piece on d5, but after losing the c4 bishop, it already has much smaller effect. [15. ♕b3 ♘b6 and Black is fine.]

15...bxc4 16. ♘d5 ♖d6?! This is a mistake. It moves into ♘d2, when ♘xc4 is coming with tempo. [16... ♖e6 was the right move 17.cxd7 (17. ♘c7? ♖xc6) 17... ♖xd7! followed by ♕b7, when Black is completely fine.]

17.cxd7 ♕xd7 18. ♘d2! Gunina rightly points out the fault of the 16th move. Still, Black had a fantastic opportunity to maintain the balance...

18... ♕b5?! Too passive. [18... ♕f5!! A fantastic idea to get rid of the d5 knight. 19. ♘xc4 ♖c5 and White has no good way to parry the ♕xe4 threat.]

19. ♖c2 [19.a4! it was better to include the a4-Ba6 moves to avoid the 20th move. 19... ♕a6 20. ♖c2 ♖ab8 21. ♖c3 ♖dc8 22. ♖b1!± White is going to have a healthy pawn up in the next move.]

19... ♖ab8! 20. ♖c3 ♖a6! Very resourceful idea...

21.a4! [21.♘xc4 ♕xc4 22.♖xc4 ♖xb2!]

21...♕f8! Using the pin on the a-file, Black tries hold the c4 pawn by ♖dc8 and also wants to activate the bishop through c5-d4! Of course the later idea has a big disadvantage as well, that it leaves the king without its main defender. [21...♕c6 22.♞e7+ ♔h7 23.♞xc6 ♔xc6 24.♖xc4±]

22.♞f1 [22.♞f3! was the right move, immediately attacking the e5 pawn and on 22...♕d6 the same idea would work, what we will see in the game...]

22...♕c5 Allows a great move to her opponent... [It was time to exchange a pair of minor pieces and only then to activate the f8 bishop. 22...♕c6! 23.♞fe3 ♕xd5 24.♞xd5 ♕c5 25.♖b1 (25.♖xc4 ♖xb2! 26.♔xb2 ♔xc4) 25...♖dc8 with unclear position.]

23.♔c1!! This great move was probably missed by Black, otherwise she would play 22...♕c6!. White protects the a1 rook, so the b5 is already hanging and at the same time attacks the h6. [23.♞c7 would lead to nowhere 23...♔a5 24.♞xb5 ♖xb5 25.♖xc4 ♕d4 Black has enough activity for the pawn.]

23...♕c6 24.♞f6+! another very strong move, other lines were not easy at all. [24.♔xh6 ♕xd5 25.♖h3 ♔f6 Black could have prevented the immediate threats; 24.♖xc4 ♕xd5 25.♖xc5 ♕xe4 26.♖xe5 ♕d3 the activity of the Black pieces would give him decent drawing chances.]

24...♔g7 25.♞g4 g5 Only move! [25...♕xe4 26.♔xh6+ ♔g8 27.♖h3+-]

26.♖xc4! And it seems that White won a piece and the game, but...

26...♖d1!! This beautiful idea forces White to find further strong moves to collect the full point. In general, we can say that if somebody defends in the most precise way in bad positions, he usually gets a chance from destiny...

27.♔xd1 ♔xc4 28.♔f3 and here it is! [Only 28.♞g3! would have won instantly, when the knights (and later the queen joins) would decide the game against the "naked" king... 28...♕xe4 (28...♕d4 29.♔f3+-)]

29. ♔e1!! A similar move to 23. ♔c1!!, which had to be foreseen before playing 28. ♖g3!]

28... ♔xe4 Black is too greedy and Gunina finds an excellent way for punishment. [28... ♔e6! would have given saving chances 29. ♖g3 ♖b3! 30. ♔e2 ♗d4 31. ♖f5+ ♔h7 32. ♖c1! When White is undoubtedly better, but still a long way to win the game...]

29. ♖c1! Just like in the 26th move, White uses the unfortunate situation of the bishops, but there are no moves like 26... ♖d1!! anymore. White is winning material in all the lines... [29. ♔f6+ would be a mistake to leave the g2 pawn without protection... 29... ♗g8! 30. ♖xh6+ ♔h7]

29... ♔g6 [There is an elegant win after 29... ♔xf3 30. gxf3 ♗xf3 (30... ♗xf2+ 31. ♖xf2 ♖xb2+ 32. ♖g3 ♗xa4 33. ♖c7±) 31. ♖xe5 ♖c8

32. ♖d3!+- wins a piece.; 29...h5 30. ♔f6+! ♔g8 31. ♔xg5+- check is a big difference to the 29. ♔f6+]

30. ♔c3 ♔e4

31. ♔xe5+! ♔xe5 32. ♖xe5 One of the bishops is falling, Black tries to get as many pawns as possible, but she cannot eliminate all of them.

32... ♗xf2+ 33. ♖xf2 ♖xb2+ 34. ♖e3 ♗xg2 35. ♖g3 ♗d5 36. ♖h5+ The king remains in mate net.

36...♔f8 37.♖d1 ♘e6?? A terrible blunder in a lost position... [37...♖xh2 38.♖xd5 ♖xh5 39.♖a5±]

38.♖d8+ And Black resigned, because of the ♘c6 mate. With this picturesque mate, Valentina Gunina became the new European Women Champion, while Anna Muzychuk took "only" bronze medal. The Russian Grandmaster, Tatiana Kosintseva finished second place. Congratulations to all of them! **1–0**

(3) Hou,Yifan (2639)

– Caruana,Fabiano (2767) [C78]

Reykjavik Open 2012 Reykjavik, 13.03.2012

[Balogh Csaba]

The following was the crucial game of the Reykjavik Open! In the last round Fabiano Caruana had half a point advantage, but he had to face Hou Yifan, and we already know how dangerous she is. In an interesting battle in Ruy Lopez, the Women World Champion outplays the Nr. 7 in the World in a complex middle game, but in the last moment she fails to convert the decisive advantage into full point.

1.e4 e5 2.♘f3 ♘c6 3.♙b5 a6 4.♙a4 ♘f6 5.0–0 b5 6.♙b3 ♙c5 This is the Modern Arkhangelsk Defense, which lately has become very popular.

7.c3 d6 8.d4 ♙b6 9.h3 0–0 10.♙e3 h6 11.♘bd2 ♖e8 12.♖e1 ♙d7

13.♔b1 Until this moment the players are following the Navara-Caruana game from Wijk aan Zee, 2012, which continued with 13.♙c2. Hou Yifan tries an interesting novelty. White had to protect the e4 pawn... We will un-

derstand the big plus of the move compared to Navara's idea in the 13...♔b8 line.

13...♘a5 [13...♔b8 This is the standard plan for Black, Caruana played it in the mentioned game. He transfers his queen to b7 to put the e4 pawn under pressure, and tries to invite White for pushing d5. That would be a big achievement for Black to provoke this move because after leaving with the knight, he could play c6 and obtain a perfect position. This is the whole idea behind Black's concept. 14.a3! And here we get the point of the 13th move, White does not want to leave the a2-g8 diagonal with the bishop. 14...♔b7 (14...♘a5 15.♙a2 c5 16.b4±) 15.♔d3 it seems that White's chances are slightly preferable.]

14.♙c2 c5 This is another typical plan in the Ruy Lopez, but now White can happily play d5, since he does not need to worry about c6 undermining the center.

15.d5 c4

16.b4! White plays on the queenside, where he is better and has more space, thanks to the d5 pawn.

16...cxb3 [16...♘b7 17.a4± Here Black has serious problem with the terrible b7 "Ruy Lopez knight", which has no future.]

17.axb3 ♙xe3 18.♖xe3 ♘b7 19.b4! White got a small advantage out of the opening. He has a clear plan on the queenside, with ♙d3 and c4, while Black's only chance to create counter play is on the kingside by playing on f5. Of course, to prepare this will take some time, and also, it is not that effective with the poor knight on b7.

19...♘h5 [19...a5 White would not touch this pawn since that would bring back the knight to the game... 20.♙d3! ♔c7 21.♙f1±]

20.♙d3! ♘f4 21.♙f1 ♖f8

22.c4! Both players followed their plans. Now the game gets to more concrete fight with many interesting ideas.

22...bxc4 [22...f5 would be a mistake because Black loses his important central pawn. 23.c5! dxc5 24.♘xe5±]

23.♙xc4 White protects the d5 pawn (after f5 it might be weak), and attacks the a6 weakness, but on the other hand gives a chance to get rid of it. [In my opinion it was better to take 23.♘xc4 f5 (23...♙b5 24.♘fd2±) 24.♖ea3

fxe4 25. ♖xe4 ♕f5 26. ♖e1± Exchanging the d5 pawn for the a6, but even after that the d6 remains weak, the b7 knight is still terrible and White has a dangerous b4 passed pawn for the future, which guarantees an advantage.]

23...a5! [23... ♕b5 24. ♖ea3±]

24.bxa5 ♖xa5 25. ♖b4 Black did not solve all the problems, the d6 pawn causes him lot of headaches.

25...♗xc4 [25...♗xg2!? Trying to use the pin on the a-file, Black had an interesting piece sacrifice to complicate the matters. 26. ♖ea3! (26. ♖xg2? ♗xc4 27. ♖xa8 ♗xe3+ check!) 26... ♕xh3 (26...♗f4 27. ♖xa5 ♖xa5 28. ♖xa5 ♖f6 29. ♖h1 ♕xh3 30. ♖g1 followed by ♗h2. Black should not have enough compensation...) 27. ♖xa5 ♖xa5 28. ♖xa5 ♖d7 29. ♖a3! and ♗h2 in the next move.]

26. ♖xa8 ♖xa8 27. ♗xc4 ♖a1+ Caruana has no chance to save his d6 pawn, so he is looking for counter play around his opponent's king.

28. ♖e1 [28. ♖h2? ♖f1!] **28...♖a2**

29. ♗fd2! Consolidating the pieces, using the fact that ♗d3 is not a real threat. [29. ♖xd6 ♗d3! (29... ♖xc4

30. ♖xd7±; 29... ♕xh3 30. ♗e3!±) 30. ♖d1 ♖c2! 31. ♖xd3 ♖xd3 32. ♗fxe5 ♖b1+ 33. ♖h2 ♕b5 would be very unclear.]

29...♖c8! Very strong play by the World Nr.7, in each move he prepares different trick against taking on d6... [29...♗d3? 30. ♖b1!±]

30. ♖e3 To control the d3 square. [30. ♖xd6? did not work 30... ♕b5!; 30. ♗xd6? ♗d3 31. ♖b1 ♖xd2]

30...♖c2! Another devilish trick by Black, but he is facing a very strong opponent.

31. ♖h2! Hou Yifan is very patient, prevents the checks on the back rank... [31. ♗xd6? ♖d1+ 32. ♖h2 ♖c1-+; 31. ♖xd6? loses in a nice way 31... ♖xc4! 32. ♗xc4 ♖d1+ 33. ♖h2 ♖f1! 34. ♖g3 ♗e2! and ♖g1 mate.]

31...♗d3? In mutual time trouble Caruana blunders, he should have continued the plan he started... [31... ♖d1! when White has nothing better than 32. ♖b3 (32. ♖xd6? ♖xc4! 33. ♗xc4 ♖f1! 34. ♖g3 ♗e2!) 32... ♖a1! 33. ♖a3 (33. ♗b6 ♖c1 34. ♗xd7 ♖h1+ 35. ♖g3 ♖g1 36. ♖b8+ ♖h7 37. ♗f8+=) 33... ♖d1! 34. ♖b3! = to make a draw by repetition!]

32. ♔b7 This is the easiest win! [But 32. ♔xd6 is also very spectacular 32... ♙b5 33. ♖g3! ♙xc4

34. ♔f6! g6 35. ♖xg6+! fxg6 36. ♔e6+ ♙g7 37. ♔d7+! ♙f6 38. ♔xc8± ♔xd2?! 39. ♔f8+! White gives beautiful mate with a single queen! 39... ♙g5 40. ♔e7+ ♙f4 (40... ♙h5 41. g4#) 41. ♔h4#]

32... ♘c5 33. ♔b6 ♘d3 Now, Hou Yifan misses some easy wins, but we should not blame the players for the mistakes, since we know how hard is to play under the time pressure... especially when the stake is to win such a big tournament as Reykjavik!

34. ♘xd6 [Black could resign after 34. ♖g3! ♖xc4 35. ♔d8+ ♙h7 36. ♔f8+-]

34... ♖f8 35. ♘6c4 [35. ♘2c4 ♘xf2 36. ♘xe5+- was also winning.]

35... ♘xf2 36. ♔b1!? She simplifies the position into clearly better endgame. Black has problems with the e5 pawn and also the rescue of the f2 knight from the cage.

36... ♔xb1 37. ♘xb1 ♙b5 38. ♘ba3 ♙a6 [38... ♙xc4 39. ♘xc4 f6 40. d6 ♙f7 41. ♙g3 ♘d1 42. ♖d3+- The knight would be trapped.]

39. ♘xe5 ♖e8

40. d6! A great last move of the time control, indirectly protecting the e5 knight.

40... ♙b7 Finally the time trouble is over! The players get extra 30 minutes, so it is time to calm down, relax a bit, and then find the way to win.

41. ♘xf7?? Hard to explain this move, White decides to force the draw, when she had a simple win after the most logical continuation. [41. ♘ac4! White ends in a piece up in all the lines: 41... f6 (41... ♘xe4 42. d7 ♖d8 43. ♘a5! This is always the key move. 43... ♙a8 44. ♘ac6 ♙xc6 45. ♘xc6 ♖xd7 46. ♖xe4+-) 42. ♘a5 the human win (computer suggest 42. ♘d7 which might be even stronger) 42... ♙xe4 (42... ♙a8 43. ♘ec6+- and the d-pawn promotes) 43. ♘g4! ♘xg4+ 44. hxg4 and Black cannot get rid of the d6 pawn without losing the bishop... 44... ♙f7 (44... ♙c6 45. ♘xc6! ♖xe3 46. d7 ♖d3 47. d8Q+ ♖xd8 48. ♘xd8+-) 45. d7 ♖d8 46. ♖xe4 ♖xd7 47. ♘c6+-]

41... ♙xf7 42. ♖f3+ ♙e6 43. ♘b5

b8! Probably, White missed this move, but it seems to me that 43...**e5** also held the draw.

44. f2 e4 45. e2 b5 46. xe4+ xd6 47. g3
Draw agreed! As first seed, Caruana won the event and gained further 5,5 points to his rating, with which he is already Nr. 6 in the World according to the live rating list!
1/2

(4) Gonda,Laszlo (2520) – Efimenko,Zahar (2703)

Schachbundesliga 2011/2012 (13.2), 18.03.2012

[Arkadij Naiditsch]

In this game we will see a great attack by White! Especially nice is the fact that in a very complex position White is managing to continue their play with silent moves, where it seems something concrete has to work out...

1. f3 c5 2. c4 c6 3. c3 The English opening has been played lately a few times by Vladimir Kramnik, who brought it back to fashion.

3...g6 [3...f6 4.e3 see Kramnik's games]

4.g3 g7 5. g2 d6 6.0–0 e6 7.a3!? in the English opening the move order is very relevant! White's plan is usually to push the b2-b4 or d2-d4 moves. Black is usually trying to be solid, avoiding or preparing against this threats

7...ge7 [7...a5 would have been a more careful move. Black should have tried to avoid White's b4 move]

8.b4! excellent move!

8...0-0 [seems not to work 8...cxb4 9.axb4 ♖xb4 10.♙a3 ♘bc6 11.♘e4! a very typical exchange sacrifice for this type of positions 11...0-0 12.♘xd6 ♙xa1 13.♚xa1 and White got more than enough compensation for the exchange down]

9.♖b1 White succeeded in the first step - to bring the pawn to b4, so we can clearly say: White is doing a bit better now

9...b6 10.e3 in my opinion the wrong plan, better was the immediate [10.♚b3 ♙b7 11.♙b2±]

10...♙b7 11.♚b3 ♚d7 12.♙b2

f5?! Black is trying to act against the White move ♘e4, but is it really a reason to weaken that much the pawn structure?! [12...♖ad8 13.d3 (13.♘e4 f5! and White would have nothing better than to go back to 14.♘c3) 13...♙a8 14.♖fd1±]

13.♘e2 [13.♖fd1 the d4 idea could have been another try for White...]

13...e5 14.d4 a very dynamic move. A positional solution could have been to play d3, ♘c3, ♘d2 with exploring the weak square d5

14...e4 15.♘d2 cxb4?! this is a mistake [15...cxd4 following the old chess rule, always exchange the pawns towards the center :). 16.exd4 d5 17.f3! a very important push for White. White can not allow Black to consolidate the center-after which Black would be better 17...♘d8! Black is of course trying to keep the central pawns at any cost! The position is very unclear]

16.axb4 d5

17.f3! also here this move is very strong. Black's center is falling apart...

17...♘d8 18.fxe4 dxe4 [18...fxe4 19.♖xf8+ ♙xf8 20.♖f1++-]

19.d5! again an absolutely correct play by White. The pawn on d5 will distract Black a lot in the development of their pieces. By exchanging the dark squared bishops, White chances for attack are increasing enormously!

19...♙xb2 20.♚xb2 ♖f7

21. ♖xe4!? The beginning of a very nice sacrifice, but from a practical point of view, there was no need for it... [21.b5! not giving Black any hopes for a b5 move, next ♘d4-c6 is coming. Black's position is very bad]

21...fxe4 22. ♖xf7 ♘xf7 23. ♘xe4 ♖f5 how to continue the attack now... seems not that easy at all, but White is finding a great continuation

24. ♘f6+ ♔h8 25. ♘g4+ ♔g8

26.h3!! the key move of the whole White's idea starting with 21. ♖xe4!! White wants now to play ♖f1 and then ♘f4-e6.

26... ♖g5 27. ♘f4 [27. ♘d4 was a bit more precise 27... ♖c8 28. ♘f3! ♖f5 29. ♖f1 and Black is collapsing under the White threats]

27... ♖c8 Black is trying to find some ways to fight. It is obvious, that in case White manages to play ♘e6 the game will be over

28. ♘e6 ♖xe6 29.dxe6 h5 [29... ♖f8 30. ♘f6+ ♔h8 31. ♘d7+ ♘e5 32. ♖xe5+ ♖xe5 33. ♘xe5 With a winning endgame for White]

30. ♖f1 [30. ♘f6+ ♔h8 31. ♘e4+ ♖e5 32.exf7 ♖xb2 33. ♖xb2+-]

30... ♘e5 31. ♖xe5 ♖xe5 32. ♘xe5+- White is 2 pawns up, plus having all the pieces standing perfectly. No hopes for Black...

32...a5 33. ♖f7! last exact move **33... ♘f5 34. ♘d7 ♔h8 35. ♘f6** even if Black made it a bit easy, a great strategical and tactical game by White! **1-0**

Endgame section

(15)

[Balogh Csaba]

In this week's study we will take a look at rook endgames, where the pawn has not crossed the middle of the board yet (the 4th rank). In practice we meet quite often with this kind of examples. I can even show you a game from my own experience, where I could successfully use the knowledge, what I had from the given diagrams. The rook keeps the Black king 2 files away from the pawns, so he cannot approach them. However, in this seemingly hopeless position, Black can hold the draw thanks to the so-called „frontal attack“. In general, in rook endgames both attacking and defensive sides should aim for active play and staying with the rooks behind the pawn. However, in this case, the only way to survive is the passive defense from the front of the pawn. I would like to draw your attention to the position of the Black king, it must stay on e6 or on e5! Let us see, why it is so! **1. ♖d4** Defends the pawn and in that way prepares the march of his king. Without this

move it was not possible because the rook checks would have forced back the king behind the pawn. [1.♔c4 ♖c8+ 2.♔b5 ♖b8+ 3.♔c5 ♖c8+ 4.♔b6 ♖b8+=] **1...♔e5!** This is why it is so important that in the starting position the Black king must stay on e6 or on e5, to be able to attack the rook. In the initial position if Black king were on e7, we could see the win in the 2nd diagram, and with king on e4, in the 3rd diagram. **2.♔c3** [2.♖d7 ♔e6 3.♖a7 ♔d6 4.♔a4 ♔c6 The king arrives! 5.♔a5 ♖b5+ 6.♔a4 ♖b8=] **2...♖c8+** White must let Black king to come closer to the pawn. **3.♖c4** [3.♔d3 ♖b8=] **3...♖b8** **4.♖c6** ♔d5 **5.♖a6** White tries to prevent from the 6th rank that the king goes in front of the pawn. However, with the 2 very strong moves, Black saves the game. **5...♖c8+!** **6.♔b3** ♖c6! Forcing the rook to leave its good position, since the pawn endgames are drawn. **7.♖a7** [7.♖xc6 ♔xc6 8.♔a4 ♔b6=; 7.b5 ♖xa6 8.bxa6 ♔c6=] **7...♖b6** **8.♖c7** [8.♔a4 ♔c6=] **8...♔d6** **9.♖c4** ♖c6! Thanks to the drawish pawn endgame, the Black king gets in front of the pawn. **10.b5** ♖xc4 **11.♔xc4** ♔c7 Important to know, the „frontal attack“ works only if White has a- or b-pawns, and his king is cut off with less than 3 files from the pawn! **1/2**

(16)

[Balogh Csaba]

This time Black's king is not standing on the ideal e6 or e5 squares, he cannot hold the draw anymore. **1.♖d4!** [1.♔c4 would lead to nowhere 1...♖c8+ 2.♔b5 ♖b8+ 3.♔c5 ♖c8+ 4.♔b6 ♖b8+] **1...♔e6** **2.♔c4** Finally the king can help the pawn, he does not need to worry about the checks. **2...♔e5** [2...♖c8+ 3.♔b5 ♖b8+ 4.♔c6+-] **3.♖d5+** ♔e6 **4.b5** The pawn has crossed the middle of the board. **4...♖c8+** **5.♖c5** ♔d7 Black is hoping for the usual drawish pawn endgame, but this time it is too late. [5...♖b8 6.♖c6+ ♔d7 7.♔c5+-] **6.b6!** and the pawn endgame is winning **6...♖xc5+** **7.♔xc5** ♔c8 **8.♔c6** ♔b8 **9.b7** ♔a7 **10.♔c7** 1-0

(17) Balogh,Csaba — Kempinski,Robert

Warszawa, 2008

[Balogh Csaba]

I played this game against the Polish Grandmaster Robert Kempinski. If Black defends well, he holds the draw, but as we will see, my opponent makes a mistake. White king cannot help the pawn because of the active position of Black's rook. If my opponent starts passing on the 3rd rank with his rook, I would have no chance to win the game. **1. ♖a2 ♜g3 2. ♜d2** [2.b5 ♜g5=] **2... ♜g8??** Robert decides to hold with „frontal attack”, but as we already know, his king should have been on e5 or on e6. Let us see how White can win in the case. [2... ♜h3 3.b5 ♜h5 4. ♜b2 (4.b6 ♜a5+ 5. ♖b1 ♜a8 and the pawn falls) 4... ♜d5 5.b6 ♜h8=] **3. ♖b3+- ♜b8 4. ♜d7!** This is the difference, Black should play ♖e6 now for the draw! **4... ♖e5 5. ♖c4 ♖e6** [5... ♜c8+ 6. ♖b5 ♖e6 (6... ♜b8+ 7. ♖c5 ♜c8+ 8. ♖b6 ♜b8+ 9. ♜b7 The usual method does not work anymore.) 7. ♜b7+-] **6. ♜d4** And we already know this position from diagram number 3! **6... ♜c8+** [6... ♖e5 7. ♜d5+ ♖e6 8.b5 ♜c8+ 9. ♜c5 ♖d7 (9... ♜b8 10. ♜c6+ ♖d7 11. ♖c5+-) 10.b6!+-] **7. ♖b5 ♖e5 8. ♜d7 ♖e6 9. ♜b7+- ♖d6 10. ♖a6**

From now on, White can push his pawn until b7 and then as we have already studied in the Chess Evolution Newsletter, 9th of March edition, he is winning with the technique of „bridge building” **10... ♜c1** [10... ♖c6 11.b5+ ♖c5 12.b6 ♖c6 13. ♖a7+-] **11.b5 ♜h1 12. ♜g7 ♜h2 13.b6 ♖c6 14. ♜c7+ ♖d6 15. ♜c1 ♖d7 16.b7** Black resigned, he did not want to wait until the bridge is built up.[16.b7 ♜a2+ 17. ♖b6 ♜b2+ 18. ♖a7 ♜a2+ 19. ♖b8 ♜a3 20. ♜d1+ ♖e7 (20... ♖c6 21. ♖c8+-) 21. ♜d4! ♜a1 22. ♖c7 ♜c1+ 23. ♖b6 ♜b1+ 24. ♖c6 ♜c1+ 25. ♖b5 ♜b1+ 26. ♜b4+-] **1-0**

(18)

[Balogh Csaba]

In case of a- and h-pawn, Black can hold the draw with the „frontal attack”, even if his king is cut with 4 files from the pawn, due to the drawish pawn endgames. **1. ♖b4 ♜e8! 2. ♜d1 ♖e7 3.a5 ♜d8! 4. ♜c1 ♖d7 5.a6 ♜c8! 6. ♜d1+ ♖c7** Just in time! **1/2**

Clash of the Titans

(19) Pytlakowski, Andrzej
– Smyslov, Vassily (2620) [D23]

Helsinki ol (Men) prel-C Helsinki (3), 1952

[Balogh Csaba]

This week I would like to present you a great attacking game from Vassily Smyslov, the 7th World Champion! It is not easy to say what was his biggest strength in chess. He was simply fantastic in all the parts of the game! He played three World Championship matches with Botvinnik. In 1954 the score was tied and the old Champion retained his title. However in 1957, at the age of 36, Smyslov managed to win and completely deservedly took the crown! Here is an interesting game by Smyslov, with a great pawn sacrifice, he forces the king of his Polish opponent to stay in the center, against which he launched a devastating attack. Let's sit back and enjoy!

1.d4 d5 2.c4 dxc4 [2...c6 3.♘f3 ♘f6 4.♚c2 dxc4 5.♚xc4 it is more common to reach the game's position, from this move order.]

3.♘f3 ♘f6 4.♚a4+ c6 5.♚xc4 ♙g4 The popularity of this line is growing very fast recently. Even top grandmasters are trying to find new ideas for both sides. However, if White wants get some advantage out of the opening, he must definitely search it in the 6.♘c3 or 6.♘bd2 move.

6.♘e5 This move leaves the d4 pawn without its main guide, and in addition, Black will win very important time in the development by playing ♘bd7.

6...♙e6! Every tempo is very important to punish White for his inaccuracy.

7.♚d3 [7.♚b4 ♚b6 8.♚xb6 axb6 would lead to a really comfortable endgame for Black. This kind of changes of the pawn formation (with axb6), is something what White always should try to avoid.]

7...♘bd7 8.♘xd7 ♙xd7 9.♘c3 Despite being Black, Smyslov is ahead in development! But how to use this advantage?

9...♚b6! Black suggests that he wants to play a quick O-O-O, to set the d4 pawn under pressure. However, the main idea is different as we will see...

10.♙d2 White would be happy to exchange his b2 pawn for the opponent's b7, and on the other hand, he is ready to play O-O-O next move and then e4. However, our hero had a devilish idea, started in the previous move. [10.e3 was the only move to defend Black's idea, but this passive way of play was not in accordance to White's opening handling. 10...e6 11.♙e2 c5=; 10.e4 e5! 11.dxe5 ♘g4 12.♚g3 ♙c5!; 10.g3 e5! 11.dxe5 ♘g4=]

10...e5! Smyslov sacrifices a pawn in order to open the diagonal for his f8 bishop, for the b6 queen which is eyeing dangerously on f2, and the d-file for his rook. White has no choice, it is a “must accept offer”.

11.dxe5 ♘g4 **12.♔g3** White is too greedy, he does not want give back so easily the “gift”. His plan is to play h3 in the next move, and if the knight retreats to h6, Black would not have enough compensation... Let’s see what the great Champion had against it! [It would have been safer to play 12.e3 but still after 12...0-0-0 13.♔c2 ♘xe5 Black is fine, but at least he has enough time to O-O after ♙e2.]

12...0-0-0! It is logical, but what to do after h3? [12... ♙xb2? 13.♖b1 ♙c2 14.h3±] **13.h3**

13... ♙e6!! Black must act as fast as possible! With a harmless move, he would just spoil all his compensation. By giving up his knight, Smyslov prepares for another sacrifice!

14.♖d1 [14.hxg4 ♖xd2! this was the point of the last move! Black is winning after taking on b2.; 14.0-0-0? ♘xf2; 14.♙c1! was the most stubborn continuation, according to computer. But who could play such a “the

house is burning, and he is cleaning the window” move?! 14...♘h6 15.e4 f5! 16.exf6 gxf6 with very big initiative for the pawn.]

14... ♙xb2! Black continues the fireworks! He does not want to waste important time with knight moves.

15.hxg4 ♙b4! Prepares for ♖xd2, against which White finds the only move!

16.♖h3! Remarkable defense, however, it does not help!

16... ♖d4! Smyslov brings all his pieces into the attack!

17.♙e3 ♖hd8 **18.f4!** The polish finds again the only move, against the treating 18...♖xd2 19.♖xd2 ♙c1! mate, but it is too late to save the game.

18... ♙xg4! The easiest win! Black does not want to give any counter chance, which might occur by pushing f5.

19.♖g3 ♙f5 ♙c2 is coming, White can in fact resign the game. **20.♖f3** ♙a5 [20... ♙c2-+]

21.g4 ♙c2 **22.e6 fxe6** **23.♙xe6+** At least, he could give an “angry check” before capitulation.

23... ♙b8 **24.♖d3** ♙xd3 **25.exd3** ♙xc3 **26.♙e5+** one more!

26...♔**a8** and finally White resigned! As you could see, just a very small inaccuracy by White in the opening (6.♘e5), was enough for Smyslov to take the initiative and use his brilliant fantasy! **0-1**

Editorial Preface

Dear friends,

We are both playing on the European Individual Championship in Plovdiv. The tournament is very strong again, with 100 players above 2 600 rating. There are 23 qualification places for the World Cup. The finish will be very exciting, we both try to do our best to have a nice result.

As we have promised, we present You some of our games, so we can share with You not only analyses, but our feelings and calculations during the game as well.

The puzzle section was very difficult on the previous week, but we hope, that You managed to solve a few of them. This week we made a more „friendly“ selection.

From the next month in the surprise section, we will publish interviews with Super Grandmasters, stay tuned for them!

We would like to draw Your attention, that we launch a special newsletter about the Anand-Gelfand World Championship match. It is going to be 14 issues. One before the match, 12 after each game, and a final one with the conclusions. We offer for our yearly CEWN subscribers for 7 euros.

*Arkadij Naiditsch

4 best games of the past week

(1) Naiditsch, Arkadij (2702)
— Sokolov, I (2653) [C84]

ECC 2012 Plovdiv (6), 25.03.2012

[Arkadij Naiditsch]

We are in the 6th round of the European Championship. Ivan and I have a good 4/5 points in the standings. I was preparing myself for a very fighting game — like every game of Ivan Sokolov, who is playing very exciting chess and is trying to „push” in almost any kind position.

1.e4 e5 2.♘f3 ♘c6 3.♙b5 Ivan wrote a great book on „Spanish gambits” in which he introduced moves like 3... ♙f5, 3.... ♙c5. His latest invention against Caruana was 3... ♘ge7 4.c3 d5!?. From the practical point of view all these lines are playable — of course if we look objectively, White is doing better. Against me Ivan is going for the main Spanish, it was a small surprise for me...

3...a6 4.♙a4 ♘f6 5.0-0 ♙e7 6.d3 Of course the main line here is 6.♖e1, but lately 6.d3 got very popular, especially often played by Magnus Carlsen and Anand. Personally, I like the 6. d3 already for many years

6...d6 [The main line starts with 6...b5 7.♙b3 d6 8.a4 ♙d7 (8...b4)]

7.c4!? a rare move, but interesting one. I already had some practice with this line in a few rapid games and was very happy about the outcome of it, so during the game I thought „Why not to try it in a normal game as well”? [7.c3 0-0!? 8.♖e1 b5 9.♙c2 d5 would lead us to one of the main positions. For those who want to check it, see games of Carlsen and Aronian]

7...0-0 [7...♙g4 is the other possibility for Black here 8.h3 (8.♘bd2?! The White knight on d2 will be very badly placed. 8...0-0 9.h3 ♙e6 10.♙xc6 bxc6 11.d4 exd4 12.♘xd4 ♙d7 With a very comfortable play for Black. (In case the White knight would be on c3, White would be a little better)) 8...♙xf3 9.♙xf3 0-0 10.♙xc6 bxc6 11.♘c3 ♘d7 12.♙e3 ♖e8 followed by ♘f8-e6. Maybe White is doing a bit better due to a better pawn structure, but Black is very solid]

8.h3 ♙e6 [seems that White has better play after 8...♖b8 9.♘c3 ♘d4 the point of 8...♖b8, now Black is having the b5 move a tempo 10.♘xd4 exd4 11.♘e2 b5

12. d4 ! a nice tactic 12... bxa4 13. c6 e8 14. xb8 b7 15. xa6 xa6 16. b4 ! and it seems that White is having a better play even if the position is very complicated]

9. c3 d7 first moment in the game, where I took some time for a thinking. Basically I have two opportunities. 10. e1 or the move from the game 10. e3 .

10. e3 [10. e1 c5 11. xc6 bxc6 12. d4 exd4 13. xd4 d7 I thought for a while about this position. Not easy to evaluate who is actually doing better. White has a better structure, but the bishop pair of Black could become very strong in the future. Also Black could try to play next moves f6 and e6 trying to take a control over the d4 square. All this was too unclear for me and I decided for the move in the game]

10... f5 in case Ivan can push something forward — you don't need to ask him twice :)

11. exf5 The most logical move in the position [11. d4 I spent quite some time calculating this move. Finally, I didn't want to make it from practical reasons. Black has too many different options and all of them are very complex and lead to positions which are very hard to evaluate 11... f4 ! (11... xc4 12. b3 ! a5 13. xc4 + xc4 14. dxe5

dxe5 15. d5 + h8 16. xe5 xe5 17. f4 d7 18. exf5 ∞) 12. d5 fxe3 13. fxe3 (13. dxe6 exf2 + 14. xf2 c5 +) 13... c5 14. dxe6 g5 and we have again a position that might be better for White, but could be the opposite as well...]

11... xf5

12. d4 ! of course I should not lose time and need to fight for the center. During the game I was very happy with my position and was sure, that I should do a bit better here [12. d5 would be the other option for White, but I wanted to search my chances in a more direct play]

12... f6 ? this is probably a mistake [12... exd4 ! would be the right reaction 13. xd4 (13. xc6 dxc3 !) 13... xd4 14. xd4 With a slight advantage for White]

13. d5 a5 ! a great move by Black to stay in the game. Black is trying to make the things tactically work — which is definitely their only chance now. In this position White is doing much better, in case White will manage to put a „blocker“ on e4 square, Black's position will get worse. [13... e7 14. c2 with a clearly better position for White (14. g4 ? a try to win the Black bishop would give White only troubles 14... g6 15. g5 h5 ! creating a deadly pin 16. e4 g6 ! 17. gxf6 h4 and Black is doing better)]

14. ♘d2! It is very important to cover the square e4 at any costs. With a knight on e4 White would block many of the Black's attempts and the dark squared bishop of Black would get very passive, Black's knight position on a5 could also get at some moment very dangerous, White's move b4 could be a serious threat in the future

14... ♙d3 15. ♖g4 [15. ♖e1!? would be another possible move 15... ♘xc4 16. ♘xc4 ♙xc4 17. ♖g4 (17. ♙xd7 a try to catch the bishop on c4 doesn't work 17... ♖xd7 18. b3 e4! Black is doing great) 17... b5 here I stoped my calculation — too early 18. ♙c2! a difficult move to find during the game. White is a clear pawn down, but the Black bishop is having a very dangerous position on c4 and could be potentially caught. In addition, White is having control over the e4 square and the knight will have just a great position on e4. All this is giving White clearly a better play; 15. ♙c2!? a very interesting positional exchange sacrifice 15... ♙xf1 16. ♖xf1 b6 it is clear that White has enough compensation for the exchange, but wether White is doing better here is under big question mark]

15... ♘b6 16. ♙xb6 cxb6

17. ♖fd1 [17. ♖fc1 would lead to unnecessary complications after 17...b5! (too early would be 17... ♙g5? 18. ♙c2! ♙xd2 19. ♙xd3 ♙xc1 20. ♖xc1 and White is almost winning!) 18. cxb5 ♙g5 19. ♙c2 ♙xb5 with an unclear position]

17... ♙h8 it is hard for Black to find a better move. The check on e6 is really unpleasant in many lines, so my opnents decides for a profylactical decision

18. ♘de4! Finally I reached the first step of my plan. The square e4 is blocked. But an exact calculation was needed. White is just in time to protect the pawn c4

18... ♙xe4 19. ♖xe4 g6 [19... ♖c8 20. ♙c2! The key move. White is using the tempo (the h7 pawn is hanging) to bring the bishop from a4 to d3 after which the knight on a5 will be in big danger. 20...g6 21. ♙d3 would lead to about the same 21... ♖c7 22. ♖ac1! The only way for White to protect the pawn on c4, but everything seems to work 22... ♘xc4 23. ♘e2 b5 24. b3+-]

20. ♙c2! I continue sticking to my plan. Next White's moves are ♙d3, ♖e2 and finally fulfilling my plan with ♘e4.

20... ♖g7 21. ♙d3 ♜f4 22. ♚e2 ♜d4 23. ♞e4

Finally I am done with my plan. All my pieces are standing at good places, Black is having a bad bishop on g7 and a knight on a5 which is very close to being caught by the b4 move.

23...b5 suddenly Black's position is very bad. Ivan is short on time, decides to give a pawn in hopes for any kind of play [23...♜c8 24.♜ac1 ♙h6 25.♜c3 would not change much as well].

24.cxb5 ♚b6 25.♜ab1?! in a winning position and having 25 minutes against my opponent's 1, I decided to make a small trap. But there was no need for that. [25.bxa6 bxa6 26.♞g5 would simply lead to a winning position]

25...axb5 26.♞g5! this was my idea. Now I want to play ♙xb5 and have the b4 move „in my pocket“.

26...♜xd5 Ivan is falling in my trap... [26...e4 27.♙xb5 ♜b4 28.a4 and White's position is of course winning as well...]

27. ♙xg6! easy but pretty

27... ♜xd1+ 28. ♜xd1 hxg6 29. ♜xd6! ♚c7 30. ♜xg6 ♜a6 the last trick of my opponent

31. ♜xa6 [31. ♚h5+?? ♙g8 32. ♜xa6 ♚c1+ 33. ♙h2 ♜f4+ with a perpetual check]

31...bxa6 32. ♚h5+ ♙g8 33. ♚h7+ and Black resigned because of the 33...♙f8 34.♞e6. A nice positional win and super important one because of the situation in the tournament. 1-0

(2) Balogh,Csaba (2664) – Sharafiev,Azat (2433) [B90]

Plovdiv, 20.03.2012

[Balogh Csaba]

In the first round of the European Individual Chess Championship in Plovdiv, I had a really tense fight against my Russian opponent Azat Sharafiev. I got a small positional advantage, but after a great bishop sacrifice, the game became amazingly complex...

1.e4 c5 2.♘f3 d6 3.d4 cxd4 4.♘xd4 ♘f6 5.♘c3 a6 6.♙e3 ♘g4 7.♙c1 [I wanted to avoid the very long theoretical lines arising after 7.♙g5 h6 8.♙h4 g5 9.♙g3]

7...♘f6 8.h3 So I switched to the 6.h3 line against the Najdorf, which recently enjoys very big popularity, even on the highest level. White wants to play g4 and ♙g2 against almost all the setups.

8...e5 9.♘de2 h5!? This is considered to be one of the best option for Black, preventing the g4 plan.

10.♙g5 After Black weakened the d5 square, White tried to occupy it with the minor pieces, but first the f6 knight must be eliminated. On the other hand, Black gets the pair of bishops, which will compensate him for the structural deficit. [10.g3 is the other main move.]

10...♙e7 11.♙xf6 ♙xf6 12.♘d5 ♙g5 13.♘ec3 ♙e6 14.♙c4 ♘c6 Both players are developing logically. The position might remind us of a typical game of the Sveshnikov variation. (1.e4 c5 2.♘f3 ♘c6 3.d4 cxd4 4.♘xd4 ♘f6 5.♘c3 e5 6.♘db5 d6 7.♙g5 a6 8.♘a3 b5 9.♘d5 ♙e7 10.♙xf6 ♙xf6) There is one relevant plus for Black, compared to

the mentioned position, that now the pawn is on b7! In the Sveshnikov variation White's main idea is to play a4 and playing on the queenside. Now this does not work.

15.a3 A novelty. Of course it was not prepared, I just wanted to keep the a2-g8 diagonal under control and preserve the bishop for the future. [15.0-0 ♖c8 16.♙b3 ♘d4 my 15th move was directed against this idea, when Black takes my other bishop as well.]

15...♖c8 16.♙a2 g6 17.0-0 0-0 18.♙d3 ♙h6 Black prepares to install his knight to d4. [It would have been very dangerous to do it immediately, since after 18...♘d4 19.f4 White can launch an attack with the quick f4-f5 against the king. The a2 bishop becomes very strong.]

19.♘d1!! Great regrouping of the pieces! Actually, I was surprised when I saw that this is the first move of the computer as well. The idea is to transfer the knight to e3 and then cover the d4 square with c3. [The most logical move 19.♖ad1 would meet by 19...♘d4! when all my pieces are tied, and the attack with f4 does not work anymore. 20.f4 ♙xd5! 21.♙xd5 (21.♘xd5 ♖xc2) 21...♚b6 Black is better.]

19...♚h4 20.♘1e3 ♖cd8 21.c3 ♙h8! My opponent plays correctly, he must organize his play on the kingside. Before playing f5, Black leaves with the king from the bishop's diagonal. [21...f5 would be premature, because of 22.exf5 gxf5 23.♘c7 ♙xa2 24.♖xa2 By exchanging the light-colored bishops, White could create many holes in Black's camp.]

22.♘b6! White must try to exchange the bishops, to minimize the effect of the kingside attack. [22.♘b4 with the same idea would be a mistake because of 22...♙c8! when Black saves the important bishop.; On queenside play with 22.b4 and a4, b5, Black could already create counterplay with 22...f5 23.exf5 gxf5∞]

22...♙xh3!! A great sacrifice, which completely changes the character of the position! Actually, I was hoping for

it, since I prepared a hidden trick on the 25th move, but I underestimated the power of the 26th move of my opponent. [22...♙g7 23.♙xe6 fxe6 24.♖ad1± Despite solving the problem around the d5 square, Black is slightly worse due to the his worse structure. In the next moves, b4 and a4 are coming.; 22...♙xa2 23.♖xa2±]

23.gxh3 ♙xh3 24.♖fd1 ♙f4

25.♘g2! This was my hidden idea, Black cannot win the knight because the queen will be trapped. [25.♘f1 ♙g4+= Black gives perpetual check.]

25...♙h2+ 26.♙f1 f5! Very strong reaction! I have seen this move, but for some reason I thought it should not be so dangerous... Black opens the f-file for the rook. [26...♙h1+ 27.♙e2 ♙xg2 28.♖g1 ♙h2 29.♖h1 ♙g2 30.♖ag1+- The queen is falling.]

27.♙d5 The bishop joins to defend, the knight remains indirectly protected. [27.♘xf4 would free the e5 square for the Black knight 27...exf4 28.♙f3 ♘e5 29.♙g2 ♙h4∞ with a very sharp position.]

27...fxe4 [27...♔h1+ 28.♔e2 ♕xg2 29.♖g1 ♕h2 30.♖h1 ♕g2 31.♖ag1 fxe4 32.♙xe4+- and the queen is trapped again.]

28.♕xe4 ♘g3!

29.♔e2! White tries to find shelter in the middle of the board and creates ♖h1 threat. [29.♖d2 ♘e7! After protecting the g6 pawn, Black could slowly continue the attack. All the White pieces are tied.]

29...♖xf2+ 30.♔d3 The king escaped from the direct threats, but still we could hardly say that it is safe. It would be great to play b4 and ♔c4-b3, but of course Black will have some words against it.

30...♕h3?! Black correctly avoided the ♖h1 threat, but he should have done it in a different way. At this moment, my opponent was already low on time, which made his task much harder to find the strongest moves. [30...♙f4! was the right move, when it is hard to explain what is happening. The computer shows some different lines which are leading to draw... 31.b4 ♘e7 (31...♕g3+ 32.♘e3 ♙xe3 33.♕xe3 e4+! 34.♙xe4 ♘e5+ 35.♔d4 ♘f3+ 36.♔c4 ♘d2+ 37.♕xd2 ♖xd2 38.♖xd2 is a draw according to computer.)

32.♘xf4 ♕g3+! 33.♕e3 exf4 34.♕xg3 fxg3 and Black should be fine.; 30...♖xb2? 31.♖h1+-]

31.♖h1! [31.♕xg6? would be a blunder to leave the e4 square, because of 31...e4+! vacating the important e5 square for the knight 32.♕xe4 ♘e5+ 33.♔d4 ♖e8--]

31...♙h2+ 32.♘e3! Keeping the blockade on e4. [32.♕e3 Of course, with such a king I would have wanted to get rid of the queens, but unfortunately at this moment, it was not possible. After the b2 pawn falls, in both lines the king remains in very big danger: 32...e4+! 33.♔c4 (33.♙xe4 ♘e5+ 34.♔d4 ♕xe3+ 35.♔xe3 ♖xb2) 33...♕xe3 34.♘xe3 ♖xb2]

32...♘e7 Black brings another piece into the attack through f5. [32...♖df8 33.♙xc6 bxc6 34.♕xg6+]

33.♖af1

33...♖xb2? A terrible blunder in a worse position. [33...♖df8! was the only move, but after 34.♖xf2 ♖xf2 35.♘bc4! ♘f5 36.♙xb7± White can cold-bloodedly take on b7 to prevent the b5 move forever. Computer confirms, that White has a big advantage, but anyway this would have been the only chance for Black.]

34. ♖f3! The queen is trapped out of the blue, but my opponent tries a last a devilish trick...

34... ♘xd5 35. ♘bxd5! After this simple takeback, Black queen survives, but the position collapses. [To play for a big material advantage would be a decisive mistake 35. ♖xh3? ♘f4+ 36. ♔c4 (36. ♙xf4 ♕xf4 ∞)

36... ♖c8+!! A fantastic move! Black is queen and rook down, but he gives pawnmate with b5! (36... ♖xb6 Actually, during the game I thought about this move, and ♖c8 mate is the next, but as usual the computer found a fascinating defense.

37. ♖xh5+!! gxf5 (37... ♔g8 38. ♙xf4 ♘xf4 39. ♖h8+ ♔f7 40. ♖xd8) 38. ♙f5! White could defend against ♖c8.) 37. ♘xc8 b5# I would not be happy to lose like this. :)]

35... ♙e6 [35... ♙d7 36. ♙xg6 ♙b5+ 37. ♔e4 ♙a4+ 38. c4+-

Suddenly, White king is protected by the knights and pawn, while Black will be mated.]

36. ♖f6 ♙e8 37. ♖xg6 ♙f8 38. ♖f1 Black resigned. A tough game right in the first round! **1-0**

(3) Shirov,A (2713) – Horvath,Cs (2517)

HUN-chT, 25.03.2012

[Balogh Csaba]

The next game is from the Hungarian league, where Alexei Shirov, aka „Mr. Fire on the board”, true to his name crushed his GM opponent. We can see an excellent novelty in the opening, which seems to refute the whole line.

1.e4 c5 2.♘f3 e6 3.d4 cxd4 4.♘xd4 ♘c6 5.♘c3 ♔c7 6.♙e3 ♘f6 7.f4 ♔b6 A recent novelty by the Georgian Javakashvili, which could be very dangerous, if somebody receives it over board. However, Shirov is always ready for such challenges... [7...♙b4 8.♘db5 ♔a5 9.e5 is the mainline, which is considered to be slightly better for White after long lines.]

8.e5! From now on, all the pieces will start to hang. It is impossible to calculate all the variations until the end, it is more important to feel, that it must be good for White! [In the first test, Nadezhda Kosintseva avoided the complications, and Black easily equalized... 8.a3 ♙c5 9.♘a4 ♔a5+

10.c3 ♙xd4 11.♙xd4 ♘xd4 12.♔xd4 d6 Kosintseva,N-Javakhishvili, Gaziantep 2012]

8...♘g4 Black tries to lure the queen, when the b2 pawn could already be taken. [8...♙c5 leads to a clearly worse endgame for Black. 9.exf6 ♙xd4 10.♙xd4 ♔xd4 11.♔xd4 ♘xd4 12.fxg7 ♔g8 13.0-0-0 ♘c6 14.♘e4 ♔xg7 15.♘d6+ ♔e7 16.g3± too many holes in Black's camp; 8...♔xb2 is risky, because the queen will have serious problems to not be trapped 9.♘db5 ♙b4 10.♙d2! ♘d5 11.♘xd5 ♙xd2+ 12.♔xd2! exd5 13.♔b1 ♔xa2 14.♘c7+ ♔d8 15.♘xa8+- the queen survives, but rook is lost.]

9.♙g1! Shirov preserves his bishop, the pin might be deadly! Now Black must act concretely, otherwise the d4 jumps away and the g4 knight is also in the air. [9.♔xg4 ♔xb2]

9...♙c5 [After 9...♔xb2 White can choose between two tempting moves: 10.♘cb5 is the easier way to win (10.♘db5 this is the stronger move, but also the harder to find 10...♙b4

11.♙d2! ♔b1 threats, when the g4 knight is hanging 11...f5 12.h3 ♘h6 13.a3! A very important in-between move. (13.♔b1 ♙xc3+ 14.♘xc3 ♔a3 would not be that easy) 13...

♙a5 (13... ♙xc3+ 14. ♘xc3+-) 14. ♖b1 ♙xc3+ 15. ♔d3! ♙a2 (15... ♙xb1 16. ♙xb1+-) 16. ♙xc3+- Black cannot avoid losing huge material.) 10... ♙b4+ 11. ♔e2! 0-0 12. ♘xc6 bxc6 13. ♙d4 White traps the queen, but Black gets some pieces for it, which might give him some practical hopes. 13... ♙xa1 14. ♙xa1 cxb5 15. ♙b2±]

10. ♙xg4! After the f8 bishop left the g7 unprotected, Shirov already takes the knight. He makes no mistake in the calculations.

10... ♙xb2 [10... ♙xd4 loses as well after 11. ♙xd4 ♘xd4 12. ♙xg7 ♙xb2 (12... ♖f8 13. 0-0-0+-) 13. ♙xh8+ ♔e7 14. ♙f6+ ♔f8 Here are several ways to win, the easiest is probably: 15. ♙d3 ♙xc3+ (15... ♙xa1+ 16. ♘d1+-) 16. ♔f2 ♙d2+ 17. ♔g3 ♙e3+ 18. ♔h4+- when White has big material advantage and it would be hard to find a safer place for his king.]

11. ♘db5! ♙xa1+ **12. ♔d2** Black is an exchange up, but his position is hopeless. The g7 is hanging, the knight is threatening on d6 and on c7, and the queen might be also easily trapped.

12... ♙xg1 [12... ♙f8 was probably the most stubborn, but also not big fun for Black. 13. ♙d3±; 12... ♙a3 13. ♙xg7 ♙c1+ 14. ♔e2 ♙xc2+ (14... ♖f8 15. ♘e4 ♙xc2+ 16. ♔f3+-) 15. ♔f3 ♖f8 16. ♘e4+-; 12... ♙xf1 13. ♙xc5 ♙xh1 14. ♙xg7+-]

13. ♙xg7 White wins back the rook. Both kings seems to be in danger, but actually it is only Black who has to worry, White can always slalom between the pieces.

13... ♙f2 [13... ♖f8 14. ♘d6+ ♔d8 15. ♙xf8+ ♔c7 16. ♘cb5+ ♔b6 17. ♖xg1+-]

14. ♙xh8+ ♔e7 15. ♙f6+ [15. ♙e2! was the most precise win now or in the next move 15... ♙xh1 16. ♙f6+ ♔f8 17. ♘d6! Black can give only a few checks, while White is mating. 17... ♙e1+ 18. ♔d3 ♘b4+ 19. ♔e4+-]

15... ♔f8 16. ♘d1 Shirov does not even want to give the opportunity to Black to give any checks... [16. ♙e2! would lead to the 15. ♙e2! line.; I just have found a beautiful mate in 16. ♙h6+ ♔e8 (16... ♔e7 17. ♙e2 ♙xh1 18. ♙f6+ see again in 15. ♙e2!) 17. ♘d6+ ♔d8

18. ♙a6!! ♙xh1 19. ♙f8+ ♔c7 20. ♘cb5+ ♔b6 21. ♘c4+ here we get the point of the 18. ♙a6!! move, the b5 knight is protected. 21... ♔xa6 22. ♘c7#

We usually can only meet in studies with this kind of mates.]

16... ♖c5 17. ♖d3 The human win! White finishes the development.

17... ♔xa2 [17... ♖b4+ 18. ♔e2 ♘d4+ the exchange of the great b5 knight does not save Black 19. ♘xd4 ♕xd4 20. ♕d8+ ♔g7 21. ♖f1!+- and the rook joins to the battle through the 3rd rank, and decides the game.]

18. ♘dc3! ♕a5

19. ♘d6! The most precise win.

19... ♖xd6 20. exd6 ♕h8 threats.

20... ♔g8 21. ♕h6! f5 22. ♖e1! and Black resigned, since he has nothing against ♖e3-g3 mate. From Black point of view it is quite painful to look at the a8 rook and the c8 bishop... Great attacking game by Shirov, after which this 7... ♕b6 line will not have too many followers. **1-0**

(4) Vallejo Pons, Francisco (2693) – Nabaty, Tamir (2559) [D20]

13th EICC Plovdiv BUL (4.32), 23.03.2012

[Arkadij Naiditsch]

Here we are facing an amazing game from the European Individual Chess Championship. From the 25 moves of the game, Black made 9 moves with their King and got mated finally on the a1 square! Let's take a look how this could happen!!

1.d4 d5 2.c4 dxc4 We are in the beginning of the Queen's Gambit lines. This opening is considered to be „ultra-safe“ and it is hard to imagine, Black king being mated in only 22 moves on the a1

3.e3 more often we see the move 3.e4 which considered to be „main“ here. Other option is 3. ♘f3

3... e5!? Black is going into a position with an isolated pawn

4. ♖xc4 [Of course 4.dxe5? would be a mistake 4... ♕xd1+ 5. ♕xd1 ♘c6 with a very nice endgame for Black]

4...exd4 5.exd4 ♖d6 [More often Black is choosing this move order 5...♘f6 6.♘f3 ♖e7 7.♘c3 0-0 8.h3 (8.0-0 ♗g4) 8...♘bd7 9.0-0 ♘b6 10.♗b3 c6 with a complicated position]

6.♘f3 ♘f6 7.♖e2+ a rare move [more popular are this lines 7.0-0 0-0 8.♘c3 ♗g4 (8...♘c6 9.h3 h6 10.♖e1 ♗f5∞) 9.h3 ♗h5 10.g4 ♗g6 11.♘e5 c5∞]

7...♖e7?! in my opinion it is not a great idea for Black to go into an endgame, where they are not in time to fulfill their development. It is a big risk and there is absolutely no reason to take it [7...♗e7 this move is looking like a lost of a tempo, but it is not. The White Queen on e2 is not standing better than on d1, so Black is basically back into the main line with ♗e7 — with only small difference, White has his Queen on e2.]

8.♖xe7+ ♖xe7 [8...♗xe7 9.0-0 0-0 10.♘c3 ♘c6 11.♖e1 ♗d6 12.♗g5 seems to give White a plus in the endgame.]

9.0-0 ♗e6

10.♖e1! White is trying to make use out of the shaky position of the Black king and choosing a forced continuation. An absolutely right choice — this is the way to play a po-

sition with a development advantage! [10.♗xe6?! Would be a clear positional mistake 10...fxe6 11.♘c3 ♘c6 Black next moves are clear, ♘b4-d5, then put the King on d7. This endgame is no way better for White]

10...♖d7 11.♘e5+! White is not giving Black any time for consolidation

11...♗xe5 a risky choice, already not an easy position [11...♖c8 12.♘c3 Would lead rly to a better position for White, but maybe it was the toughest way to continue the fight for Black]

12.dxe5 ♗xc4 13.exf6 gxf6

14.♘c3 White is a pawn down, but the Black king is feeling himself very uncomfortable on d7, plus the pawn structure is terribly demanaged. It is clear, that White is having a solid advantage. After the game, I asked Vallejo until which moment he was in his preparation, and he said until exactly here. The move 14...c5 was new for him

14...c5?! [14...♘c6 was the only way to continue the game in more or less normal conditions for Black 15.b3 ♗e6 16.♘e4 f5 17.♘c5+ ♖c8 18.♗f4! It is nice to see how much is white dominating in the position. Black's extra

pawn gives Black maximum some chances for a draw (18. ♖xe6? ♜e8) 18...♜e8 19.♜ac1 It is hard to find for Black a move, that would improve the position. A very typical example how to play in domination even in a position without Queens on the board]

15. ♕f4 [Another interesting move was 15.♜d1+ ♖e7 (15... ♖c6 16. ♕f4 b6 17.a4! a super strong move. White wants to play next ♜d6 and ♖b5. In case of 17...♖b7 18.♖b5! and Black is not in time to play Nc6) 16. ♕f4 ♜d8 17.♜xd8 ♖xd8 18.♜d1+ ♖d7 19.♖e4 Again the same story, White's activity and development advantage is playing a decisive role 19...♖e7 20.b3 ♕e6 21. ♕d6+ ♖e8 22.♜d3!± a great move! Now the threat is coming from the unexpected ♜g3-g8!]

15...♖c6 16.♜ed1+ [of course not 16.♜ad1+? ♖d4 17.♕e3 ♜he8 and the rook on e1 is hanging]

16...♖e6?? Black is starting their king march. It is hard to say what exactly Black had missed. [16...♖d4 the only move 17.♕e3 ♖e7 18.♕xd4 cxd4 19.♜xd4 ♕e6 20.f3 White is having a very comfortable advantage. The idea of playing such an endgame could be: To exchange one pair of rooks (best would be both pairs), put the pawns

on a3, b2, f3,g3,h2, King to e3 and maybe knight to f4. Black's position is very unpleasant-not to say more. Probably a World Champion A.Karpov would consider it to be close to lost :.)]

17.b3 White is starting a series of forced moves. Step 1: to bring away Black bishop from the center

17...♕a6? this is leading already to a forced mate! [17... ♖f5 the only chance to fight 18.bxc4 ♖xf4 19.♜d5 would give White close to a winning position]

18.♜d6+ White is starting the step 2: The hunt at the Black's king begins

18...♖f5 [18...♖e7 is of course losing as well 19.♖d5+ ♖f8 20. ♕h6+ ♖e8 21.♜e1+ ♖e5 22. ♕g7+-]

19.♖d5! Next White's move ♜xf6 is unstoppable

19...♖d4 20.♜xf6+ ♖e4 21.f3+! ♖d3 [21...♖xd5 22.♜d6# Would be a very beautiful mate]

22.♜d1+ Black king is fighting alone against the rest of the White pieces. This can't end good...

22...♖c2 23.♜d2+ ♖b1 24.♖c3+ ♖a1 25.a4

Just a fantastic final position ! **1-0**

Endgame section

(15)

[Balogh Csaba]

We have reached the last lesson of the month, when we will study those kind of rook endgames, where White has a connected g-h-pawn advantage. These kind of positions are winning in general, but as we will see, there might be exceptions. White must mainly take care of the Black king, not to let him stay between his pawns. First, let us see the winning technique! **74...♖b4+ 75.♖g4 ♜b1** Black tries to make the task harder by threatening vertical and horizontal checks. **76.♜f4** White must hold his rook close, so he can restrict Black's checks. **76...♜h1+ 77.♙g4 ♜g1+ 78.♙f5 ♜a1 79.h6+!** Finally we could push our pawn, but the continuation remains difficult. **79...♙h7 80.♙g4!** Tries to find shelter on h5! **80...♜g1+** [This time, it would only make the job easier, if the king goes between the pawns with **80...♙g6** because of **81.♜f6+ ♙h7 82.♜f7+ ♙g8 (82...♙g6 83.♜g7#) 83.♜d7+-]** **81.♙h5 ♜h1+ 82.♜h4 ♜g1** Here we are! How should White continue?

83.♜h2! Very important move, which puts Black into zugzwang! He has only one way, in which he could prevent the g6 move: **83...♜g3** however with this move, the rook gets too close to the king, and the checks will not be threatening anymore. **84.♜e2! ♜h3+ 85.♙g4 ♜a3 86.♜e7+** When Black's king is forced back to the back-rank, the win is very close. **86...♙g8 [86...♙g6 87.♜g7#] 87.g6 ♜a4+ 88.♙f5 ♜a5+ 89.♙f6 ♜a6+ 90.♜e6 ♜a8** Due to the threatening mate on the 8th rank, the rook is forced into passive defense. **91.♜d6 ♜c8 92.♙e7!** And White exchanges the rooks in the next move, and wins the game. **1-0**

(16)

[Balogh,Csaba]

Black holds the draw, even without staying with his king between the White pawns. The rook is obliged to defend passively the pawns, however in this case his king remains unprotected from the side checks! **1. ♖g6+** [1. ♔f4 ♖a4+=] **1... ♔h7** White must settle for the draw! **1/2**

(17) Kling,Josef

1851

[Balogh Csaba]

The following example is probably the most important defensive position, where Black can hold the draw by several exact moves. Kling and Horwith have published this endgame in 1851, 161 years ago! Let us see, why White can not win! **1. ♖d4 ♖b6** Black defends against the 6th ranked checks, and by passing with his rook, wait for White to find a plan. **2. ♖d8!** The best chance! The point is that after the check, the g5 pawn cannot be taken, since the h-pawn is promoting. At the same time, he threatens ♖g8 check! **2... ♖b4+** **3. ♔e5 ♖b7!** An extremely important move, controls the h7 square, so the g5 pawn is hanging now. [3... ♔xg5?? 4.h7+-; Instructively loses 3... ♖g4? 4. ♖g8+ ♔h7 because of 5. ♔f5!+- (5. ♖g7+? would have been a mis-

take 5... ♔h8 6. ♔f5 ♖f4+! 7. ♔g6 ♖f6+! 8. ♔h5 ♖xh6+! due to this nice stalemate idea!) ; 3... ♖b5+ also draws, but in a more difficult way, than 3... ♖b7! 4. ♖d5 (4. ♔e6 ♖xg5) 4... ♖b7 5. ♔e6 ♖a7 6. ♖d7 ♖a6+ 7. ♖d6 (7. ♔e7 ♔xg5 8.h7 ♖a8 9. ♔f7 ♔h6=) 7... ♖a7= as Dvoretzky showed it in his book.] **4. ♖g8+ ♔h7 5. ♖e8 ♔g6** [With the help of a nice trick, Black has the chance to force draw immediately 5... ♖b5+ 6. ♔f6 ♖xg5!]=] **6. ♔f4 ♖b4+ 7. ♖e4 ♖b6=** And we are back into the initial position. **1/2**

(18)

[Balogh Csaba]

Finally, let us get acquainted with this kind of self-helper pawns. The h-pawn promotes to queen, even without the help of the king. Black cannot stop him. Anything could happen, White's next moves are h6, g5, ♖g7, and then, h7, g6, ♖g8, and finally h8♔. **1.h6 ♖h1 2.g5 ♔f5 3. ♖g7** Black has no chance to get closer with his king. With this example, we have finished our first month rook endgame lesson, from the next week, we arrive with a new theme! Stay with us! **1-0**

Clash of the Titans

(19) Petrosian, Tigran V — Yudovich, Mikhail Jr [A05]

Moscow Spartak-Iskra Moscow, 1953

[Balogh Csaba]

The next game, I would like to present you is played by Tigran Petrosian! The 9th World Champion, who had the nickname of „Iron Tigran” because of his positional style and his intention to be as safe as possible! It was incredibly hard to beat him. He became the Champion by defeating Botvinnik in 1963, when he was 34 years old, and owned the crown for six years, until 1969! Afterwards, Spassky managed to win over him, in his second attempt, since in 1966, Tigran could hold his throne. This game perfectly shows his inimitable style! Let's see how he broke the resistance of the Russian master Yudovich Mikhail Jr! The opening part was not so exciting, but after Black's mistake on move 9, Petrosian starts to improve his position move by move until he wins the game.

1. ♘f3 ♘f6 2. g3 g6 3. ♖g2 ♖g7 4. 0-0 Right from the beginning, he secures the position of his king.

4... 0-0 5. d3 d6 6. e4 He needed six moves to finally reach the 4th rank!

6... e5 Black plays symmetrically, but this is not a great idea against the Champion. It was more advisable to have a more open position against him, let's say with 6... c5.

7. ♘bd2 ♘c6 8. ♘c4 ♖e6 9. ♘g5!? Forces Yudovich to decide the character of the game. He has three options

now: to allow White to take on e6 with a possible improvement on the pawn structure after fxe6, to take on c4, or to save his bishop for the future.

9... h6? Black chooses the worst one. He wants to improve his structure, but actually he just makes the opposite. [I don't like 9... ♗xc4 neither, because of 10. dxc4 h6 11. ♘h3! when the knight on h3 is slightly misplaced, but after ♗e3, ♖d2, f3 and ♘f2, white has some advantage.; 9... ♗g4! should have been played, with perfect position for Black in all lines 10. f3 (10. ♖d2 h6 11. ♘f3 ♖d7=; 10. ♖e1 ♘d4) 10... ♗d7 11. f4 exf4 12. gxf4

12... d5! very important to break the pawn chain in the center **13. exd5 ♗g4! ♖**

10. ♘xe6 fxe6 11. c3 ♖h7 [11... d5 12. ♘e3 ±]

12. ♘e3 ♖e7 13. f4! The most ambitious move, White wants to push f5, to create a very dangerous attack.

13... ♘d8 [13... exf4 was better, but Black did not want to open the position for the bishop pair. 14. gxf4 ±]

14. a4 A bit strange decision from Petrosian, he does not continue the plan started with the previous move. Instead of the mating attack, he prefers to win the game

in a positional way. What to do, that is his style! Creates a very strong square on c4 for his knight. [14.f5!±]

14...c6 15.fxe5!? Creates fixed doubled pawns for Black, which are sometimes quite useful because they are controlling all the central squares. But this is not the case. [15.f5± was still possible]

15...dxe5 16.b4 Taking ground on the queenside. White is better on all the parts of the board, in addition, he has the bishop pair.

16...f7 17.e2 e2ad8 18.c4 Tigran can organize the ideal setup for his pieces, since his opponent is without counterplay. He has no chance to activate his bishop on g7, and the knights have no squares to occupy.

18...d7 19.f3! Such kind of „ugly“ moves are normally very difficult to play, but not for Petrosian!

19...e8 Trying to exchange the powerful knight on c4.

20.f2! White forces further weakening on the queenside and creates an unpleasant pin on the f-file.

20...b6 [in case of 20...a6 21.e3± the bishop would arrive on the b6 and c5. 21...xd3 22.b6! xc4 23.xd8+-]

21.a5! Forcing to push b5, but then Black's camp remains full of holes!

21...b5 22.d2 heading to c5!

22...ed6 connects his rooks, so he threatens to play g5. Watch how the World Champion destroys this attempt for a counterplay!

23.e2! White leaves the f-file and prepares for his next move.

23...g5 24.e3!! White had other good possibilities as well, but I like the idea of this move so much, that I decided to give it „!!“ mark. The point is, Black's position is so cramped that Petrosian wants to keep all the pieces on board. Currently the rook is only a defender of the d3 pawn, but in the future it might penetrate on the f-file. [24.xf8 xf8 25.b3 e8 26.xg5 hxg5 27.f1± was also fine of course.]

24...h5 Tries to activate the bishop from h6.

25.h4! The only good piece of Black, has to retreat as well.

25...gf7 26.b3 e7 27.f3 And the rook is back to the f-file, so he frees the e3 square for the bishop. Very interesting, that White only with his a5 pawn has crossed the middle of the board, but his position is completely winning.

27...h6 Finally, there is a hole in White's base, so the knight tries to settle there. [27...h6 28.xh6 (28.a6!?) 28...xh6 29.af1 xf3 30.xf3+- and in the next to move, c5 and h3 will decide the outcome of the game.]

28.g5 f6 29.xf6! creates deadly pin for the g5 bishop.

29...♖xf6 30.♙h3! The target is the e6 pawn.

30...♘e8 31.♘c5 ♘g7 32.♙e3! The weakness of the e6 and e5 doubled pawns is deciding the game.

32...♘f7 [32...♘g8 33.♙xf6 ♘xf6 34.♙g5!+- and the e5 falls.]

33.♙xf6 ♙xf6 34.♖f1 ♙e7 35.♙f2 ♘h6

36.♙f6! I think Petrosian really enjoyed to play this position. He can do whatever he wants, while Black is out of counterplay.

36...♙xf6 37.♖xf6 ♖d6 [37...♖e8 38.♘d7+-]

38.♖f8 and Yudovich resigned, as he found himself in complete zugzwang in material equality! White can simply go for the a7 pawn, and then promote the queen. It was very instructive to see, how after the 9th move mistake by Black, the great Champion crushed his opponent! He created many holes and weaknesses with „small“ moves, and Black was unable to defend all of them. Typical victory from Petrosian, where he has slowly „choked“ his opponent. **1-0**

Surprise section / study

Editorial Preface

The European Individual Chess Championship came to a dramatic end. In the last round Jakovenko won the final battle against the leader Laurent Fressinet and took the clear first place with 8,5/11. Second place was shared by 14 players, after tiebreak Fressinet was second, 3rd place went to Malakhov.

One of Your favorite commentator has probably qualified for the World Cup as well: after a disastrous start, Csaba Balogh managed a great come back with 4/4 in the round 6-9 and then with 2 draws against Caruana and Vitiugov completed a perfect second half.

Now it is time for yet another issue of CEWN. The game of the week should be clearly the Jakovenko-Fressinet, a battle for the Title of European Champion!

From the current issue, we start with "practical endgames". Enough of knowledge and theory, time for practice! We discuss only one bishopendgame, but hopefully You will find it very instructive.

We wish You as usual a lot of fun and good reading!

Don't forget to reserve some free time from May 12th on. We will comment live the World Championships games on Chessdom.com, a fantastic match between the World Champion Anand and the great Match player Boris Gelfand!!!

*Arkadij Naiditsch
Balogh Csaba*

4 best games of the past week

(1) Jakovenko,Dmitry (2729) — Fressinet,Laurent (2693) [D38]

Plovdiv, 31.03.2012

[Balogh Csaba]

The decisive game of the European Individual Championship. We are in the last round, when Laurent Fressinet is leading by a half point, but he had to face the Russian Super GM, Dmitry Jakovenko with Black. Let's see what happened...

1.d4 d5 2.c4 e6 3.♘c3 ♘b4 4.♘f3 ♘f6 Black chose the Ragozin defense.

5.cxd5 exd5 6.♙g5 lately this is considered to be the most ambitious setup against Black's opening.

6...♘bd7 7.e3 c5

8.dxc5 This move was a rare sideline until Kramnik won a nice game against Ponomarev back in 2009. Since then this is already one of the most critical lines for Black from

the opening point of view. [8. ♙d3 is the most often seen in practice.]

8...♙a5 9.♖c1 ♙xc3+ [The mentioned game continued with 9...♘e4 10.♙xd5 ♘xc3 11.bxc3 ♙xc3+ 12.♙d1 0-0 13.♙c4 ♘f6 14.♙xf6 ♙xf6 15.♙e2 when Kramnik obtained a small advantage.]

10.bxc3 0-0 11.♘d4 ♙xc5 [The other line is 11...♘e4 12.♙f4 with several games in the database, but it is not clear, how Black should play to equalize.]

12.♙d3 ♖e8 A novelty, which does not solve Black's problems. [Players tried before 12...♘e4 but after 13.♙f4 ♘b6 14.♙h5 ♖e8 15.0-0 g6 16.♙h6± White got and edge in Vitiugov-Alekseev, Saratov 2011.]

13.0-0 ♘e4

14.♙f4 Lets make a summary of the opening. White has the bishop pair, powerful knight on d4 and a small weakness on c3, while Black tries to compensate it with active pieceplay with his knights. White threatens to play c4 now, to get rid of the weakness and open the position for the bishops to make their strength even more effective. Black must prevent it at any cost.

14...♘e5?! Black wants to occupy the c4 square with a tempo, otherwise he manages to get one of the bishops. However, Fressinet probably underestimated the strength of White's response. [14...♘b6 was the better way to prevent c4, which transposes to the 12...♘e4 line.]

15. ♖xe5! Jakovenko rightly decides to give up his bishop, in order to be able to play c4.

15...♖xe5 16.c4! Black got into trouble, which is bigger than it might seem at first sight. By playing c4, White solves the problem of his isolated pawn, opens the c-file for the rook, which will become the most important line and also destroys the fortress of the e4 knight. Black has problems with the development of his c8 bishop, while all the White pieces have a clear future.

16...♘f6 [16...♘d7 would lose a pawn after 17.♘b3! ♖e7 18.f4! ♖f5 19.♘d4±]

17. ♖b3 ♖e7 Black protects the b7 pawn, to be able to put out his bishop.

18. ♖fd1 All the pieces are working now.

18...♘g4 [18...dxc4 19.♘xc4±]

19.f3 ♘e6 Black not only goes for a bad knight vs good bishop position, but also worsens his pawnstructure. However, it was already very difficult to recommend something else for him. [19...♘h5 has a nice refutation 20.cxd5 ♖xd5 21.♘f5 ♖d7]

22. ♘e7+! ♖xe7 23. ♘xh7+! ♖xh7 24. ♖xd5 ♘xd5 25. ♖xd5+- White is a queen up.]

20.cxd5 ♖xd5 21. ♘c4 ♖e5 22.f4! ♖e4 23. ♘xe6 fxe6 Here we are! Jakovenko plays now according to the classical Russian school, but he misses a forced way to win a pawn.

24. ♘e2?! White wants to transfer his bishop to f3, but he gives small hope for Black to survive. Actually, this was

the only inaccuracy by Jakovenko in the whole game. [24.♖d4! ♔f5 25.♖d6 ♖ae8 26.♙d3! ♔a5 27.♙b5! ♖f8 28.♖xe6 white could have won a pawn.]

24...♘d5 25.♔f2! White brings his king closer to the center, since he sees that his opponent has no choice and must go for a bad endgame due to the ♙f3 threat.

25...♔b4 26.♙c4! White transfers the bishop back to the a2-g8 diagonal, when it will make a strong pressure on the e6 weakness.

26...♔xb3 27.♙xb3 ♘c7 28.♖c5! The rook goes to e5, where it ties the Black pieces.

28...♔f8 29.♖e5 g6

30.h4! Please notice Jakovenko's play on the kingside, the way he plays according to the two weaknesses rule. Black has enough force to defend the e6 pawn, so White creates another target.

30...♔g7 31.h5 ♖f8 32.g4! ♖ff7 33.♖g5 White awaits the best moment for exchanging on g6.

33...♖d7? A blunder in a terrible position. [33...♖f8 34.♙f3±]

34.hxg6 hxg6

35.♙c2! wins a pawn and also the game.

35...♔f8 [35...♖xd1 36.♖xg6+ ♔h7 did not save Black, since after 37.♖xe6+! Black has no good square to leave from the check 37...♔h8 38.♖h6+ ♔g7 39.♖g6+ ♔h7 40.♖g5+! ♔h6 41.♙xd1 after collecting all the pawns, White takes back the rook!]

36.♖xg6 ♖xd1 37.♙xd1 ♖h7 [37...♖d7 38.♙b3+-]

38.♙b3 The situation has not changed, White still has the strong bishop against the bad knight and already an extra pawn, which means Black is hopeless.

38...♔e7 39.f5 Creates connected passed pawns.

39...exf5 40.gxf5 ♘e8 41.e4 ♘d6 42.f6+ and e5 in the next move and one of the pawns will promote soon. Black resigned. Jakovenko deservedly took the 1st place, Fressinet finished 2nd and Malakhov 3rd. Congratulations! **1-0**

(2) Fressinet,Laurent (2693) – Akopian,Vladimir (2684) [E43]

Plovdiv, 30.03.2012

[Balogh Csaba]

Laurent Fressinet won a great game in the 10th round of the European Individual Championship. White achieved an edge from the opening. It created strong pressure, which Black could not handle and allowed White to finish the game with a nice combination.

1.d4 ♘f6 2.♘f3 e6 3.c4 b6 4.e3 ♙b7 5.♘c3 ♙b4 6.♙d3 0–0 7.0–0 We are in one of the main positions of the Nimzo Indian, 4.e3 variation.

7... ♙xc3 Black wants to avoid long theory and goes for a positional battle. [7...c5 and; 7...d5 are the main moves.]

8.bxc3 d6?! Despite being the main line according to the database, in my opinion this is a mistake. Black goes in a wrong direction with the knight. [Black should have organized his play against the doubled pawns on the c-file 8...c5 9.♘d2 ♘c6 later ♖c8, ♘a5, ♙a6 and d5 could be a plan.]

9.♘d2! Typical plan in the Nimzo, White wants to occupy the center with e4. The mentioned plan in the 8th move (8...c5) was directed also against this setup.

9... ♘bd7 10.e4 e5 11.f3 By overprotecting the e4 pawn, White prepares for the idea, which we will see in the next move.

11... ♖e8

12. ♖f2! The first step is done, White occupied the center. Thanks to this he enjoys space advantage. The second step is to improve the pieces. The most important question, what to do with the knight, which currently disturbs the development? With his last move, White gives place for the knight to transfer it to the ideal g3 square.

12...c6 Black prepares for a central break, however, it cannot be a good idea since it opens the center and the position, when after that the bishop pair starts to work. Other plans do not equalize either, but anyway one of the knight moves should have been tried. [12...♘h5 13.g3 and then ♘f1–e3 gives White a small advantage.(13.♘f1? ♘f4 14.♙c2) ; 12...♘f8 13.♘f1 ♘e6 14.♙c2 with the initiative of White.]

13. ♖f1 d5

14. ♘g3! Very strong play by Fressinet! He holds the tension and does not „touch“ any of the pawns. He uses the fact, that all the pawn takes by Black would only improve White's position. In addition, by the c6, d5 plan, Black weakened the d6 square, where the knight is heading to.

14... ♔c7 [Both 14...dxc4 15. ♕xc4; and 14...exd4 15.cxd4 would just allow White to get rid of the doubled pawns; while 14...dxe4 15.fxe4 would open the f-file for the rook.]

15. ♕g5! Very deep idea by Fressinet! The bishop on g5 confuses the Black's pieces, so it should be sent away. However, the move h6 weakens the kingside very much. The knight arrives to f5 with even bigger effect, all the sacrifices on g7 and h6 will hang in the air.

15...h6 16. ♕e3 ♖ad8 17. ♘f5! dxc4? Akopian desperately tries to complicate the matters, but it still just improves White's position. [17...♘f8 was probably the only chance, but still after 18. ♔d2! and Black cannot prevent the different sacrifices 18...dxe4 (18...♕c8 19. ♘xg7! ♕xg7 20. ♕xh6+ ♔h7 21. ♕xf8 ♖xf8 22.exd5+-) 19. ♕xh6! (19.fxe4 ♘g4) 19...exd4 (19...exd3 20. ♕xg7 ♘6h7

21. ♕f6!! prevents f6 and threats with ♘h6 mate 21...♘xf6 22. ♔g5+ ♘g6 23. ♔xf6+-) 20. ♕xg7 e3

21. ♕xf6! ♘g6 (21...exd2 22. ♘h6# picturesque mate) 22. ♔c1 exf2+ 23. ♕xf2 ♘f4 24. ♕xd8 ♖xd8 (24...♘xd3+ 25. ♕f1) 25. ♕f1 and White has an advantage.]

18. ♕xc4 b5 19. ♕b3 ♘c5

20. ♖d2! Fressinet calculates precisely. White wins now in a more or less forced way...

20... ♘b3 21. axb3 Now, Black must waste an important tempo on defending the a7 pawn.

21... a6 22. dxe5! Forces Black to take on d2, which invites the White queen to its ideal square!

22... ♖xd2 23. ♕xd2 ♕xe5 24. ♙d4! ♕e6 25. ♘h6+! ♙h7 [25... gxf6 26. ♕xf6 The mate is unavoidable on the long diagonal.]

26. ♘f5 and Black can not prevent the ♕g5 and ♘xg7 threats, so he resigned. An easy, but very instructive game. **1-0**

(3) Akopian,Vladimir (2684) – Khalifman,Alexander (2649) [B90]

13th EICC Plovdiv BUL (11.12), 31.03.2012

[Arkadij Naiditsch]

We are in the last game of the European Championship. Both players have 7/10 points, and a victory would mean good money and sure qualification to the World Cup. It is a funny coincidence that exactly these two players were fighting for the World Chess Crown in 1999 and the Russian player came out as a winner and was announced FIDE World Champion.

1.e4 c5 a clear sign already on the first move, that there is going to be a fighting game. Usually Khalifman prefers more solid openings like „Petrov“.

2. ♘f3 d6 3. d4 cxd4 4. ♘xd4 ♘f6 5. ♘c3 a6 We are in the Najdorf. Probably in one of the most popular openings in the chess game. Hundreds and thousands of hours have been spent on analysing this opening and still we see in many games with new ideas or positions where no concrete „solution“ has been found on „how to get better for White“

6. ♙e3 One of the main moves, another main move is **6. ♙g5**

6... e6 [6... e5; 6... ♘g4 were the 2 other main options for Black]

7.f3 [7.g4 this move got lately very popular, but it is leading to very forced positions, where both White and Black need to remember very well their analyses. Here one example of what can happen in case Your analyses are bad or You just forget something 7...e5 8.♘f5 g6 9.g5 gxf5 10.exf5 d5 11.♚f3 We are in a well known forced position 11...♘e4!? a rare move with a huge preparation behind it! 12.♘xe4 dxe4 13.♚xe4 ♘c6 14.♙c4 ♚d7 15.g6 fxg6 16.fxg6 ♚f5 17.♙f7+ ♙e7

18.♙c5+?? this move almost loses the game. But how to play such a position without a computer support. Almost impossible... (18.♚h4+ ♙d6 19.♙b6 would lead to a craziness on the chess board :) 18...♙f6 19.♚h4+ ♙g7

20.♙xf8+ ♙xf8 21.♙d5 ♙g7 22.♙xc6 bxc6 23.♚e7+ At this moment White had only 10 minutes left on their clock and Black even managed to gain some time!!! 23...♙xg6 24.♚g1+ ♙h5 25.0-0-0 ♙e6-- Sutovsky,E 2700-Zhigalko, A 2590 ECC 2012 Black managed to get a totally winning position with out doing any moves himself!]

7...b5 8.♚d2 [8.a4]

8...♘bd7 9.g4 [9.a4 another main line in the position]

9...b4!? beginning of quite a tricky line ... [9...♘b6; 9...h6]

10.♘ce2 [10.♘a4 h6!? this small differences of move orders in the opening are sometimes very hard to understand. For this deep analyses are needed and from time to time players prefer to have one line more than another...]

10...h6 White wanted to push g5 which has to be stopped

11.0-0-0 ♚c7 12.h4 White's play is clearly on the king side. It is all about the question: Can White be on time to push g5 and just smash Black defence lines, or Black will be quicker in the center to create a big counterplay

12...d5! No time to lose, White wanted to play ♖h3 followed by the deadly g5

13. ♕f4!? [13. ♖g3 a pretty move, but not an effective one 13...e5! (13... ♖xg3?? 14. ♕f4 not often we can see the Black Queen having no moves) 14. ♖b3 (14. ♖df5 d4 15. ♕f2 g6+ and the White knight is caught on f5) 14...d4 15. ♕g1 a5 16. ♖f5 a4 17. ♖bxd4 a very typical piece sacrifice for Najdorf positions 17...exd4 18. ♕xd4 b3! a very good move! White was one move late to play ♔b1. Black was faster this time]

13...e5

14. ♕h2! a great idea by White! Bishop on h2 is attacking the center, at the same time White is ready now for the g5 move.

14...dxe4? hard to blame Black for such a logical move like 14... dxe4. But it is probably a serious mistake in this very concrete position. Every loss of tempo, even such a move as taking a pawn, can change radically the whole evaluation [14... ♖b6!? Black should not lose any time! Development is everything 15.b3 (15.exd5 ♖fxd5 16. ♖e1 ♕e7 leads to a clearly good play for Black) 15... ♕d6 16.g5 (16. ♖f5 ♕xf5 17.gxf5 0-0! and Black seems to be the faster

one) 16... ♖h5 17. ♖f5 ♕xf5 18.exf5 with a very complicated and unclear position]

15.g5! An excellent move, even if a logical one. Suddenly Black's position is getting very dangerous

15...hxg5 This logical move is leading to a bad position for Black. But what else to do? [15...exf3 16. ♖xf3 (16.gxf6 fxe2 17. ♖xe2 gxf6 18. ♕h3 ♖b8 19. ♖hf1 with a strong attack for White) 16... ♖g4 17. ♕h3 ♖xh2 18. ♖xh2 All the White pieces are attacking the Black's position. It cannot have a happy end for Black...]

16.hxg5

16... ♖xh2! Searching for practical chances [16... ♖h5 17.fxe4 With an equal material on the board Black's position is clearly very bad. White has million threats for no compensation for that. Next White moves could be g6, ♕h3, ♖f5.]

17. ♖xh2 exd4 18. ♖h4?! a bit strange decision for White, or maybe he just underestimated next Black's move?! [More logical was 18. ♖h8! ♖d5 19. ♖xd4 Black has 2 pieces for the rook, but all White pieces are in the attack and Black cannot avoid serious material losses 19... ♕b7

20.fxe4 ♘e7 21.♔h3 (21.♔xd7+ ♔xd7 22.♖xf8+ ♔xf8 23.♖xd7 with a clearly better endgame for White) 21... ♘c5 22.♔c4 And probably the game will end soon with a mate!; 18.♘xd4 This move would not be the best one. 18...♘d5 19.♘f5 ♔f4! Black is changing the main attacking piece, White's Queen 20.fxe4 ♔xd2+ 21.♖dxd2 ♘f4 22.♖h8 g6 Probably White is still doing better, but the position remains very unclear]

18...♘g4! a great move by Black [Black would not solve their problems after 18...♘c5 19.gxf6 b3!? 20.♔b1! a very cool and strong move 20...g5 21.♖h8 bxc2+ 22.♔xc2 d3 23.♔d2! and it seems White is having almost a winning position 23...dxe2?? is leading to a pretty mate after 24.♔d8+ ♔xd8 25.♖xf8+ ♔xf8 26.♖xd8#]

19.♘xd4 [19.♖xg4!? would be probably objectively the best choice for White, even if we have to say that Black is already doing fine 19...♘c5 20.♘xd4 ♔xg4 21.fxg4 0-0-0 and Black is doing fine; 19.♔xd4 ♘ge5 20.♖xe4 ♔c5 21.♔d5 (21.♔d2 f5!) 21...♔b7 22.♔xd7+ ♔xd7 23.♖xd7 ♔xd7 24.♖xe5 ♔d6 in this endgame only Black can be better]

19...♘ge5 20.♖xe4 ♔b7 Black is just in time to complete development. Now things are looking much brighter for them

21.♖ee1 0-0-0 Black managed to solve their main problem — to get away with the king from e8. Now Black is having a slight material advantage which gives him at least even chances. I personally would say, Black is doing better

22.f4 ♘g6? wrong direction. From here on things start to go very badly for Black [22...♘c4! 23.♔xc4 (23.♔f2 ♘db6) 23...♔xc4 24.g6 ♘c5 with a good position for Black]

23.♔h3! White is using their chance!

23...♔b8 Black has to do something about the pin [23...♔xf4? is losing because of 24.♔xd7+ ♖xd7 25.♔xf4 ♘xf4 26.♖e8+ and Black is simply an exchange down]

24.♔xd7! another great move by White, based on exact calculation

24...♖xd7 [not working is 24...♔xd7 25.f5 ♘h8 26.♘b5!! What a great trick 26...♔xd2+ 27.♖xd2 ♖c8 28.♘d6 with big chances for a win for White]

25. ♖e8+

25... ♔a7? Black's panics in already very dangerous position [The only chance to continue the game was 25... ♕c8 26. ♖xf8 (26.f5 is a bad move now because of 26... ♕c5 27.fxc6 ♖xd4 and Black is doing well) 26... ♘xf8 27. ♖xb4+ ♔a8 28. ♖xf8 ♖d8! a very strong and only move, probably Black has overlooked it 29. ♖b4 ♖xf4+ 30. ♔b1 ♖xg5 31.c3 Material is equal, but it is clear that White is doing better due to the very open position of Black's king. Black can save this, maybe, but still a lot of work in front of him]

26. ♘b5+! axb5 27. ♖xd7 White got material advantage plus an attack. The game is basically over

27... ♖xf4+ 28. ♔b1 Black can not do much here anymore, especially in a practical game. White has simply too many threats

28... ♖xg5

29. ♖c7! Akopian is finishing the game in a great style

29... ♔a6 30. ♖xf8! The last exact move **1-0**

(4) Nisipeanu, Liviu-Dieter (2643) – Azaladze, Shota (2419) [B06]

13th EICC Plovdiv BUL (11.24), 31.03.2012

[Arkadij Naiditsch]

1.e4 We are again in the last round of the European Championship. Blacks needs to make a draw to qualify to the World Cup because of the great tiebreak, for White only a win is an option. We will see a great attacking game by Nisipeanu, who loves to give mates and proves one more time how good he is in that

1...g6 2.d4 ♖g7 3.♘c3 c6 4.f4 [4.♘f3 is the other main option, now at 4...d5 5.h3 dxe4 6.♘xe4 ♘d7 7.♙c4 ♘gf6 8.♘xf6+ ♘xf6 9.0-0 0-0 10.♔e1 with a small, but stable advantage for White]

4...d6 seems like Black doesnt want to go into the main lines [Clearly the main would be 4...d5 5.e5 h5 6.♘f3 ♙g4 with long theoretical lines to follow]

5.♘f3 [To avoid a double pawn structure, White could start gere with 5.♙e2!? and only at 5...♘f6 6.♘f3 followed by ♙e3, Qd2, long castle or just a short castle. For sure White is doing a bit better]

5...♙g4!? Black is playing according to the idea of the opening — attacking White's center

6.♙e3 ♙b6 This is the idea of Black's 5...♙g4. Now White cannot avoid a small destruction of their pawn structure, which is clearly good for Black

7.♙d2 ♙xf3 8.gxf3 ♘f6 White has a strong center and a bishop pair. For this Black has a better pawn structure and quite a safe position. It is clear, that White must search their chances in attack in the center, Black has to hurry to finish their development in castle long if possible

9.0-0-0 Of course the long castle! White needs to act quickly

9...♙a5?! Black obviously was afraid of White's d5 push, but in my opinion there is no reason for that. 9...♘bd7 would have been a better choice

10.♙b1 a good prophylactic move before starting the real action

10...♘bd7 11.e5 White is statring concrete action in the center [11.♔g1!? with the idea ♔g5 would have been another interesting option for White]

11...Nf5? this is a big mistake [11...Nd5! this move is almost always the right way to go for this kind of structures! 12.Ne4 (12.Nxd5 ♔xd2 13.♔xd2 cxd5 in this endgame Black should be doing fine. White pawn structure f4,f3 is very bad and not letting White with big hopes for any advantage) 12...♔xd2 13.♔xd2 b5! Black should try to keep their beauty on d5 alive at any costs, White threatened to play c4 14.exd6 f5 15.Ng5 ♔xd4 With quite an unclear position]

12.♔h3 a move with multiple threats. White wants to push f5, attacking the knight on d7 and at the same time wants to play silent ♔g4 and take on h5 after which Black's position would be a disaster

12...Nb6 13.♔d3 Of course White should not allow the Black knight to jump to c4

13...♔h6 a very risky move in already a hard position [13...♔b4 not solving the problems 14.♔g4 Nc4 15.b3 Nxe3 16.♔xe3 and because of ♔xh5 next White is doing much better]

14.exd6! White is opening the Black's king position

14...exd6

15.f5! ♔g7 16.♔e4+ To be sure that Black will not castle in this game anymore

16...♔f8 17.♔he1 Every move of White is looking very logical and strong. White is putting all their pieces in the center, preparing for the final blow

17...d5!? probably the best chance to fight [not helping much 17...♔e8 18.♔h4 Nc4 19.♔c1! silent but very effectfull move. White is making a use out of their „extra“ rook in the attack 19...♔xe1 20.♔xe1 Nf6 21.Ne4! and probably Black is lost!]

18.♔h4 Nc4 19.♔c1?! [why not 19.♔g5! ♔g8 20.♔d3 protecting against the ♔b4 move 20...♔b4 21.b3 and White is having a huge advantage because of the Black rook on h8 which will probably never come into the game anymore]

19...♔b4! Black is almost back in the game.

20.♔a1 such a move is hard to play in a position where White should look for a direct attack. But probably there is nothing better. Black wanted to make a draw by playing ♔a3 check

20...♙f6 21.♚f2 Somehow Black survived the very hard moments, but still their position is clearly worse. They need to solve the huge problem with the rook on h8

21...a5 [21...♖g7!? Is leading to a clearly better position for White, but with some chances for Black. It is not an option to play with the rook on h8 22.♙g4 ♜he8 23.♙xh5 gxh5 24.♘e2!±]

22.♘e4!? a typical Nisipeanu move. When there are 2 choices, to make a position pressure and a chance to sacrifice something for the attack, it is an easy choice for Liviu-Dieter! [22.♙f1 with a better position for White]

22...dxe4 23.fxe4 Probably one of the critical position of the game. Black is a piece up for just a pawn, but in case White manages to bring their pawn in movement, the game can have a quick end. Black needs to act very quickly!

23...a4?! Beginning of an end [23...♙g5! been the only way to continue the game 24.fxg6 (24.c3 ♚e7) 24...hxg6 25.♙e6 ♙f6! looks like a loss of a tempo, but no! Black managed to activate the rook on h8 by forcing White playing fxg6 fxg6 26.c3 ♚b5 27.♙g4]

24.c3! ♚a5 25.e5! really a beautiful position! Black is a piece up but totally lost. All White pieces are standing just perfect!

25...♘xe5 Nothing helps already [25...a3 26.b4 ♚d8 27.exf6 ♘xf6 28.♚h4 With a mating attack]

26.dxe5 ♙xe5 27.♙h6+ getting the king in a deadly corner

27...♖g8 28.♚e3! [28.♜d7 would win immediately as well, Black cannot defend the weakness of f7 28...♙f6 29.♚e2 ♘g7 30.♚c4 ♜f8 31.♜e8! would have been a pretty end of a nice game]

28...♜e8

29.♚xe5! A great finish by Nisipeanu!

29...♜xe5 30.♜xe5 ♚a8 White is practically material up. Black rook on h8 will never play a role in this game anymore

31.a3?! a strange inaccuracy by White — of course White is still winning [31.♜e3 followed by ♜ed3 and Black resigns]

31...♘f6 32.♖e7 Black is totally paralyzed. And earlier or later White will connect their rook on the d file and the game will end

32...b5 33.♙g2 [33.♖d6+-]

33...♘g4 34.♙xc6 ♔c8 35.♖de1 ♘xh6 36.f6!

Just a fantastic end position! **1-0**

Endgame section

(15) Khalifman,A (2649) – Laznicka,V (2702)

Plovdiv, 29.03.2012

[Balogh Csaba]

At this moment, I was walking around the boards and I saw this position. I thought that the players will agree to draw soon, since there are almost no pieces on the board. Later, when I checked the results, I was shocked to see, that White won this game. I suspected some terrible blunder, or losing on time. .. Then I downloaded the game and I just had to realize, that the former FIDE World Champion Alexander Khalifman simply outplayed his 2700+ opponent. Let us study, what happened...

37. ♖g3 First of all, let's summarize what we see. White has a passed pawn on the kingside, which is in every endgame a big plus for the attacking side, while Black's a and c pawns are well blockaded by the b3 pawn. If Black pushes any of his pawns, that will get to a dark square, when it becomes a potential target. In addition, White king

stands on a more active place. These are all the pluses of the White side, however the position should be drawish of course, since there are only 3-3 pawns on board without any crucial damage on Black's side. White prepares for creating the passed pawn on the kingside, while Black has nothing better than to wait.

37... ♜f8 38.h4 ♜e7 39.h5 ♜f8 40. ♜f4 ♜e7 41. ♔e4 ♜d8 Black rightly expects that his opponent will push g5 and he wants to keep that pawn under attack. As we will see, this does not prevent White from creating a passed pawn. [Occupying the long diagonal would lead to the same position after 41... ♜b4 42.g5 ♜c3 43. ♜e3 ♜b2 44. ♜f4 (44. ♜d4 leads to forced draw 44... ♜xd4 45. ♔xd4 ♜f5 46.g6 hxg6 47.hxg6 ♜xg6 48. ♜c5 ♜f5 49. ♜xc6 ♜e4 50. ♜b6 ♜d4 51. ♜xa6 ♜c3=) 44... ♜c3 45. ♜g4 ♜b2 46.g6! hxg6 47.hxg6 ♜f6 48. ♜h5 ♜g7 49. ♜g5 we will see this position later.]

42.g5! ♜e7 43. ♜d2 ♜d8 44.g6! At first sight White blunders the pawn, but of course, there is a trick behind the move.

44...hxg6 45.hxg6 There are only 2-2 pawns left on the board, but White saved all the advantages, what we discussed before.

45... ♖e7 [45... ♔f6 does not work 46. ♗g5+! White wins.]

46. ♗c3 ♖a3 Sooner or later, Black had to change the diagonal... [46... ♗d8 47. ♔f4 ♗e7 48. ♔g4 due to the threat of ♗h5-h6, Black must transpose to the game with ♖a3.]

47. ♔f4 ♗c1+ 48. ♔g4 ♗e3 49. ♔h5 ♗c1

50. ♗a5 [50. ♗g7 would have been a very tricky continuation as well 50... ♔e7! Only move! Black king must go behind the pawn. (50... ♗d2 would lose instructively 51. ♗h6 ♗c3 52. ♗e3 White threatens to play ♔h6 and transpose to the game 52... ♗g7 53. ♔g5 Now, Black can only move with his king, but he soon gets into zugzwang... 53... ♔e5 54. ♗d2 ♔e6 55. ♗b4 Here is the zugzwang! Black must allow ♔f5, after which White transfers his bishop to f6. 55... ♗d5 56. ♔f5 c5 57. ♗d2 ♔d6 58. ♗g5 ♔d7 (58... ♗d5 59. ♗f6 ♗h6 60. ♗e5!+- Black has nothing against the plan of ♔f6, ♗b2, ♔f7 and ♗c1.) 59. ♗f6 ♗h6 60. ♗e5+- and ♔d5 collects the pawn.) 51. ♗h6 ♗b2 52. ♗e3 ♔f8 53. ♔h6 ♔g8 54. ♔g5 ♔g7 55. ♔f5 ♗c3 56. ♗c5 ♗b2 This is the only way for Black to hold. The passive defense, which is very hard to find for many players in general. Here, I did not find any plan for White to improve his position.]

50... ♗e3? Decisive mistake, he should have gone with his king to g7, and get the position we mentioned in the 50. ♗g7 line. [50... ♔f6 51. ♗d8+ ♔g7]

51. ♗d8+- Suddenly, it seems to be over. White manages to play ♗g5 and ♔h6, after which his position is winning.

51... ♗f4 52. ♗g5 ♗e5 53. ♔h6 Laznicka realized, that he lost, he tries his last chance to create a passed pawn, but he is too far...

53... c5 54. ♗d2

54... ♔d5 [54... ♗d4 55. ♔h7 ♗e5 56. ♗h6 ♗d4 57. ♗g7! ♗e3 58. ♗c3 and the g-pawn promotes.]

55. ♔h7 c4 56. bxc4+ ♔c5 57. ♔g8! Not the only way to win, but the prettiest. White plays ♔f7 and ♗g5-f6 in the next moves.

57... ♗d4 58. ♔f7 ♔xc4 59. ♗g5 Black resigned. A very instructive endgame! I guess players on each level has learnt a lot from this. **1-0**

Clash of the Titans

(16) Botvinnik, Mikhail — Ragozin, V [C16]

Leningrad, 1927

[Balogh Csaba]

The next game I present you, is from my big idol, Mikhail Botvinnik! His incredible understanding of chess, very deep opening and psychological preparation for the game, and the ability never to run out of energy to study chess, have altogether made him the 6th World Champion! He took the title in 1948, when he was 37 years old, and was fighting for the crown through 15 years against the strongest chess players in the world! In 1951 and 1954, he defended his Title against Bronstein and Smyslov, but in 1957, Smyslov defeated him. However, in 1958 he took a revenge and owned the throne until 1960, when Tal was able to beat him. However, Botvinnik has managed to win the rematch again in 1961. At the end, only Petrosian could stop him in 1963. I know Botvinnik's games very well, and I have wide choice of them to present from. I decided to show you a game from his young years. You can see that being 16 years old, he understood well the principles of chess! (At that time 16 years old without computers, I could only compare to a guy from today, around 9–10 years old!) The game is very instructive, it is about the center.

1.e4 e6 2.d4 d5 3.♘c3 ♘b4 4.e5 f6?! At that time, theory was just about to develop. Sometimes people tried unsuccessful ideas. The plan itself is correct, to undermine White's central pawns, but Black chooses wrong target.

The textmove weakens the position of the king too much. [4...c5 is the main move of recent theory.]

5.♘f3 c5 Consequent move, which leads to further weakenings.

6.a3! White would like to stabilize his center with 7.bxc3.

6...♙a5 [On 6...cxd4 White has a pleasant choice between 7.axb4 (or 7.♙xd4 ♘c6 8.♙b5 ♙d7 9.♙xc6 ♙xc3+ 10.♙xc3 ♙xc6 11.0–0±) 7...dxc3 8.♙d3!? cxb2 9.♙xb2 in both lines, with a nice advantage. Here, we can see a pawn sacrifice aiming quick development and two strong bishops. 9...f5 10.♘d4 ♘e7

11.♙h5+! trying to create some holes in the Black camp. Later there might be two promising plans for White, one is to open the center with c4 immediately, the other is to play b5 with the idea of activating the bishop on a3, and only then c4.]

7.b4! Nowadays, it is an obvious and well-known move, but 85 years ago, only with knowing principles well, players could find such moves. With this pawn sacrifice, White saves his very strong center, which guarantees him a huge advantage.

7...cxb4 [7...cxd4 8.♘b5! ♕c7 9.♙xd4 ♘c6 10.♙g4 with very strong attack!]

8.♘b5! This is the point of the previous move. The d6 hole is very unpleasant from Black's point of view.

8...♘c6 [8...bxa3+ 9.c3 and ♕xa3 is coming in the next move! Black could not hold the pressure.]

9.axb4 ♕c7 Black continues the game in the same spirit, tries to force White to take on f6, and obtain a nice central pawn-chain, at the same time he wants to keep the e7 square for the knight. [9...♕xb4+ 10.c3 ♕e7 11.♕d3 Despite being a pawn up, Black suffers with the development, due to the strong e5 pawn.]

10.c3 ♘ge7 [10...fxe5 would be bad as well, because of 11.♘xc7+ ♙xc7 12.b5 ♘d8

13.♙b3! e4 14.b6!± White could use the pin on the a-file.]

11.exf6 gxf6 Finally Black achieved his aim! He has strong center, and wants to make it even stronger with e5. However, we will see, that in the next moves, he must prepare for this.

12.♕d3 [12.♘h4!? was also very dangerous.]

12...0-0 [The direct 12...e5? has a nice refutation with 13.♘xe5! fxe5 14.♙h5+ ♔d7 15.♕f5+ ♘xf5 16.♙xf5+ ♔e8 17.♙h5+ ♔d7 18.♙g4+ ♔e8 19.♙g7!+-]

13.0-0 ♕d7 [13...e5 is still premature, because of 14.♘xc7 ♙xc7 15.b5! e4 (15...♘d8 16.dxe5 fxe5 17.b6! ♙xb6 18.♘xe5) 16.bxc6 bxc6 17.♕c2 exf3 18.♙xf3±]

14.♕h6 Developing with tempo.

14...♖f7 15.♙d2

15...e5 Black succeeds to continue his whole idea, but soon it becomes clear, that it was bad, right from the beginning. In spite that he managed to create nice center, the pawns will be rather vulnerable than strong because of their immobility (they cannot move, since after e4, White will have the very strong resource f3, which destroys the center), and it is already White who can undermine the central pawns with c4, or the other one with f3 (after pushing e4). The main creator of all these problems for Black is the king! There is no pawn left to defend his royalty! Please look at the position after the 18th move, to understand, what I mean.

16.dxe5 ♘xe5 [16...fxe5? 17.♘g5]

17. ♖xe5 fxe5 18. ♖xc7 ♔xc7 Let's stop for a moment! Here we can understand much easier the problems, which I explained after the 15th move.

19. ♔g5+ ♔h8

20. ♔h5! Very subtle play! Prepares for the next move, and creates complications in Black's camp, due to the fact that the f7 rook cannot leave its square because of the necessity to defend the h7 pawn. [The direct 20. ♖ae1? would be a big mistake 20... ♖g8!! Black takes the initiative!]

20... ♗e6 [On 20... ♔g8 21. ♖a3! is very strong, with the idea to push c4, and use the rook on g3!]

21. ♖ae1! The f1 rook might be very useful in the future by playing f3 or f4, and the f-file opens.

21... e4

[21... ♖f5 does not work 22. ♗f4! and after Black is forced to give up his center, his position collapses! 22... exf4 23. ♖xe6+-]

22. c4! Using the pin on the e-file, Botvinnik immediately undermines the center!

22... ♖f5 [22... exd3 23. ♖xe6+-; 22... ♖g8 would have been the only chance, but after some exact moves by White, the position remains terrible. 23. cxd5 ♖xd5 24. ♗xe4 ♖f6 25. ♖f3! ♖g4 26. ♔h3+-]

23. ♖e2 ♖e5 Black tries to protect the center with his full army, he knows if it collapses, he can resign the game.

24. ♖c1! Not the only win, but definately the nicest! The great Champion transfers the bishop to the long diagonal, against what Black has no defence. [24.cxd5 was also winning 24... ♖xd5 25. ♖xe4 ♜h5 26. ♖f4! ♜xf4 27. ♜xh5 ♖xe4 28. ♜c5!+-]

24... ♜d6 25.cxd5 exd3 [25... ♖xd5 26. ♖xe4+- The center falls apart!]

26. ♖b2+ ♜g8 27. ♜g4+! The most precise move, which leads to forced and spectacular mate!

27... ♞g6 28. ♜xe6 ♜xd5

29. ♜xg6+! hxg6 30. ♜xg6+ ♜f8 31. ♜g7+ ♜e8 32. ♜e1+ ♜d8 33. ♜e7+ ♜c8 34. ♜c1+ Black resigned! We can see how people played chess 85 years ago! Without any serious theory, they tried to play according to principles. Ragozin's idea in itself is fully justified, that center is very important! But there is one very important thing, that Botvinnik nicely demonstrated to us, that the center must be supported by pieces, otherwise it might collapse! **1-0**

Editorial Preface

Right after finishing the European Individual Championship, Arkadij took part in the Neckar-open Deizisau, from where he comments two of his nice victories. He scored 7/9, which sounds good, but actually was a bit disappointing for him.

Meanwhile, the Russian Team Championship has just started. The cream of the chess world is playing there. Next week we will collect our examples from this event and as usual present you the most interesting part of it.

This week we include a really funny study in the surprise section. We hope you manage to solve it, use your imagination!

We also analyse two instructive practical endgames. The examples of the puzzle section are easier than the previous weeks. Enjoy!

As usual, we wish You lots of fun with the new edition of CEWN!

*Arkadij Naiditsch

4 best games of the past week

(1) Naiditsch,A (2702)
— Kurmann,O (2458) [A15]

16th Neckar Open Deizisau GER (9.6), 09.04.2012

[Arkadij Naiditsch]

We are in the last round of Neckar Open. It is the biggest and probably the hardest German open, with close to 800 participants, 5 days — 9 games schedule. It was a disappointing tournament for me having at the current moment 6/8 and no chances to fight for the first places. Anyhow, in order to not to lose too many ELO points I tried at least to make a „pretty operation“ and to win my last game having then not that terrible 7/9 points.

1.c4 it was the second game of the day and I had only 30 minutes break between my games. I had no idea what my opponent is playing and decided that it would not be a bad idea of having a „silent“ opening

1...f6 2.f3 c5 3.c3 e6 4.e3 [of course the main move here is 4.g3 d5 (4...b6 is the other main option for Black which is leading to hedgehog structures 5.g2 b7 6.0-0 e7 7.e1 e4 the only way to avoid Whites e4 push (7...0-0 8.e4 d6 9.d4 cxd4 10.exd4 c7 11.b3 a6 12.b2 bd7 13.c1 And we are in the double fianchetto hedgehog, which is usually evaluated as a promising one for White) 8.ex4 ex4 9.d3 b7 10.e4 with a little bit better position for White) 5.cxd5 exd5 6.d4 c6 7.g2 e7 8.0-0 here we are in the main line of Tarrasch]

4...d6?! First when I saw my opponent making this move, I thought he just has missed the field d5 — which is very possible after such a tough schedule :). After the game I asked my opponent what went wrong?! He told me, that he didn't want to go against me for the main lines appearing after 4...d5

5.d4 bd7 6.d3 a6 7.0-0 of course White should not go for the e4 move, after which we would be again in the hedgehog with just a tempo down for White

7...g6?! This is a very dangerous way to develop pieces for Black. It gives White enough time to start some action on the queenside. [Much more solid was 7...e7 8.b3 White has many plans of developing, the most simple one is with b3-Bb2, another one could be to try to play b4 by: a3,Bd2,b4 8...0-0 9.e2 b6 10.c1 b7 11.e2 c7 12.f1 With small, but stable plus for White]

8.b1 Here I was already very happy with my opening outcome. To play for the b4 push is definitely making sense now

8...c7 Quite quickly played by my opponent. Is it a real defence against the White's push b4?!

9. ♖d2?! generally a useful move, but now too careful [Of course I should have played 9.b4! cxb4 10. ♖xb4 d5 in case Black doesn't try something forced, it is clear that White has very big advantage 11.c5 b6 12.cxb6! a nice tactical solution, that I actually saw during the game — just after playing 10 hours of chess, it is hard to be 100% sure in any calculation 12... ♞xb6 (12... ♞xc3 13.b7! the key move of the line 13... ♖xb7 14. ♖xb7±) 13. ♖b3 ♖d6 14.e4! and Black's position is falling apart]

9...b6

10.b4 One move too late — still better than never

10... ♖g7 Black is trying to fulfill their development, but one tempo is missing until castle and it gives me just enough time to reach almost a decisive advantage

11.bxc5! it's time for some concrete action

11...bxc5 12. ♞a4 cxd4?! [The only way to fight was 12... ♖b7 13.d5! 0-0 14.e4 with a clear advantage for White]

13. ♞e4! Probably this is what my opponent has missed [for some time I was not sure if White can play 13. ♞d5 a spectacular piece sacrifice, but not a good one 13...exd5

14. ♖a5 ♞a7 15. ♖b6 ♞b8 16. ♖xd4 ♖b7 and it seems that Black is doing fine]

13...0-0 [13... ♞xe4?? loses on the spot 14. ♖xe4 ♖b8 15. ♖a5 ♞a7 16. ♖xb8 ♞xb8 17. ♖b1 ♞a7 18. ♖b6 ♞b8 19. ♖xd4+-]

14. ♖a5 ♞a7 15.exd4 White is dominating in the centre and in development, which gives me a big advantage

15... ♞xe4 not a nice move to make, but there was no other way to defend the pawn d6

16. ♖xe4 ♖b8

17. ♖xb8 ♞xb8 [At 17... ♞xb8 White has a very nice continuation 18. ♞c6 d5! a great move by Black to stay in the game 19. ♖b1 (the most natural 19.cxd5? would give Black good chances for escape 19... ♞f6 20. ♖b1 ♞f4 21. ♖d3 ♞xd5 White should be still better, but the position is far from clear) 19... ♞f4 20. ♖c2!+- an amazing move! White wants to trap the Black Queen by playing ♖d2 — and there seems to be no escape! White is close to winning here 20...dxc4? 21. ♖b4! ♖e8 22. ♖d2 ♞g4 23. ♖b8+-]

18. ♖b4 ♖d7 [18... ♖d8?! 19. ♖xd6! a little, but nice combo 19... ♖xd6 20. ♞e8+ ♖f8 21. ♞xc8+-]

19. ♔a3 ♖c8 20. ♙xd6 ♜xc4 [20... ♙xd4 Would lead as well to a very bad position 21. ♘xd4 ♚xd4 22. ♙b7 ♜e8 23. c5± White has bishop pair, a passed c pawn, plus all the pieces are centralized — this should be enough for a big advantage]

21. ♜b1! Suddenly the Black's 8th rank is very weak

21... ♙b5 [21... ♖c8 22. ♙b7 ♜e8 23. ♙c5 ♙f8 24. ♘e5!+- What a domination on the board!; 21... ♘c6 22. ♙d3 White wins an exchange]

22. ♙d3! The last precise move. The game is over [Definitely I would be not happy after 22. ♜xb5?? axb5 23. ♚xa7 ♜c1+ 24. ♘e1 ♜xe1#]

22... ♜a4 allows me to finish the game in a beautiful way

23. ♚xa4 ♙xa4 24. ♜xb8+ ♙f8 25. ♘g5 ♚g7 [would lose of course as well 25... ♚xd4 26. ♜xf8+ ♚g7 27. ♜xf7+ ♚h6 28. h4+- with a very soon mate]

26. ♙xf8+ At this moment my opponent looked at me, smiled and played

26... ♚f6 27. ♘h7#

One of the rare cases in my chess career, when I could finish the game with a mate on the board :) **1-0**

(2) Naiditsch,A (2702) — Bluebaum,M (2407) [B13]

16th Neckar Open Deizisau GER (7.9), 08.04.2012

[Arkadij Naiditsch]

Here we face a typical game of Caro-Kann Panov variation. My opponent was a young German talent. The first surprise of the game he made when he arrived to the board in just a T-Shirt, when I was freezing even with warm clothes on. The second one, when he started to bang from time to time on the clock — to be honest not very impressive... The third surprise was a nice one though, he gave me an extra tempo in the opening :)

1.c4 c6 2.e4 My opponent plays the Slav on 1.d4 and the French on 1.e4. So I made a little trick in the opening by playing 1.c4

2...d5 3.exd5 cxd5 4.d4 and we are in the Caro-Cann, Panov line which was obviously not very known to my opponent.

4...f6 5.g3 c6 6.g5 dxc4 The very main move. [Just 2 weeks ago, D.Solak tried against me quite a dubious plan 6...e4?! 7.fxe4 dxe4 8.d5 f6?! what a crazy idea... When I was learning chess, I think my trainer would have adviced me to change the sport after intentionally playing f6!? in my preparation :) 9.gd2 e5 10.f4 g6 11.c2 and White is doing clearly better; 6...e6 7.f3 e7 8.c5 0-0 9.b5 e4 10.xe7 xe7 11.c1 is the other main line]

7.gxc4 e6?! Now White got a very good version of Panov or some others would say Queen's Gambit. Big specialists in this positions are for example: Rublevsky and Dreev, who have been playing it almost through their whole chess career. [7...xd4 8.xd4 xd4 9.0-0-0 e5 10.f4 g4 11.f3 This is the main position of a very forced and sharp line started with 6....dxc4. For long time it seemed like Black is ok, but lately probably White is doing better]

8.f3 [The early wish to win the game would not bring anything 8.d5 exd5 9.fxd5 e7! Black is doing perfectly fine]

8...e7 9.0-0 0-0 So we are in a very often appearing position with an isolated pawn on d4. A few basic ideas: Black will try to make a blockade on the d5 square, by bringing their knight from c6 in best case over b4 to d5, or over e7 to d5. Also b6-Bb7 would be a normal development. An exchange of any piece is very positive for Black. White should try to create pressure on the center and combine it with the attacking ideas on the Black king. In the best case e2-Rad1, b1, e5 would be perfect places for the pieces. Another White's idea is to break through with the d5, but this is very hard to manage.

10. ♖e1 a standard move. White is putting more pressure on the center and letting Black decide if they go for ♘b4 or play b6

10...b6 [10...♘b4?! would let White put the pieces to perfect positions 11. ♘e5 ♘bd5 12. ♖c1 Next White's moves could be ♕d3-b1, ♖d3 with a very dangerous pressure on the Black's king]

11.a3 [again too early would be 11.d5?! ♘xd5! The only move, but more than enough 12. ♕xd5 exd5 13. ♖xd5 (13. ♘d4 ♕xg5 14. ♘xc6 ♖d6 15. ♖xd5 ♖xd5 16. ♘xd5 ♕b7 and the bishop pair gives Black at least equal chances in this endgame) 13...♖xd5 14. ♘xd5 ♕xg5 15. ♘xg5 ♕b7 also here White has no objective chances to hope for an advantage]

11... ♕b7 Here was the first moment, when I thought for a while. I had a choice of two moves that seemed to be very logical to me, 12. ♖d3 and 12. ♕a2. Both moves follow the same idea, but still there is little difference between them

12. ♕a2 [12. ♖d3! in my opinion the better move 12...♖c8 13. ♖ad1 (Logical 13. ♕a2 is not the best because of the 13...h6! in general this move is very dangerous for Black

because it weakens the pawn structure, but here everything seems to be working for Black. Chess is a forced game :) 14. ♕h4 (14. ♕e3 ♕d6 15. ♖ad1 ♘e7 16. ♘e5 ♕xe5 17. dxe5 ♖xd3 usually an exchange of Queens is always good for Black — here as well 18. ♖xd3 ♘fd5 with at least an equal position) 14...♘h5! the key idea of Black's play 15. ♕xe7 (15. ♕b1 g6 16. ♖xe6 ♘f4! a very cool defence) 15...♘xe7 and Black reached what they wanted. The Black knight from c6 is going to d5, plus one piece has been exchanged. This means good position for Black) 13...h6 14. ♕f4! By this exact move order, 12. ♖d3, 13. ♖ad1, 14. ♕f4 White seems to reach a very pleasant position. During the game, not easy moves to play!]

12... ♘d5?! this is generally not a good move [12...♖c8 13. ♖c1 would lead us to a complicated position which I personally prefer to play with White]

13. ♕xd5! This is the right way to act at moves like 12...♘d5

13... ♕xg5 [13...exd5 14. ♕xe7 ♘xe7 15. ♖d3 We have another typical position here. White is doing clearly better and even if the position is looking like „should be somehow OK for Black” it is by far not. The bishop on b7 is very

bad and the clear advantage in the development is giving White very good chances to bring the full point home]

14. ♖e4 another typical type of position. Black has the bishop pair but White is better developed and it is not going to be easy for Black to manage the coordination of the pieces. Now it is all about the time. In case Black manages to consolidate — their position is fine

14... ♗f6 15. ♔a4! very logical. White is putting pressure and at same time developing their pieces very naturally. Next White moves are easy, ♖ad1, ♘e5 and hope to make d5 working

15... ♘a5 16. ♘e5 ♔e7 [16... ♗xe5 17.dxe5 ♗xe4 18.♘xe4± Would lead to a position with "good White knight" against the "bad Black knight". Also the square d6 secures White a solid advantage]

17. ♖ad1 Probably here was the critical moment of the game. Can Black somehow hold their position?! [a mistake would be 17.b4? ♗xe4 18.♘xe4 ♗xe5 19.dxe5 ♘c4 and Black's knight finally gets into the game]

17... ♖fc8 [17... ♖fd8 seems not to solve all problems 18.♘g4 ♗xe4 19.♖xe4 ♗g5 20.d5! and Black's position is quite dangerous]

18. ♘d7! before playing 18.♘d7 I took a lot of time for thinking. Many options to continue the game and I needed to make quite an exact calculation

18... ♗c6 Very quickly played by my oponent, and exactly the move I was hoping for.... [18... ♗xe4 19.♘xe4 ♗h4! only move! Very unhuman 20.♘e5 Would lead to a better position for White, but maybe still Black would be a bit in the game]

19. ♗xc6 ♘xc6 20. ♘xf6+ ♔xf6

21.d5! This is the decisive move! White is using the temporarily unlucky position of the Black pieces

21... exd5 [The game would last longer after 21... ♘e5 22.♔e4 ♘g6 23.dxe6 fxe6 24.♔xe6+ ♔xe6 25.♖xe6 and White is just a pawn up in the endgame]

22. ♘xd5 ♔g5 [22... ♔xb2 23.♖c1+- This had been my calculation starting with 18.♘d7! It was very important to see 23. ♖c1 move because it is the only winning move and fundamental for White's advantage]

23. ♖e3! a precise move. White wants to play ♖c3 or just h4 making a „hole“ for the King and after taking some more forced action. Black cannot avoid loss of material

23...h6? this makes the win easy [23...♔f8 would have been one of the computer's suggestions here, but also after 24.b4 Black's position is probably lost]

24. ♖c3 Quite a nice example of play of position with isolated pawn and what can happen to Black in case of inaccurate play...

[24. ♖c3 ♘e7 25. ♖xc8+ ♖xc8 26.h4 ♔e5 27. ♔d7+-] **1-0**

(3) Dominguez Perez,L (2730) – Ibragimov,I (2539) [C02]

Russian league, 09.04.2012

[Balogh Csaba]

We are facing a typical battle in the French advance variation. Black gets a good position out of the opening, but does not find the right plan. With nice maneuvering White overtakes the initiative and finishes the game with a pretty mating attack.

1.e4 e6 2.d4 d5 3.e5 c5 4.c3 ♘c6 5. ♘f3 ♘ge7 The third most common move after [5... ♖b6 and; 5... ♔d7]

6. ♘a3 cxd4 7.cxd4 ♘f5 8. ♘c2 ♖b6 9. ♔d3 There are still many games for the given position, but now Black deviates from the mainline with a logical move.

9... ♔d7 Prepares to bring the rook to c8. [One of the biggest experts in the French defense, the Armenian GM Rafael Vaganian, has played an instructive game against Nigel Short 9... ♔b4+!? 10. ♔f1 in this opening, it is not a big problem for White to move with the king, since the position is closed and in a few moves he can make an artificial castling with g3 and ♔g2 (10. ♘xb4 would lose a pawn 10... ♖xb4+ 11. ♔d2 (11. ♔f1 ♘fxd4) 11... ♖xb2) 10... ♔e7 11.g3 the d4 pawn is always poisoned in this line, now after exchanging all the pieces on d4, ♔b5 checks the queen 11... ♔d7 12. ♔g2 ♖c8 (12... ♘fxd4? loses again after 13. ♘fxd4 ♘xd4 14. ♔e3! ♔c5 15.b4!+- winning a piece) 13. ♔xf5 exf5 we will see this structure in our game as well 14.b3 0-0 Black equalized and after 15. ♔g5? big mistake, he already has a big advantage 15... ♔xg5 16. ♘xg5

16...f4!! the bishop moves to f5 and the d4 pawn cannot stay for a long time on the board 17.gxf4 ♘e7! ♔g6 threatens to win one of the knights 18.♘e3 and at this moment Black missed the win in the Short-Vaganian, Montpellier 1985 game 18...h6! 19.♘f3 ♔g6+ 20.♖f1 ♕b5+ 21.♖e1 ♔e4 Black is completely winning.]

10.0-0 a5 Strong move, Black should organize his play on queenside. [10...♘cxd4? just as in the previous line, the d4 pawn is indirectly protected: 11.♘fxd4 ♘xd4 12.♕e3! ♕c5 13.b4! ♘xc2 14.♕xc5+-]

11.♕xf5 exf5 Here we have this structure. Generally, we can say it is fine for Black, and the fans of the French defense should never be worried about this slightly strange pawn structure, but still the position requires exact play.

12.♘e3! Dominguez plays logically. He has a nice square on f4, which he is going to occupy with the knight.

12...♕e6 13.g3! ♕e7 14.♘g2! h6 A useful move. Black should keep his dark squared bishop, not letting White to exchange it in a given moment with ♕g5.

15.h4

15...0-0 [I have seen some games in this structure, where Black kept his king in the center. It is in complete safety there. 15...♖d7!? 16.♘f4 ♔hc8]

16.♘f4 ♔fc8 Black prepares for the invasion on the c-file after ♘b4, something that White must prevent...

17.♔e1! Just to have ♔e2 on ♘b4. Until this point Black played well, but now he chooses a wrong plan...

17...♔c7 It is logical to double on the c-file, but White can easily neutralize the threats there... [In my opinion, it was better to play 17...a4 to install the knight to c4 18.♔e2 ♘a5 Black seems to be completely fine 19.♕d2 (19.♔xa4? is not working 19...♘b3!; 19.♖g2 ♘c4 20.♘e1 ♔c7) 19...♘c4 20.♕c3 and now we can see a typical plan for the structure, which could be a bit scary for somebody 20...g5! 21.♘xe6 ♔xe6 with a comfortable game.]

18. ♖e2 White defends the b2 pawn in order to develop with ♗e3.

18... ♖ac8 19. ♗e3 The position of the Black's rook seems to be nice, but in fact it does not do anything. Black does not have anymore the a4, ♘a5-c4 plan. It is already not easy to suggest something for him, while White has a clear idea now, what we will see in the game...

19... ♘b4 20. ♘e1! The plan was anyway to transfer the knight to d3.

20... ♔b5 [20...g5!? was possible again, but now it is more risky than before 21. ♘xe6 ♔xe6 22.hxg5 hxg5 23.a3 ♘c6 24.f4! could be slightly better for White.]

21.a3 ♘a6 22. ♘ed3 Black is out of counterplay. He tries to maneuver with the pieces, but there is no weakness in White's camp.

22...a4 it is already too late, the knight has no chance to arrive to a5.

23. ♖d2! Very deep move! It opens the diagonal for the queen, so White prepares for kingside attack with g4!

23... ♗f8?! Another bad idea, but the position was already quite unpleasant. Black underestimates the g4 plan... The bishop was better placed on e7, where it was looking at the h4 pawn. [Even after the logical 23... ♖c4 24. ♘xe6 fxe6 25.g4! was working. White is better anyway.]

24.g4! Creates two threats. The direct one is to take on e6 then on f5 and attack with ♔h5, ♘f4. The positional idea is to push g5, disturbing Black's king.

24... ♗d7 [24... ♔d7 was more logical, but the position is bad anyway 25.g5! hxg5 26.hxg5 g6 27. ♔g2 White prepares to bring the rooks to the h-file, just as in the game and 27... ♔e7 would drop a pawn 28. ♘xe6 fxe6 29. ♔xa4]

25.g5! hxg5 Black did not want to open the h-file, but to receive gxh6 is not much fun either. [25...g6 26. ♔f3 ♗e6 27.gxh6+- 27... ♗xh6 loses to ♘xe6]

26.hxg5 g6 27. ♔f3 Developing with a tempo.

27... ♗e6

28. ♔g2! Prepares for ♖h1. You can notice that the Black rooks on the c-file still don't do anything.

28... ♖c4 [28... ♗g7 29. ♖h1 ♖c2 White only gives up his strong knight for the bad bishop, when it is winning on the spot. 30. ♘xe6! fxe6 31. ♖xc2 ♖xc2 32. ♘f4 ♗e8 33. ♗h3+-]

29. ♖h1 ♗c7 30. ♖dd1! Really nice maneuvering! Dominguez prepares for doubling.

30... ♗g7 31. ♖h4 ♗d7 [31... ♔f8 The king has no chance to run away from the dangerzone 32. ♖h7! say stop to the king! 32... ♘e8 33. ♘xe6+ fxe6 34. ♘f4+-]

32. ♖dh1 ♗d8 33. ♗g3! White has time for everything. First he defends the g5 pawn and wants to play ♖h7, ♗h4. Black cannot do anything against it...

33... ♗b5 34. ♖h7 ♗xd4 35. ♗h4 Black resigned! Very nice game by Dominguez... It is really enjoyable to watch his games because all his moves are very easy to understand. **1-0**

(4) Shanava,K (2586) – Bacrot,E (2706) [C50]

Deizisau, 09.04.2012

[Balogh Csaba]

This game is from the 8th round of the Deizisau open, where the top seed Super GM Etienne Bacrot had run into a painful defeat.

1.e4 e5 2. ♘f3 ♗c6 3. ♗c4 ♗c5 4.0-0 ♗f6 5.d3 0-0 6. ♘bd2

6...d5 Bacrot's favorite move, which recently became an alternative of the standard d6 setup. He played it 4 times in 2011.

7.exd5 ♗xd5 8. ♖e1 ♗f6 9.h3 a6 A strong improvment on the first try... [His first game went with 9... ♗d6 10.a3 a6 11. ♗a2 ♗f5 12.b4 ♖e8 13. ♗b2 h6 14. ♗e4 (14. ♗c4±) 14... ♗e6 15. ♗xe6 ♖xe6 16.c4 ♗xe4 17.dxe4± White achieved a small advantage, which later manged to convert into full point in Radjabov-Bacrot, Khanty Mansiysk 2011.]

10. ♗xe5 A tricky novelty. [The expert of the Italian opening, Sergei Movsesian has played 10.a3 but after 10...b5

11. ♖a2 ♖b7 12. ♘f1 e4! 13. dxe4 ♔xd1 14. ♖xd1 ♘xe4= Black easily equalized and soon they agreed to draw, Movsesian-Bacrot, Rogaska Slatina 2011]

10... ♖xf2+? A terrible reaction. Probably also affected by the fact, that the game has started at 9 in the morning, which is generally still sleeping time for most of the top players. [10... ♖d4! would have been the only move, but enough to maintain the balance 11. ♖e2 (11. ♘xc6 ♖xf2+ 12. ♖h1

12... ♖g4!! Maybe Black missed this great move, which actually wins on the spot. 13. ♘f3 (13. hxc4 ♖h4#) 13... ♖xf3 14. gxf3 ♘h5--+) 11... ♘xe5 12. ♘b3! ♖xf2+! 13. ♖xf2 ♖xf2+ 14. ♖xf2 ♘xc4 15. dxc4 ♖f5 and the game would have simplified to a drawn endgame.]

11. ♖xf2 ♖d4+

12. ♖g3! This brave run with the king is based on exact calculation... [12. ♖f1 with the same idea as in the game is not that effective 12... ♘xe5 13. ♘b3 ♖d6 14. ♖f4 ♘fd7 Black has the important ♖f6! resource and the f4 bishop is not protected by the king 15. ♖xe5 seems to win at first sight, but after (15. ♖h5 ♖f6!) 15... ♘xe5 16. ♖h5 b5! 17. ♖xe5 ♖d8 the c4 bishop is trapped]

12... ♘xe5 13. ♘b3! ♖d6 14. ♖f4 ♘fd7 [14... ♖e8 15. ♖e2+- wins a piece]

15. ♖h5! b5 Black finds the only moves to not lose a piece immediately, but his position remains terrible. [15... ♖e8 16. ♖xf7+!+-]

16. ♖xe5 ♘xe5 17. ♖xe5 ♖g6+ [The endgame with a pawn down was hopeless after 17... ♖xe5+ 18. ♖xe5 bxc4 19. dxc4+-]

18. ♖h2 bxc4 19. dxc4 ♖xc2 Black maintains the material equality, but we will soon realize the main defect of his position... [19... ♖e6 Black would not have any compensation for the pawn 20. ♘d4 ♖xc4 21. b3 ♖b5 22. ♖xc7±] **20. ♖ac1** to protect the c4 pawn with tempo.

20... ♖f2 On other retreats of the queen, White could simply take on c7. Now the b2 pawn would hang as well.

21. ♖c5! After the big mistake by Black in the 10th move, we got this position by more or less forced way. Black's position is actually much worse than it might seem at first sight. With the last move White created the threat of ♖e2 and after any queen moves ♔xc7. The main problem is that the bishop on c8 is practically dead. The c5 knight dominates it completely. There is not even a small chance to develop it in order to connect the rooks.

21... ♔d2 [21... h6 22. ♖e2+- and ♔xc7; 21... ♖a7 would be too ugly 22. ♖cd1 with serious problems on the backrank.]

22. ♖cd1 ♔b4 [22... ♔a5 has a refutation 23. ♔e7! with the threat of ♔xf8 or ♖d8 23... ♗f5 24. ♖d5!+- and White wins material, after the knight jumps away to d7]

23. ♖d8!! Excellent move! The mate on the backrank can only be avoided with ♗b7, but it gives up the d7 square.

23... ♗b7 [23... ♖xd8 24. ♔e8+ ♖xe8 25. ♖xe8#]

24. ♖d7 and Black cannot do anything against ♘e6! [The direct 24. ♘e6 would lead winning position as well, but the text move wins even bigger material 24... fxe6 25. ♖d7 ♖f6 26. ♔xc7 and the bishop falls because of the mate threat on the 7th rank.]

24... ♔xc4 Black sacrifices his bishop, it means he resigns the game...The rest is easy. [24... ♗c6 25. ♘e6!+- mate is coming soon.]

25. ♘xb7+- ♔xa2 26. ♖xc7 h6 27. ♘d6 ♖ab8 28. ♘f5 [28. ♘xf7!? was also good 28... ♖xf7 29. ♖xf7+- and the b8 is hanging.]

28... ♔xb2 29. ♖c3! Of course no exchange this time.

29... f6 30. ♔g3 Black resigned. A very annoying loss from Black's point of view, since he made only one mistake right after the opening and in fact he had no chance anymore to come back in the game. On the other hand, the Georgian GM Shanava showed very nice performance, you can rarely beat a 2700+ player in this fashion. **1-0**

Endgame section

(15) Riazantsev,A (2710) – Macieja,B (2605)

Plovdiv, 30.03.2012

[Balogh Csaba]

This interesting endgame arose in the 10th round of the European Championship. White has an extra pawn and more active pieces, but the appearance of the opposite colored bishops always increases the chances of the defending side. In addition, the only way for White to make progress is on the kingside, but after pushing forward the pawns, the Black queen might give perpetual check. The exchanging of the queens always leads to drawn endgame. Riazantsev plays this game with excellent technique, but still in one moment, by very accurate defense, Black could have hold the draw.

35. ♔e7! White tries to squeeze Black's king into the corner by centralizing the pieces.

35... ♙c4 With the idea to play ♔f7.

36. ♔e4+! The only way to avoid ♔f7. [36.f4 ♔f7 Black eases his defense.]

36... ♙h8 37. ♔f4 White approaches to the timecontrol. 37. ♔g6 could have come immediately...

37... ♙h7 38. ♔f5+ ♙h8 39. ♔g6! Black has only one way to prevent ♔xh6.

39... ♔h7 40. ♔g3

40... ♔g8! The only move! Black must transfer his queen to f7, otherwise the f4-f5-f6 is crushing. The bishop moves along the a2-g8 diagonal would give up the b5 pawn after ♔b8, while 40... ♙d3 loses to 41. ♙xg7. [40... ♙e2 41.f4! ♙c4 (41... ♙d3 42. ♙xg7+ ♔xg7 43. ♔xd3+-) 42.f5 and mate is coming after f6.]

41. ♔e5! After confusing a bit Black's pieces, White is in time to push up his pawn to f5!

41... ♔f7 42.f4! ♙h7 [42... ♙d3 would just temporarily prevent f5 43. ♙f2 and g4, f5 in the next moves would transpose to the game...]

43.f5! ♙d5 [43... ♔f6 The opposite colored bishop endgame with two pawns down is already losing... 44. ♔xf6

gxf6 45. ♖xf6 here is one line to demonstrate it: 45... ♗d3 46.g4 h5 the same would happen if Black waits for ♔f2-g3-f4, h4 and g5. 47. ♔f2 hxcg4 48.hxcg4 ♗c4 49. ♔e3 ♔g8 50. ♔f4 ♔f7 51.g5 ♗d5 52. ♗d4 ♔g8 53.g6 ♗c4 54.f6 White wins the bishop after f7 and due to his remaining c3 pawn, wins the game as well.]

44. ♔h2 ♔d7 45.g4 ♗a8 If we compare the current position to the initial one, we can clearly see, how big progress White has already made. The threat is now to play h4-g5, creating mating net against the squeezed king.

46. ♔g3! ♔b7! The correct defense against h4-g5, but now White can occupy the important f7 square. [46... ♗c6 47.h4! ♗b7 48.g5 would be decisive]

47. ♗e6! ♔c7+ 48. ♗e5 ♔c6? and this is the losing move, White shows flawless technique. [However, I was unable to break the computer's stubborn defense: 48... ♗a7!! 49. ♔h4 ♔f2+ 50. ♔h5 ♗a7

I tried many different ways for break through, without success: 51. ♗g6+ ♔g8 52. ♗e8+ (52.f6 always lead to opposite colored bishop endgame with two pawns up, but now with the ideal version for Black.. 52... ♗d5! 53. ♗xg7+ ♔xg7 54.fxg7 ♔h7! and the king manages to stay between the pawns, White cannot make progress.; 52. ♗xg7 is not working, because the c3 pawn is hanging at the end. 52... ♗xg7 53. ♗xh6 ♔xc3) 52... ♔h7 53. ♗d4 (53. ♗xb5?? would be too greedy, suddenly Black creates the mating net 53... ♗e3! 54.h4 ♗e4!! g6 threats and on 55. ♗xg7 ♗c6! with ♗e8 mate!; 53.f6 ♗d5! leads to the same drawish endgame 54. ♗g6+ ♔g8 55. ♗xg7+ ♔xg7 56.fxg7 ♔h7=) 53... ♗c7 54. ♗g6+ (54. ♗xb5?? here again is a blunder 54... ♗e7-+; 54.f6 ♗d5! draws again; 54. ♔h4 ♗d5) 54... ♔g8 55.f6 ♗d5 56. ♔h4 ♔f7 57. ♗xg7+ ♔xg7 58.fxg7 ♔h7 Black holds the draw, but I must say, I would wonder if any human could find all these moves!]

49. ♗f7! ♔b7 50. ♗g6+ ♔g8 51. ♗e8+! ♔h7

52. ♔h4! Black can resign now. Incredible, in the 48... ♔a7 line, the king was on h5 and it was draw, now with the king on h4 Black is in sort of zugzwang, cannot prevent the f6 threat. Black queen has too many defensive tasks, it must control the g7 square against ♔g6-g7 and also has to protect the bishop. Now Black is not in time to play ♙d5...

52... ♔c6 [52... ♔a7 53. ♙d4 ♔b7 54.f6! after destroying the king's main defender, the computer shows forced mate in all the lines.]

53. ♔f7! ♔b7 54. ♔g6+ ♔g8 55. ♔e8+ ♔h7 Until this moment, White played perfectly, but now and a few more times later on, he misses the f6 possibility. However, the way he plays is also winning.

56. ♙d4 [56.f6!+-]

56... ♔c6 57. ♔f7 ♔b7 58. ♔g6+ ♔g8 59. ♔e8+ ♔h7 60. ♔f8 This was White's idea instead of the mate after f6. Black got into zugzwang. He has no piece to move with. The a8 bishop or the g7 pawn is hanging. [60.f6!+-]

60...b4 61.cxb4 [61.f6+- was still mate.]

61... ♔d7 was the only way to get out of the zugzwang, but now Riazantsev elegantly transposes to a winning endgame.

62. ♔xg7+! ♔xg7 63. ♙xg7 ♔xg7 64.b5! Important to push the b-pawn as far as possible, before creating other passers on the kingside.

64... ♔f6 65. ♔h5 ♔g7 66.b6 ♙d5 67.g5! hxg5 68. ♔xg5 ♔f7 69.h4 ♙b7 70.h5 ♙h1 71.h6 ♙g2 72.f6 and Black resigned. ♔g8 would have been the only move to stop the h-pawn, but then the king might calmly go to promote the b-pawn. A very instructive endgame! **1-0**

(16) Drenchev,P (2499) – Balogh,Cs (2664)

Plovdiv, 25.03.2012

[Balogh Csaba]

In the 6th round of the European Championship, I got this seemingly easy, but very difficult rook endgame. The mutual timetrouble also made our task much harder... The position should be drawn because White seems to be in time to sacrifice his rook for the h-pawn and then with the help of the king promote his own pawn. Right in the beginning my opponent is facing a very difficult decision. To play slowly with b3, ♔a3-a4 and b4, or the quick b4, which cuts his own king from the support. After b5, Black will be able to win the pawn with ♜f5...

63.b3? The wrong plan, but still after some accurate moves, White could have held... [63.b4 was the precise move 63...♔g5 64.♜h8 ♔g4 65.b5 ♜f5 Seems to win because White's king is too far from the h-pawn, but... 66.♜g8+! Very important to force the king behind the pawn! 66...♔f3 (66...♜g5 67.♜xg5+ ♔xg5 68.b6=) 67.♜h8 ♔g2 68.♜g8+ ♔h1 69.b6! ♜a5+ (69...♜b5 70.♜g6 is easy draw. Black rook cannot help for the king to escape from

the corner.) 70.♔b3 ♜b5+ 71.♔c3 ♜xb6 72.♔d2 ♜e6= and as we already know from the 3rd CEWN, the position is a theoretical draw.(72...♜b1 would be winning with the pawn on h2. This is also known from the 3rd CEWN. 73.♔e2 ♜g1 74.♜h8 h2 75.♔f2 but now it is just a draw.)]

63...♔g5 An amazing moment! Normally in such positions we don't need to think and save some time for the rest of the game. Who could believe, that we are in the critical position of the game...

64.♜h8? The losing move, only 64.♜h7! would have save the game. We will soon understand the difference... [64.♜h7!! ♔g4 65.b4! White has no time to play ♔a3, it would lose in the same way as the game. 65...♔g3 66.b5 h2 (66...♜f5 leads to the same draw as in the 63.b4 line.. 67.♜g7+! ♔f2 68.♜h7 ♔g2 69.♜g7+ ♔h1 70.b6 ♜a5+ 71.♔b3 ♜b5+ 72.♔c2 ♜xb6 73.♔d2 ♜e6=) 67.b6! and here comes the difference... 67...♜f7! This is the winning idea, the 64.♜h8 line, but now... (67...♜f6 is easy draw after the known technique 68.♜g7+ ♔f2 69.♜h7 ♔g2 70.♜g7+ ♔h1 71.b7=) 68.♜xf7! h1Q

69.b7 White pawn reaches to b7 square after which Black has no chance to win 69...♔d5+ 70.♔b2 ♔b5+ 71.♔c3 ♔g4 72.♔d7!! and the king cannot approach the the pawn because of the rook checks along the d-file. A study-like escape by White.]

64...♔g4 Black is winning now!

65.♔a3 [65.b4 ♔g3 66.b5 h2 67.b6

67...♔f8! is the big difference 68.♔h7 (68.♔xf8 h1Q-- The pawn can not reach the b7 square.) 68...♔a8+ 69.♔b2 ♔b8 70.♔g7+ and here Black is not forced to go behind the pawn 70...♔f4! 71.♔h7 (71.♔f7+ ♔g5! 72.♔h7 (72.♔g7+ ♔h6--+) 72...♔xb6+ 73.♔c2 ♔h6!--+) 71...♔xb6+ 72.♔c2 ♔g3 73.♔g7+ ♔f2 74.♔h7 ♔g2 75.♔g7+ ♔h1

and now compared to the mainline of the 63.b4 line, the pawn has reached the h2 square and Black is winning 76.♔d2 ♔b1 77.♔e2 ♔g1 ...and the king escapes in time, as it was mentioned in the 3rd CEWN.]

65...♔g3 66.♔a4

66...♔f4+! The easiest win.

67.b4 ♔h4 68.♔c8 [68.♔g8+ Black king could control the 1st rank and hide himself behind the b-pawn... 68...♔f2 69.♔f8+ ♔e2 70.♔e8+ ♔d2 71.♔d8+ ♔c2 72.♔c8+ ♔b2--+ and the h-pawn promotes.]

68...h2 69.♔c1 h1Q 70.♔xh1 ♔xh1 The king is too close to the pawn.

71.♔b5 [71.b5 ♔f4 72.b6 ♔b1 73.♔a5 ♔e5 74.♔a6 ♔d6 75.b7 ♔c7--+]]

71...♔f4 72.♔c6 ♔c1+ 73.♔d6 ♔b1 White resigned. An interesting endgame. Good example of why it is relevant to know theoretical endgames. **0-1**

Clash of the Titans

(17) Fischer, Robert James — Rinaldo, John [C97]

USA-ch op 58th Cleveland (4), 08.08.1957

[Balogh Csaba]

We dedicate the rest of the month of April to probably the most popular World Champion of all times, Robert Fischer! He was the one who managed to break the Soviet hegemony in chess! Fischer took the crown in 1972 after defeating Spassky. The first game that we will see from the World Champion is from his childhood, we will see how deeply he understood chess already at the age of 14.

1.e4 e5 2.♘f3 ♘c6 3.♙b5 One of the most complex openings of the chess game is the Spanish. Fischer played it all his life and was one of the biggest experts of it.

3...a6 4.♙a4 ♘f6 5.0-0 ♙e7 6.♖e1 b5 7.♙b3 d6 8.c3 0-0 9.h3 The initial position of the main lines. Black can choose between many setups. All of them lead to different kind of positions. Here Black chose probably the most famous, the Chigorin variation.

9...♘a5 10.♙c2 c5 11.d4 ♕c7 12.♘bd2 ♙d7 Now or in the next move cxd4 is the mainline.

13.♘f1 ♖fe8 Standard place for the rook in the Spanish! A multipurpose move, it prepares for the g6, ♙f8-g7 plan, protects the e5 pawn to free the queen and in some moments, Black can take exd4 and press the e4 pawn. Now, White must choose between two plans. One is to

play 14.b3, in order to exclude the a5 knight from the game, followed by ♘g3. This is what I would prefer, but Fischer and the theory considers the other direction of the f1 knight to be stronger.

14.♘e3 This move has two aims. The main is to organize a play against the a5 knight, connected with b4. This is what we will see in the game. The other idea, which I consider to be less dangerous is dxe5 and on dxe5 ♘h2-g4, trying to create a stronghold on d5 for the knight.

14...g6 15.♙d2 White slowly prepares for the b4 plan.

15...♙f8 16.♖c1! The last preparation. A bit strange that four years later Fischer deviated from this game and pushed b4 immediately, which was premature... [16.b4 cxb4 17.cxb4 ♘c4 18.♘xc4 bxc4 19.♖c1 and here Matanovic found a very strong plan and equalized right away.. 19...exd4 20.♘xd4 d5! 21.exd5 ♖xe1+ 22.♙xe1 ♕d6 Fischer-Matanovic, Bled 1961]

16...♙g7 Black was not impressed by the great preparation and allowed White to continue his plan... [16...♘c6 was the principled move in my opinion 17.d5 ♘e7 18.c4! and white is slightly better due to his space advantage.]

17.b4! Black is facing a very difficult decision now...

17...♘c6?! and he fails... There was only one way to stay in the game, but it was against the character of the Chigorin players. In general, the players who play this opening with the Black color prefer to have a closed position. However, the only move was to take twice on d4 and open the position. [17...♘b7? the Hungarian grandmaster also failed to find the correct move

18.bxc5! Black is forced now to take out of the center and with this he does not destroy White's central pawns. This is a very bad sign for him... 18...exd4 19.cxd4 dxc5 20.e5! ♘h5 21.♘d5! ♔d8 22.♙e4! c4 23.♙g5 ♔a5 24.g4!+- and White won soon in Smyslov-Barcza, Zagreb 1955; 17...

cx d4 18.cxd4 exd4! was the only way to play (18...♘c4 including the ♖c1 and ♙g7 moves, this does not work anymore because of 19.♘xc4 bxc4 20.dxe5 dxe5 21.♙b3 ♙e6 22.♘g5±) 19.♘xd4 (19.bxa5 is interesting 19...dxe3 20.♙xe3 ♔xa5 21.♔xd6 ♙e6 22.a4 could be slightly better for White.) 19...♘c4 20.♘xc4 bxc4 And the computer defends Black's position, even if it seems quite bad for me after ♙b1. (20...♔xc4? 21.♘f3±) 21.♙b1 I would be happy to stay like this, but the position is unclear.(21.♙b3 ♙b5 22.a4 ♘xe4)]

18.♘d5! An excellent move by Fischer! He foresees the consequences of the exchanges in the center...The position opens up and White is much better prepared for that.

18...♘xd5 19.exd5 ♘e7

20.dxc5! I like the way how White handles the position! This is rather positional way, while the computer move 20.dxe5 is a tactical solution. [20.dxe5 ♘xd5 (20...dxe5 21.♙e3± this could arise after 20.dxc5 dxc5 as well..) 21.♙e4 ♙c6 22.♙g5! ♔b7 23.exd6 h6! when White should be better, but he needs to play precisely, otherwise the Black bishops might be unpleasant...]

20...♘xd5 [20...dxc5 21.♙e3±]

21. ♖b3! He chooses the right diagonal for the bishop! There might be some problems around the f7 square, ♘g5 is in the air. [21. ♖e4 would lead to rather unclear situation after 21... ♙c6 22. ♙g5 ♚b7 23.cxd6 ♖e6!]

21... ♘f6 [21... ♙e6 was the best chance, but White is better after both 22.cxd6 (22. ♘g5 dxc5 23. ♘xe6 fxe6 24.bxc5 ♚xc5 25.c4 bxc4 26. ♖xc4±) 22... ♚xd6 23. ♘g5±; 21... ♙c6 the same defense as after 21. ♖e4 does not work because 22. ♙g5 ♚b7 23.cxd6 ♖e6 24.c4! is probably the strongest move 24...bxc4 25. ♖xc4 ♖xd6 26. ♘xe5+-]

22.cxd6 ♚xd6 23. ♘g5! ♖f8 [23... ♖e7 24. ♙e3! similar to the game]

24. ♙e3! Creates the ♙c5 threat and a small tactical trick!

24... ♚xd1

25. ♖exd1! This is much stronger, than the other take-back. Fischer sees, that the other rook will be very useful on the c-file after pushing c4!

25...h6 There was no other move to prevent ♙c5, but this allows a small combination for White.

26. ♘e4! White either wins the h6 pawn, or he takes the bishop pair.

26... ♘xe4 [26... ♙f5 27. ♘xf6+ (27. ♘d6± also very unpleasant...) 27... ♙xf6 28. ♙xh6±]

27. ♖xd7 ♖ac8 28.c4!+- It is easier to understand the 25th move now, why the e-rook took on d1. Black collapses, too many weaknesses in his position. The power of the bishops is also deadly.

28... ♘g5 [28... ♖fd8 29. ♖a7+-]

29. ♙xg5 Not bad, but I would have kept the bishop... [29.c5+-]

29...hgx5 30.c5 [and Black resigned. It might seem a bit premature, but he has nothing against c6-c7 and then ♙d5-b7. Just for demonstration: 30.c5 e4 (30... ♙f6 31.c6 ♚g7 32.c7 ♙d5-b7 next) 31.c6 ♙b2 32. ♖c2 ♙a3 33.c7 ♙xb4 34. ♙d5+- A great positional achievement from a 14 years old! Please don't forget, that there were no computers at that time, that 14 years old chess player is like 9–10 now. This game shows how great was Fischer and what talent he had from early age. Next two weeks we will study tactical crushes by Fischer!] **1–0**

Editorial Preface

Probably, the two strongest leagues have come to an end this weekend. In Germany, the favorite Baden-Baden won the Championship again. There was a big sensation when Anand lost his game against Tiviakov. He is definitely focusing now on the World Championship match. Second was Werder Bremen and the bronze went to Solingen.

The Russian league had a dramatic finish. Before the last round, the Team of St. Petersburg was leading, but had to face against the top seed ShSM-64 Moscow. The victory of either team would grant them the gold medal, but in case of a 3–3 score, Tomsk — 400 would get the sudden chance to be ahead of them thanks to a better tiebreak. After an amazing fight, the main match finished 3–3, and Tomsk was the happy winner of the Championship!

The average rating of the 1–5 Teams was over 2700!! We could enjoy many interesting battles, so we have collected our main games from this event and we hope You will enjoy them.

As usual, we wish You lots of fun with the 8th CEWN!

*Arkadij Naiditsch

4 best games of the past week

(1) Svidler,P (2744)
— Jakovenko,D (2729) [D37]

Russian league (3), 11.04.2012

[Balogh Csaba]

The new European Champion Dmitry Jakovenko has proved that his success was not accidental. Peter Svidler chose a very sharp line against the Queen's Gambit, but the complications clearly favored Black!

1.d4 ♖f6 **2.c4** e6 **3.♗f3** d5 **4.♗c3** ♕e7 **5.♖c2** The main-lines are 5.♕g5 and 5.♕f4. Two days later Svidler drew in a fantastic game against Morozevich in the 5.♕f4 line. We analysed this game for you as well...

5...c5 **6.dxc5** This is the sharp handling of the position. [The calm 6.cxd5 leads to equality after 6...cxd4 7.♗xd4 0-0! 8.♕g5 ♗xd5 9.♕xe7 ♗xe7 10.♖d1 ♖b6=]

6...d4 **7.♗b5**

7...e5! A great sacrifice, which is actually well-known. We explain the point of it in the 8.♗xe5 line.

8.e3 Practically a novelty. White has accepted the sacrifice in the previous games. [8.♗xe5 a6! Black pushes back the knights, since the standard reaction with ♗d6+ loses a piece. 9.♗a3 After such an ugly move it is obvious that Black gets more than enough compensation for the pawn. (9.♗d6+? ♕xd6 10.cxd6 ♖a5+ is the idea of the 7...e5! move.) 9...0-0! 10.g3 ♖a5+! 11.♕d2 ♖xc5 12.♗d3 ♖c6! By three precise queen moves, Black prevented ♕g2. White is already in danger. 13.♖g1 (13.f3 ♕f5) 13... ♕f5 14.♕g2 So far we were following the Khalifman-Topalov, Dubai rapid 2002 game, where Black could have played even stronger. 14...♖d7! and ♗c6, ♖fe8 are coming with an advantage.]

8...♗c6! Logical developing. [8...a6?! would be a mistake now 9.♗d6+ ♕xd6 10.cxd6 ♖xd6 11.c5! ♖e7 12.exd4 exd4+ 13.♕e2± followed by O-O, White is better.]

9.exd4 exd4 **10.♕f4** White has to act directly, since after the normal developing moves Black gets an advantage. [10.♕e2 0-0 11.0-0 ♕xc5± a6 is next.]

10...0-0 **11.♕c7** Svidler found a really unusual idea, but it was not working well for him... neither I found equality for White after other moves. Probably that is why White decided to complicate the matters. [11.♗c7 runs into the very strong 11...♗h5! 12.♕d6 (12.♗xa8? ♗xf4 the a8 knight is trapped.) 12...♖b8± and Black takes on d6 and gets an advantage.; 11.0-0-0 ♕xc5 The b1 king is unsafe.]

11...♖d7 **12.♗e5** [On 12.♕d6 Black has 12...b6!± followed by bxc5, creating a protected passed pawn on d4.]

12...♔e6!

13.0-0-0 This was the idea behind 11.♙c7. Now ♘xe5 would be a mistake because of ♖xd4 and the next move ♙xe5. Unfortunately for him, Jakovenko found its refutation! [13.♙e2 with the same idea as 13.O-O-O 13...♙xc5!± (13...♖xe5? 14.♖xd4! ♙a6 15.♙xe5±)]

13...♖e8!! Svidler probably missed this move! Suddenly all his pieces get confused. Each defends another, but all of them are on vulnerable places. Black is winning now, after only 13 moves. [13...♖xe5? 14.♖xd4 ♙a6 15.♙xe5 ♙xa2 16.♙d3±; 13...♙xc5?! 14.♖xc6 bxc6 15.♖xd4]

14.f4 ♙h6? but this is a mistake. Now White could have come back to game. [14...♙xc5!? 15.♖d3 b6-+ is one way to win.; It would be interesting to know, why Jakovenko rejected to play this move. Seems like winning a piece. He definitely saw it, but who knows what was he afraid of... 14...a6 15.♖xc6 bxc6 16.♖xd4 ♙e3+! after this important check, Black can take on c7. 17.♙b1 ♖xc7 18.♙d3 (18.♖xc6 ♙f6-+) 18...g6 19.♖xc6 ♙f6-+]

15.♖xc6! bxc6

16.♙e4? Human move, but losing one. [The computer suggested an amazing move: 16.♙e5! The position becomes amazingly complex with many different options. Finally I found only one way for an advantage. 16...d3!! This is of course another move, which is almost impossible to play for a human.

a) 16...♙g4 17.♖xd4 f6! (17...♙xd1 18.♙xd1 White gets very strong initiative for the exchange. 18...♙xc5 19.♖f5 ♙e6 20.♙d3,) 18.♖xc6 ♙xc5 19.♙d4! ♙xd1 20.♙xd1 ♙xf4+ 21.♙d2 ♙d6 22.♙xc5 ♙xc5 23.♙d5+ ♙xd5 24.cxd5 White has only one pawn for the exchange, but the c6 knight is really powerful. Black is slightly better, but the logical outcome should be draw;

b) 16...♙xc5 17.♙xd4! (17.♖xd4? f6! would trap the bishop out of the blue) 17...♙xf4+ 18.♙d2 ♙xd2+ 19.♙xd2! (19.♙xd2 would be a mistake because of 19...♙e7! 20.♖c3 ♙g5 21.♙c5 ♙f5 22.♙xf8 ♙d8! with attack!) 19...♙e7 20.♖c3 ♖c7 with a small initiative for Black, but probably White can hold.; **c)** 16...cxb5 17.♙e4 White traps the a8 rook! 17...♙g4 (17...♙f6 18.♙xa8 ♙xe5 19.♙xc8 ♙xf4+ 20.♙b1 This is a position which we would like to get in the 16...d3!! line, but without the d-pawn which closes the diagonal of the bishop. Without the d-pawn ♙f2 wins im-

mediately, now White is fine.) 18. ♖xa8 ♙xd1 19. ♔xd1 bxc4 20. ♙xc4 ♘d6 21. ♖d5 ♘xc4 22. ♖xc4 ♖c6 with approximately even position.; 17. ♙xd3 (17. ♖xd3 cxb5 18. ♖e4 ♙f6! Black goes for the same line as in 16... cxb5, but now he managed to get rid of the d-pawn. 19. ♖xa8 ♙xe5 20. ♖xc8 ♖xf4+ 21. ♔c2 (21. ♔b1 ♖f2--+ This is the big difference and also the idea of 16...d3!!) 21...bxc4--+ 17...cxb5 18. ♙e4 f6! a more or less forced line is coming 19. ♙d6 (19. ♙xa8 fxe5+) 19... ♙xd6 20. cxd6 ♖xf4+ 21. ♔b1 ♘xd6 22. ♖xd6 (22. ♙xa8? ♙f5--+ 22... ♖xd6 23. ♙xa8 bxc4 24. ♙e4 (24. ♖xc4+ ♙e6) 24...h6 25. ♖xc4+ ♙e6+ When Black has a clear advantage. He can create many problems against the White king.; 16. ♙d6 would have probably been the best practical decision 16... ♙xd6 17. ♘xd6 ♘xd6 18. cxd6 c5!+ and try to defend this worse position. (18... ♖xf4+ 19. ♖d2 ♖xd6 20. ♖xd4)]

16... ♙xc5! Black is winning again now.

17. ♙e5 [17. ♙a5 was better, but also not much fun. 17... ♙g4+]]

17... ♙g4! with the idea of f5!, when the queen has to leave the diagonal and then the b5 knight is hanging. Black is winning big material now.

18.b4!? Desperate attempt. [18. ♖d2 f5!--+; 18. ♘xd4 ♙xd1 19. ♘f5 ♖g6 20. ♔xd1 ♘f6!--+]

18... ♙xb4 19. ♖xd4 f6 [19...f5!? was winning as well.]

20. ♙d6 Black is winning by force after the most natural moves. [20. ♖xc6 fxe5 21. ♖xa8 exd4--+]

20... ♘xd6 21. ♘xd6 ♙xd6 22. ♖xd6 ♖ae8! and the Black rook invades to the backrank and decides the outcome of the game. The queen has only one square to cover the f4 pawn, but it moves into another idea...

23. ♖d4 ♖e1+! 24. ♔c2 ♖d1! 25. ♖c5 ♖xf4! Black finished the game with a small combination. An impressive win by Jakovenko, after which probably the 5. ♖c2 c5 6.dxc5 line will not enjoy too many followers.[25... ♖xf4 26. ♖xd1 ♙xd1+ 27. ♔xd1 ♖d8+ 28. ♔c2 (28. ♔e2 ♖d2+ 29. ♔e1 ♖c2!--+ after this subtle move, mate is coming soon.) 28... ♖d2+ 29. ♔b3 ♖b8+--+] **0-1**

(2) Svidler,P (2744) – Morozevich,A (2765) [D37]

Russian league (5), 13.04.2012

[Balogh Csaba]

Two days after the defeat against Jakovenko, Svidler had to face the same opening, this time against Alexander Morozevich. A fantastic battle which ended in draw after excellent moves of both sides.

1.♘f3 ♘f6 2.c4 e6 3.♘c3 d5 4.d4 ♙e7 5.♙f4 It was enough from 5.♙c2.

5...0–0 6.a3 A very small sideline, which was tried by Carlsen and Topalov as well. [6.e3 is the mainline with thousands of games in the database.]

6...b6 The most common move, however Anand and Kramnik played 6...dxc4 in 2011. Now, Black wants to occupy the center with pawns and prepares for c5.

7.cxd5 [7.♙c2 happened on the highest level in a quite recent game 7...c5 8.♖d1 ♘c6 9.cxd5 ♘xd5 10.dxc5 bxc5 11.e3 (it would be interesting to know Aronian's idea after 11.e4 Black gets compensation in both lines, but not obvious if it is enough or not. 11...♘xf4 (11...♘d4!? 12.♘xd4 cxd4) 12.♖xd8 ♖xd8) 11...♙a5 12.♘e5 ♘xe5 13.♙xe5 ♖d8 14.♙d3 ♙a6! 15.0–0 (15.♙xh7+ ♙h8 White loses too much time in the development.) 15...♙xd3 16.♙xd3 ♘xc3 17.♙xc3 ♙xc3 18.♙xc3 ♙f8 Black equalized and the players soon agreed to draw in Topalov-Aronian, Wijk aan Zee 2012.]

7...♘xd5 8.♘xd5 exd5 9.♙c2 Svidler prepares to undermine Black's strong central pawns... [Carlsen beat Anand in a blitz game back in 2009, but it was definitely

not because of the opening 9.e3 c5 10.♙d3 ♘c6 11.♙c2 h6 12.dxc5 bxc5 13.0–0 c4 14.♙e2 ♙e6 15.♖fd1 ♙b6 16.♖ab1 ♖ac8 17.h3 ♙f6 and Black was completely fine.]

9...c5 10.dxc5 bxc5

11.e4 The point behind the 9.♙c2 move. If Black could consolidate his center, he quickly overtakes the initiative. There were two games in the database for this position, in both Black equalized quite easily... However Morozevich came up with a very interesting novelty.

11...dxe4! Of course, it is very logical to open the center against the e1 king, but what happens with the a8 rook? [11...♙b7 12.exd5 ♙xd5 13.♙c4 ♙h5 14.♙b3 ♙xf3 15.♙xf3 ♙xf3 16.gxf3 ♘c6 with more or less balanced endgame in Gyimesi-Naiditsch, German league 2010.; 11...d4 12.♙d3 ♙a6 13.♙xa6 (13.0–0 could be an improvement on White's play.) 13...♙a5+ 14.♘d2 ♙xa6 15.♙xb8 ♖axb8 16.♘c4 d3! 17.♙xd3 ♖fd8 18.♙e2 ♙g5 Black got very strong initiative for the sacrificed pawn. Wojtaszek-Roiz, Lublin 2011.]

12.♙xe4 Just as in the game against Jakovenko, Svidler tries to trap the a8 rook. Such coincidence happens sometimes in chess.

12...♖e8! Well played by Morozevich. It would be interesting to know, until which move it was the preparation of the players...

13. ♖d3 Prepares for O-O-O and ♖xh7. Seems like White is crushing, but... [Let's see what happens if he accepts the sacrifice: 13. ♖xa8 ♖f6+

14. ♖e3 is the only move

a) Really nice lines arise after 14. ♖e2 ♖xe2+!! Black must keep the king in the center, but it costs to him the other rook! 15. ♖xe2 ♖a6+ 16. ♖e1 ♖e8+! Very important to have the ♖b5 option on ♖e3! 17. ♖e3 (17. ♖e5 ♖xe5 18. ♖xe5 ♖xe5+ 19. ♖d1 ♖xb2+; 17. ♖e5 ♖xe5) 17... ♖b5! Three pieces are attacking the king and White has no defense. 18. ♖g1 ♖xb2 19. ♖d1 ♖c3+ and ♖f1 mate,;

b) 14. ♖e5 ♖xe5 15. ♖xe5 ♖a5+! Black is winning in both lines despite being currently a rook down. 16. b4 (16. ♖d1 ♖d8+ 17. ♖d3 ♖xd3+ 18. ♖e2 ♖d2+ 19. ♖f1 ♖a6!-+ this is the point! Black has too many threats and on 20. ♖xb8 ♖d8 is check.) 16... cxb4 17. ♖xb8 b3+ 18. ♖d1 ♖g4+-+; 14... ♖b6! with the idea of ♖b7, trapping the queen. (14... ♖xb2? would give enough time for White to solve the problems around his king 15. ♖c4! ♖xa1 16. 0-0+-) 15. ♖d5

(15. ♖c4 ♖b7) 15... ♖xb2 16. ♖d1 ♖b7! All the pieces are joining now to the attack, but strangely Black has only draw on White's best moves. 17. ♖xc5 ♖xf3 18. ♖c1! the only way to avoid ♖c3! (18. gxf3? ♖c3+-+) 18... ♖h4!? 19. ♖c2 ♖b1+ 20. ♖c1 ♖b2= with repetition,; 13. ♖e5 ♖f6 14. ♖d3 would be a transposition to the game.]

13... ♖f6 Now it is all about the calculation. Chess principles don't help here. Both players find the best moves until the end.

14. ♖e5! [14. ♖e5 would be a mistake because of 14... ♖d7! 15. ♖xh7+ (15. ♖xa8 ♖xe5 16. ♖xe5 ♖xd3!-+) 15... ♖f8 16. 0-0-0 ♖xe5 17. ♖b5 ♖f5! Only, but good! White is in trouble. 18. ♖h8+ (18. ♖xf5 ♖b6) 18... ♖e7+]

14... ♖c6 It is an interesting moment of the game. Black has two choices, both lead to draw. One is a very simple and short line, while the other is amazingly sharp, and one mistake could be fatal for both sides. Most of the people would prefer the first one, but Morozevich faithful to his style goes for the complications. [14... ♖f5 was the calm reaction 15. ♖xf5 g6 16. ♖e4 ♖d7! 17. 0-0 ♖xe5= with an equal position.]

15. ♖xh7+ ♖f8

16. ♔h8+! Svidler also calculates precisely! [The tempting 16.0-0-0 would be bad in view of 16... ♕xe5 17. ♔h8+ (17. ♕xe5 ♖xe5) 17... ♖e7 18. ♕g5+ ♔d6!! and Black is about to be winning. Any moves of the d3 bishop would met by ♘d4! 19. ♕e4+ ♘d4]

16... ♖e7 17. ♘xc6+ Check-Queen!

17... ♔d7+ Countercheck-Queen! Incredible position!

18. ♕e5! [18. ♖f1 ♔xc6 19. ♔h7 g6! 20. ♖d1 Black wins with a nice queen sacrifice 20... ♕f5! 21. ♕b5+ ♔xb5 22. ♖xd8 ♖axd8-+ White's pieces are not coordinated.]

18... ♔xc6! Other moves were bad. [18... ♖xe5+? 19. ♘xe5+ White takes back with check.; 18... ♖xh8 19. ♘xd8 ♕xe5 20. ♘xf7±]

19.0-0-0! There is no time to take care about such small things like the h8 queen. :) White had prepared for ♕e4! [19. ♕e4+? ♖b6-+]

19... ♕xe5 [19... ♖xh8 would be similar to the game 20. ♕e4+ ♖b6 21. ♖xd8 ♕xe5! (21... ♖xd8? 22. ♕xf6 gxf6 23. ♕xa8±) 22. ♖xh8 ♕f4+! and we have the same position as in the game, only the king is on b6 and not on c7, but does not make any difference...]

20. ♕e4+ ♖c7 21. ♖xd8 ♖xh8 22. ♖xh8 Maybe at this moment some of the „Moro“ fans gave up their hopes today, he is an exchange and a pawn down. But here comes the cold shower, which had to be foreseen after the 18th move!

22... ♕f4+! and the king has no good square, it has to move into a motif.

23. ♖c2 23. ♖b1 was the same. [23. ♖d1 ♕g4+=]

23... ♕b7!! This was the whole point! White has nothing better, than to go for a drawn endgame.

24. ♕xb7 [24. ♖xa8? ♕xe4+]

24... ♖xh8 25. ♕d5 ♖d8 The most accurate draw, Black holds the material equality. [25... ♖xh2 26. ♖xh2 ♕xh2 27. ♕xf7 ♕g1 was of course also easy draw, but at least White could have said, that he was a pawn up.]

26. ♖d1 [26. ♕xf7 ♖d2+ 27. ♖b3 ♖xf2=]

26... ♕xh2 27. ♕xf7 [27.g3 ♕g1=] **27... ♖f8!** Black sets back the balance.

28. ♕d5 ♖xf2+ 29. ♖d2 ♖xd2+ 30. ♖xd2 ♕e5 31.b3 ♕f6 What a game! Both players deserve congratulations! 1/2

(3) Morozevich,A (2765) – Jakovenko,D (2729) [D16]

19th TCh-RUS 2012 Sochi RUS (2), 10.04.2012

[Arkadij Naiditsch]

Another spectacular game by Morozevich, who just mated his opponent in the middle of the board. In this game White will show us a great example of how to fight for the initiative, and afterwards a great way of finishing the game. The chess of Morozevich is a bit „unusual“, but truly creative and very strong!

1.d4 d5 2.c4 c6 Another game on the Slav. This opening is really the hit of the last 6 month.

3.♘f3 ♘f6 4.♘c3 dxc4 5.a4 e6 6.e4 ♙b4 7.e5 And we are in the relatively rare line, which got lately attention of top players of the world. We already have commented the game Anand-Eljanov in CEWN Nr4 from German Bundesliga where White manages very quickly to reach almost a winning position from the opening.

7...♘d5 8.♙d2 b5 In case White manages to get the c4 pawn, of course the advantage of White will be sure.

9.axb5 ♙xc3 10.bxc3 cxb5 11.♘g5 ♘c6 [11...h6 12.♙h5 g6 13.♙h3 f5 14.exf6 e5 was in the game Anand-Eljanov where White could almost immediately end the game by playing 15.g4! With a big advantage]

12.♙h5 ♙e7 13.h4 a good move! White is bringing the rook over h3 into the game. It is clear that in case Black manages to consolidate, he will have just a pawn up. White should act fast. On the White's side, at some moment, a move like ♘e4 followed by ♘d6 can be very unpleasant for Black. At the current position, at ♘e4 Black would escape into a short castle

13...b4 a beginning of quite a forced play with extremely dangerous position for Black [Would be a mistake 13...h6?! 14.♘e4 0-0]

15.♙h3! followed by ♙xh6 with a mating attack; **13...♙b7** Would have been more of a safe choice, even if the position remains very unclear and sharp **14.♙h3 a5** It is hard for Black to find a move better than 14...a5 even if it is like a lost of a tempo. In the future this move will allow Black to be more prepared for the b4 push, and also in many lines the rook on a8 will be more free for action **15.♙f3 g6 16.♙h6 f5!** a great move to protect the pawn on f7 **17.h5**

♔d7 18. ♖h3 gxh5 19. ♕e2 We are facing a crazy position in which it is very hard to say, who is doing better]

14. ♕xc4! [14. ♘e4?! a try to keep the pawn would bring White absolutely nothing 14...0-0 15. ♕xc4 bxc3 16. ♘xc3 ♘xd4 And Black is doing fine]

14...bxc3 15. ♕c1 the bishop is going to a3, where he will avoid Black's short castle in the future

15... ♘xd4

16.0-0! a great play by White. First it seemed as if White is going for ♖h3, and suddenly White castles short. The explanation is easy: White is trying to do everything to avoid Black's short castle. For that White played h4, but now there is no need anymore for the rook to go over h3 to f3, nor the bishop from c1 is taking over. The White's threat ♕a3 is not letting Black any hopes for a short castle anymore

16...h6 What else to do?! White wanted to play ♕a3 followed by ♘e4

17. ♕xd5! White is not falling into Black's trap [This logical move would lead to nothing for White after 17. ♕a3? ♘f4 18. ♖g4

18...hxg5!! a very beautiful move! Black is a Queen down for just a piece, but the position is a draw!! 19. ♕xe7 ♖xh4 20. ♖d1 c2! the key move! Black needs the White Queen to get away from d1 to gain control of the f3 square 21. ♖e1 ♘h3+ 22. ♖h2 (of course losing is 22.gxh3? ♘f3+ 23. ♖g2 ♘xe1+) 22... ♘f4+ with a perpetual check. What an amazing line!]

17...exd5 18. ♕a3 ♖c7 19.e6! another great move by Morozovich! White should not let the „emotions“ down and even is giving another pawn away just to open the position to the maximum

19... ♕xe6 The only move

20. ♘xe6 ♘xe6 21. ♖xd5 White is 2 pawns down, but the Black King is in the center of the board, plus the rook on h8 is out of play. This gives White a clear advantage, but further energetic play is required

21...Rd8 [21...Rc8 22.Rab1! would put a huge problems in front of Black. Another funny thing, the h4 move is now extremely useful for White. We can see a typical Morozovich style, everything is a bit strange, but fits together!]

22.Rb3 h5 Black is trying to bring his rook from h8 into the game. To play without the rook is not really an option

23.Rfe1 Rh6 White is mating Black from every side!

24.Rb4! Rd7 25.Rac1 Rb8 26.Ra4+ Rc8 27.Rb4

An amazing final position! The white pieces are taking all perfect position, meanwhile the Black ones are standing extremely bad. It is not a game from a simul, but from the Russian Team Championship against an opponent of 2730 ELO. What a great win by Morozovich! **1-0**

(4) Tomashevsky,E (2736) – Landa,K (2645) [D02]

19th TCh-RUS 2012 Sochi RUS (7), 15.04.2012

[Arkadij Naiditsch]

Usually we are trying to comment games with a lot of action and sacrifices, but this time let's take a look on a great positional win of the Russian Super GM Tomashevsky. From this game we will be able to learn a lot of „how to play“ few structures and what is definitely needed to be avoided by Black

1.d4 Nf6 2.Nf3 d5 3.c4 e6 4.g3 We are in a Catalan. Landa is actually a big expert in the opening

4...Bb4+ [4...dxc4 Is the other main line]

5.Bd2 Be7 6.Bg2 c6 7.Qc2 b6 8.0-0 Ba6 9.b3 Nd7 We are in one of the oldest theoretical lines. The position is looking symmetrical. White is standing a bit more „free“ and Black is having basically one „main“ plan, to castle short, then to play Rxc8 and c5, after which the exchanges in the center will be not possible to avoid, which normally is leaving White with nothing.

10.a4!? A nice plan by Tomashevsky to active the rook from a1

10...c5 Don't ask Landa twice for the main ideas, he knows them for sure :)

11.a5 0-0 12.♖d1!? I like this White's move a lot! White is keeping the tension in the center, meanwhile bringing their rook to the d file which is not very „typical“, much more standard is the move ♖c1. Let's see how this will affect the game

12...cxd4?! this is a mistake. It was too early for Black to release the tension in the center and bring the White knight with a tempo into the very hot place [a very solid 12...♖c8! 13.cxd5 ♘xd5 14.♘c3 with quite a solid position for Black; or a more risky 12...b5!? 13.dxc5 bxc4 14.b4 ♘e4 with a very unclear position, were clearly the better options for Black]

13.♘xd4 ♙c5 14.♙e1 a logical move by White, but not the best one. It is easy to understand White, who wants to prove that ♖d1 was a very „deep“ move, but a more concrete action would be the right one at this moment [14. ♘c6! ♖c8 15.♘b4 and White is having clearly a better position — Black can't avoid an exchange of one of his bishops]

14...♖c8

15.♙b2! White is taking away the Queen from the dangerous c file and preparing for concrete action. At first sight, the position looks optimistic for Black, but in fact things are by far not that good. White has 2 concrete threats: to play cxd5 or to play axb6, it forces Black to take some decision. We are only at move 15, until now Black has only one little inaccuracy 12...cxd4 and this inaccuracy leads already to difficult decisions.

15... ♙xd4? A move called „don't try it at home“! Never give away a black squared bishop! [of course 15...dxc4? 16.♘c6 ♖c7 17.b4! Would lead to a much better position for White; Amazingly 15...♖e8! Would keep Black in the game! A typical computer move, almost impossible to do at the board. What we learn from that, to keep the tension in the center is usually a good decision — in case if it is possible]

16.♙xd4 e5 17.♙b2 d4? Black continues their strategy — which is very wrong. [17...dxc4 18.bxc4 ♙xc4 19.♘a3! would lead to a worse, but playable position for Black]

18.axb6 ♙xb6

19.♙a3! just few moves have passed, and from an unclear position we can give a completely different evaluation

ation to the game — probably lost for Black! And White demonstrates very well why it is so.

19...♖b8 The only move to keep the pawn on a7 alive

20. ♗b4! Another important moment, White is bringing his Black squared bishop into the game

20...♖fe8 21. ♗d6 ♗fd7 22. ♗xb8! White is just playing a great game! A very untypical, but great decision to play 22. ♗xb8! Black is basically hopeless against the White's next knight maneuver. It is great to see, all the material is equal at the board, but Black is having almost a lost position. From moves like 22. ♗xb8! we can learn

22...♗xb8 23. ♗d2 ♖c7 Black is hoping to play next ♗c8 and finally free a bit the knot around the a file

24. ♗e4 The white knight came it wants to be. White wants by playing ♗d6 or just ♖d6 to reach a position with a huge advantage. It seems that Black is already in time trouble, which is very easy to explain. It is hard to play a position with equal material, but with no moves that could save the game

24...♖d8?!

25. ♗c3! basically after this move the game is over. When we look back at the game, White won it without calculating much and by doing logical moves, unsing Blacks misunderstanding of the position. Not often we can see such a clear example of „how to play with White and what to avoid doing with Black”

25...♖cd7 26. ♗a4 ♖g6 27. ♗c5 ♖d6

28. ♖a5! the last precise move, Black is totally pinned and the loss of material is very visible

28...♖e8 29. ♖c7 ♗c8 30. ♖xb8 h5 31. ♖xa7 A great example of how to play a Catalan with „dynamic” centre. **1-0**

Endgame section

(15) Jakovenko,D (2729) – Karjakin,S (2766)

Russian league, 13.04.2012

[Arkadij Naiditsch]

We are in an opposite color bishop endgame that normally should be a draw, but the appearance of rooks on the board gives Black some winning chances. Is it so?! The Russian Top GM did not manage to find a way to make a fortress. It sounds a bit unreal, but the current endgame might be winning for Black! A great endgame to analyse for You, dear reader. We would be happy about Your feedback on this endgame!

45. ♖d5 With this move White is starting their plan, which is to put the bishop on e4, King to e2 and wait — this was a bad idea. This plan is leading to a lost position and Karjakin is showing us why in the game. [let's take a look if another „fortress would bring White a draw” 45. ♖b3 ♜b4 46. ♖c2 ♜f6 47. ♜f1 ♜b2 48. ♖d1 ♖e5 49. h3 ♜b1 50. ♜g1 ♜c1 51. ♜f1 ♖f4 52. ♜g1 ♖e5 53. ♜f1 ♖d4 54. ♜g1 ♖c3 55. ♜f1

55... ♜xd1! 56. ♜xd1 ♖c2 and Black is winning; 45. ♖f1 ♖f6 46. ♖d7 ♜a7 47. ♖c8 ♜e7—+ In case Black manages to bring the rook to e1, the game is immediately over; 45.f4 a radical decision. By giving away the f pawn, White will try to build a fortress by having their bishop on squares f3-e2 45... ♜xf4 46. ♖d5 ♖f6 47. ♖f3 ♖e5 48. ♖e2 ♜b4 49. ♖f3 ♜b2 50. ♖e2 ♜c2 51. ♖f3 ♜c1 52. ♖f1 ♖a5 53. ♖g2 ♖d4 54. ♖f1 ♖d3 followed by ♖c2, and Black is winning again]

45... ♜d4! a nice move by Black. No reason to give White even a small hope to free the rook from d1. Also Black will bring now the bishop from c3 to the perfect position on f4

46. ♖e4 ♖b4 The bishop is going to f4

47.♔f1 ♚d6 48.♔e2 ♚f4 49.h3 It would be nice for White to keep the pawn on h2, let's see if this is possible to manage [49. ♚c6 ♔h6 50. ♚e4 ♔g5 51. ♚b7 ♔h4 52. ♚c8 ♖d8 followed by ♔h3 and the pawn h2 is getting lost, with it the game]

49...♔h6 50.♖g1

50...♖c4! Another precise move by Black. No reason to give White a chance for ♚c2-d1 even if the position is probably lost anyway

51. ♚d3 ♖c1 52. ♖d1 ♔g5 The Black King is going to h4 and the pawn h3 is going to fall. White's position is hopeless

53. ♚b5 ♔h4 Now at 54. ♚d7 ♖c7! is coming. **0-1**

(16) Holzke,F (2506) – Ftacnik,L (2570)

German league, 15.04.2012

[Balogh Csaba]

We are facing a very interesting endgame from the German league. After analysing it deeply, I came to the conclusion that the position is objectively drawn, but in a practical game, White has more chance to win, than Black to hold the draw. I must admit, that GM Holzke played with excellent technique.

52. ♚d6 First, let's summarize what we have! White has material advantage, a target on h4 and a weakness on f4. White cannot use his king to convert the advantage because its duty is to protect the g2 pawn. The g5 would be an ideal square for the bishop, where it protects the f4 pawn and attacks the h4, but there are technical difficulties to transfer there because it must guard the f4 pawn. In addition, with bishop on g5, Black has a potential stalemate possibility with ♖xg2 or ♖h1. White has only one plan, try to squeeze out the Black king from h5 with the knight.

52...♖a4 53.♘g5 ♖a8 54.♙e7 ♖a4 55.♙d6 ♖a8 [Black could not hold for long the rook on the 4th rank 55...♖d4 56.♙e5 ♖a4 57.♘h7 ♙h6 58.♘f6 and now the rook must leave, because on 58...♖c4 59.♙d6! ♙f8 threats with mate. 59...♙g7

(59...g5 we will analyse this idea in the game at 57...g5) 60.♘d7! ♖a4 61.♙f8+! ♙h7 (61...♙f7 62.♙h6+- White has managed to transfer the bishop to g5 and also squeezed out the Black king from h5. This is the winning plan!) 62.♘f6+ ♙h8 63.♙h6+-]

56.♘h7 ♙h6! Only move. [On 56...♖c8 57.♙e7 with the threat of ♙g5 57...♙h6 (57...♖c7? 58.♘f6+ ♙h6 59.♙f8++) 58.♘f6 First White rescues the knight, then he occupies the g5 square. Black can not avoid this. 58...♖a8 59.♘d7 ♖a4 60.♙g5+ ♙g7 (60...♙h5 61.♘f6#) 61.♘e5+- and ♘f3 wins the pawn and the game.]

57.♘f6 ♙g7 [57...g5 Black could get rid of one pawn, but then the target on h4 becomes more vulnerable. 58.fxg5+ ♙xg5 59.♘d7! ♖a6 (59...♙h5 60.♘e5+- Sooner or later White will get his knight to f3 and attack the h4 with the bishop.) 60.♘e5! Small tactical trick in order to

transfer the knight to f3. 60...♙f6 (60...♖xd6? 61.♘f7+ 61.♙c7 ♖a7 62.♙b6 ♖a6 63.♙d4+- and ♘f3 is next.)

58.♙e5 White had to change his plan for a while. [58.♙e7 did not work because of 58...♙f7 59.♘d5 ♖a5 60.♘b4! ♖b5 61.♘c6 ♖b6 62.♘b4 ♖b5 draw.]

58...♙h6 59.♙c3 ♙e1 is the threat now.

59...♖d8!? A tricky move, Black does not want to let the knight escape. [However, I did not manage to find a win after 59...♖a6 60.♘g8+ (60.♘d7 ♖a4 61.♙e5 ♖a7) 60...♙h7 61.♘e7 ♙h6 White can maneuver for long, but I don't see the way of progress. Of course the position requires accurate defense from Black point of view.]

60.♙b4! [60.♙e1 would meet by 60...g5 and White has problems with the knight.]

60...♙g7 This logical move seems to be the decisive mistake. Black could have held the draw with the computer's suggestion. [60...g5! 61.fxg5+

61...♙g6!! The problem is still the same, hard to rescue the knight. (but not 61...♙xg5 62.♙e7+- because we get the position that we discussed in 57...g5.) 62.♙c5 ♖d3 63.♘e8 ♖d2! The knight is on the way to get out from

the cage, but the f4-f3 plan gives enough counterplay for Black to save the game.]

61. ♖e1!! Probably Black missed this move! Even with so little material on board, we must look for tactical motifs.

61... ♖d4 [The passive defense cannot be good. 61... ♖h8 62. ♘d7 and ♘e5-f3.]

62. ♖c3! and the bishop is back to the long diagonal. White can use the pin for winning an important tempo to transfer the knight to a better position. The computer still tries to hold, but I think it is already too late.

62... ♖d3 [62... ♖c4 63. ♘d5+ ♔f7 Black tries to prevent ♖f6. It is already a big achievement for White to get the king to f7, but the win still requires very exact play. (63... ♔h6 64. ♖f6+-) 64. ♖e5 ♖a4 65. ♘c3! This is the shortest way for the knight to f3. 65... ♖b4 66. ♘e2 with the idea of ♘g1-f3. 66...g5 67. ♘d4! (67.fxg5? ♖e4) 67...gxf4 (67...g4 68.hxg4 fxg4 69. ♘f5 h3 70.gxh3 gxh3 71. ♔xh3+- I was not sure about this position. But thanks to the „Tablebase“ we know the correct evaluation. White gives mate in 48 moves. :) I am sorry for the readers, I will not demonstrate it. The point is, the bishop and the knight cover the pawn and the king and White can promote his pawn without giving a chance to Black to sacrifice the rook for the pawn and one of the pieces.) 68. ♘f3± White collects all the pawns.]

63. ♖e5 ♔h6 64. ♘g8+! ♔h7 [64... ♔h5 65. ♖f6+- transposes to the game.]

65. ♘e7 The end is near now.

65... ♔h6 66. ♖f6 ♔h5 67. ♘g8! [67. ♖g5? is premature because 67... ♖d2 and stalemate threat on g2.]

67... ♖d1 Black realized, that he is lost, he tries his last trick.

68. ♖e7! But of course, White does not fall into that and sets up a new mate threat with ♘f6 and ♖f8, what could only avoid by playing g5, which is kind of resignation as well. [68. ♖g5?? ♖h1+ 69. ♔xh1]

68... ♖f1 69. ♘f6+ ♔h6 70. ♖f8# Very nice play by the German grandmaster! It was very instructive also for me, I have never studied such kind of endgames. **1-0**

Clash of the Titans

(17) Fischer, Robert James
– Myagmarsuren, Lhamsuren [COO]

Sousse Interzonal+ (3), 1967

[Balogh Csaba]

As I promised, we study two nice tactical crushes by Robert Fischer. In this week, White nicely builds up his attack and finishes the game in a beautiful fashion! Please, forgive me for showing some computer lines, which are sometimes hardly understandable for me as well. The correct analysis of the position requires it.

1.e4 e6 2.d3 The King's Indian attack. Fischer liked playing this opening, since in many lines it is similar to the King's Indian defence, which was his favorite choice against 1.d4 as Black. He often played against 1.e4 c5 2.♘f3 e6, 3.d3 as well.

2...d5 3.♘d2 ♘f6 4.g3 c5 5.♙g2 ♘c6 6.♘gf3 ♙e7 7.0–0

7...0–0 The main continuation, however, some experts consider it to be an inaccuracy. After castling short, White can organize his attack on the kingside quite comfortably (as we will see in the game). [It is more careful to develop the queenside first and see, what White is going to do 7... b6 8.♙e1 ♙b7 9.e5 Black has an extra option here 9...♘d7 10.♘f1 ♙c7 11.♙f4 h6 12.h4 0–0–0! to castle queenside and prepare a counterattack with g5. For example: 13.c3 ♙dg8 14.h5 g5 15.hxg6 fxg6; 7...♙c7 8.♙e1 b6 is another possibility, if Black is afraid of the e5 plan...]

8.e5 ♘d7 9.♙e1 Both sides have their clear ideas. White plays on the kingside with ♘f1, h4, ♙f4, ♘g5 and ♙h5, while Black must create his counterplay on the queenside with b5, a5, b4, ♙a6 etc... Actually, I would always prefer White, but the machine gives plus for Black in almost all the positions, suggesting unhuman moves and saves him. It is amazingly hard to convince the computer... So, from this point of view, I recommend you to try this opening with White, but never against a machine... :-)

9...b5 [The main move is 9...♙c7 10.♙e2 to include is pair of moves, when later the typical ♘d4 plan for Black might come with a tempo... 10...b5 11.♘f1 a5 12.h4 b4 13.♙f4 ♙a6 with many games in the database.]

10.♘f1 b4 [10...a5 11.h4 b4 is just a transposition.]

11.h4 a5 12.♙f4 a4 [12...♙a6 13.♘e3 a4 14.a3 would also be a transposition.]

13.a3! Strong reaction by Fischer, which was at that time a novelty! Recently, if somebody is familiar with this opening, he knows the rule that when Black plays a4, push a3 immediately! But of course it is much easier to copy than to create the right plans... Fischer understood that if he allows his opponent to push a3 himself, Black's counterplay could come much faster. [13.♖h2 a3 14.b3 ♗a6 with the idea to play ♜c8 and in the right moment ♖d4 and c4. Black won many nice games this way.]

13...bxa3 14.bxa3 ♘a5?! I did not manage to find the idea behind this move. [There was a very instructive game between two great players 14...♗a6 15.♘e3 ♖d4 logical plan, but White countered it elegantly! 16.c4! ♘b3

17.cxd5! ♘xa1 18.♔xa1 exd5 19.♘xd5 White got one pawn for the exchange and all his pieces stand perfectly. 19...♗xd3 20.e6! Nice tactical shot! 20...♖f6 (20...fxe6 21.♗c7! ♔e8 22.♜xe6 ♜f7 23.♔e1+-) 21.♘xe7+ ♔xe7 22.♘e5 ♗g6 23.♘c6! the queen is almost trapped 23...♔b7 (23...♔e8 24.e7+-) 24.♗d6 ♘e7 threats 24...♗e4 25.♜xe4! ♔xc6 (25...♘xe4 26.♗xe4+-) 26.♗xf8 ♜xf8 Black did not wait 27.♔xf6!! gxf6 28.♜g4 and resigned the game. Gheorghiu-Uhlmann, Sofia 1967]

15.♘e3 ♗a6 16.♗h3? The bishop was doing fine on g2. This gives enough time for Black to generate counterplay. [White should have continued the attack 16.♘g5! with the idea of ♔h5 and on 16...h6 17.♘h3! ♔h5 and ♘g4 are coming with mating attack.]

16...d4 17.♘f1 White did not want to close the Queen's way to h5 with ♘g4.

17...♘b6 Logical decision to transfer the knight to d5. [17...♗b7!? came into consideration 18.♘g5 c4 with counterplay.]

18.♘g5 ♘d5 19.♗d2 ♗xg5 Sooner or later Black had to take the knight. [19...c4 20.♔h5 ♗xg5 21.♗xg5 ♔d7 would be a transposition to the 21...c4 line.]

20. ♗xg5 ♔d7

21. ♖h5 ♜fc8 Black frees the f8 square. As we will see in the game, the queen went there to protect the g7 pawn and in some other variations, it might be useful a square for the king as well to run away from the checks. [I could not convince the computer about the attack after the principled 21...c4 22. ♘g2 seems to be the most dangerous

a) 22. ♘f6 was premature 22...gxf6 23.exf6 ♔h8 24. ♘g2 ♜g8 25. ♘xd5 (25. ♘e4 ♜g6) 25...♜xd5 26. ♞e5 unusual way of winning back the piece, but Black is fine anyway 26...♜b7 27. ♞xa5 cxd3 28.cxd3 ♘xd3;

b) 22. ♞d2 I only managed to give perpetual check, for example: 22...cxd3 23. ♞e4 dxc2 The computer is not impressed, that all the pieces are attacking :-) This is what I called, un-human moves. 24. ♘f6 gxf6 25. ♞xf6+ ♞xf6 26. ♜g5+ ♔h8 27. ♜xf6+ ♔g8 28. ♞e4 ♘d3 29. ♜g5+=; 22...cxd3

23. ♘e4 with initiative in all the lines: 23...h6

a) 23...f5 24.exf6 gxf6 25. ♘h6 ♜f7 26. ♞d2 (26.cxd3) ;

b) 23...g6 24. ♜h6 f5 25.exf6; 24. ♞h2! and try to mate him after ♞g4!(24. ♘xh6? f5!)]

22. ♞d2! Fischer brings the knight into the attack through the e4 square.

22... ♞c3 Black naturally prevents is.

23. ♘f6! Seems to be over, but Black found resourceful defense.

23... ♜e8! In order to neutralize the ♜g5 threat by ♜f8! [23...gxf6 would lose quickly after 24.exf6 ♔h8 25. ♞f3! ♜g8 26. ♞e5!+- wins the queen]

24. ♞e4 The 22...♞c3 was not successful enough because after taking the knight on e4, ♜xe4 decides the game.

24...g6 This is the first moment when computer finally admits White's attack. [24...♞xe4 25. ♜xe4+-; However after 24...♘b7! it is still very hard to convince the machine. Most of the lines lead to unclear positions, but...

25. ♖xg7!! (25. ♘g5 h6 26. f4 hxg5 27. ♖xg5 ♖f8 28. ♖e7 ♖e8 29. ♖f6 ♖f8=; 25. ♘xc3 dxc3 26. ♖g4 ♖f8; 25. ♘d6 ♖f8 26. ♘xc8 ♖xc8) 25... ♖xg7!

a) 25... ♘xe4 loses to the great 26. ♖h6!! ♘d2 27. ♖g2! the only way 27... ♖xg2 28. ♖xg2 ♖c6+ 29. ♖h3 ♖f3 30. ♖f6 ♖f5+ 31. ♖g2 ♖g6 (31... ♖f3+ 32. ♖g1 ♖g4 33. ♖xd2+-) 32. ♖xd2±;

b) 25... ♖xe4 has another nice refutation 26. ♖xe4! f5 (26... ♘xe4 27. ♖h6+-) 27. exf6!! ♖xh5 28. ♖xe6+ ♖f7 29. ♖xf7+ ♖xf7 30. ♖e7+ ♖g6 31. ♖ae1+-; 26. ♖g5+ ♖f8 27. ♘f6 ♖c6 28. ♖h2! and the computer confirms White's advantage]

25. ♖g5 ♘xe4 26. ♖xe4 c4 It is clear that now the counterplay is not coming in time.

27. h5 cxd3 28. ♖h4! Threats with hxg6 fxg6 ♖xh7 ♖xh7 ♖h4 and mate in two moves. By leaving the d3 pawn on the board, Fischer avoids the Black's bishop joining of the defense through d3.

28... ♖a7 Horizontal defense with the rook. [28... dxc2? 29. hxg6 fxg6 30. ♖xh7 ♖xh7 31. ♖h4+ ♖g8 32. ♖h8+ ♖f7 33. ♖g7#; 28... ♖c7 was better chance to counter the textmove 29. ♖g2 by ♖b7. However, the machine suggests an unreal winning line: 29. ♖c1!! (29. ♖g2 ♖b7!) 29... ♖ac8 (29... dxc2 30. ♖xc2! ♖xc2 31. hxg6 fxg6 32. ♖xh7+-) 30. ♖h6! to lure the queen from the defense of the e6 pawn. 30... ♖f8 31. ♖d2! ♘b3 32. hxg6! fxg6 33. ♖xe6+! ♖f7 34. cxb3+- Of course, if somebody finds all these moves he will be disqualified for cheating with computer! It is impossible to play like this for a human.]

29. ♖g2!! Fantastic winning move! Using the fact, that ♖b7 does not work now.

29... dxc2 [29... ♖b7 would close the 7th rank. 30. hxg6! fxg6 31. ♖xh7+-]

30. ♖h6! ♖f8 [On 30... c1Q+ 31. ♖xc1 ♖xc1+ 32. ♖h2! and the same finish as in the game...]

31. ♖xh7+!! Beautiful finish of a great game! Mate is coming in two more moves. The game demonstrated very well the plans in the opening for both sides. [31. ♖xh7+ ♖xh7 32. hxg6+ ♖xg6 (32... ♖g8 33. ♖h8#) 33. ♖e4#] **1-0**

Editorial Preface

Clearly, the main event of the week is the match between Aronian and Kramnik. The match is taking place at the neutral territory of Zürich. It is the first match in history between 2 players with an ELO rating higher than 2800. Even if the match is considered to be friendly, it is ELO counted, so we can be sure that both players are giving their best!

A very strong open in Dubai came to an end with 5 players sharing first place, Ni Hua winning on tiebreak. It had a dramatic last round.

The Austrian League had also its last weekend, and the team of one of Your commentators Balogh Csaba, the "Advisory Invest Baden", took the first place again, on better tiebreak.

In the "surprise section" of the newsletter, we are presenting for the first time a short interview with the Spanish number one Francisco Vallejo. Please don't judge the interview for being too short, it's not easy to make this GMs answer the questions :).

As usual, we wish You a lot of fun with this edition of the Chess Evolution Weekly Newsletter.

*Arkadij Naiditsch

4 best games of the past week

(1) Kramnik,Vladimir (2801)
— Aronian,Levon (2820) [D43]

Zurich Chess Challenge Zuerich SUI (1), 21.04.2012

[Arkadij Naiditsch]

We are in the first game of a “friendly” match between world’s number 2 and 3, Levon Aronian and Vladimir Kramnik. It is the first match in the history of chess between 2 players with an Elo rating higher than 2800. We can be sure about one thing, both players want to win this match like hell! We will see probably one of the worst games of Kramnik in a long time. Bad preparation, bad play, resignation. On the other hand, great play by Aronian. Let’s see how it is possible to beat a 2800+ Elo player with the Black pieces!

1.♘f3 One of Kramnik’s favourite first moves.

1...d5 2.d4 ♘f6 3.c4 c6 Maybe Black’s 3...c6 was a little surprise for Kramnik. 3...e6 was most likely to be played by Aronian.

4.♘c3 e6 5.♙g5 h6 6.♙xf6 Just like in his previous matches, Kramnik usually chooses “silent” lines in his first games. [6. ♙h4 would be the move to get a “real” fight. 6... dxc4 7.e4 b5 And we are in the very sharp Botvinnik lines.]

6...♙xf6 7.e3 ♘d7 8.♙d3 dxc4 9.♙xc4 g6 10.0-0 ♙g7
Until here both players were playing pretty fast. And of course, nothing new. We are in a well known position.

11.♖e1 [11.e4 could be the other choice here. 11...e5 12.d5 ♘b6 13.♙b3 ♙g4 with almost an equal position.]

11...0-0 12.e4

12...e5! In my opinion, the right way to play here. [12... b6 is also a possible continuation, with evaluations that are by far less clear. 13.e5 ♙e7 14.♙d3 ♙b7 15.♙e4 ♖fd8 Could be the other main position for analysis.]

13.d5 ♖d8 The first moment of the game where Aronian had his first small thought. [The wrong plan would be

now to play 13...♘b6 14.♙b3 ♕g4 15.♖e3 ! += and we can clearly see why White included the 11.♖e1 move before playing e4.]

14.♖e3 Quickly played by White. We are in the game Gunina-Muzychuk, that was analyzed in the CEWN Nr4. It was practically the final battle for the Female European Title.

14...b5! A good move, now things are getting forced.

15.dxc6 After this move, White is not doing better, but what else to play?! [15.♙b3 ♘c5 and only Black can hope for an advantage.; 15.♙e2 ♘b6 is clearly not an option for White, as well.]

15...bxc4 16.♘d5

16...♙e6! N This novelty was played after Black took some time to think, but I'm quite sure that Aronian knew it, and the readers of CEWN knew it as well! We suggested this move in one of the analysis of CEWN Nr4, and evaluated it as "giving an equal position for Black". [16...♙d6 was played in the ladies' game. 17.cxd7 ♕xd7 18.♘d2 with some advantage for White.]

17.cxd7 Before making this move, Kramnik thought for almost 30 minutes. I don't think that he was evaluating "what to play next", but asking himself "how could I have missed 16...♙e6 in my analysis?". A very unpleasant feeling — especially when 16...♙e6 is the first choice of the computer. [17.♘b4 a5! would be definitely a bad choice for White.]

17...♖xd7 An easy move, but a nice one! This is why the Queen has to stand on e6 and not on d6, in order not to be under "attack" after White's ♘d2-c4.

18.♙a4?! One thing is clear, White is not doing better. In fact, he needs to be quite precise to make a "correct" draw. The move in the game is not working towards getting it. [18.b3! In my opinion the right way to play for a draw was 18...cxb3 19.♙xb3 ♕b7 20.♖d1 ♖ad8 21.♖ed3 Black might be doing a bit better, but White definitely has a very solid position.; 18.♙e2 would not equalize. 18...♕b7 19.♖d1 ♖ad8 20.♙xc4 ♕xd5 21.exd5 ♖xd5 And we are again in a typical endgame, where Black is doing a bit better.]

18...♕b7 19.♙xc4 [19.♖ae1 ♖c8! and Black is doing better. The plan for Black should be to play ♕f8-c5, or to try to develop the bishop by playing h5-Bh6.]

19...♕xd5 [Another interesting option would have been 19...♖c8!? 20.♙a4 Probably because of this move, Aronian didn't want to play it, but I think here Black clearly has a very strong initiative. 20...♕xd5 21.exd5 ♖xd5! (Of course not 21...♙xd5 22.♘xe5! with a draw.) 22.♙xa7 e4! Black is a pawn down, but all the pieces are perfectly placed. Plus, he has reached the dream structure with the

“pawns on e4-f5”. All these factors clearly give Black more than enough compensation for the sacrificed pawn.]

20.exd5

20...♔xd5! A good estimation of the position by Black. The endgame is looking drawish, but by far it is not! Black is doing better, and maybe some optimist would say “much better”.

21.♔xd5 ♖xd5 22.♖ae1 ♔e8 We are in a typical position. Black’s idea is clear, to play f5 followed by e4. In case White doesn’t do something quick, the game could be over pretty soon. The White knight on f3 could stay without squares to go, Black rooks could take over the 2nd rank — a lot of bad things could happen to White. That’s why Kramnik’s next move is very logical!

23.g4! Good play by White! The only way to stop the direct f5 push. Besides, the White King feels a bit better having a place to escape on g2.

23...♔h7! Not falling into a deep trap. [Why not to play 23...f5?! 24.♘h4! This is White’s idea. 24...♖d4 (24...fxg4 25.♘xg6 ♕f6 26.♘f4 and again White’s chances to get

a draw are huge.) 25.♘xg6 ♖xg4+ 26.♖g3 and White almost escaped with a draw.]

24.g5!? A very risky move from a human point of view, even if most of the engines are happy with it. [A waiting move would leave White in a bad position. 24.h3 f5 25.gxf5 gxf5 26.♘h2 e4 with a big advantage for Black.]

24...hxg5 Of course Black should not let White play h4.

25.♘xg5+ ♔g8

26.f4?? What a terrible move by White. Such a mistake is even hard to explain, but let’s try to understand it from his point of view. Of course by playing 24.g5, White didn’t help his pawn structure at all. In case the game would go on with this “slow play”, Black will be just much better and will have good winning chances. So, the only way for White to be back in the game is to do something concrete, this makes sense! ...But not by playing 26. f4?? [26. ♖a3 f6 27.♘e4 f5 with a clearly better position for Black, but anyway White is still in the game.]

26...♖b8! Exactly! Now White is simply losing a pawn.

27.fxe5 [27.b3 exf4 28.♖e8+ ♜xe8 29.♜xe8+ ♚f8 30.h4 ♔g7 and we can evaluate the position as winning for Black.]

27...♜xb2 28.♘f3 What else to do? At [28.♜3e2 ♜xe2 29.♜xe2 ♚xe5 Black is a pawn up, and he has the advantage of bishop vs knight. The position is winning!]

28...♜xa2 29.e6! The only chance. White needs to exchange as many pawn-pieces as possible.

29...fxe6 30.♜xe6

30...♜f5! Black is really playing a great game. A very exact move, killing almost any hope Kramnik might have had. The White knight doesn't have a better move than to go to the corner of the board, where it will have to face its destiny in about 10 moves :).

31.♘h4 ♜f4 [A very nice computer way of winning would be 31...♚d4+ 32.♔h1 ♜ff2! 33.♜xg6+ ♔f7 34.♜g2 a5 A great position! White is totally hopeless against Black's a4-a3-a2 and Queen.]

32.♜6e4 ♜f6 This move surprised me a lot during the live transmission. Why to leave 4 rooks at the board, have a running king and have a theoretical chance of blun-

dering something big?! On the other hand, it shows the great self-confidence Aronian has regarding himself and his play! [The simple 32...♜xe4 33.♜xe4 ♔f7 would probably lead to a winning position. The a-pawn will Queen and White can't do much about it.]

33.♜g4! Getting the Black king to "free-waters".

33...♔f7 To put the king on h7 was also possible, but then after White's 34.♘g2, he would be under constant attack on the h-file. White could also try the maneuver 34.♜g3 with the idea of ♘f3 and ♘g5 check.

34.♜c1 ♚h6! No fear in Black's moves! Black continues his strategy, to keep the White's knight on h4 out of play, even if he will need to run a bit with his king by doing so.

35.♜c7+ ♔e8 36.♜e4+ ♔d8 37.♜h7

37...♚f8! Another very precise move by Black. Now we can already call the position winning! The White's rooks can not create any serious threat against the Black king. At the same time, the White king on g1 is in big danger of getting mated. The knight on h4 is still out of play and Black's a-pawn will start to move eventually.

38. ♖d4+ ♔c8 39. ♖c4+ ♔b8 The king march has ended in a safe square, b8!

40. ♖d7 Allowing Black's strategy to show its glory.

40...g5! Trapping the White knight!!

41. ♘g6 ♙d6

What a perfectly played game by Black! **0-1**

**(2) Aronian, Levon (2820)
– Kramnik, Vladimir (2801) [C67]**

Zurich Chess Challenge Zuerich SUI (2), 22.04.2012

[Arkadij Naiditsch]

The second game of the match was also very interesting. Aronian started with 1.e4, a very unusual first move for him, and Kramnik answered with the usual unbreakable weapon of his, the Berlin defence. It seemed like after the opening Kramnik managed to get an almost equal position, but suddenly he had to face a few difficulties. A great game on how to defend a worse position!

1.e4 Is really Aronian playing White?! :)

1...e5 2. ♘f3 ♘c6 3. ♙b5 ♘f6 The beginning of the Berlin!

4.0-0 ♘xe4 5.d4 ♘d6 6. ♙xc6 dxc6 7.dxe5 ♘f5 8. ♖xd8+ ♔xd8 9. ♘c3 ♙e6!? Quite a rare move [9... ♔e8 10.h3 h5 We can find this position in almost every game featuring the Berlin, and it seems like Black is doing pretty well here.]

10. ♖d1+ Immediately played by Aronian — so he seemed to be well prepared. [10. ♘g5 is the other possible move for White.]

10...♔e8 11.♘g5 ♘c8 12.h3 So we have reached one of the main positions in the current line. The Berlin Wall is a very complex opening, and sometimes it is very hard to say who is actually doing better. If White manages to play g4, f4 and f5, we can usually say that White should be better. Of course, Black won't allow these pawns to advance so fast. On the other hand, if Black manages to force the exchange of knights, he should be doing very fine.

12...♙e7 13.♙f4 N This is an official novelty by White. The move is very logical: White develops a piece, threatens to play ♖d2, ♗ad1, or to break through with the e6 push at the right time!

13...♘h4! A very atypical, but very strong, reaction by Black. [The more typical 13...h6 14.♘f3 ♙e6 15.g4! ♘h4 16.♘xh4 ♙xh4 17.f3 would lead to a position with a small plus for White.]

14.e6! White needs to do something, Black intended to play ♘g6. [14.♘ge4 is usually not the right place for the White knight. It doesn't support in any way the g4 move, and it takes away the e4 square from his colleague on c3. 14...h6! Avoiding White's ♙g5 — Black is doing very fine.]

14...f6! [The risky 14...♘g6 15.exf7+ (15.♘xf7 ♘xf4 16.♘xh8 ♙xe6 would lead to a crazy position, I have no idea who is doing better.) 15...♔f8 16.♙e3 h6 17.♘ge4 ♔xf7 It seems like Black managed to reach what he wanted, but... 18.f4! A very strong move! Black can not stop White from playing f5 in the next move, which would lead to a clear advantage for White! Chess is a tactical game after all :); 14...fxe6? This would be a big position mistake. 15.♘ge4 followed by ♙xc7 the next move, with a big advantage for White.]

15.♘f7 ♗g8 Another exact move. Now the rook won't be under attack in case of 15... ♗f8.

16.♙xc7 ♙xe6 17.♘d6+ ♙xd6 18.♙xd6 ♔f7 It seems like Black got the maximum out of his chances, and the game is coming to an end, but no! White still has a few tricks in his magic box.

19.f3 A harmless looking move, but with a nice idea behind it.

19...♘f5 20.♙c5 b6 This kind of move is never easy to play. The Black pawns are fixed on dark squares, becoming potential victims. Now we can see the idea behind White's f3 move. [If Black looks for an immediate draw with 20...♗gd8 21.♗xd8 ♗xd8 22.♙xa7 ♗d2 23.♗c1 ♘g3 (23...♘h4 24.♙f2) 24.b3! A great move, White needs to take away the c4 square from the Black bishop. 24...♘e2+ 25.♘xe2 ♗xe2 26.♔f1 White keeps good winning chances with just an extra pawn.; Of course 20...a6? 21.♙b6! and White gets control over the d-file forever.]

21. ♖f2 ♜gd8 The Black rook has to be placed on the d-file.

22.a4! White's key idea! Suddenly, a position that looked very calm and safe for Black is getting very dangerous. How to prevent the a5 move?!

22...♞e7! The beginning of a series of 12 moves, which leads to a forced draw. Fantastic calculation by Black, or just good calculation with some luck?! We will never know.

23.a5 c5 A very forced and almost only move that gives Black a clear draw. [23...♞xd1+ 24.♞xd1 bxa5 25.♞a1 would lead to a clearly better position for White.]

24.♞b5 White accepts Black's challenge and goes for direct play. [24.g4!? is a very tricky suggestion of the computer. White keeps the pieces back, improves the position of his King, and at the same time takes control over the f5 square. I guess Black would need to continue very precisely to achieve a draw.]

24...♞c6! Only move. [24...♞d5? would be countered by 25.c4! ♞b4 26.♞xd8 ♞xd8 27.♞xa7 bxa5 28.♞xc5 and White is a clear pawn up.]

25.♞xd8 [25.♞c7 would have been a trickier move for White. 25...♞ac8 26.♞xd8 ♞xd8 27.axb6 axb6 28.♞a6 ♞d1+ 29.♞h2 ♞d2 Black is on the edge, but surviving. 30.♞xb6 (30.♞xe6 also leads to nothing more than a draw. 30...♞xf2 31.♞xc5 bxc5 32.♞xc6 ♞xc2 33.b4 c4 =) 30...♞d7! Only move to hold the position! I wonder if Kramnik had seen this move when he played 22...♞e7!? 31.♞xc5 ♞xc2 32.b4 ♞xb4! making the draw official.]

25...♞xd8 26.axb6 [A wrong decision would have been 26.♞xa7?! ♞xa7 27.axb6 ♞c6 28.♞xc5 The White pawns are blocked and only Black can be better here.]

26...axb6 27.♞a6 ♞d1+ 28.♞h2 ♞d2 29.♞xb6 ♞xc2! It is very important to take on c2 first. [29...♞xf2? 30.♞xc6 ♞xc2 31.♞c7+ ♞g6 32.♞d4 and White is winning.]

30. Nxd6+ [The draw would be unstoppable after 30. Rxc6 Rxf2 31. Nxd6+ Ke7 32. Ne4 Rxb2 33. Rc7+ Kf8 34. Nxc5 Qf7 = and there is nothing left to play with.]

30... Ke7 31. Ne4 Nd4! Another key move that Kramnik should have seen when he played 22... Ne7, or no later than 24... c5. What a great calculation!!

32. Rb7+ [At 32. b4 Qd5! is very strong.]

32... Qf8 33. Rc7 No more chances left for White, the position is drawn.

33... Rxb2 34. Rxc5 Nf5 35. Ng3 Rxf2 36. Nxf5 Qxf5 37. Rxf5 Ra2 A great defense by Black based on very exact calculation! **1/2**

(3) Balogh,Cs (2664) – Bromberger,S (2513) [B12]

Austrian league, 19.04.2012

[Balogh Csaba]

I played a short, but nice, attacking game in the Austrian league.

1.e4 c6 A surprise from my opponent, who generally plays the Najdorf. I was sure that he was prepared for some of my recent games in the Caro-Kan, so I decided to try my old line...

2.d4 d5 3.e5 Qf5 4.h4 I used to play this until 2009. Nowadays I use it only occasionally, when I try to surprise my opponents.

4...h5 5.c4 e6 6. Nc3 Qe7 [Currently 6... Ne7 is considered to be the best, when White has a choice between 7. Nge2 (and 7. Qg5); I remember that I started playing the 4.h4 line after I saw the following game: 6... Nd7 7.cxd5 cxd5 8. Qd3 Qxd3 9. Qxd3 Ne7 10. Nf3 Nc6 11.0-0 Qe7

12. Qg5! White plays on the weakened dark squares, g5 and f4. **12...a6 13. Rac1 Nb6 14. Ne2! Qd7 15. Nf4 Nc4**

16.b3 ♘a3 17.♖fd1 ♜c8 18.♙xe7 ♚xe7 19.♞c5 Improving all the pieces to the maximum. 19...♞c7 20.♞dc1 g6 21.♘g5 Now, all pieces have reached perfect positions and Nigel Short finishes the game with great style. 21...♞d7 22.♞xc6! bxc6 23.♘xg6! fxg6 24.♚xg6+ ♔d8 25.♞xc6 and Black resigned the game. Short-Johannesen, Torino 2006. This victory impressed me a lot!]

7.cxd5 cxd5 8.♙d3 The move enjoys popularity since Gulko beat Karpov back in 1994. White exchanges the strong f5 bishop and goes for a slightly better position with a space advantage due to the e5 pawn. The current game is already my 4th win in this position.

8...♙xd3 9.♚xd3 ♘c6 10.♘f3 ♞c8

11.0-0! White tries to win a tempo by sparing g3, but it leaves the h4 pawn unprotected. [11.g3 is the main move, but here Black has 11...♙b4 and developing with ♘ge7.]

11...♙xh4 [11...♘h6 12.♙xh6 ♞xh6 13.g3 This is a standard position of the line. White has a small positional advantage. The h6 rook is out of the game. Black must play ♔f8, g6, ♔g7 and ♞h8 to bring it back, but this gives enough time for White to organize his play on the queenside with a3, ♞fc1, b4 and ♘a4-c5. Actually, this is

how I won my previous 3 games.; Now on 11...♙b4 I have 12.♘e2! trying to play like Nigel Short!]

12.♘b5! A strong novelty, based on the next move! [12.♘xh4 ♚xh4 13.♘b5 ♔f8 Black was fine in the Perunovic-Ruck, Vogosca 2007 game.]

12...♙e7 [On 12...♞b8 13.♘d6+ ♔f8 14.♚c3!? ♙e7 15.♘xb7! ♞xb7 16.♚xc6 White balances the material and enjoys a small advantage.]

13.♙g5!! A spectacular move, which forces the creation of big weaknesses in Black's camp.

13...f6 I had to make a very difficult decision, to include ♚g6 check or to play without that. After thinking for 40 minutes, I managed to come to the right conclusion. [13...♔f8 14.♘d6 ♞c7 15.♙xe7+ ♚xe7 The powerful knight on d6 gives more than enough compensation for the sacrificed pawn. Here, the computer recommends a very strong plan: (15...♘gxe7? 16.♘g5 ♘c8 17.♘dxf7! ♞xf7 18.♘xe6+ +-) 16.♞fc1! ♘h6 17.b4 +/- with huge pressure on the open file.; 13...♙xg5? does not work, because of 14.♘d6+ ♔f8 15.♘xg5 ♚xg5 (15...♞c7? 16.♘dxf7! ♞xf7 17.♘xe6+ +-) 16.♘xc8 +/- with an exchange up.]

14.exf6! [14.♔g6+ gave no advantage 14...♔f8 15.exf6 gxf6 (15...♙xf6!? is also possible.) 16.♙f4 a6! 17.♘c3 This is the critical position of the 14.♔g6 line. Seemingly the queen on g6 is very annoying for Black and ♖ae1 is a serious threat, but... 17...♙d6!

(In case of the logical 17...♔e8 18.♔g3! with the threats of ♖ae1 and ♘h4.) 18.♘xd5!? exd5 19.♘g5! A double knight sacrifice! 19...fxg5 20.♙xd6+ ♘ce7! It's very important to free the c6 square for the rook! (20...♘ge7 would lose nicely to 21.f4! g4 22.f5 +-) 21.♖ae1 (Now on 21.f4 g4 22.f5 Black has 22...♖h6!) 21...♖c6! 22.♔f5+ (22.f4 g4 23.♔f5+ => 22...♔e8 23.♔g6+ = with perpetual check.)

14...gxf6 15.♙f4 The most logical move, but it gives Black a chance... [The passive looking 15.♙d2! would have given White a very big attack 15...a6 16.♘c3 The point is that Black can not play ♙d6 with a tempo (when the bishop is on f4) freeing the e7 square for the knight. This half tempo gives White enough time to build up an enormous attack! 16...♔f7 17.♖ae1! and ♘h4 or ♘e2-f4 are coming!]

15...♙d7? Black tries to find shelter for the king in the center. Logically it can not be good. The position might seem to be lost for a human, but as usual, the computer finds an amazingly stubborn defense. [15...a6! Trying to send away the active knight. 16.♖fe1!? I was about to play this move and felt the attack to be decisive! But... (On 16.♘c3 Black has 16...♙d6! 17.♔g6+ ♔f8 which transposes to the 14.♔g6 line.) 16...axb5 17.♖xe6

17...♙d7! (17...♔f7 18.♖ae1 Probably this is where my opponent had stopped his calculations of the 15...a6 line and chose another move due to ♔f5 in the next move, with the threat of ♘g5. Actually he was right, but the computer shows some unreal lines: 18...♙b4 19.♖1e2! (On

the direct 19. ♖g5+ Black has 19... ♔g7! (19... fxg5 20. ♕g6+ ♔f8 21. ♕f5+ +-) 20. ♖1e3 ♕d7 21. ♖g3 ♘ce7! Seemingly Black is completely lost, but according to the machine, he is just winning. Incredible!) 19... ♘ge7 20. a3! ♘g6 (20... ♘a5 21. ♘d6 +/-) 21. ♘g5! ♘e7 22. ♕f5 Increasing the pressure to the maximum. 22... ♖c7 23. ♖xe7+! and striking at the right moment! 23... ♘cxe7 24. ♕xf6+ ♔g8 (24... ♔e8 25. ♕xg6+ +-) 25. ♕e6+ ♔g7 26. ♘f6+ ♔f8 27. ♘g5 +- Black can not defend himself.) 18. ♖ae1 Normally, this is a moment when humans turn to another move due to the ♘h4 threat. However, once again, the machine shows a brilliant cold-blooded only move, which I was unable to refute... 18... h4!! Simply prevents ♘h4... 19. ♕f5 ♔f8 and I did not find more than draw after 20. ♘e5 ♖h6 21. ♘f4 ♖h8 =]

16. ♖fe1! The e6 pawn is too vulnerable. Now the threat is the simple ♕e3.

16... ♘b4 [On 16... a6 White retreats with the knight. 17. ♘c3! +- Black has no defense against ♕e3. Now the knight on c3 is well placed, because it's threatening a sacrifice on d5.]

17. ♖e2! On the other hand, White starts to double the rooks on the e-file. Now the threat is to play a3, sending away the bishop, and then to bring the rook to e1.

17... a6 18. a3!! The best move. Of course 18. ♘c3 also gave a big advantage, but the text move is much better! Black loses in all the lines.

18... ♘f8 [18... ♘a5 19. ♘d6 +-; 18... axb5 19. axb4 +-; I felt 18... ♕a5 to be the critical, but correctly saw the winning move 19. ♕g6! +- The checks on the 7th rank are decisive!]

19. ♖ae1! axb5 20. ♖xe6 and Black resigned. [20. ♖xe6 ♘e7 (20... ♘ge7 21. ♖d6+ +-; 20... ♘h6 21. ♕xb5 +-) 21. ♕f5 ♔e8 22. ♖d6! +-] **1-0**

(4) Wojtaszek,R (2706) — Fedorov,A (2609) [E62]

Czech league, 23.04.2012

[Balogh Csaba]

Radoslaw Wojtaszek, one of Anand's seconds has won a nice game in the Czech league. We will study typical maneuvers of the King's Indian defense combined with great tactical elements at the end.

1.d4 ♘f6 **2.c4** g6 **3.♗c3** ♕g7 **4.♘f3** d6 **5.g3** The g3 system is one of the most popular setups against this opening.

5...0-0 **6.♖g2** ♘c6 **7.0-0** ♕f5 A "sideline", but still almost 1500 games in the database. On neutral moves, Black wants to play ♘e4. [7...a6 is the most often seen move.; Another sideline is 7...♖b8 We analyzed a game like this in the 1st edition of the CEWN.]

8.d5 ♘a5 **9.♘d2** Logical reaction, White defends the c4 pawn and intends to occupy the center with e4. [The mainline is 9.♘d4 ,though it would fall into the idea of 7...♕f5. 9...♕d7! Black retreats with the bishop to d7 and after White protects the c4 pawn, he pushes c5 and achieves a comfortable position.]

9...c5 **10.e4** ♕d7

11.♖c2 Standard plan. White prepares to fianchetto his c1 bishop.

11...e5 [11...a6 would lead us to the main pawn structure of the King's Indian g3 system. 12.b3 b5 13.♕b2 ♖b8 14.♖ab1 e5 With thousands of games in the pawn formation. In general, theory considers White's chance to be slightly better.]

12.b3 ♘g4 Instead of creating tension on the queenside with a6 and b5, Fedorov — who played this opening his whole life — initiates direct play on the kingside.

13.♕b2 f5 Black wants to push f4 with a very dangerous attack, which has to be prevented. In the game of the 1st CEWN, in a similar structure, White reacted with a typical response by pushing f4 himself. It is clear that now White is not prepared well for this move, so Wojtaszek plays the other known method of countering the f4 threat.

14.exf5! gxf5 Black, of course could not give up control over the e4 square.

15.h3 ♘f6

16.f4! Forces Black to close the center, and the maneuvering part of the game might start.

16...e4 [16...exf4 Opening the position would be punished in an instructive way: 17.♘e2!! fxg3 18.♘f4!! With this double pawn sacrifice, White completely paralyzes Black's pieces. The next move would be ♖ae1 or ♜f3-g3. Very nice picture, how the White pieces are dominating the whole board!]

17.♘d1! The knight is a great blockading piece, which is heading to e3. In general, White has a really long-term idea, to play on g4! It would open the position of his own king, so it needs huge preparation. However we can see in the game, how effective it could be if White pushes it in the right moment.

17...♙e8! Black plays logically as well. He transfers his queen to its ideal square on g6. It temporarily prevents the ♘e3 idea, due to the concrete ♙g6, ♘h5 threat. The next two moves by White will be prophylactic against this idea.

18.♙h2! ♙g6 19.♜f2! [19.♘e3 ♘h5]

19...♙f7? A logical move, which is actually a serious mistake. Black should have forced the knight to go to f1, we will soon understand why... [19...♘h5! 20.♘f1 ♜f7 21.♘de3 ♙h8 22.♙h1 ♜g8 23.♜g2 With a really sharp, double-edged position.]

20.♘e3 ♜g8 21.♜g1! This is the point! That is why, the 19th move was a mistake. By having the rook on g1, White's chances to push g4 in the right moment increase a lot.

21...♙h6? Another mistake, after which the g4 push becomes deadly. White was already better anyway. Let's see what happens, if Black fights differently against g4. We will see a really nice regrouping of the pieces in both cases. [21...♙h8 22.♙f1! ♙h6 23.♙e2 ♜g6 Black pins the king and doubles his rooks on the g-file, which was actually the idea behind the 19th move. However, White has a great knight maneuver! 24.♘df1! ♜ag8 25.♘g2! One knight is going to h4 and the other one to e3. The f5 pawn becomes a real weakness!; 21...h5]

White uses the same plan that we saw in the other line: 22. ♕f1! ♖e7 23. ♕e2 b6 24. ♘df1 ♜ae8 25. ♘g2! ♖d8 The Black king would like to run away from the “battlefield”, but as we will see, there is no safe place for him in this game. 26. ♘h4 ♜h7 27. ♘e3 ♖c7 28. a3! += After paralyzing Black’s pieces, White can organize a queenside attack.]

22. ♕h1! Wojtaszek already foresaw his next two moves. We understand soon why the bishop went to h1!

22...b6 [On 22...♖e7 happens the same that did in the game...]

23.g4!! Seems like committing suicide, but in reality it leads to winning the e4 pawn — that is why the bishop

has to stay on h1 now — which means the collapse of Black’s position!

23...fxg4 24. ♜g3!! This was the brilliant idea! Stops the g3 threat, and Black is helpless against ♘xe4.

24...♜ae8 [24...♜h5 25. ♘xe4 ♘xe4 26. ♕xe4 gxf3 27. ♕f3! +- opens the diagonal for the queen to take on h7!; 24...♘h5 does not work, because of 25. ♕xe4 +-]

25. ♕xf6! White wins huge material now on all the lines.

25...♜xf6 26. ♘xe4 ♜e7 To protect the d6 pawn.

27. ♘xg4 [27. ♘g5+ was even easier 27...♖f8 28. ♘f5 +-]

27...♕xg4 28.hxg4 and g5 is coming, Black is hopeless.

28...♜h4+ 29. ♜h3 ♜xg4 30. ♘g5+! ♕xg5 31. ♜xh7+ Very instructive game. We learned many ideas on how to play this pawn structure. **1–0**

Endgame section

(15) Balogh,Cs (2664) – Baramidze,D (2612)

Austrian league, 21.04.2012

[Balogh Csaba]

After a long and tough middle game, I got this endgame with an extra pawn. However, converting the advantage was still going to be really difficult due to the relatively small amount of material on the board. In order to make progress, White has to push his pawns forward, but this would lead to further exchanges. At this moment, both me and my opponent were living on the 30 seconds increments, which made our tasks even harder. After my last move 79. ♕d4, Black was facing a critical decision, to defend passively or to transpose to a bishop endgame.

79...e5? Short on time, Black chooses the wrong direction... [79...♔f7 was the correct move. I don't know who has better chances, White to win or Black to hold the draw.]

80. ♔xf6 gxf6! This is the critical moment of the game! White has to find the right plan to win the game, which I missed with 30 seconds on the clock. Unfortunately, two moves later, when I realized which was the right path, it was already too late... [Of course not 80...♕xf6? 81. ♕c3 ♔g8 82. ♔d3 ♔f7 83. f4 +- wins another pawn, since Black can not go for the pawn endgame.]

81. ♕b6? [81. ♕c3! ♔g6 82. f3! ♕c5+ 83. ♔e2 ♕b6 84. g4! This is the winning position, but it still requires good technique. Black has nothing else than passing with the bishop. 84... ♕c5 85. ♕e1! White prepares the plan with ♔d3-c4-d5, but first he had to prevent ♕f2. 85... ♕b6 86. ♔d3 ♕a7 87. ♔c4 At this moment, due to the gxh5, ♔d5-e6 threat, Black is forced to take on g4, which is clearly an improvement for the attacking side. 87...hxg4 (87... ♕e3 88. gxh5+ ♔f7 (88... ♔xh5 89. ♔d5 ♔g6 90. ♔e6 +- White is going to exchange his h-pawn for the f6 pawn, after that, e5 will fall as well.) 89. ♔d3 ♕h6 90. ♕d2 Unfortunately for Black, the pawn endgame loses with just one tempo... 90... ♔g7 (90... ♕f8 91. ♔c4 +-) 91. ♕xh6+ ♔xh6 92. ♔c4 ♔xh5 93. ♔d5 ♔xh4 94. ♔e6 ♔g5 95. ♔f7! f5 96. ♔e6 fxe4 97. fxe4 ♔f4 98. ♔d5 +-) 88. fxc4 ♕e3

(88...♔f7 89.h5 ♕e3 90.♔d3 transposes to the main line.)
 89.♔d3 Here it's another important moment to find the right plan. After forcing Black to take on g4, the King must change his direction! (89.♔d5 ♔f7 90.h5 ♕c1 would be hard to make progress, but of course with 91.♔c4! White can change his mind at any time.) 89... ♕f4 90. ♕d2 ♕g3 91.h5+ ♔f7 92.♔e2 ♔g7 93.♔f3 ♕h4 94.♔g2 ♔f7 95.♔h3 ♕f2 96.g5! This is the point. White penetrates through the f5 square and collects the e5 pawn as well. The position is winning, thanks to the dark square bishop, which corresponds to the promoting square in h8. 96... fxf5 97.♔g4 ♕d4 (97... ♕c5 98. ♕xg5 ♔e6 99.h6 ♕f8 100. h7 ♕g7 101. ♕h4 ♕h8 102.♔g5 ♔f7 103.♔f5 ♕g7 104. ♕g3 +-) 98. ♕xg5 ♔g7 (98... ♔e6 99.h6 ♔f7 100.♔f5 +-) 99.♔f5 ♕c3 100. ♕f6+ ♔h6 101. ♕xe5 ♕e1 102.♔g4 +- and the two extra pawns secure an easy win.]

81...♔g6! Now the position is drawn! Black can push f5!

82.♔d3!? At this moment, I already saw the f3-g4 plan, so I tried this tricky move, trying to lure the Black king to e6, which again would give me time to play f3 and g4. [On 82.f3 f5! is in time!; 82. ♕c7 does not stop neither 82... ♕c5+ 83.♔e2 f5! with a draw. We will discuss this positions below!]

82...f5! [82...♔f7? 83.f3 +-]

83.f3 [83.exf5+ ♔xf5 84.f3 (84. ♕e3 e4+ = Despite being a healthy pawn up, White has no chance to bring home the full point, because Black succeeded to set up an ideal blockade position with the pawns. Any sort of pawn moves lead to exchanges and soon White gets out of material...) 84... ♕b4 85. ♕f2 ♕a5 = White can not make progress. He must cover the e1 square with the bishop, the pawns are immobile, while on 86.♔c4 Black can simplify with e4.]

83... ♕b4 [83...♔f6 was also draw 84.♔c4 ♔e6 85.exf5+ ♔xf5 86.♔d5 ♕b4! Accurate move! 87. ♕c7 ♕c3 = and again, Black has managed to build a fortress!]

84. ♕f2 ♔f6 85.♔c4 ♕d2

86.♔d5 Now, my king has reached the nice looking d5 square, but still after a great only move, Black holds the draw.

86...f4! Other moves were losing easily, but now unfortunately, I could not play 87.g4, which means that Black builds up a successful fortress again. [86...♙c1 87.♙b6 fxe4 88.♔xe4 ♔e6 89.♙d8 ♙d2 90.g4 +-; 86...♙a5 87.♙e3 +-]

87.gxf4 [87.g4 hxg4 88.fxg4 ♙e3! This is the key move to save the game. 89.♙e1 f3=]

87...♙xf4 88.♙b6 ♔e7 89.♙c7 ♔f6 90.♙d8+ ♔f7 91.♔d6 ♙g3 92.♙g5 ♙h2! = and White has no chance to improve his position. Black is either passing with ♙g3-h2 or with ♔f7-f6. I tried several more moves, then a bit disappointedly, agreed to a draw.

93.♔d7 ♙g3 94.♔d6 [94.f4 leads to a draw as well 94...♙xf4 95.♙xf4 exf4 96.e5 f3 97.e6+ ♔g7 98.e7 f2 99.e8Q f1Q 100.♔xh5 ♔f7+ =]

94...♙h2 95.♔d5 ♙g3 96.♙d8 ♙f4 97.♔d6 ♙g3 98.♙g5 ♙h2 99.♔d5 ♙g3 1/2

(16) Socko,B (2636) – Kraemer,M (2492)

Austrian league, 22.04.2012

[Arkadij Naiditsch]

In this position Black suddenly resigned. Lets take a look, if he was right or not!

1...♖b4 2.♖f6+! The only move, which is leading to a win for White. [Looks logical, but would throw away the full point. 2.♖a7+ ♔f8 Black wants to give a check on b5, the only chance for White to play for a win is 3.♖d7 (3.♔f6 ♖b6+ draw) 3...♖b5+! a very important check, all Black moves are forced and only 4.♖d5 (4.♔f6 ♖b6+ 5.♔e5 ♖b5+) 4...♖b3! attacking the pawn e3, by this Black wins an important tempo 5.e4 ♔e7! and Black is just in time to put the king to e7, the only way to save the game 6.♖a5 ♖b7! 7.♖a6 ♖b5+ 8.♔f4 ♔f7 with a draw.]

2...♔g7 3.♖d6! Again the only way for White.

3...♔f7 Black is trying to block with his King the route of the opponent's King — it is the only chance. In case, if it was Black's move, ♖b5-Rd5 and ♖b7 would hold the draw. [3...♖b5+ doesn't leave any hopes for Black 4.♖d5 ♖b4 5.♖d7+ ♔f8 6.♔e6! ♖b5 7.♖d5 (7.e4 would be a mistake 7...♖xg5 8.♔f6 ♔e8! 9.♖e7+ ♔d8 10.♖g7 ♖g1 11.e5 ♖f1+ 12.♔e6 ♖e1

13. ♖xg6 ♔c7 with theoretical drawn position.) 7... ♖b3 8.e4 and White wins easily. Lets check one line: 8... ♖f3 9. ♖d8+ ♔g7 10. ♖d7+ ♔f8 11.e5 ♖f5 (11... ♖f1 12. ♖d8+ ♔g7 13. ♔d7 ♖d1+ 14. ♔e7 ♖a1 15.e6 ♖e1 16. ♔d7 ♖d1+ 17. ♔e8 ♖a1 18.e7 ♖a7 19. ♖d6+-) 12. ♖d8+ ♔g7 13. ♔d6 ♖xg5 14.e6 ♖g1 15.e7+-; 3... ♖g4 4. ♖d7+ ♔f8 5. ♔f6+-]

4. ♖d7+ [A terrible mistake would be 4.e4? ♖b5+ 5. ♖d5 ♖b7! 6. ♖c5 (6. ♔d6 ♖b6+ 7. ♔d7 ♖b7+ 8. ♔c6 ♖e7 9.e5 ♔e6 draw) 6... ♔e7! and we are back to our drawish lines 7. ♖c6 ♖b5+ 8. ♔f4 ♔f7 9. ♖c7+ ♔f8 White can not make progress... 10. ♖d7 ♖a5 11. ♖d5 ♖a7 12. ♔e5 ♔e7]

4... ♔e8 [4... ♔f8 doesn't save Black 5. ♔e6 ♖a4 6. ♖d4! always the winning technique — ♖d4! 6... ♖a6+ 7. ♖d6 ♖a4 8. ♔f6+-]

5. ♖d4! ♖b3 6. ♔f6! ♖xe3 7. ♔xg6 And we reached a well known winning rook endgame. Lets us demonstrate the way to promote the pawn:

7... ♔f8 8. ♖d8+ ♔e7 9. ♖g8 ♖g3 10. ♔h7 ♔f7 11.g6+ ♔e7 12. ♖b8 ♖h3+ 13. ♔g8 ♖g3 14.g7+- and White wins with the help of the “bridge building”, what we already discussed in the 2nd CEWN. So, the resignation of the game was premature, it would have been worth a try, if White finds all the only moves to win the game... **1-0**

Clash of the Titans

(17) Nikolic, Emil – Fischer, Robert James [E61]

Vinkovci, 1968

[Balogh Csaba]

We will enjoy a fantastic victory of Robert Fischer. An intuitive piece sacrifice, followed by many silent moves...

1.c4 g6 2.♘c3 ♗g7 3.g3 e5 4.♗g2 d6 5.e3 ♘f6 Black's setup might remind us of the previous Fischer game against Myagmarsuren, except this time he leads the opposite color.

6.♘ge2 0-0 7.0-0 c6 8.d4

8...♖e8 Black shows a clear intention to push e4, White did not consider important to prevent it. In my opinion, this was a bad idea...

9.♖b1?! The plan itself is correct, to play b4-b5. White should play on the queenside, while Black will launch an attack against the king. [9.♙c2 was better, but still after 9...♘a6 Black should be fine... 10.♖b1?! moves into ♗f5.

(10.a3 and b4 is the right move.) 10...exd4! 11.♘xd4 (11.exd4? ♗f5)

11...c5! An unusual motif to win a pawn. 12.♘db5 ♗f5 13.e4 ♘b4! 14.♙e2 a6 15.♘a3 ♘xe4! 16.♘xe4 ♗xe4 17.♗xe4 f5]

9...e4! 10.b4 [10.f3 would be the principled reaction by White in order to undermine the center, but now he does not have enough pieces to control the e4 square... 10...exf3 11.♗xf3 ♗f5 and Black is better, since White has no e4 move.]

10...♗f5 [10...♗e6 was another idea to force White to open the diagonal for the g7 bishop. 11.d5 (11.♘xe4 ♘xe4 12.♗xe4 ♗xc4 and d5 in the next move, would be fine for Black.; 11.♙b3? does not work 11...b5 12.d5 bxc4) 11...cxd5 12.cxd5 ♗g4 13.h3 ♗xe2 14.♙xe2 ♘bd7 Black is OK after ♖c8, ♘b6.]

11.h3 Sooner or later the h3-h5 pair of moves had to be included. If Black plays h5, White anyway must play h3 in order to push g4 on the h4 move. [On 11.b5 the game could continue with 11...♘bd7 12.bxc6 bxc6 13.♙a4 This is premature because of 13...♘b6! 14.♙xc6 ♖c8 =+]

11...h5 12.♘f4 ♘bd7 Please notice, that Fischer puts his pieces in the same squares as in his game against Myagmarsuren.

13.a4?! In my opinion, this seems to be a loss of tempo. [13.♚b3 was more logical. 13...♘f8 14.b5 (14.d5 ♘8d7! After White gave up the control over the e5 square, Black changes the direction of his knight.) 14...♘8h7 15.bxc6 bxc6 16.♚b7 ♖c8 The a7 pawn is not that relevant, Black must focus his play on the kingside. 17.♚xa7 ♘g5 18.♖b7 ♘d7 with a really unclear position.]

13...♘f8

14.c5? This is a terrible positional mistake. White closes the center, after which it is much easier for Black to develop his attack. The move is also against the old chess rule, which says: against a flank attack, in case of same side castling, you should aim to open the center! [14.♙b2 was the correct plan, followed by d5 in the next move.]

14...d5 15.b5 ♘8h7 16.♙d2 ♘g5

17.♖b2 White prepares for the invasion on the b-file. [17.bxc6 bxc6 18.♖b7? runs into a double attack: 18...♚c8]

17...♚d7 18.♙h2 [18.h4?! is never an option for White. It would give up the light squares. 18...♙g4! 19.♚b3 ♘f3+]

18...♙h6 19.a5

19...♙g4!! I wanted to give more exclamation marks to this move :). A brilliant idea. We can not see any concrete threats yet, but soon we will understand what it is for...

20.hxg4 [The attack remains dangerous, even if White ignores the bishop. 20.♚b3!? ♘f3+ 21.♙xf3 ♙xf3 22.bxc6 bxc6 23.♚b7 ♚f5 Of course, Black needs the queen. 24.♚xc6]

24... ♖xf4 25.gxf4 (25.exf4 ♘g4+! 26.hxg4 hxg4 and mate is coming soon.) 25... ♘g4+ 26.♔g1 (26.hxg4 ♕xg4) 26... ♘e5! and Black mates after ♕xh3!]

20...hxg4 21.♖h1 The only defensive way, trying to run away with the king. [21.a6 would be a bit optimistic. 21... ♘f3+ 22.♕xf3 gxf3 23.axb7 Black does not even need to waste time on rook moves... 23... ♘g4+ 24.♔g1 ♕xf4 25.exf4 ♕f5 26.bxa8Q ♖xa8 and ♕h5 decides the game.]

21...♘f3+! 22.♕xf3 gxf3 This pawn formation was the point of 19... ♕g4!! White has no chance to sacrifice his knights for the f3 pawn. Otherwise, Black can slowly play ♔g7, ♖h8, doubling the rooks on the h-file and giving mate.

23.♔g1? [The computer move 23.♘h3!? was the only chance, but 23... ♔g7! 24.♔g1 ♖h8 25.♕f1

Here I found a fantastic move. The point is, White's only chance for counterplay is a6, but Black can stop it before continuing his own plan. (25.a6 ♕xe3 26. ♕xe3 ♖xh3) 25... a6!! (25... ♖h7 26.a6 ♖ah8 27.axb7 ♕xb7 28.b6 might be also good for Black, but I think 25...a6 is easier.) 26.bxc6 bxc6 27.♘a4 ♖ag8 Black has to lose another tempo before doubling on the h-file, but this has no significance, since White's pieces are completely paralyzed...]

23... ♕xf4! Precise calculation! After eliminating the knight, Black saves a tempo to bring the rook to the h-file. White is not in time to run away with the king.

24.exf4 ♔g7! 25.f5 A desperate try to open the bishop's diagonal. [25.♔f1 ♖h8]

25...♖h8! 26.♙h6+ White temporarily closes the h-file.
 [26.♔c1 ♜xh1+ 27.♙xh1 ♜h8+ 28.♙g1 ♔xf5]

26...♜xh6 27.♜xh6 ♙xh6 28.♔d2+

28...g5! Black does not give the chance for playing ♔f4.

29.bxc6 ♔xf5! ♔h3 threatens with mate on g2, White has only one way to prevent it.

30.♘d1 ♔h3 31.♘e3 But now again, the rook comes to the h-file...

31...♙g6! 32.cxb7 ♜h8 A brilliant victory! **0-1**

Interview with Vallejo Pons

GM Vallejo, you have just become champion of Germany with Baden Baden. In how many countries have you already won the Team Championship?

For now I have won just Spanish, French and German league, but also true that I played only at these championships, plus the Italian, where we became second :)

Is Spain a good country for being a chess professional?

I don't think it is a bad one, but of course now with the big economic crisis many tournaments are collapsing. To be honest I don't even remember the last time I gave a simul, 15-20 years ago, things were much easier.

But I still like what I do, it is paid decently, and you travel a lot, I think I don't have the right to complain.

Would You advice a young kid who has talent to continue the chess career or better switch to the usual, school, university ?

It depends on his level, nowadays you need at least 2600 to have a nice future in the chess world, otherwise for sure University is a better option. So if you are talented and have 2600 perspective in the future, go ahead.

Everyone knows chess at top level is exhausting. What is your favorite food and drink before the game and during?

Fresh juice is clearly my favorite drink, and for eating in general I like any kind of food if it is a good quality one. Let's say my favorite is Lobster Soup (typical from Menorca) and during the games I like bananas and chocolate.

Editorial Preface

The great match between Kramnik and Aronian finished with a “friendly” outcome of 3–3. This was the first match in history that featured two 2800+ rated opponents. We saw great fighting spirit from both players! You will find 4 out of 6 games in the 9th and 10th editions of the Chess Evolution Weekly Newsletter.

After offering a very hard selection of puzzles in the first editions, we have switched to a selection of easier ones.

In less than 10 days, the battle for the World Championship between Anand and Gelfand will begin. Don’t forget that You can subscribe to the special Chess Evolution Newsletter that will be provided for this match with a 50% discount (7 Euro!), only available to CEWN subscribers.

As usual, we wish You lots of fun and we hope you make the most out of the 10th edition of the Chess Evolution Newsletter!

4 best games of the past week

(1) Kramnik,V (2801)
— Aronian,L (2820) [C47]

Zurich Chess Challenge Zuerich SUI (3), 24.04.2012

[Arkadij Naiditsch]

We are in the 3rd game (out of 6) of the friendly match between Kramnik and Aronian. The first match in history between two players with a 2800+ ELO rating. This game was, probably, one of the most spectacular ones in the match!

1.e4 We don't see Kramnik playing 1.e4 often, but maybe he chose to change his first move after losing a horrible game in the 1st round, when he played 1.d4.

1...e5 2.♘f3 ♘c6 3.♘c3 What a surprising choice of opening by White! Who could expect that such an opening Guru like Kramnik would choose this „boring“ line?

3...♘f6 4.d4 exd4 5.♘xd4

5...♘c5 This came as a huge surprise to me. Why not 5...♘b4 going into the old lines, where nobody has been

able to show how to play for an advantage in the last 30 years? Usually, White chooses this line to make a draw out of the opening. In the interview after the game, Aronian said that he wanted to create some „action“ — well, he achieved his goal!

6.♗e3!? Yes, finally we see something out of Kramnik's preparation. [The main choice would be 6.♘xc6 bxc6 7.♗d3]

6...♗b6 7.♔d2 From here on we are in an almost totally unknown position, only after 7 moves! [Sort of a main line here is: 7.♘xc6 bxc6 8.e5 ♗xe3 9.fxe3 ♘d5 with a crazy position.]

7...0–0 8.0–0–0 ♖e8 Very logical play by Black.

9.f3 d5!? From here on the game is getting forced. [If black chooses a slow move 9...d6 10.g4 White is doing better.]

10.exd5 [10.♘xc6?! clearly wouldn't give White any advantage 10...bxc6 11.g4 ♗e6 Black finished his development and got active in the center — everything is looking very nice for him!]

10...♘xd5

11. ♖g5! A very strong move by White! Probably the only chance to fight for the advantage.

11... ♜xc3!? A very interesting move by Aronian, which leads to a very crazy position! [Leads to a worse endgame 11...f6 12. ♖c4 A lot of pieces are hanging in the center, and all the coming moves seem quite forced 12... ♜xd4 13. ♜xd5 ♖e6 14. ♖xf6! A very nice tactical blow! 14...gxf6 15. ♜xb6 axb6 16. ♔xd4 ♔xd4 17. ♖xe6+ ♖xe6 18. ♖xd4 ♖xa2 19. ♖b1 and we are in an endgame where White is clearly doing a bit better due to the pawn structure.]

12. ♖xd8 ♜xd1 13. ♖xc7! Kramnik is howing once again his great calculation skills in a position that's not easy at all! [13. ♖h4 ♜xd4 14. ♖xd1 and we are in a position where Black has at least 3 moves that make the evaluation completely unclear: 14... ♖f5, 14... ♖e6 or 14... ♜f5. Yes, White is a Queen up, but all the Black pieces are standing in great positions, clearly giving him good counterplay. For the computer fans it is important to know that almost all engines evaluate the advantage of the queen as „too strong“.]

13... ♖xc7 14. ♜xc6 ♜e3

15. ♖b5! A very important, and very strong, move by White! It is very difficult to calculate all the lines here... [A mistake would be 15. ♜d4? ♖f4! 16. ♖b5 ♜f1! and White is losing his Queen!]

15... ♖xc6!? [15... ♖f5!? This is the first choice of the engines, but it's almost impossible to make this move during a practical game. 16. ♜d4 ♖f4 and again we are facing a long forced line. 17. ♖xe8 ♜xg2 18. ♖xf7+ ♔xf7 19. ♜xf5 ♖xd2+ 20. ♖xd2 ♖d8+ Probably Black has good chances to save this endgame.; A very interesting human move would be 15...a6 16. ♖a4 ♜c4 but it seems not to work because of 17. ♖b4! b5 18. ♖b3 and it looks like White's material advantage is too big]

16. ♖xc6 ♜c4 [Doesn't work 16... ♖f4 and White needs to make 3 amazingly cool moves. 17. ♖b1! ♖f5 18. ♖xa8! ♖xa8 19. ♖e1! White is winning, but this sequence is far from obvious!]

17. ♔d4 Other queen moves were also possible, but probably the move in the game is the best one — Why? Hmmm, probably it's just a feeling :)

17... ♖e6! Good and logical

18. ♖xa8 [18. ♖xe8?? ♖e5! and the White queen doesn't have any good squares. 19. ♔h4 ♖xb2+ 20. ♔d1 ♖xe8 with a mating attack!]

18... ♖b6 [18... ♖e5 19. ♔xa7!]

19. ♔d3 [If White tries to hold the piece on a8, he could end up creating ugly complications for himself. 19. ♔e4 ♖e3+ 20. ♔d1 ♖xb2+ (A bit optimistic would be 20... ♖d8+ 21. ♔e1 ♖b6 The position looks super dangerous for White, but the computer finds great defensive resources. 22. ♖b7! An amazing move that's hard to find in a practical game. 22... ♖e3 23. ♖a6! and probably White is doing better.) 21. ♔e1 ♖d7 If somebody is better here, probably it's Black!]

19... ♖xa8 20. ♖e1 ♖d8 21. ♔e4 Somehow, the position seems to have stabilized. Black has 3 pieces for a queen and 2 pawns. All of Black pieces are standing very active giving a lot of chances for tactical ideas. How to evaluate such a position? It's very hard to say. I would say about equal, maybe just a little bit better for White.

21...g5? In my opinion, a terrible mistake by Black. He's weakening the king for no reason, and the g-pawn would stand much better on g6! [21...g6 would be the right move

here! And it's hard to say what's going to be White's next move. In case of: 22.b3 ♖c5 23.bxc4 ♖a3+ 24. ♔b1 ♖b8+ the position is drawn.]

22.c3! Whites keeps on playing great chess! 22.c3 A very important multi-functional move. The White king gets an escape square on c2, and the b3 move becomes a potential threat from now on.

22... ♖c5 Reacting against the b3 move.

23. ♖e2 White keeps on improving his position.

23...h6 24.g3 [24.h4 was another way to weaken the pawn structure around the Black king.]

24...a5 Black has nothing to improve anymore, the a-pawn is the „last hero“.

25.f4 a4

26.f5! Another important moment, White solves in a great way.

26... ♖d5 27. ♔d3 ♖b6 28.b3! Finally the pawns are starting to move.

28...axb3 29.axb3 ♖a5 30. ♖e8+! White continues with his great play. [The computer move: 30. ♔b5 ♖xb3+

31.♔b2 ♘a5 leads to a very strange position. 32.♖e8+ ♜xe8 33.♚xe8+ ♙h7 34.♚d7 ♙b3 35.♚b5 and the computer gives White a clear win, but don't ask me why! This is very strange, it's a very funny thing. Imagine the position: Black gives his knight for the pawn on c3. Is the position winning for White?!. Let's see, Black has: ♙g7, ♙f6 and ♙e4. White has: Queen, King, and pawns. Can White win this? Doesn't seem likely!]

30...♜xe8 31.♚xd5 Now Black has only one chance to make a draw, to give a piece for 2 pawns. Is it possible to do?! Let's see the game.

31...♜d8 32.♚b5 ♜d6 Black is getting the rook to the 6th rank, more precisely to f6, where it will be protected by the King on g7. At the same time, he will try to give one of his pieces for the 2 pawns, precisely on this 6th rank.

33.♙c2 ♙g7 34.b4 ♘b7 35.c4 ♜f6 36.g4! White has no reason to hurry and to risk giving away the f5 pawn. [A big mistake would be 36.c5? ♙xc5 37.bxc5 ♜xf5! 38.♚xb7 ♜xc5+ The Black rook is going to e6, and the position becomes a theoretical draw!]

36...♘d8 Black is trying to fight, but the position is hopeless. He can't coordinate his pieces correctly.

37.c5 ♙c7 [The last chance to fight would have been 37... ♘c6! 38.♚a4 ♙c7 39.b5 but it seems that here White will probably win the game, as well.]

38.♚d7 ♘c6

39.b5! The last precise move!

39...♘a7 40.♚xc7 ♘xb5 41.♚e5 ♘a7 42.♚d3 The White king is going to g3, then White will play h4, hxg, hxg, and ♚e3. Black is totally paralyzed against this plan. A very interesting game and a well deserved winner! **1-0**

(2) Aronian, Levon
— Kramnik, Vladimir

Zuerich (6), 27.04.2012

[Balogh Csaba]

We are in the last round of the historical match between two 2800+ players. The score is 2.5–2.5 and Aronian has the White pieces. It was obvious that he would press hard to win the match, but on the other hand, he had to be careful not to go too far.

1.e4 This is the 3rd time that Aronian played 1. e4 on the match. I guess it was quite a big surprise for everybody.

1...e5 2.♘f3 ♘c6 3.♙b5 ♘f6 Kramnik had no reason to deviate from his pet Berlin line. It was Aronian who had to show something more.

4.d3 Here we are! In their previous games, Aronian went for the mainline with 4.0–0. Now, he is aiming for a more complex middlegame with more pieces on the board.

4...♙c5 5.♘bd2 d6 6.c3 0–0 7.0–0 The first critical moment of the game. In a well-known theoretical position, Kramnik practically comes up with a novelty.

7...♞e7!? Typical idea in the Ruy Lopez — to transfer the knight to g6. It was considered as premature, since after 8.d4 Black has to give up his center.

8.h3 Aronian does not try to refute Kramnik's idea. [8.d4 was the critical test of 7...♞e7. Let's check what could have been Black's preparation. 8...exd4 9.cxd4 ♙b6 10.h3 White has to prevent ♙g4, it would have put big pressure on the central pawns. (10.♞e1 ♙g4 11.h3 ♙h5 Black is fine.) 10...♞g6

11.♞e1 The critical position. The computer suggests slow plans, but I don't like it at all. However, a quick break in the center might solve Black's opening problems. **11...d5!?** **12.e5 ♞h5!** I like this move a lot, with the idea of quickly undermining the e5 pawn with f6! **13.♞b3!** (The logical **13.♞f1** is probably a mistake. **13...c6 14.♙d3 (14.♙a4 f6 =+ 15.e6 ♞e8) 14...♞hf4 15.♙c2 f6 =+ Everything works as expected for Black.) 13...c6 14.♙d3 ♞hf4 (14...f6? is too rush. 15.♙xg6 hxg6 16.♞h4 +/-) 15.♙xg6 (White can't keep his important bishop with 15.♙c2 because 15...f6! arrives in time.) 15...fxg6! 16.♙xf4 ♞xf4 and I like Black's position. He has two bishops, the e5 passer will be blockaded with ♙e6 and the heavy pieces might cause prob-**

lems on the f-file. A potential idea in the future could be g5-g4, with an attack.]

8...♘g6 9.♖e1 White also prepares for the standard plan of driving his knight to g3.

9...c6 Kramnik decides to go back to one of the main lines by transposition. [In my opinion 9...a6 is worth a try in the future. 10.♙a4 b5 11.♙c2 ♙b7 12.♞f1 (12.d4 ♙b6 13.♞f1 c5) 12...♙b6 13.♞g3 d5 Black is fine in both lines.]

10.♙a4 ♖e8 11.d4 ♙b6 We usually get this position from the 7...♙b6 move order.

12.♙c2 White must overprotect the e4 pawn in order to transfer the knight to g3.

12...h6 13.a4!? is considered to be the critical move. White keeps his knight on d2 in order to prevent the 13.♞f1 d5 possibility. [13.♞f1 There was already a blitz game of Kramnik in this position. 13...d5 14.♞xe5 ♞xe5 15.dxe5 ♖xe5?! was a mistake. (15...♞xe4 would have equalized comfortably. 16.♙xe4 dxe4 17.♚xd8 ♙xd8 18.♖xe4 ♙c7 19.♙f4 White can keep his extra pawn, but the activity of Black's pieces will give more than enough compensation.

(19.f4 f6) 19...f5! 20.♖e2 g5! 21.♙h2 f4! Closing the bishop out of the game. 22.♖ae1 ♙f5 with initiative.) 16.♙f4 ♖e8 17.e5 ♞h7 18.♚d3 ♞f8 Radjabov-Kramnik, Kazan 2011 (blitz). White could have gotten an advantage after 19.♚g3]

13...♙e6 14.♞f1

14...exd4! Very strong novelty! Black begins concrete actions in the center. [In the previous game Black got into trouble very soon. 14...♚c7 15.♞g3 ♖ad8 16.♙e3 d5 and the central break ran into a strong refutation: 17.♞xe5! ♞xe5 18.♙f4! ♞fd7 19.a5! ♙xa5 20.exd5 ♙xd5 21.dxe5 +/- and White soon won in Alekseev-Jumabayev, Moscow 2012; 14...d5? 15.exd5]

15.♞xd4 It was a difficult decision, to obtain a strong center with 15. cxd4 or to play the f4 plan after 15.♞xd4. Black had his ideas after both captures. [15.cxd4 d5! 16.e5 ♞e4 17.♞1d2 (White wins a pawn only temporarily. 17.♙xe4? dxe4 18.♖xe4 ♙d5) 17...f5! Very important move, either to keep the powerful e4 knight or to break White's center. 18.exf6 ♞xd2! 19.♙xd2 (19.♙xg6 ♚xf6! 20.♙xe8 ♞xf3+ 21.♚xf3 ♚xf3 22.gxf3 ♖xe8 =+ This exchange sacrifice was the whole point of 14...exd4!) 19...♚xf6 Black is fine.]

15...♙d7 Again, Black is ready for the d5 break.

16.f4! In order to have 17.e5 on 16...d5.

16...d5! If White had enough time to play ♘g3, he could have prevented the d5 break forever.

17.e5 ♘e4 18.♙xe4 dxe4 Another critical position. White has to choose between three options. Black's main idea is f6 or f5.

19.a5!? A really creative pawn sacrifice. We will get the point a few moves later. [19.♘g3 was the most logical move to take the e4 pawn with the knight. 19...f5! 20.exf6 ♙xf6 Here we get the point of Aronian's 19.a5 move. He wanted to avoid this recapture, because the bishop would hang on a5. 21.a5! (21.♘xe4?! ♙h4 again with very strong compensation) 21...♙xd4+ 22.♙xd4 ♙xd4+ 23.cxd4 ♘h4! 24.♙xe4 ♘f5 25.♙xe8+ ♙xe8 26.♘xf5 ♙xf5 White is a pawn up, but due to the appearance of opposite colored bishops and the activity of Black's pieces, a draw would be the logical outcome of the game; 19.♙xe4 was the least promising alternative, Black gets very strong initiative after 19...c5 20.♘f3 ♙c6 21.♙e1 c4+ 22.♙h2 (22.♘d4? ♙h4 causes huge problems around the f4 pawn.) 22...f6 Black is fine.]

19...♙xa5 20.♘g3 ♙b6 21.♙h2! Prophylactic against the ♙h4 ideas. [21.♘xe4?! would be a mistake. 21...♙h4! 22.♘d6 ♘xf4! 23.♙xf4 ♙xf4 24.♘xe8 ♙xe8 Despite only having one pawn for the exchange, Black is clearly better due to his bishop pair and the weak e5 pawn.]

21...c5!? [In my opinion 21...♘h4 was a safer way to equality. 22.♘xe4 c5 23.♘f3 ♘xf3+ 24.♙xf3 ♙c6 with a balanced position.]

22.♘df5 ♙xf5 23.♘xf5 ♙xd1 24.♙xd1

24...♙ad8 Black is still a pawn up, but it is him who must be careful not to stay worse, due to the weaknesses of the e4 and b7 pawns, the bad b6 bishop and the hole on d6. When Aronian played 19.a5, he was hoping to get an advantage thanks to these factors. On the other hand, Kramnik is playing on f6, which could solve his problems.

25.♙e3 [On 25.♙e1 ♙d5! 26.♘d6 ♙e7 and f6 is coming next.; 25.♘d6 f6! 26.♙e3 ♙f8 Black seems to equalize.]

25...♙d3! Very strong move, to complicate the matters. [The principled 25...f6 was premature. 26.♙xd8 ♙xd8 27.exf6 gxf6 28.♙a4! += with a clear advantage.]

26.♙e1 Aronian refreshes the threat of ♘d6.

26...f6! Black had to undermine the center, even if it costs him the h6 pawn. With this, he also gets rid of the d6 stronghold.

27.exf6 gxf6 28.♘xh6+ ♔f8? The first mistake of the game! Black should have sent the knight to f5, we will soon understand why. [28...♔g7 was the right move. 29.♘f5+ ♔f7 30.♖a4 ♘e7! The exchange of knights was an important idea, which leads to complete equality!]

29.♖a4! Really strong move, Black has serious problems with his e4 pawn, due to the f5 threat! That's why he should have forced the knight to f5 first.

29...♖d5 30.c4? A miscalculation by Aronian. [30.f5! would have given White a big advantage. 30...♕c7+ (30...♘h4 31.c4! and the knight is trapped.) 31.♔g1 ♕g3 32.♖f1 ♘e5 33.♖xe4 +/-]

30...♖d3! 31.b4?! The previous move was based on this idea. Aronian was hoping for 31...cxb4, but Kramnik found a brilliant idea!

31...♖xe3!! Black gets two very dangerous passers after this great exchange sacrifice. Suddenly, Black has a winning advantage. What a turn in the game! [31...cxb4

32.♕xb6 axb6 33.♖xb4 ♘xf4 34.♖xb6 ♔g7 35.♘g4 += This unpleasant endgame was Aronian's idea.]

32.♖xe3 cxb4 33.♖g3 There was no increment of 30 seconds in the match, and the time pressure made the tasks of both players even harder. [33.♖e1 ♘xf4]

33...e3 Logical move, but White survives. [33...♘e7!! was the winning move. Of course for computers this is an easy one. The next moves of the line are also amazingly hard to find for a human. 34.♘g4 (34.♖xb4 ♕c7 is the idea. White's pieces are really poorly placed, he can not avoid losing big material.) 34...♘f5 35.♖b3 (35.♘xf6 ♘xg3 36.♔xg3 (36.♘xe8 ♘f1+ An important „zwischenzug“!) 36...♖e7 37.♘d5 ♖g7+ 38.♔h2 e3 White can not stop the pawns.) 35...e3 36.♖b1 e2 37.♘xf6 (37.♖e1 b3 38.♘xf6 ♕f2) 37...♖e7 38.♘d5 ♘e3! 39.♘xe7 ♘d1! Black promotes a queen after this nice rank closing combo!]

34.♖xg6 e2 35.♖a1 [35.♖g8+ ♔e7 36.♖xe8+ ♔xe8 37.♖a1 ♕f2 of course was not the way to play for White. The queenside passers decide the game.]

35...♕f2! [But not 35...e1Q?? 36.♖g8+ ♔e7 37.♖xe1+]

36.♖g8+ Aronian logically goes for the b7 pawn. But at the same time, he helps the Black king to support his own pawns. [36.♖xf6+ ♔g7 37.♖d6 e1Q 38.♖xe1 ♖xe1 Black's a- and b-pawns seem more dangerous than the f-g-h trio.]

36...♔e7 37.♖g7+ ♔d6 38.♖xb7 e1Q 39.♖xe1 ♕xe1 40.♘f5+ [40.♖xa7 ♕c6 41.♘f5 transposes to the 40.♘f5+ ♔c6 line.]

40...♔c5 The last move of the time trouble. An inaccuracy. Kramnik could have checked a bit more Aronian's defensive abilities. [On 40...♔c6! 41.♖xa7 b3 42.♘d4+ ♔b6 White has to find the only move to hold the draw. 43.♖a1! (However 43.♖a3 seems to lose after 43...b2 44.♖b3+ ♔c5 45.♘c2 (45.♖xb2 ♔xd4 46.♖b6 ♖e3!! ♕g3 threatens with mate. (46...♕h4 47.g3!) 47.g4 ♕h4 and on g5, Black always has f5.) 45...♕c3! 46.♘a3 ♖a8! 47.♘b1 (47.♖xc3 ♖xa3!) 47...♕d4 48.♘d2 ♖a4! and the ♖b4 idea decides the game. Here is one line to demonstrate: 49.h4 ♖b4 50.♖xb4 ♔xb4 51.h5 ♔c3 52.♘b1+ ♔c2 53.♘a3+ ♔b3 54.♘b1 ♔a2 55.c5 ♔xb1 56.c6 ♕b6 57.h6 ♔c2 58.h7 b1Q Black should win.) 43...♕c3 44.c5+! ♔b7 45.♖b1 ♕xd4 46.♖xb3+ ♔c6 47.g4 and White will be able to exchange the f6 pawn, and hold the draw.]

41.♖b5+! Thanks to this small tactical trick, White forces a draw.

41...♔c6 [41...♔xc4?? 42.♘d6+]]

42.♘d4+ ♔c7 43.♖c5+ Draw agreed after a very interesting battle. We could see that both players had their chance to win the match, but it finished with a 3–3 result after all.[43.♖c5+ ♔b7 44.♖b5+ ♔c7] **1/2**

(3) Sutovsky,E (2700) – Olszewski,M (2539) [B43]

Italian league, 29.04.2012

[Balogh Csaba]

A typical Sicilian battle, with lots of tactical ideas. On the White side Emil Sutovsky, one of the biggest expert of attacking chess.

1.e4 c5 2.♘c3 e6 3.♘f3 a6 4.d4 cxd4 5.♘xd4 b5 We are in the Paulsen variation.

6.♕d3 ♖b6 Black wants to develop his queen to c7, but first he sends away the active d4 knight. This is a well-known motif in this line.

7.♘f3 Theory considers this retreat of the knight as best. [7.♘b3 ♖c7 and; 7.♕e3 ♕c5 are the other mainlines.]

7...♖c7 8.0–0 ♕b7 9.♖e1! White must stay in the center. The game does a good job in showing the ideas of this setup.

9...♕e7 [9...♕c5 is an alternative for Black.]

10.♕d2! In the Sicilian defense, we can sometimes meet with this move. The idea is always the same, White wants to push a4, so he prepares for the b4 response.

10...d6 Black would like to develop his knight to d7 and prepare for ♖f6. [10...b4 11.♘a4 ♘f6 12.c3! bxc3 13.♘xc3 and the rook comes to c1, which is going to be really annoying.; The direct 10...♘f6 would run into the dangerous 11.e5 ♘d5 12.♘xd5 ♙xd5 13.♘g5 when ♔h5 might cause serious problems.]

11.a4! bxa4 Black can rarely be happy with this capture. The optimal answer would be b4, but thanks to the 10. ♙d2 move, White can build a very strong position. [11... b4 12.♘a2 Black is forced to weaken his structure with 12...a5 13.c3 bxc3 14.♘xc3 and the knight on b5 creates big problems.(In this case the direct 14.♔c1! is even stronger. 14...♘f6 15.♙xc3 ♔d8 16.♔b3 White is already close to winning.)]

12.e5! I like this move a lot. White does not want to allow ♘d7 to his opponent. [12.♔xa4 ♘d7 13.♔e2 ♘c5 14.♔c4 ♔d8 would be unclear, if Black manages to finish his development with ♘f6, he is completely fine.]

12...dxe5 [12...♘d7 is met with 13.exd6 ♙xd6 14.♘e4! ♙xe4 15.♙xe4 and White gets the bishop pair. 15...♔d8 16.♔xa4 ♘c5 loses the a nice queen sacrifice. 17.♙a5!! ♙xh2+ 18.♘xh2 ♔xd1 19.♔xd1 ♔c8 20.♔c4 +-]

13.♘xe5 ♘f6 [13...♘d7 14.♙f4 +/-]

14.♔xa4

14...0-0 Black finally managed to finish his development, but as You can see, due to the ♙d2-a4 idea, the rook joins the attack.

15. ♙f4 Strong move, but I feel 15.♔h4 was more principled. The text move cuts the rook from the attack. [15.♔h4!? ♘c6 (15...♘bd7? 16.♙f4! ♔d8 17.♘xd7 ♔xd7 18.♙xh7+ +- wins the queen.) 16.♙f4 ♔d8 and here, from the many good-looking options 17.♔h3 is the one I like the most, with the main idea of ♙xh7 and ♔h5 mate, and ♔g3 might be also very unpleasant.]

15...♔d8 16.♔d4? I don't like this at all. It moves into the ♘c6 move, with tempo. I think Sutovsky had already seen his 18th move and could not resist the temptation. [16.♔e3! ♘c6 17.♔h3! should be a winning attack.]

16...♔e8 17.♙g5 ♘c6! Here comes the idea:

18.♘d5!? Beautiful move, but unfortunately only leads to a draw. [18.♔h4 ♘xe5 19.♔xe5 g6 Black has enough time to reduce the power of the attack.]

18...♘xd4! Only move! [After 18...♘xd5 the nicest part of the game is coming: 19.♙xh7+! ♙h8 (19...♙xh7? leads to a quick mate. 20.♔h5+ ♙g8 21.♔h4 +-) 20.♔h4! (Strange-

ly, White has nothing after 20. ♖h5 ♗xg5! The bishop defends everything from h6.) 20... ♗xg5 Critical moment. Where to jump with the h7 bishop?

21. ♗e4+!! (21. ♗d3+ ♗h6 and on the winning idea 22. ♖c1 ♗g8 23. ♖xh6 Black has 23... f5!! with an extra piece.) 21... ♗h6 (21... ♗g8? 22. ♖h5 ♗h6 23. ♗g4 +-)

22. ♖c1!! An incredibly hard move to find. The idea itself is obvious, but why not 22. ♖d2 ?? The answer is, White must protect his backrank! Who could care about it in this position?... (22. ♖d2 ♗xe5 23. ♖xh6+ ♗g8 24. ♗h7+ ♗h8 25. ♖xe5 Black has 25... ♗a4!! and the same win seen after 22. ♖c1 does not work anymore. White must give perpetual check. 26. ♗d3+ ♗g8 27. ♗h7+ ♗g8 28. ♗f5+ ♗g8 29. ♗e4+ ♗g8 30. ♗h7+ ♗g8 31. ♗h7#)

23. ♖xh6 f5 Here we get the point. We realize why the bishop had to retreat to e4 in the 21st move. 24. ♗xd5! ♗xe5 (24... exd5 25. ♗xc6 +-) 25. ♗xe6+ ♗f7 26. ♖g6 +- White wins.) 23. ♖xh6+ ♗g8 24. ♗h7+ ♗h8 25. ♖xe5 ♗a4 Another very important moment. The Black queen wants to join the battle through f4, how to avoid it? (25... gxf6 26. ♖xh6 +-; 25... ♗f6 26. ♗d3+ ♗g8 27. ♖xf6! gxf6 28. ♖g5+ fxf6 29. ♖xg5+ ♗h8 30. ♖h6+ ♗g8 31. ♖h7#)

26. ♗e4+! ♗g8 27. b3!! and this is why the queen must stay on c1. There is no mate on a1 now. 27... ♖d4 (On 27... ♖b4 28. ♗h7+ ♗h8 29. ♖e4! ♖e7 30. ♗f5+ ♗g8 31. ♖eh4! Nice position, but it still requires accurate moves. 31... g6 (31... gxf6 32. ♖g4+!) 32. ♖h7!! with the idea

31. ♖eh4! Nice position, but it still requires accurate moves. 31... g6 (31... gxf6 32. ♖g4+!) 32. ♖h7!! with the idea

of ♖h6, and on 32...exf5 (32...gxf5 33. ♖h8+ ♔g7 34. ♖h6#) 33. ♖h8+ ♔g7 34. ♖b2+!! Black must push f6, when mate follows.) 28. ♕h7+ ♔h8 29. ♕d3+ ♔g8 30. ♖e4 Here again the same idea: to transfer the rook to the h-file with tempo. 30... ♖c3 (30... ♖xe4 31. ♕xe4 gxh6 32. ♖xh6 f5 33. ♖xe6+ +-) 31. ♖c4! ♖e5

As usual, White can win another big tempo with the bishop check: 32. ♕h7+! ♔h8 33. ♕g6+! This time to g6 33... ♔g8 34. ♖h5!! ♖f6 (34... ♖e2 35. ♕h7+! ♔h8 36. ♖h3 +-) 35. ♕h7+ ♔h8 36. ♖ch4 +- And mate is coming. Wonderful line! Of course, it is quite impossible for us human beings to find it, but we can still enjoy the accuracy of the machines!; 18...exd5 leads to a bad position. 19. ♖xc6 ♖xc6 (19... ♕xc6 20. ♕xf6 +-) 20. ♖xe7 +/-]

19. ♕xf6! ♕xd5! The young Polish grandmaster finds all the only moves! [19... ♕xf6 would lose to 20. ♖xf6+ gxf6 21. ♖g4+! ♔h8 22. ♖h4 f5 23. ♖f6+ ♔g8 24. ♖e3! Black has nothing, other than 24... ♖f3+ 25. ♖xf3 ♖d8 26. ♖h6! ♕xf3 27. ♖xf3 ♖d4 28.c3! ♖e5 29. ♖e3! and White wins the queen or gives mate.]

20. ♕xh7+! Who says A must say B as well!

20... ♖xh7 21. ♖h5+ ♔g8 22. ♕xg7! Destroying all the defenders, although there is nothing more than perpetual check.

22... ♖xg7 23. ♖g4+ ♔h7 24. ♖h5+ [24. ♖e3?? would be too optimistic. 24... ♖f3+! 25. ♖xf3 ♖g8 The king finds shelter on f8 and Black wins the game.]

24... ♖g7 25. ♖g4+ ♔h7 26. ♖h5+ ♔g7 27. ♖g4+ 1/2

— Naiditsch,A (2702) [A61]

Nancy,Rapid, 29.04.2012

[Arkadij Naiditsch]

This is my game from a recent rapid tournament in Nancy. We will see a big fight in the Benoni with many interesting tactical motifs and, of course, a lot of mistakes — which are difficult to avoid when you play with a time control of 15 min + 3 sec.

1.d4 ♘f6 2.c4 e6 3.♘f3 c5 My first attempts to play the „Benoni” went quite horribly wrong. I was simply losing in all of my games. Lately, things are getting better and, of course, it is a great fighting opening to use in rapid chess, especially when You are looking for an open fight against an specific opponent!

4.d5 d6 [4...exd5 would not be precise now. 5.cxd5 d6 6.e4! and White uses a pleasant move order.]

5.♘c3 exd5 6.cxd5 a6 I like to include the moves a6-a4, some players don't, I guess it's matter of taste.

7.a4 g6 8.♗f4 This is already quite a rare move. Usually White plays ♗f4 when Black doesn't include the moves a6-a4.

8...♗g7 9.e3 0-0 [An attempt to trap the bishop doesn't work out well here. 9...♘h5 10.♗g5 f6 11.♗h4 0-0 12.♘d2! This is a typical move for many different kinds of structures. White's next move is ♗e2 or g4, and the knight on h5 is going to face big trouble.]

10.h3 A profilactic move against ♘h5.

10...♘h5 [10...♖e8 11.♗d3 against Black's ♘e4. 11...♘bd7 The attempt to develop the pieces in a „standard way” is not going good. 12.♗xd6! ♖b6 13.♗h2 ♖xb2 14.♖c1! The key move! Now White is doing clearly better. (14.♖c1 ♘g4!)]

11.♗h2 f5 12.♗e2 It's usually hard to say what's the best place for the bishop, e2 or d3. In this position I also think that 12.♗e2 looks very logical and human.

12...f4 In case You play the Benoni, there is no time to lay back! No hesitations are allowed!

13.0-0 [13.e4 ♘d7 and Black is doing very fine.]

13...fxe3?! A very risky move by me. [13...♔e7 would have been the right choice. I was a bit afraid of 14.♔d2 ♕h6! This is the move I underestimated, White is now basically forced to play e4 and the bishop on h2 is almost dead, besides the center is stable — which is definitely a big achievement for Black. (14...fxe3 15.♔xe3! and White has a big advantage.) 15.e4 ♖d7 with a very fighting position.]

14.fxe3 ♔e7 If I was in time to play ♖d7-e5 my position would be very nice!

15.♔h1 ♖d7 Just one move left to get the ♖e5 move.

16.♖d2! Good move by my opponent. White acts with concrete play, now things are getting very sharp.

16...♖xf1+ Before playing ♖xf1 I thought for some time. I didn't know if I should go for the immediate 16... ♔xe3, but this looked too dangerous, so I decided to play the move in the game first.

17.♔xf1 ♔xe3 A dangerous move that leaves White with a big choice of interesting moves, but once again, the Benoni is not the right opening if You want to be safe. [17...♖e5 This move looks more solid, but Black has to face some problems. 18.g4 (18.♕xh5 Usually this kind of move doesn't give White any advantage, Black is in time to develop his pieces nicely. 18...gxh5 19.♖f3 ♕d7 The development is finished. 20.♖xe5 ♕xe5 21.♕xe5 ♔xe5 with a good position for Black. ♖e8 will be the next move, then the exchange of Queens if possible. Only White is taking a risk here.) 18...♖f6 19.♕xe5 ♔xe5 20.♖c4 ♔e7 21.♔f4 ♖e8 22.♔e4 ♔d8 23.♖f1 ♕d7 24.a5]

18.♖c4! [18.♖de4 I spent some time before playing 17...♔xe3, because I could not find what to do against

18.♖de4. 18...♕xc3! But then I found this move, not an easy one. It is hard to give away such a piece. 19.♖xc3 ♖g3+ 20.♕xg3 ♔xg3 21.♕g4 ♖e5! 22.♖e4 ♔h4 With an unclear position.]

18...♖g3+ I'm taking away my opponent's strongest piece, the black square bishop.

19.♕xg3 ♔xg3 20.♖e4 ♔h4 21.♖exd6 ♖f6 I calculated up to this position, and was quite happy with it, waiting for my opponent to play ♖b6.

22.♖b6 And indeed 22.♖b6 was played, I had the feeling that my opponent blundered my next move.

22...♙xh3! A nice and typical tactical idea! Black is sacrificing a piece for a direct attack on the king!

23.gxh3! [23.♘xa8? After the game Tornike asked me what would I have played against 23.♘xa8? and I told him 23...♙f5+ 24.♔g1 ♘g4! Black is winning thanks to the double mate threat on h2 and d4. A very beautiful position!]

23...♖d8! Nothing else seems to work for Black. [23...♖f8 would be a mistake because of 24.♔g2 ♘h5 25.♙xh5 ♖f2 26.♔g4! and of course White is winning, although a move like ♔g4 is not easy at all to see in a rapid game!]

24.♘bc4 What else to do for White?!

24...b5 [24...♙f8 This move was the other option I had considered during the game, but somehow I felt that it looked very unnatural. Maybe it would have been a good option for Black. 25.♘xb7 ♘e4 26.♖a3 ♖d7! This is the key move, Black is attacking the knight on b7 and at the same time preparing to play ♖f7!]

25.axb5 axb5

26.♘xb5! It's hard not to panic with White, all the Black pieces are placed in perfect attacking positions. [26.♘e5?

doesn't give anything for White. 26...♖xd6 27.♖a8+ ♙f8 28.♘g4 h5 and Black is close to winning.]

26...♘e4 27.♖a3 A very logical move — and a mistake. [27.♔g2! ♖f8 28.♔g1!! The computer evaluates this position as almost winning for White. Well, in a practical rapid game, it doesn't look clear at all. And of course, to find 27.♔g2 and 28. ♔g1!! in the next move is very very hard.]

27...♖f8 28.♔g1 [28.♔g2? ♖e1+ 29.♔h2 ♖f2]

28...♘f2+ [28...♙h6!? was an interesting option here, but short on time, I decided to go for more concrete play where I thought, I was almost winning.]

29.♔h2 At first, I thought this move loses for White [29.♔g2 ♖f5! with a very strong attack.]

29...♙h6 [29...♘xh3! Of course, I wanted to play it. 30.♔g4 but after I saw 30.♔g4 I could not find anything for me... too bad, I missed an amazingly beautiful win! (30.♖xh3 ♖f2+) 30...♖f2+ 31.♔h1 ♖f1+! 32.♔h2

32...♖h1+!! This is the move I blundered! 33.♔xh1 ♘f2+ and of course Black is winning.]

30. ♔g2 From here on the game became completely hectic. Both of us had less than 2 minutes on the clock.

30... ♘e4 [30... ♖f5!? was probably the right move here!]

31. ♖f3 ♙f4+ 32. ♔g1 ♘g5? [It wasn't too late to play 32... ♖f5! Again, the right move, why didn't I play it!? :)]

33. ♖a3 ♚e1+ 34. ♙f1

34... ♘e4 [I was afraid of playing 34... ♙h2+ 35. ♔xh2 ♖f2 36. ♔g1 ♖xg2+ 37. ♔xg2 and here I thought I should be clearly worse, but 37... ♚e4+ 38. ♔g1 ♚f4 probably gives Black good drawing chances, even if it looks a bit strange.]

35. ♚e2? My opponent panics and it's hard to blame him, he was short on time and under the attack of all the Black pieces. The cool [35.d6! ♙g3 36.d7 ♙f2+ 37. ♔h2! +- would have probably given the full point to White, even though everything is still more or less open, and there's such a little amount of time left ,til the end of the game.]

35... ♙h2+ 36. ♔xh2 ♖f2+ 37. ♚xf2 ♚xf2+ 38. ♙g2 ♚f4+ 39. ♔g1

39... ♚c1+ 40. ♙f1 ♚f4 41. ♙g2 And we reached a drawn position.

41... ♚c1+ 42. ♙f1 ♚f4 43. ♙g2 ♚c1+ I think it a very interesting game with a lot of tactical motifs for both sides. A typical game in the Benoni! **1/2**

Endgame section

(15) Brunello, Sabino — Caruana, Fabiano

CIS 2012 — Serie Master (3), 28.04.2012

[Chess Evolution]

Black has been better throughout the game, but White fought relentlessly. So it took Black quite some time to reach this winning endgame. Let us take a look at it.

62...e3 63.a7 The only move.

63...xa7! 64.e5 The last chance for White to try to blockade the Black pawns on the black squares. [64.♞xa7 f2+ 65.♔e2 ♔f1 ♕+ 66.♔xf1 ♔d2]

64...f2+ 65.♔e2 We reached a position which doesn't like a simple win, but in fact it is! White has no chance to hold the fortress and the position of zugzwang will arrive inevitably.

65...♔c3 The Black king starts his march to g1.

66.♞g4 ♕b6 A waiting move, now White needs to move the knight away from g4, allowing Black to start the king march.

67.♞h2 [67.♞e5 Wouldn't get anything 67...♔d4 68.♞c6+ ♔e4 69.♞b4 and Black can finish with a nice mating idea. 69...f1 ♕+! 70.♔xf1 ♔f3 71.♞d3 e2+ 72.♔e1 ♕a5+ 73.♞b4 ♕xb4#]

67...♔d4 68.♞f1 ♔e4 White is hopeless and can only watch the Black king going to g1.

69.♞g3+ ♔f4 70.♞h5+ ♔g4 71.♞f6+ ♔h3 72.♞d5 ♔h2! Of course, some level of accuracy is needed. [72...

♔g2? 73. ♖f4+ ♔g1 74. ♖h3+ and White keeps on fighting.]

73. ♖f4 Black wanted to play ♔g1.

73... ♖c7! 74. ♖d5

74... ♔g1! The Black king has reached his final destination.

75. ♖xe3 ♖f4 76. ♖f1 ♔g2 Great technique by the young Italian Super GM! **0–1**

(16) Yu Yangyi (2615) – Wang Rui (2407)

Chinese league, 30.04.2012

[Chess Evolution]

We took this bishop endgame from the Chinese Team Championship. Is it a draw or is it winning? The White king should squeeze out the opponent's king to get access to the pawns. We can quickly realise that it is only possible with the help of zugzwang.

56. ♔a6 ♖g8 Black would like to see the winning plan and starts passing with the bishop. [If Black transfers his king to e7 and, only then, starts the waiting policy: 56... ♔d8 57. ♔b7 ♔e7 58. ♔c7 ♖g8 59. ♖c6 ♖f7 60. ♖d7 ♖g8 61. ♖e6! White can transpose to a pawn endgame with precise calculation. 61... ♖xe6 62. fxe6 ♔xe6 63. ♔c6! f5 (63... ♔e7 64. ♔xd5 ♔d7 65. c4 Due to the paralyzed king-side pawns, the endgame is hopeless for Black. 65... ♔e7 66. c5 dxc5 67. dxc5 ♔d7 68. c6+ ♔c7 69. ♔c5 +-) 64. gxf5+ ♔xf5 65. ♔xd5 g5 66. hxg6 Black has to lose an important tempo to take back the g-pawn... 66... ♔xg6 67. ♔xd6 h5 68. ♔e5! The only way to win! 68... ♔g5 (68... h4 69. ♔f4 +-) 69. d5 h4 70. d6 h3 71. d7 h2 72. d8 ♔+ +-]

57.♔a7 In the next few moves, White is thinking about his plan. This is the right technique, if you have time for everything, don't hurry to a decision!

57...♙f7 58.♙b5

58...♙g8 At this moment, White found the way to win, realising the existence of the zugzwang position.

59.♔a6! The king must stay on a6, we will soon understand why... [59.♙e8 ♔d8 60.♙g6 Now the Black bishop is paralyzed, but Black can block the king's route, using the opposition. 60...♔c7 61.♔a6 ♔c6]

59...♙f7 60.♙a4! ♙g8 61.♙e8! ♔d8 [61...♙h7 62.♙f7! +-]

62.♙g6! ♔c7 63.♔a7! Here we are! Black has to move with his king, but this opens the path for White. Just like in a pawn endgame, White wins with the opposition.

63...♔c6 [63...♔c8 64.♔b6 +-]

64.♔b8! ♔b5 65.♔c7 ♔c4 66.♔xd6 ♔xc3 67.♔e7! ♔xd4 68.♔f8 The poor Black bishop is trapped.

68...♔c3 69.♔xg8 d4 70.♙e8 Black resigned.[It's quite funny that White wins even after allowing Black to pro-

mote a queen. 70.♔xg7 d3 71.♔xh6 d2 72.♔g7 d1♙ 73.h6 +- Black has no chance to stop the h-pawn, while the bishop covers the king from the checks on both sides. But of course, there was no need for such a big amount of „risk“.] **1-0**

Clash of the Titans

(17) Bolbochan, Jacobo – Euwe, Max [E86]

Mar del Plata Mar del Plata, 1947

[Balogh Csaba]

In the next two editions, we will study the games of the 5th World Champion, the one who could defeat Alekhine, Max Euwe. He got to the top of the chess world in 1935 at the age of 34 and kept his title for 2 years, when Alekhine beat him in the rematch.

1.d4 ♘f6 2.c4 g6 3.♘c3 ♙g7 4.e4 d6 5.f3 The Saemisch system of the King's Indian defense enjoys big popularity even in our days!

5...0-0 6.♙e3 Black can choose between several different setups. Theory considers 6...c5 as the best option.

6...e5 7.♘ge2 [7.d5 is the other mainline.]

7...exd4 A rare sideline compared to 7...c6 for example, but don't forget that we are in 1947 now.

8.♘xd4

8...c6 Black's opening strategy is clear. He wants to open the center while the White king is stuck on e1.

9.♙d2 d5 10.cxd5! cxd5 11.e5 The Argentinian Master reacts correctly! This is the only way to fight for the advantage. He creates a blockaded isolated pawn on d5... if he can solve the position of his king, he gets a clear edge.

11...♘e8 12.f4 f6! Of course, Black must try to open the position as quickly as possible.

13.♘f3?! This is a mistake. [The correct way of handling the position was showed by the great Hungarian Grandmaster, Lajos Portisch, 20 years after the current game! **13.e6! ♘c6** (On **13...f5 14.e7 ♙xe7 15.♘xd5 ♙d8 16.♘c3 ♘f6 17.0-0-0** White enjoys a big advantage: his pieces are much better placed and the bishop arrives to c4 soon.) **14.f5!** White blocks the g7 bishop and disturbs the pawn structure. **14...gxf5 15.0-0-0 ♘xd4 16.♙xd4 ♙xe6 17.♙b1!** White sacrificed two pawns and made a silent move. He is much better due to the superiority of his pieces. **17...♘c7** (Opening the long diagonal does not solve the problems. **17...f4 18.♙xf4 f5 19.♙e5 ♙xe5 20.♙xe5 +/-** The king remains vulnerable.) **18.♙d3 ♙d7 19.♙h4 a6 20.♘a4** (The positional **20.♘e2 +/-** followed by **♘d4**

was also good, but the text move is even better.) 20...♔f7 (20...d4 21.♘c5 ♕d5 22.♘xe6 ♘xe6 23.♙c2! was the idea behind 20.♘a4!) 21.♘c5 ♙c8 22.g4 +- White won in an excellent style, Portisch-Bouaziz, Sousse 1967. After this defeat, strong players never repeated Euwe's idea.]

13...♘c7 14.0-0-0 Too brave. White should have preferred castling kingside. [14.exf6 ♙xf6 15.♙e2 ♘c6 16.♖d1 ♖e8 17.0-0 ♕e7 18.♘e5 with counterplay.(Or 18.♙d4)]

14...♘c6! Development is more important than the d5 pawn! White consequently goes for the challenge.

15.♘xd5 ♘xd5 16.♕xd5+ [16.♙c4 would give up the bishop pair. 16...♘ce7 17.♙xd5+ ♘xd5 18.♕xd5+ ♕xd5 19.♖xd5 ♙f5! with more than enough compensation for the pawn. The rooks are joining the battle and ♙e4 is also a threat.]

16...♕xd5 17.♖xd5 fxe5 18.fxe5 [The saying „less pieces, less problems” does not help this time. 18.♘xe5 ♘xe5 19.fxe5 ♙e6 20.♖a5 b6 21.♖a4 ♙xe5 Black wins back the pawn. It's easy to feel the difference between the bishops of each side.]

18...♙e6! Developing with tempo is something that should never be missed. :)

19.♖b5

19...♖ac8! Despite having no queens on the board, the White king is under a serious attack.

20.♙b1? [20.♙d2 The only safe place for the king was f2, even if he needed to run through the board after doing this. 20...b6 21.♙e2 ♖fd8+ 22.♙e1 Here, the computer suggests the subtle 22...♖d5! (22...♙xa2 =+ Black can, of course, take back the pawn at any moment.) 23.♖xd5 ♙xd5 24.♙f2 ♘xe5 with a big advantage.]

20...♖xf3!! Great tactical idea! We soon understand why Euwe eliminated the knight. [20...♙f5+? 21.♙a1 White is fine.]

21.gxf3 ♙f5+ 22.♙c1 [And now on 22.♙a1 Black has 22...♘d4!! It is over now, that was the reason for the exchange sacrifice.]

22...♘d4+ 23.♙d1 ♘xb5 24.♙xb5 ♙xe5 Black restored the material balance and preserved the superiority of his pieces.

25.b3 [On 25.♙xa7 Black has a very strong response with 25...♙f4! 26.♖e1 ♖c1+ 27.♙e2 ♖c2+ 28.♙f1 ♙h3+ 29.♙g1 ♙xh2+ 30.♙h1 ♙g3 Everything was more or less forced, and now the h-pawn joins the attack and decides the outcome of the game.]

25...♖c2! Activity is the most important factor!

26.♙c4+ ♔g7 27.a4 ♖a2 From now on, we can enjoy the spectacular domination of the Black pieces.

28.♖e1 ♙c3! Euwe does not give a chance for counter-play.

29.♖f1 [29.♖e2 ♖a1+ 30.♙c1 ♙b4! followed by ♙a3.]

29...♖xh2 30.♙xa7 ♖d2+! Black wins a tempo due to the mating net.

31.♔c1 ♖a2 32.♔d1 h5! There is nobody that can stop the h-pawn!

33.f4 ♙c2+! Improving the bishop with the same mating net trick.

34.♔c1 ♙e4 35.♔d1 h4 And White resigned! A nice game by Euwe, showing a great use of the activity of his pieces. **0-1**

Editorial Preface

A great month of chess is ahead of us. The Gelfand-Anand WCC match, a super-tournament in Malmo, the US Championships, the Capablanca Memorial. All events of high interest and great chess!

In the current 11th issue of CEWN, we made a little exception: instead of the usual 4 games from the past week, we selected only 3, and Balogh Csaba commented his game from 2011 against Delchev — it was a request from a CEWN subscriber.

In the current issue, we advise You to pay more attention to the endgame section, we have put together a very interesting one this time.

Dear subscriber, in case You have a special request, or a wish too see a commented game of one of your “heroes”, please don’t hesitate to drop us an e-mail. We cannot promise to fulfill every wish, but we will try.

As usual, we wish You a lot of fun with the CEWN Nr 11!

*Arkadij Naiditsch

4 best games of the past week

(1) Caruana, Fabiano (2767)
— Genov, Petar (2463) [B12]

TCh-ITA 2012 Arvier ITA (5), 30.04.2012

[Arkadij Naiditsch]

We will be now spectators of a great game by the current number 7 in the World showing us how to crush the Caro-Kann. Fabiano demonstrates many typical ideas with his almost perfect play! This game is like a lecture!

1.e4 c6 2.d4 d5 3.e5 ♟f5 4.♟f3 e6 5.♟e2 ♟e7 6.c3!?

This is Caruana's specialty! The position is not easy to play at all! There are many tricks that we will discover in the coming moves. [6.0-0 is another main line here.]

6...♟d7 7.0-0 [Can White give an early try to exchange the bishop on f5?! 7.♟h4 ♟e4! . Black should not give the bishop away for "free" 8.♟d2 ♟g6! . Here we see a typical "Caro-Kann trick". 9.♟xe4 (9.♟hf3 ♟f5 and Black managed to save the bishop.) 9...♟xh4 10.♟g5 ♟xg2+ 11.♟f1 ♟b6 with a very unclear position.]

7...♟c8 This move has pros and cons. The con is that after c6-c5, Black will be never able to develop the knight nicely to c6. The pro is that White can't play ♟h4 anymore.

8.♟bd2 ♟e7 Black managed reach a very solid position, ♟h4 doesn't work anymore. Black will try to use this time to castle short, play c5, and have a very normal position.

9.♟e1! A very strong move by White with a "double" idea! He wants to play g4 followed by f4-f5, and at the same time, the ♟d3-f4 maneuver is always possible.

9...♟g6?! The first clear inaccuracy. [9...h6 10.g4 ♟h7 11.f4 ♟b6! would lead to a slightly worse, but normal position for Black.]

10.♟d3 If the first idea doesn't work, you always have the second one :).

10...c5 11.♟f4 cxd4 12.♟xg6 White completed his first mission, to exchange the knight for the strongest Black piece, the White square bishop.

12...hxg6 13.cxd4 In this position, White is doing a bit better — maybe even more than a bit better. His idea is clear, to block the queenside, and try to develop some

play on the kingside. Caruana is doing it impressively good.

13...♔b6?! Probably, this move is not really necessary for Black. [13...a6 14.♘f3 ♘a7 The Black knight's place is on c6, and Black should get there as soon as possible.]

14.♘f3 a6 Finally, the right plan.

15.g3! Against the Black pawn structure with d5-e6-f7-g7-g6, it is very good to put the pawns on g3-h4!

15...♘a7

16.h4 The second part of White's plan is done: the pawn structure is perfect. Now it is important not to give Black any counter play on the queenside.

16...♖c8 17.♖b1 A very good preventive move. White is not in a hurry to play b3 or a3, which would immediately create a weakness in the pawn structure. He prefers to stay flexible.

17...♘c6 18.♔g2 ♘b4 Black has basically no plan. To castle short is always too dangerous because White's ♖h1 and h5.

19.a3 ♘c6 Black managed to create a little attacking spot on White's pawn structure, but lost 2 moves doing this ♘b4-c6 maneuver.

20.♙e3 ♘a5 21.♘d2! and White is again just in time to block the b3 and c4 squares.

21...♔c7 Now we can clearly see that 13...♔b6 was not the best Black could do.

22.♙d3 Now that everything is "safe" on the queenside, White starts with the final step — to attack the Black king.

22...♘c4 23.♔g4 We can immediately see how dangerous Black's position suddenly is. Now Black has to be always very careful with moves like ♙xg6, or ♖h1 and h5.

23...b5 [23...♘xe3+ 24.fxe3 would only lead to a deadly attack for White. Black has no "entry" path on the queenside.]

24.♘f3! White is bringing another piece into the attack, now ♙xg6 is already a threat!

24...♘db6 25.♙g5 Another good move by White. The Black knights are standing very nicely, but are quite useless! White doesn't only have the attack options now, but

also b3 could be a very dangerous for Black in the right moment.

25...a5 This move allows White to finish the game in style. [25...♔d7 26.♖h1 with a big advantage for White.]

26. ♗xg6! The beginning of Black's end.

26...fxg6 27. ♔xe6 a4 It is amazing, but Black has no moves! White just wanted to play b3 and after ♗xa3 win the game with ♖bc1. Black is totally paralyzed.

28.b3! +- A nice finishing move! White brings another piece into the attack.

28...axb3 [28...♗xa3 29.♖bc1! ♔d7 30.♔xg6+ ♔f8 31.♗xe7+ ♔xe7 32.♔xb6 +-]

29. ♖xb3 And the rook will end the game soon with the ♖f3 check. Funny to see a rook from a1 on f3 in a Caro-Kann!

29...♔d7 30. ♔xg6+ ♔f8 31. ♖e1 Bringing the last piece into the attack. Great, and very cool, play by White.

31...♗xg5 This move loses immediately, but other choices would just make the game longer, without any effect on the result.

32. ♗xg5 ♖h6

33. ♗h7+! A great game by White! **1-0**

(2) Postny,E – Stojanovic,D [D19]

Saraevo, 07.05.2012

[Balogh Csaba]

A very interesting game from Sarajevo. White sacrificed a pawn to get the bishop pair. Almost during the whole game, he had to play with a material disadvantage, but the activity of his pieces gave very strong compensation. The position was really sharp, so we will see serious mistakes from both sides.

1.d4 d5 2.c4 c6 3.♘f3 ♘f6 4.♘c3 dxc4 5.a4 ♙f5 The Slav defense with 5... ♙f5. This is the mainline, but recently we see more often 5...e6.

6.e3 [6.♘e5 is the other option for White, which usually leads to a more sharp game.]

6...e6 7.♙xc4 ♙b4 8.0-0 0-0 9.♙e2 We are at the beginning of the line, Black has a wide choice of moves now. It is a matter of taste to choose one or another.

9...♙g4 [Theory considers 9...♘bd7 to be the main move 10.e4 ♙g6 11.♙d3 ♙h5 12.e5 ♘d5 13.♘xd5 cxd5 14.♙e3 with many games, even on the highest level.]

10.h3 ♙xf3 11.♙xf3

11...♘bd7 Black gave up the bishop pair, but has a very solid position. His future plans are connected with the e5 and c5 pushes, while White should try to play e4 in the right moment to open the diagonal for the c1 bishop, and gain space in the center.

12.♙d1 [12.e4 is premature because of the standard reaction 12...e5!]

12...♙c8 The most frequent move used in practice. Black prepares for the c5 break. [12...e5 was played by Carlsen in 2008, but after 13.d5 ♙xc3 14.dxc6 e4 15.♙e2 ♙e5 16.cxd7 ♙e7 Black usually has to suffer for a draw against the two bishops, and he has no chance to win at all.]

13.♙e2 White prepares for the e4 push, but it seems to be too slow. [13.e4 e5! 14.♙e3! is the critical line, Black has to show some new ideas, because the previous games gave an advantage for White.(14.dxe5 ♘xe5! was the tactical explanation of the move.)]

13...♙e7 This is the novelty in this current game, but I think it was not a good one. It's always a big question for Black in the opening, where to develop his queen, to a5 or e7. Due to concrete lines, we will see that 13...♙a5 was preferable in this situation. [13...♙a5 14.♘a2 ♙e7 15.♙d2 ♙c7 16.b4 e5 17.♘c1 ♘b6 18.♙b3 e4 19.♙e1 ♘bd5 20.♘e2 ♙d6 Black was fine in Ljubojevic-Bareev, Monte Carlo 2003 rapid game.]

14.♙b3 Another slow move. White does not use his chance to punish his opponent for the previous inaccurate move. [14.e4! was correct, and on the standard 14...e5 15.d5 ♘b6 16.♙b3 cxd5 White has the important 17.a5!]. If White to take with the knight on d5, he obtains a clear

advantage, while after 17...♙xc3 18.bxc3 White wins an exchange with ♙a3!]

14...e5 This is the sharp way to handle the position. [14...c5 was safer.]

15.dxe5 ♙xe5 16.♙c2 Only the e4, f4 and e5 idea could give an advantage, but it needs serious preparation. The c3 pawn is indirectly defended now.

16...♘b6 [On 16...♖fe8 White plays the same plan as in the game 17.e4 ♙xc3 18.bxc3 ♘c5 19.f4 ♙xc3 20.♞a3! ♙b4 21.e5! with very strong compensation for the pawn. The rook on g3 joins the bishops for the attack.; 16...♙xc3?! 17.bxc3 ♙xc3? is a big mistake, because of 18.♙b2! ♙a5 (18...♙xb2? 19.♙xh7+ +-) 19.♞xd7! ♘xd7 20.♙d3! +- . This is the point.]

17.e4! No choice, White has to play this move, even if it costs him a pawn.

17...♙xc3 18.bxc3 ♖fe8 Well played! Black prepares for central actions. [18...♙xc3 19.♞b1 and ♙b2 is coming next with more than enough compensation.]

19.f4! ♙xc3 We have reached a critical moment in the game:

20.♞a3? It is logical to throw the rook into the attack, but it moves into concrete tactical ideas. As we will see, the a3 rook becomes vulnerable. [20.♞b1! with a really unclear situation. I personally prefer White, but the machine suggests unnatural moves that balance the evaluation.]

20...♙c4 [20...♙c5+!? was very strong as well, with the idea of 21.♙h2 ♘bd5! and it is hard to deal with the different threats of the knight on c3 and f4. 22.e5 is met with 22...♘xf4! 23.♙xf4 ♙xa3 Black takes too much material.]

21.♙d3 ♙c5+? Black included the ♙c4-Bd3 maneuver into the 20...♙c5 and ♘bd5 idea, but it gives an extra possibility for White! [21...♙d4+! was logical and strong, to keep the pressure over the e4 pawn 22.♙e3 ♙b4! with a double attack on e4 and a3.]

22.♙h2 ♘bd5 23.e5! ♘xf4 [23...♘d7 24.♙e4 with an attack.]

24.♙xf4 ♙xa3 25.♙f3! This is the point! White leaves the pin of the rook and pins the queen himself. Black is forced to give up his knight, but he still maintains some material advantage.

25...♙e7 26.exf6 ♙xf6

27. ♔g3! How to evaluate the position? Black has a rook and three pawns for the two bishops, but the presence of the queens and the d1 rook on the board gives very good attacking chances for White. As we will see, Black has serious difficulties to defend.

27... ♖e6 Black would like to control the open files. He wants to play ♖cd8, which was not possible before due to ♗g5.

28. ♗c2! Very strong move! White wants to transfer his bishop to b3, where it could create decisive threats on f7 with the help of the rook.

28...c5 In order to have c4 on ♗b3.

29. ♖d6! Improving the pieces to the maximum!

29... ♔e7 [29... ♔e1 The exchange of the queens does not save Black. The power of the bishops would tell in the endgame as well. 30. ♔xe1! ♖xe1 31. ♖d7 +/-]

30. ♗d3! Forcing weaknesses and preparing for ♖d7.

30...g6 31. ♖d7 ♗f6 32. ♔g3! Powerful play by White. He had to get away from the ♖cd8 threat. The exchange of the rooks would have eased Black's task a lot. White wins a pawn now.

32...c4 [32...b6 33. ♖xa7 +/-; 32... ♔c6? 33. ♖d6 +- wins the queen!; 32... ♖e7? 33. ♗g5 +-]

33. ♖xb7 Materially, Black is still fine, but his main problem with the bishops and the rook are still not solved.

33... ♖e2 34. ♗d1!

34... ♖e4 White played excellent chess in the last stage of the game and obtained a winning position, but it took all his time. In the time trouble he makes a serious mistake, which remained unpunished by his opponent.

35. ♗d6?? Black gets a sudden chance. [35. ♗h6 c3 (35... ♔e5 36. ♔xe5 ♖xe5 37. ♖xa7 +-) 36. ♖xa7 +- White is completely winning. The Black king is too weak under the pressure of the bishops. Black can not promote his c-pawn due to the weak back-rank.]

35... ♔f1? But he missed it. Now, White is winning again. [35...h5!! Incredible, but suddenly Black is better. What a turn of it would have been. White can not hold the h2-b8 diagonal after the threatened h4 move. 36. ♗xh5 (36. ♗b4 h4!) 36...c3! is the point. White does not have ♗b3 anymore.; Not 35...c3 36. ♗b3 +-]

36. ♖f3 ♜e6 37. ♙d5 [37. ♞f4 +- would lead to immediate resignation.]

37... ♜f6 38. ♙e5 ♜f5 39. ♙e4 ♜f2 40. ♞g5 Black can not hold the threats, ♞h6 is the idea now.

40... ♞e2 Tricky move against 41. ♞h6, but after move 40, White got some extra time, so he was able to find a way to win.

41. ♜c7!? White wants to play ♙d4-♞e5, which was not working immediately. [41. ♜d7 +- was the most precise according to the computer.; 41. ♞h6? ♜xg2+! was the idea. 42. ♙xg2 ♞xe5+; 41. ♙d4?? ♞xe4 42. ♙xf2 ♞xb7]

41... ♜f8 [41... ♜xc7 42. ♞d8#]

42. ♙d4! Black loses a huge amount of material.

42... ♞xe4 [42... ♜f1 43. ♞e5 +-]

43. ♙xf2 This is the first moment in the game when it is White who enjoys the material advantage. This is of course a decisive one.

43... ♙c3 44. ♜xc3 ♞xa4 45. ♞f6 An interesting game! **1-0**

(3) Iordachescu Viorel (2643) — Shanava Konstantine (2596)

Naxcývan OPEN Naxcývan — AZERBAIJAN (3), 30.04.2012

[Arkadij Naiditsch]

A very interesting and fighting game in the "Pirc". At first, it looked like White was taking over, then Black came back, but with the sacrifice of a piece, White managed to develop a deadly attack. From there on, all moves were perfect. A very useful game to collect some new ideas and plans.

1.e4 g6 The Georgian player Konstantin Shanava is a big specialist in the "Pirc".

2.d4 ♙g7 3. ♘f3 White chooses the 3. ♘c3 move more often.

3...d6 4. ♙e2 ♘f6 5. ♘c3 c6 6.0-0 0-0 7. ♜e1 We are in a more or less "safe" position. White has a bit more space due to his pawn structure. As usual, in the "Pirc", Black will try to compensate by playing ♞bd7 and e5, or b5-b4.

7... ♜c7 A dangerous move. [7... ♞bd7 looks more typical and logical to me. 8.e5! The only way to avoid Black from playing e7-e5, after which Black's position should be fine.

8...dxe5 9.dxe5 ♘g4 10.e6 White can not hold the pawn on e5, so he employs a typical sacrifice. 10...fxe6 We face quite an unclear position. The pawn on e6 will fall, but now the Black bishop on g7 is very strong, and compensates for a lot of Black structural minuses.]

8. ♖f4 ♘bd7 9.e5 ♘h5 The most fighting move! [Doesn't seem to work 9...dxe5?! 10.♘xe5 (Of course not 10.dxe5 ♘h5 and White loses the pawn on e5.) 10...♘xe5 11.dxe5 ♘d5 12.♘xd5 cxd5 13.♔xd5 and it looks like White should be doing better.]

10. ♖g5 [10.exd6 would lead to no advantage for White. 10...exd6 11.♖e3 ♘b6 and Black should be OK.]

10...dxe5 The beginning of a sharp position.

11. ♖xe7 ♖e8

12.d5! Maybe this is the first critical moment of the game.

12... ♖f6? In my opinion this is a big mistake, Black should never give up his "beauty". [12...♘b6! looks quite interesting. 13.d6 ♔d7 and even though White's position looks quite dominating, it is by far not that clear. In case Black manages to play ♔e6 or ♔f5, followed by ♖d7, it would be not clear who is doing better ... The bishop on e7 is

standing very pretty, but on the other hand, the Black pieces could go "around" him, and after ♔f5-Bd7, the e7 bishop could become a target with ♘c8 coming next.]

13. ♖a3?! Not a bad move, but it's too "slow". [Looks much more energetic to play 13.d6! 13...♔b6 14.♖xf6 ♘hxf6 15.♖c4! . White is trying to make use of Black's bad development, and a clearly weak king — his main guardian is gone from g7. 15...♔xb2 16.♔d2 and in my opinion, White should be able to create a very dangerous attack.]

13... ♘f4 [13...e4 would be the wrong moment to open the position for Black. 14.d6 ♔b6 15.♖c4 White is doing clearly better.]

14.d6 ♘xe2+ 15. ♔xe2 ♔d8 White's position is looking clearly better, but things are not "clear" at all. Black got the bishop pair, and the knight on d7 is a great blockading piece. Most likely White is doing better, but not "much" better at all.

16. ♖ad1 ♖g7 17.h4 [17.♘e4 h6 18.♘g3 with the idea of h4-h5 would have been another option for White. It is clear that the Black king is the target for White.]

17...a5! Black starts a tricky development on the queen-side.

18. ♘e4 b5

19.b3?! This logical move probably lets the rest of White's advantage slip away. [19.c3!? Same idea — but a better version.]

19...f5 20.♘g3 ♙a6? This is a big mistake. [Black could have tried to play the very risky 20...e4 21.♘d4 ♙xd4 . It's never a good feeling to give away the bishop from g7. 22.♖xd4 ♙xh4 Black is a pawn up, but after 23.♙b2 all the black squares are very weak and White has clearly more than enough compensation for the lost pawn.; 20...a4! After this move, it wouldn't have been easy for White to find a good move, at: 21.♙b2 axb3 22.axb3 ♖a2 23.♙a1 ♘f6! Black would be suddenly the one that gets the active pieces.]

21.♙b2 e4 22.♘d4 [22.♙xg7 exf3 23.♙d2 ♙xg7 24.♖xe8 ♙xe8 25.♖e1 ♘e5]

22...♙b7 In this not that clear looking position, Whites starts to play just great! [22...b4 23.♙d2 ♙b7]

23.♘dxf5! [23.c4 would probably leave White with some advantage as well.]

23...♙xb2 [23...gxf5 24.♙xg7 ♙xg7 25.♘xf5+ is, of course, just losing for Black.]

24.♘e7+ ♖xe7 Black needs to give back some of the material. [If Black plays 24...♙h8 25.♘xe4 White gets a deadly attack.]

25.dxe7 ♙xe7 26.♘xe4 ♘f8 [Also doesn't help 26...♙g7 27.♘d6! and White exchanges the queens, but due to the very unlucky position of the Black pieces, White is in time to make use of it. 27...♙xe2 28.♖xe2 The bishop on b7 is hanging. The White rook will go to e7 next. Black can't hold such a position for a long time..]

27.c3! White is playing just perfect, no reason to be greedy now and play [There's no reason to be greedy now and play 27.c4?! ♙g7 28.cxb5 cxb5 29.♙xb5 and even though White is better, Black has chances to get the draw.]

27...♙a3

28.♙f3! Another great move by White! ♘f6 is threatened now.

28...♙f7 The only move that doesn't lose immediately.

29.♙g3! Now ♘d6 or b4 is threatened. At 29...♙e7, 30.♙c7 is coming!

29...♙g7 30.b4! White is uses the fact that after 30...axb4? 31. cxb4 ♙xb4 32. ♙b3! check, and the bishop on b4 falls.

30...♔h8 31.♚d6 The finishing move of White's great sequence! Black is totally paralyzed, the bishop on a3 is out of the game and all the White pieces are just standing perfectly. The direct threat now is ♘g5.

31...axb4 32.cxb4 c5 Black starts to give away the material, but what to do?! It is better to die fighting!

33.bxc5? [33.♘xc5! ♙xb4 34.♖e7 would finish the game immediately.]

33...♖c8 [33...♖a6 would leave Black some chances — of course, the position is very bad.]

34.♚d3 Probably both players were already in big time trouble.

34...♙xe4? [34...♙xc5 and again, it would not be so easy for White to bring home the full point.]

35.♚xa3! White is has 2 pawns and a rook for 2 Black's pieces, which gives him a small metrial advantage. But the dangerous position of the Black king, plus the perfect position of White's pieces, finish the game quickly.

35...♙b7 36.♖d6 g5 37.h5 g4 38.h6 ♚c7 39.c6 It was too much even for Shanava:). A nice fighting game! **1–0**

(4) Balogh,Cs (2662) – Delchev,A (2628) [C41]

European Team Championship, 11.11.2011

[Balogh Csaba]

Listening to the wish of one of our subscribers, I would like to present you my game against Delchev from last year.

1.e4 d6 2.d4 ♘f6 3.♘c3 e5 4.♘f3 ♘bd7 This is the so-called Philidor defense. The opening is a bit passive, but it requires careful handling by White, otherwise Black can "jump out" and create very strong counter play.

5.♙c4 ♙e7 6.0–0 0–0 7.a4 White prolongs the decision of playing the setup with ♖e1 or the one with ♚e2-Rd1. Anyway on 7...c6 or 7...a6, White has to prevent b5, so it is just a transposition.

7...a6 [7...c6 8.♖e1 Here Black has a choice between 4–5 more or less equivalent moves. The main one is 8...b6 which could lead to our current game through a different move order... 9.♙a2 a6 10.h3 ♖b8 11.♙e3]

8.♖e1 I think this is the right place for the rook, and not d1 after ♚e2. At least I prefer this one.

8...b6

9.h3 A very useful move. White prepares to develop the bishop to e3. [In my previous game, I played the other setup, but after all, I believe it is less effective 9.b3 ♘b7 10.♘b2 c6 11.♘d3 ♖e8 12.♞e2 . This is the point of the 9.b3 system. White plays the position like in the Ruy Lopez and transfers the knight to its ideal g3 square. Black has enough time to make the correct regroupings as well, and equalizes. 12...♙f8 13.♞g3 g6 14.c3 ♔c7 15.♚c2 ♙g7 = Black has also reached his optimal position. He is ready to push d5. Balogh-Alvarez Pedrasa, Pamplona 2010.]

9...c6 Black's idea is to gain space with ♖b8 and b5. [On 9...♘b7 I consider 10.d5! to be the strongest move, in order to close the bishop. White enjoys a huge space advantage and starts to organize his play on the queenside. Black's position is cramped, he can only hope for some counter play on the kingside, but in my opinion, it is quite harmless. A possible plan could be ♙f1, with the idea of a5 and on b5, ♞a2-b4 and c4.]

10. ♙a2 A very useful move to avoid giving b5 with tempo. It prepares again for ♙e3, which could have been met with ♞xe4 ♞xe4 and d5, fork. This is a typical trick of the Philidor.

10...♖b8 [10...♘b7 The bishop stands better on c8, where it controls the f5 square. White should immediately use this inaccuracy. 11.♞h4! with the idea of ♞f5. The other typical tactical trick with 11...♞xe4 does not work, because of 12.♞xe4 ♙xh4 13.dxe5! (but not 13.♞xd6 ♙xf2+! 14.♙xf2 ♚f6+ 15.♙g1 ♚xd6) 13...dxe5 (13...♞xe5 14.♚xd6 +/-) 14.♚g4 with a winning attack.]

11. ♙e3 b5 12.axb5 axb5

13.b4! This is a very important move to stop b4. After this, I don't see how Black could equalize. He might have two plans, one is to play for the d5 push with the idea of ♙xb4, but this idea somehow never works tactically. The second one is to try to make use of the weakening of the c4 square, this is what my opponent tried. In both cases, he must overprotect the e5 pawn first.

13...♚c7 14. ♙b3 Improves the piece and opens the a-file for the rook. There are 18 games in the database with terrible statistics for Black.

14...♞b6 [The central break with 14...d5 is met with 15.dxe5! ♞xe5]

a) 15...♞xe4 White has the very strong 16.♖a7! ♙b7 (16...♞xc3 17.♖xc7 ♞xd1 18.♖xd1 ♙xb4 19.♖xc6 +-) 17.♞xe4! dxe4 18.e6! exf3 19.♚xd7 +- with a winning advantage. 19...♚xd7 20.exd7 ♙xb4 21.♖d1 Black can resign.;

b) On 15...♙xb4 16.exf6! ♙xc3 17.fxg7 ♖e8 18.exd5 +- Black collapses.; 16.♞xe5 ♚xe5 17.♙d4 +/- and White takes on d5 the next move.]

15. ♔d3! Logical development, controlling the c4 square. It is quite hard to suggest an idea for Black due to his space disadvantage.

15... ♕d7 Logical, but takes the d7 square from the knight. White immediately makes use of it!

16.dxe5! dxe5 17. ♕c5! The position has opened up a little bit, now we can clearly see the superiority of the White pieces, especially the difference between the light-squared bishops.

17... ♕e8 Ugly move, but it was hard to advice something better. It frees the d7 square for the knight. Actually, only this was the novelty of the game, but we both already spent about 1–1 hour. [17... ♖fe8? loses right away 18. ♘g5!; 17... ♕xc5 18.bxc5 ♘c8 19. ♘a2 +/- Black has no moves.]

18. ♖ed1 A small mistake, which gives my opponent some “freedom”, after exchanging a pair of rooks. The idea itself, that the e-rook should occupy the d-file, was correct. The a1 rook can penetrate sometimes on the file. [18. ♕e3! was better 18... ♕xc5 19.bxc5 ♘c8 (After 19... ♘bd7 Black cannot move his pieces.) 20. ♘a2 ♘e7 21. ♘b4 +/-]

18... ♖d8 19. ♔e3 ♖xd1+

20. ♘xd1! There was only one piece that could be improved, the c3 knight. Now it is heading to d3!

20... ♘c8! Black finds the only chance to transfer his knight to g6.

21. ♘b2 ♕xc5 22.bxc5 White should not be afraid of the doubled pawns, because it limits the movement of Black's pieces. In addition, White gets the b4 square for the knight.

22... ♘e7 23. ♘d3 ♘g6

24. ♖a8!? I set up a small trick... I knew, that my opponent would be happy with any kind of exchanges, since it improves his chances to survive. As the principle says, “don't exchange pieces if you have a space advantage”. With this seemingly illogical move, I invited him to exchange a pair of rooks, but as we will see, it falls to my trap.

24... ♕d7?! Delchev falls into my idea. [24...h6 should have been played, but White has an obvious advantage anyway. 25.c4 bxc4 26. ♕xc4]

25. ♖xf8+ ♔xf8 26. ♘fxe5! This was the trick! White takes the most important pawn. I thought, that the game

was over, but Delchev found a way to restore the material equality.

26...♞xe5 27.♔f4 ♚e8! 28.♞xe5 ♔e7 White cannot protect the c5 pawn, but suddenly an attack against the king creates huge problems.

29.g4! ♔xc5 Invites me to make a spectacular combination, which would spoil the win. However there was another solution... [29...g6 30.♔g2 +/-; 29...h6 30.h4 +-]

30.g5! ♞h5 31.♔f5! White creates too many threats. The knight checks or ♚xf7 would decide the game. [31.♔xf7+ wins a pawn, but 31...♚xf7 32.♞d7+ ♔e7 33.♞xc5 ♚xb3 34.♞xb3 ♞f4 and Black gets very good drawing chances.; 31.♞d7+ ♔e7 32.♔xf7+ is the same as 31.♔xf7]

31...♔a7? This loses in a nice way. [31...♔d4 would have been the only move, but White has a clear advantage anyway after 32.g6! (But not 32.♚xf7? because 32...♞g3! would save the game!) 32...♔d1+ 33.♔g2 hxg6 34.♞xg6+ ♔g8 35.♞e5 +/-; 31...♔d6 32.♞xf7 +-]

32.g6! The pins are deadly.

32...♞f6 [32...hxg6 33.♞xg6+ ♔g8 34.♔xh5 +-]

33.gxf7 ♚d7 Of course, there are many different wins, but the nicest was definitely:

34.♔xh7!! I must admit that it was really a good feeling to be able to finish the game with this move. I rarely have the chance of doing such things.[34.♔xh7 ♞xh7 (34...♔a1+ 35.♔g2 ♔xe5 36.♔h8+ ♔e7 37.f8Q#) 35.♞g6#] **1-0**

TCh-ITA 2012 Arvier ITA (2), 28.04.2012

[Chess-Evolution]

34...♞e5 We are in a very interesting endgame. It is clear that White has very good winning chances. On the other hand, it is not an easily winning position, the Black's b-pawn is giving him some counter play.

35.f4 This move gives Black very good chances for a draw. But, how to win here? Does White have a better choice? [35.f3! looks much stronger, but at the same time, it's not easy to see a clear winning plan. 35...♞c7! Only move, Black needs to get his king to d6. 36.e4

a) 36.d6+ ♞d7 37.f4 (37.e4 ♞f7) 37...♞f7 38.♙xb7 ♞xd6 39.♙d5 ♞e7 and again, Black has good drawing chances;

b) 36.g4? The attempt to get free central pawns is not working either. 36...fxg4 37.f4 b6+ 38.♞d4 ♞f3+! and already Black is winning.; 36...♞d7+ (36...fxe4 37.d6+!)

37.♞d4 fxe4 38.fxe4 ♞d6 39.♙f1 ♞e5 and probably the position is a draw!; 35.♞d4 ♞d6 36.e4 Doesn't seem to bring White anything good either. (36.♙f1 ♞f3+ with a draw.) 36...fxe4 37.♙xe4 ♞g4! It's very important for Black to bring the knight to f6. 38.f3 ♞f6 39.g4 b5 and probably the position is a draw.; 35.♙f1 ♞g4! Black is winning a pawn. 36.♙b5+ ♞e7 37.d6+ (37.f3 ♞xe3 38.♞d4 f4! The only saving move, if White would manage to put his king on e5, the game would be over.) 37...♞e6! Black's position looks very dangerous, but everything seems to work out. 38.♙c4+ ♞d7 39.♙b5+ ♞e6 40.f3 ♞xe3 41.d7 ♞e7 42.♞b6 ♞d8 and again, White has reached nothing more than a draw.; 35.e4! ♞d3+! The only move to keep on fighting. (35...fxe4 36.♙h3+! followed by ♞d4, and it seems that White should win here.) 36.♞d4 fxe4 37.f4 ♞f2 38.♞e3 (38.♙xe4 ♞xe4 39.♞xe4 h5) 38...♞g4+ 39.♞xe4 ♞d6 and again, Black has good chances to make a draw.]

35...b6+? A terrible mistake [35...♞d3+! This move would probably give Black a draw. 36.♞d4 ♞f2 37.e4 White needs to do something, if Black manages to play ♞d6, everything should be fine. 37...fxe4! (Losing is 37...♞xe4? 38.♙xe4 fxe4 39.g4! not allowing Black to fix the structure with h5.) 38.♞e3 ♞g4+ 39.♞xe4 ♞d6 with good drawing chances.]

36.♙xb6 [36.♞d4!? ♞f7 (36...♞g4 Black is not in time for the usual maneuver ♞g4-f6. 37.e4! +-) 37.e4 fxe4 38.♙xe4 ♞d6 39.g4 The Black knight should be on f6 and the king on d6. The combination of ♞d7-Nd6 doesn't give Black big hopes. White is winning.]

36...♞c4+ 37.♞c5 ♞xe3

38. ♖h3! It looks like Black got some drawing chances here, but that's not the case, the position is totally winning for White. Why?! Because all the Black pawns are standing on White squares, making them easy target for the bishop. White only needs to get the bishop to g8.

38... ♖d1 White wanted to play ♖d4-e5 with a winning position.

39. ♖f1 ♖f2 40. ♖g2 [40. ♖b5+ ♖d8 41. ♖d4 ♖h1 42. ♖e5 ♖xg3 43. d6 and White is winning because Black can not hold the pawns h7-g6-f5. White will play ♖c4-g8 or ♖f6-g7.]

40... ♖g4 41. d6 ♖f6 42. ♖f3? This move is a bit strange... and practically gives Black a draw. [42. ♖d5 ♖h5 43. ♖c6+ ♖d8 44. ♖d5 ♖xg3 45. ♖e5 Seems to win immediately because Black has no defense against the maneuver ♖d5-g8.]

42...h6? [42...h5! could have been Black's last chance 43. ♖d5

43... ♖e4+!. This is why the h5 move is necessary. 44. ♖xe4 fxe4 45. ♖d4 ♖xd6 46. ♖xe4 ♖e6 with a drawish pawn endgame.]

43. ♖c6+ ♖e6 44. ♖g2 ♖d7 45. ♖c6+ ♖e6 46. ♖g2 ♖d7 After repeating moves twice, finally White makes the right choice.

47. ♖d5 ♖h5 [47... ♖e4+ doesn't give Black a draw now 48. ♖xe4 fxe4 49. ♖d4 ♖xd6 50. ♖xe4 ♖e6 51. g4 ♖f6 52. ♖d5 h5 53. g5+ ♖f5 54. ♖d6 ♖xf4 55. ♖e6 with an easy win for White.]

48. ♖c6+ ♖e6 [48... ♖d8 49. ♖d5 ♖xg3 50. ♖e5 and we have comeback to the usual winning position.]

49. ♖f3 ♖f6 50. ♖c6! White is totally winning — the rest of the game needs no comments.

50... ♖f7 51. ♖c7 ♖e8+ 52. ♖d7 ♖f6+ 53. ♖c6 h5 54. ♖g2 ♖e6 55. ♖f1 ♖f7 56. ♖c4+ ♖f8 57. ♖e6 ♖e8 58. ♖c7 We saw a very interesting endgame with a lot of mistakes on both sides, which clearly shows that endgames are really difficult to play! **1-0**

(16) Yu Yangyi (2626) – Laylo,D (2502)

Asian Continental Championship, 06.05.2012

[Chess Evolution]

Despite the little amount of material on the board, the position is amazingly complex. These kind of positions are very useful to improve our calculating abilities!

57.g5? Here is the next question: How to defend with Black? [57.♔f6!! We must calculate really deeply to be able to find this move! The idea is to give a check on the d-file and then to approach with the king to the c-pawn. 57...c4 (57...♔d5 58.♖d2+! ♔c4 (58...♔e4 Trying to block the route of the White king would block the diagonal for the bishop. 59.g5 c4 60.♖d7 ♕g8 61.♖d8 ♕d5 (61... ♕h7 62.♖h8 +-) 62.♖xd5! and the pawn promotes with check.) 59.g5 ♔b3 60.♖d7 ♕c2 61.♔e5 +-) 58.g5 c3 (58... ♔d5 59.♖d2+ ♔c5 60.♖d7 ♕b1 61.♔e5 +-; 58...♔c5 59.♖a7 ♕b1 60.♔e5 The technique is always the same. Practically, if you find 57. ♔f6, the win is already in your pocket.)

59.♖a3! The last important move. White is a tempo ahead. 59...c2 60.♖c3 ♕e4 (60...♔d5 61.g6 +-) 61.g6 ♔d5 62.g7 +-; 57.♖a5 Trying to cut the king along the 5th rank does not help. 57...♔d5! First, the king crosses the line and then Black can push his c-pawn. (But not 57...c4? 58.g5 c3 59.g6 ♕xg6+ 60.♔xg6 c2 61.♖a1 +-) 58.g5 ♔d4 59.g6 ♕xg6+ 60.♔xg6 c4 61.♔f5 c3 with a draw.]

57...♔e5!! Very strong reaction. Black does not allow the cut along the 5th rank, and at the same time, he blockades the path of the White king. [57...c4? 58.♖a5 +- transposes to 57.♖a5.]

58.♖h2! [58.g6 ♕xg6+ 59.♔xg6 c4 leads to a draw.]

58...♙d3! The most logical, which is, actually, the only move to save the game. [58...♙e4? is not an option. 59.♖e2 c4 60.g6 +-; 58...♙f5 loses to the great 59.♗h5!! ♙g4. Only move, otherwise g6 decides the game. 60.♗h1 ♙f5 61.♖e1+! ♙d4 62.♙f6 Very important tempo, which allows the same win that we saw in the 57.♙f6 line. 62... ♙h7 63.♗d1+ ♙e4 (63...♙c3 64.g6 ♙xg6 65.♙xg6 c4 66.♙f5 ♙b2 67.♙e4 c3 68.♙d3 c2 69.♗d2 +-) 64.♗d7 +-]

59.♗h5 [59.g6 ♙xg6+ 60.♙xg6 c4 There is no win... 61.♖e2+ ♙d4 62.♙f5 c3 =]

59...♙d4 60.♗h4+ White tries all his tricks, which takes away Black's energy.

60...♙d5! It was another moment to go wrong, but Black defends precisely. [60...♙e5? 61.g6 ♙xg6+ 62.♙xg6 ♙d5 63.♙f5 c4 64.♙f4 ♙d4 65.♗h8 +- White is in time.]

61.♗h5 [61.g6 ♙xg6+ 62.♙xg6 c4 63.♙f5 c3 =]

61...♙d4 After Black found the important 60...♙d5, White tries a different plan.

62.♙e6!? c4 63.♗h4+

63...♙c5?? and suddenly Black blunders. After finding a couple of difficult moves, he fails in an easier moment. [63...♙e3 would have secured the half point. 64.♙d5 c3 65.♗h3+ ♙e2! is the last required exact move. (65...♙d2? 66.♙d4 +-) 66.♙d4 c2 67.♗h2+ (67.♗h1 ♙d2 =) 67...♙f3 68.♗h1 ♙g6 = and the handshake is coming soon.]

64.♙e5! c3 65.♗h8! We arrive again to the winning position. The White king catches the pawn, while the rook supports the g-pawn.

65...♙a6 [65...c2 66.♗c8+ ♙b4 67.♙d4 ♙f5 68.♗c7 ♙b3 69.♙e3 +-]

66.g6 c2 67.♗h1 It is all over now.

67...♙b4 68.♙d4 ♙b3 69.♗c1 ♙c8 [69...♙b2 70.♗xc2+ ♙xc2 71.g7 +-]

70.g7 ♙e6 71.♙d3 ♙f5+ 72.♙d2 ♙h7 73.♗xc2 1-0

Clash of the Titans

(17) Speijer, Abraham — Euwe, Max [A48]

Amsterdam Amsterdam, 1923

[Balogh Csaba]

We will see a great positional exchange sacrifice by Max Euwe. A nice example for recognizing when a bishop is stronger than a rook...

1.d4 ♘f6 **2.** ♘f3 **d6** Euwe is heading for the King's Indian defense.

3.b3 Of course, we don't want to study theory by watching this game. This move is not as bad as it might look, a few moves later we get a completely "natural" position.

3...g6 4. ♖b2 ♖g7 **5.** ♘bd2 **0-0 6.e3** ♘bd7 **7.** ♖e2 White already has a normal position, the defect of the 3.b3 move has disappeared.

7...e5 After finishing the development, Black starts to fight for the center with this typical King's Indian break.

8.dxe5 [On 8.0-0 ♖e8 we would reach a similar structure to the Nikolic-Fischer game, discussed in the 9th CEWN.]

8...♘g4! This is the point of the previous move. Black equalizes after successfully undermining the center.

9. ♘c4 White does not handle the opening too ambitiously, he wants to get rid of the pieces. [9.0-0 ♘dxe5 10. ♘xe5 ♘xe5 = with the idea of ♘f3+, getting the bishop pair.]

9...♘gxe5 10. ♘cxe5 ♘xe5 **11.** ♘xe5 **dxe5 12.** ♖a3 [12.0-0 = leads to complete equality.]

12...e4!! Brilliant idea! An intuitive exchange sacrifice for long-term compensation. [12...♖e8 13. ♖xd8 ♖xd8 14.e4 = was White's idea, with a draw soon.]

13. ♖xf8 White accepts the challenge, which was a mistake in my opinion. [13.0-0! was much safer, but accurate calculation was needed. 13...♖g5!? (13... ♖xa1 14. ♖xf8 = gives nothing.) 14. ♖xf8 ♖h3 15. ♖f3! . Strong move, followed by a forced line which leads to equality. (15.g3 ♖xf8 is very unpleasant for White.) 15...♖d8 16. ♖e2 exf3 17. ♖xf3 ♖xg2! 18. ♖xg2 ♖xg2+ 19. ♖xg2 ♖xa1 20. ♖e7! It's very important to fight for the only open file. (20.

♖xa1? ♔xf8 =+) 20...♖d7 21.♖xa1 ♖xe7 22.♖d1 f5 23.c4 ♔f7 = with an even endgame.]

13...♗c3+! An important intermediate check to take away the short castle.

14.♔f1 ♕xf8 Here we are! Black gave an exchange for the c3 bishop, which disturbs the communication between White's pieces. It's hard to find a future for the heavy pieces, not only for the rooks, but for the queen as well.

15.h4? White would like to get rid of the strong bishop by giving back the material advantage, and wants to generate play for the h1 rook, but it gives Black too much time. He will be able to activate his rook. [15.♖b1 was the best move, with the idea of ♔g1, ♕f1 and ♖d1, developing artificially, which is actually not easy to refute with Black.

15...c6! with the idea of paralyzing the White pieces, by pushing b5. It prevents the important ♗c4 plan. (On 15...♗e6 16.♔g1 ♖d8 17.♕f1 and ♖d1 or ♗c4 is coming.) 16.♔g1 (16.a4 a6!) 16...b5! 17.a4 a6! Black seems to have more than enough compensation. Even the materialistic computers like this idea.]

15...♗e6! Another strong move. Of course, Euwe keeps his c3 bishop!

16.h5 At least consequent, but it gives an important tempo for Black. Even after opening the h-file, the h1 rook remains out of the game.

16...♖d8 17.♕c1 ♕c5 It is never a question whether to take on a1 or not. [17...♖d2!? was also good.]

18.♖b1 ♖d2! Black is ready for concrete threats now. ♖xe2 is in the air.

19.b4 Trying to "breathe". [19.hxg6 loses in a spectacular way 19...♖xe2! 20.gxh7+ ♔h8 21.♔xe2 ♕b5+!.. It's important to prevent the king from going to f1. 22.♔d1

22...♗g4+ (I was shocked by the 2nd strongest move of the computer: 22...♕h5+!? 23.♖xh5 ♗g4+ 24.f3 exf3

with mate in three!!! An amazing position.) 23.f3 exf3 Take a look at the White pieces and at the Black bishops.; 19.a4 to prevent ♖b5 check. The rook sacrifice would meet with 19...♔d6! refreshing the same threat, but now it is followed by ♔a6!]

19...♔e5 20.♖b3 White could not live with the bishops anymore and decided to give back the exchange, even at the cost of some pawns.

20...♔xb3 Euwe plays simple chess, although there was a more spectacular way to get the victory. [20...♖xe2! 21.♖xc3 (21.♔xe2 ♔c4+ 22.♔d1 ♔d6+) 21...♔g4!! due to the double threat of ♖xc3 and ♖f6, it is over now. 22.♖c5 ♖f6]

21.axb3 ♔xb4 22.hxg6 hxg6 Black is completely winning anyway. He is not only a pawn up, but his pieces are superior as well.

23.♖h4 ♔c3 24.♖xe4 ♖xc2 An instructive win by Max Euwe that shows how the quality of the pieces can overcome a material disadvantage. **0-1**

Editorial Preface

The main event of the month is definitely the World Championship Match between Anand and Gelfand. After the first four games, the score is 2–2. Anand missed a serious chance to win in game 3, we show you this game in the current CEWN. We analyze all games in details and give predictions for the coming rounds in our special WCC newsletter. You can see more information about it on our website: www.chess-newsletter.com.

Meanwhile, the Capablanca memorial has come to an end. As it's already usual, Ivanchuk won the event with 6.5/10, this was his 6th victory in a row in Havana.

The US Championship is just getting to an end. As it was expected, there will be a very interesting run for the first place between the two favorites, Nakamura and Kamsky.

The tournament in Malmo has come to an end as well. The top seed Italiano, Fabiano Caruana, has convincingly won the event!

As usual, we wish you lots of fun with the 12th edition of the Chess Evolution Weekly Newsletter!

4 best games of the past week

(1) Anand,V (2791)
— Gelfand,B (2727) [D70]

WCC 2012 Moscow, 14.05.2012

[Chess Evolution]

We are in the 3rd game of the WCC match and, just like in the first round, Anand opens with 1.d4.

1.d4 ♘f6 **2.c4** g6 **3.f3** and here comes the change in comparison to game 1, where White played 3.♘c3.

3...d5 Maybe in the next games Black could try the 3...♗g7 4.e4 d6 line going into the King's Indian, where Anand usually chooses the lines with ♘f3 and not f3!

4.cxd5 ♘xd5 **5.e4** ♘b6 **6.♘c3** ♗g7 **7.♗e3** 0-0 **8.♔d2**
This is the very main position of the Grünfeld with 3.f3.

8...e5!? This move is not the main option. [8...♘c6 is the usual choice with long and sharp lines.; 8...♔d6!? 9.f4 ♖d8 10.♘f3 ♔b4 ~ happened in the recent game between Jobava-Caruana from 2012.]

9.d5 c6! Black needs to start his play in the center immediately. In case White manages to castle long and play h4-h5, Black's position will be very bad.

10.h4 Let the actions begin! [10.d6? doesn't work now because of 10...♖e8 11.0-0-0 ♖e6 12.♗g5 Black wanted to play ♗f8 and the pawn on d6 would be lost 12...f6 13.♗e3

13...♗f8! a great sacrifice! 14.♗xb6 axb6 15.♗c4 b5! 16.♗xe6+ ♗xe6 White is an exchange up, but he's doing clearly worse! There is no decent defense against Black's b4 move. Besides, all of Black pieces are perfectly in the game and the knight from b8 will take a very good square on d7.]

10...cxd5 11.exd5 ♘8d7 [11...f5 Of course it would be very nice for Black to get the pawn to f5, but it seems like White is just too fast 12.h5 ♘8d7 13.hxg6 hxg6 14.♗h6 White's threats over the Black King are very dangerous already.; 11...h5 This move is quite interesting and deserves attention, Black blocks his opponent's play on the file, and wants to continue his development in a normal way by playing ♘8d7-Nf6. White has quite a big range of moves here, for example: 12.♘h3 then ♘g5, or maybe

the direct 12.0-0-0 followed by g4 is possible as well. We can be sure of one thing: this position has been very well analyzed by Gelfand's team as well as, of course, by Anand's team, so we should just simply believe them that 11...♖bd7 is the best move here :).]

12.h5 ♘f6 13.hxg6 fxg6 Both players have played their moves very fast until this point. It's a bit strange that almost all the engines give White quite a big advantage — which is not obvious at all with "human eyes"! This makes the position very tricky and hard to analyze. [13...hxg6 14.♙h6 with a mating attack.]

14.0-0-0 ♙d7 After this move Anand had his first thought. Let us take a look at the position from the logical point of view: 1) It is clear that positionally White is doing better. A strong pawn on d5 gives White a clear advantage in the center. Also, in case White manages to develop his pieces by playing, for example, ♘h3-g5, he will be better as well. 2) It is clear that Black's chances lie in creating dynamic play.

15.♔b1 A standard prophylactic move. The White king will have to move away from the c-file eventually.

15...♖c8 I think we are at the first critical position. White has a huge range of moves that need to be considered, Anand took around 25 minutes of thinking before playing his next move.

16.♔a1 [One of the options should definitely be 16.d6 ♙e6 This is why d6 might not be the best, the bishop on e6 is standing perfectly, even if it looks like a lost tempo, just 2 moves ago ♙c8-d7 was played. 17.♙g5 Black wanted to play ♘fd5. 17...♔d7 The Black queen is going to f7 and, at the same time, Black keeps his desire to play

♘fd5. Once again, White had a lot moves to consider. As we can see, the position is super complicated and it is really hard to say who is doing better.; Another interesting move is 16.♘h3 e4 (A typical sacrifice doesn't work now 16...♖xc3?! 17.♔xc3 ♘fxd5 18.♙c4! and some of Black's pieces will be lost on the d-file.) 17.♘f4 and we are again in a totally messy position, but I feel that White might be better here. The knight on f4 is in a very powerful position.]

16...e4! An excellent move by Black! And it was very quickly played by Gelfand. Great preparation by the Gelfand team.

17.♙d4! After another long thought, Anand finds what is probably the best reaction! [A mistake would be 17.fxe4? ♖xc3! this time works: 18.♔xc3 ♘xe4 19.♔e1 ♘a4 and the Black pieces are going for the White king 20.♙d4 ♘xb2! and this is the finishing move. The White King is going to be mated soon.; Would also be a mistake 17.♘xe4? ♘xe4 18.fxe4 ♖xf1! a pretty move that Anand can see immediately 19.♖xf1 ♘c4 and again the b2 pawn is the troublemaker, Black is winning.]

17...♘a4 This move was also quickly played by Black, and it seems like it leads to a forced draw — amazing preparation! [17...♘c4 This move gives White the chance to develop completely 18.♙xc4 ♖xc4 19.♘ge2 and White should be doing a bit better, he managed to keep his strong d pawn, and will have dangerous attacking chances in the future with his king in a very safe position.; 17...♖e8!? Personally, I like this move a lot, now Black wants to play e3 18.fxe4 and the sacrifice on c3 is a constant threat 18...♖xc3! 19.♙xc3 ♘xe4 We are in a totally unclear position. A very deep analysis would be necessary to know who is doing better here. Computers probably don't give a correct evaluation in many lines, which makes it even harder to find the truth, but again, we should just believe in Gelfand's team and conclude that 17...♘a4 is the better choice.]

18.♘ge2 [An interesting move would be 18.♘xe4!? ♘xe4 starting a long forced line, it's possible that instead of 18...♘xe4 Gelfand planned to do something else!? but it's not easy to understand what's the plan actually... 19.fxe4 ♙xd4 20.♙xd4 ♙g5 Of course Black's chance lies in his the development! 21.♙b1 The white King plays a role in the game, protecting c1! 21...♖xf1 What else?! 22.♖xf1 ♙xg2 23.♘e2! Maybe Anand blundered this nice protective move?! 23...♙xe2 24.♙a1 We are in a very crazy position. From the material point of view, Black is doing better, but probably in a practical game, Black's position can be very dangerous. White has good attacking chances plus 2 central pawns that can start advancing very soon. I think White's position is even objectively better.]

18...♙a5! A very good move by Black, practically forcing White to go into a drawn endgame.

19.♘xe4 It is difficult to find something better for White. [19.fxe4? doesn't work again 19...♘xc3 20.♙xc3 (20.♘xc3 ♘xe4 21.♘xe4 ♙xd2 22.♘xd2 ♙xd4) 20...♙a4 and White can not protect the pawn on e4 — so Black should be doing great.]

19...♙xd2 20.♘xf6+

20...♖xf6! A very precise move by Gelfand. [In case of 20...♙xf6 21.♖xd2 ♙xd4 22.♖xd4 ♖c2 23.b3 Black would still have to fight for a draw.]

21.♖xd2 ♖f5! Black's target is the lonely d5 pawn, and it is very difficult for White to find anything to protect it.

22.♙xg7 ♙xg7 23.d6 Black simply wanted to win the pawn back by playing ♘b6 and, if ♘c3 ♘xd5 comes.

23...♖fc5?! The first inaccuracy by Gelfand after a great sequence of moves. [The not very difficult 23...♘b6 24.♘c3 ♖d5! = leads immediately to a draw 25.♖xd5 ♘xd5 and White has nothing better than allowing Black to take twice on c3.]

24.♖d1 += The beginning of what looks like the end for Black...

24...a5 [Still 24...♘b6 25.♘c3 ♘d5 probably would have been the best option for Black.]

25.♖h4! Finally, the White rook from h1 joins the game. White wants to play ♖e4-Re7.

25...♖c2 Probably the last chance for Black to start some action.

26.b3 ♘b2!? A very risky move by Black, but probably the best chance to fight. [In case of the silent 26...♘b6 27.♖e4 a4 28.♖e7+ ♔f6 29.♘g3! White seems to be close to winning. The knight on e4 is going to become a beast!]

27.♖b1! [The tempting 27.♖dd4 leaves the Black knight without moves, but 27...a4 28.bxa4 Black wanted to play a3 28...b5! leads to quite a complicated position. Especially in a practical game, it is very hard to evaluate!]

27...♘d3 28.♘d4 ♖d2 29.♙xd3 ♖xd3 30.♖e1! So, White is a pawn up, and ♖e7 is a very dangerous threat. Black's only hope seems to be the White King.

30...♖d2! Black tries to use all the tricks in the fight for survival. To have both rooks on the 2nd rank is the best chance.

31.♔b1 ♙f5+ The only move

32.♘xf5+ gxf5 33.♖e7+ ♔g6 And we are in a position where Anand made a terrible miscalculation. Having only 5 minutes for 6 moves, Anand makes a very strange decision — practically agrees to a draw.

34.♖c7? [34.d7 ♖cc2 35.♖c4! It is clear that Anand saw this move 35...♖xa2 (35...♖xc4 is not saving the game either 36.bxc4 h5 37.♔c1 ♖d4 38.♔c2 ♔f6 39.♖h7 ♔e6 40.♔b3! ♖xd7 If Black doesn't take on d7, the White king will anyway go to b5. 41.♖xd7 ♔xd7 42.♔a4 b6 43.♔b5 followed by c5 with a totally winning pawn endgame.) 36.♖c8 ♖db2+ 37.♔c1 ♖f2 38.♖e6+ ♔h5

39.g4+! and this is the key move! Not an easy move to foresee, especially with so little time on the clock. White promotes the queen with check 39...fxg4 40.♖c5+ ♔h4 41.d8♔+]]

34...♖e8 35.♖h1? It was not too late to play 35.♖e7, and probably Black has nothing better than to come back with 35...♖c8 and pray for a repetition.

35...♖ee2! Now the game is just a draw!

36.d7 ♖b2+ 37.♔c1 ♖xa2 A very interesting game. Black was clearly better prepared, but strangely enough, missed a very easy draw and found himself in a very difficult endgame. It still looks like Anand is not in his top shape. 1) Today, he got into a little bit of time trouble and 2) He missed quite an easy win with 34. d7. Usually, the World Champion does not miss such opportunities! **1/2**

(2) Nakamura,Hi (2775) – Robson,R (2614) [B75]

ch-USA 2012 Saint Louis USA (3), 10.05.2012

[Balogh Csaba]

A very interesting — typical for the Dragon — battle between the top US player Nakamura Hikaru and the rising star Ray Robson.

1.e4 c5 2.♘f3 d6 3.d4 cxd4 4.♘xd4 ♘f6 5.♘c3 g6 The starting position of the Dragon variation in the Sicilian.

6.♙e3 ♙g7 7.f3 ♘c6 8.♔d2 0–0

9.g4!? Recently, the 9.g4 line has enjoyed a lot of popularity. Still, the mainlines are 9.♙c4 and 9.0–0–0.

9...♙e6 The main move, which tries to use the fact that White has weakened his f3 pawn in the previous move. Creating doubled pawns and taking the bishop pair has its drawback as well, it opens the f-file. In addition, after playing 9.g4, White has no longer the option of 0–0, and castling queenside moves into the diagonal of the strong “dragon bishop”.

10.♘xe6 fxe6 11.0–0–0 White is of course ready for the complications and prepares for a kingside attack with h4-h5.

11...♘e5 12.♙e2 ♚c8 Black prepares for ♘c4. Both players knew the position very well, since Robson already had a game on this position in 2012. Nakamura deviates from that game, which continued with 13.♙h6.

13.h4 ♘fd7 Before playing ♘c4, Black opens the diagonal of the bishop and attacks the f3 pawn.

14.f4 ♘c4 15.♙xc4 ♚xc4

16.e5! By temporarily closing the bishop's path, White wins enough time to push h5.

16...♘b6? A novelty, but definitely a bad one. [It would be very interesting to know what was Nakamura's improvement over the previous game, in which Black found the strongest move and played 16...♖ad8 17.exd6 (I suspect Nakamura's novelty to be somewhere around this point 17.h5 but after 17...dxe5 I could not find a convincing way to continue. For example: 18.hxg6 hxg6 19.♚h2 ♘f6 20.♖df1 (20.fxex5 ♖xd1+ 21.♘xd1 ♘xg4 22.♚h7+ ♙f7) 20...e4 Black seems to be fine.) 17...exd6 (17...♘b6!? is also interesting 18.dxe7 ♖xd2 19.exf8Q+ ♙xf8 20.♙xd2 ♙xc3 21.♙xc3 ♚xf4+ 22.♙b1 ♚xg4 and the knight becomes a very strong blocking piece on d5.) 18.h5 ♙xc3 19.♚xc3 ♚xc3 20.bxc3 ♘f6 21.hxg6 hxg6 The position

was about equal in Cornette-Delgado Ramos, Montcada i Reixac 2011.]

17.h5! dxe5 18.hxg6 hxg6 [18...exf4 is refuted nicely by 19.♚h2! h6 20.♙d4! e5 21.♙xe5! +-]

19.♚h2 Seems to be all over, but Robson finds the best practical chance to stay in the game!

19...♖xf4! Nice exchange sacrifice. Black gets 2 pawns, which would be fine materially, but of course, with the tripled pawns on the e-file, Black can not pretend to have achieved equality. [On 19...exf4 White can choose between two spectacular wins 20.♖d4! and after the check on h7, the rook takes on f4!(20.♙d4!)]

20.♙xf4 ♚xf4+ 21.♙b1! Naturally, White does not solve his opponents structural problems.

21...♚xh2 22.♖xh2 ♖f8 23.♘e4 +/- White is better, but the win requires good technique. As we will see in the game, small mistakes might give Black good counter play.

23...♖f4 24.♘g5 Here is the first inaccuracy. In my opinion, it would have been more important to take the b7 pawn, in order to create a passed c-pawn. [24.♘c5 ♖xg4 25.♘xb7 +/-]

24...♖xg4 25.♘xe6 ♕f6

26.b3! Strong positional move. White wants to restrain the movement of the b6 knight.

26...♘c8! Of course, Robson immediately finds another path to activate his knight. [26...e4 27.c4 +/-]

27.c4?! A mistake, after which the game opens up again. [Obviously 27.♖d8+ does not win a piece 27...♕f7; 27.♖f2! would have been a great prophylactic move against ♘d6, after this White could start his play on the queenside with c4, ♕c2. 27...♘d6? 28.♖xd6! is the whole point! 28...exd6 29.♖xf6 +/-]

27...♘d6 Now the knight is back in the game.

28.c5 ♘b5! Probably Nakamura underestimated the strength of this move. Now the game becomes amazingly complex. [28...♘e4 29.♕c2 +/-]

29.♖d7 White pinned his hopes to this move, but leaving the 1st rank with the rook gives Black many tactical possibilities.

29...♕f7?! Robson misses the sudden chance he got. [A study-like draw could have appeared after 29...♖g1+

30.♕c2 e4! 31.♖xb7 ♖a1! This was the idea of the previous moves. White gets an opportunity to queen his c-pawn with check, however it is only enough for the draw. Let's see how it happens! 32.♖xb5 (32.♖h3!? ♖xa2+ 33.♕c1 Here, White could probably still hope to get some advantage.) 32...♖xa2+ 33.♕c1 ♖xh2 34.c6 e3 35.c7 ♖h1+ 36.♕c2 e2 37.c8 ♖+ ♕h7 Here we are! White is a queen up, but the draw is inevitable. 38.♖b8 (38.♖e5!? ♕xe5 39.♘g5+ ♕g7 40.♘f3 e1Q 41.♘xe1 ♖xe1 Black is safe.) 38...♖c1+! 39.♕xc1 e1♖+ 40.♕c2 ♖e2+ 41.♕c1 ♖e1+ = Perpetual check.]

30.♖xb7 ♖g1+ A couple of only moves are coming from both sides. Nakamura calculated precisely that the cooperation between Black's pieces is not enough to create real threats. [30...♖b4 is refuted by the silent 31.♘d8+! ♕e8 32.♕c1! ♕xd8 33.a4! +/-]

31.♕c2 ♘a3+ 32.♕b2 ♘b1! Spectacular move, which prepares for e4.

33.♘d8+ ♕e8 34.♘c6 e4+ 35.♕c2 ♘a3+ 36.♕d2 ♘b1+ 37.♕e3 Due to the very sharp middle game, the players got into time trouble, which affected their play in this difficult position.

37...♖e1+? Somehow, Robson misses the logical ♘c3 now, and a few moves later as well. [37...♘c3 At the end, I came to the conclusion that White's best option is 38.♖c2 followed by a forced line 38...♗g3+ 39.♕f2 ♖f3+ 40.♕g1 e3 41.♖xc3 ♗xc3 42.♖xe7+ ♕f8 43.♖e4 += White is better, but it is not obvious if he can win after 43...♖f5!]

38.♕f2

38...♖c1 39.♖h7! ♖c2+ We have reached the most critical position of the game, and as it happens so often, we are in the last move of the time trouble! [39...♖xc5 40.♘xe7 +-]

40.♕g3? This mistake could have cost the full point to Nakamura, but Robson didn't make the most out of his

chance. [40.♕e3 would have easily won 40...♘c3 41.♘e5!! is definitely the best, and the nicest move of the position, with the threat of ♖b8 mate. 41...♗xe5 42.♖bxe7+ ♕d8 43.♖xe5 +-]

40...♖c3+? Finally, the players got extra time and Nakamura found a really beautiful way to win. I am quite sure that he had already foreseen the final position! [Just as in the 37th move, Black missed 40...♘c3! The subtle point is that 41.♘xe7?? loses the h7 rook after (41.♖hxe7+ ♗xe7 42.♖xe7+ ♕f8 should be draw.) 41...♗e5+! 42.♕g4 ♖g2+ 43.♕h3 ♖h2+]

41.♕g4 e3 42.♘xe7 e2

43.♘d5!! [43.♖b8+ ♕d7 44.♘xg6+ ♕c6 45.♖e8 +- was less spectacular.]

43...♖g3+! 44.♕f4! ♗g5+ 45.♕e5!! e1Q+ 46.♕d6 Just as in the 29...♖g1 line, one side promotes a queen with check and obtains huge material advantage. In that case, it was only enough for draw, while now he can not avoid being mated. Robson gives a few checks, but soon, he runs out of them.

46... ♖f4+ 47. ♘xf4 ♜d3+ 48. ♘xd3 ♙g3+ 49. ♘e5 1-0

(3) Nepomniachtchi, I (2716) – Quesada Perez, Yu (2625) [A18]

47th Capablanca Mem Elite Havana CUB (6), 10.05.2012

[Balogh Csaba]

A highly impressive performance by Ian Nepomniachtchi, who is known for his fast playing style, spending between 30 and 60 minutes for the whole game!

1.c4 ♘f6 2. ♘c3 e6 3.e4 Generally, White plays this move order to avoid the Nimzo-Indian variation (1.d4 ♘f6 2.c4 e6 3. ♘c3 ♙b4), but it gives some extra options for Black.

3...d5 [3...c5 is the other move.]

4.e5 d4 A well-known push with thousands of games in the database.

5.exf6 dxc3 6.bxc3 ♙xf6 7.d4 e5 8. ♘f3 exd4 9. ♙g5 ♙e6+ 10. ♙e2 ♙e7 We are in the first critical position of our current game. We can still meet with more than hundred games that include players like Kasparov, Aronian, Kramnik and Karpov. Anyway, Nepomniachtchi deviates from the mainline, which was played by all of the top guys; a move that seems to give White an advantage.

11. ♖xe7!? [Let's first take a look at a very instructive rapid game from the highest level. 11.cxd4 ♖xg5 12. ♘xg5 ♜f6 13. ♜d2 0–0 14.0–0 White is better developed and has the advantage in the center. However, Black's idea in the whole line is to quickly put pressure on the d4 pawn, forcing the center to move, giving him different kinds of counter play. For example, in case of d5, Black gets the possibility to undermine it with c6. 14... ♘c6 15.d5 ♘d4 16. ♘e4 ♘xe2+ 17. ♜xe2 ♜g6?! This seemingly logical move got punished by Aronian in a really nice fashion! (I found 17... ♜e5 to be an improvement, and on 18. ♜fe1 ♖f5 Black seems to equalize. Probably this is the reason why Nepomniachtchi looked for an alternative for White, and found the 11. ♖xe7 move.) 18. ♜fe1 ♖f5 Black seems to be fine, but Aronian comes up with a temporary pawn sacrifice.

19. ♘g3! ♖d3 20. ♜e5 ♖xc4 21. ♘f5! White threatens with ♘e7, and on 21... ♖h8 (21... ♜f6 22. ♘e7+ ♖h8 23. ♜xc7 +/-) 22. ♘e3! This move was the point of the maneuver that started with 19. ♘g3! White obtains a very strong passed pawn on d5 after taking on c7. 22... ♖d3 23. ♜xc7 ♖e4 24. ♜f4 ♜fe8 25.f3 ♖d3 26. ♜ad1 Black could be only fine, if he had a blockader knight on d6. 26...h5 27. ♜d2 ♖b5

28. ♜ed1 ♜ad8 29.d6 +/- Black has huge problems. The end of the game was also very spectacular: 29... ♖c6 30.d7 ♜e6 31. ♘c4 ♜f6 32. ♜xf6 gxf6 33. ♘a5 ♖g7 34. ♜d4 f5 35. ♖f2 b6 36. ♘xc6 ♜xc6 37. ♖g3 The White king is going to support the d7 pawn, and also would like to collect weak kingside pawns. 37... ♜c2 38. ♖f4! ♖g6 39. ♖e5! ♜e2+ 40. ♖d6! Great run! 40... ♖f6 41. ♜d5 ♜xg2 42. ♖c7 ♜gg8 43.f4 ♜gf8 44. ♜g1 ♖e7 45. ♜d6 1–0 Aronian-Kramnik, Moscow 2011. It is very rare to see Kramnik losing in such a way, even if it was "just" a rapid game!]

11... ♜xe7 12.cxd4 0–0 13.0–0 Just as it was explained in the previous line, Black has to put pressure on the center.

13... ♖g4 The most logical move to eliminate the defender. [13... ♜d8 seems to be a bit too slow 14. ♜b1! White provokes weaknesses, and after 14...b6 15. ♘e5! is very strong 15... ♖b7 16. ♖f3 c5 17. ♖xb7 ♜xb7 18.d5 +/- with a clear advantage, thanks to the protected passed pawn on d5 and the powerful knight.]

14.h3 ♖xf3 Black decides to force matters, but as we will see, he is not in time to consolidate the position. [If Black decides to hold the tension with 14... ♖h5 White must react energetically 15. ♜b1! b6 16. ♜e1! ♘c6

17. ♖a4! I think that this concrete move is the only way to get an advantage. (On 17.d5 ♙xf3 18. ♙xf3 ♘e5 Black is fine! This is what he is aiming for in this opening.) 17... ♙f6 18. ♘e5! ♙xe2 (18... ♘e5 19.dxe5 ♙g5 (19... ♙xe5? 20. ♙f3 +-) 20. ♙xh5 ♙xh5 21. ♙c6 += with an obvious advantage.) 19. ♘xc6 +/- Just as in the Aronian-Kramnik game, the knight becomes much stronger than the bishop. The knight restrains Black's pieces, while the bishop has no real target.]

15. ♙xf3 ♘c6

16. ♖b1! [16. ♙xc6 bxc6 Black does not need to worry about the doubled pawns, they are holding well the c4-d4 pawn, so he can start to attack the d4-pawn.]

16... ♖ad8 [16... ♖ab8 would cost a pawn 17. ♙xc6! bxc6 18. ♖xb8 ♖xb8 19. ♙a4 +/-]

17. ♖e1 ♙f6 Things are developing very logically, but unfortunately for Black, complications are working badly for him.

18. ♖xb7! By exchanging the pawns, White opens the position favoring the bishop against the knight.

18... ♖xd4 [18... ♘xd4 19. ♖xc7 ♘xf3+ 20. ♙xf3 ♙xf3 21.gxf3 +/- The endgame looks quite promising for White, he is not only a pawn up, but also has an active rook on the 7th rank.]

19. ♙e2 It is very hard to hold the c7 pawn, Black is in serious trouble.

19... ♖d7 [19... ♙d6 met with the very strong 20.c5! ♙xc5 21. ♖xc7 ♖d6 22. ♙e8!! winning the c6 knight!]

20. ♙e8!! Nepomniachtchi play is extremely strong! He uses the weak back-rank. Imagine how bad it would be to have around 10 minutes, while your opponent makes such moves with 1 hour and 30 minutes on his clock. Black has to find only moves to avoid losing immediately.

20... ♖e7! [20... ♙d6 would not solve the danger on the 8th rank 21. ♙xc6 ♙xc6 22. ♙xf8+ ♙xf8 23. ♖b8+ +-]

21. ♖xe7 ♘xe7 22. ♙d7! Black can not keep the material balance for long. White pieces are dominating the board, while the c7 and a7 pawns are just falling.

22... ♙a1+ 23. ♙h2 ♙e5+ 24.g3 ♖c8 [24... ♘g6 25. ♖xc7 ♙f6 26. ♙c6 +/-]

25. ♖b3! Not the only winning move, but the best practical one for sure. Black is forced to exchange queens due to the ♖e3 threat, transposing into a losing endgame.

25... ♕d6 [25... ♕e6 26. ♖xe6 fxe6 27. ♖b7 +/-]

26. ♖d3! ♕xd7 27. ♖xd7 ♖f8 28. ♙b7! The first pawn falls. Black is lost.

28... ♖b8 29. ♖xc7 ♖e8 30. ♙a6 ♖d8 31. ♖xa7 ♖b2 32. ♙b5! The f2 pawn does not play an important role with queens off the board. Black cannot create any threats around the king, while the a- and c-pawns start to run.

32... ♖xf2+ 33. ♖g1 ♖e2 34. c5 ♖e5 35. a4! Black resigned, since he can not take on c5 due to ♖d7! I am pretty sure, that after this convincing victory by White, we will see the move 11. ♙xe7 more often in practice. **1-0**

(4) Onischuk, Al (2660) – Nakamura, Hi (2775) [A40]

ch-USA 2012 Saint Louis USA (4), 11.05.2012

[Arkadij Naiditsch]

From the first moves of the game, it is clear that Nakamura wants to win today, provoking White a lot during the opening phase. On the other hand, Onischuk does everything he can to keep the position as calm as possible, finally reaching a draw in a clearly worse position. A good example on how dangerous it can get when You play for a draw in a better position.

1.d4 e6 2.c4 b6 From Nakamura it is possible to expect almost any opening — sometimes it is even hard to call “opening” to what he is doing. The b6 move, of course, does nothing but tells his opponent, “I am ready to play a worse position against you — I will win anyhow, because I am the better player”.

3. ♘c3 ♙b7

4.e4! Why not to take over the center!?! [4. ♘f3 f5 This is usually the idea of 2...b6, instead of the usual development of the knight to 2... ♘f6]

4...♙b4 5.f3 A bit too passive — this is not the way to play for the advantage, even if the move is super solid. [The main move in the position is 5.♙d3 In case White manages to play ♘ge2 now, the Black's position is going to be very problematic. In chess, to play without a pawn center usually is not a smart choice. 5...f5!? Probably this is the move that Onischuk was afraid of. It is a very rare line — almost never played on the high level -, probably for good reasons, but as a surprise weapon it is not a bad try. For example, Caruana (the current Nr.7 in the World) founded no way to get an advantage in his game against Erdos 6.♙h5+ g6 7.♙e2 ♘f6 8.♙g5 fxe4 9.♙xf6 ♙xf6 10.♙xe4 ♙xe4 11.♙xe4 0-0 = Caruana-Erdos 2011]

5...♘e7 Black keeps the pawn structure as flexible as possible. White has to take care of d7-d5, and f7-f5 as well

6.♙d3 A very standard way to develop the pieces. Another possible choice for White is to play ♘h3-f2.

6...f5 [6...d5 could have been another option for Black 7.♙a4+! It is very important to block Black's c7-c5 move 7...♘bc6 8.cxd5 (8.♘ge2 dxe4 9.fxe4 0-0 gives Black good play.) 8...exd5 9.♘ge2 White is keeping the center, and that means he should be better (9.e5 ♙d7 Seems like Black is totally fine here. 10.♘ge2? would give Black the chance to show a pretty trick 10...♘xe5!); 6...c5 7.d5 This type of position is always better for White. The bishop on b7 is now very badly placed.]

7.♘ge2 [Seems like White is not in time for 7.e5 c5! and Black's dream came true — White can not hold the center 8.a3 ♙a5 and probably Black is already doing better.]

7...fxe4 Good move. White wanted to castle short, and Black would be in trouble again. Black needs to show

very dynamic play, if White manages to develop the pieces normally, Black's position will be clearly worse.

8.fxe4

8...0-0 9.♙e3 White is planning to castle long.

9...e5!? Very original play by Black. He is clearly going to play on the dark squares. On the other hand, he takes a very big positional risk, the bishop on b7 is not going to play anymore in this game.

10.d5 ♘a6 11.♙d2 White wants to get "everything": to castle long, to keep all the pieces on the board, and to play a3-b4. Well, this would be perfect, but Black has an Ace in the hole. [11.a3 ♙c5 (11...♙xc3+ 12.♘xc3 ♘c5 13.♙c2 followed by the b2-b4 move. White has a very clear advantage) 12.♙xc5 (12.♙d2 ♙xe3 13.♙xe3 ♘c5 14.♙c2 a5 The only move. In case White manages to play b4, he is going to be better 15.b3 Black wanted to play a4 15...♘g6 16.g3 d6 followed by ♙c8-Bd7. Maybe White still has a small advantage, but the position is quite unclear. This is exactly what Nakamura was trying to reach with his opening choice.) 12...bxc5! This move was probably Nakamura's idea. Black is blocking the b4 move, having exchanged the Black squared bishops — which is very

good. In the next moves, Black is going to play d6 and ♖b8-Nd7, with about an equal position]

11...♘c5 12.♙c2

12...♘c8! Very inventive and strong play by Black, in a position that seemed to be clearly worse for him. [12...a5 would be too slow 13.0-0-0 White's next move is ♖hf1 and we can clearly see: White has a strong center, space advantage, and in the future, the bishop pair (the Black bishop on b4 will take the knight on c3), White is doing clearly better]

13.a3 ♙xc3 14.♙xc3 [14.♘xc3 ♘d6 Black is attacking the c4 pawn, and he wants to double take on e4, with ♙h4+ winning back the piece. White has no decent defense against Black's threats — Black is doing perfectly fine.]

14...♘d6 15.♘g3 a5 16.0-0-0

16...a4! Black has reached his maximum. The Whites pawns on the queenside are blocked, and the pawns on c4 and e4 are potential weaknesses. The bishop from b7 will finally come into the game via a6. Suddenly we have to say that White needs to act accurately not to be worse... [16...♙a6 17.b4!]

17.♘f5 White goes into a clearly worse position, trying to make a draw.

17...♘cxe4! 18.♙xe4 ♘xf5 [Of course not 18...♘xe4? 19.♙xe5 ♙f6 20.♘e7+! ♙h8 21.♙xe4 ♖fe8 22.♙f4 and only White can be better here, even if the position is close to equality.]

19.♙xf5 ♖xf5 20.g4 ♖f3 21.♙xe5 ♙e8! Suddenly White is in big danger, the pawn chain c4-d5 that was so strong has become the weakness of the position, and the bishop on b7 has become the hero! Black wants to play ♙a6 and it is very hard for White to find a way to defend the central pawns.

22.♙d4 ♙xe5 [22...♙g6 would deserve attention here.]

23.♙xe5 d6 24.♙c3 ♙a6 25.♖d4

25...Rxe8 Black has both open files (f- and e-) under control, which gives him a big advantage. Now, he only needs to play Rxc8-d7, and I guess it would be very hard for White to save the position. It is strange how quickly things can change in chess; a very safe and better position got into big trouble just by doing natural moves...

26.c5! I think this was a good decision by Onischuk, to stand and wait for Black to improve would lead to a "slow death".

26...bxc5 [26...dxc5 27.Rxa4 Bb5 28.Ra7 Rf7 29.Rd1 White wants to play d6, getting excellent drawing chances.]

27.Rxa4 Bb5 [It's not better to play the logical 27...Bf1 28.Ra7 Re7 29.Ba5! and Black can not defend the pawn on c7 29...Qf7 30.Rxc7 Rxc7 31.Bxc7 Qe7 32.Ba5 Of course in this endgame only Black can be better, but at the same time, his advantage is too small, and objectively is nothing more than "a bit more pleasant for Black, but a draw".]

28.Ra7 Rf7?! Black probably underestimated White's next move. [28...Rc8 Would keep some advantage for Black.]

29.Re1! Another very important move by White. Onischuk is very strong if it comes to technical positions, especially if he is defending slightly worse ones.

29...Rc8 [29...Rxe1+ 30.Bxe1 with only one rook on the board, Black has no real winning chances.]

30.Re4 Black wanted to play Bc4.

30...Qf8 It seems like the position should be an easy draw, but in fact it is far from "easy". The pawn on d5 continues to be a potential victim and White needs to play quite precisely to hold.

31.Qd2

31...Bf1! The bishop is going to g2

32. ♖ea4 ♔e7 33. ♖a8 ♔d7! Again, Black gets very tricky! [Not enough for a win would be 33... ♖xa8 34. ♖xa8 ♙g2 35. ♖g8! White exchanges the last pair of rooks 35...g6 36. ♖g7 ♖xg7 37. ♙xg7 ♙xd5 38.g5! White should not let Black play g5, fixing the pawns on light squares. 38...♔e6 39.b4!]

34. ♖xc8 ♔xc8 35. ♖a8+ ♔b7 36. ♖h8 [Not enough for a draw would be 36. ♖g8 ♙c4! 37. ♖xg7 ♖f2+ 38.♔e3 ♖xh2 and Black continues pushing.]

36...g6 37.g5! With a very nice idea of trapping the Black's rook.

37... ♖f5?! This move allows the smallest winning chance to slip away. [37... ♙c4 38. ♙f6 ♙xd5 39. ♖e8

White wants to play ♖e7 next. Objectively, the position is a draw, but still Black could push a little in the opposite-colored bishops endgame. In comparison to the game, Black is at least 2 tempi up.]

38.h4 A cool and good move.

38... ♖f7 [38... ♖xd5+ 39.♔e1 ♙d3 40. ♖xh7 makes no sense for Black]

39. ♙f6 ♙g2 40. ♖e8 ♙xd5 41. ♖e7 ♖xe7 Black played clearly better in the middle game and had some chances in the end, but White took over and showed great play in a worse endgame to get a clear draw. **1/2**

Endgame section

(15) Kraemer,M (2505) — Meier,G (2639)

Norderstedt, 12.05.2012

[Chess Evolution]

An interesting rook endgame was played in the German Cup. Seemingly, White is completely lost, but as we will see, the misplacement of the h5 king gives him good counter chances.

54.♔e3! The move might look like it is equal to resignation, but in reality there is a deep idea behind that... Black must find the only move to win the game!

54...♖d3+? Black played the most obvious move, but it throws away the win. [54...♖d1!! was the winning move! In rook endgames, we can meet many times with the fact that occupying the 1st (or 8th) rank with the rook is very important, because it supports the promotion of a pawn. This is the case in our current example as well. 55.♔f4 ♖f1+ 56.♔e5 e3 57.♔f6 e2]

55.♔f4 ♖f3+ [55...♖xa3 56.♔xf5 ♖f3+ 57.♔xe4 =]

56.♔e5 e3

57.♔f6! This was the point! We can see that even in the endgames, activity is sometimes much more important than material! White can create different kinds of threats against the unfortunately-situated king of Black.

57...e2 58.♖g5+ ♔h6 59.♖g6+ ♔h7 60.♖g7+ ♔h8 The king is squeezed to the corner!

61.♖e7

61...♖xg3 [A really nice line arises after 61...♖xa3 62.g4!! and on the too greedy 62...fxg4?? 63.♔g6 +- White suddenly mates!]

62. ♔xf5 [62. ♖e8+! was the most precise way to draw, giving Black not even the smallest hope to convert his advantage. 62... ♖h7 63. ♖e7+ ♖h6 and only now 64. ♖xe2 when White creates a mate threat on the h-file. 64... ♖h5 65. ♖xf5 ♖f3+ 66. ♖e6 ♖xa3 67. ♖e5+ =]

62... ♖xa3 63. ♖xe2 ♖b3 64. ♖e4?! After this inaccurate move, the position remains drawn. [But the active defense combined with a small tactical trick was much easier 64. ♖e5! ♖xb4 65. ♖g6! as usual, White uses the poor placement of his opponent's king. 65... ♖g4+ 66. ♖f5 = and White takes on b5 with a draw.]

64... ♖g7! Black had to be really happy to finally escape from the corner.

65. ♖e5 a3 [65... ♖d3 Going behind his own pawn might be a better try, but White should be able to hold the draw anyway 66. ♖e6 ♖d8 67. ♖e7 ♖a8 68. ♖g4+ ♖h6 69. ♖d6 = Still, Black's main problem is his cut king.]

66. ♖d5?! [66. ♖d6 would have secured the draw, as we can see in the lines: 66... ♖f6 (66... a2 67. ♖e7+ ♖f6 68. ♖a7 ♖b2 69. ♖c5 =) 67. ♖e6+ ♖f5 68. ♖e5+ ♖f4 69. ♖xb5 ♖e4 70. ♖a5 ♖d4 71. b5 =]

66... ♖f7! Black prevents the check on the 7th rank to go behind the a-pawn! Now a2 threatens with a win. White has only one move to save the game, which is already very difficult to find...

67. ♖f4+? He fails. [67. ♖d6!! Refreshing the ♖e7 idea was the correct move! 67... ♖f8 (67... a2 68. ♖e7+ ♖f6 69. ♖a7 =; After 67... ♖d3+ 68. ♖c6 a2 69. ♖e1 Black does not have ♖b1 anymore.) 68. ♖f4+ ♖g7 (68... ♖e8 69. ♖e4+ ♖d8 70. ♖f4 =) 69. ♖e4 =]

67... ♖g6! Black is winning now! Let's see the differences:

68. ♖f2 [68. ♖e5 is met with 68... ♖g5! with the same problem as 68. ♖e4.; On 68. ♖e4 ♖f5 White can not take the b5 pawn after check, like we saw in the previous lines...]

68... ♖xb4 It is over now! Black obtained the "self-helped" pawn, what we already discussed in the 5th edition of the CEWN newsletter. Black can promote the pawn without the help of his king!

69. ♖a2 ♖b3 70. ♖d4 b4 71. ♖c4 ♖b2 72. ♖a1 a2 0-1

(16) Seirawan,Y (2643) – Ramirez,Alej (2593) [D11]

ch-USA 2012 Saint Louis USA (4), 11.05.2012

[Chess Evolution]

We are in a very interesting endgame from the US Championship. This game was already quite a long one, we are at move 77. All game long, White was pushing but never could find a concrete way to finish the game. Let us evaluate if the current position is a winning one!

77...♖c5 78.♖a7! White starts with a perfectly good move: the White rook is going to the 8th rank, and the Black King is getting into a mating net.

78...♔g7 79.♖a8 f6 Probably the only move. [In case Black keeps waiting, White has a very simple way of finishing the game 79...♖c4 80.♖g8+ ♔h7 81.♖f8 and the f7 pawn. Of course, with 2 extra h- and g-pawns, Black's position is hopeless.]

80.♖g8+ ♔h7 81.♖f8! A good move! White continues building a mating net around the Black king.

81...fxg5

82.♖f7+? The check came too early [82.hxg5! would have been the right play, now White wants to play ♘f5 with the deadly threat of g6. 82...♔g7 83.♖f7+ ♔h8 84.♘f5! and again the move ♘f5 decides the game! 84...♔g8 85.♖f6 White will play ♔g6 and the mate is coming very soon.]

82...♔h8 83.hxg5 Can Black find a way to give up the bishop for the g5-pawn?! Usually it should be possible, but the Black king on h8 is under constant mating threats!

83...♙a5! Black is planning to play ♙d2.

84.♖d7 At first sight, this is a very good move. White defends against the ♙d2 move, and at the same time, if Black plays ♖c7, he can play ♖d8. On the other hand, White gives the Black king a chance to escape from the "corner of death". [If White tries to avoid the escape of the Black king 84.♘f5 ♔g8 85.♔g6 (In case of 85.g6 ♙b4! it is very hard for White to make progress.) 85...♖c6+! 86.♖f6 ♖xf6+ 87.gxf6 At first sight, it looks like the position is winning, but it is a draw. 87...♔h8 88.f7 ♙b4 From now on White can not make any kind of progress, the position is a draw.]

84...♙c3! The only right diagonal for the Black bishop. Black has to be prepared against White's maneuver ♖g4-f6

85.♙g6 Giving Black an amazing chance to draw! [The logical 85.♘g4 ♜c6 86.g6 could be met with 86...♙g8! Black King is starting the run 87.♘h6+ ♚f8 88.♘f5 ♙e8 89.♞b7 ♙d8! and the position seems to be a draw. In case of g7, Black will always have the ♙xg7 resource, with a theoretically drawn position of R+N versus R.]

85...♞c6+ 86.♙f7 After playing 3 great moves in a role, Black makes a terrible mistake — and the draw was sooo close already.

86...♙e5? This move allows White to win by force. [Black had here a study looking draw 86...♞c5! The first step is to bring the White pawn to g6 87.g6 ♞c8 88.♘f5

It looks like the position is totally lost, White wants to play ♜d2 with mate on the h-file, but 88...♙g7!! gets a very beautiful draw! 89.♘xg7 ♞c7!! (Of course not 89...♞f8+? 90.♙e6 and White is winning.) 90.♞xc7 The Black King is in stalemate.]

87.♘g4! Now, White has just enough time for the ♘g4-f6 maneuver.

87...♙c3 88.♘f6 ♙xf6 [88...♞c8 89.♞d3 +-]

89.gxf6 ♙h7 If Black rook would be on a6, the position is a theoretical draw! But the rook is on c6, and White makes use of it.

90.♙e7 ♞c8 White wanted to play f7.

91.♞d8 ♞c7+

92.♙d6! And here we see the difference, if the Black rook would be on a7, Black could have played ♙g6 with a draw.

92...♞f7 [92...♞a7 93.♞d7+ +-]

93.♙e6 We faced another very interesting endgame. As we could see, it is quite hard to defend a worse endgame, so from the practical point of view: to win such an endgame is much "easier" than holding the draw. **1-0**

Clash of the Titans

(17) Stein, Leonid — Spassky, Boris V [C09]

URS Soviet Union, 1967

[Balogh Csaba]

The “Titan section” is back with a great fight between the 10th World Champion, Boris Spassky, and Leonid Stein, who was clearly a top 10 player in the 60s!

1.e4 e6 2.d4 d5 3.♘d2 c5 4.♘gf3 ♘c6 5.exd5 exd5 Black goes for the Tarrasch line in the French defense. In this variation, Black accepts to play with an isolated pawn, but he tries to compensate with active piece play.

6.♙b5 ♙d6 7.0–0 ♘ge7 8.c4 [White should definitely prefer 8.dxc5 ♙xc5 9.♘b3 when we reach the starting position of the whole line. Black can choose between two retreats of the bishop, to d6 or b6.]

8...a6!? An excellent idea based on a positional pawn sacrifice! [The before-mentioned game continued with 8...0–0 9.dxc5 ♙xc5 10.♘b3 ♙b6 11.♙xc6 bxc6 12.c5

♙c7 13.♘fd4 White created nice squares for the knights, but the bishop pair compensates for Black.]

9.cxd5? White falls into the positional trap. [9.dxc5 should have been played 9... ♙xc5 10.cxd5 axb5 11.dxc6 An important moment: 11...0–0! (But not 11...bxc6 because of 12.♘e4! ♙xd1 13.♙xd1 and Black has problems with his king.) 12.cxb7 ♙xb7 Black sacrificed a pawn, but due to the open position where the pair of bishops can work with full effectiveness, he does not need to worry about staying worse.]

9...axb5 10.dxc6

10...c4! This was Spassky's idea when he played 8...a6!

11.cxb7 ♙xb7 Let's summarize what we have for the small material deficit... Black has the bishop pair, the bishop on b7 controls the relevant long diagonal, the d5 square might be occupied by any of the pieces, an excellent pawn structure on the queenside — the b5, c4 pawns are clearly dominating the a2, b2 counterparts — and an isolated pawn on d4 which becomes a real target. After analyzing all this factors, we come to the conclusion that Black's compensation is not only enough to secure a draw, but he already overtook the advantage as well!

White is missing his light squared bishops, which could reduce the power of the bishops with ♗e4!

12. ♖e1 0-0 13. ♘e4 ♖e8!? This move is a matter of taste. Spassky decides to give up his “weaker” bishop, it is more important to save the one on b7 for the long-term. However, it was possible to keep both bishops as well. [13... ♗c7 gave an advantage as well.]

14. ♗g5 [After 14. ♘xd6 ♖xd6 Black is better anyway, but maybe the “less pieces, less problems” strategy could help White to survive.]

14...f6! Taking the e5 square under control to reduce the movement of the White knight. Without the light squared bishop, White can not make use of this weakness.

15. ♗d2 ♘f5! Going for the d4 target!

16. ♖c2 [16. ♘xd6 would have been the last chance to take the bishop, but position the remains quite bad... 16... ♖xd6]

16... ♗f8! White cannot defend the pawn...

17. ♖e2 [17. ♗c3 is refuted nicely by 17...b4! 18. ♗d2 (18. ♗xb4 does not work 18... ♗xb4 19. ♖xc4+ ♖h8 20. ♖xb4 ♗xe4) 18... ♖d5! 19. ♘g3 ♘xd4 Nicely illustrates the power of the b7 bishop!]

17... ♘xd4 18. ♘xd4 ♖xd4 19. ♖ae1 By giving back the pawn, White at least could activate his pieces. Unfortunately for him, Spassky finds a nice combination to obtain material advantage:

19...f5! At first sight it might look like a blunder, but **20. ♘f6+ ♖xf6 21. ♖xe8 ♖g6!** with this double attack, Black wins back the exchange.

22. ♖xf8+ ♖xf8 23.f3 Only with this sacrifice, White could prevent the mate. [23.g3? ♖c6]

23... ♗xf3 24. ♗c3 ♗e4 25. ♖f2 Until this moment, Black played a perfect game, but now he blunders a small tactic, which could have cost him the victory...

25...f4? [25...♖d8 Black is up a pawn and has the more active bishop, which is a really important factor at the appearance of the opposite colored bishops.]

26.♖d1? White logically tries to activate his rook, but it throws away the sudden chance! [26.♙xg7! Both players missed this small tactical trick. White restores the material equality and saves the game.]

26...♙c6 Now Black is winning again.

27.h3 [27.♙b4 ♖e8]

27...h6 Both players opened their back-ranks. [27...f3 was another way to victory 28.g3 ♖e8! 29.♖e1 ♖e2! 30.♖xe2 fxe2 31.♙xe2 ♙xg3+ 32.♙f1 ♙xh3+ 33.♙e1 h5 should be easily winning.]

28.♙h2 ♖f5! Black continues the attack by transferring the rook to g5! White can not hold the threats.

29.♖d8+ ♙h7 30.♙c2

30...♙g3+! Clever way to unpin the b1–h7 diagonal.

31.♙g1 [Of course not 31.♙h1 ♙xh3+!] **31...♙e3+!** And on every possible king move, ♙e4 decides the game!

32.♙f2 ♖g5 Now, finally White survives getting mated by exchanging the queens, but it costs him another pawn, which is already too much to have any hopes...

33.♙xe3 ♖xg2+ 34.♙f1 fxe3 35.♖d6 ♙e4 36.♖d4 [36.♖e6 loses to 36...e2+ 37.♙e1 ♙d3]

36...♙f3 37.♖f4 e2+ [White resigned in view of 37...e2+ 38.♙e1 ♖g1+ 39.♙f2 ♖f1+ 40.♙g3 ♙c6 and the pawn promotes! A fantastic achievement by Spassky, even if there was a blunder in the 25th move.] **0–1**

Editorial Preface

The World Championship match between Anand and Gelfand is still tied 4-4. We have seen 1 victory for each side. We present you one of them. The tension is growing from round to round, since there are only 4 games left, and a small mistake could be decisive.

The US Championship has come to a dramatic end! The two favorites, Nakamura and Kamsky, were dominating the field, scoring one win after another. After the 9th round, Kamsky had the lead with 7 points, while his rival was just a half point behind him. In the penultimate round, they faced each other and Nakamura won a very interesting battle with the Black pieces. In the last round, he secured the first place with a fine win over Seirawan! In the current CEWN, we demonstrate 3 critical games from this event.

In the “surprise section”, try to calculate as long as you can. The final strike — the whole point of the puzzle — comes only after a long and forced line.

We wish you lots of fun with the 13th edition of CEWN!

4 best games of the past week

(1) Gelfand,B (2727)
— Anand,V (2791) [D45]

WCC (7), 20.05.2012

[Arkadij Naiditsch]

So long we've been waiting for this day, and finally THE day has arrived. Gelfand has won the 7th game of the match very solidly. Anand helped him to get the full point — where he could.

1.d4 d5 2.c4 c6 3.♘c3 ♘f6 4.e3 e6 5.♘f3 a6 Another game on the Slav, and probably some of the spectators thought here „another short draw...”. Gelfand had different plans

6.c5 ♘bd7

7.♙c2!? A very rare move in a well known position. [7.♙d3; 7.b4 are the main moves here.]

7...b6 Basically, Black only has 2 major ideas here, to push b6 or to push e5. In case of e5 now, the Queen on

c2 might be very useful. [7...e5 8.dxe5 ♘g4 9.♘a4! and here we see why the Queen on c2 is a useful piece, to protect the pawn on c5! 9...♘dx5 (9...♘xc5?! 10.♘xc5 ♙a5+ 11.♙d2 ♙xc5 12.♙c3 followed by h3-g4 cutting out the Black knight from the game. White is doing clearly better here.) 10.♘xe5 ♘xe5 11.♘b6 ♖b8 12.b4 and it seems like White got a small advantage. I guess this „advantage” is not enough to have real hopes of getting the full point...]

8.cxb6 ♘xb6 [8...c5 would have been the other option for Black, but in case of 9.♙d2 ♘xb6 we would go back to the game.]

9.♙d2 c5 10.♖c1!? Until this oment, Gelfand blitzed out his moves while Anand had been spending some time starting from 7.♙c2. [10.dxc5 looks very tempting but doesn't work 10...♙xc5 11.♘b5 ♘e4! and, of course, Black is doing more than fine.]

10...cxd4 Here we had the first very interesting moment, to take on 10...cxd4 or to play 10...c4, both seem to lead to a slightly worse position, but which one too choose? [10...c4 11.b3! Of course White needs to open the queen-side immediately. (Moves like 11.e4 ♙b7! 12.e5 ♘e4 usually lead nowhere for White) 11...cxb3 12.axb3 += Black would give a lot to have the knight not on b6, but on c6! This is the right place for the knight. Now White will play ♙d3, 0-0, ♘e5, with some pressure]

11.exd4 ♙d6 The first move after which Gelfand started thinking.

12. ♗g5! In my opinion a very good move, showing a deep understanding of the position. [First it seemed like 12. ♘a4 ♘xa4 White wanted to play ♗a5 13. ♔c6+ ♗d7 14. ♔xd6. This looks clearly better for White, but Black can improve his situation by playing 14... ♘e4 15. ♔a3 ♘xd2 16. ♔xd2 ♗f6! . This move is super important and typical for many types of positions. Black doesn't allow the White knight to jump to e5. (16... ♔e7?! would be too early 17. ♔xe7+ ♔xe7 18. b3 ♘b6 19. ♘e5! The White knight managed to reach his destination on e5 19... ♗f6 20. ♘xd7 ♔xd7 21. ♔c5 += . The a6 pawn is weak, White controls the c-file, and the bishop is better against the knight — all these factors give White a clear advantage.) 17. ♗d3 White can't do anything better than to play ♗d3 17... ♔e7! and only now comes the exchange of queens 18. ♔xe7+ ♔xe7 19. b3 ♘b6 20. ♔c5 ♗d6 21. ♔hc1

21... ♘c8! This fantastic move solves all Black's problems. The knight has finally reached the right square, c6, and we get to an endgame where only Black could claim to have an advantage.]

12...0-0 13. ♗d3 h6 14. ♗h4 From the first look, the position looks very harmless for Black. But things are by far not so clear here... Black has a big problem, the bishop on c8. Eventually, White could be better in the endgames due to the pawn structure and the weak Black pawn on a6.

14... ♗b7 A logical move by Anand. [It's hard to say if 14... ♗f4 15. ♔d1 ♗b7 would be the right way for Black to react, in order to include the moves ♗f4-Rd1.]

15.0-0 ♔b8 A very risky move. [15... ♘bd7 Here, it looks much more solid to play 16. ♗g3 ♗xg3 17. hxg3 and we would be back to a position similar to the one in the game.]

16. ♗g3 White continues his opening strategy, to play with as less risk as possible. Maybe here White had a good chance to try to play a bit more active. [16. ♗xf6!? From a positional point of view, this move is clearly a „bad choice“ for White. Anyway, chess is a tactical game and the Black king is open now, which usually gives a lot of tactical opportunities. 16... gxf6 17. ♘e2! This is the key move of 16. ♗xf6, the White knight is going to h5! (Of course, in case of 17. ♔e2 ♔c8 followed by ♗f8-g7, only Black can be better.) 17... ♔c8 18. ♔d2 ♗f8 19. ♘g3 and I think White has very dangerous play on the kingside. The knight is going to h5, attacking the f6 pawn, which will be very hard to defend. If Black plays f5, the e5 square will be free for White to play ♘e5, followed by ♔f4.]

16...Rc8 Another risky move by Black that gives White an extra opportunity. [16...g3!? 17.hxg3 Rxd6 leaving Black with a much wider range of possibilities for the next move. Black could try the Nbd7-Rfe8 and e5 idea, which would lead, in the worst case, to a slightly unpleasant position.]

17.Rxe2 [Why not 17.Ne5!? Ne4! This is clearly what Gelfand might have been afraid of. (17...Nbd7 18.Rxe2!? would have clearly been an interesting choice for White. In case of 18...gxe5 19.dxe5 Ne8 20.f4! followed by f5, White has a dangerous attack.) 18.gxe4 dxe4 19.Rxe2 f6! Black has an open king, but he got the d5 square. In my opinion, we are in a very complicated position.]

17...g3 18.hxg3 Rxd6 19.Rc2 Nbd7

20.Rfc1 At first look, this position should be equal, but what can Black do here. How to get rid of the bishop on b7, how to get the guy into the game?!

20...Rab8!? I think this was a very strong move by Black, forcing White to act. [20...Rc7 21.Na4 Rxc2 22.Rxc2 and White is doing a bit better. On 22...Rc8 23.Rxc8+ gxc8 24.Qc2 we get to a typical position which is quite unpleasant to play for Black. Even if the queens are exchanged, the game would not be a draw at all, due to the pawn structure, that always gives White some edge.]

21.Na4 Ne4? From here on, Anand starts to do very strange moves... We can rarely see the World Champion (maybe never) in this shape. Did he drink or eat something wrong during the game?! [21...Rxc2! During the live game, I thought this might be Black's idea 22.Rxc2 (22.Qxc2 doesn't bring any advantage either 22...Rc8 23.Qd1 Rxc1 24.Qxc1 Ne4 and Black is just in time to block White from playing Nc5.) 22...gxc6! Black is getting rid of the bad bishop, the troublemaker 23.Nc5 gxb5 and in my opinion, Black should be doing fine here. I don't see any reason for White to claim an advantage.]

22.Rxc8+! This logical move leads to a big advantage for Black.

22...gxc8 23.Qc2 [Another very good option for White was 23.Qe1!

23...♙b7 24.♚a5 and White places the queen just in a perfect place! Black got no ♖c8 because of ♗xc8 and ♙d8. The next White move will be ♚c7 or ♖c7. The position is a clear +/-; 23.♙xe4? would be too greedy 23...dxe4 24.♚xe4 ♙b7 and due to the great bishop on b7, Black shouldn't have any problems. There's enough compensation for the pawn.]

23...g5? What a shocking move by Black... It's hard to say what was the idea of Anand, but in any case, this kind of moves should not be played at all. [23...♘df6! was probably the only way to continue the game, even though White is doing already better 24.♘c5 ♘xc5 25.dxc5 ♚c7 26.♚c3 blocking the dark squares. White will play b4 next, it will be possible to play a4-b5, otherwise, just ♘e5 followed by f4. It's clear that White is doing better, but how much better? Well, this would have been seen had Black played 23...♘df6.]

24.♚c7! Excellent answer by Gelfand, who just probably said „thanks” to the g5 move. White reaches an endgame with a huge advantage.

24...♚xc7 25.♖xc7

25...f6?? An amazing mistake by Anand. After this move, Black can basically resign. It's interesting that at this point Anand only had 15 minutes left until the time control. This is clearly a very bad sign, we can rarely see the World Champion spending more than an hour for the whole game! Probably Anand was very tired, or maybe he was pretty disappointed with his play?! We will never know, but one thing is clear, something is very wrong with V. Anand... [25...♘df6 26.♘e5 ♘d6 was the only choice not to lose immediately. Of course, Black is doing very bad here.]

26.♙xe4! The winning move! We cannot imagine how Gelfand felt like at this moment. Since 1993, he hadn't won a game against Anand with a normal time control, and to go ahead and win in the 7th round of the WCC match... Well, better than a dream! :)

26...dxe4 27.♘d2 White's knights are dominating the board and Black is still „sitting” with his bad bishop on c8.

27...f5 28.♘c4 ♘f6 29.♘c5 ♘d5 30.♖a7 For a while I thought that Anand would just resign the game. It is really a „disgusting” position from Black's point of view. No moves...

30...b4 31. e5 c2!? In a lost position, Anand finds some practical chance, even though White is still totally winning and it is not easy to go wrong...

32. c6 xb2 33. c7! The easiest winning move. Of course 33. e7 and 33. a8 were winning as well.

33...b1+ Allowing White a very beautiful finish. [Of course, 33...e3 34. xc8+ h7 35. c7+ h8 36. fxe3 xe3 37. e5 clearly doesn't save Black from a 0! 37... xg2+ 38. h1 f2 39. cd3 and White should easily convert with a piece up.]

34. h2 e3 35. xc8+ h7

36. c7+! A move that's too easy to be missed.

36...h8 [36...g6 37. e5+ h5 38. xe6 +-]

37. e5 e2 38. xe6 Followed by g6, g8, and g7 mate. Black is hopeless! A very solid game by White, and an incredible performance by Black. **1-0**

(2) Kamsky,G (2741)
– Seirawan,Y (2643) [B19]

ch-USA 2012 Saint Louis USA (9), 17.05.2012

[Balogh Csaba]

Gata Kamsky won a nice game against the Caro-Kann defense. The game is interesting from a theoretical point of view as well.

1.e4 c6 2.d4 d5 Recently, the Caro-Kann lives its best period ever. We very often meet with this opening, even on the highest level. The advance variation with 3.e5 is White's favorite nowadays, but fashion changes from time to time.

3.♘c3 dxe4 4.♗xe4 ♘f5 5.♘g3 ♘g6 6.h4 h6 7.♗f3 ♗d7 8.h5 ♘h7 9.♙d3 ♙xd3 10.♙xd3 e6 11.♙d2 ♗g6 12.0-0-0

12...♙e7 This is considered to be the basic position of the 3.♘c3 line, where White can choose between 3 big setups. Black's other main option with 12...♙c7 followed by 0-0-0 is out of fashion now.

13.♗e4 [13.♙b1 and; 13.♙e2 are the two other setups.]

13...♗xe4 14.♙xe4 ♗f6 15.♙d3 0-0 [For the Caro-Kann fans, I would probably suggest 15...♗g4 this is how the big opening expert, Alexey Dreev, played few month ago. 16.♙e2 0-0 The knight is very annoying on g4. It prevents the typical g4 pawn sacrifice, which we will see in our current game as well. 17.♗e5 ♗xe5 18.dxe5 ♙b6 19.♙b1 ♗fd8 20.g4 20...♙b5! This is Black's defensive resource. 21.♙xb5 (If White wants to keep the queens on the board with 21.c4 ♙c5 22.f4 b5! Black creates his counterplay against the provoked weakness with c4.) 21...cxb5 22.♙e3 b6 23.c3 ♗ac8 Black was more or less fine in Guseinov-Dreev, Plovdiv 2012.; The standard 15...♙d5?! is not advisable here 16.c4 ♙e4 because of 17.♙b3! b5 18.♗he1 ♙f5 19.♗e5! and Black has serious problems on the queenside.]

16.♙b1 Preparation for the g4 sacrifice. [On 16.g4, a theoretically very important game was played 2 months ago 16...♗xg4 17.♗hg1 ♗xf2 18.♙e2 ♗xd1 19.♙xh6 ♙f6 20.♙xg7 ♙xg7 21.h6 ♙f6 22.♙h2 (22.♗xg7+ ♙h8 23.♗g5 ♙xh6 24.♗h7+ ♙xh7 25.♗xh7 ♙xh7 26.♙h5+ leads to draw as well.) 22...♙xf3 23.hxg7 ♙e3+! 24.♙b1 (24.♙xd1 ♙xd4+ 25.♙c1 ♙xg1+ 26.♙xg1 ♗fe8 =) 24...♗c3+! The only way to avoid mate 25.bxc3 ♙xg1+! 26.♙xg1 ♗fd8 Everything was more or less forced until this moment. I remember, that I was watching this game live, and both players were blitzing out the moves until this moment. This is what we call computer chess. 27.♙g5 ♙h7 28.♙f6 ♗d7 29.♙b2 ♗g8 30.♙h4+ ♙xg7 31.♙g3+ ♙f8 32.♙b8+ ♙g7 33.♙g3+ ♙f8 34.♙b8+ ♙g7 35.♙g3+ 1/2-1/2 Hovhannisyan-Akopian, Plovdiv 2012.]

16...c5 Black's main strategy in this opening is to open the position with this c5 break, and in the endgames (after the heavy pieces get exchanged on the d-file) the h5

pawn might become a real weakness. Black won many games this way...

17.g4! And this is White's strategy! He must launch an attack against the Black king, which is also very natural in case of opposite side castling. Of course, giving mate has higher value than one pawn. :)

17...♘xg4 Black must accept the sacrifice. Allowing White to play g5 is too dangerous. [17...cxd4 18.g5 hxg5 19.♙xg5 followed by an attack on the g-file.]

18.♙e2! Kamsky protects the f2 pawn before playing ♖hg1. Seirawan reacts with the first move of the machine, probably they were both still in their preparation.

18...♙h8 Moving out of ♙xh6 after ♖hg1–Nf6. [Another idea could be 18...♙b6 to defend the e6 pawn after 19.♖hg1 f5 but here, White plays the energetic 20.♘e5! ♘xe5 21.dxe5, with huge pressure on the g-file.]

19.♖hg1 ♘f6 20.dxc5 [20.♙xh6 would have been premature 20...gxh6 21.♙e3 ♖g8 22.♙xh6+ ♘h7 23.♘e5 ♙f8 Black defends against the concrete threats and preserves the extra piece.]

20...♙c7 Black had to leave from the pin on the d-file.

21.♘e5! Kamsky brings his pieces into the attack, but Caro-Kann players know that Black's defensive possibilities are excellent in this opening.

21...♙xc5? [21...♖ad8! should have been played, when it is not easy at all to continue the attack 22.b4 might be the strongest move for White, but of course it has its minuses as well. (22.♖de1 ♙xc5; 22.f4 does not work with the idea of ♙g2 22...♙xc5 The bishop controls the g1 square; 22.♖g3 ♙xc5 23.♖dg1 ♖xd2! 24.♙xd2 ♙xe5) 22...a5 23.a3

axb4 24.axb4 followed by ♙f4. White's prospects seem to be slightly preferable.]

22.♙xh6!! gxh6 23.♖d7!! A fantastic tactical shot, to lure the knight from the defense! [23.♙d2? ♙xe5 24.♙xh6+ ♘h7 White has nothing.]

23...♙xd7! Only move to avoid mate, but it loses material. [23...♘xd7 24.♙d2! ♙h7 25.♘g4!! This is the whole point! The mate is unavoidable.]

24.♘xd7 ♘xd7 25.♙d2! This double attack finishes the game.

25...♙h7 26.b4 [There was nothing wrong with 26.♙xd7 +-]

26...♖ad8 27.bxc5 ♘f6 [27...♘xc5 28.♙f4 +- with the threat of ♙f6.]

28.♙f4 Black could resign at this moment, Seirawan tries for few more moves.

28...♘e8 [28...♘xh5 29.♙e4+ ♙h8 (29...f5 30.♙xe6 +-) 30.♙e5+ +-]

29.♙e4+ [29.♖g6! was the computer finish!]

29...♙h8 30.♙xb7 ♘g7 31.♙xa7 ♖c8 32.♖d1 ♘f5 33.♖d7 ♙g7 34.a4 ♙f6 35.a5 1-0

(3) Kamsky,Gata (2741) – Nakamura,Hikaru (2775) [B90]

ch-USA 2012 Saint Louis USA (10), 18.05.2012

[Arkadij Naiditsch]

Only 2 rounds to go in the US Championship. The usual battle between Kamsky and Nakamura for the tittle. Before the game, Kamsky was a half point ahead. As we know, playing for second place is definitely not Nakamura's style. We will see a fighting game, with a lot of mistakes, and a lot of emotions!

1.e4 c5 Nakamura is playing a lot of different openings against 1.e4, and it's hard to guess his first move. In the current game he chose the Najdorf, maybe a bit surprising for Gata, because he didn't seem to be well prepared in the opening.

2.♘f3 d6 3.d4 Is Gata playing for a win?! 3.♙b5 would be a very safe move, and the draw is enough to be half a point ahead before the last round.

3...cxd4 4.♘xd4 ♘f6 5.♘c3 a6 6.a4!? And Gata plays his favorite move, 6.a4, which he already used in his World Championship match against Topalov.

6...e5 In my opinion, 6...e6 or 6...g6 are make more sense now. Now, in the game, White is sort of „half a tempo“ up in comparison to the 6.♙e3 e5 7.♘f3 line.

7.♘f3 ♙e7 8.♙c4 And we can see that the a4 move is a very useful one, it stops Black from playing b5. The idea of the whole system for White is to exchange the bishop on c1 for any Black piece by playing ♙g5, and then start to take over the d5 square. The only problem could be

that the knight on f3 is out play. So, in the best case, White will transport the knight via ♘d2-Nf1–Ne3 and ♘d5. This would be the perfect scenario.

8...0–0 9.0–0 [It would be too early to play 9.♙g5 ♙e6! White wanted to play ♙xf6 and ♘d5 with a slightly better position 10.♙xf6 ♙xc4 11.♙xe7 ♔xe7 and Black is doing perfectly fine. The pawn on d6 is a little weak, although White cannot create any serious threats. Black will play ♘c6, ♖d8 and will probably push through with d5.]

9...♙e6! Here we see the weak point of the a4 move. In case of the usual ♙b3, Black will take ♙xb3; White doesn't have the usual option of axb3, and will have to take with the c-pawn.

10.♙b3?! Maybe the usual answer. [10.♔e2!? looks interesting to me, trying to save a tempo on ♙b3 10...♘c6 11.♖d1 and maybe White will be able to avoid playing ♙b3.]

10...♘c6! Another very important move that clearly shows the weakness of White's play, the bishop on b3!

11.♙g5 ♘a5 The idea of Black is to force White to take with ♙xe6 fxe6, and of course White's hopes for an advantage just disappear.

12. ♖xf6 White continues with the plan, but he had to lose one tempo with ♖b3, and another one on the next move with ♖d5. 2 tempi in the opening are just too much to have hopes to get the advantage.

12... ♖xf6 13. ♖d5 [13. ♖d5 ♖xb3 14. cxb3 ♖c8 would lead to no advantage for White. The knight on f3 is standing very badly, and it's not clear why the knight is better than the bishop on f6.]

13... ♖c8 Black is preparing the ♖c4 jump.

14. ♖d2 If we look at this position from a logical point of view, we can easily figure out that something went very wrong in the opening for White. He managed to block the d5 square with a piece, but with the wrong one, a knight should be standing there. The bishop on d5 has no options except to take on e6, which would lead to a better position for Black.

14... ♖c7!? A very interesting move. Black fixes the c2 pawn as a potential victim, and at the same time, he frees the d8 square for ♖d8. Also, ♖xd5 could be a threat given that White would not be able to play ♖xd5 because of ♖xc2, and of course, in case of exd5, Black would be doing very good. [Also possible would be 14... ♖b6 15. ♖b1

(Of course not 15. ♖b3 ♖c4!) 15... ♖g5 and we are in a position similar to the game.]

15. ♖e1 White continues to follow the opening plan...

15... ♖g5! Until now, Black is playing a great game. Attacking the knight on d2, he wants to win control over the c4 square, and finally get the knight from a5 into the game.

16. ♖f1 [16. ♖f3 ♖h6 would have no effect on Black.]

16... ♖b6 Black tries to keep the position complicated. [The simple 16... ♖c4 17. ♖xc4 is the only move for White. On 17. ♖b1, ♖xb2 would follow 17... ♖xc4 18. ♖e3 ♖e6 and Black is doing at least equal — probably a bit better. White finally covered the d5 square, but had to give up both bishops.]

17. ♖b1 ♖c4 18. ♖e2 Not an easy task to find a useful move for White. [A clear mistake would be 18. ♖xc4? ♖xc4 19. ♖e3 ♖d4 and White will not be able to avoid some material losses.]

18... ♖h6 A good positional move by Black. Nakamura is bringing the bishop „just in case“ to a safe position. And indeed, Black has no need to hurry. White has no obvious ways to continue. [18... ♖xb2? 19. ♖d1! and Black is a piece up.]

19.h4 A clear sign that Kamsky could not find a clear plan.

19...♔b4 Black continues to improve his position.

20.g3

20...♖c7! The rook on c7 is standing just great. In case of ♕xe6 fxe6, Black will have the move ♖cf7! with big pressure over the f2 pawn. Also, ♖fc8 could be a future response.

21.♔g2 ♖b6 Time for action. Black wants to play ♖xa4.

22.♕b3!? Probably the only way to get some counter chances in a bad position. [22.♖ed1 ♖xa4 23.♖xa4 ♕xa4 24.c3 ♕d7 looks like a pawn down for nothing.]

22...♕xb3? In my opinion, this is too greedy. [22...♖c4!? Now Black really wants to take with ♖xb2 23.♕xc4 ♖xc4 24.♖e3 ♕xe3 25.♕xe3 f5 with a very dangerous initiative. All Black pieces are standing on very good positions. And suddenly White can get in big trouble.]

23.cxb3 ♕xb3 24.a5! Suddenly, things aren't clear at all. White is going to have a fantastic knight on d5, plus the bishop on h6 could be in danger after ♖h2-g4.

24...♖a4

25.♖h2?! What a strange decision. [Why not 25.♖d5! . What can be more logical than to play ♖d5? 25...♖c2 26.♕d1! Maybe this is the move that White missed?! 26...♖xb2 27.♖e7+ ♔h8 28.♕xd6 and White is already taking over the game. ♖g6 is a big threat. Black's pieces are pinned and the bishop on h6 is out of play.]

25...g6 [In case of 25...♖xc3?! 26.bxc3 ♕xc3 27.♖g4 ♕xa5 28.♖ed1! , we are facing a very funny position. Black is 3 pawns up, but things are not that clear at all. White has many potential ideas for an attack. Besides, the d6 pawn could fall after ♖d5 and ♖bd1. In my opinion, the position is very unclear here.]

26.♖g4 ♕g7 27.♖d5 ♖c2 Black needs to force the exchange of queens as fast as possible. With 2 strong knights, White always has good chances for an attack.

28.♕e3 [28.♕d1 doesn't work now 28...♖xb2 29.♖e7+ ♔h8 30.♕xd6 ♕a4! and Black can simply move the Queen away from the b-file, threatening ♖d3. The bishop on g7 takes away White's idea of ♖xg6.]

28...♖c5 This allows White to get a forced draw. [Probably, after 28...♕xe3 29.♖gx3 ♖xb2 30.♖xb2 ♖xb2 31.♖b1 White has a clearly better endgame.]

29.h5? What a mistake! Could it be that White was playing for a win?! [29.♘df6+! would have been the correct decision 29...♙xf6 (29...♔h8

30.♘d7! Probably, this move was blundered by White 30...♔d8 (30...♙xe3? 31.♘xe3 and Black is losing an exchange.) 31.♘xc5 ♙xe3 32.♘xe3 ♔xc5 33.b4 and we have reached a typical position, something White wanted to get from the first moves of the opening. The White knight on d5 will totally dominate the Black bishop, and even being a pawn down, White has a clear advantage here!) 30.♘xf6+ ♔g7 31.♘h5+! and Black cannot avoid the perpetual check.]

29...♙xe3 This move starts a very long line of forced moves. It's hard to say if Black calculated it all, or just was a bit lucky...

30.♘gxe3 ♔d2 31.♘c4 White needs to do something regarding the pawn on e4.

31...♔d4 32.♘xd6 ♔d8 Another forced move. White wants to play b4.

33.b4 ♘d3! The first moment when Black had 2 choices. [The good looking 33...♘xe4? 34.♘e7+ ♔f8 35.♘xb7! would lead to big trouble for Black 35...♙xe7 36.♘xd8 ♔xd8 37.b5 ♘c5 38.hxg6 hxg6 39.♔ec1 and due to a very

dangerous a pawn, White is doing clearly better here. Yes, 2 pieces aren't always a winning combination, especially when they are so uncoordinated.]

34.♘xb7 ♘xe1+ 35.♔xe1 White has a pawn and 2 very strong knights for the exchange, it's very hard to say who is doing better here. Probably, the position should be about equal. We can imagine both players suffering here, in big time trouble and with the pressure that was there from move 1. Blacks needs to win, but I guess Kam-sky was also quite ambitious and wanted to win the US Championship with one round to spare.

35...♔a8

36.f3? This move allows Black to cut the knight on b7. [36. hxg6 hxg6 37.♘d6! would have been the correct idea. And probably Black has nothing better than to make a draw by repeating moves with ♔d8-Nb7-Ra8-Nd6.]

36...♙f8! The White knight on b7 has no moves, plus the b4 pawn is hanging.

37.♔c1 White can not keep the b4 pawn. [37.♔b1 ♔b8]

37...♙xb4 38.♔c7 gxh5 39.♔h3 ♔g7 40.♔h4 ♔a7 Time trouble is over. Black is a clear exchange up, plus the knight on b7 and ♔c7 are pinned. Seems like White's only chance for a draw is the knight on d5, which could jump to f5 via ♘e3-f5.

41. ♔xh5

41... ♖xd5! From a human point of view, a logical decision. Black kills the main enemy, but White gets a few tactical chances. Also 41... ♖xd5 shows big confidence in his own calculation, which was not easy at all. [41... ♖d3! would end the game immediately 42. ♘xb4 ♖b3 Black is winning the piece back, getting 2 rooks against rook and knight. White is totally hopeless.]

42. exd5 ♙xa5 43. ♖e7 [43.d6 is a losing move, but the variation is not obvious at all 43... ♙xc7 44. dxc7 ♖a8 45. ♘d6 a5 46. c8 ♖xc8 47. ♘xc8 a4 48. ♘d6 a3 49. ♘f5+ ♔f6 50. ♘e3 a2 51. ♘c2 White is just in time to stop the a-pawn, but Black has a few more pawns 51... ♔e6 52. g4

52...f5! and Black is in time to make a new passed pawn. Great calculation by Nakamura!]

43... ♙b6 44.d6 a5 45. ♔g5 White looks for chances, but there aren't any. [Black also wins after 45. ♘d8 ♔f8! Again, we have the same idea, the White knight cannot stop Black's a-pawn 46. ♖xa7 ♙xa7 47. ♘c6 ♙b6 48. ♘xe5 a4 49. ♘c4 ♙c5 50. d7 ♔e7 51. ♔h6 ♔xd7 52. ♔xh7 ♔e6 53. g4 ♔d5 and again, White cannot stop Black from queening the a-pawn.]

45...a4 The winner of the game is: the a-pawn

46. ♔f5 a3 47. ♘d8 a2 48. ♘e6+ ♔h6 49. ♘g5 a1Q 50. ♘xf7+ ♔g7 In the last round of the US Championship, Nakamura completed his victory with a win over GM Seirawan. Anyway, in the current game he had a few „difficult“ moments. The luck of a champion :). **0-1**

(4) Nakamura,Hi (2775) — Seirawan,Y (2643) [C00]

ch-USA 2012 Saint Louis USA (11), 19.05.2012

[Balogh Csaba]

Nakamura had a half point advantage over Kamsky in the last round. Let's see how he handled the tension.

1.e4 e6

2.f4!? Nakamura likes pretty weird openings. These are especially good against players who can get into time trouble, because they must start to think right from the beginning.

2...d5 3.e5 c5 4.♘f3 ♘c6 5.c3 White would like to get a „healthy“ pawn structure with d4.

5...♞ge7 Standard developing of the knight, f5 is its ideal square.

6.♞a3 Before playing d4, White overprotects it with his knight from c2, in order not to get under a quick attack with ♞f5 and ♙b6.

6...♞f5 7.♞c2

7...h5 Seirawan stabilizes his knight on f5. [Two years ago, Nakamura himself had to face this opening against Stripunsky. He reacted with 7...d4 8.♙d3! White immediately makes use of the previous move and transfers his bishop to e4. 8...♙b6 9.♙e2 (It was better to play 9.cxd4 cxd4 10.0-0 ♙d7 11.b3 += followed by ♙b2. White should be better.) 9...♞fe7 10.♙e4 ♞d5 11.g3 (Here again, White should have taken on d4 11.cxd4! ♞xf4 (11...cxd4 12.d3 +=) 12.♙f2 cxd4 13.0-0 with the initiative.) 11...♙d7 12.c4 ♞db4 13.d3 ♞xc2+ 14.♙xc2 f5! 15.exf6 gxf6 16.♞h4 f5 17.♙g2 0-0-0 Black was fine and later won the game.; I like the most, how the big expert of the French defense has handled the position: 7...♙d7 8.♙d3 and here, I like the idea of (8.d4 cxd4 9.cxd4 ♙b6 Black would be fine. He has a very good version of the advance variation (3.e5 line), where the only difference is that the pawn is on f2 and not on f4. Now, the pawn on f4 restricts the mobility of White's pieces.) 8...♞h4 9.0-0 ♞g6! The position is very unusual and it requires unusual handling as well 10.g3 ♙c7 followed by 0-0-0 and f6.]

8.♙d3 g6 9.0-0 ♙e7 White ran out of useful moves, he must take a concrete decision.

10.♙xf5 gxf5

11.d4 White gave up the bishop pair, but the position is closed, where the knights are not worse.

11...h4? A serious positional mistake by Seirawan, who is a great player, but in this tournament was definitely in a terrible form. [11...b6! Black should have kept his center! He can play a5 and ♖a6 next with a perfectly fine position.]

12.dxc5! Excellent decision by Nakamura! By taking on c5, he obtains the important d4 square for his knights!

12...♙xc5+ 13.♙e3 ♙e7! Black must keep his dark squared bishop to control the weakened Black squares (h4, g5, f6, d6, d4). [13...♙xe3+ would be another serious mistake 14.♘xe3 +/- and we get the typical bad „French bishop” against a good knight position.]

14.h3 I like this move! White fixes the h4 weakness. It might restrict the movement of Black's pieces after ♙f2 and ♙e1, as we will see in the game.

14...b6 15.♙e2

15...♘b8? A very nice idea, but unfortunately for Black, White is ready to counter it. The move supports ♙a6 and intends to drive the knight to e4 through d7 and c5. [15...a5 should have been played, followed by ♙a6. 16.♙f2 ♖b8 17.♖fd1 ♙a6 with a playable position for both sides, but White's chances should probably be slightly preferable.]

16.♖fd1 ♙a6 17.♙e1 ♘d7

18.b4! White wants to play on the queenside with a4. Seirawan has definitely seen this when he played his 15th move, but probably he thought that he could make use of the c4 hole with the bishop.

18...♘f8 We can see now that the h4 weakness has annoyed Seirawan a lot, and he transfers his knight to g6. [18...♖c8 is met with 19.a4 ♔c7 (19...♙c4 20.♘cd4 is similar to the game.) 20.a5! The rook is going to penetrate on the a-file.]

19.a4 ♙c4 Otherwise, a5 would have been unpleasant.

20.♘cd4 ♔d7 21.b5! The knight on c6 becomes a beast.

21...♘g6 22.♘c6 ♔f8

23.♘d2! Probably this was the whole concept that was missed, or at least underestimated by Black. He hoped that the c4 bishop would stop White's play on the queen-side, but actually the case is exactly the opposite. It becomes a target, which just supports White's plans.

23...♙d3 24.c4! Nakamura demonstrates with perfect play the deficiency of Black's strategy. The c6 knight is the key of the position, it paralyzes Black's pieces.

24...♔g7 [24...dxc4? 25.♘xc4 Black can not hold the pin.]

25.cxd5 exd5 [25...♔xd5 would have been met with 26.♘xe7 ♘xe7 27.♘f3 +-]

26.♘b1! Nice regrouping of the pieces, using the unfortunate situation of the bishop.

26...♙c4 [26...♙e4 27.♘c3 +-]

27.♔c3! Black can parry the double threat of ♔xc4 and e6.

27...♔e6 28.♘d2! And the bishop is trapped.

28...♖hc8 A tactical blunder in a hopeless position. The c8 square should have been preserved for the queen to retreat. [28...♔h7 29.♘xc4 dxc4 30.♖ac1 +- It is over. Black's main problem remains the same, the c6 knight neutralizes all hopes for counterplay.; 28...♙e2 29.♘d4 +-]

29.♘d4! ♔d7 30.e6! Black resigned! A nice victory by Nakamura, who completely deserved to win the US Championship. **1-0**

Endgame section

(15) Seirawan,Y (2643) – Robson,R (2614) [A16]

ch-USA 2012 Saint Louis USA (6), 13.05.2012

[CE Team]

We are in a practical endgame, White is probably doing a bit better, but nothing more. During the next moves we can clearly see how fast things can change...

16... ♖xf3? In my opinion, a terrible mistake. Now White is doing clearly better. [16... ♖fe8! could have been the right move, with the idea of e5! After all the exchanges on e5, we would most probably reach a rook endgame which is just slightly better for White, but clearly a draw 17.a4 White's idea is, of course, to push a5 17...e5! forcing the major exchanges on e5 18. ♘xe5 ♘xe5 19.fxe5 ♖xe5 20. ♙xb7 ♖xb7 21.a5 ♖be7! White puts pressure on the b6 pawn, and Black on the e2 pawn. The position is close to a draw.; 16... ♖fd8 could have been another idea for Black, in order to play next ♘f8-Ne6 and f5! next. This is, as well, a typical structure of the pieces.]

17. ♙xf3 ♖fc8 This move is also hard to understand, it seems like Black has chosen a passive approach.

18. ♔g2 A solid move, but a waste of time. White could have immediately played ♖fb1–Kf1–e3–Ke2.

18...e6 19.a4 a5 Black continues to be ultra passive. After 19.. a5 Black's only chance to have some play is to get the knight to b4, but this is practically impossible.

20. ♖fb1! Good move. Black pieces ran out of moves now.

20... ♔f8 21. ♔f1 And White is back in the right path.

21... ♔e7 22. ♔e1 ♔d6 23. ♔d2 ♔c7 24.e3 h6

25.h4! There is no reason to give Black any counterplay with g5.

25... ♖g8 26. ♖g1 Blocking against the g5 move and threatening to play h5 eventually...

26...h5 Black is closing the only possible play they had, but the position remains, of course, very solid.

27.d4! Seirawan plays the endgame really good. He has nothing to fear now, the Black knight almost has no moves from d7, except to f6, where it's not well placed. The White pawns at f4 and h4 are going to look weak

now, but like the chess saying goes: „A weak pawn is a pawn that can be attacked”.

27...cxd4 Black is trying to protect himself against White's d5 move. After the exchange on d4, White will never be able to play d5 because of ♖c5, but some other ideas are coming ahead! [27...♖be8 28.d5! As we can see, the d5 move was really a powerful threat 28...e5 29.fxe5 ♖xe5 30.♕h1 with the idea of f4 and e4 next. Black's position is really bad.]

28.exd4 ♕d6 Now it is clear, White is going to play for the c5 push...

29.♖c3 ♖gc8 30.♖gb1 ♕e7 31.♖d3

31...♖d8? This move is almost losing immediately. [Black should have continued what he started: a passive defence, and it is not easy at all to break through for White 31...♕d6 32.♖b5 (32.f5 White always has the idea of the f5 push, but it seems like it never works 32...gxf5 33.♕xh5 ♖h8 34.♕f3 ♖xh4 35.c5+ ♕c7! and the Black king protects the pawn on b6.) 32...♕e7 33.c5 (33.f5 This time f5 doesn't work for a different reason 33...gxf5 34.♕xh5 ♖h8 35.♕f3 ♖xh4 36.c5 e5! The White King on d3 is under check...; 33.♕e2 ♕d6 34.♕d2 ♕e7 35.c5 bxc5 36.♖xb8

♖xb8 37.♖xb8 ♕xb8 38.dxc5 ♕d7! and we can see again that White is clearly not in time) 33...bxc5 34.♖xb8 ♕xb8 35.dxc5 ♕a6 and Black saves the position thanks to the ONLY move ♕a6! Yes, Black is lucky, but as we can see, it is very hard to win a game if the opponent doesn't commit major mistakes. On the other hand, it is super difficult to just move ♕d6-Ke7 for the next 30 moves, and White might find a winning plan eventually. Maybe it could be to put the rook on h1 and then try to push f5!]

32.♕c6! And here comes the immediate punishment. Black is losing the b6 pawn, and the game.

32...♕f6 33.♕xd7 ♖xd7 34.♖xb6 ♖bd8

35.d5! Maybe the young Robson has blundered this move?!

35...♕f5 36.♖b7! The most accurate. With one rook on the board, White's win is almost automatic.

36...♕xf4 37.♖xd7 ♖xd7 38.♕d4 White wants to play ♖b6.

38...g5 [In case of 38...♕g4 39.♕e5! is the winning move. 39...exd5 40.c5 ♕xh4 41.c6 ♖c7 42.♕d6 ♖xc6+ 43.♕xc6 d4 44.♕b5 +-]

39.hxg5 h4 40.♖b8! The best way to hold the free pawn on Black is to attack it from „behind“.

40...♔xg5

41.♔e5! another very strong move. The White king joins the action at the right moment — when the Black king is badly placed on g5.

41...exd5 42.♖g8+ ♔h5 43.cxd5 Black can not stop White's d-pawn from queening.

43...h3 44.d6 White combines the mating threats to the Black king with queening the d-pawn. Black is totally hopeless.

44...f6+ A desperation move.

45.♔e6 ♖h7 46.♖g1 [46.d7 would win as well, with a very nice „computer finish“ 46...h2 47.d8♖ h1♖ 48.♖xa5+ ♔h6 49.♖d2+ ♔h5 50.♖e2+ ♔h6

51.f3!! Of course, the position is winning anyway, but 51.f3 is just fantastic.]

46...♔h4 47.♖h1 ♔g4 48.d7 ♖h8 49.♔xf6 Really well played by Seirawan. From such instructive endgames we can learn a lot! **1-0**

(16) Acs,P (2587) – Horvath,Ad (2473)

Hungarian league, 20.05.2012

[Chess Evolution]

What would you think about this seemingly hopeless position? White is two pawns down and it is only Black who can create different kind of threats. However, the Hungarian GM held the draw, not even giving the smallest hope for his opponent to score. Let's see how could this happen!

42. ♖g3!! White transposes into a bishop endgame and, at the same time, improves his pawn structure.

42... ♜xg3 Black had no choice... [42... ♜h1 would be too passive 43. ♜f4 with an easy draw.]

43. fxg3 White built up an excellent blockading position. The pawn on g3 stops the h- and the f-pawn, while the king goes to e3 or, if Black allows it, to f4. However the key factor is the pawn on b5, which allows White the relevant counterplay, to transfer his bishop to c6. All this facts make it possible for White to save the game with accurate play.

43... ♜g6 44. ♜e3

44... ♜g5 [After the game, GM Horvath told me that his original intention was to play 44...h4!? and by sacrificing one of the h-pawns, Black frees the path for the f-pawn 45.gxh4 ♜f5 The idea is ♜e5 and f5-f4, but Horvath realized his opponent's saving resource: 46. ♜h5!! The only move! (46. ♜b3 f6) 46...f6 (46... ♜e6 is met with 47. ♜f4 = We will see similar position later in the game.) 47. ♜e8! This is the point, White generates counterplay 47... ♜e6 (47... ♜e5 48. ♜c6! ♜xc6 49.bxc6 ♜d6 50. ♜xe4 ♜xc6 51. ♜f5 =) 48. ♜f4 (Of course not 48. ♜c6? ♜xc6 49.bxc6 f5) 48...f5 49. ♜g6 =]

45. ♜b3!

45...f5 Another important moment, where it is very easy to go wrong. [On 45...f6 White has enough time for the usual plan with 46. ♖e6 f5 (46...h4 47.gxh4+ ♔xh4 48.♗f4 h5 49.♕f5 =) 47. ♕d7! Only move, but good enough. 47... ♖g4 48.b6 and Black cannot make progress. 48...♗g5 49.♕e8 =]

46. ♕d1! Black cannot use his bishop to increase the advantage, since it must take care of the b-pawn, while in other cases, Black must allow the White king to occupy the f4 square. [The tempting 46. ♕e6? would lose after 46...h4! 47.gxh4+ ♔f6! and Black is in time to mobilize his passers in the center by putting his king to e5. 48.♕d7 ♖e5]

46...♗c8 Black protects the f5 pawn before pushing h4. [46...h4 47.gxh4+ ♔xh4 48.♗f4 ♖h3 49.♗xf5 ♖g3 50.b6 e3 51.♗g6 =]

47.b6 h4 48.gxh4+ ♔xh4 49.♗f4 ♖h3

50. ♕h5! e3 [50...♗g2 could have been the last try, but White is just in time 51.♕g6 ♖f2 52.♕xf5! e3 53.♕xc8! and the pawns promote at the same time. 53...e2 54.b7]

51. ♕f3 From now on, Black has no more chance to win...

51...♗a6 52.♕e2 ♗b7 53.♕f3 ♗c8 54.♗xe3 ♖g3 55.b7 f4+ 56.♗e2 ♗xb7 57.♕xb7 f3+ 58.♕xf3 h5 59.♕xh5 1/2

Clash of the Titans

(17) Alekhine,Alexander — Bogoljubow,Efim [E11]

Budapest Budapest, 1921

[Balogh Csaba]

This week we'll study once again a heavyweight battle between Alexander Alekhine and Efim Bogoljubow. The players faced each other twice for the World Champion title, both times Alekhine came out victoriously, just as in our current game.

1.d4 ♘f6 2.♘f3 e6 3.c4 ♙b4+ This is the so-called Bogoljubow Indian defense, which got its name after the Black player.

4.♙d2 Here Black has a wide choice of moves. 4...♙e7 is the mainline, but 4...a5, 4...c5 or the text move are also moves with huge theory.

4...♙xd2+ 5.♙xd2 d5 6.e3 0-0

7.♘c3 This setup is in its heydays, two 2700+ GMs play it frequently successfully nowadays. For whom is interested, I recommend to check Jobava and Vitiugov games.

7...♘bd7 [7...♙e7! is the right setup, and also how the mentioned experts are playing. The idea is ♙d8, and a quick dxc4 and c5. White has to work hard to prove some advantage.]

8.♙d3 This move is always questionable, since it allows dxc4 with a tempo. White usually makes some useful moves like ♖c1 before developing the bishop. [Anatoly Karpov won a nice „squeezing game” against Andersson in 1984 with his usual style: 8.cxd5 exd5 9.♙d3 ♙e8 10.0-0 ♘e4 11.♙c2 ♘df6 12.b4 White launches a minority attack to create weaknesses on the queenside 12...c6 13.♘e5 ♙f5 14.♘a4 g6 15.♙b2 a6 16.♖fc1 ♙e7 17.♘c5 ♘xc5 18.bxc5 ♙xd3 19.♘xd3 += and Karpov got a small but stable advantage, which he converted in 84 moves. First, he transferred his king to a1, then started to move with his kingside pawns, which were supported by his heavy pieces, then as usual, he preferred to bring back his king to g1 :, and slowly but surely brought home the full point.]

8...c6 [8...dxc4 9.♙xc4 c5 would have been logical after 8.♙d3, with the idea of ♘b6 and cxd4.]

9.0-0 Black must do something in the center, otherwise e4 arrives, which guarantees a small advantage for White.

9...dxc4 10.♙xc4 e5! Excellent reaction by Bogoljubow based on a small tactical trick.

11.♙b3 Typical reaction. Black's idea is to take exd4, and on exd4, create a blockade on the d5 square with ♘b6. White is moving out from this tempo. [On 11.dxe5 ♘xe5! was Black's idea, with equality.]

11...♔e7? [11...exd4 should have been played anyway 12.exd4 ♘b6 13.♖fe1! followed by ♘e5 with some initiative for White, although the position is playable for both sides.]

12.e4! Excellently played! But the move had to be calculated precisely. Black must accept the challenge and needs to go for the complications, otherwise, he cannot develop his pieces.

12...exd4 13.♘xd4 ♘c5 [After 13...♘xe4? 14.♔e3 Black loses a piece due to the pin.]

14.♙c2

14...♖d8 This was the critical line. At first sight, White can hardly handle this pin, since he cannot escape with 15.♔e3, because of ♘g4. However Alekhine has pre-

pared his next move and evaluated the consequences perfectly! [The pawn on e4 is indirectly protected in the same way 14...♘fxe4? 15.♘xe4 ♘xe4 16.♔e3 f5 17.f3 +-]

15.♖ad1! ♙g4 Bogoljubow is aiming to finish his development, but this gives enough time for White to consolidate his center, which secures an advantage. [On 15...♘e6 White has 16.♘f5! and the queen is hanging with check! 16...♔c7 17.♔e3 +/- with a clear advantage.]

16.f3 ♘e6 This was the point behind the previous move, but White keeps his calmness.

17.♖f2! There is a hidden weakness in Black's camp, the small a7 pawn. Black cannot take control over the d-file, because this pawn is hanging.

17...♘xd4 18.♖xd4 ♙e6 [18...♖xd4 19.♔xd4 ♖d8 20.♔xa7! Black must waste an important tempo on protecting this guy.]

19.♖fd1 b6 White got enough time to control the d-file. Black has no chance to change all the heavy pieces, which could give him real hopes for the draw. This is all very nice, but how to improve on White's position? Alekhine shows us!

20.h3! +/- Another excellent move, White prepares for f4 and prevents the ♘g4 ideas. If White manages to mobilize his central pawns, they can very quickly decide the game, as we will see in the present case. From Black's point of view, the big problem is that he cannot do anything against it, he must wait and watch how the pawns swap him away.

20...c5 21.♖4d2! Of course, White must keep the d-file under control! This was the only way to do that.

21...♖xd2 22.♔xd2 c4 It is very hard to suggest something clever for Black.

23.f4! Now e5, and when the knight moves, f5 comes with concrete threats.

23...g6 Black tries to prevent the f5 push, but he only manages to do it temporarily.

24.♔d4! Centralizing the queen, Black is in a kind of zugzwang anyway.

24...♖c8 Tries to ease his suffering with ♔c5.

25.g4!! It is practically over! The pawn-storm decides the outcome of the game. Bogoljubow tries a desperate sac-

rifice, but of course, against Alekhine, it is not a serious try.

25...♗xg4 [25...♔c5 does not help, because of 26.f5 ♗d7 27.♔xc5 ♖xc5 28.g5 +- winning a piece.]

26.hxg4 ♘xg4 27.♔g2! The easiest, in order to meet ♔h4 with ♖h1.

27...h5 28.♘d5 ♔h4 29.♖h1 ♔d8 30.♗d1 A real positional masterpiece by Alekhine, who clearly showed that, despite being considered a brilliant tactician player, his positional strength was also outstanding! **1-0**

Editorial Preface

The World Championship has finished with a dramatic rapid tie-break. The score after the normal games was 6–6. So, 4 games of rapid with the time control of 25 minutes, with additional 10 seconds per move, have decided the title. Vishy Anand won the match with a score of 2.5–1.5 and retained his crown! We must admit that Gelfand dominated through the whole tie-break. He always had the upper hand in the games, but being short on time, missed his chances. Anand used the mistakes of his opponent in the time trouble extremely well, and managed both to win a drawn endgame and to save lost and clearly worse positions.

Congratulations for both players. I am sure that in the next few months they will not even look at a chessboard, and will enjoy their well-deserved vacations.

In the current CEWN, our special guest GM Georg Meier, has analyzed his fine positional victory over Sergei Tiviakov, which he needed to win the very strong rapid tournament in Pfaffikon.

There is a real “pearl” in the puzzle section this week, please pay attention to the game Chighlidze-Lomsadze, where Black won after a beautiful combination.

We wish you lots of fun with the 14th edition of the CEWN!

*Arkadij Naiditsch
Balogh Csaba*

4 best games of the past week

(1) Gelfand,B (2727)
— Anand,V (2791) [E54]

WCC Moscow 2012 (9), 23.05.2012

[Naiditsch Arkadij]

1.d4 [It's interesting that we can get the game's position from a completely different line as well 1.e4 c6 2.d4 d5 3.exd5 cxd5 4.c4 ♘f6 5.♘c3 e6 6.♘f3 ♙b4 7.♙d3 dxc4 8.♙xc4 0-0 9.0-0 b6 This is the Caro-Kann „Panov” move order.]

1...♘f6 Anand is changing his opening, no more Slavs. Is it because he lost the previous Black game or just because he had enough of defending slightly worse positions?!

2.c4 e6 3.♘c3 ♙b4 4.e3 The starting position of the Nimzo with 4.e3. A very complex opening with a lot of different setups for both sides. If there is a huge preparation behind it — and Gelfand definitely did it — it is a very dangerous weapon.

4...0-0 5.♙d3 [5.♘ge2 is the other option.]

5...d5 6.♘f3 c5 7.0-0 Thousands of games have been played here and we still don't know if White is better or not... This time it is Black's turn to decide which continuation to choose.

7...dxc4 [7...♘c6 is the most popular line at the moment.]

8.♙xc4 cxd4 9.exd4 b6 Until now both players have been playing very quickly. This position is very well

known and has been analyzed and played by almost all the Top players.

10.♙g5 ♙b7 White has many possibilities. All are similar, many of them lead only to transpositions. For example, most often we get the game's position from the 11.♖c1 ♘bd7 12.♚e2 move order.

11.♚e2!? ♘bd7 [I think 11...♙xc3!? should be the main line for Black. In comparison to the game, Black does not include the ♖c8-Rc1 moves — which I think should favor him 12.bxc3 ♘bd7 13.♙d3 ♚c7 14.c4 h6 15.♙d2 ♘g4! A very typical idea that can be seen in many lines. It forces White to make an unpleasant decision. Either he must weaken the long diagonal with g3, or exchange his strong light-squared bishop 16.♙e4 ♙xe4 17.♚xe4 ♘gf6 with an equal position in Giri-Nakamura Dortmund 2011.]

12.♖ac1! Very quickly played by Gelfand. I think it is a very good move. Black now has to count on 12...♙xc3 13.♖xc3! and suddenly the position could become dangerous. White can continue with ♘e5 followed by ♖g3. Another thing, Black has no ♚c7 so he needs to lose time for ♖c8 — which clearly is not the best move here.

12...♖c8 13.♗d3 General ideas: White is planning to play on the kingside by playing ♘e5 next and searching for tactical blows. Black has 2 major ideas, either to make a blockade on d5 or to play ♗xc3 and then try to create pressure against the central pawns, or to break them with an e5 push.

13...♗xc3 Anand chose the latter idea.

14.bxc3 ♖c7 15.c4 We reached a standard pawn structure. White got the center and the bishop pair, on the other hand Black would like to make holes in it with e5. In general, such structures are evaluated as a bit better for White but it is very difficult to increase the advantage. Black's position is stable, always ready for counterplay.

15...♗xf3? It is very hard to explain this move... Maybe the World Champion missed that he has no e5 in the next move? We will never know. One thing is for sure, this is a move with a „don't try it at home" sign! [15...♖d6; 15...♖c6 Both moves would give Black a normal game.]

16.♖xf3 ♖fe8 Probably now Anand realized that after [16...e5 17.♗f5! is not the most difficult move to blunder — winning the exchange 17...exd4 (17...♖ce8 18.♖g3 and

all the pieces are pinned.) 18.♗xf6 ♘xf6 19.♗xc8 ♖xc8 20.♖fd1 +/- and Black can hold only by miracle!]

17.♖fd1 White got the bishop pair and very pleasant play. The Black knights are getting nicely blocked by White's center and the move e5 almost never works.

17...h6 18.♗h4 ♖d6 So we have probably reached „the critical" position of the game.

19.c5? In my opinion, a big mistake! Gelfand is going for the queen which guarantees him the possibility of „torturing" Anand for the next 30 moves, with no real winning chances. [19.♗g3 would have been the right choice here 19...♖e7 20.♖e1 No reason to give Black any hopes for e5. White's next move could be ♖cd1, then maybe h4-h5 and ♗h4 back. White should not hurry with anything and enjoy the position. Black has basically no idea how to improve and is forced to wait for White's actions.]

19...bxc5! Only move, still it deserved the !. You can have my queen, Anand says it with pleasure :).

20.dxc5 ♖xc5 21.♗h7+ ♖xh7 22.♖xd6 ♖xc1+ 23.♖d1 So White is a queen up, but of course it is easy to see that Black got very good chances for a fortress. Idea of Black:

to exchange one rook, to exchange one knight for the bishop, then to put the knight on d5 and the rook on c7, which should guarantee a draw. Ideas of White: the major goal is to keep the bishop of h4 alive. In case it is possible, Black will have big problems defending the pawn a7; with both knights on the board, only one of them can occupy the square d5.

23...♖ec8 Of course no need to hurry with ♖xd1.

24.h3 White needs to make the first rank safer.

24...♞e5! Following the main goal, the exchange of the bishop on h4.

25.♞e2 ♞g6! White can not keep the bishop on the board.

26.♙xf6 [26.♙g3 ♞e4! The bishop is going to be taken!]

26...gxf6 27.♖xc1 ♖xc1+ 28.♙h2 If the Black pawn was on g7, both players would agree to a draw, but with a damaged pawn structure, White is getting some chances. Besides, the Black knight hasn't arrived to d5, so White has a few „free“ moves to try to prevent it. Another relevant fortress idea could be a setup, when Black plays a5

and puts his rook on d5. It would be impossible to break through.

28...♖c7! The fortress with a5 would cost that pawn after ♞b5, so Black protects the pawn and the 7th rank.

29.♞b2 ♙g7 30.a4 Sooner or later, White needs to push his pawn to a6 to tie Black pieces. [30.♞b8!? was a tricky idea 30...♖d7 31.♞c8! trying to force the rook to e7, and after 31...♖e7 White plays (31...♖d5! Here comes the other fortress idea. Black wants to push a5 to secure the draw. 32.♞a6 is the only way to avoid it, but now 32...♖d7 and the knight is heading to d5 again.) 32.g3! taking away the f4 square which could bring the knight to d5, while the other route, through e7, is also blocked 32...f5 33.h4 ♞f8 34.♙g2 ♖d7 35.a4 ♖e7 36.a5 ♖d7 37.a6 ♖e7 Even if this position is a draw — and probably it is — it is clearly better for White to have the Black knight on f8 instead of on d5.]

30...♞e7! The knight is heading to its ideal position!

31.a5 ♞d5 32.a6 Of course, pawn on a6 is standing very good. White got now the idea of ♞b7, but at the moment this idea brings nothing for White, since Black can simply start passing with the king on g7-g8.

32...♔h7 Black is asking White „do you want to play g4?“

33.♚d4 I think this is an absolutely correct try from White, seems like after 33.g4 Black holds the draw by „doing nothing“. [33.g4 ♖g7 34.♚g3 ♔h7 35.♚h4 The only plan for White is to go with the king to h5 and attack the h6 pawn. (35.h4 ♖c3+ 36.f3 ♖c7 37.f4 ♖c3+ 38.♚f2 ♖c7 and again White can not break through.) 35...♖c3! 36.♚b7 ♔g7 with a deadly threat: ♜f4.]

33...f5 Black puts the pawn on f5. Why? Very simple reason: the exchange of all the pawns brings Black closer to a draw, and now White has no other idea to win than to play g4, which would mean the exchange of one pawn.

34.f4 ♖d7 35.♚g3 [35.g4!? would have been a better try to win the game 35...♚g6! Probably the only move (35...fxg4 36.hxg4 ♔g8 37.♚g3 ♖c7 38.f5 and maybe White has some chances to win the game) 36.♚g3 (36.gxf5+ exf5!

followed by the next move ♜f6, here White is hopeless, the position is a draw) 36...♜f6! and probably also here White can not reach anything better than a draw. The Black pieces are too stable.]

35...♔g6 36.♚h8 ♜f6 37.♚b8 h5! Black prevented the g4 option forever.

38.♔h4 ♔h6 As we will see further in the game, Anand has switched to 38...♖e7 which gives a draw as well.

39.♚b2 [39.g4 hxg4 40.hxg4 ♜xg4 41.♚h8+ ♔g6 42.♚g8+ ♔h6 is just a draw.]

39...♔g6 40.♚c3 ♜e4 The time trouble is over, Gelfand had a long thought here, tried to find a winning plan, but there is no objective chance to score.

41.♚c8 [It was not too late to lose the game by playing 41.♚f3 ♜f6 42.♚g3+ ♔h7 43.♚g5 and it seems like White is winning the h-pawn — this is correct, but by losing the h-pawn, the White king gets into a mating net! 43...♜e4! 44.♚xh5+ ♔g7 and White cannot do anything against ♖d8-Rh8! Black is winning.]

41...♜f6 42.♚b8 ♖e7 Of course 42...♔h6 would lead to a draw as well.

43.g4 The last try.

43...hxg4 44.hxg4 fxg4 [Of course not 44...♜xg4? because of 45.♚g8+ ♔h6 46.♚g5+ ♔h7 47.♚xe7]

45. ♔e5 At first sight it seems to be dangerous, but Anand prepared the cold blooded

45... ♘g8! [The active 45... ♘d5? loses to 46. ♔g5+ ♕h7 47.f5! exf5 48. ♔xf5+ and the knight on d5 falls.]

46. ♔g5+ ♕h7 47. ♔xg4 f6 Another precise move leaving White with no hopes.

48. ♔g2 ♕h8 49. ♔e4

49... ♕g7 An interesting game! Objectively judging the game, the move 19.c5? gave out the advantage, but it gave us a very instructive example on how well can the R+N cooperate in endgames to create fortresses! **1/2**

(2) Nguyen Ngoc Trungson (2656) – Harikrishna,P (2693)

Asian Nations Cup ZaoZhuang, China, 24.05.2012

[Balogh Csaba]

An impressive win in the Asian Nations Cup! Black probably mixed up something in his preparation and got into deep trouble right after the opening.

1.d4 ♘f6 2.c4 e6 3. ♘c3 ♙b4 4.e3 The Nimzo with 4.e3 is getting really popular again. Probably the fact that Gelfand obtained an advantage with it in two games against Anand in the WCC match will also improve the opening's popularity.

4...b6 [4...0-0 and; 4...c5 are more common moves.]

5. ♘ge2

5... ♙a6 This is the old main line. Probably Harikrishna wanted to surprise his opponent, but White was prepared perfectly for it. [However recently, if somebody plays 4... b6 it usually continues with 5...c5 6.a3 ♙a5 7. ♖b1 ♘a6 with very sharp lines to follow.]

6.♘g3 [6.a3 is the other way to handle the position in order to keep a healthy pawn structure.]

6...♙xc3+ 7.bxc3 d5 This is Black's idea! Otherwise the move ♙a6 loses its point. Black had to take on c3 before playing this move, because of the check on a4. Fischer played a few games on the 60s with this setup.

8.♙a3! The young Vietnamese GM knows the theory well. White prevents 0-0. [There was a giant game on move 8.♙f3 0-0 9.e4 dxe4 10.♘xe4 ♘xe4 11.♙xe4 in this moment, Fischer came up with a fantastic idea. 11...♙d7!! Prepares for the ♘c6-a5 maneuver, launching an immediate attack against the weak doubled pawns. White has a chance to obtain 2 rooks for the queen, but in this case as well, the weakness of the queenside pawns will tell 12.♙a3 ♖e8 13.♙d3 Developing and forcing some weaknesses before taking the rooks 13...f5 14.♙xa8 ♘c6 15.♙xe8+ ♙xe8 16.0-0 ♘a5! This is the point, White loses a pawn and in addition, the black knight is going to dominate the a3 bishop 17.♖ae1 ♙xc4 18.♙xc4 ♘xc4 and Black won later in the game Portisch-Fischer, Santa Monica 1966]

8...♙xc4 9.♙xc4 dxc4

10.e4! White tries to make use of the fact that the Black king is still stuck in the center. [White could have taken back the pawn, but this would give enough time for Black to solve his opening problems 10.♙a4+ ♙d7 11.♙xc4 ♙c6 White has to exchange the queens and the end-game is about even.]

10...♙d7 Black wants to castle queenside, and also would like to keep his extra pawn on c4. We are still in theory.

11.0-0 ♙c6? This is a terrible novelty, which just helps White to initiate an attack against the king. [11...♘c6?! is less exact, because of 12.♙e2 ♘a5 13.♙b4 when White is going to win back the pawn and enjoy a comfortable advantage due to his superior pawn formation.; 11...♙b5! is definitely the right move, with the idea of ♘c6 and 0-0-0. White must act quickly here with 12.e5! ♘d5 13.♙g4 creating holes in Black's camp, and the knight could use them from e4 13...g6 14.♘e4 ♘d7 15.♙c1! h6 16.a4 with a complex position. I personally prefer White's position. I think this is more than enough compensation for the pawn.]

12.d5! Of course, White opens the position with tempo.

12...♙b5 White has to play energetically, otherwise after ♘bd7 and 0-0-0 Black enjoys a pawn up. [12...exd5? would be too optimistic to open the e-file 13.exd5 ♙xd5 14.♙e2+ ♙e6 15.♙f3 +- Rooks are joining the game with a winning attack.]

13.dxe6 fxe6

14.e5! The amount of pawns does not count now! White has to open the lines at any cost! Unfortunately for Black, he must cooperate with his opponent because against any moves with the knight, ♔g4 is decisive.

14...♔xe5 [14...♘d5 15.♔g4 +/-]

15.♖e1 ♔d5 Black defends well, but his mistake in the 11th move was too grave. White cruelly punishes him for that.

16.♔e2! Of course, White needs the queens for the attack.

16...♘bd7 [The logical 16...♔f7 is met with 17.♖ad1 ♔c6 18.♖d4! is the „key“, which is necessary for the advantage. White brings another piece into the attack 18...b5 (18...♖e8 19.♖xc4 ♔b7 20.♘e4! +/-)]

19.♘e4! ♘xe4 20.♖xe4 ♖e8 and here White gets the opportunity for a nice finish with 21.♔f3+ ♔g8 22.♖xe6! +- with mate on f8.]

17.♖ad1 ♔c6 18.♘f5! White creates many different threats (Nxc7, ♘d4, ♘e7) using the fact that Black has no 0-0-0, due to ♘e7. [18.♔xe6+ ♔xe6 19.♖xe6+ ♔d8 20.♘f5 +/- is also very good, but why to exchange queens?!]

18...e5 [On 18...♔f7 19.♘e7 +/- is the strongest. Black can not hold the e6 pawn.]

19.g4!! A fantastic move, with a double threat, that Black cannot prevent! The obvious threat is g5 and the knight has no good square to escape, while the hidden idea becomes clear in the 19...h6 line.

19...♔f7 [19...h6 20.♔xe5+!! great queen sacrifice! 20...♘xe5 21.♖xe5+ ♔f7 22.♖e7+ +- followed by ♖xc7 mate. Thanks to the excellent 19.g4!!, the knight on f5 is protected.]

20.g5 ♖he8 Black preferred to give up the piece, which is basically equal to resignation. [20...♘d5 21.♔f3 +/-; 20...♘g8 21.♖xd7+ ♔xd7 22.♔xe5 +/-]

21.gxf6 ♖xf6 Black has 3 pawns for the piece, but his pawns are weak and White pieces are standing perfectly.

22.♖e3 b5 23.♖g4 ♖xg4 24.♔xg4 ♖e6 25.♔e4 White simplifies the position to a winning endgame. From now on, all the moves are winning, Black just continues playing on, because in a team tournament it is especially a bad feeling to resign a game...

25...♔xe4 26.♖xe4 ♖a6 27.♙c5 ♔f6 28.a3 ♔f5 29.f3 ♖g6+ 30.♔f2 c6 31.♖d7 a5 32.♖f7+ ♖f6 33.♖xg7 b4 34.cxb4 axb4 35.♙xb4 c5 36.♙c3 ♖e6 37.♖xc4 ♖xa3 38.♖xh7 ♖a2+ 39.♔e3 ♔g6 40.♖hh4 ♔g5 41.♖h8 Finally Black resigned. A nice attacking game, I especially liked the 19.g4 move with the idea of ♔xe5. **1-0**

**(3) Korobov,A (2678)
– Socko,B (2635)**

Lublin, 26.05.2012

[Balogh Csaba]

A really high-level performance by the Ukrainian GM with the White pieces.

1.d4 d5 2.c4 dxc4 Black chose the Queen's gambit accepted and White reacts with the most aggressive move.

3.e4 e5 The most forcing line. Other possibilities like 3... ♖f6 or 3... ♖c6 are also playable. Black can choose his setup according to his style.

4.♖f3 Theory is developing very quickly recently, due to the arising sharp positions, where the computers are coming up with many new ideas.

4...♙b4+ [4...exd4 is the mainline. It's interesting that Socko won a nice game with this just a few weeks ago, and now he deviates from that game.]

5.♙d2 ♙xd2+ 6.♔xd2 A sideline compared to the main 6. ♖bxd2. The move was considered to be harmless, but maybe after the present game, it will be time to take it seriously.

6...exd4 7.♖xd4 ♔e7 Black could have started with 7... ♖f6, the difference will be only in the move order.

8.♖c3 ♖f6

9.0-0-0 and this is the novelty! I must say, a very logical one. [In the previous game, between two great players, White played much more carefully with 9.f3 0-0 10.♙xc4 c5! (10...♖d8 is a mistake! Seems like Black pins the queen, but after 11.0-0-0! it is not easy at all to avoid the ♘f5 threat. Suddenly Black finds himself in a pin.) 11.♘de2! The knight is heading to the weakened d5 square, but Black has an important resource to parry the threat 11...♖d8 12.♙e3 ♙e6! and after 13.♙xe6 fxe6! 14.0-0 ♘c6 15.♖ad1 b6 with a more or less even position in Andersson-Seirawan, Tilburg 1990.]

9...0-0 10.♙xc4 This is the point! White does not waste time on defending the e4 pawn and wants to rush Black in the center with ♖he1 and e5. It is very unpleasant to face such a novelty. Taking on e4 looks very suspicious and also the opponent might have prepared something. This is how Socko was probably thinking, and decided to avoid complications.

10...c5 [However, after analyzing the position, I came to the conclusion, that the only way to fight for equality was in taking the „poisoned” pawn. 10...♘xe4! White has two options: 11.♙e3 (On 11.♘d5 Black must react precisely with 11...♙h4! (After 11...♙c5 12.♙c2 Black is in deep

trouble. The threat is b4 and the knight is hanging on e4.) 12.♙e3 (12.♙e1 ♘d6! Black can sacrifice an exchange 13.♘xc7 ♘xc4 14.♘xa8 ♘c6 15.♘xc6 ♙h6+! This is the key! 16.♙b1 ♙xc6 and the knight is trapped in the corner.) 12...♘xf2 and Black is fine.) 11...♙c5! Another only move 12.♙xf7+ ♖xf7 13.♙xe4 ♘a6 and the position seems to be around even, but of course, without the computer, it is very hard to find these moves.]

11.♘db5! Thanks to 0-0-0, White supports the invasion on the d-file with his rook. A positional threat could be ♙d6, transposing to a better endgame. White had to evaluate the consequences well since the move might meet with a quick a6-b5 attack, when all the moves are coming with tempo.

11...a6 [On 11...♘c6 the most accurate is 12.♖he1! ♘e5 13.♙e2 and ♙d6 is coming in the next move, even after 13...a6, with a clear advantage for White.]

12.♘d6 ♘c6 Black also tries to use his d4 square. [12...b5 does not work 13.♙xf7+ ♖xf7 14.♘xc8 +/-]

13.♖he1! Very well played! Black has no good way to prevent e5, after which his position might immediately collapse if he doesn't find something clever now.

13...♙e6 The best chance, but it does not solve the problems. [13...♖d8 is punished elegantly by 14.e5! ♘xe5 15.♖xe5! ♙xe5 16.♘xf7 +/- winning material.; 13...♘e5 just temporarily stops e5, because after 14.♙b3 White is going to push f4-e5 with tempo.]

14.e5

14...♘g4 Black must try to complicate matters, otherwise White's active pieces in the center quickly swaps him away. [14...♘d7 15.♘d5! ♙xd5 16.♙xd5 with a huge advantage 16...♘cxe5 loses to 17.♘xf7! ♖xf7 18.f4! +/- Black cannot hold the pins...]

15.f4 ♙xc4 16.♘xc4 ♘d4 At least Black temporarily pushed back the pieces, but it costs him to get a really poor knight which lands on h6 soon.

17.h3 ♘h6 18.♙d3 White would like to play g4 to exclude the knight on h6 forever from the game. First he had to leave from the ♘f3 fork. [A rather positional way would have been 18.♘d6 and after 18...♘hf5 19.♘xf5 ♘xf5 20.♙d7 +/- White has a clearly better endgame.]

18...b5 19.♘d6

19...f6 Black tries to stay in the game. He wants to play ♘f7 to get rid of the strong d6 knight, which paralyzes his pieces. White must play really energetically, otherwise his advantage can quickly spoil.

20.b4!! I really like this move! White wants to keep his d6 knight at any cost, and at the same time wants to get rid of the strong d4 knight. [Once again, there was a more positional way to keep the advantage 20.♙e4 ! 20...fxe5 21.fxe5 ♘f7 22.♘xf7 ♙xf7 23.e6! +/- and White supports his e-pawn with all his forces. The knight on c3 also joins through d5.]

20...fxe5 21.bxc5 [The tactical solution 21.♖xe5 was also good enough 21...♙f6 (21...♙xd6 22.bxc5 White takes back the piece on d4.) 22.♘d5! this is the key 22...♙xd6 23.♘e7+! ♙h8 24.bxc5 +/- and again White takes on d4 next.]

21...♖xf4

22. ♔e3! White creates some threats using the pin on the e-file, f4 and the d4 are hanging, Black must leave with the queen. [The tempting 22. ♘d5? would change the outcome of the game 22... ♔e6! 23. ♘xf4 ♔xa2! and suddenly White is in trouble.]

22... ♔g5 [22... ♖af8 23. ♖xd4 ♖xd4 24. ♔xd4 exd4 25. ♖xe7 dxc3 26. c6]

23. ♖d2 By unpinning the king along the c1–h6 diagonal, White creates again many different kind of threats, like ♘d5, g3 or ♔xe5. The move covers the important c2 square, where Black could set some tricks. [23. ♘d5? would be a blunder again 23... ♔xg2 and mate threat on c2...; On 23.g3 Black had 23... ♔g6]

23... ♘f7 24. ♘d5 ♘f5 [24... ♘xd6 25. cxd6 ♖c8+ 26. ♔b2 +- White wins. The knight takes some big material on f4 or through e7.]

25. ♘xf5 ♖xf5 26. c6 [26. ♔xg5 It would have been more practical to exchange the queens first, then there is no chance to blunder anymore. 26... ♖xg5 27. c6 +- and thanks to the powerful d5 knight, the pawn promotes soon.]

26... ♔h4 27. c7 White is winning anyway.

27... ♖c8 28. ♖c2 ♘d6

29.g3! Black resigned since he cannot cover the e7 square. A really great achievement by White, who combined the positional ideas with strong tactical play! **1–0**

(4) Tiviakov, Sergei (2656)
– Meier, Georg (2637) [C10]

Pfaeffikon rapid, 28.05.2012

[Meier, Georg]

1.e4 e6 2.d4 d5 3.♘d2 dxe4 No, I am not playing for a draw. In this opening, I usually try to get to some equal endgame, where I hope to outplay my opponents. To be honest I was expecting a higher level of resistance than usual in this game, but it turned out to be easier than expected.

4.♘xe4 ♘d7 5.♘f3 ♘gf6 6.♘xf6+ ♘xf6 7.♙d3 c5 8.0–0 cxd4 9.♘xd4 ♙c5 10.♘f3 0–0 11.♙g5 Tiviakov made all these moves quickly, confidently aiming for the ensuing endgame.

11...h6 [11...b6 12.♙e2 ♙b7 13.♖ad1 ♙c7 14.♙xf6 gxf6 15.♙e4 ♖fd8 16.g3 ♙xe4 17.♙xe4 f5 18.♙e2 ♙e7 19.c3 ♙f6 20.♖xd8+ ♖xd8 21.♖d1 ♖xd1+ 22.♙xd1 In principle, this is the best White can get. With ♙+♘ vs. ♙+♙ he is hoping to prove that the Black king is weak. Although Tiviakov succeeded 15 years ago, I don't think that black has any serious problems. 22...♙c4 23.a3 b5 24.♘e1 a5 25.♘d3 e5 26.♙d2 ♙d5 27.♙e2 ♙g7 28.g4 ♙g5? (28...♙f8 = would have led to equality 29.gxf5 e4) 29.♘xe5 f6 30.♘f3 fxg4 31.♘d4 f5 32.♘xb5 and later White managed to convert his advantage Tiviakov-Speelman, Beijing 1997.]

12.♙h4 b6 13.♙e2 ♙b7 14.♖ad1 ♙c7 15.♙xf6 gxf6 16.♙e4 I guess my opponent was happy, and I was too!

16...♖fd8 17.c3

17...♖ac8 Here I realized White could exploit my extra move h7-h6.

18.g3?! [18.♙xb7 ♙xb7 19.♖d2 ♖xd2 20.♙xd2 and Black must lose a tempo to protect the h6 pawn, but anyway it seems to be fine after 20...♙g7 21.♖d1 ♙e7 followed by ♖d8.]

18...♙xe4 19.♙xe4 ♖d7! = After this move, I take the d-file under control, which guarantees equality.

20.♖xd7 [White could have forced an immediate draw with 20.♙g4+ ♙h7 21.♙h4 ♙g7 22.♙g4+ =]

20...♙xd7 21.♖e1 ♖d8 22.♙g2 b5 I start to improve my pawn structure, giving White chances to create problems for himself.

23.a3 a6 24.♖e2 ♙d1 25.♙c2 ♙f8 The endgame is approaching, so the right place of the king is in the center.

26.♙xd1 [On 26.c4 my intention was to push 26...b4 and Black has no reason to worry.]

26...♖xd1 27.♖c2

27...Ke7 I started to feel that I was going to outplay my opponent, who is famous for his strong play in technical positions. By now I reached the maximum Black can hope for: R+B vs. R+N, a centralized king and a few white pawns on dark squares. Nothing has gone seriously wrong yet for White, his structure is flexible enough. But Tiviakov didn't realise that it was time to play for a draw, as only White can possibly lose this kind of positions...

28.Nd2 f5 29.Kf3 Ke1! Cutting off the White king! I had no intention to force a draw with 29...Kh1, I wanted to see if White assesses the position correctly or if he still thinks that he can be better... [29...Kh1 30.Kg2 Kh1 =]

30.b4? A serious mistake, now White has a chronic weakness on a3. White had to find a way to exchange pawns to get closer to a draw. [30.c4?! is inaccurate 30...b4 31.Nb3 (31.axb4 Bxb4 I am going to push a5-a4 and put my king on c5.) 31...bxa3! Important tactical motif to keep the advantage 32.Nxc5 a2 33.Nb3 a5! 34.Rc3 a4 35.Na1 Rxa1 36.Ra3 Rc1 37.Rxa2 Rxc4 with a winning endgame.; 30.Nb3! was the right move, and only after 30...Bb6 31.c4! bxc4 32.Rxc4 Bd6 is still comfortable for Black, but objectively equal.]

30...Bd6 31.c4 Ra1 32.Rc3 Be5 Due to the weakness on a3, White's pieces are getting tied up.

33.Rb3

33...Bd4! I begin to play for domination. This was the most important decision I had to take in this endgame. [The straight forward 33...Ra2 34.Kf3 Bb2 35.cxb5 axb5 36.Nb1 e5 37.Nc3 Bc1+ 38.Kf3 Rxa3 39.Rxa3 Bxa3 40.Nxb5 Bxb4 would have allowed White to exchange too much material. With all the pawns on one side, White should be able to make a draw after 41.Nc7 when the knight gets out of danger.]

34.cxb5? Another huge mistake by Tiviakov! He was probably hoping to get to an endgame like in the last line and exchange pawns, but I was not planning on letting him get out of the box! White had to create a protected passed pawn with c4-c5, which promises him a lot of saving resources. Obviously White was afraid too lose all his queenside pawns in that case though, as they would all be fixed on dark squares. [34.c5 e5 35.Kf3 Ra2 36.Rd3 It's obviously very nice for Black, but with the entry square d6 for the White rook, there will be counterplay when Black decides to go Bb2]

34...axb5 Now Black gets a free hand and will gradually squeeze out the win.

35.h3 Looks miserable, but its hard to find any saving chances for White by now. [35.♔g2 ♖a2 36.♞d3 e5 I need to keep the bishop on d4, which paralyzes White's pieces. (36... ♙b2? 37.♞f3) 37.♔f1 ♙e6 38.♔e1 ♙d5; 35.♔e2 ♖a2 36.f4 Due to the pin on the 2nd rank, I have enough time to collect the a3 pawn 36... ♙b2 37.♔d3 ♙xa3 38.♞f3 ♙b2 and the bishop gets back to the game in time. 39.♞d4 ♙xd4 40.♔xd4 ♜c2]

35...e5 36.g4 ♖a2

37.♔e2 f4 The more natural and elegant way to conclude the game was 37...e4! but I was sure that White could not stabilize on the light squares. [37...e4! 38.gxf5 ♔f6]

38.♞d3 ♙e6 39.f3 [39.h4 f5 40.gxf5+ ♔xf5]

39... ♙e3 40.♔e1 ♙xd2+ 41.♞xd2 ♖xa3 42.♔f2 ♜b3
White could have resigned with a clear conscience here.

43.♞d8 ♜xb4 44.♞h8 ♜b2+ 45.♔f1 ♙d5 46.♞xh6 ♙d4 47.♞h5 f6 48.g5 fxg5 49.♞xg5 b4 50.h4 b3 51.♞g8 ♜c2 0-1

(15) Shabalov,A (2523) — Sargissian,G (2679)

Chicago Open, 27.05.2012

[Chess Evolution]

63...Kg6! Of course, Black must preserve his g-pawn. Otherwise, if White can sacrifice his knight, the a1 corner would be the wrong one for the Black bishop.

64.Ne4 g4 65.Kd4 Bf3! Forces White to decide the direction of the knight. [65...Kf5? would run into 66.Nf2! when White could finally give his knight for the pawn, since 66...g3? does not work because of 67.Nxd1! g2 68.Ne3+]

66.Ng3 Kg5 67.Be3 Seems like everything is fine, but with the help of zugzwang, Black can improve his position.

67...Bb7 White is in zugzwang! He must allow Black to transfer his king to the ideal e5 square. We'll understand soon why this is so important.

68.Ne2 Kf5 69.Ng3+ Ke5 70.Nh5

70...Bc6! Before starting action, Black improves a bit on his bishop.

71.Ng3 Kd5! Black wants to go for the a-pawn!

72.Kd3 Bb5+! and this is the point! White is facing a really unpleasant decision, he must give a free way to his opponent's king! This could be a very important moment because many times in similar situations, one move draws, while the other one is losing. In this particular case, I came to the conclusion that Black is winning in both cases.

73.Ke3 [73.Kc3 Ke5! 74.Kd2 Kf4 75.Nh5+ Kf3

76.♖g7 Black must play accurately to convert the advantage. As we will see, the knight is very tricky... This is positive from Black's point of view, it's not a problem if he doesn't find the win, since he can try as long as he wants. White can only pass with the knight anyway 76...♙c4 (76...g3? is of course premature 77.♖f5 g2 78.♖h4+ =) 77.♖f5 (77.♖h5 ♙f7 78.♖g7 ♖f2 79.♖f5 and here Black has a nice maneuver to transfer the bishop to b1, which is actually not the only way to win, but the fastest one. 79...♙a2 80.♖d4 (80.♖g7 ♙b1 81.♖h5 ♖f3 to control the f4 square. 82.♙e1 ♙d3! and White is in zugzwang 83.♙d2 ♙g6 and then again, the pawn promotes.; 80.♖h6 loses quickly after 80...g3 81.♖g4+ ♖f3 82.♖e5+ ♙e4 and the pawn promotes.) 80...♙b1 81.♖e2 ♙f5 transposes to 77.♖f5.) 77...♙f2 78.♖d6 (78.♖g7 ♙f7 79.♖f5 ♙g6 and g3 next, except on ♖e7 ♙e4.) 78...♙d5 79.♖f5 ♙e4 80.♖d4 (80.♖g7 ♙g6 81.♖e6 g3 82.♖f4 ♙f5 White always finds himself in zugzwangs.) 80...♙h7 81.♖e2 ♙f5 82.♙d1 (82.♖f4 g3 83.♙d1 ♙f3 84.♖e2 g2 85.♙e1 ♙e3 86.♖g1 ♙g4; 82.♖d4 g3)

82...♙e3! This is the key square for the king. Now again, Black can sometimes just go for the a3 pawn 83.♙e1 ♙d3 84.♖g3 ♙f3 85.♖h5 and here again, White has no moves.

Black only needs to waste a tempo, and then the pawn promotes automatically. 85...a6 86.♙d2 ♙g6 87.♖g7 g3 Of course, it is very hard to find this shortest way to win, but Black cannot spoil the advantage, probably even accidentally, he would employ the winning concept.]

73...♙c4 74.♙f4 We reached the critical moment, where Sargissian, who is very strong in technical positions, made a very strange decision...

74...♙b3?? [74...♙d7 Why to give up the pawn? Black could have postponed going for the a3 pawn. First improving the position to the maximum 75.♖e4 a5! 76.♙g3 a4 and after pushing the pawn to a4, Black collects the pawn 77.♙f4 ♙b3 is the elegant win (77...♙c6 is also easily winning.) 78.♖c5+ ♙xa3 79.♖xd7 ♙b4 80.♖e5 ♙c3 and the next 3 Black moves will be made by the a-pawn.]

75.♙xg4 ♙xa3 Suddenly we reached a theoretical drawn position, but White must defend precisely. First he must obviously approach to the pawn.

76.♙f4 a5 77.♖e4 ♙b4 78.♙e3 a4 79.♙d2! Naturally the king should try to reach the corner.

79...a3 80.♘c3 ♕e8! Black needs to cut the king along the b1–h7 diagonal.

81.♗a2+ [81.♖c1 ♕g6 82.♔d2 is the same.]

81...♖b3 82.♗c1+ ♖b2 83.♗d3+ ♖b1

84.♗b4 The knight is standing perfectly on b4, where the king cannot disturb him in one move. White is going to play ♖c3–d2. Black tries for a while, then changes to a more tricky plan.

84...♕f7 85.♖c3! This is important. White must only use the c3 and d2 squares for passing. [85.♖d1? loses to 85...♕g6 86.♖d2 ♖b2 This is the winning position and ♖b3 is coming next. That is why the king must stay on c3, to have the ♖b3 option if the bishop stops controlling that square. 87.♖d1 ♖b3]

85...♕e6 86.♖d2 ♕g4 87.♖c3 ♕d1 88.♖d2 ♕b3 89.♖c3 ♕a4 90.♖d2 ♕d7 91.♖c3 ♕e6 92.♖d2 ♕g8 93.♖c3 ♕f7 94.♖d2 Black realized that there is no break through, so he tries another idea.

94...♖b2 This move must always be met with...

95.♗d3+! ♖b3 96.♗c1+ ♖c4! We came to another very tricky position, where only one move saves White.

97.♗a2! The knight must go to c3, otherwise White gets into zugzwang and loses. [97.♖c2? ♕g6+ 98.♖d2 ♕b1! This is the winning position. White must allow ♖c3, slowly squeezing out the c1 knight. You can see the win in the game's 98...♕b1 line.]

97...♕g6 98.♗c1?? After making only moves during an hour, White gets out of energy and makes a losing move. [98.♗c3 was the way to draw, but White had to see that after 98...♖b3 he has 99.♗e2! Only move! 99...♖b2 100.♗c3 and the position is drawn.]

98...♕f5?? Black spoils the win! [He could have taken control of the a2 square with 98...♕b1 99.♖d1 ♖c3 100.♗e2+ ♖b2 101.♗c1 and Black wins by transferring the bishop to c4. White gets into zugzwang again! 101...♕e4 102.♖d2 ♕g6! Losing a tempo to force the king to d1. (102...♕c2?? seems to win on the spot, but White has 103.♗a2!! and the knight gets to c3, which is a draw as we already know.) 103.♖d1 and now the bishop goes to c4 103...♕f7! 104.♖d2 (104.♗d3+ ♖c3 105.♗c1 ♕c4) 104...

♙c4 105.♔d1 ♔c3! This is the winning position. White is in zugzwang, he must allow ♔c2 in the next move.]

99.♘a2 ♔b3

100.♘c1+?? Shabalov fails to play ♘c3 again, but this time he gets punished for the mistake. [100.♘c3 =]

100...♔b2 101.♔d1 and as we know, the bishop must go to c4.

101...♙e6 102.♔d2 ♙c4 and White resigned. A tough endgame! [102...♙c4 103.♔d1 ♔c3 104.♔e1 ♔c2] 0-1

(16) Zarkua,D (2446) – Jobava,B (2721)

Georgian Championship, 14.05.2012

[Chess Evolution]

An instructive rook endgame. At first sight, the game is unclear, but in reality Black is easily winning. Jobava plays with excellent technique and gives a nice lesson for us.

48...♖h1! Obviously Black needs to support his h-pawn.

49.♖h5 [Trying to create counterplay by using the central pawns is a bad idea here. The pawn cannot leave the e2 square, we will soon understand why... 49.e4? h3 50.♖h5 h2 followed by ♖a1 next move.; 49.♖f6+ ♔d5 50.♖f5+ ♔e4 51.♖c5 ♔xf4 52.♖xc4+ ♔g3 53.♖c7 h3 54.♖g7+ ♔f2]

49...h3! 50.♔c3 h2! We must always think twice before making this move. It is a committing move, since from now on the king cannot help in promoting the queen. If he goes to g3 for example, White gives a check on the g-file and on ♔f2, ♖h7. While with the pawn on h3, Black can temporarily hide his king to h2 and escape his rook from behind the pawn. In our present game, Black per-

fectly realizes that he wins all the pawns with the help of zugzwang.

51. ♔c2 c3 The White king cannot move anymore. On any kind of e-pawn moves, ♖a1 decides the game. White can only pass with his rook on the h-file, or push his f-pawn, which is useless without the e-pawn.

52. ♖h6+

52... ♔d5 Whatever White does, Black is going to win the f-pawn soon.

53. f5 ♔e5 54. f6 ♔e6 and here we are in zugzwang! Not a mutual one, since Black can pass with ♔f7 in any case.

55. f7+ ♔xf7 The next step is to take the e-pawn with the same method.

56. ♖h3 ♔g6 57. ♖h8 ♔g5 White has no chance to save it...

58. ♖g8+ ♔f4 59. ♖h8 ♔g3 60. ♖g8+ ♔f2 61. ♖f8+ ♔xe2 Mission complete! The last step to conclude the game is to leave the 2nd rank with the king and to play ♖a1. Again, White can only watch this.

62. ♖e8+ ♔f3 63. ♖f8+ ♔e4 64. ♖e8+ ♔d5 White resigned, since he soon gets out of checks! It's very important to mention that Black is winning only because he has the c-pawn. If it was on the b- or a-file, and the White king is on b2 or a2, the position would be a theoretical draw, since the only winning idea with ♖a1 does not work anymore! **0-1**

Clash of the Titans

(17) Tal, Mihail – Wade, Robert Graham [B77]

Palma de Mallorca Palma de Mallorca (1), 1966

[Balogh Csaba]

We are going to study an interesting game by Tal! As we will see, there will be many mistakes from both sides, but on the other hand, the game is full of nice tactical ideas.

1.e4 c5 2.♘f3 d6 3.d4 cxd4 4.♘xd4 ♘f6 5.♘c3 g6

Black chose the Sicilian Dragon defense, which guarantees us a very sharp fight. We must admit that this was a really brave decision by Black, to go for this opening against Tal!

6.♙e3 ♙g7 7.f3 ♘c6 8.♚d2 0-0 9.♙c4 ♙d7

10.h4 This move was played by Fischer in 1956, but it usually just leads to a transposition of the 10.0-0-0 mainline.

10...♖c8 11.♙b3 ♚a5 [11...h5 is considered to be the main recently 12.0-0-0 ♘e5 was played by Carlsen and Radjabov.]

12.h5 Of course, in case of opposite side castling White happily sacrifices his h-pawn in order to open the file for his rook. As we will see, it is more effective after some preparation with 12.0-0-0. [White could have transposed to a very good line, but of course, at that time theory had just started developing. Let's see what happens in case of the standard „Dragon moves“ from both sides 12.0-0-0! ♘e5 13.♙b1 ♘c4 14.♙xc4 ♖xc4 15.h5 The same pawn sacrifice like in the game, but this time it works in a much better version 15...♘xh5 16.g4 ♘f6 and here comes the difference: 17.♘b3! it is another standard idea in the Dragon, which sometimes wins the game on the spot. After each move of the queen, White plays the same 17...♙a6 18.e5! dxe5 19.g5 +- is the point! White wins a piece.]

12...♘xh5 13.g4 ♘f6 [13...♘xd4!? was an interesting alternative to make some simplifications before retreating with the knight 14.♙xd4 ♙xd4 15.♙xd4 ♘f6 16.0-0-0 ♙e6 17.♙b1 with chances for both sides.]

14.0-0-0 ♘e5 In most of the lines against the 9.♙c4 setup of the Dragon, Black has to neutralize the strong b3 bishop with the maneuver ♘e5-c4.

15.♙h6

15...♙xh6! Excellent decision by Black, who uses the fact, that White cannot take back with the queen.

16.♖xh6 [16.♙xh6?! is met with the typical exchange sacrifice 16...♙xc3! 17.bxc3 ♙xc3 18.♖b1 ♖c8 with a perfect position for Black! He can slowly push a5-a4. It might seem a bit strange but the f6 knight holds all the threats. White cannot get rid of it, while g5 is met with ♘h5, closing the h-file.]

16...♙xc3! Another typical motif in the Dragon! Black takes the c3 knight, which plays a very important role in the attack. It was the only piece that could have taken away the f6 defender with ♘d5. In addition, Black destroys the pawn structure. [16...♘c4 meets the same motif, which we have already seen in the 12.0-0-0 line 17.♙xc4 ♖xc4 18.♘b3! But the lack of the dark squared bishop gives an additional option for Black 18...♙e5! is the only move to stay in the game, although White gets a dangerous attack anyway (18...♙a6 19.e5! dxe5 20.g5 +-) 19.f4! ♙e6 20.g5 ♘h5 (20...♘xe4? 21.♙h2! wins.) 21.♘d4 ♙g4 22.♘d5 ♖e8 23.♖h1 with a complicated position, although White's chances should be preferable.]

17.bxc3? Of course, Tal would like to keep the queens on the board with the hope of a mating attack, but it could have cost him to the game.... [17.♙xc3 ♙xc3 18.bxc3 ♖c8 19.♖b2 This is one of the typical endgames in the Dragon. Black has only one pawn for the exchange, but his superior pawn structure and pieces give him enough compensation for the material deficit 19...g5 The position should be evaluated around even.]

17...♖c8 A „reflex“ move after the sacrifice on c3, but it spoils a beautiful win! [I think, if Tal was on the Black side,

he would have played 17...♙xg4!! 18.fxg4 ♘xe4 19.♙e3 and here comes the fantastic idea 19...♙a3+ 20.♖b1

20...♘c4!! White is forced to accept this sacrifice as well 21.♙xc4 ♘xc3+ 22.♖a1 ♙b2+!! This is the whole point! 23.♖xb2 ♘xd1+ Black got 4 pawns for the piece, which guarantees him a big advantage, maybe even a winning one.]

18.♖b2 b5? Too slow! [18...♙xg4 should have been played again, but now we are in a different story 19.fxg4 ♘xe4 20.♙h2! The only way to save the game. Otherwise, White loses in a study-like way again. (the logical 20.♙e3 loses after 20...♘xc3 21.♖dh1 ♘c4+! 22.♙xc4 ♖xc4 23.♖xh7 Black's attack arrives on time 23...♙xa2+ 24.♖c1 24...♙a1+ 25.♖d2 ♘e4+! 26.♖e2 (26.♙xe4 ♖xd4+) 26...♙xd4! Black is safe against all the threats and he has obtained a decisive material advantage...) 20...♙xc3+ (20...♙xg4 21.♙h4 ♘xh6 22.♙xe4 Black has 5 pawns for the piece, but with the queens on board, White has good attacking chances.) 21.♖b1 ♘c4 22.♙xc4 ♖xc4 23.♖xh7 ♖xd4 and White has nothing better than perpetual check. Optimistic attempts might cause problems only to himself. 24.♖h8+ ♖g7 25.♖h7+ (25.♙h7+

The Black king runs away 25...♔f6 26.♖f1+ ♔e6 27.♙xf7+ ♔d7 28.♙e8+ ♔c7 29.♙d8+ ♔c6 30.♙c8+ ♔b6 31.♙xc3 ♘xc3+ and Black is better.) 25...♙g8 =]

19.♖dh1 ♘c4+ 20.♙xc4 bxc4 Black was hoping for this position when he played 18...b5 and hoped that the f6 knight would defend him from any trouble.

21.♖xh7! Tal, probably without too much hesitation, sacrificed his rook...

21...♘xh7 22.♙h6 e6? [Black was still fine after 22...♙e5! controlling the h8 square 23.♙xh7+ ♔f8 24.♙h6+ (White cannot transpose to an endgame, because 24.♙h8+ ♙xh8 25.♖xh8+ ♔g7 26.♖xc8 ♙xc8 27.♘c6 ♔f6 28.♘xa7 ♙d7! and the knight is trapped, while the Black king soon collects the kingside pawns.) 24...♙g7 25.♙h4 with a very complex position. Probably the correct evaluation is about even.]

23.f4!! Incredibly strong move! White prevents the ♙e5 and ♙g5 defensive ideas and prepares for g5, when he creates the threat of ♙xh7 ♔f8 ♙h8 ♔e7 ♙f6! ♔e8 ♖h8 mate. Black has two „free” moves, but he cannot prevent this threat. [23.♙xh7+ is nothing after 23...♔f8]

23...e5 [The counterattack doesn't give any hope 23...♖b8+ 24.♔c1 ♙xa2 (24...♙xc3 25.♙xh7+ ♔f8 26.♙h8+ ♔e7 27.♘c6+ wins the queen.) 25.♔d2! ♖b1 26.♙xh7+ ♔f8 27.♙h8+ ♔e7 28.f5! gxf5 (28...♖xh1 29.f6# Nice mate!) 29.gxf5 exf5 30.♖h6 +- with a mating attack.; 23...♙e8 is the computer's recommendation, but it does not help 24.g5 ♖c7 25.♙xh7+ ♔f8 26.f5 +- White is going to mate.]

24.g5 ♙e8 [24...exd4 25.♙xh7+ ♔f8 26.♙h8+ ♔e7 27.♙f6+ followed by mate.]

25.♘e6!! The only winning move! [Black resigned in view of 25.♘e6 fxe6 26.♙xh7+ ♔f8 27.♙h8+ ♔e7 28.♖h7+ ♙f7 29.♙f6+ ♔d7 30.♙xf7+ ♔c6 31.♙b7+ +- An instructive game that demonstrates many typical ideas in the Sicilian Dragon variation!] **1-0**

Editorial Preface

The biggest ongoing event is definitely the French Team Championship. A lot of top GMs are participating and it has a very interesting format, they play on 8 boards and the teams can mix up the order of their players in each round. They publish the pairings only an hour before the game, to avoid long preparations.

Arkadij plays for the team of Marseille. He had a great start, scoring two nice wins, which he is going to demonstrate in this edition. The other two games, and both endgames, are also from this event.

Right after the World Championship match, all eyes will be focused on Moscow again, because from the 8th of June, the Tal Memorial is going to start. Take a look at the list of players:

1	Carlsen, Magnus	GM	NOR	2835
2	Aronian, Levon	GM	ARM	2825
3	Kramnik, Vladimir	GM	RUS	2801
4	Radjabov, Teimour	GM	AZE	2784
5	Nakamura, Hikaru	GM	USA	2775
6	Caruana, Fabiano	GM	ITA	2770
7	Morozevich, Alexander	GM	RUS	2769
8	Grischuk, Alexander	GM	RUS	2761
9	Tomashevsky, Evgeny	GM	RUS	2738
10	McShane, Luke J	GM	ENG	2706

The next two CEWNs will be mainly dedicated to this tournament!

This week, the "Titan section" goes back to the 19th century with a nice game by Lasker.

Once again, we wish you lots of fun with the 15th edition of CEWN!

Top 12 France (1), 31.05.2012

[Arkadij Naiditsch]

In the first round of the French League I had to face my teammate from Baden Baden. Philipp is a good chess player, but he's mainly dedicated to teaching, giving a lot of lessons to young players. In Baden Baden, he is famous for playing with his cap! Once we asked him to take it off but he refused, he said he had achieved a score of 15,5/17 with it. Respect! Luckily, in this game, he didn't have it on :).

1.d4 d5 Usually Philipp doesn't play the Queen's Gambit, so I was a bit surprised.

2.c4 dxc4 And for sure, never the Queen's Gambit Accepted!

3.♘f3 a6 In my opinion, this is a very interesting line! In the main lines after 4.e3 b5, Black is doing quite well.

4.a4 This is a rare move, but this is exactly what I wanted. By now I was quite sure that my opponent was out of his book, or would be soon...

4...♘f6 5.♘c3 e6 6.e4 ♕b4 [6...c5 is probably the most concrete continuation here. It seems like White doesn't get any advantage here.]

7.♕xc4!? We are in a very well known position, except that it usually appears without the a4-a6 moves included.

7...♘xe4 8.0-0

8...♘f6!? After a bit of thinking, my opponent played an interesting move. This move makes a lot of sense. In comparison to the main line without a4-a6, White got no ♕a4 check! [8...♘xc3 This would be the other main move 9.bxc3 ♕e7 10.♘e5 0-0 11.♖g4 and again we are in a very well known position, without a4-a6. It's very hard to say who benefits from these 2 moves!]

9.♕e2 0-0! 10.♖e2 We have quite a strange position. It seems like White is just a pawn down, but things are not that simple. White has a big advantage in development, and it's not easy for Black to find an adequate place for the bishop on c8!

10...c6 Philipp decides to stop White's d4-d5 push forever. Well, it's a logical decision, but White gets some extra squares.

11.♖ad1 ♕e7 12.♘e5 ♘d5 13.♕c1 Of course, White should avoid any kind of exchanges.

13...♘d7 14.♖fe1 In my opinion this is the critical moment of the game. Black needs to make a decision, what to do next? No more easy moves. [Looks tempting but it's too early, now Black can play 14.♖d3 ♘7b6! 15.♕b3 f6 and White has no ♘d3-Nc5 maneuver.]

14...♘xe5 The wrong choice, in my opinion. [It would also be wrong to play 14...♘7f6 15.♖d3! and the White rook will stand very dangerously on g3, becoming very helpful in a future attack!; 14...♔c7!? A silent move that allows White to act first! I think a move like ♔c7 is needed anyway, and why not to make it now?! The position is very complicated and White has a lot of different ideas; the main one is, of course, to play 15.♖d2 or 15.♙a2-Bb1, bringing the bishop to the attack. A great position for practical games, with a lot of options for both players!]

15.dxe5 White has a very strong pawn on e5, which gives him excellent attacking chances! Black's main defensive move, f7-f5, is not that effective anymore, White is always ready to take with exf6.

15...♔c7 16.♖d3 White needs more material for the attack and the rook will be perfectly placed on h3 or g3!

16...♖d8? This is already a serious mistake. Black doesn't feel the danger. It was already time to think about „how to avoid getting mated“. [16...f5! Not a nice move to make, but probably the only chance to continue the game. White's mating threats are very dangerous! 17.exf6 ♙xf6 18.♘e4 It's obvious that White has a very comfortable position despite being a pawn down. Black's pawn struc-

ture is very bad, plus he's not completely out of danger, White's next moves could be ♖h3, ♙d3 and the Black king would be under attack once again.]

17.♖h3! White threatens to play ♔h5 and in case of h6, ♙xh6 would finish the game.

17...g6 18.♙f3! Philipp told me after the game that he had blundered this move. Indeed, this move is almost decisive! Whites wants to play ♖xh7 now.

18...♘xc3 19.bxc3 [Here I thought for a while if I should play the direct 19.♖xh7 but I found the resulting position very unclear, and there is no reason for me to go for such crazy complications 19...♘e2+!? (Would lead to a very unclear position 19...♙xh7 20.♙xf7+ ♙h8 21.♙h6 (21.♙g5!? See below.) 21...♘e2+! and again the ♘e2 move! (21...♖g8?? gives White the chance to give a pretty mate 22.♖e3 ♙d8 23.♙g7+ ♖xg7 24.♖h3+) 22.♙xe6 ♖g8 23.♙d3 ♙d8 24.♙f4 Black is a rook up, but White intends to play ♖e3-Rh3, the position is very unclear.) 20.♙xe2 ♙xh7 21.♙xf7+ ♙h8 22.♙g5 ♖d7 23.♙e8+ ♙g7 24.♙h6+ ♙h7

25. ♖h5! gxh5 26. ♔xh5 and it's hard to say if White has more than a draw here.]

19... ♖f8 White wanted to take on h7.

20. ♖g5 ♖d5 [Also loses 20... ♖e7 21. ♖xh7! ♖xg5 22. ♔h3 ♖f8 and it seems like the Black king has escaped from the dangerous corner, but White has 23. ♖d3!! An amazing move! White wants to play ♖xg6 and Black doesn't have any defense against it 23... ♖xd3 24. ♔xd3 and White is winning due to the big amount of threats.]

21. ♖f6 The mating net around the Black king is getting tighter.

21... ♖d7

22. ♖e4 Black resigned because of ♖eh4.[Here I missed a chance to give a nice mate 22. ♔h5 gxh5 23. ♖g3+ ♖g7 24. ♖xg7+ ♖f8 25. ♖xh7 with ♖h8 mate.] 1-0

(2) Naiditsch,A (2698) – So,W (2659) [C42]

Top 12 France (2), 01.06.2012

[Arkadij Naiditsch]

We are in the 2nd round of the French Team Championship. I am playing for the current champion, „Marseille“, while my opponent plays for the strongest club rating-wise, „Clichy“. We lost the match but I managed to win a nice game against my young and talented opponent.

1.e4 e5 2.♘f3 ♘f6 The opening choice surprised me a little bit, Wesley is playing a lot of different openings, but he's not choosing the „Russian“ very often.

3.♘xe5 d6 4.♘f3 ♘xe4 5.d4 d5 6.♙d3 ♙e7 7.0-0 ♘c6 8.♘c3 We are in the very main line. There are a lot of games by Gelfand, Kramnik and other top GMs here.

8... ♙f5 [8... ♘xc3 9.bxc3 ♙g4 is the usual main line, but of course, the move in the game is not a surprise.]

9.♖e1 ♘xc3 10.bxc3 ♙xd3 11.♙xd3 0-0

12.♖e2!? This is a novelty that I had in mind for a long time, and never had a chance to use it! So finally, the time

has come! The move 12.♖e2 is quite tricky. The idea is to get control over the e-file.

12... ♖d6 [Black is not in time to exchange both rooks on e8 12... ♖d7 13.♙f4 ♖ae8 14.♖ae1 The fight for the e file! 14... ♙d8 15.♖xe8 ♖xe8 16.♖xe8+ ♙xe8 17.♙b5! and we see a typical double attack, on b7 and d5, which gives White the advantage.]

13.♙d2 ♙f6 14.♖ae1 I managed what I wanted, to control the e-file, which will always give me dangerous play on the kingside.

14...h6 Seems like my opponent is not really impressed with my play and feels nodanger.

15.♙f5 Transferring the queen closer to the Black king.

15... ♖ad8

16.♙h5 [Another tempting move was 16.♙f4 ♖d7 17.♙h5 Now White fixes the Black pawn on c7 17... ♘e7!? Black needs to transfer the knight to g6, where it will defend the king. Another important factor is that Black will be able to finally play c7-c6. White needs to act quickly! 18.♘e5!? It's hard to find a better move for White 18... ♙xe5 19.♙xe5 with a double attack, on e7 and c7. Black

needs to give away the pawn 19...♘g6 20.♔xc7 ♔xc7 21.♙xc7 ♖c8 22.♙a5 b6 23.♙b4 ♖fd8 24.♖e3 In this endgame, White is a clear pawn up, but Black keeps excellent chances for a draw. The doubled pawns on c2 and c3 are weak, and in case of an exchange of bishop and knight, Black will probably manage to make a draw in the rook endgame.]

16...♔d7 [After the game my opponent told me that probably the immediate 16...♞e7 would have been a much better move. Yes, this is true, but White still keeps some advantage 16...♞e7 17.h3 (17.♔g4 ♔d7) 17...♞g6 18.♞h2 The usual maneuver! White is clearly the one putting pressure.]

17.h3 ♞e7

18.♞h2! My opponent clearly underestimated this move. White wants to play ♞g4 and it is very hard to find any defense against it! Wesley thought here for more than 30 minutes, and found nothing better than to give his queen away.

18...♔f5 [18...♞g6 19.♞g4 ♔c6 would have been another option, but now Black is totally pinned and has no moves 20.g3! A very cool and strong move. White wants

to play f4-f5 with a devastating attack, Black is hopeless. (20.f4 would give Black some chances 20...♙h4! This is the point 21.f5 ♙xe1 22.♖xe1 ♖de8! Probably, White is still doing better, but things are by far not that clear.)]

19.♔g4! This is the key move! During the game I was very happy to find this ♞h2-Qg4 idea.

19...♔xc2 My opponent finds nothing better than to give his queen. Probably the best practical choice. [It's easy to miss White's win after 19...h5 20.♔xf5 ♞xf5 21.g4! winning the whole piece! Not often we see the bishop getting trapped on f6 21...hxc4 22.hxc4 ♞h4 23.g5 and White is winning the bishop.; 19...♖d7 20.♙xh6 is winning now; Doesn't help either: 19...♔xc4 20.♞xc4 ♞f5 21.♞xf6+ gxf6 22.g4 and White is winning the h-pawn 22...♞h4 23.♙xh6 ♞f3+ 24.♙f1 ♞xe1 25.♙xf8 ♔xf8 26.♖xe1 and of course, this rook endgame should be winning.]

20.♙g5 ♔xe2 I have to make a choice, to play ♔xe2 or ♖xe2. Both seem to be close to winning.

21.♖xe2 I think this was not the best, I need my queen on the other side, to attack Black's pawns and king. [21.♔xe2! ♙xg5 22.♔b5 and it is almost impossible for Black to find a defense against ♔xb7, and against f4, at

the same time 22...b6 23.f4 ♖h4 24.g3 ♖f6 25.♘g4 and White's position should be completely winning!]

21... ♖xg5 22.h4 ♖f6

23. ♖h5 Another imprecise move, blundering Black's next defense. [23. ♖g3! would have been the right decision. Of course, I saw this move but somehow I didn't want to give Black any counterplay. Well, next time I should not be so lazy and calculate until the end 23...♘f5 Only move, White wanted to play ♘g4 24. ♖xc7 ♖c8 25. ♖d7 ♘xh4 Here I stopped my calculation, thinking: I am much better, why to let Black have some play? 26. ♘g4 ♖g5 27. ♖xd5 ♖xc3 28. ♖xb7 and in fact, Black's play is not dangerous at all and White should be easily winning here.]

23... ♖h8! A great defense by my opponent, probably the only move to stay in the game.

24.g3 [24. ♘g4 ♘g8! and Black continues the fight!]

24...c5! Another good move, Black needs to fight! If White manages to play ♖f3 and ♘g4, Black's position would be totally lost.

25.dxc5 ♘c6 26. ♖e3 d4 27.cxd4 ♖xd4 With every exchange, even of a pawn, Black's chances to get a draw increase.

28. ♖e2 b6 Continues with the plan of exchanging as much as possible.

29. ♘g4! Now I felt that it was time for me to be very careful. A few more inaccurate moves and the position could already be a draw. If Black manages to force the exchange of knights, I think the position should be a draw! The good thing is that if I can keep the knights on the board, I should probably be winning. [This line shows how easy it is to make a draw 29.cxb6 ♖xb6 30. ♘f3? ♘d4! and the position is a draw!]

29... ♖h7 [Of course not 29... ♖xc5 30. ♘xh6! My idea is coming true 30...gxh6 31. ♖xh6+ ♖g8 32. ♖xc6 and White is totally winning.]

30. ♖f5+ ♖g8

31. ♖e4! A good move. I want to force the exchange of a pair of rooks and play ♖+♘ against ♖+♖+♘, which should be winning.

31... ♖c8 Only move, otherwise White would play c5-c6.

32.cxb6 ♖xb6 33. ♖c2 And I am close to completing my plan.

33...♖fe8 34.♔a4 h5! Again, a good move by my opponent! [In case of 34...♘d4 35.♖xc8 ♖xc8 36.♘e5 we are in a position where I think it's impossible for Black to hold 36...♖d8 37.h5! It is important to fix the Black pawn structure. Now White wants to attack the f7-pawn, to exchange the knight for the bishop, and to bring the a-pawn to a6. All these factors give White a winning position!]

35.♘e3! [35.♖xc6 hxg4 leads to a position where it's very hard to say if it's winning or not... I decided better not to try it...]

35...♙xe3 Nothing else to do, the knight on c6 is hanging and I wanted to play ♘d5 next.

36.fxe3 ♖e6 37.♔g2 g6 Here I felt I was already very close to winning. Black's pieces cannot move and the arrangement of the pieces is winning for me.

38.♖c5 I didn't have much time here and played this move quite fast. [38.e4 This was more exact, not giving Black any chances. White plans to play ♖c5, to bring the White a-pawn to a6, or to open the kingside with g4. The position should be winning.]

38...♖xe3!? This move leads to a lost position, but it is a good practical chance!

39.♖xc6 ♖xc6 40.♔xc6 ♖e2+ 41.♔f3 ♖xa2 We made the time control and I had enough time to figure out a nice way to win. If Black manages to put the rook on e6 or f5, the position is a draw! So I must be very careful...

42.♔c8+ ♔g7

43.♔c4! A good move, now the Black rook will remain passive, while the White king advances one line up, closer to his target.

43...♖a3+ Any other move would lose the rook.

44.♔f4 Now White's idea is to combine the threats of winning the rook and creating a mating attack.

44...♔g8 Black has no moves

45.♔g5! The king is a strong piece in the endgame!

45...♔g7 Black can not allow the White king to go to h6.

46.♔d4+ ♔h7 47.♔f6 If not to h6, then to f8!

47...♖f3+ 48.♔e7 ♔g8 Black just needs one more move to play ♖f5, but...

49.g4! This is the winning move! White crushes Black's pawn structure, getting a mating attack or a material advantage!

49...hxg4 50.h5! ♔h7 [In case of 50...gxh5 51.♔e5 followed by ♔g5 and ♔f8, with mate.]

51.♔f8 And the White king reaches his final destination!

51...♔h6 52.♔h8+ ♔g5 53.h6 The second queen is coming.

53...♔b3 54.♔g7 A very nice fighting game! My opponent's play was not very fortunate in the first 20 moves, but then he was very inventive in the defense! **1-0**

(3) Le Quang Liem (2703) – Navara,D (2706) [D90]

French league, 03.06.2012

[Balogh Csaba]

A perfect game by Le Quang Liem. After achieving a small advantage, White found all the strongest moves — which were not easy at all — and took home the full point.

1.♘f3 Recently everybody is facing serious difficulties against the Grünfeld, so people are trying to create different tricks, using various move orders right from the beginning of the game.

1...♘f6 2.c4 g6 3.♘c3 d5 Navara sticks with the Grünfeld anyway.

4.cxd5 ♘xd5 5.♔b3 This is one of the characteristics of keeping the pawn on d2. Now in case of the typical ♘xc3, White takes back with the queen, attacking the rook.

5...♘b6 6.d4 ♘g7 7.♘f4 ♘e6

8.♔a3 We are just at the start of the lines, when Black comes up with an interesting pawn sacrifice, which is actually not a novelty, just a rare move. Navara had to be

well prepared, because his opponent already played this in 2012.

8...c5!? Black wants to get some important tempi in development to compensate for the pawn. This idea really makes sense, since White needs a lot of moves to castle short. [8...c6 is considered to be the main line 9.e3 0-0 10.♟e2 a5 11.0-0 ♞b4 12.♞fc1 c6 with a complex position.]

9.♞xc5 [9.dxc5 It's not really an option to open the diagonal for the g7 bishop 9...♞c4 Black is fine.]

9...♞c6 10.e3 ♞c8 11.♞a3 White had to make 2 queen moves, while Black put out his pieces, and as the famous saying goes, „two tempi in the opening have the same value of a pawn“.

11...0-0 12.♟e2! White has no more time to waste. [A nice illustration of what could happen if White makes some careless moves 12.♞d1 a5! Black would like to play ♞b4 in some occasions 13.♞e5 ♞d5 14.♞xc6 ♞xc6 White is facing serious problems 15.♟b5 ♞b6 ! 16.♞xa5 ♞xf4 17.exf4

17...♟b3!! Black won an exchange due to the ♞e6 threat and obtained a winning position in Sadorra-Ganguly, Subic 2009.]

12...♞c4 Black must also play actively, otherwise he'll just end up a pawn down.

13.♞a4! Excellent decision to give back the pawn, trying to achieve a positional advantage. [13.♟xc4 would have been too greedy 13...♟xc4 when White must forget about castling short, which does not predict a nice future for him.]

13...♞xb2 14.♞b5 ♞c4! As a Grünfeld player, you must always stay focused on tactical ideas. Black uses a small trick to escape with his knight. [14...♞b6 15.♞xb6 axb6 16.♞b1 += is slightly better for White, due to the weaknesses on the b-file.]

15.0-0 Finally the king is safe. From a positional point of view, White has a beautiful position. The e3-d4 pawn structure neutralizes the g7 bishop. Black has no chance to use the typical break with e5. The bishop on f4 stands perfectly, it restricts the movement of Black's pieces. White can start to put pressure on the queenside and in the center. [The piece is immune, since after 15.♟xc4? ♟xc4 16.♞xc4 ♞xd4 Black wins.]

15...♞a5 Actually this is the novelty of our present game, and this had to be Navara's preparation, but it seems like White can keep a small advantage. [The passive 15...♞b6 was played before 16.♞ac1 (16.♞fc1 would have more logical, since the a-rook could be used effectively after a4-a5, or on the b-file...) 16...♞d5 17.♞xd5 ♟xd5 (17...♞xd5 was better, but still after 18.a4 += White has the advantage. Black doesn't have any active plans, while White

puts pressure on the queenside.) 18. ♖c5 e6 19. ♖fc1 +/- White enjoyed a clear advantage. Shchekachev-Safarli, Zuerich 2009]

16. ♖fc1 And again White correctly brings his f-rook to c1, because the other one is needed on the a- and b-files to get good queenside play.

16... ♖a3? As a real Grünfeld player, Navara plays dynamic chess, but unfortunately for him, complications favor White this time. [Black should have gone into a slightly worse endgame 16... ♖xb5 17. ♖xb5 ♖b6 18. ♖g3 += After removing the bishop from the ♖d5 threat, White can start his play with a4. He enjoys a small, but long-term advantage.]

17. ♖xb7! Not afraid of anything! Le Quang Liem had very deep defensive ideas in mind. An important detail is that the bishop on f4 is still standing perfectly, it covers the b8 square and the ♖c7-Rfc8 plans.

17... ♖b4 18. ♖e1! A necessary retreat against the ♖c2 threat.

18... ♖f5 [I tried to on Black's play with doubling on the c-file, but it does not help. After some accurate moves,

White gets a big advantage 18... ♖c6 19. ♖f3 ♖c4 20. ♖e4! ♖xc1 21. ♖xc1 ♖xa2 22. ♖a1 +- and White is going to take on e7, or to play ♖c5.]

19.g4!! White defends resourcefully. Black has no way to make use of this weakness and the bishop on g3 is going to be a great guard of the king.

19... ♖ac2 [On the passive 19... ♖e6 20. ♖xe7 White simply collects the 2nd pawn.]

20. ♖xc2 ♖xc2 [20... ♖xc2 White can choose between two wins: 21. ♖d5 is the computer's suggestion (21.gxf5 ♖xa1 22. ♖b2 +- is the human way.) 21... ♖xa1 22. ♖xe7+ ♖h8 23. ♖xc8 +-]

21. ♖b5! White continues to play a perfect game, he is not giving any chance to his opponent.

21... ♖xa2 [On 21... a6 the strongest move is 22. ♖d6!! exd6 23. ♖xd6 +- and too many pieces are hanging.]

22. ♖xa7 A cold-blooded capture. Attacking the c8 rook and intending to play ♖c6.

22...♔d2 23.♖e1! White had other winning move as well, but he does not want to give any chance for counterplay. [23.♘xc8 ♘xc1 24.♘xe7+ ♔h8 25.♕f3 +-]

23...♖ce8 [23...♘c3 24.♕f3 +- Suddenly Black's pieces got confused, and remained without any targets.]

24.♖b2! Black is not only clear a pawn down, but he also must worry about his pieces on the queenside.

24...♘c3

25.♕f3 e5 Finally Black manages to open his „Grünfeld bishop“, but it is already too late. Anyway, we must be aware of this idea against the e3-d4 pawn structure.

26.dxe5 ♖xe5 A desperate attempt. [26...♕xe5 27.♕xe5 ♖xe5 28.♖ac1 +-; 26...♖b8 27.♖c1 +-]

27.♕xe5 ♕xe5 28.♘c6! It seems like Le Quang decided to play this game without any mistakes. Even in this completely winning position, he plays the most precise moves.

28...♖b8 A last trick. [28...♘e2+ 29.♖xe2 ♕xb2 30.♖xd2 ♕xa1 31.♖xc2 +-; 28...♘e4 29.♘xe5! ♖xf2+ is just one check 30.♖h1 +- White is a rook up.]

29.♖c1! [Black wanted to lure the knight 29.♘xb8 to have 29...♘e4! and the bishop on f3 is not protected after ♘xe5, but still White has a win: 30.♖e2! ♕xb2 31.♖xd2 ♘xd2 32.♖a2 ♘xf3+ 33.♖h1! ♕e4 34.♖xb2 +- and the knight doesn't have any good squares, so White wins with the exchange up.]

29...♕xh2+ 30.♖g2 Black resigned. A typical battle in the dynamic Grünfeld defense, which this time ended with an impressive victory by White. **1–0**

(4) Fedorchuk,S (2634) – Bauer,C (2672) [B01]

French league, 04.06.2012

[Balogh Csaba]

Christian Bauer, one of the biggest experts in the Scandinavian defense, got into serious trouble against a harmless-looking setup.

1.e4 d5 2.exd5 ♖xd5 And here, instead of the standard 3.♘c3 and 4.d4, White played calmly.

3.♘f3 ♘g4 4.♙e2

4...♘c6 [The idea of White's concept becomes clear after 4...♘f6 5.d4 e6 6.0–0 ♙e7 and before developing with ♘c3, White creates a much more favorable pawn structure with 7.c4! ♖d8 8.♘c3 followed by ♙e3, with a small but long-lasting advantage.]

5.♘c3 ♖a5 Compared to the main Scandinavian (3.♘c3 ♖a5 4.d4), White can make use of having the pawn on d2. Therefore, I believe this time the queen should have gone to d7. [5...♖d7 6.h3 ♙h5 7.d4 d5 is a threat now 7...e6 and here White has the very strong 8.♘e5! ♙xe2 9.♖xe2 We

reached the critical position where Black can choose between 3 moves. It seems to me that White has some advantage in any case 9...♘xe5 a) 9...♖xd4 10.♘xc6 bxc6 11.♙e3 White is seriously ahead in development and the c6 pawn is a real weakness 11...♖d7 (11...♖b4 12.♖a6 ♘e7 is the only move to defend the c6, but now the knight blocks the bishop, so it is going to be very difficult to finish the development. White can continue in „gambit style“ 13.0–0 ♖xb2 14.♙d4 with an attack.) 12.♖d1 Another piece comes with tempo 12...♙d6 13.♘e4 ♘f6 14.♘xf6+ gxf6 15.c4! with big problems for Black. He cannot leave the pin with 15...♖e7 because of 16.♖f3!; b) 9...♘xd4 10.♖d3 ♖d8 (10...♖d6 just steps into 11.♙f4) 11.♙e3 ♘c6 12.♖b5 a6 13.♖a4! with a very strong compensation once again.; 10.dxe5 ♙b4 11.♙d2 += followed by 0–0–0. I think White should be slightly better due to the space advantage with the e5 pawn, but possibly Black can hold with accurate play.]

6.h3 ♙h5

7.♖b1!! A great idea! Suddenly the Black queen feels uncomfortable, because of the b4 threat.

7...e6 [7...0-0-0 is met with the sacrifice 8.b4! ♖xb4 9.a3 The idea is to win the h5 bishop after 9...♗c6 10.♖b5. 9...♗d5 10.♗xd5 ♕xd5 (10...♖xd5 11.c4 +/- with serious problems.) 11.♖b5! +/- forcing the crucial weakening of the king with c5.]

8.a3! White calmly prepares the b4 push, after which the queen has no good square to retreat. After ♕b6 ♗a4 traps it, and ♖f5 is met with g4. Therefore, Black was forced to make a really unpleasant decision.

8...♗xf3 This is generally the last thing Black wanted to do, but there was simply nothing better.

9.♗xf3 ♗ge7 10.b4 ♕e5+ The Black queen does not find its place on the board. It is clear that White has won the opening battle.

11.♗e2 0-0-0 12.0-0 ♖d6 Black frees the e5 square for the knight to get rid of the powerful light-squared bishop.

13.g3 A logical move, but probably White could have played much more energetically. [13.d4! White threatens to play c3, where Black has practically no moves, so he is forced to accept the sacrifice 13...♗xd4 (13...♗e5 is met with 14.♗xb7+! ♕xb7 15.♗f4! wins.) 14.♗xd4 ♕xd4

15.♕e2! with an amazing dangerous attack. White simply wants to play ♗e3 or ♗b2, followed by ♖fd1 or ♕b5. Black can hardly hold the threats.]

13...h5 14.b5 ♗d4 Black was hoping for „less pieces less problems“, but he can never equalize in this game. [On 14...♗e5 White simply wanted to react with 15.♗g2 h4 16.g4 Black could only temporarily push back White's pieces. Now it is White's turn, he is going to play d4 and Black has to retreat.]

15.♗g2 ♗ef5 16.a4 A logical move again, but maybe here White could have played in similar style to the 13.d4 line. [16.♗xd4 ♕xd4 Bauer probably wanted to take back this way (16...♗xd4 is met with 17.c3 ♗f5 18.d4 +/- with a big advantage.) 17.♗b2! ♕xd2 18.♖f3 ♕d5 19.♕xd5 exd5 20.♖fd1 leads to a very unpleasant endgame, where the 2 bishops start to work on the long diagonals, while defending the pawn with 20...c6 leads to dangerous attack after 21.bxc6 bxc6 22.c4! opening the diagonal 22...dxc4 23.♖dc1! White needs to keep all his remaining pieces in order to lead an effective attack.]

16...♕b6 Creating some small trick on g3, but of course, White easily parries it.

17.♕h1 ♗xe2 18.♕xe2 White simply wants to play c3 and d4 with a big advantage, and Black cannot prevent it... At least, I don't see the way to do it.

18...♖d4?! 19.♖a1 After this calm response, the c3-d4 plan is coming with tempo.

19...a5 White could have transposed to a superior endgame, but he preferred to keep the queens on board. It is up to our style, which one we like more...

20.c3 [20.bxa6!? ♔xa6 21.♔xa6 bxa6 22.c3 ♖d8 23.♖b1 +/- The weak a6-pawn is Black's main problem.]

20...♖d7 21.d4

21...♗e7 White has many tempting plans. In fact, he can do whatever he wants, because Black will soon get out of moves. Fedorchuk decides to overprotect the d4 pawn, in order to swap Black off the board with c4-c5.

22.♗b2 ♔b8 23.♖ad1 g6 24.♖d3 ♖hd8 25.♖fd1 ♗f6? Black fights against the c4 push, but this is the start of a blunder. [Passing with the bishop on f8-e7 was probably the only plan, but it cannot lead to anything good 25...♗f8 26.h4!? ♗e7 27.♔f3 +/- followed by c4, when the d4 pawn is not hanging anymore.]

26.♗a3! ♗e7? [26...♔a7 was the only move, but after 27.♗c5 ♔a8 the queen ends up in the corner, which does not mean anything good.]

27.♗c5! Suddenly the queen is trapped! White wins a huge amount of material.

27...♗xc5 28.dxc5 ♖xd3 29.♖xd3! ♖xd3 30.cxb6 Nice positional game, and an interesting line to avoid the complications of the Scandinavian defense. **1-0**

Endgame section

(15) Fargere,F – Miton,K [B30]

Top12, 2012

[Chess Evolution]

We are in a drawn-looking bishop endgame, but it is by far not an easy draw...

39...♔h6 40.f4?! This seems to be the first inaccuracy of White. [40.♙e8 would be the right way to continue 40...♙g6 41.♔h2 ♔g5 42.♔h3 ♙f5+ (42...♔f4 43.♔xh4 ♔xe5 44.g3 = The White king is going back to g2 next, and Black cannot do anything about it. It's always very important for White to keep the pawn on f2!) 43.♔h2 ♔f4 44.♙xf7 ♔xe5 45.♙e8 ♔f4 46.♙c6 Again, a very important moment. White chooses a passive tactic to keep the pawn on f2! 46...e5 47.♙b7 e4 48.♙c6 h6 49.♙b7 h3 50.gxh3 ♔f3 51.♔g1 ♙xh3

52.♙c6 ♙g4 53.♙b7 h5 54.♙c6 h4 55.♙b7 h3 56.♙c6 ♙f5 57.♙b7 = Black has no chances to achieve any more progress, the position is a draw.]

40...♔h5 [A very interesting try to play for a win would have been 40...♔g6

41.g4! An amazing resource for White

a) 41.♙e8 ♔f5 42.♙xf7 ♙c4 and both the f4 and e5 pawns are going to fall;

b) 41.♔f2 ♔f5 42.♔f3 (42.♔e3 ♙c4) 42...h5 43.♙b7 ♙c2 with the idea of ♙d1, and Black is winning.; 41...h5 (41...♙e2 Also after this move, it looks like White has a study looking draw 42.♙e4+ ♔h6 43.g5+ ♔h5

44. ♖f2! White needs to stop Black from playing ♔g4 44... ♙d1 45. ♖e1! ♙g4 46. ♖f2 ♙f5 47. ♙f3+ ♔g6 48. ♖g2 h6 49. gxh6 ♔xh6 50. ♖f2 = and Black can not make any further progress.; 41...hxg3 42. ♖g2 ♖f5 43. ♖xg3 h5 44. ♙e8 and it seems like White is just in time to hold the draw.) 42. ♙f3 hxg4 43. ♙xg4 ♙f5 44. ♙f3 f6 45. exf6 ♔xf6 46. ♖f2 ♖e7 47. ♙a8 ♖d6 48. ♙b7 ♖c5 49. ♙a8 ♖d4 50. ♙b7 (50. ♙g2? h3) 50... ♙e4 51. ♙c8 ♙d5 52. f5 e5 53. f6 e4 54. ♙g4 e3+ 55. ♖e2 ♙c4+ 56. ♖f3 =]

41. ♙f3+ ♔g6

42. ♙g4?! [42. ♖f2 ♖f5 43. g3! = would give White a draw now. (43. ♖e3?? ♙c4)]

42... ♙f5 43. ♙f3 ♙c2 44. ♙g4 h5 45. ♙f3 [45. ♙h3 ♙f5]

45... ♖f5 46. ♙xh5 ♔xf4 47. ♙xf7

47... ♙f5! 48. ♖f2? Decisive mistake! White could have held the position after: [48. ♖h2! ♙g4! (48... ♖xe5 49. g3 h3 50. ♙h5 followed by g4, with a draw.) 49. ♙e8 ♖xe5 50. g3 h3 51. ♙b5 White wants to play ♙f1 and ♙xh3 51... ♖d4 52. ♙d7! This is the point! Anyway, it's not easy to see this idea during a practical game. (52. ♙f1 e5 53. ♙xh3 ♙xh3 54. ♖xh3 e4 and Black is queening first.) 52... ♖e4 53. ♙c8 ♖f5 (53... ♖f3 54. ♙b7+ ♖f2 55. ♙c8 =) 54. ♙d7 ♖g5 55. ♙b5 e5 56. ♙f1 and only now. the bishop is going to f1 56...e4 57. ♙xh3 =]

48... ♙g4! 49. ♙e8 ♖xe5 50. ♖e3 Black's task is to achieve a zugzwang position in order to get the f4 square for his king.

50... ♖f5 51. ♙a4 The bishop controls d1 and doesn't allow ♖g4-Kg3.

51... ♖g5 52. ♙b3 ♙f5 53. ♙d1 ♙b1 The idea is ♙a2-Bd5.

54. ♙b3 e5 55. ♙d1 ♙f5 [55...e4 An interesting idea to play for a zugzwang that seems to win as well 56. ♙e2

♔f5 57. ♖d1 ♖d3 58. ♖h5 ♖f1 59. ♔f2 ♖b5 60. ♔e3 (60. g3 h3 61. ♔g1 e3 62. ♔h2 ♔g5 63. ♖f3 ♖d7)

60... ♖d3 wins a tempo 61. ♖d1 ♔g5 and White is in zugzwang. He is forced to let the Black king penetrate.]

56. ♖f3 ♖g6 57. ♖e2 ♖e8 58. ♖f3 ♖b5 Finally Black takes control of the h1–c6 diagonal, or is able to win the g4 square for his king!

59. ♖d5 [59. ♔e4 ♖c6+]

59... ♔g4 60. ♔f2 [Doesn't help 60. ♔e4 ♔g3 61. ♔xe5 ♖f1 62. ♔d4 ♖xg2 63. ♖e6 ♖h3! 64. ♖d5 (64. ♖xh3 ♔xh3 65. ♔e3 ♔g2) 64... ♖g4 65. ♔e3 h3 with the plan of h2-Bh3-Bg2 –+.]

60... ♔f4 And Black is winning very easily.

61. ♖b7 ♖d3 62. ♖c6 e4 63. ♖b7 e3+ 64. ♔g1

64... ♔g3 0–1

(16) Fressinet,L (2715) – Nanu,C (2520)

French league, 03.06.2012

[Chess Evolution]

From a positional point of view, White is clearly better because of his superior pawn structure, stronger pieces, and the a6 and e6 weaknesses. Of course these are all very nice, but how to break through Black's rock solid position? The knight on c6 is an excellent blockading piece, which also prevents the penetration of the king through d4-c5. After a long maneuvering without being able of cracking Black's defense, White found a last trap...

91. ♖b7 [91. ♖xb5? is not enough 91...axb5 92. ♗xb5 ♔d7 Black easily stops the pawns.]

91... ♗f7? Black blunders, or underestimates his opponent's idea, and makes a decisive mistake. [91... ♗d7! 92. ♖c5 ♗c8 would have held the draw. White cannot improve his position.]

92. ♖c5 ♖b8 93. ♖xa6!! After this great sacrifice White is winning, but converting still requires perfect technique. Compared to the 91. ♖xb5 possibility, Black is not in time

to block ideally the pawns, and what is even more important, he cannot avoid ♔d4-c5.

93... ♖xa6 94. ♗xb5 ♖c7 95. ♗e2 ♗e8 Black finds the best chance. [95... ♔d7 96.b5 is hopeless. Black's pieces are standing horribly. In fact, he can only watch how White promotes his pawns.]

96. ♔d4!

96... ♖b5+ This is again the best chance. Black cannot create any counterplay, while random moves are losing after ♔c5 and b5. [96... ♗b5 loses after 97. ♗xb5 ♖xb5+ 98. ♔c5 and the pawns start to march.]

97. ♗xb5! Excellent decision! We will soon understand why the knight had to be eliminated. [It would have been easy to go wrong with 97. ♔c5 but after 97... ♖c3! 98. ♗d3 ♖a4+! 99. ♔d4 ♔d8! 100.b5 ♔c7 Black has built up an unbreakable fortress, due to the knight on a4, which prevents all the king maneuvers.]

97... ♗xb5 98. ♔c5 ♗f1 We are in the critical position of the game. After more than 5 hours and 99 moves of fighting, Fressinet wanted to play for a win without taking any risk, but it could have cost him the full point.

99.h4? This gives a very important tempo for Black. [99. ♖b6! was the way to win 99... ♙xh3 (99... ♔d7 100.a6 d4 Black must sacrifice this pawn to be able to stop the a-pawn, but it does not save the game 101.exd4 ♙xh3 102.b5 White's main idea is ♔a7 followed by the unstoppable b6-b7-b8 102... ♙f1 (102... ♙g2 103. ♔a7 +-) 103.d5! White closes the diagonal and wins.) 100.a6 ♙g2 101. ♔c7! Now, both pawns are promoting at the same time, but at the end White collects the e6 pawn with check, which decides the outcome of the game. 101...h5 102.b5 h4 103.b6 h3 104.b7 h2 105.b8Q h1Q 106. ♔d8+! ♔f7 107. ♔f6+! This is the point! 107... ♔g8 108. ♔xe6+ ♔g7 109. ♔f6+ ♔h7 110.e6 +- and Black cannot stop the pawns.]

99... ♔d7 Now the position is drawn, but Black needs to defend precisely.

100.b5 [100. ♔b6 was an alternative 100... ♔c8 101.b5 h5!! The key move! We will understand its point in the 102... ♙c4 line. 102.a6 ♔b8 103. ♔c6 ♙c4 104. ♔d6 ♔a7 Black holds, as the 102... ♙c4 line shows.]

100... ♔c7 101.a6

101... ♔b8? Probably because of tiredness, Black loses the game in 2 moves. [101...d4! was the easiest, and also

the best practical way, to hold the draw. This sacrifice is very logical because the bishop could have held the a-b pawns from g2, and White cannot make use of his extra pawn after exd4... 102.exd4 ♙g2 103.b6+ ♔d7 White cannot improve his position, he must settle for draw.; 101... h5! was the other way to draw, but we'll discuss it again in the 102... ♙c4 line.]

102. ♔d6 ♙xb5? The position was lost anyway, but after this move, White in fact cannot spoil the win. [102... ♙c4 A very interesting position. Who would guess that the right evaluation of the position is set around the h5 move. If White plays it, he wins; if Black does it, he draws. It is much easier to understand the idea behind it than to find this move with any color. It is all about the h6 weakness. White would like to fix it and then take it, while if Black puts it to h5, he can defend it with the bishop

103.h5!! (The logical 103.b6 trying to exchange the a6 pawn for the e6 one would spoil the win after the excellent response by Black 103...h5!! 104. ♔e7 (104. ♔d7 ♔a8!! When the White king is on the d-file, the bishop cannot leave the c4 square, where it fulfills two functions: it protects the e6 square and on a7, ♔b7, a8Q, ♔xa8, ♔c7,

Black must have the ♖a6 resource.) 104... ♖a2 105. ♔d7 (105. ♔f6 ♖c4 106. ♔g5 ♖e2 =) 105... ♖c4! 106.a7+ ♔b7 107. ♔d6 White tries to create some zugzwang, but Black is ready to hold (107.a8Q+ ♔xa8 108. ♔c7 ♖a6!) 107... ♔a8 (107...d4!? is also completely fine now 108.exd4 ♖d5 109. ♔e7 ♖c4 110. ♔f6 ♖d5 111. ♔g5 ♖f3 with a draw, since the overoptimistic breakthrough 112.d5?? loses after 112... exd5 113.e6 d4 114.e7 ♖c6) 108. ♔c6 ♖a6 109. ♔c7 ♖b7 110. ♔d7 d4! 111.exd4 ♖d5 = See the 107...d4 line.) 103... ♔a7 104. ♔e7 ♔b6 105. ♔f6 ♖xb5 106. ♔g6 Black's bishop is really unfortunate. He cannot win any tempi when catching the h-pawn, he can only take it on h5, otherwise it would be too late 106... ♖e8+ 107. ♔xh6 ♔xa6 108. ♔g5 ♖xh5 109. ♔xh5 ♔b5 110. ♔g6 ♔c4 111. ♔f6 +-]

103. ♔xe6 ♖xa6 [103... ♖d3 104. ♔f7 +-]

104. ♔xf5 +- It is over now. [Black's last hope was in the too direct 104. ♔f7 ♔c7 105.e6 ♔d6 106.e7 ♖b5 107.e8Q ♖xe8+ 108. ♔xe8 when Black can hold the pawn endgame after the strong 108...d4! 109.exd4 ♔d5 110. ♔f7 ♔xd4 111. ♔g6 ♔e4 112. ♔xh6 ♔xf4 = with a draw.]

104... ♔c7 105. ♔g6 ♔d7 106. ♔xh6 ♔e6 107.h5 Too many pawns are running. The king and bishop cannot stop all of them.

107... ♔f7 Otherwise, ♔g7 and h6.

108.f5 ♖d3 109. ♔g5 ♔g7 110.e6 ♔h7 111.f6 1-0

Clash of the Titans

(17) Porges,M – Lasker,Emanuel [C67]

Nuremberg Nuremberg, 20.07.1896

[Balogh Csaba]

We go back to the 19th century! A nice game from the 2nd World Champion, Emanuel Lasker. He won his title in 1894 at the age of 26, by defeating Steinitz, and held it through 27 years, which is a record in chess history.

1.e4 e5 2.♘f3 ♘c6 3.♙b5 ♘f6 4.0-0 ♘xe4 5.d4 ♙e7!? This is the so-called Rio de Janeiro variation of the Spanish opening, which was the favorite weapon of the famous 19th century chess player Adolf Anderssen. He played it for the first time in 1862!

6.♙e2 ♘d6 7.♙xc6 bxc6! 8.dxe5 ♘b7 This is the point behind Black's idea. Usually the knight has a hard time trying to find a safe place on the board, while now it is heading to e6. Black has a bit cramped position, but he has gained the bishop pair as compensation. This opening went out of fashion due to the passive middlegame positions, but since the Russian top GM Malakhov started to play it in 2009, the variation is alive again! Many strong players tried to refute it, but it's still not clear how to achieve an advantage for White. Now White can choose between at least 6 different setups, I doubt that the text move can create real problems for Black.

9.b3 0-0 10.♙b2 d5

11.exd6?! This cannot be a good idea. Black gets rid of his doubled c-pawns and the position opens up, which favors the bishops. [I think 11.♖d1 is the only way to fight for an advantage, with the idea of c4 and ♘c3.; Lasker won another nice game as Black after 11.♘d4 ♙d7! prepares for c5, but first prevents ♘c6 12.♘d2 c5 13.♘4f3 ♙f5 14.♖ac1 c6 Black is already completely fine, but let's see how Black outplays his opponent 15.♙fe1 a5 16.a4

16...♘d8! Generally the Black knight lands on e6 in this opening, but usually it goes through the c5 square 17.♘f1 ♘e6 18.♘g3 ♙g6 19.♙d2 h5 20.♘e2 ♙f5 21.♙a3 ♖e8 22.♙e3 h4 23.h3 ♙a6 White already has serious problems. A nice lesson from Lasker, against Teichmann, who

was also one of the best players during that time 24.♔h1 d4 25.♚d2 ♖ed8 26.♘eg1

26...♘f4 and in this completely cramped position, White thought that the World Champion had blundered a tactical motif, but Lasker calculated one move further... 27.♙xc5 ♙xc5 28.♘xh4 ♚g5 29.♘gf3 Seems like White wins back the piece and ends up with material advantage, but... 29...♙b4!! (29...♚h6? 30.♘f5 +-) 30.♚xb4 ♚xh4! 31.♚d2 ♚h6 and Black kept his extra piece. Teichmann-Lasker, Nuremberg 1896.]

11...cxd6 12.♘bd2

12...♖e8! 13.♖fe1 ♙d7! Both players are developing logically. Black needs to slowly put out his pieces and then the bishop pair will automatically start to work.

14.♘e4? A serious mistake, which might be called as decisive against a player like Lasker. [Let's see what happens after some „normal“ moves: 14.♘c4 ♘c5 15.♖ad1 ♙f8 16.♚d2 ♖xe1+ 17.♖xe1 d5 18.♘ce5 ♙e8 Black has the initiative: he has a healthy pawn structure, the bad b7 knight turned out to be a strong piece on e4 or e6, and the bishops start to work soon as well, let's say after f6 and ♙g6.]

14...d5! Probably White just missed this move. He is lucky not to lose immediately...

15.♘ed2 ♙a3 Seems to be over, but White finds a way to stay in the game.

16.♙e5 f6 17.♚a6! The only way not to lose material, but it improves Black's pawn structure so much, that the position becomes close to winning.

17...fxe5 18.♚xa3 e4 19.♘d4

19...♚f6! A very strong positional idea. Lasker forces White to play c3, which is another crucial weakness in his

position. It gives up the control over the d3 square, and the knight is going to occupy this square soon.

20.c3 ♖f8 Another very unpleasant move. White is facing a difficult decision again. The only move not to lose material is 21.f3, but it is another weakening move.

21.f3 [21.♖f1 loses to 21...♔g5 and White cannot parry the ♕h3 threat.]

21...♔g5! Small but brutal moves. Black creates the threat of c5, and after the knight goes away, the f3 pawn is hanging. White has only one move to avoid losing a huge amount of material, but again it has its drawbacks...

22.♔c1 Only move, but it gives up the c5 square. Black immediately activates his knight. [22.♖e2 c5]

22...♘c5! [22...c5 is tempting, but White can hold after 23.♘c2 ♕h3 24.♖e2 Ugly, but White is alive.]

23.♘f1 White is defending tenaciously, but his 14th move was so bad that he can never get back into the game.

23...♔g6 Of course, against such a weak king Black needs to keep the queens on board.

24.♖e3 ♘d3 25.♔d1 [25.♔d2 would be met with 25...c5! 26.♘c2 ♖xf3! 27.♖xf3 exf3 and Black wins.]

25...♘f4 In the last four moves, Black managed to transfer his b7 knight to f4! A remarkable achievement!

26.♘g3 h5! With each move, Black creates a threat. Lasker does not give a „free“ move for White to consolidate his position.

27.♘de2 The time has come the finish the game with a nice combo!

27...♘xg2! 28.♔xg2 exf3+ 29.♖xf3 ♕h3+! This is the point.

30.♔xh3 Black wins by force now: [30.♔f2 ♖xf3+ 31.♔xf3 h4 The White king is too naked.]

30...♔g4+! 31.♔g2 ♖xf3+ 32.♔g1 [On 32.♔h3 h4 is coming anyway 33.♔xh4 ♖f6 and mate soon.]

32...h4 33.♘h1 [33.♘f1 ♖f2+ 34.♔h1 h3]

33...♔e3+! [White did not want to wait 33...♔e3+ 34.♔g2 h3# Nice mate! At the beginning of the game Lasker showed great positional understanding, while in the middlegame he proved his excellent tactical abilities. Anyway, the most remarkable thing is that this game was played 116 years ago!] **0-1**

Editorial Preface

The main event of the past few weeks came to an end: the French Top 12 tournament. The team Clichy totally dominated the league with Ivanchuk playing the top board, and won the French Team Championship with a perfect score! Congrats.

The Tal Memorial is being played with an amazing lineup this year. The only player that doesn't fit in terms of ELO is McShane, but he got in thanks to a poll that was done over the Internet. In this super-tournament, we will see a battle between world's number 1, Magnus Carlsen, and number 2, Levon Aronian, who is just 10 ELO points behind in the rating list. The tournament is super exciting.

Another stage of the Women Grand Prix has begun as well, with both Koneru and Hou Yifan participating. If the young Chinese super star can prove once again that she is the number one (after Polgar, who doesn't participate in female tournaments), we are going to see this news during the next few weeks.

At the moment, we are trying to get some small interviews with the seconds of the Anand-Gelfand match, but it seems not as easy as it sounds. Such a match is really exhausting.

As usual, we wish You lots of fun with the CEWN Nr16!

*Arkadij Naiditsch

4 best games of the past week

(1) Kramnik,V (2801) – Grischuk,A (2761) [E97]

Tal memorial (2), 09.06.2012

[Balogh Csaba]

A great novelty based on very deep ideas by Kramnik against the King's Indian defense...

1.♘f3 Kramnik starts the game with the „Anti-Grinfeld move order.

1...♘f6 2.c4 g6 3.♘c3 ♘g7 By not playing 3...d5, we transpose back into the King's Indian defense.

4.e4 d6 5.d4 0-0 6.♘e2 e5 7.0-0 ♘c6 8.d5 ♘e7

9.b4 The 9.b4 line is the so-called Bayonet attack. Kramnik is definitely the biggest expert of this opening. Usually all the developments with White are based on his games.

9...♘h5 10.g3 White prevents the ♘f4 idea.

10...f5 11.♘g5 This maneuver connected with the ♘e6 jump is a well-known idea in this line. We will see it in this game as well.

11...♘f6 12.♘f3 This is a fresh approach by White. By far the main move is 12.f3, but Kramnik introduced this idea in another nice victory against Giri in 2011.

12...c6

13.♘g2! Kramnik improves on his own game! [13.♘a3 was played before 13...cxd5 14.exd5 This takeback is quite a risky move in general, since it allows to open the diagonal of the King's Indian bishop. 14...e4 15.♘e2 In my opinion, Grischuk's novelty was in this moment 15...♘e8? Kramnik brutally punished this move (15...h6 seems to lead to a more or less forced draw in a tactical line 16.♘e6 ♘xe6 17.dxe6

17...d5! Black would like to push d4, this forces White to go for the simplifications 18.cxd5 ♖fxd5 19.♗xd5 ♔xd5 20.♔xd5 ♗xd5 21.♕c4 It is very hard to improve on the play with any color. (21.♖ac1 es met with the very unpleasant 21...♗c3! 22.♕c4 ♖fc8 White cannot control the e2 square with the bishop.) 21...♗b6 22.♕b3 ♕xa1 23.e7+ ♖f7 24.♖xa1 ♖e8! 25.b5 ♗g7 Black already threatens to take on e7 26.♕xf7 ♗xf7 27.♖d1 ♗c8 28.♖d7 b6 = and we reached a drawish endgame. Black is going to play ♗e6 and take on e7. Probably, Grischuk had analyzed this line and decided to go for it...) 16.♖c1 h6 17.♗e6 ♕xe6 18.dxe6 ♗c7 This was the idea behind the 15th move, but White is in time to organize counterplay in the center 19.b5 ♕e5

20.♔b3! ♗g7 (20...♗xe6 21.♖fd1! ♗d4 22.♖xd4 ♕xd4 23.c5+ might be a transposition into the game, since on 23...d5 24.♗xd5! 24...♔xd5 loses the queen 24...♗xd5 25.♖d1! and White wins.) 21.♖fd1 ♗xe6 22.c5! ♗d4 23.♖xd4! A necessary exchange sacrifice, but of course, after foreseeing the ensuing position, White joyfully gives the material 23...♕xd4 24.cxd6 ♗g8 25.♗d5 The game is practically over. The White rook invades on the 7th rank. 25...♗h8 26.♖c7 ♕e5 27.♕b2 (27.♖e7 was even easier

27...♕g7 (27...♕xd6 28.♕b2+ +-) 28.♗f4 +-) 27...♔xd6 28.♖xb7 +- and White won a few moves later. Kramnik-Giri, Hoogeveen 2011.]

13...h6 Grischuk reacts the most logical way, but actually I did not find a way to equalize after this move. [13...fxe4 is the computer's recommendation, but it is not in the spirit of the King's Indian, because White manages to consolidate his center. 14.♗gxe4 ♗xe4 15.♗xe4 (15.♕xe4 The best was if White could take back with the knight on d5, but Black has the concrete 15...♕h3 16.♖e1 ♔b6 with a double attack on f2 and b4 17.♕e3 ♔xb4) 15...cxd5 16.cxd5 ♗f5 I personally think White should be slightly better, mainly because of the bad g7 bishop, which has no future in this game, but the machine believes in Black's position.]

14.♗e6 ♕xe6 15.dxe6 ♗xe4 Grischuk is a King's Indian specialist and plays the position in style, but unfortunately for him, Kramnik knows all the details of the position... [15...fxe4 Keeping 2 knights on the board is met with the same 16.b5! preparing for ♕a3 16...d5 17.♕a3 ♖e8 18.cxd5 cxd5 19.♔b3 followed by ♖d1, with an advantage for White. Black cannot hold his center.]

16.♗xe4 fxe4

17.b5! The situation has changed. A few moves ago, Black was fighting to undermine White's strong center. He successfully fulfilled his plan, so this time it is White's turn to do the same. He already has no pawns to go for this plan, but he can focus all his pieces into the attack. White wants to continue the game with ♖a3, trying to force the d5 move and then launch a quick attack against it with ♙b3 and ♖d1. If Black cannot hold his center, his position collapses very fast. [After 17. ♖xe4 the opening would end with Black's triumph 17...d5 ! 18.cxd5 cxd5 19. ♖g2 ♙d6 collecting the e6 pawn.]

17...♖f6 [Protecting the e4 pawn would help White to continue his plan 17...d5 18.cxd5 cxd5 19. ♖a3 ♖e8 20. ♙b3 followed by ♖d1.]

18. ♖xe4 ♖xe6 Black is a pawn up, but he has serious problems with the coordination of his pieces, and his pawns are vulnerable in the center.

19. ♙a4! White develops with a tempo in order not to waste any time. He attacks the c6 pawn and prepares for ♖d1 in the next move.

19...d5 [19... ♙e8 20. ♖d1 += and ♖a3 is coming next.]

20. ♖d1 ♙h7 [20...d4 Black could have saved his extra pawn, but only in a really anti-positional way. Please compare the g7 bishop and the one on e4, after this, there is no need to think about White having enough compensation for the pawn or not... 21.bxc6 bxc6 22. ♖a3 ♖c8 23. ♖ab1 with complete domination.; The best option could have been to give back the pawn and try to save a worse endgame after 20... ♙e8 21.cxd5 cxd5 22. ♖xd5! This is why Black played 20... ♙h7. 22... ♘xd5 23. ♖xd5 ♖d8 24. ♖xe6+ ♙xe6 25. ♖e3 += Black has weaknesses

on the queenside and an isolated pawn on e4 (it had to be pushed there sooner or later to activate the bishop) is also a potential target.]

21.cxd5! White must be precise. [The tempting 21. ♖a3 would spoil the advantage 21... ♙e8! 22.cxd5 cxd5 23. ♖xe7 dxe4 24. ♖c5 a6 Black gets counterplay.]

21...cxd5 22. ♙b3! And only in the next move ♖a3. Of course, the d4 push for Black is always bad, because of the same reasons as in the 20th move.

22...♖b6 Grischuk tries a trick, but such things do not work against Kramnik... [22... ♙d7 23. ♖a3 d4 24. ♖ac1 and again White's pieces are dominating the board.]

23.a4! One more tempo had to be „wasted“ before playing ♖a3. [23. ♖a3? would fall into Black's trap 23... ♙e8! leaving the pin on the d-file and attacking b5 at the same time.]

23...a6 Black tries to get counterplay by opening the a-file, but it is too late.

24. ♖a3 Finally!

24...axb5 25. ♖xe7 ♙xe7 26. ♖xd5 In case of opposite colored bishops in middlegames, the principle says, that side with the more active bishop is better, and material is not that important. Now it is impossible to compare the two bishops, Grischuk collapses in a few more moves.

26...b4

27.a5! Another excellent decision. White wants to have the ♖b5 option.

27...♔f7 This loses, but objectively the position was hopeless anyway. [27...♖f6 28.♖b5! ♖a7 is very passive 29.♖d1 +-]

28.h4! h5 29.♔d1! The triple threat of axb6, ♖d7 and ♔xh5 was too much for Black, so he resigned the game. Kramnik showed, once again, his deep understanding of the Bayonet attack! **1-0**

(2) Mamedyarov,S (2726) – Shanava,K (2589) [D45]

Tbilisi, 09.06.2012

[Balogh Csaba]

The game is taken from the Georgia-Azerbaijan friendly match. However, as we will see, the only friendly thing about it is the name — they played really sharp chess. We are facing a very interesting game, especially knowing the circumstances. Mamedyarov „improved” on his previous game in the 13th move with a dubious novelty, which seemed to be a great bluff, but Black fell right into its beautiful idea. If Black would’ve reacted better, he would have obtained a clear advantage.

1.d4 d5 2.c4 c6 3.♘c3 ♘f6 4.♘f3 e6 5.e3 ♘bd7 The starting position of the Meran. White goes for one of its sharpest lines...

6.♔c2 ♖d6

7.g4!? This is Mamedyarov’s favorite move, which enjoyed huge popularity around 5-6 years ago, even on the highest level. Recently it went a bit out of fashion, mainly because of the strong computers that are suggesting

very good ideas for Black. He can choose between many sharp options, and all of them lead to complex positions.

7...dxc4 [7...h6 is another move that is considered to be fine for Black.; White gets very strong compensation if Black accepts the sacrifice 7...hxg4 8.♖g1 ♘xh2 9.♘xh2 ♙xh2 10.♖xg7 ♘f8 11.♖g2 ♙d6 12.e4 followed by ♙g5 and 0-0-0. White gets a very strong initiative for the pawn. Black's pieces are undeveloped and the lines are opening towards the king.]

8.g5 [8.♙xc4 is just a transposition to the game after 8...e5 9.g5 ♘d5]

8...♘d5 9.♙xc4 e5 Actually, this is a very logical response. Black opens the center against the attack on the flank.

10.♙d2 [Giving up the light squared bishop for a pawn is not an advisable idea 10.♙xd5 cxd5 11.♘xd5 0-0 12.♙d2 ♖e8! with the threat of e4. The White king gets in trouble.; 10.♘xd5? cxd5 11.♙xd5? does not work because of 11...♙a5+]

10...0-0 11.♘xd5 cxd5 12.♙xd5

12...exd4 Shanava was well-prepared, since Mamedyarov had a game not so long ago in this theoretical position.

13.♘xd4 White deviates from his previous game, but this is not a novelty yet. [13.♙e4 dxe3 14.♙xe3 ♙a5+ 15.♙f1 (On 15.♙d2 ♙b4 Black is fine according to the machine.) 15...f5 could be a very strong improvement for Black (probably this was Shanava's idea). (15...♘e5 happened in the game Mamedyarov-Zherebukh, Khanty-Mansiysk 2011.) 16.♙b3+ is probably the best, but still after (16.♙d3 meets with 16...♘e5 17.♘xe5 ♙xe5 followed by f4 or the simple ♙e6 and ♖ac8. Black has a big advantage.; To open the f-file and the diagonal of the c8 bishop would be a serious mistake 16.gxf6? ♘xf6 with a big attack.) 16...♙h8 17.♙d5 f4 18.♙d2 ♙c7 only Black can be better. His pieces are coming out with tempo, first the d7 knight, then the c8 bishop.]

13...♙xg5 14.♙f5 This is the novelty of the game. White would like to transpose into a superior endgame, but of course, Black keeps the queens on the board.

14...♙e7! [14...♙xf5? 15.♘xf5 ♙e5 White wins a pawn after 16.♙b4 ♖d8 17.♘e7+ ♙h8 18.♙xf7 +/-]

15.♖g1 Very suspicious move. The White queen is pinned. At first sight White could immediately make use of it.

15...♘b6 [After 15...♙e5 I think, Black has a clear advantage... 16.♙g5 is probably White's best option to go for a worse endgame (16.♙e4 g6 and the d7 knight jumps in the next move.; 16.♙c3 ♘f6) 16...♙xg5 17.♖xg5 h6 18.♖g1 ♘f6 =+]

16. ♕c3!! This great queen sacrifice is the start of Mamedyarov's ingenious play, but it was not too late for Black to obtain a good position.

16... ♖e5? Just as in the previous move, Black plays the most logical move. After the shocking 16. ♕c3, Black would like to exchange the queens... [16... ♕xf5? simply loses after 17. ♘xf5 The best that Black can achieve is 17... ♖e5 18. ♕xe5 ♕xe5 19. ♘h6+ ♔h8 20. ♘xf7+ +/-; Just as in the previous move, Black should have played 16... ♕e5! 17. ♖xe5!! (The elegant 17. ♘c6? would win, if taking on c3 didn't come with check! 17... ♕xc3+ and Black takes the knight.) 17... ♖xe5 18. ♘e2! and Black has nothing better than giving back the queen and simplifying to a drawish endgame 18... ♖xc3+ 19. ♘xc3 ♘xd5 20. ♘xd5 ♕e6 Black is slightly better, but the game should end in a draw.]

17. ♖d3!! After this fantastic and completely unexpected move, White is winning. Black cannot neutralize the power of the c3 bishop connected with the threats around the g7 square.

17... ♘xd5 [17...g6 18. ♕b3! Too many threats are in the air. One of the possible winning sequences could be 18... ♖h5 19. ♘f3! ♖d4 and ♖xd6 are threats 19... ♖xf3 20. ♖xg6+! hxg6 21. ♖xg6#; White wins the queen af-

ter 17... ♖xd5 18. ♖xg7+! ♔xg7 19. ♘f5+! ♔g6 (19... ♔g8 20. ♘h6#) 20. ♘e7+ +-]

18. ♘f3!! The 3rd incredibly strong move in a row, but not the last one. Only with this double attack against the queen, White can continue pressing the g7 pawn.

18... ♕f5 [18... ♘xc3 19. ♘xe5 +-; On 18... ♘f4 White has many different wins, but the nicest is definitely 19. ♖xd6!! ♖xd6 20. ♖xg7+ ♔h8 21. ♖xf7+ ♔g8 22. ♖g7+ ♔h8 23. ♖g6+ +-]

19. ♖xd5!! This final decisive blow „puts the dot over the i“. White ends up with material advantage after a forced line.

19... ♖xd5 20. ♖xg7+ ♔h8

21. ♖xf7+! First, the f-pawn had to be eliminated to avoid the f6 resource.

21... ♗e5 [21... ♔g8 22. ♖g7+ ♔h8 23. ♖g5+ ♗e5 24. ♘xe5! is the most precise way to win 24... ♖f6 25. ♘d7!! +-]

22. ♗xe5+ ♔g8 23. ♖g7+ ♔h8 24. ♖g5+ Maybe Black could have continued a bit more with two pawns down, but he was so impressed with White's play that he resigned immediately. **1-0**

(3) Kulaots, K (2578)
– Naiditsch, A (2698) [E32]

Top-12 French league (11), 10.06.2012

[Arkadij Naiditsch]

We are in the last round of the French league. My team was quite unlucky, so we finished in 4th place. The first move of my opponent was a bit surprising to me, his main move is 1.e4

1.d4 ♘f6 2.c4 e6 3. ♘c3 ♗b4 4. ♔c2 0-0 Lately, I've been playing 4...d5 more often, maybe this is what he was hoping for...

5.e4 The beginning of a sharp line. The main line is of course 5. a3 ♗xc3 6. ♔xc3 d5.

5...d5 6.e5 ♘e4 7. ♗d3 c5 8. ♘f3 cxd4 9. ♘xd4 ♘d7 10. ♗f4 ♔h4 I like this line with ♔h4. Lately, it seems to lead to a force draw, but things are quite complicated.

11.g3 ♔h5 It seems like 11... ♔h3 is very playable for Black as well.

12.0-0 Castling looks a bit dangerous for White, but it is the correct move. About a year ago I played a game against Parligras where he continued: [12.♖e2 ♔g6 Blacks wants to play ♘xc3 13.a3 It is already a clear sign that things went wrong for White. He hasn't castled yet, giving Black some tactical ideas! 13...♙c5 14.♖d1

14...f6! A very nice move. Black is crushing White in the center and the e5 pawn is the key one, without it White's position is falling apart 15.♘xe4 dxe4 16.♘xe6 ♙xf2+ 17.♔d2 ♖e8 18.♘c7 fxe5 19.♘xa8 exf4 and Black is close to winning.]

12...g5 Until here, both me and my opponent played quite quickly. It is a well known line which appears almost by force.

13.cxd5

13...gxf4!? Before this move I started to think. I could remember the famous game Mamedyarov-Efimenko, where Black managed to make an easy draw after: [13...♙xc3 14.bxc3 exd5 15.♙xe4 dxe4 16.e6 gxf4 17.exd7 ♙xd7 18.♔xe4 fxg3 19.fxg3 b6 and the position seems to be equal, but I was in a rather fighting mood, and wanted to play an interesting game. I didn't want to get a draw by force.]

14.♙xe4 Before playing 14.♙xe4 my opponent thought for about 15 minutes and I think he made the wrong choice. [14.dxe6! This is the critical move! 14...♘xe5 (14...fxg3 15.hxg3 The inclusion of these 2 moves doesn't give anything for Black.) 15.♘xe4 and here we see the main idea, White forces Black to take on e6 with the pawn, so the bishop on c8 becomes a very bad piece that cannot support Black's attack 15...fxe6 White has a lot of moves here and the position is very complicated. Anyway, I feel that this should be better for White.]

14...♘xe5 15.dxe6

15...♘g4! A very important move that needed a very precise calculation! Let's take a look at few lines, some of them very beautiful!

16.♘f3?! [The main move here should be 16.exf7+ ♖xf7 17.h4 White is a pawn up and the Black king is quite open as well — the position is very forced! 17...fxg3 18.fxg3 Black has 2 options here 18...♙c5! A very difficult move to make during a practical game (18...♘e3 This is the move I wanted to play 19.♙b3 White needs to give up the exchange, but the pin on f7 is super dangerous! 19...♘xf1 20.♖xf1 ♙xc3!

Black is just in time for 20...♙xc3. Anything else would lose immediately due to White's ♖xf7 threat 21.♘e2!! An amazing move, which I have blundered during the game!

a) 21.♖xf7? looks logical, but I saw that it loses due to 21...♙xd4+ 22.♙h1

22...♙e6! The only move, but a winning one! Black is simply a rook up. (22...♙xf7 23.♙d5) 23.♙xe6 ♙xf7;

b) 21.bxc3 ♙g7! Escaping from the pin 22.♖xf7+ ♙xf7 White got some counterplay, but it is clear that Black is doing better;

21...♙f6 and here we see the idea of 21. ♘e2!, in case of 21.bxc3 White had no use for the a1–h8 diagonal, and the knight on d4 is useless. With 21.♘e2! White brings the knight to f4 and, at the same time, wants to play ♖xf7 and ♙xc3! leaving the Black king under checks! An amazingly strong move, but almost impossible to find during a practical game! 22.♖xf6 ♙g7 23.♖xf7+ ♙xf7 24.♙c3+ and White is out of danger because of the open Black king. 24...♙f6 25.♙c7+ ♙f7 26.♙c3+ The position seems to be a draw.) 19.♘ce2 White needs to protect the knight on d4 19...♘e3 and now the ♘e3 wins a lot of strength 20.♙b3 ♘xf1 21.♖xf1 Black is an exchange up, and in

comparison to the previous lines, the bishop on b4 is not hanging, so Black has time for: 21...♔g7! 22.♖xf7+ ♔xf7 23.♔c3 ♖b6 The position remains quite complicated, but Black should be doing better.; 16.h4 During the game I was mainly afraid of this move... The position is super complicated but my bishop on c8 is still out of play... 16...♗xe6! Black needs to go for the White king, but to do this, a complete development is needed 17.♘ce2 (17.♘xe6 fxe6 18.♔b3 fxg3! and Black is the one who starts the mating attack first.) 17...fxg3 18.fxg3 ♘e3 19.♔a4

19...♗c5 According to the computer, Black is doing very good here, and probably it is true, but during the game I was not that sure. If White managed not to lose immediately, Black's position could become very bad. Luckily, it seems like White is going to lose some material in the next moves.]

16...♗xe6! I was so happy with my position here! All my pieces are very well placed and things are getting „darker“ around the White king.

17.♖ad1 White wants to play ♘d5.

17...♖ac8 A very logical move. I am avoiding the ♘d5 move, plus I want to play the ♖c5-Qh3-Rh5 maneuver, which could be deadly for White.

18.♗xb7? This move was a shock. Such greediness in a very dangerous position, this can't be good for White. [18.♔c1! it was really time for some defensive actions 18...fxg3 19.hxg3 White wants to play ♔g5+ with the exchange of queens. Probably Black should be doing somehow better here, but the position remains quite unclear.]

18...♖c7! Now Black is in time to put the queen on h3, where it will be perfectly placed!

19.♗e4 Nothing else to do...

19...fxg3 20.hxg3 ♔h3 Now Black has multiple mating ideas. Here are a few: to play ♗c5 followed by ♔xg3, or to play ♖c5-h5, also the f5-f4 push is very dangerous. White's position is on the edge.

21.♔c1 The right idea, but 2 moves too late...

21...f5! No time for hesitations! I am starting a direct mating attack. [21...♖c5! This move would be an easier way to victory, but again, it's not easy to find 22.♗d5 h6!! This is the key move! To take with 22...♗xd5 23.♔g5 ♔h8 24.♖xd5 brings nothing for Black, but after 22...h6!! White is totally hopeless.]

22.♗d5 The only move...

22... ♖xd5 23. ♖xd5

23...f4 Black starts a mating attack with all his pieces against the poor White king. This can't end well...

24. ♖g5+ ♔h8 25. ♖d1 [I was expecting 25. ♖d2 with the same idea of checking on d4 25... ♖c5 26. ♖e4 ♖b6! and I thought that somehow I will mate White during the next few moves. And indeed, it was a correct feeling, White has no defense against fxg3.]

25... ♖c5 26. ♖e4 [26. ♖xc5 doesn't work because of 26... ♖xc5 27. ♖d4+ ♖e5! White can't win back the exchange because of the mate on h2. Black should be winning here.]

26... ♖e3! [26... ♖b6 would win as well, but why not to take the queen by force?]

27. fxe3 ♖xe3+ 28. ♖f2 ♖c1 29. ♖xc1 ♖xc1 White's position is totally hopeless. A nice attacking game! **0-1**

(4) Aronian,L (2825) – McShane,L (2703) [D15]

Tal Memorial (3), 10.06.2012

[Arkadij Naiditsch]

We will see an amazing game! I can't remember Aronian losing with White and especially being crushed in the opening like this! It is the 3rd round of the Tal Memorial, McShane started with a double 00, and Aronian with the solid 1,5/2. Not many would have put money on a victory by the talented Englishman, but things went far from what was expected!

1.d4 d5 2.♘f3 ♘f6 3.c4 c6 4.♘c3 And we have another game in the Slav.

4...a6 McShane chooses a very solid line with a6.

5.♖g5 [5.e3 is the main move in the position.]

5...dxc4!? McShane is going for the most forced line! Strangely, after 5...dxc4 almost no games were played on the high level, so it's hard to say if Aronian knew this move or not, maybe he knew it and made a mistake in

the variation?! [5...♘e4; 5...e6 would be the other 2 possibilities.]

6.a4 [6.e4 b5 and we are in the usual unclear positions that appear in a lot of lines, where Black takes on c4 and protects it with b5. White will develop his play in the center, while Black will try to be solid]

6...h6! A very important move that will be very helpful for Black soon. White needs to decide what to do with the bishop on g5.

7.♙h4 The most natural reply. [7.♙xf6 exf6 These positions can never be better for White even if he manages to recover the pawn on c4. Black's bishop pair will always give enough counterplay!; 7.♙d2 Can this be the right move?! 7.♙d2 looks just ugly. Why did White play 5.♙g5?]

7...b5! I don't know if McShane knew this idea or just found it over the board, in any case, it's a very strong move.

8.axb5 this move is a clear sign of huge self confidence of the White player. It was still not too late to switch to moves like 8.e4 with quite an unclear position.

8...cxb5 9.♘xb5 axb5! Otherwise, White is doing much better.

10.♖xa8 ♕b7 Can it be that Black is doing already better in just 10 moves?... Amazing!

11.♖a1?! [11.♖a7 would bring nothing for White 11...♔b6 12.♔a1 e6 and White is not in time for ♖a5.; 11.♖a2!? Maybe this move would have been a better option for White. The rook on a1 will be under attack (Na5-Nb3), so why not to put the it on a2?]

11...g5!? And here we see why 6...h6 was such an important move. [Anyway, after 11...e6 12.♕xf6 ♕b4+ 13.♘d2 ♖xf6 14.e3 0-0 it seems like Black has more than enough compensation for the exchange. His next move could be e6-e5.]

12.♕g3 e6 13.e3 White doesn't have any other defense against the ♕b4 threat.

13...♕b4+ 14.♔e2 White's position looks very ugly. For just an exchange Black managed to put the White king on e2 in front of the bishop on f1 (I can't remember seeing this kind of lack of construction before on the high level), the Black pawn structure is just great and all the

pieces are well placed. All Black needs to do is to open some extra lines and the game will be over.

14...♘c6 A good choice, McShane brings his knight to b3 where it will be perfectly placed!

15.♘e1 White is trying to develop his pieces a little bit, at least. White's idea is to play ♘c2 forcing the ♕b4 to go away and then develop by playing ♔e1-Be2. But all this plan looks very slow — in fact, too slow...

15...♘a5 16.♕e5?! This move probably already leads to big trouble. Much better was: [16.♘c2 ♕e7 17.f3! A very logical move. White blocks Black from playing ♘e4 and, at the same time, the White king will finally find a more or less safe square on f2 17...0-0 18.♔f2 ♘d5 Black wants to play f5-f4. The position is quite complicated but we can feel that it should be very nice to play for Black, even if a lot of engines might probably disagree.]

16...0-0! No time to waste, Black needs to play actively.

17.h4 [17.♕xf6 would not solve White's problems 17...♖xf6 18.♘c2 ♘c6 Black is still very active and White has a horrible development. I would prefer to play with Black here.(18...♖e7?! 19.♘xb4 ♖xb4 20.♖c2!)]

17...g4 It's hard to say if the inclusion of 17.h4-g4 is good for White — probably not. Aronian is a very optimistic player and I am sure that in the current position he was not thinking about „how to escape today?“, instead „how to trick my opponent?“.

18.♘c2 ♕e7 Of course there is no reason for Black to give away the bishop on b4.

19.♔e1 ♘b3! McShane is playing a great game. [19...h5 would have been possible as well.]

20. ♖a2 [At 20. ♖a7 ♔b6 White would have no better move than to come back to a2.]

20...h5 Looks like an easy move, and in fact it is! White is slowly getting into deep trouble. Black's pieces keep on rolling forward, and it's hard to say how to stop them!

21. ♘e2 White is trying to develop anything he can, but it is too late!

21... ♙d6! Another great move by Black. White only has one active piece, so it is time to exchange it! There is no reason for Black to even look at 21... ♙xg2, which would give White some play on the g-file. Black has to stick to the main idea: to play for domination. McShane is doing it perfectly!

22.f3 White is trying to create something... [22. ♙xd6 ♔xd6 and White simply has no moves!]

22... ♘d5 McShane sees it well, after 22.f3 the weakness is the pawn on e3!

23.fxg4 Maybe this move is already losing, but what else to do? White is trying to search for chances with his activeplay [23. ♙xd6 ♔xd6 24. ♔f2 f5 and White's position simply looks horrible.]

23... ♙xe5! 24.dxe5

24... ♔b6 White is hopeless against the Black threats. Black wants to play ♘xe3, or ♖d8, winning the Queen on d1. The White rook on a2 is totally out of the game.

25. ♙f3 [25. ♖h3 ♖d8 White has no defense against ♘f4 26.gxh5 ♘f4]

25... ♘xe3?! This move gives White some hopes... [25... ♖d8! would have been the correct play, and it is a bit strange that McShane got away from his mainidea 26. ♙xd5 White has no other move... In case of 26. ♔e2, ♘c1 wins the rook on a2 26... ♖xd5 27. ♔f3 ♖d2 and White's position is lost.]

26. ♘xe3 ♔xe3+ 27. ♔e2 ♔c1+ 28. ♔d1 ♔e3+ 29. ♔e2 ♔c1+ Probably Black was in time trouble and decided to repeat the moves.

30. ♔d1 ♙xf3! Of course, continuing the game. White's position is still very very bad.

31.gxf3 ♔e3+ 32. ♔e2 ♔c1+ 33. ♔d1 ♔e3+ 34. ♔e2 ♔f4 Black wants to play ♖d8 next. The White king is still in the center, and the rook on a2 is always in danger of getting caught!

35. ♔h2 [35. ♔f2 would have been a better way to fight, but also here Black is close to winning 35... ♖d8 36. ♖d1 ♔h2+ 37. ♔e3 ♔xe5+ 38. ♔f2 ♔h2+ 39. ♔e3 ♔xh4! Black got 2 pawns for the exchange, and probably the knight on b3 is worth more than the rook on a2. The position should be winning for Black.]

35... ♔xf3! As Kasparov once said, greediness is a positive characteristic in a chess player.

36. ♖f1 ♔e4+ 37. ♔f2 ♔d2 38. ♖g1 ♔f3+ White resigns because of 39. ♔e1 ♔e3! What a game by McShane, I think he will not forget it soon. The same goes for the World's Number 2, this was Aronian's toughest lost in maybe a couple of years... **0-1**

Endgame section

(15) Morozevich,A (2769) – Carlsen,M (2835)

Tal memorial (2), 09.06.2012

[Chess Evolution]

Morozevich outplayed Carlsen in the middlegame, but he allowed the World Nr.1 to escape into this endgame with a pawn down, where the active position of Black's pieces and the limited number of pawns guarantee very good chances for survival. It's important to mention that we are in serious time trouble, only 2 moves left, but Morozevich makes a terrible mistake in the calculation...

39. ♖c4 This must be the right approach. White should eliminate the strong d5 bishop.

39... ♗xc4 [Probably Morozevich has only calculated that the bishop endgame is winning for him in a study-like way... 39... ♖c8 40. ♗b3 ♖xc2? (40... ♗g8 leads back to a similar position like in the game. 41. ♖e2 f6 (41... ♗xb3 42. ♗xb3 ♗d5 43. ♗c3)) 41. ♗xc2 ♗xf3 This could be the

only reason for Black to go into the bishop endgame, otherwise ♗e4 wins easily... 42.gxf3 h3

43.f4! The only way to stop the h-pawn. (43. ♗e4 would spoil the win after 43...f5! 44. ♗xb7 f4! and the h-pawn promotes, but White is lucky to hold the draw with 45.a6 ♗c7 46.d5! h2 47.d6+ ♗xd6 48.a7 h1 ♗ 49.a8 ♗ ♗e1+ = and the game ends with perpetual check. Black gives the checks on the e-file. White's pieces are standing poorly to protect the king.) 43... ♗d5 44. ♗d1! ♗e4 Seems like Black can control the diagonal, but... 45. ♗g4! h2 46. ♗c8! +- wins for White.]

40. ♖xc4?? This kind of blunders are possible on any levels. Morozevich had only seconds left on his clock, when Carlsen took ♗xc4. He realized, that after the planned takeback with the king, the pawn endgame might be losing for him. In this kind of shock, he decided to go for a worse rook endgame, that he can hold... [Lets see what happens after 40. ♗xc4 ♗g5! Probably Carlsen would have continued to stay in the rook endgame and save it with an active defense. (Let's examine what would happen after 40... ♖c8+ 41. ♗d3 ♖xc2 42. ♗xc2 ♗c6 This was the sudden fear of Morozevich. Black intends to take the

a-pawn and obtain a pawn endgame with a far advanced passed pawn, which could be easily winning for Black. But... 43.♔d3 ♖b5 44.♔e4 White king must run to support the d-pawn 44...♙xa5

45.♔e5! In this moment, the d-pawn promotes with check, but things are by far not that clear... 45...b5 (45...♙b4 is the other option, when White must react precisely 46.♔d6!! Only this way (46.d5 ♔c5 wins for Black.) 46...♔c4 47.d5 ♔d4!? Tricky move. Black tries to win the d-pawn. (47...b5 leads to a queen endgame with a pawn up for White. 48.♔c6 b4 49.d6 b3 50.d7 b2 51.d8♙ b1♙ 52.♙xh4+ +/- Probably White's winning chances are bigger than Black's drawing possibilities.) 48.f4! ♔c4 49.f5! b5 (Black cannot wait longer with 49...♔d4 50.f6 ♔c4 51.♔e7 and the f-pawn promotes faster.) 50.♔c6 b4 51.d6 b3 52.d7 b2 53.d8♙ b1♙ 54.♙d5+ ♔c3 55.♙xf7 +/- Again with a pawn up with good winning chances.) 46.d5 ♔b6 (46...b4 47.d6 ♔b6 48.♔f6! A well known motif in pawn endgames, how the king helps his own pawn 48...♔c6! The only way to promote in the same time, otherwise White queens with check. 49.♔e7 b3 50.d7 b2 51.d8♙ b1♙ 52.♙d6+ +/-) 47.♔d6! Only this way! White only temporarily blocks the route of the pawn. Now again, the d-

pawn arrives with check and the usual queen endgame with a pawn up arises 47...b4 48.♔e7 b3 49.d6 b2 50.d7 b1♙ 51.d8♙+ +/- Of course, it was impossible to calculate all these lines with a few seconds. Now we can understand Morozovich's shocking take-back in move 40.) 41.♖a2 ♖f5 Black pins the White rook to a passive defense on a2, while the a6 push leads to further exchanges of the pawns, which increases the probability of the draw...]

40...♖xg2 Black is better now. He has the better king, a dangerous h-pawn and the d4, f3 pawns are weak. What a turn of the game! But Morozovich received his extra hour after move 40, so he got the time to calm down and save the game with good technique.

41.♖c5! The rook must stop the h-pawn from behind. Besides, it cuts the Black king along the 5th rank!

41...h3 42.♖h5 h2 43.♔c4! [To go for the b7 pawn would be decisive 43.♔b5? ♖g5+]

43...♖c2+ [If Black tries to approach to his h-pawn, White's d-pawn becomes dangerous as well. 43...♔e6 44.d5+ ♔f6 45.♔c5 ♔g6 46.♖h3 ♔f5 47.♔b6 =]

44.♔d3 ♖a2 45.♔e4 [45.♔c4 should also be enough to draw.]

45...f5+!? Carlsen tries a last trick. By exchanging his f-pawn for the d-pawn, he manages to „breakthrough“ on the 5th rank. But on the other hand, this gives White a free f-pawn, which allows him to hold the draw.

46.♔f4 ♔d5 47.♖xf5+ ♔xd4 48.♖h5 ♖g2 ♔g3 had to be prevented. [48...♔d3 49.♔g3 =]

49.♖h7 ♔d3 50.♔e5 The rest of the game is forced and obvious...

50...♔e2 51.f4 ♔f1 52.f5 ♖a2 53.f6 ♖xa5+ 54.♔e6 ♖a6+ 55.♔e7 ♖xf6 56.♔xf6 ♔g1 57.♔e5 h1♔ 58.♖xh1+ ♔xh1 59.♔d4 The game contained 3 different kind of instructive endgames. One rook endgame, one bishop endgame and a pawn endgame. **1/2**

(16) Naiditsch,A (2698) – Edouard,R (2625) [A37]

TCh-FRA Top 12 2012 Belfort FRA (7.2), 06.06.2012

[Chess Evolution]

After a long and not very good game, my opponent finally gives me a chance.

59...♖d3?

60.h5! The only chance for White to play for a win is to get a passed pawn and there is no other way to do it than to play h5.

60...gxh5 Of course Black can't allow White to play h6.

61.♔h4 Of course, I need my king to support the g-pawn.

61...♖xf3 A risky move, but it gives a draw for White. The one-rook endgame is going to be super forced and very hard to play for Black during a practical game. [61...♖d1 would probably give Black a draw... not an easy one, though. 62.♖h3 (62.♙xh5? would be too greedy 62...♖h1+ 63.♙g4 ♖g1+ 64.♙h5 ♖h1+ with a draw.) 62...b4!? 63.axb4 ♖1d4+ 64.♙xh5 ♖xb4 with good chances for a draw, even if the position is not so simple.]

62.♖xf3 b4! The only move! Black's idea is to exchange the b-pawn for White's a-pawn and to give the rook for the g-pawn, trying to queen the a-pawn with the support of the king. It is very important for Black to be in time to cross the 5th rank, otherwise, the White rook alone will be able to stop the a-pawn.

63.axb4

63...♙c6! Another very good move by my opponent. Black's dream is almost coming true...

64.♖f5! The only chance to win the game is to cut the Black king. [64.♙xh5? leads to a forced draw after: 64...♙b5 65.g6 ♖xg6 66.♙xg6 ♙xb4 67.♙f5 a3 68.♙e4 a2 69.♖f1 ♙b3 70.♙d3 ♙b2 =]

64...♖d4+? The first imprecise decision. [64...♖d5! would be the easiest way to a draw, and a very logical move. Black needs to open the possibility of crossing the 5th rank with his king 65.♖f8 ♖d4+ From here on, all the lines are very forced 66.♙xh5 ♖xb4 67.g6 ♖b7 68.♖f5 (68.♖a8 ♙b5 69.♙h6 ♙b4 70.g7 ♖xg7 71.♙xg7 a3 72.♙f6 ♙b3 73.♙e5 a2 74.♙d4 ♙b2) 68...a3

69.♙h6 a2 70.♖a5 ♖b2 71.g7 ♙b6 72.♖a3 ♖g2 73.♙h7 ♖h2+ 74.♙g6 ♖g2+ 75.♙f7 ♖f2+ with a draw. The White king has no place to escape from the Black rook.; 64...♖d1 gives Black a draw as well, but a very difficult one 65.g6 a3 66.♖a5 ♖a1 67.♙g5 (67.g7 ♖g1 68.♖g5 ♖xg5 69.♙xg5 a2 70.g8 ♖a1 ♙b7 71.♖c4+ ♙b7 and of course, this queen endgame is a draw.) 67...h4! An amazing move, and the only one that leads to a draw. Black needs to get rid of the h-pawn to be able to check the White king on the h-file 68.g7 h3 69.♙g6 ♖g1+ 70.♖g5 ♖xg5+ 71.♙xg5 a2]

65.♙xh5

65...♖xb4?? After this move, it's all over. [65...♖d1! would still give a draw for Black 66.♖a5 (66.g6 ♖h1+ 67.♔g5 a3 68.g7 a2) 66...♖h1+! The only move (66...♖a1? would be the losing move 67.g6 a3 68.g7 ♖h1+ 69.♔g6 ♖g1+ 70.♔f7 ♖f1+ 71.♔g8 ♖a1

66...♖b1 67.g7 An easy drawn-looking endgame turns into a fierce battle. Once again, we can see how complicated rook endgames are. Every mistake could be the last one, and a lost position can suddenly become a draw!
1-0

72.♖g5! and we see a very typical maneuver, the White rook is going from a5 to g2, and then to f2, in order to free the White king from g8 72...a2 73.♖g2 ♔b5 74.♖f2 ♔xb4 75.♔f7 and White is just in time to win the game!) 67.♔g6 ♖a1 68.♔h6 a3 69.g6 a2 70.g7 ♖h1+ 71.♔g6 a1 ♖ 72.♖xa1 ♖xa1 73.g8 ♖ ♖g1+ 74.♔f7 ♖xg8 75.♔xg8 ♔b5 Draw.]

66.g6

Clash of the Titans

(17) Tal,M – Matanovic,A [C97]

Alekhine Memorial Moscow, 1963

[Balogh Csaba]

The next game is a nice example of the main line in the Ruy Lopez. White got a positional advantage by some strong (already quite typical) maneuvering. And when the moment came, Tal made a decisive blow in his usual style.

1.e4 e5 2.♘f3 ♘c6 3.♙b5 a6 4.♙a4 ♘f6 5.0-0 ♙e7
6.♖e1 b5 7.♙b3 d6 8.c3 0-0

9.h3 The initial position of the main Spanish, where Black has a wide choice between around 10 big continuations. Each of them lead to different kinds of structures. This is the reason why this opening is so complex and popular, rich in positional and tactical ideas.

9...♘a5 This is the Chigorin variation, considered to be the main line of all Spanish.

10.♙c2 c5 11.d4 ♙c7 This is the main move again. [Recently 11...♘d7 12.♘bd2 exd4 13.cxd4 ♘c6 is more common and very sharp. But of course, fashion is always changing. „The best setup” doesn’t exist.]

12.♘bd2 The typical Spanish maneuver, transferring the knight to the kingside through f1.

12...♙d7 [12...cxd4 13.cxd4 ♘c6 leads to more opened positions. The Black player can choose a setup according to his style, this is the best part of the Spanish.]

13.♘f1

13...♖fe8 We are still in quite a big line of theory. Black would like to achieve the typical transfer of the bishop to g7, after g6 and ♙f8.

14.b3! I like this move very much! The main idea is to get the a5 knight out of the game, White prevents the ♘c4 possibilities. White never wants to develop his bishop to b2, it is strictly against the a5 knight. There is a very deep idea behind the move as well. White does not want to decide where the f1 knight should go. It usually jumps to g3, but as we will see, it has a different direction as well.

14...g6 Black continues his plan. [14...♙f8 would meet with the unpleasant 15.♙g5! Black has problems with the knight.]

15. ♖g5! And here comes the point of the 14th move. White wants to play ♖e3 using the weakened d5 square and Black cannot prevent it with ♘c4-b6, for example.

15... ♘h5 The exchange of the dark-squared bishops is always a hard decision. White would miss this piece in the future and it is his stronger bishop, but on the other hand, Black's kingside might become really weak.

16. ♖xe7 ♖xe7 17. ♘e3! The knight goes to e3 and is ready to jump to d5.

17... ♘f6 18. ♘g5?! This is typical in the style of Tal. He immediately wants to launch an attack against the king... but this time it would have been more advisable to continue the game in a positional manner, as GM Stein demonstrated one year later against the same opponent... [18. ♖c1! White prepares for the b4 push and the opening of the c-file. 18... ♘b7 19. b4! White managed to create the „typical bad spanish knight“ on b7, which cannot join the game 19... c4 20. a4! ♖ae8 21. axb5 axb5 22. ♖a1 White slowly improves his position. Black remains without counterplay, since 22... exd4 is met with 23. ♖xd4. 22... ♖c6 23. ♖a6 ♖c8 24. d5! ♖d7

after 21.♔d2 ♘c6 22.dxe5 dxe5 23.♘f3 White has a small plus anyway. He is going to install his knight to d5 and if Black takes it, he recaptures with the pawn.]

21.dxe5! dxe5 Black should try to keep his center, but it has concrete problems. [21...♖xe5 22.♘f3 ♜ee8 23.♔d4 +/- is also very unpleasant.]

22.♘d5! ♘xd5 23.exd5 With the use of the d6 threat, White created many dangerous ideas that Black cannot really parry. Let's see a few lines:

23...♞b7 Black tries to block the d-pawn, but this allows White to use the pin on the c-file. [On 23...♔b6 24.d6 ♜ee8

25.♙xg6!! White wins in all lines. Probably the most spectacular is after 25...hxg5

a) 25...♖xc1 26.♙xf7+ ♔f8 27.♔xc1 hxg5 28.♙xe8 +/-;

b) 25...fxg6 26.♔d5+ ♔h8 27.♖xc8 ♙xc8 (27...♖xc8 28.♔xe5+) 28.♔f7 +/-;

26.♔h5! Everything is forced now 26...fxg6 27.♔xg6+ ♔f8 28.♖xc8 ♙xc8 (After 28...♖xc8 The White rook joins and decides the game. 29.♔f6+ ♔g8 30.♖xe5 +/-)

29.♔f6+ ♔g8 and here comes the fantastic strike: 30.d7!! A really unusual motif 30...♔xf6 31.dxe8 ♔+ ♔f8 32.♖xe5 +/- White wins.; 23...hxg5 24.d6 +/-]

24.♘xf7! ♖xf7 [24...♔xf7 25.♙xg6+ +/-]

25.♙xg6 White wins material and continues attacking.

25...♔d6 [25...♔xc1 26.♙xf7+ ♔xf7 27.♔h5+ ♔f8 28.♖xc1 ♖xc1+ 29.♔h2 +/- White takes more pawns. Black cannot coordinate his pieces.]

26.♙xf7+ ♔xf7 27.♖xc8 ♙xc8 Here, of course, White can choose between many different wins. Tal finds the most effective solution:

28.♔c2 ♙d7 29.♔h7+ ♔f8 30.♖e3 and Black resigned. 1-0

Editorial Preface

The very exciting and amazingly strong “Tal Memorial” has come to an end with the second consecutive victory of Magnus Carlsen, who managed to win his last game with Black against McShane, while at the same time Aronian won his game against the tournament leader till then, Caruana. We saw a lot of very interesting games, and sometimes the result was very unpredictable. Who would’ve bet before the tournament that McShane would beat Aronian, Morozevich and Kramnik!

We comment a few games from the Tal Memorial for You, we hope You will enjoy these very high level games.

The Female Grand Prix is still being played. The most exciting part is still to come and the winner will be decided in the last rounds.

In this issue we want to present You one study from GM Sergey Grigoriants, who has sent his composition to us. We are really grateful for this! It is totally crazy, and in case You can find a winning idea-don’t get dizzy!

As usual, we have a couple of interesting practical endgames and the puzzle section.

Enjoy the CEWN Nr 17!

4 best games of the past week

(1) McShane, Luke J (2706)
— Carlsen, Magnus (2835) [C85]

7th Mikhail Tal Memorial Moscow RUS (9), 18.06.2012

[Arkadij Naiditsch]

The last round of maybe the most prestigious event of 2012, the Tal Memorial. Magnus Carlsen is on +1, and needs badly a full point to get at least the shared lead in the tournament. His opponent McShane had won 2 games in a row, against Morozevich and Kramnik! In this game the World's number 1 gives us a great example of how to play structural positions!

1.e4 e5 It's a bit funny that Carlsen chooses 1...e5 to play for a win. All his wins in the Tal Memorial were with Black, and with 1.e4 e5.

2.♘f3 ♘c6 3.♙b5 a6 4.♙a4 ♘f6 5.0-0 ♙e7 6.♙xc6 McShane likes to play „slow“ positions and this is exactly what he is getting after 6.♙xc6, but of course, probably White accepts not getting any opening advantage.

6...dxc6 7.d3

7...♘d7 We are in an often played position, and 7...♘d7 is probably the best way for Black to continue. The Black knight is going to d4!

8.b3 The usual setup for White as well. White develops the bishop on b2 to provoke Black's f6 move in order to play ♘h4 later...

8...0-0 9.♙b2 f6 10.♘c3 This is something new. Usually, White was trying to continue with 10.♘bd2. Then, he would have 2 different plans, to play for f4 or to play with ♘c4-a4-a5 trying to fix Black on the queenside. On the other hand, Black usually chooses to play ♖e8-Nf8-Ne6 or c5-Nb8-Nd4, in any case. The key in this line is to bring the knight to d4! [10.d4 exd4 This kind of moves bring nothing at all for White.]

10...♖e8 This move is hard for me to understand. Why does Black want to play ♘f8-Ne6 and not the immediate 10...♘c5 followed by Ne6? [10...♘c5 In my opinion, the most logical move. 11.♘h4 In case of any other move, Black just plays ♘e6 11...g6! A very typical reaction. Black blocks the White knight on h4 and threatens to play f6-f5 at some moment 12.f4 exf4 13.♖xf4 f5 and Black is doing very good.]

11.♙h1 This is a useful prophylactic move, but why not to go immediately for ♘e2-Nh4 and f4...

11...♘f8 12.♘e2 c5 Probably 12... ♘e6 was also possible, because 13.d4 can never bring White any advantage, but why to make an extra calculation? 12...c5 is definitely a good move and will be needed in the future

13. ♖h4 ♜e6 [13...g6? would be to passive now 14.f4 exf4 15.♜xf4 and the White knights are getting very dangerous!]

14. ♜f5?! I don't like this move at all, McShane brings the knight to e3, but what for? [14.f4!? If You say A, sometimes it's good to say B as well 14...♜d4 (Of course doesn't work: 14...exf4? 15.♜xf4 ♜xf4 16.♜xf4 g5 17.♜f5! and White is almost winning.) 15.fxe5 (15.f5 This move looks quite interesting as well. The idea of White could be just to play ♜xd4 next, then, ♜f3-Rh3-Qh5 and try to give mate...) 15...fxe5 16.♜f5 with maybe a slight advantage for White. Now we can see very well that the Black rook has nothing to do on e8. It would be better placed on f8!]

14... ♜f8 Of course Black doesn't give White the chance to play ♜xe7 followed by f4, with a slightly better position for White.

15. ♜e3 ♜d4 The Black knight reached his final destination!

16.f4

16... ♜e6! An easy-looking move that is very important. From this moment on, Black completely takes over the game.

17.fxe5 [17.f5 ♜f7! This is the key idea. It's very important for Black to have the bishop on f7 after White's f5. The bishop will protect the Black king and support Black's play on the queenside. 18.g4 b5 with good play for Black.]

17...fxe5 18. ♜g1 Still, the position remains about equal, although White is in big positional danger. It's funny to see how many moves McShane made with his knights! The knight from b1: ♜c3-e2-g1. The knight from g1: ♜f3-Nh4-Nf5-Ne3. A total of 7 out of 18 moves!

18...g6! A great move by the World's number one! It's not easy at all to understand why the Black bishop's best square is on g7! I think the idea is quite simple, it is clear that Black will start playing on the queenside very soon, so White's only chance is going to be to play on the kingside. As we know from the King's Indian structures, the king on g8 is very safe if the bishop is on g7!

19.c3?! I think this is a serious positional mistake. Now Black is getting a clear target in White's pawn structure. [19.♜f3 would have been a better move. The next Whites

moves could be ♖c1–Bd2. Of course White has no advantage, but it's time to think „how to make a draw“]

19...♘c6 20.♘f3 ♖g7 Black is not in a hurry and starts by putting his pieces in good squares.

21.♔e1 McShane had less than 15 minutes for the last 20 moves! And the position is already very hard to play for White, Black has the very unpleasant threat of playing a5-a4. Usually, White can block the a-pawn by playing a4, which doesn't work now because the pawn on b3 is hanging. This is why 19.c3?! was a very risky decision. Black has a clear target now!

21...a5! Don't ask Carlsen twice!

22.♖d1 It's already hard to give an advice for White... The position is quite unpleasant.

22...a4 23.bxa4 ♖xa4 24.a3 ♖f8! Another very good move by Black. His best scenario is to exchange one pair of rooks and the queens, to get a clearly better endgame. The rook on f8 supports that idea and protects Black from any attacking ideas of his opponent.

25.♖c1 ♖a8! Another easy-looking and very strong move. Carlsen doesn't give McShane even a slight hope for a successful attack.

26.♔g3 It's hard to blame White for doing this move with only 10 minutes left on the clock and in a position that is very hard to play...

26...♖b3! And probably this is already a winning move. It's really amazing to see that until now Carlsen hasn't done any „difficult“ moves, and seems to be winning! This is real high class chess!

27.♖de1 White panics and starts a last attack... [27.♖d2 ♖h6! 28.♔e1 would still be playable for White, but of course, Black is doing much better.]

27...♔xd3 And Black is just a pawn up

28.♘g4 ♖e6 A very solid move. Black's position looks a bit dangerous, but again, the structure with the pawns on h7-g6 and the bishop on g7 is almost indestructible!

29.♘h6+ ♔h8 30.♔h4 ♖f6 Maybe this move is not the most effective one, but it's very logical from a human point of view. Black exchanges one piece and takes away the g5 square for the White knight...

31. ♖g5 ♗xg5 32. ♔xg5 ♙g7 33. ♔c1

33... ♖f4?! In a winning position and with his opponent having no time on the clock, Black takes a very risky decision. [33... ♔d6! By bringing back the queen, Black gives White no chances for any tricks, the game is basically over. ..]

34. ♖d1 [34. ♗g5! The first and only chance of White in this game. Suddenly the game would become quite complicated 34... ♗c4 (34... ♖xf1+ 35. ♖xf1 ♗c4 36. ♖d1 and the White rook enters on d7.) 35. ♖xf4 exf4 36. ♗g4 Black's probably still doing better, but the position is very sharp! This is definitely a very unnecessary risk!]

34... ♔c4 35. ♖fe1 ♖af8 And the game is totally over. Black is not only a pawn up, but now he controls the f-file as well.

36. ♗g5 [36. ♗f5+ doesn't work for White 36... gxf5 37. ♗xe5 ♗xe5 38. ♔xf4 ♗g6 39. ♔xc7+ ♖f7 and Black is winning.]

36... ♗c8 The knight on h6 is going to drop.

37. g3 ♖f2 I guess this was the right moment to resign, but McShane decided to make 3 more moves.

38. ♗f5+ gxf5 39. ♗h3 ♖e2 40. ♔g5+ ♙h8 Magnus Carlsen managed to win this game almost without calculating anything. A really great positional game of the World's Nr.1! This game brought him a clear first place, after Caruana lost his last game against Aronian. This is the game we are going to analyze next. **0-1**

(2) Aronian,L (2825) – Grischuk (2761) [E15]

Tal memorial, 16.06.2012

[Balogh Csaba]

Despite the fact that the game finished in only 28 moves, we are facing a very interesting and eventful draw. Actually, it seems like both sides played perfect chess.

1.d4 ♘f6 2.c4 e6 3.♘f3 b6 Recently Grischuk plays all the openings. This time he chose the Queen's Indian defense.

4.g3 And Aronian went for his favorite 4.g3 system.

4...♙b4+!? This was probably the first surprise. The move is a sideline compared to the 4...♙a6 and 4...♙b7 options. However, in my opinion, we will see this more often, because Aronian played the critical line and Grischuk seems to have refuted it.

5.♙d2 ♙xd2+ 6.♚xd2 This is the right capture. The ideal development of the b1 knight is to c3.

6...♙a6 7.b3 c6 Black would like to build a strong center with d5, but first he prepares for a possible capture with the c-pawn.

8.♘c3 This is considered to be critical. [A normal development leads to equality after 8.♙g2 d5 9.0-0 0-0 (9...dxc4 is not good, because of 10.♘e5) 10.♘e5 (10.♖c1 ♘bd7=) 10...♘fd7 11.♘xd7 ♘xd7 12.cxd5 cxd5= with complete equality and a lot of draws in the database.]

8...d5

9.e4! This temporary pawn sacrifice is a typical motif in the Queen's Indian to undermine Black's center.

9...♘xe4 10.♘xe4 dxe4 11.♘g5 This is the point. Black cannot protect his e4 pawn and if he doesn't do something concrete, he'll end up in a bad position...

11...c5! At first sight it's a very risky move, since it weakens the h1-a8 diagonal, where the White bishop could penetrate. However, in our current era, computers make many dubious-looking moves possible. [11...♘d7 happened more often 12.♘xe4 ♘f6 13.♙g2 ♘xe4 14.♙xe4 ♙b7 15.0-0 0-0 16.♖fd1 and White has a small, but long-lasting advantage. Black must stay in passivity. 16...♗f6 17.♗e3 ♖fd8 18.♖d2 ♖d7 19.♖ad1 g6 20.h4 h5

21.c5! This is a well-known motif to increase the advantage. White fixes the weakness on c6, stops Black's counterplay with c5 and kills the b7 bishop. 21...♖c8 22.a4 ♘a6 23.♖c1 with a clear advantage in Tkachiev-Bauer, France 2007.]

12. ♘g2 [12.♘xe4 is White's other option, but probably Grischuk prepared a nice exchange sacrifice 12...cxd4 13.♘g2 0-0! White has two different ways to win the exchange, but Black gets enough counterplay in both lines

14.♘f3 (14.♘f6+ ♖xf6 15.♘xa8 ♖e5+! and if White wants to avoid the perpetual check, he must give up his right to castle 16.♖e2 (16.♖f1 ♖c5! In order to put the knight to c6. If White needs to give up his bishop, Black punishes him on the light squares, so he must retreat, 17.♘f3 ♘c6 and Black got only one pawn for the exchange, but the d4 passer and the superior pieces give more than enough counterplay. In addition, Black cannot connect his rooks with 18.♖g2 because of 18...♘e5 and White either give up his bishop, or allows Black to occupy the long diagonal.) 16...♖a5+ 17.♖d2 ♖e5+=) 14...♘d7! White must give up his strong bishop, so Black will be able to use the weak light squares with accurate play.

15.♘xa8 ♖xa8 16.0-0 h6! Forcing the knight to the unfortunate h3 square. 17.♖xd4 ♘f6 18.♘h3

18...♘b7! This is Grischuk's point! Very deep preparation! Black doesn't even get a pawn for the exchange, but he doesn't need to worry about being worse. Let's examine some concrete variations to understand why it is so... 19.f3 This strange move is probably the best option, but after this, it becomes clear that White cannot be better.

a) 19.♘f4 ♘e4! with the idea of ♘g5! 20.♖fd1 (20.h4 e5! 21.♖xe5 ♘d2 with serious threats on the diagonal.) 20...♘g5 with very unpleasant threats.

b) The most logical 19.♖fd1 is met with 19...♖c8!! with the double threat of e5 and ♖c6. White is already in deep trouble.

19...♘xf3 20.♘f4 ♘b7 Black already got a pawn, and wants to play ♖c8-c6, ♖d8 or ♘e4. The position is unclear, but from a practical point of view, it is much easier to play with Black.]

12...♘c6 13.dxc5! Only move, otherwise Black gets a decisive advantage. [After 13.♘xe4 Black can sacrifice the exchange in an even better version 13...♘xd4! 14.♘d6+

♔xd6 15. ♘xa8 0-0 16. ♘g2 ♔e5+! and Black wins due to the tactical trick: 17. ♖f1 ♘xb3!; 13. ♘xe4 is refuted in similar fashion 13... ♘xd4! 14. ♘xa8 ♔xa8 White has an extra option now: to castle queenside, but it doesn't help either. 15. 0-0-0 h6 16. ♘h3 ♘b7! 17. ♖hg1 ♘f3! The bishop sends both rooks to bad squares. 18. ♖de1 ♘g4! 19. ♘f4 0-0 and ♘f3 will be the next move, with a big advantage.]

13... ♔xd2+ 14. ♔xd2 The e4 pawn is the key in Black's position, he must protect it at any cost.

14... f5! 15. ♘xe6 Actually, only this was the novelty of the game. [There was only one game before with the 11...c5! idea, which continued with 15.cxb6 ♔e7! 16.bxa7 ♖hd8+ 17. ♔c1 White is a pawn up, but all his pieces are terribly placed and the pawns on the queenside are immobile. Obviously, Black should have enough compensation. 17... h6 (17... ♖xa7 is also fine for Black 18. ♖d1 ♖xd1+ 19. ♔xd1 ♘d4↗) 18. ♘h3 ♘d4 19. ♖d1 e5 20. ♔b2 ♖xa7 21. ♖d2

21...g5! Black's kingside pawns are looking much more dangerous than the ones on the queenside. White tried to improve his knight on h3, but he missed a nice tactical blow: 22. ♘g1? ♘xc4!! 23.g4 (With the idea of 23.bxc4

♖b8+ 24. ♔c1 (24. ♔c3 ♖a3#) 24... ♘b3+ wins) 23... ♘xb3! 24. ♘e2 (24. axb3 ♖xa1 25. ♔xa1 ♘xb3+) 24... ♘a4 and Black won soon in Saric-Riazantsev, Budva 2009.]

15... ♔f7 16. ♘f4 Aronian wanted to control the d3 square in order to be able to move to c3 with the king after the check. [16. ♘c7 was an alternative, but Black has no reason to complain after 16... ♖ad8+ 17. ♔c1 (17. ♔c3 ♖d3+) 17... ♘b7 18.cxb6 axb6 with a similar position to the 15.cxb6 line. White is a pawn up, but Black has enough compensation, mainly due to the g2 bishop and the forthcoming ♘d4 move.]

16... bxc5 Finally Black restored the material equality, but he still needs to play precisely to equalize. Aronian sets very difficult problems to solve.

17.f3! Very logical move, trying to activate the poor bishop on g2. If White manages to open the diagonal, suddenly the bishop on d5 would start to dominate the position. Black cannot allow this.

17... ♖ad8+ 18. ♔c3

18...e3! Excellent decision! Of course it's very logical to close the g2 bishop, but it had to be deeply calculated,

because White gets access to the c5 pawn and the e3 pawn might become weak as well. [18...exf3? 19.♙xf3 ♘d4 20.♙d5+ ♔f6 21.♞ae1 ♙c8 22.b4+/- White's dream would have come true.]

19.♘d3 [19.♞he1 ♞he8; 19.♘d5 was an alternative, but Black seems to be fine after 19...♞he8 20.♞he1 e2 21.f4 ♙b7 followed by ♘d4.]

19...♞he8!! Of course, Grischuk had to foresee all these lines and its consequences before pushing e3.

20.♘xc5 [20.f4 was an alternative again, but just as in the opening part, Black sacrifices an exchange and gets enough compensation 20...e2!! 21.♙d5+ (21.♙xc6 ♞e3! 22.♙d5+ ♞xd5! This is the point! 23.cxd5 ♞xd3+ 24.♔b2 ♞xd5 Black has only one pawn, but with such a protected e2 pawn, he cannot be worse. It's important for Black to keep his rook on the board so that the most probable outcome of the game will be a draw.) 21...♞xd5! leads to a position similar to the one in the previous line 22.cxd5 ♞e3 23.dxc6 ♞xd3+ 24.♔c2 ♔e7 and again, the game should end in a draw.]

20...e2! The most precise again. [20...♞d2 was a tempting alternative, but White can obtain a small advantage

after the subtle 21.♙f1! ♙c8 22.♞e1! ♞xa2 23.♞e2! ♞xe2 24.♙xe2+ =]

21.♘xa6 ♞e3+ 22.♔c2 [22.♔b2 loses after 22...♞d2+ 23.♔a3 ♘d4! ♘c2 is coming 24.♘b4 a5 ! 25.♘d5 e1 ♔ 26.♞hxel ♞xe1 27.♞xe1 ♘c2+ wins.]

22...♞ed3!! Grischuk had to calculate until this moment when he played his 18th move! Already now, Aronian is the one that has to make only moves to achieve a draw.

23.♞ae1! Of course Aronian is also a great player, and finds the only way to draw.

23...♞d2+ 24.♔c1! [24.♔b1 leads to problems for White after 24...♞d1+! 25.♔b2 ♞8d2+! and after both king moves, ♘d4 sets huge problems for White. For example: 26.♔c3 ♘d4 27.f4 (27.♘c5 ♞c2+ 28.♔b4 ♞cc1) 27...♞d3+ 28.♔b2 ♞xe1 29.♞xe1 ♞d1]

24...♞xa2! Preparing for the invasion of the 2nd rank. Aronian has to find another only move...

25.f4! [25.♘c5? loses elegantly to 25...♞dd2 26.f4 ♘b4! 27.♙d5+ ♘xd5 28.cxd5 ♞ab2! with a mate threat.]

25...♞dd2! 26.♙xc6 ♞ac2+ [26...♞ab2 leads to draw as well 27.♘b4 a5 28.♙f3 axb4 29.♞xe2 and Black gives perpetual check again 29...♞bc2+ 30.♔b1 ♞b2+ =]

27.♔b1 ♞b2+ 28.♔a1 ♞a2+ A fantastic game! All the lines after 11...c5 are more or less forced and at the end it seems to be perfectly fine for Black. This means that the 4...♙b4 setup is playable! Congratulations to both players! **1/2**

(3) Morozevich,A (2769) – McShane,L (2706) [D15]

Tal Memorial Moscow RUS, 17.06.2012

[Balogh Csaba]

A sensational comeback from McShane, who lost 3 games in the tournament, but after defeating Aronian (the game was analyzed in the previous CEWN), Kramnik and Morozevich, he came back to 50 percent. On the other hand, a disaster for Moro, who seemed to be unstoppable after 5 rounds (he had 4 points at that point), but after losing 3 games in a row, ended up „catching up” with McShane at 50 percent.

1.d4 d5 2.c4 c6 3.♘f3 ♘f6 4.♘c3 a6 The Slav with 4...a6 is considered to be a very solid opening, Black is fighting for the draw. However, it seems to be a very dangerous weapon in the Englishman's hands, because he beat Aronian in the same line.

5.e3 In the mentioned game, Aronian played 5.♙g5.

5...b5 6.b3 ♙g4 This is a well-known theoretical position, where the main move is 7.♙e2, although Morozevich tried another setup in this game.

7.h3 ♙xf3

8.gxf3!? White's general plan with this capture is to limit Black's chances to get counterplay in a number of ways — with c5 and f4. This way, White closes the position and enjoys a nice space advantage. Anyway, it's usually really difficult to break Black's rock-solid wall. [8.♙xf3 is the other variation. Here the fight becomes extremely sharp right from the beginning. 8...e5 9.dxe5 ♙b4 with many games in the database, some of them even on the highest level. The outcome of the whole line is still not clear, the players are searching and finding many new ideas even nowadays.]

8...♘bd7 9.♙g2 This is practically the novelty of the game. Morozevich's idea is to keep the position open, which is a principled one, due to his bishop pair. [9.f4 e6 10.c5 is how the games usually proceed.]

9...e6 White wanted to play f4, but he was reasonably afraid of ♙b4...

10.♙d2 [10.f4 ♙b4! 11.♙d2 bxc4 12.bxc4 ♘b6 This is a typical way to activate the knight, we will see it in the game as well. In this particular position, White has the possibility to win the pawn, but Black gets very strong counterplay: 13.c5 ♘c4 14.♙a4 ♖b8! 15.♙xc6+ ♘d7 and White is facing serious problems.]

10...♙e7

11.f4 0-0 [11...bxc4 12.bxc4 ♘b6 13.c5 ♘c4 was an option here as well, but McShane delayed it by one move, giving White an extra chance to obtain the usual slightly better but closed position with c5.]

12.0-0 [On 12.c5 Black probably reacts with 12...a5! 13.♔c2 ♘e8! followed by f5! Black closes the position on both flanks and waits for White to find a breakthrough. Usually this kind of games end up in 100 moves draws, when White maneuvers for 50 moves, then tries something, Black easily neutralizes, and they agree to a draw.]

12...bxc4 13.bxc4 ♘b6 14.c5 ♘c4

15.♗e1 White would like to preserve his bishop pair, a longterm idea could be to play ♗f1 and the knight could not easily escape from c4. Let's summarize some general ideas about the doubled pawns on the f-file. The f4 pawn is standing perfectly, since it prevents Black's main idea for counterplay with the e5 push. A lot of times White can use the g-file for an attack with the rooks (this is not the case in the current game). However, it gives Black the „famous“ plan to undermine it with g5, because White cannot hold it with the g3 pawn anymore. McShane was clearly familiar with this idea and he effectively executed it in the game.

15...♔h8! Prepares for ♖g8 and g5! White cannot prevent this plan, the question is how to make it the least effective.

16.♘e2! Morozevich sees that the kingside is going to be opened soon, therefore, he brings a defender.

16...♖g8 17.♘g3 g5

18.♔f3?! Probably this was not the best idea by White. [He should have kept the g-file closed with 18.f5! g4 19.h4! ♘d7 (19...e5 is an alternative for Black, but here again White has an important resource 20.e4!! opening the position for the bishops. ♗c3 is coming soon and White controls both diagonals.) 20.♖c1!! This extremely strong move, with the idea of an exchange sacrifice, keeps the position open for all 3 results. (20.h5 meets by 20...♗h4! ♔g5 and ♘f6 are the next moves. Black leads a very dangerous attack.) 20...♗xh4 (20...♖c8 protecting the c6 pawn does not prevent the sacrifice. 21.♖xc4! dxc4 22.♔a4 ♗xh4 23.♗xc6 ♘f6 24.♗g2+= White has very strong compensation. He is going to take the c4 pawn, the g2 bishop dominates on the board and also defends the king from any kind of attacks.) 21.♖xc4! dxc4 22.♔a4+= and White's chances seem to be preferable for me, but of course, the position remains sharp.]

18...g4! 19.hxg4 ♘xg4 Black wants to create mate threats by transferring his queen to the h-file.

20.♖c1 Morozevich had the same exchange sacrifice in mind, the one we examined in the 18.f5 line, but there, it was a much better version. [20.♕h3 f5! Black locks the position and enjoys a clear advantage. 21.♖c1 ♔e8! protects the c6 pawn and brings the queen to the attack.]

20...♔f8! 21.♕h3 [21.♖xc4? ♔h6! is over.]

21...♘f6! Excellent decision. Black has an important resource against ♖c4. [Now on 21...f5 22.♖xc4! dxc4 23.♔xc6 and White gets strong counterplay.]

22.♔h2 [22.♖xc4 dxc4 23.♔xc6 ♔h6! 24.♔g2 (The bishop cannot occupy its ideal position because of 24.♕g2? ♘g4) 24...♘d5! This is the point of 21...♘f6, the queen gets out of the game. Black plays ♕h4 and the attack is very dangerous.]

22...♖b8! The last passive piece joins the game as well. [Helps White now, because after 22...♔h6?! 23.♖h1! he might launch an attack on the h-file.]

23.e4? [23.♕c3 was the right move to prevent ♖b2 23...♕d8 with a possible exchange of the dark squared bishops. The position remains complex, but objectively it's about even.]

23...♖xg3!! A very tempting sacrifice. It's strange that Morozevich allowed it... McShane was down on time, and probably White hoped that he would be unable to continue the attack precisely, so he could preserve his material advantage in the future.

24.fxg3 [is not an option, since the f4 pawn falls soon 24.♔xg3 ♘xe4 25.♔d3 ♔h6]

24...dxe4 White is in trouble.

25.♔c3 [25.♔e2 ♖b2 26.♖c2 ♖xc2 27.♔xc2 ♘e3 wins back the exchange.]

25...♘b2? This gives sudden counter-chances for White. [25...♔h6!! would have been extremely strong, but McShane failed to find it with only 1 minute on his clock. 26.♖h1 (26.♔xc4 ♘g4+ wins because of 27.♔g2 (27.♔g1 ♔xh3) 27...♘e3+) 26...♘e3!! 27.♔g1 ♘fd5 28.♔d2 ♔g7 followed by ♕f6. It's easy to see that Black has complete domination with his knights.]

26.♖b1! [Another very strong idea could have been 26.d5! exd5 27.♕f2! McShane pointed out this idea as his fear during the press conference. 27...♘d3 28.♕d4 ♖b2+! is the best for Black, the game seems to lead to a draw after: (28...♔h6? 29.♖b1! Black is suddenly in trouble. 29...♖g8 30.♖b7+-) 29.♖c2 ♖xc2+ 30.♔xc2 ♔h6 31.♔c3 ♔g8 32.♖b1 White seems to win, but... 32...♘g4+! 33.♔g2 f5! giving air to the king on f7 34.♖b7 ♔f7 35.♔a5 ♔h5! 36.♔d8 ♘e1+ 37.♔g1 ♘f3+ 38.♔g2 ♘e1+ with perpetual check. This was a more or less forced line, which was of course impossible to find for a human, especially with 30 seconds on the clock.]

26...♘d5 27.♔d2 ♘c4 28.♖xb8 ♔xb8

29. ♖e2 [29. ♖c1! should have been played, with the idea of 29... ♘ce3 30. ♖f2 ! activating the rook along the b-file. White is suddenly better, due to the serious mistake in the 25th move.]

29... ♘ce3 30. ♖h1 ♘f6 Black's position is much easier to play in time trouble and Morozevich collapses in a few moves. However, the position was still very unclear...

31. ♘g2? White blunders a tactical motif. [31. ♘c3!? An ugly move, but it saves the important d4 pawn.]

31... ♘xd4 32. ♘xe4?! This loses immediately, but position was already very bad. [After 32. ♖d2 Black would have had to find a study-like win, which is actually the only way to win the 32... ♘g4+! 33. ♖h3

33... ♖f8!! Brilliant move! Two pieces are hanging, but White gets mated. **34. ♖xd4+** (34. ♘xg4 ♘f6+ 35. ♘g5 ♖g7+ 36. ♘h4 ♖h6#; 34. ♘xe4 ♘de3!! 35. ♖xd4+ ♘g8 and ♖h6 mate next.) **34... ♘g8!!** Only move again! (34... e5 35. fxe5 ♖h6+ 36. ♘xg4 ♖g6+ 37. ♘h4 ♖h6+ is just a draw.) **35. ♘xg4** (35. ♖xe4 ♘de3) **35... f5+** 36. ♘g5 ♖e7+! **37. ♘h5** (37. ♘h6 ♖f7) **37... ♖f7+** 38. ♘h4 ♖g6!! Black is a rook and a piece down and continues the game with subtle moves... **39. ♖d1 ♖f6+!** **40. ♘h5** (40. ♘h3 ♖h6+) **40... ♘e3!!** **41. ♖e2 ♖g6+** **42. ♘h4 ♘g4!!** is the final blow! Fantastic line. Of course, only for computers.]

32... ♘xf4! Killing.

33. gxf4 [33. ♖d2 ♘g4#! is a picturesque mate!]

33... ♖xf4+ 34. ♘g3 ♖xe4 Black is already ahead in material, the fact that his pieces are standing perfectly is even more important.

35. ♖e1 ♖f5 White is practically in zugzwang. [35... f5 followed by f4 was an even easier win.]

36. ♘d6?! A mistake, but it was already over anyway.

36... ♘g4+ 37. ♖g2 ♘e3+ A time trouble repetition.

38. ♖h2 e5! The bishop is excluded from the game.

39. ♖g1 ♖f4+ 40. ♘h3 ♖h6+ [White resigned in view of 40... ♖h6+ 41. ♘g3 ♘f5+ 42. ♘g4 ♖f4+ 43. ♘h3 ♖h4+ 44. ♘g2 ♖g3+ 45. ♘h1 ♖xg1# A great fighting game.]
0-1

(4) Aronian,Levon (2825) – Caruana,Fabiano (2770) [D70]

7th Mikhail Tal Memorial Moscow RUS (9), 18.06.2012

[Arkadij Naiditsch]

In this game, the World's number 2 player gave a hand to the number 1, allowing him to win the tournament. Aronian, with this victory, helped Magnus Carlsen to get the title. We'll see another great prepared line by Aronian, who was quite unlucky in this tournament. However, he didn't conclude the game for a long time, until Black collapsed under big time and positional pressure.

1.d4 ♘f6 **2.c4** g6 **3.f3** We saw this line being played twice by Anand in his WCC match against Gelfand, so probably we'll see a lot of new games following this line in the future .

3...d5 The beginning of a long forced line. Black has 2 more options: 3...c5 with a sort of Benoni and 3...♙g7 4.d4 d6, going back to the King's Indian

4.cxd5 ♘xd5 **5.e4** ♘b6 **6.♘c3** ♙g7 **7.♙e3** 0-0 **8.♙d2**

8...♘c6 The beginning of a quite forced line. [8...e5 9.d5 c6 10.h4 cxd5 11.exd5 ♘8d7 12.h5 ♘f6 13.hxg6 fxg6 14.0-0-0 with very unclear play. Anand,V — Gelfand,B WCC Moscow 2012.]

9.0-0-0 ♙d6 **10.♙b1** This is the main move given by the theory, and don't ask me why... Only a lot of hours of analysis can prove such things.

10...♖d8 **11.♘b5** ♙d7 **12.d5** a6 **13.♘c3N** And here comes the novelty! [13.dxc6 This move seems to lead by force to an equal endgame 13...♙xd2 14.♖xd2 ♖xd2 15.♙xd2 axb5 16.cxb7 ♙xb7 17.♙xb5 f5 18.exf5 ♙d5 19.♘e2 ♙xa2+ 20.♙c2 gxf5 with an about equal endgame, Vituigov,N — Giri,A 2011.]

13...♙e8 The most natural move for Black. [13...♘e5?! seems to lead to a bad position 14. ♙xb6 (14.b3!? might also be interesting, with the positional idea of ♘ge2-Nd4 next.) 14...cxb6 15.f4 and the knight from e5 doesn't have the d7 square. 15...♘g4 16.h3 ♙xc3 It never feels right to give up the bishop from g7, but Black has no choice here. 17.bxc3 ♘f6 18.♙d3 and White should be doing better.]

14.♙e1 This move was also very quickly played by Aronian.

14...♘e5

15. ♖e2!? This move clearly shows how deep the preparation of the current World's Number 2 is. This move is hard to understand and it looks more like a question for Black: „What do You want to do next?“ At the same time, 15. ♖e2 is a move that develops a piece, and in some lines, White will be able to play f4 without being afraid of ♘g4. Let us take a look at a few lines that could happen in this very complex position.

15...e6?! After a long think, Caruana takes the wrong decision. [15...♘ec4 In my opinion this move should be critical 16. ♖d4 (16. ♖c1 is too slow now 16...e6! and Black will crush White's center.) 16...e5! (Of course doesn't work: 16...♖xd4? 17. ♖xd4 e5 18. ♖xc4; 16...e6 The exchange of the g7 bishop is a very dangerous idea for Black. Usually, this can only lead to a better position for White. 17. ♖xg7 ♖xg7 18. ♖xc4 ♘xc4 19. ♘ge2 and White should be doing clearly better. The Black king can get in big trouble very soon, after White advances with h4-h5. Besides, the black squares around the Black king are quite weak. This can be useful for White as well...) 17. ♖xb6 (17. ♖f2 ♖f8!? leads to a very unclear position, but I feel that Black should be doing fine here...) 17...♘xb6

18.h4 At first sight, Black should be doing fine here, but things are not that simple. White is very quick on the king-side. The Queen on e1 is perfectly placed after White's h5, and can join the attack immediately through h4. 18...c6 Black is trying to do something active on the queenside. (18...h5?! 19.g4→) 19. ♖f2 ♘d7 20.h5 ♘f6 21.hxg6 hxg6 It's hard to say who is doing better... further analysis are needed. But we can be sure that Aronian knew who is better here.]

16. ♖xb6! And here comes the immediate punishment.

16...cxb6 17.f4 Indeed, 15. ♖e2!? is a useful move now.

17...♘d7 Ugly move, but where else to go?! [17...exd5 It doesn't look very promising for Black to give away a piece. 18.fxe5 dxe4 19. ♖h4 Probably White has different ways to achieve an advantage. 19...♖xd1+ 20. ♖xd1 ♖xe5 21. ♘ge2 e3 22. ♖c2 Black has 3 pawns and the bishop pair for White's extra piece, but it's hard to imagine Black being OK here. I think White is doing much better.]

18.dxe6 ♖xe6

19. ♘f3?! An interesting moment. It's very obvious that White is doing better. White has few ways to proceed

here: [19.♔f3 followed by ♘d5 looks very tempting. White is doing much better, but Aronian chooses a different way.]

19...♖e8 Obviously, after this reply White is close to winning. Then, 19.♘f3 should have !! marks.. . But Black had a different choice, and even though it looks very dangerous, it was preferable to take it. [19...♙xc3 The only way to go on 20.♖xc3 ♖xe4+ 21.♙d3 ♖xf4 and we reach a critical position. Computers are happy with Black here, but from a human point of view, Black is fighting on the edge. Let's take a look to a few lines... 22.♖hf1 (22.♙c4 ♖f8! An ugly, solid and protective move! 23.♖hf1 ♘c5 24.♘e5 ♖e4+ 25.♙a1 ♙e6 and it looks like Black is in time to protect the f7 pawn.) 22...♖f8 Again, the usual defensive move! 23.♙c2 It's clear that White has very good play here, but it's hard to say if he has more than that.

Maybe 19. ♘f3!? was just a bluff by Aronian. At least after the simple 19. ♙f3, White would be doing very good without any risk.]

20.♖h4! A very strong move.

20...♙f6 [20...♙xc3 21.bxc3 ♖xe4+ 22.♙d3 and White is winning.]

21.♘g5 ♘f8 The only move to defend h7.

22.♙c4 [It's very tempting to play 22.♘d5? ♖xd5! A great counter move! (22...♙xg5 23.fxg5+-) 23.♖xd5 ♙e6 24.♖d3 ♖c8 and Black is totally back into the game! The White king will get under a heavy attack in the next moves.]

22...♙g7 23.♖g3 This move has a great idea behind it. [23.e5?! ♙e7 and Black wins the f5 square for the bishop.]

23...♙xg5 Black is practically forced to take on g5 because of the hanging pawn on f7.

24.fxg5!! A great idea by White, very original and strong play. Of course, after 24. ♖xg5 White would be doing better, but now he's probably close to winning. White will use the f-file for the mating attack, and the f6 square is controlled by the pawn on g5.

24...♙e6 25.♘d5 White is forcing Black to give away the bishop. ♖e5 is a deadly threat now.

25...♙xd5 26.♙xd5 Let's take a look at the position. The White bishop on d5 is a beast, the Black king is weak and White has many different ideas to develop a deadly

attack. The position should be already evaluated as winning for White.

26...♖d7 27.h4 ♖c8 28.a3 A nice prophylactic move, but why not to end the game immediately by playing the logical: [28.h5 gxh5 29.♙f3 followed by ♖h5-Rdh1 with a quick mate...]

28...♙d8 29.♙f2?! Once again onian doesn't play h5... this is really strange. In my opinion, after 29.h5 the game would end very quickly. It would be really interesting to know why Aronian didn't play the most obvious move in the position.

29...♞e6 30.♙a2 Of course, White is doing much better and Black is still quite hopeless, but it's time to finish the game...

30...♙e7

31.♖hf1?! White could just take with 31.♙xb6 ♖c2 32.♖hf1 and get a winning position.

31...b5 If White doesn't want to take, why to give then...

32.♖d3 Black's position remains very bad... but he's still fighting and doesn't have a material disadvantage.

32...♖cc7 33.♙b1 This is already a clear sign that White doesn't really have a plan...

33...a5 34.g4 a4 [34...b4 would maybe give Black slightly better chances to survive.]

35.♖f3 ♙d6 36.♖f6 And finally White is entering Black's position.

36...♙c5 37.♙g3 White doesn't go for a much better endgame, but wants to end the game on the spot.

37...b4 38.axb4 A human decision by Aronian, but a forced winning line would be: [38.♙e5 ♙c2+ 39.♙a1 ♙c1+ 40.♖xc1 ♖xc1+ 41.♙a2 ♖xd5! The only resource Black has! 42.♖xg6+! Of course White can't take on d5 because of b3 mate! 42...♙f8 43.♙h8+ ♙e7 44.♖xe6+ fxe6 45.♙f6+ ♙d7 46.♙f7+

46...♙c8 47.♙xe6+ ♙c7 48.♙e7+ ♙b8 49.♙xb4+-]

38...♙c2+ 39.♙a1 a3 40.bxa3 It seems like the White king is a bit open, but everything is under control. White still wants to play ♙e5, or ♖xf7 followed by ♙e5.

40...♖xd5 Black tries his last chance.

41.exd5 ♞d4

42. ♖xf7+! The finishing move.

42... ♜xf7 43. ♚e5+ ♔f8 44. ♚b8+ ♔g7 45. ♖xf7+ ♜xf7 46. ♚xb7+ ♔e8 47. ♚b8+ ♔d7 48. ♚a7+ ♔d6 49. ♚xd4 White is in a queen endgame with 3 extra pawns...

49... ♚c1+ 50. ♔a2 ♚c2+ 51. ♚b2 ♚c4+ 52. ♔a1 ♚xg4 [52... ♚f1+ 53. ♚b1 and there are no more checks... The next White moves could be ♔b2-Qc2 and the position is totally winning.]

53. ♚f2! The most precise move.

53... ♔xd5 54. ♚c5+ Aronian showed great preparation and maybe a nice bluff, playing 19. ♘f3 and giving Black

the chance to play 19... ♙xc3!, with unclear play. After that, Black never had a real chance to comeback to the game. An interesting game and a very important one for the current theory! **1-0**

Endgame section

(15) Kramnik,V (2801) — Tomashevsky,E (2738)

Tal memorial, 14.06.2012

[Chess Evolution Team]

We are in move 60, when the players have just passed the 2nd time control. They received their extra 15 minutes. Despite the small amount of pieces, the position is full of beautiful ideas, and requires very deep play from both sides. It was practically impossible to continue the game flawlessly... The position is objectively drawn, but probably in a practical game, White has bigger chances to win, than Black to hold it.

60...h6! Tomashevsky finds the only move. He prevents the ♖g5 threat. [Exchanging the rooks would win for White with very precise play 60...♖g6 61.♖xg6 hxg6 (61...♔xg6? 62.♗e5+- The pawn endgame is hopeless.) 62.e5 ♗h6 63.e6 ♗g8! The critical move, where the knight is quite safe against the attacks from his White counterpart. (63...♗f5 64.♔d7 ♔g4 65.♗d4! White easily promotes the

pawn. 65...♗g7 66.e7 ♔xf4 67.♗e6+-) 64.♔d8! White must give up all his pieces to send away the g8 knight. 64...♔g4

65.♔e8!! ♔xf4 (65...♔xf3 66.♔f7 ♗h6+ 67.♔xg6 ♗g8 68.f5+- wins.) 66.♔f8 ♗f6 (On 66...♔f5 White can first protect the pawn, then take the knight. 67.♗d4+-) 67.e7! ♔xf3 68.♔f7 ♗e4 69.♔e6!+- The last exact move to prevent ♗d6.; The double attack with 60...♗f6 loses after 61.♖g5+ ♔h6 62.♗d4!+- with a picturesque mate.]

61.e5 Obviously, White should push his passers.

61...♗f6 After this move, the position is still drawn, but it becomes much more difficult to hold... [61...♗e3! with the threat of ♗d5. 62.♔d7 (62.♖d8 This allows the Black king to approach... 62...♔g4! 63.♗d4 ♔xf4 64.e6 ♖a7+! The only move. 65.♔d6 ♗c4+ 66.♔c5 ♗e5 and Black saves the game.) 62...♖a7+ 63.♔d6 (63.♔e6 ♖a6+ The White king has no shelter to hide.) 63...♖f7! wins the f-pawn and at the same time the knight catches the e-pawn 64.e6 ♖xf4

65.e7 ♖f5+! 66.♔e5 ♗xe7!= and the rook on g8 hangs as well.]

62.♖d8 Kramnik uses his imagination greatly and sets up very difficult tricks for Black to solve. [62.exf6? did not come into consideration 62...♖xf6 White cannot defend the f4 pawn.; 62.♖f8 ♗d5+ 63.♔d7 (63.♔b7 ♖b6+ 64.♔a7 ♖b3 65.♗d4 ♖b4 66.♗e6 ♔g4=) 63...♔g4]

62...♔g4 63.♗d4

63...♖a7+! Tomashevsky defends very well, but it takes all his time and energy to stay focused until the end of the game. [The tempting 63...♔xf4 loses immediately 64.♔b7!+- and the rook has no square on the 6th rank to defend the knight.]

64.♔d6! [64.♔b6 is met with 64...♖d7! 65.♖xd7 ♗xd7+ 66.♔c7 ♔xf4 This was the point of the check in the 63rd move.]

64...♗e4+ 65.♔d5 ♗c3+! [65...♔xf4 loses the knight by force... 66.♖f8+ ♔e3 67.♖f3+ ♔d2 68.♔xe4+-]

66.♔c4 ♔xf4! Black chose the right moment to take the pawn. [66...♖c7+? would move into the e6 check. 67.♔d3+- 67...♔xf4? 68.♗e6+]

67.e6 ♖c7+ 68.♔d3 Until this moment, Tomashevsky defended tenaciously, but he failed to find the last exact move to secure the draw. We must add that the players were already fighting for 7 hours, were completely exhausted and lived only with the 30 seconds of increments.

68...♔e5? White wins in a study-like way after this move. [68...♗a4 followed by ♗c5 was the way to draw.]

69.♖d7! ♗d5 [69...♖c8 70.e7+- followed by ♖d8 wins.]

70.e7! After this great move, it is a bit strange, but Black is simple unable to stop the pawn.

70...♖c3+ 71.♔d2 ♖c8

72. ♖c6+!! Tomashevsky has missed this motif in the 68th move. Of course, we cannot blame him for this mistake, especially with only seconds on his clock. [72. ♖d8? ♖xe7 was a draw.]

72... ♖e6 **73.** ♖xd5!! ♖xc6 [73... ♖xd5 74. ♖d8! was the whole point, and the pawn promotes.]

74.e8 ♖+ ♖xd5 We reached a winning endgame, but it still requires some accurate moves. Of course, such technical task is not a challenge for a player like Kramnik.

75. ♖d3 ♖e6 **76.** ♖b5+ ♖d6 **77.** ♖d4 ♖e7 **78.** ♖f5! The White king and queen cooperate well to squeeze the Black king to the 8th rank.

78... ♖f6 **79.** ♖h7+ ♖f8 **80.** ♖e5 ♖a6 **81.** ♖b7 ♖g6 **82.** ♖h7 ♖a6 **83.** ♖d3! Black resigned because he must give up the 6th rank with his rook and will lose his h-pawn soon. [83. ♖d3 ♖a7 84. ♖d6+ ♖g7 85. ♖e6! The shortest way to win. Black has serious problems with his rook to avoid being checked by the queen. 85... ♖f7 86. ♖g3+ ♖f8 87. ♖g6 ♖e7+ 88. ♖d6+- White wins the h-pawn, and the game. A very interesting endgame with many study-like motifs.] **1-0**

(16) Stefanova,A (2518) — Yildiz,B (2333) [A09]

4th WGP Kazan 2012 Kazan RUS (9), 20.06.2012

[Chess Evolution Team]

After not playing a great game, the players reach a quite interesting bishop endgame. The position looks like a draw, but not an easy one. White's b-pawn gives White some chances.

45. ♖f2! [Of course not 45. ♖xc5+? This move is nothing but a tempo lost. 45... ♖xc5 46. ♖f2 ♖d4 With the Black king on d4, it should be easy not to make a draw...]

45... ♖c6 Black needs to get rid of the pin.

46. ♖xc5 ♖xc5 **47.** ♖e3 ♖d5 And we are at the first critical moment of this endgame. White has a couple of choices. The first question is if White should play 48.g5!? blocking the black pawns on the White squares, which can be in general a very good idea. Another question is, what is the best place for the White bishop?!, but this of course is not an urgent task. Another serious question could be, if 48.g5 is not the best option, maybe 48.h4!?, and if none of them are good, does Black want to play g5 next?! Let's take a look!

48.b4 Of course the right idea, but could White maybe try to be a little more tricky to accomplish this?! [48. g5! I feel this is the right move, and it's the right one even if the position probably remains a draw! White blocks the Black pawn on h7-g6 and the h7 pawn becomes a target!

48...♔e5 49.b4 ♕f5 (49...♕d5 50.b5 ♕b7 (50...♕a8 51.b6 ♕b7 52.h3 ♕c8 53.♕c4 ♕b7 54.♕g8 ♕f5 55.h4 ♕g4 56.♕xh7 goes back to the main line.) 51.b6 ♕f5 52.h4 ♕e5 53.♕c4 ♕f5 54.♕g8 goes back to the main line.) 50.h4 ♕e5 51.b5 (Doesn't help much: 51.♕a6 ♕d5 52.b5 ♕c4! and White has pinned himself.) 51...♕d5 52.b6 ♕b7 This seems to be a central position in this line...

53. ♕c4 It seems like White cannot get a better move order or a better version than this. (53. ♕g4 ♕a6 54. ♕d7 ♕b7) 53...♕f5 54. ♕g8 ♕g4 55. ♕xh7 ♕h5! Amazing move that might save the draw! (55...♕xh4 seems to loose by force, but again we have a position where each tempo matters 56. ♕xg6 (56.♕f4? e3=) 56...♕xg5 57. ♕xe4 ♕a6

58.♕d4! The White king is just fast enough to get to the c6 square. 58...♕f6 59.♕c5 ♕e7 60.♕c6! White wants to play ♕c7 next with a winning position. 60...♕d8 61. ♕f5! creating a freeway to a7 for the White king! 61... ♕e2 Black has no moves and needs to remove the bishop from a6. 62.♕b7! ♕f3+ 63.♕a7 and we reached an easy winning theoretical position. The winning idea is to bring the bishop to b7 getting control over the diagonal a8-h1 63... ♕d5 64. ♕d3 ♕f3 65. ♕a6 ♕e4 66. ♕b7! The rest is easy 66... ♕f5 67. ♕f3 ♕c8 68. ♕g4) 56.♕f4 ♕c6! Probably the only waiting move that saves the game! Amazing — yes, impossible to see — yes! 57. ♕g8 ♕xh4 58. ♕e6 e3 (58... ♕b7! 59. ♕f5

59...e3! seems to give Black a draw as well...) 59. ♖xe3 ♜xg5 60. ♜d4 ♜b7! A really very nice move, White wanted to play ♜d5 and b7 61. ♜c5 ♜f4 62. ♜d5 ♜a6 63. ♜c6 63... ♜e5! Another only move! (63...g5? 64. ♜c4 ♜c8 65. ♜c7 and White is winning.) 64. ♜b3 g5 65. ♜a4 g4 66. ♜b5 g3 67. ♜xa6 g2 68. b7 g1 ♚ 69. b8 ♚+ ♜e4 White is a piece up, but of course it is a theoretical draw. Quite an amazing end to an amazing line!]

48...♜e5?! [48...g5! would lead to quite an easy draw! 49. b5 ♜e5

50. b6 ♜c8 51. ♜c4 ♜b7 White is not able to make any further improvement. 52. ♜g8 h6 53. ♜c4 ♜c8 54. ♜e2 ♜b7 55. ♜b5 ♜d5]

49.h3?! Still, 49.g5 would give good practical chances.

49...h5?! With this move, Black is risking quite a lot. Of course the idea is right: to exchange as many pawns as possible. But again, 49...g5 would lead to a much safer draw.

50.gxh5! The only chance for White is to block the Black pawn on white squares.

50...gxh5 51.h4 ♜f7

52. ♜b5 [52.b5!? would have been a better try, even though it leads to a forced draw 52...♜d5! A really difficult move to make over the board. (The logical 52... ♜e8 and Black wants to give the bishop for a pawn, reaching an easy draw because of the wrong colored bishop and the h pawn. 53.b6 and Black loses by a single move 53... ♜d6 54. ♜f4! White needs the king as close as possible to the h7 square. 54...♜c6 (54...e3 55. ♜f3! and White is winning the e-pawn for free, and with it, the game.) 55. ♜b5+

55...cxb6 56. dxe8 c7 57. dxe5 d6 58. g5 e7
59. g6 f8 60. h7+- and White is just in time!) 53. cxf4

53...e3! The only move . By sacrificing the e-pawn, Black pushes the White king one step back, giving him just enough time to bring the king to g8! 54. cxe3 dxe8 55. b6 (55. cxf4 dxb5 56. dxb5 e6 57. g5 f7 58. h6 g8 Draw.) 55...c6 56. b5+ cxb6 57. dxe8 c7 58. cxf4 d8 59. dxh5 e7 60. g5

60...f8 61. h6 g8 and again Black is in time.]

52...d5 53. d7 d6? [53...c4 would be the easiest way to make a draw 54. b5 d5 White will need to give away the b-pawn to be able to take the h-pawn in exchange. And this would mean of course no winning chances. 55. dxe8 c5 56. dxh5 cxb5 57. g6 c5 58. h5 d6 59. h6 g8 60. cxe4 e6 with a draw.]

54. a4! And suddenly White is winning!

54...g6 [54...e5 55. c6 g6 56. b5 and Black is losing the e-pawn and with it, the game!]

55. d4! White managed to make a huge improvement, to put the king on d4. Now there's only one precise move left to win the game.

55...c7

56. ♖b5? [56. ♖c2! This move would win on the spot! 56...e3 (Also loses: 56...♖b6 57. ♖xe4 ♖xe4 58. ♖xe4 ♖b5 59. ♖f5 ♖xb4 60. ♖g5 ♖c5 61. ♖xh5 ♖d6 62. ♖g6 ♖e7 63. ♖g7 and White is in time to put the king on g7.) 57. ♖d1 ♖b6 58. ♖e2 The e-pawn s gonna drop, and with it the game. White would bring the king to g5 next, and win another pawn by playing ♖xh5.]

56...♖b6 57. ♖e2 ♖c6 58. ♖e5 ♖b6 59. ♖d5 ♖f5 60. ♖e5 ♖g6

61. ♖f6? It is quite amazing, but the position is still winning for White! [61. ♖c4! would have been the right move. Black is in zugzwang and needs to take away the square c6 with his king. 61...♖c6 62. ♖f6 and only now, ♖f6 is

winning the game 62...♖e8 63. ♖f5 The Black e-pawn is getting lost. Black has no more life saving ♖c6! 63...e3 64. ♖f4+-]

61...♖e8! Now the Black bishop is going to b5 next, securing a draw.

62. ♖f5 ♖b5 63. ♖xb5 ♖xb5 64. ♖xe4 ♖xb4 65. ♖f5 ♖c5 66. ♖g5 ♖d6 67. ♖xh5 ♖e7 68. ♖g6

68...♖f8 And Black is as usual „just“ in time.

69. ♖h7 ♖f7 70. h5 ♖f8 A super interesting endgame! A lot of draw and winning motifs! Really something to learn from. It was a bit fun to analyze this endgame, hopefully without any major mistakes! This endgame is really a super complicated one! **1/2**

Clash of the Titans

(17) Petrosian, Tigran V — Pirtskhalava, A [A90]

Tbilisi Tbilisi, 1947

[Balogh Csaba]

A typical victory against the Stone Wall setup, where Petrosian has managed to execute all the basic principles, obtaining the strong knight against the poor light squared bishop.

1.d4 f5 2.c4 e6 3.g3 ♘f6 4.♙g2 d5 This is the Stone Wall. Black builds a very solid and hardly breakable structure in the center with c6. This has its drawbacks as well, Black practically gives up the fight for the dark squares. That's why White's main plan is to exchange the dark squared bishops and occupy the weakened e5 and f4 squares with the knights, playing against the remaining c8 bishop.

5.♘f3 This obvious move is not the best setup for White. [5.♘h3! is already a well-known move in this position. The point is that White wants to occupy the e5 square with the knight. Of course, you can ask the logical question, why

not ♘f3 then? The answer is, if White develops the knight to f3, Black can control the e5 square with a knight from d7, however with ♘h3 White prepares for the long term maneuver: ♘f4-d3 and the other knight goes to ♘d2-f3. Due to the closed position, White has time for this strategy... Let's examine a nice game by Anand: 5...c6 6.0-0 ♙d6 7.♙c2 0-0 8.♘d2 The knight is going to f3. 8... ♙d7 Black generally has two plans to develop the bishop on c8. One is with b6-Bb7 and the other is ♙d7-e8 and later activate it from g6 or h5. In this game, Nikolic chose the latter idea. 9.♘f3 ♙e8 10.♙f4! Before transferring the h3 knight to d3, White exchanges the dark squared bishops to make the hole on e5 even „bigger”. 10...h6

11.♙b3! Anand creates a weakness on the queenside. After the c8 bishop left that part of the board, it might become vulnerable. (Of course there was nothing wrong with 11. ♙xd6 ♙xd6 12.♘f4+=) 11...b6 12.♙fc1 (12. ♙xd6 ♙xd6 13.♘f4+= was, of course, still fine.) 12... ♙e7 A typical move. Black tries to confuse White's pieces. He threatens with g5-g4. (Black could have only temporarily excluded the h3 knight from the game with 12...g5 because after 13. ♙xd6 ♙xd6 14.♘e5+/- the knight might come back any time through f2.) 13.cxd5! ♘xd5 Usually, if Black

cannot keep his strong center with a pawn capture on d5, it's very bad news for him. (13...cxd5? 14.♙c7+/-; 13...exd5 14.♘e5+/-) 14.♙d2 g5 15.♘e5 It's clear that something went wrong with Black's position. White's pieces are dominating. Only the h3 knight is out of the game, but soon it also joins... 15...a5

16.e4! White opens the center against his opponent's weak king. 16...fxe4 17.♙xe4 ♖a7 18.f4!+/- White changed the character of the game. After opening the position, he launched an attack against the king, instead of playing positional chess on the queenside. White won later in Anand-Nikolic, Wijk aan Zee 2000.]

5...♙d6 6.0-0 c6 7.♘c3 0-0 8.b3 Fianchettoing the bishop on b2 followed by the knight maneuver that we will see in the game is the classical way of handling the position. Theory already knows that here Black can achieve his „dream position“, but at that time people were not that familiar with the positional finesses of the opening... After a few developing moves, Black chose the wrong plan...

8...♙e7 9.♙b2 ♘bd7 10.e3 This is the preparation for the mentioned knight maneuver. White is going to trans-

fer his c3 knight to d3. We can see now that compared to the 5.♘h3 move, White is 2 tempi down and at the same time, he cannot exchange the dark squared bishops.

10...♘e4

11.♘e2! With the idea of ♘f4-d3. We might know this motif from the Queen's Indian defense as well. In some lines, Black plays d5, jumps with his knight to e4 and protects it with f5, weakening the e5 square.

11...♙f6?! Black tries to organize some attack, but it cannot be effective since the White king is very safe. [11...b6! is the right plan 12.♖c1 ♙b7 13.♘f4 a5!? (13...♖ac8 is also possible. The idea is to push c5 and then hold the tension in the center. This leads to very complex positions, which are completely playable for both sides. In general, this is what Black is playing for when he plays the Stone Wall.) 14.♘d3 c5 with counterplay.]

12.♘f4 ♙h6 [12...g5 is definitely a better try for Black, with the idea of stabilizing the knight on e4 13.♘d3 g4 Now, White cannot get rid of the knight with f3, but he can simply ignore it and continue his plans on the queenside... 14.♘fe5 ♙g7 15.♖c1 followed by b4, with better prospects for White.]

13. ♘d3 ♘df6 Black leads some kind of „shadow attack“, allowing White to execute all the good plans.

14. ♘fe5 White prepares for ♔e2 (to protect the e3 pawn) and f3. Black realized that he cannot hold his e4 knight anymore and decided to exchange it for the one on e5.

14... ♘g5

15.f3! After successfully occupying the e5 square, the next goal in White's strategy is to push e4. This is also a well-known method of increasing the advantage in such kind of positions. Petrosian presents us a model game on how to handle this structure.

15... ♘f7 16. ♔e2 The e4 move needs to be well prepared.

16...g5 [Developing the pieces with 16... ♘d7 does not help 17.e4! and the Black position collapses soon, unless he does something concrete... 17...dxe4 18.fxe4 ♘xe5 19.dxe5 ♘g4 but White counters it with very strong play 20.h3! ♔e3+ (20... ♘e3? 21. ♘c1) 21. ♔f2! fxe4 (21... ♔xe2 22. ♔xe2+- with such a bad bishop on d7, Black is hopeless.) 22. ♔xg4 exd3 23. ♘d4! ♔h6 24. ♔af1+/- followed by ♘e4 with serious problems for Black.]

17. ♔ae1 Petrosian is not in a hurry, since Black has no useful plan. [17.e4+/- was fine as well.]

17...a5 [17... ♘d7 18.e4+/-]

18.e4! It's always a bad sign for Black to receive this move. White has many concrete threats like ♘xf7 and e5, for example, and if Black takes everything on e4, his king will be under a mating attack (even if he had his pawn on g7). Practically, Black plays without the c8 bishop and the a8 rook, which cannot bring anything good for him.

18... ♘b4 19. ♔d1! Petrosian does not even give the smallest hope for counterplay by opening the a-file. From a positional view, the game is over. Black tries to create some complications but with such bad pieces, he just accelerates his defeat...

19...dxe4 20.fxe4 ♘xe5 21.dxe5!

21... ♘xe4 22. ♘xe4 fxe4 23. ♘f2! Of course, the e4 square should be occupied by the knight.

23... ♘c5 Black tried to escape to some opposite colored bishop endgame (which should be also lost with heavy pieces on the board), but probably White's reply came without thinking...

24. ♖d4! Keeping the strong knight on the board.

24... ♖e7 25. ♘xe4 ♖d7 Finally, Black starts to develop and to connect his rooks, but it is too late...

26. ♖c5!+- The e7 bishop was the last piece that held Black's position together. After exchanging it, Black cannot hold the dark squares... Game over. The rest is a matter of technique.

26... ♖xf1+ 27. ♖xf1 ♖xc5+ 28. ♘xc5 ♖e8 29. ♖f6 ♖g6 Black definitely made a huge improvement in the last 5 moves by transferring his c8 bishop to g6, but White already starts collecting the pawns.

30. ♘xe6 g4 31. ♘f4 ♖g5 32. ♘xg6 hxg6 33. ♖f4 ♖g7 34. ♖e3 ♖d8 35. e6 ♖e8 36. ♖f7+ 1-0

Editorial Preface

The main event of the female chess came to an end. The Grand Prix in Kazan had 2 winners, Muzychuk and Koneru, they both scored 7,5/11. Third came Hou Yifan and Cmilyte with 7/11.

Another interesting event is in progress. The qualification tournament for the Russian Super Final with players like Nepomniactchi, Jakovenko, Vitiugov and many other strong GMs participating in it.

Peter Svidler won his match against David Navara 3–1. From this event we comment the two decisive games.

In the “special” section of the newsletter, we present You a 3 vs 3 pawn endgame. Try to calculate till the end, there is only one winning way. Such kind of exercises help a lot to improve the calculating abilities!

Have fun and enjoy the CEWN Nr18!

4 best games of the past week

(1) Svidler,P (2741)
— Navara,D (2706) [C65]

Prague match Prague CZE (2), 21.06.2012

[Balogh Csaba]

Svidler comes up with a new plan against the rock-solid Berlin defense, but it appears to be just a „one-game idea“. If Black would have reacted well, he seems to be completely fine.

1.e4 e5 2.♘f3 ♘c6 3.♙b5 ♘f6 A surprise by Navara, who is not really a Berlin specialist, he plays it only occasionally. Therefore, Svidler prefers to avoid the endgame that arises after the main move 4.0–0, and goes for a line, where all the pieces remains on the board — he hopes to outplay his opponent by being more familiar with the middlegame ideas.

4.d3 ♙c5 5.c3 0–0 6.0–0 d6 7.♘bd2 a6 8.♙xc6 [8.♙a4 was the standard move, but Berlin players already worked out the right setups to achieve a comfortable position.]

8...bxc6

9.♖e1 This is the novelty. A really harmless-looking move, with the typical Spanish plan to transfer the knight to g3. It has the poison inside, that Black calms down, because he successfully equalized the opening part of the game, makes some „handy“ moves and suddenly finds himself in trouble. This happened in this game as well. [9.d4 is a very sharp continuation with many recent games even on the highest level. Navara was definitely very well prepared for this.]

9...♖e8 10.h3 Another typical move to avoid the ♘g4 and ♙g4 ideas.

10...♙b6 Black quits from the d3-d4 tempo, this is also a known plan.

11.♘f1 [11.♘c4 h6 12.♙e3 ♙e6 seems to be nothing for White.]

11...h6 Black also prevents the pin with ♙g5. Both sides made their useful moves so far.

12.♘g3

12...♙e6?! I don't like this move. Black decides the placement of his bishop too early. [I would clearly prefer the standard 12...a5 13.♙e3 (13.d4 Probably Navara wanted

to avoid this move by 12...♙e6, but Black seems to be in time for undermining the center. 13...exd4 14.cxd4 c5 15.d5 ♙b7 This plan is also known in the 9.d4 line. Black needs to play c6. 16.♚c2 (16.♙f4 c6 17.dxc6 ♙xc6 18.♚xd6 ♚xd6 19.♙xd6 ♞xe4 with equality.) 16...c6 17.dxc6 ♙xc6 18.♙f4 By playing c6, Black weakened the d6 pawn, but also got a target on e4. From this point of view, the next move suggests itself: 18...♖e6! 19.♖ad1 ♚f8! followed by ♖ae8, pushing the e4 pawn. Black has no problem.) 13...c5! This is another typical „Spanish” idea. Black fights against the d4 push. On the other hand, it is always hard to make this move, because the b6 bishop gets out of the game, but all other pieces are doing well. Black can play on d5, White will avoid this by pushing c4, closing the position. But after c4, Black has good maneuvering possibilities with the transfer of the knight to e6, or preparing for an f5 push. Also the b6 bishop could be improved by a4-Ba5.]

13. ♙e3 [13.d4 was an alternative 13...exd4 14.cxd4 d5 15.e5 ♞e4 Probably this pawn sacrifice is the reason for 12...♙e6, if White accepts it, Black plays c5 and ♙d5 and obtains a comfortable position. But after 16.♙e3! I think White has some advantage, because of the poor b6 bishop and the weakness on the c-file.]

13... ♙xe3?! After this move, I think White is better. Black is not able to react well against the d4 push. [13...c5 was the right move again. I am sure that Navara saw it, but psychologically it is a difficult decision to close the b6 bishop.]

14. ♖xe3 c5 15. ♚c2 [15.d4 was possible immediately as well 15...cxd4 16.cxd4 exd4 17.♞xd4 White is slightly better. He has better pieces and a superior pawn struc-

ture. As the principle says: „It’s better to have the smallest amount of pawn islands”. Now White has two against three. 17...♙d7 18.♖c1 c5 19.♞de2 followed by ♞c3 and pushing the d6 pawn.]

15... ♞d7 [The prophylactic 15...♙d7 was probably more advisable, but still after 16.d4 (16.♖d1 one more preparation is also possible.) 16...cxd4 17.cxd4 exd4 18.♞xd4 White is better.]

16.d4! cxd4 17.cxd4 exd4 18. ♞xd4 White is clearly better now. We must admit that the e3 rook is excellently placed. It might be useful all along the 3rd rank. We can see how difficult it is to play the Spanish opening. After the novelty in the 9th move, Black made very logical moves and got into trouble, in 5 moves, right after 14.♖xe3.

18...a5 [Fighting against the c6 square with 18...c5 would weaken the d6 pawn too much. 19.♞df5; Computer suggests a nice idea on 18...♞e5 19.♚c3! eying at the g7 square after ♞df5 and f4. 19...♚f6 20.f4!! ♚xf4 21.♖f1 ♚g5 22.♞gf5 ! and the rook arrives to g3. 22...♙xf5 23.♞xf5 ♚f6 24.♖g3 g5 25.♚xc7 +/-]

19.b3 [19.♖d1 was probably even better. Svidler did not want to allow a4 to fix his pawn structure on the queen-side, but he could have launched a quick attack after that: 19...a4 20.♘gf5 ♙xf5 (20...♙xa2 21.♖g3) 21.♘xf5 and ♖g3 next.]

19...♘c5 20.♖d1 ♙d7 This was Black's aim, to consolidate his position with ♙f6, but Svidler found a very strong idea. It is not difficult to see the move, it is much harder to judge its consequences correctly...

21.e5! White creates a lot of concrete threats connected with ♘df5.

21...dxe5 [21...g6 22.♘f3 +/-]

22.♘f3 Really subtle play, but.. [The computer move 22.♘df5! was even better 22...♙xf5 (22...♘e6 23.♘h5! too many threats are in the air and if Black wants to ease his task by 23...♘d4 24.♘xd4 exd4 25.♖g3 wins, because of 25...g6 26.♖xg6+ +-) 23.♘xf5 ♙f6 24.♘xg7! ♙xg7 25.♙xc5 +- Despite the material equality, Black is lost. His pawns and the king are just too weak.]

22...♘b7! Only move! Black needs to block the d-file.

23.♘xe5 ♘d6

24.a4 Another human move. Fixing the weakness on a5, Black has no useful move. [24.♙c3 with the idea of ♘h5 was also good.]

24...♙e6 [24...f6 in order to get rid of the strong e5 knight 25.♘xd7 ♙xd7 26.♖c3 ♖a7 27.♘e2 and the knight goes to d4 with a big advantage.]

25.♙c3 ♙g5 26.♘f3! Svidler does not want to give any counter-chance. [26.♙xc7 ♖ec8 was Navara's idea 27.♙b6 (27.♙xd6? ♖d8) 27...♘f5 28.♘xf5 ♙xf5 to get some activity for the pawn. Still, after 29.♘c6! White is better.]

26...♙d8 [26...♙e7 27.♘d4 +/-]

27.♘d4 Black is in big trouble. The only „normal“ move 27...♙d7 in order to simplify the position, loses.

27...♔h8 [27...♙d7 28.♘df5! +- White wins due to the pin along the d-file.]

28.♘h5! White wins material now.

28...♙g5 29.♘xe6 ♖xe6 30.♙xe6 fxe6 31.♙xc7 ♙xh5 32.♙xd6 [32.♖xd6 +- was better, White is a pawn up, he has more active pieces and better pawns.]

32...♙e2 33.♙d3 After playing a perfect middlegame, Svidler transfers into a winning rook endgame.

33...♙xd3 34.♖xd3

34...♖c8?! This eases White's task, because the Black rook gets into passivity soon. [34...♖b8 was a better chance, but White seems to be winning after transferring the king to the queenside. 35.♖e3 ♖b6 36.h4 gaining some ground before starting the action. 36...♙g8 37.♙f1! (37.♖e5?! would be a bad idea. 37...♖xb3 38.♖xa5 ♙f7 Black has very good chances to survive. White has to exchange the b3 pawn for a5 in a much better version.) 37...♙f7 38.♙e2 g5 39.hxg5 hxg5 40.♙d2 ♙f6 41.♙c2 ♖b8 (41...♙f5 moves into 42.♖c3! followed by ♖c5.) 42.♖e4! ♖b6 43.b4! This is the key, and the White king supports the a-pawn. 43...axb4 44.♙b3 +-]

35.♖e3! ♖c1+ 36.♙h2 ♖c2 37.f3 Now Black is forced into passivity, otherwise he ends up two pawns down.

37...♖c6 [37...♖b2 38.♖xe6 ♖xb3 39.♖e5 +-]

38.♖e5 ♖a6 and now the position is easily winning. Svidler demonstrates it with perfect technique. [38...♖b6 39.♖b5!]

39.♙g3 ♙g8 40.♙f4 ♙f7 41.♖b5 First, he activated his pieces.

41...♙f6 42.h4 ♖a8 43.g4 Then he limited Black's counterplay on the kingside.

43...♖a7 44.♙e4 g5 45.hxg5+ hxg5 46.♙d4 ♖d7+ 47.♙c4 And he went to support his extra pawn on the queenside.

47...♖a7 48.b4! and the final breakthrough decides the game.

48...axb4 49.♙xb4 ♙e7 50.♖xg5 ♙d6 51.a5 ♖f7 52.a6 ♙c6 53.♖a5 ♖f4+ 54.♙c3 ♖xf3+ 55.♙d2 A fantastic performance by White! Congratulations! **1-0**

(2) Navara,David (2706) – Svidler,Peter (2741) [A15]

Cez Trophy 2012 Prague CZE (3), 23.06.2012

[Arkadij Naiditsch]

We are in the third of the 4-game mini match played in Czech Republic between Navara and Svidler. This event is already traditional; Navara plays different Super GMs each year. Svidler is leading at the moment with his nice win in the second game and it's clear that Navara has to show something with White, so we will see a very sharp game, where Svidler shows once again how strong his „Grunfeld” is!

1.♘f3 ♘f6 2.c4 g6 3.♘c3 d5 And we are in the Anti-Grunfeld. The Grunfeld has been Svidler's favorite defense for as long as I play chess, and he shows great results in it.

4.cxd5 ♘xd5 5.♔b3 Lately, White is trying a lot of different lines, trying to break Black's defense, but probably the Grunfeld is one of the best standing openings nowadays. During the WCC it was also Gelfand's favorite choice.

5...♘b6 6.d4 ♘g7 7.e4 Quite a funny thing: not so long ago Navara played this position against Aronian with Black and managed to win!

7...♘g4 The new trend of this line, not so long ago the main line was: [7...0-0 8.♘e3 ♘g4 9.♖d1 This is a very complicated and interesting position. 9...e6 (9...♘xf3?! 10.gxf3 This would be just good for White. Now White would have an extra plan with f4-f5 next, which is quite unpleasant for Black.) 10.♘e2 ♘c6 11.♘g1! A nice tactical trick to protect the d4 pawn, the main attacking pawn in White's pawn structure. 11...♘xe2 12.♘gxe2 ♔e7 13.0-0 ♖fd8 We are in the game Aronian-Kamsky, where White managed to win. Probably White is doing a bit better here, but of course, Black has a very fighting position.]

8.♘b5+!? A tricky move. White uses the chance to force Black to play c6 — and to avoid ♘c6 in the future.

8...c6 9.♘g5 This is the main point of 8.♘b5. White, of course, can't allow Black to play ♘xf3 with ♘xd4 to follow.

9...0-0 10.♘e2 We are still in the game Aronian-Navara from Wijk ann Zee 2012.

10...♘xe2 11.♘xe2

11...e5!? This is Svidler's novelty. [11...♘a6 12.♘e3 ♔d6 13.0-0 ♖b4 and Black managed to reach an endgame,

which is usually a good thing in the Grünfeld. This is how Navara managed to win not so long ago. But we can be sure that both players analyzed this position for some time. I think that in case of 11...♘a6, an option is to play 12.0-0 c5!? 13.d5 with a very complicated position.]

12. ♔h3?! [12.dxe5! seems to be the critical move here. 12...h6! (12...♙xe5? 13.♔h3! The winning move 13...h5 14.♘e6! and Black loses material) 13.♘h3! (13.♘f3 ♘8d7 and it looks like Black is doing fine. The e5 pawn will fall and with it, the advantage of White.) 13...♘8d7 14.f4 and White is in time to defend the e5 pawn. 14...♘c5 15.♔c2 ♘d3+ 16.♙f1 The position looks a bit dangerous for White, but I think that the extra pawn should give White better chances. 16...f5 17.exf6 ♙xf6 18.♙e3 The position remains quite forced, but White should be doing better.]

12...h6 Now the position becomes very forced, but I clearly prefer Black.

13. ♘f3 exd4 Black managed to get the most important pawn — this can't be good for White.

14. ♙xh6 ♖e8! A very strong and cool move. Black is not afraid to start defending his king immediately. The White pawn on e4 is hanging, and in some lines, the Black king could use the f8 square to escape.

15.0-0-0 White starts to go all-in, which is logical. No way back anymore... [In case of the simple 15.♙xg7 ♙xg7 16.♘fxd4 ♖xe4 17.0-0-0 ♔f6 the position seems to be equal to me, but it's clear that Navara needed the full point, and an equal position with a draw as the most likely result was definitely not an option for the top Czech player.]

15...c5! Black remains very cool, again. Of course, this move seems to be easy and logical, but things are by far not that easy over the board. White has direct threats and Black needed to calculate precisely to know that he won't get a lost position.

16. ♘g5 The last chance to create something...

16... ♔d7 17. ♔h4 Of course White needed to avoid the exchange of queens. In case of an endgame, Black would be doing much better.

17...f6! This is the key move, which I think Navara blundered. The Black queen from d7 is now protecting the bishop on g7! Not an easy thing to see from far away, but Svildner seems to be in great shape.

18. ♙xg7 ♔xg7 It's hard to give White an advice now. Black got the central pawns, plus White's attack came to an end, and the pawn on e4 can fall any moment. Black is doing clearly better now.

19. ♘h3 ♘c6 20. ♖d3 White decides to „die with a scream“. The position looks quite sharp now, but actually, it is quite easily winning for Black.

20...g5 Why not to win the pawn on e4 if it's possible...

21. ♔h5 ♖xe4

22.f4! The only chance for White. White tries to open the position of the Black king at any costs. [22. ♖g3 ♖h4 and Black kicks out the White queen, keeping his extra pawn.]

22... ♗f7 Black is suddenly losing the coolness, and the full point was so close already. [22... ♖b4! would have been the right choice. 23. ♖g3 ♗f7! and only now ♗f7. The knight on b4 is now the killer around the White king. 24. ♖xg5+ ♔f8! (Of course not 24... fxg5 25. ♗xf7+ ♔xf7 26. ♖xg5+ and the rook on e4 is falling.) 25. ♗h8+ ♔e7 and Black is winning.]

23. ♖g3! Excellent move. White looks for chances in a bad position. To take on f7 is not an option, to go for an endgame with a pawn down would be similar to resigning the game.

23... ♗c4+ [A more solid, though not a better choice would be 23... ♗xh5 24. ♖xh5 ♖f8 I have to admit that this looks quite dangerous, but everything seems to work. Black should be doing better. 25. ♖g3 (25. fxg5 fxg5 26. ♖g3 ♖e5! A critical move which is hard to see... 27. ♖xg5 ♔h8 and the Black king is suddenly very safe on h8. Black is doing clearly better, even though the position remains

dynamic and complicated.) 25... ♖e3! and Black should be better again.]

24. ♖c3! [24. ♔d2? would be a mistake 24... ♖b4! A very beautiful move! Black gives mate first. 25. ♗g6+ ♔f8 26. ♗xf6+ ♔e8 The Black king escapes and White can't do anything against the double threat of ♗xd3 and ♗c2-Nxd3.]

24... dxc3 We see a couple of forced moves.

25. ♗g6+ ♔f8 26. ♗xf6+ ♔e8 27. ♗g6+ ♔d7 28. ♗xe4 cxb2+ 29. ♔b1 Everything was forced until here. How to evaluate this position? It's not that easy. The only thing we can say is that probably Black is still doing better thanks the pawn and the dangerous position of the White king, that is surrounded by the Black knights... However, things are very complicated and an exact calculation is needed.

29... ♖e8?! This logical human move is a mistake. [29... ♖d4! would have been the right choice. The Black knight on d4 dominates the game. 30. ♗xb7+ (30. ♖e1 ♖d5 It's amazing how strong the knights can be in the center.) 30... ♔d8 31. ♗e4 ♖d5

and Black is winning.]

30. ♖d1+ White takes his chance.

30... ♘d4 31. ♙xb7+ ♔d8 32. ♙b8+ ♔d7 33. ♙b7+ ♔d8

34. ♙b8+ ♘c8 Great fighting spirit by Black. It would be a pity for Black to make a draw in this game, after having a clearly winning position earlier. The main point is that the White knights on h3-g3 are totally out of the game.

35. ♙xb2

35... ♙e6! Black continue the attack. Of course, it is a pity to have the knight on c8 instead of on d5, but it might still be enough to mate the White king.

36. ♖c1 A losing move in a position that was probably lost anyway. [36. ♙a1 would have been a better chance 36... ♖b6 37. ♙c1 ♘d6! Finally, the Black knight is coming into the game, but Black has to exchange queens... 38. ♙xc4 ♘xc4 39. a3 ♔c7 and probably Black should be winning here. Two knights and a rook should be enough to mate the White king.]

36... ♙a4! Black is taking the last preparation steps. It's getting very dark around the White king.

37. ♙a1 ♖b6 38. ♙d2 ♘d6 The mate is unstoppable.

39. ♖c3 ♘c4 40. ♙d3 ♙b4 41. ♖b3 ♙e1+ A slightly crazy game where White clearly didn't have his best day, getting into big trouble almost out of the opening and not managing to come back into the game. It would be very interesting to know what Svidler actually planned to do after his novelty 12...e5, 13.dxe5... **0-1**

(3) Kosteniuk,A (2457) – Danielian,E (2484) [C13]

FIDE Women GP Kazan 2012 Kazan, RUS, 20.06.2012

[Balogh Csaba]

We are in the 9th round of the Women's Grand Prix in Kazan, when the current leader, Danielian (with 6/8), faced the former World Champion, Alexandra Kosteniuk.

1.e4 e6 2.d4 d5 3.♘c3 ♘f6 4.♙g5 Recently, 4...♙b4 and 4...dxe4 are more popular.

4...♙e7 5.e5 ♘fd7

6.h4 This very interesting gambit line is known since the beginning of the 1900's. It was the favorite of Euwe and Alekhine. [6.♙xe7 ♙xe7 7.f4 is the main line, with a small advantage for White.]

6...c5 This is the most principled move. It tries to undermine White's center and also to open the center against the flank attack, but it has concrete problems... [6...h6 7.♙xe7 ♙xe7 is the way the specialists of this line play with the Black pieces nowadays.; It is not advisable for Black to accept the pawn sacrifice. 6...♙xg5 7.hxg5 ♙xg5

Here White has many different options. The following line seems to be the best to me: 8.♙d3 g6 (Black quickly collapsed after 8...♘c6 9.♘f3 ♙g6 10.♙xg6! Black probably missed this „simple“ move, since it is not obvious at all to exchange queens while being a pawn down. 10...fxg6 11.♘b5! and Black cannot protect the c7 pawn. 11...♙e7 (11...♙d8? 12.♘g5 +- wins.) 12.♘xc7 ♖b8 13.♘b5+/- with a big advantage in Kasparov-Kortschnoj, Zuerich (rapid) 2001.) 9.♘f3 ♙e7 10.0–0–0 White already finished the development, enjoys a nice space advantage due to the e5 pawn and has a very simple plan against the h7 pawn... At the same time, Black is stuckedn his camp and needs a lot of time to secure the king's position. 10...♘b6 11.♙e3 ♙d7 12.♖h6! ♘c6 13.♙d3 0–0–0 14.♖dh1 +/- Finally, Black finished his development, but White wins back the pawn and holds a nice positional advantage.]

7.♙xe7 This is the defect of the 6...c5 move. Black cannot take back with the queen. However, White's center is under attack, the position is very far from clear.

7...♙xe7 Black quickly wants to play ♙b6, ♘c6, so White doesn't have enough time to consolidate his center. [7...♙xe7?! is met with 8.♘b5! and if Black does not want to give up the right for castling, then he must play 8...0–0 9.♘c7 and Black does not get enough compensation.]

8.dxc5 We are sti ll in theory. I don't know whether the next move was still preparation or not, but it seems to be an inaccuracy.

8...♘c6 [Black should have taken 8...♘xe5 9.♙e2 ♘bc6 10.0–0–0 is the start of the line. Sakaev won a nice game against French defense specialist Ulibin in Dubai 2000. He analyzed this position in details over many pages. At

the end he comes to the conclusion that position is very unclear with chances for both sides. That game continued with 10...♔f8, but 10...♔a5 is an alternative as well.]

9.♔d2 White gives back the favor. [It would have been logical to protect the pawn on e5 and achieve a typical French defense structure, where generally White has a small advantage. 9.f4 ♔a5 10.♔d2 ♖xc5 11.♖f3 ♔d8 and here White has the important resource to stop Black's counterplay with d4. 12.♗d4! +=]

9...♗xc5? This is a clear mistake. From now on White's strategy starts to dominate. [Black could have gotten a better version than the 8...♗xe5 line, because now the queen is on d2 and it does not pin the king along the e-file. 9...♗dxe5 10.0-0-0 ♔a5 11.f4 and in this position, a very „inhuman“ move leads to a more or less forced draw: 11...♗g4! (11...♗d7 12.♗b5! creates real problems, because of the threat ♗xc6 and ♗xd5.) 12.♗b5 ♗b4! This is the point. It is hard to deal with the ♗a2 threat. It arrives even after 13.a3 and Black takes the bishop on b5. 13.♔e2 Attacking the knight on g4 and preparing for a3, but Black has... (13.a3 ♗a2+; 13.♔b1 a6 14.♗a4 ♔xc5) 13...♗xa2+! 14.♗xa2 ♔xa2 15.♔xg4 ♔a1+ 16.♔d2 ♔a5+

17.♔c1 ♔a1+ = and the one who avoids the perpetual gets into an inferior position.]

10.0-0-0

10...♗a5 [Now 10...♗xe5?! is simply answered with 11.♔e3! and Black cannot hold the threats. ♗xd5 is in the air.]

11.♖h3! Very nice and strong move! I personally was always a fan of the h4-Rh3 or a4-Ra3 plans in the middle-game. The rook causes serious problems in Black's camp along the 3rd rank.

11...h6 Against the annoying ♔g5 check. [11...d4 is countered by 12.♔g5+ ♔f8 13.♗b5! ♔xa2 14.♖a3! You see the 11.♖h3 move. :) 14...♔d5 15.♗c7+- White wins.]

12.♗ge2! Another spectacular and strong move. White brings a blockader to d4 and keeps the 3rd rank open for his rook.

12...♖d8 [12...♗d7 13.♗d4 is also horrible for Black. He cannot even ease his position with 13...♗xd4 because of 14.♗xd5+! +-]

13. ♖f4 Prepares for an attack against the kingside pawns with ♖f3 or ♖g3.

13... ♘d7 This is a kind of desperation in a really bad position. [After the „normal“ 13... ♙d7 White simply plays 14. ♖g3 ♖g8 15. ♘d4 ♘xd4 16. ♙xd4+/- with a big advantage. The king became really vulnerable on e7.]

14. ♖g3 ♖g8

15. ♖e3 Kosteniuk had the right idea in mind, to play ♘d4. First she protects the e5 pawn, but as we will see, it was not necessary. [The tactical 15. ♘d4! was even stronger 15... ♘dx5 (15... ♘cxe5 is refuted elegantly by 16. ♖e3 f6 17. ♘xe6! ♙xe6 18. ♙c4!! Not the only win, but definitely the nicest. 18... dxc4 19. ♙xc4+ ♙e7 20. ♙xg8 +/-) 16. ♘f5+! exf5 17. ♖xd5 ♙c7 18. ♖xe5+! This is the point. White wins the queen in both cases. 18... ♙xe5 (18... ♘xe5? 19. ♘d5+) 19. ♖e3 ♙xe3+ 20. ♙xe3+ ♙e6 21. ♙d3 and Black cannot avoid losing material, while his king is still in the danger zone.]

15... ♖b8 A waiting move, because b5 did not work immediately. The position looks really terrible for Black, but actually White must play powerfully to convert the advantage. [15... b5? 16. ♘xd5+! exd5 and now the „silent“

17. ♘c3! and Black cannot escape if the knight arrives to d5, while 17... ♘b6 loses after 18. e6! ♙xe6 19. ♙c7+ ♙f8 20. ♙xc6 +/-]

16. ♘d4 ♘xd4 17. ♖xd4 g5 Black's only chance is to complicate the matters. [Stabilizing the d5 square with 17... ♘b6 is met with 18. b4! ♙a3+ 19. ♙b1 +/- and the queen is trapped on a3. ♘b5 is coming next.]

18. hxg5 hxg5 19. ♙g3 [It was better to play 19. ♙g4 but the text move does not spoil the advantage.]

19... ♙c5 Now Black improved a bit with a tempo.

20. ♙g4

20... b5 [20... f5 temporarily pushes back White's pieces 21. exf6+ ♘xf6 22. ♙d1 +/- but the king remains in the center.]

21. b4! Very strong response! Depriving Black of his only counterplay with b4!

21... ♙c6 22. ♙h5 White prepares for the tactical blow, which she managed to play in the game.

22...a5? [The ugly 22... ♖a6 was the only move according to computer, but still after 23.f4 White launches an enormous attack against the f7 pawn.]

23. ♘xd5+! exd5 24.e6! It is over now. Black cannot survive the opening of the lines.

24... ♖g6 [24...fxe6 is simply met with 25. ♔h7+ +- and the rook falls.]

25.exd7+ ♔xd7 White restored the material equality, and continues the attack. The only question remains, how long can Black prolong the resignation?

26. ♖d3 ♖g7 27. ♔h8 ♔f6 28. ♖xd5+ ♔c6 29. ♖c5+ ♔d6 30. ♔f8+ A nice attacking game, after which Danielian collapsed and lost the last 2 games as well, dropping back to the 6th place. **1-0**

(4) Lahno, Kateryna (2546) – Kosintseva, Tatiana (2532) [E56]

4th WGP Kazan 2012 Kazan RUS (11), 22.06.2012

[Arkadij Naiditsch]

We are in the last round of the Grand Prix. Both players are out of contention for the medals, but this game was very exciting anyway. After a good opening outcome, Lahno made a great combination and... lost the game. Let us take a look at what exactly happened.

1.d4 ♘f6 2.c4 e6 3. ♘c3 ♖b4 4.e3 We are in the main line of the Nimzo.

4...0-0 5. ♖d3 c5 6. ♘f3 d5 7.0-0 ♘c6

8.cxd5 [8.a3 ♖xc3 9.bxc3 dxc4 10. ♖xc4 ♔c7 would lead to the very main position of the Nimzo.]

8...exd5 White has opened the bishop on c8, but the idea is to play against the isolated pawn on d5 now.

9.dxc5 ♖xc5 [9... ♖xc3 10.bxc3 ♖g4 This is another typical way of handling these positions, but not with this move order. Here White is a tempo up compared to the main lines, so even after an easy move like 11. ♖e2 White is doing a bit better.]

10.h3 This is an often played position. Lahno will demonstrate perfectly White's main idea. On the other hand, Black's play will not be great at the beginning. Usually, Black looks for a fast d4, trying to force a draw by exchanging a lot of material, and exploiting the isolated pawn.

10...a6 [10...♔e7 this should be the best way of handling this position. 11.b3 ♖d8 12.♙b2 ♘e4 13.♘e2 ♘b4 14.♙b1 ♙f5 with a fighting position, Roiz-Fressinet, 2011.]

11.b3 White needs the bishop on b2, this is clearly its best place.

11...♙e6 12.♙b2 ♙a7 13.♘e2 Another correct strategic decision. White needs to take care of the d5-d4 threat, and to keep the option of putting a „blocker“ on d4 is never a bad idea.

13...♖c8 From this moment on, the game starts to get exciting. We can already say that White should be quite happy with the outcome of the opening. If the White player is not creative, by playing 14.♘ed4, he would get a typical slightly better position.

14.♘g5!? White uses the chance for tactical play! Suddenly, the Black king is quite in danger! White wants to play ♙xf6 and the pawn on h7 drops.

14...g6 [14...h6? would not help because of 15.♙xf6 ♔xf6 16.♘h7 and White is a clear exchange up.]

15.♘f4 All the light White pieces are in the attack!

15...♔e7 16.h4! I like this move a lot! White's h-pawn is going to be „the“ little extra White needs to make the attack even stronger. [16.♔f3 would have been another logical continuation. 16...d4 Black is forced to act, to close the bishop on b2 is the first priority. 17.♘gxe6 fxe6 18.♙c4 ♔h8 White is doing better, but the position is still a fighting and quite complicated one.]

16...♙b8 A nice move by Black! It's clear that he needs to do something about the bishop on b2, and will simply try to play ♙e5 next.

17.h5 ♙d7? This is a real surprise. A shocking move by Black, giving White a few interesting opportunities. [17...♙e5! would have been the only move. 18.♙xe5 ♘xe5 White needs to act quite fast as well... If Black gets a „free“ move now, White wouldn't be doing better at all. 19.hxg6 This leads to the forced win of a pawn, but it's not evident that it leads to a clearly better position. 19...hxg6 20.♘gxe6 fxe6 21.♘xg6 If You say A, You need to say B and get the pawn. 21...♘xg6 22.♙xg6 ♔g7 It looks like Black is simply a pawn down, but things are by far not that simple. 23.♙d3

23...♔h6! A very important move, now White doesn't have 23.♖c1? because of 23...♗xc1 24.♕xc1 and ♘g4! The next Black's move will be ♙f7 followed by ♖h8. In my opinion, Black has enough compensation for the pawn.]

18.hxg6 With this move, White starts a very beautiful combination. However, she had many different moves as well. Let's take a look at a few of them! [The typical 18.♘xh7! would be a very interesting option. 18...♘xh7 19.hxg6 fxg6 20.♘xg6 The Black position looks really dangerous, but it seems that White doesn't have any forced win. 20...♗f7 (20...♗d6 21.♕h5 ♖f7 22.f4! A key move here, White wants to play ♖f3-Rg3 next with a basically killing attack. I would not like to be Black here...) 21.f4 And again, the f4 move! The position doesn't look simple at all, but I think in a practical game it is almost impossible to hold this with Black. White's play is so simple — just to go for the Black king with all you got. Objectively, I think White is doing clearly better.]

18...hxg6 19.♘xd5!? This is what White wanted by playing 18.hxg5. A great tactical blow, very beautiful.

19...♘xd5

20.♕h5! What a great tactical mating idea!

20...f6! I have the feeling that Kosintseva was very lucky — and happy — when she saw the move f6. Any other

move would lose the game on the spot, and by accident the game gets quite unclear now... [20...gxh5 21.♕h7# What a mate!]

21.♕xg6 [21.♕xg6+!? ♗g7 22.♕h5! It looks like White is winning, but Black has a great defensive move: 22...♗fd8! and we are in a really crazy position. I feel White should be doing better, but to prove this would still be very hard.]

21...♗e5?! [21...♗e5 This move looks quite logical, but it leads to some super deep complications as well. 22.♕h7+ ♗g7 23.♕g6+ Of course, White tries to play for the mate. 23...♗h8 24.♕h6 ♗g7 The only defense, White wanted to play ♕e4. 25.♕h1! The only square for the queen. An easy move to blunder. When was the last time you saw the h-file open and the White Queen on h1?! 25...fxg5 26.♕e4+ ♗g8 27.♕xd5+ ♖f7 with a very strange and unbalanced position. The game would just begin here, all 3 results are possible.]

22.♕a3! A beautiful move! Seems like White is close to get the full point!

22...♕g4 The only move, freeing the d7 square for the Queen, any other move would lose on the spot.

23. ♔h1?? A horrible mistake. [23. ♕h7+ This would have been the other option 23... ♖g7 (23... ♔h8 is losing on the spot due to the usual 24. ♔h1! ♕g7 25. ♕e4+) 24. ♕xe7 ♕xh5 25. ♕xf8+ ♖xf8 26. ♕e4 fxg5 27. ♕xd5 The end-game is still not a simple one, but only White can be better here.]

23... ♔d7 And suddenly White is very bad, probably close to lost... How to avoid the loss of material? White is already a piece down... This is really a tragic end, and a very beautiful combination.

24. ♕e4 What to do? White tries to keep some pieces on the board, in order to have practical chances. [Doesn't help 24. ♕xf8 fxg5 White will lose one more piece on the next move, which would give Black 3 pieces for a rook and 2 pawns, this is clearly easily winning.]

24... ♘c3! Another very strong move by Black! Suddenly, Kosintseva is the one who wants to give mate by playing ♘e2, and after ♔h2, ♘f3!

25. ♔h6 This move saves White from a direct mate, but not from a lost position.

25... fxg5 And another White piece has been taken.

26. ♕xf8 ♖xf8 27. f3

27... ♔g7!? The safest move, Black forces White to exchange queens and get in a position where the best choice is to resign.

28. ♔xg7+ ♖xg7 29. ♕xb7 ♘d3 The game is over! What a position... The next 8 moves need no comments...

30. ♖fd1 ♘e2+ 31. ♔f1 ♘g3+ 32. ♔g1 ♘e2+ 33. ♔f1 ♘g3+ 34. ♔g1 ♖h8 35. ♖xd3 ♖h1+ 36. ♔f2 ♖xa1 37. e4 ♖xa2+ 38. ♔e1 ♕e6 We saw a very interesting game with quite an interesting opening for those who are playing the Nimzo with White. From this game we have to learn that not every beautiful tactical blow leads to a full point... Chess is a cruel game :). **0-1**

Endgame section

(15) Galliamova, A (2484)
– Hou Yifan (2623)

WGP Kazan, 20.06.2012

[Chess Evolution]

At this seemingly drawn position, Hou Yifan, the Women's World Champion, found very good practical chances to win.

27...♖xd4! [27...♖xe3?! with the idea of transposing into a pawn endgame. This doesn't work well for Black. 28.fxe3 f5!! In order to prevent e4 and prepare for ♕b7. 29.♕f2 ♕b7 30.♘c6! By precise calculations, White enters into the simplifications. Now the correct defense is 30...♔g7-f6 and then start passing with the bishop. Probably the game would end in a draw in this case. 30...♕f8 31.♕e2!

31...♕xc6? Still, 31...♔g7 would hold the draw. 32.dxc6 ♕e7 33.♕d3 The king arrives just in time. 33...♕d8 (33...d5 34.♕d4 ♕d6 is met with 35.c7! ♕xc7 36.♕xd5+- when the superior position of White's king decides the outcome.) 34.♕d4 ♕c7 35.♕d5 This had to be calculated beforehand. Both sides can only move with their pawns, but as we will see, Black loses the fight for a tempo. 35...b4 (35...g5 36.g4! is the easiest win. 36...f4 (36...fxg4 37.hxg4 b4 38.b3 h6 39.e4 +- and zugzwang.) 37.exf4 gxf4 38.♕e4+- and White wins with the help of the kingside pawns. Black must hurry to catch them with the king, but this leaves the queenside unprotected. Passed pawns are very important factors in all the endgames, especially in pawn endgames.) 36.b3 g5 37.g4! f4 38.exf4 gxf4 39.♕e4 ♕xc6 40.♕xf4 +- White wins as it was explained in the 35...g5 line.]

28.♖e8+ ♔g7 29.♖xc8

29...♔f6! Black uses the more active situation of his king and tries to save the important pawns on the queenside, sacrificing the less useful ones on the kingside. [29...♖xd5 leads to a more or less forced draw after 30.♖c6 ♖d1+ 31.♔h2 ♖d2 Black takes one more pawn, but his complete queenside is vanishing. 32.b4 ♖xf2 33.♖xa6 ♖b2 34.♖xd6 ♖xb4 35.a6 ♖a4 36.♖b6 b4 37.a7 ♖xa7 38.♖xb4 with an easy theoretical draw.]

30.♖c6 ♔e5 31.♖xa6

31...♖b4 Here we can get the point of Black's play. He wants to save either the d- or the b-pawn, which could become very dangerous with the support of the king. The position is still drawn, but time trouble is approaching and White must make a difficult decision.

32.♖b6 [Creating counterplay by obtaining a kingside passer would have been the right idea, but Galliamova was afraid of losing too many tempi with the rook moves, allowing the b-pawn to promote. 32.♖a7! ♖xb2 (32...f5!? is an alternative, but White can hold the draw here as well. 33.♖xh7 ♖xb2 34.a6 ♔xd5 35.a7 ♖a2 and here, I think the best way to save the half point is to stop the b-pawn with the king. 36.♔f1 b4 (36...♔c6 37.♔e1 ♔b6 does not win a pawn, because of 38.♖d7 =) 37.♔e1 ♔c4 (37...b3 38.♔d1 = Just in time, the a-pawn gives enough counterplay. 38...♖a1+ 39.♔d2 b2 40.♖b7 ♖xa7 41.♖xb2=) 38.♔d1 ♔d3 39.♔c1 and the b-pawn is stopped, while going for the kingside pawns is not dangerous. 39...♔e2 40.g4 ♔xf2 (The tempting 40...f4? is too optimistic. Black causes problems only to himself. The h-pawn runs very fast. 41.h4 f3 42.h5 gxh5 43.gxh5 ♔xf2 44.h6 ♔e2 45.♖f7+- and White wins.) 41.gxf5 gxf5 42.♖f7 =) 33.♖xf7 ♖a2 Probably, Hou Yifan would have tried this way, because now the a-pawn does not reach the 7th rank, so it's not that dangerous. Anyway, White holds the draw. 34.♖xh7 ♔xd5

35.h4 Not the only way, but it seems to be the easiest one to create a passer on the h-file. 35...b4 36.g4 b3 37.♖b7 ♔c4 38.h5 gxh5 39.gxh5 ♖xa5 (On 39...b2 White

must deal with the ♖a1 threat first. 40.♔g2 ♕c3 and here comes a very important and often-seen motif in the rook endgames. Black defended the b2-pawn and is ready to activate the rook, but 41.♖c7+! White sends the king away 41...♔d3 42.♖b7 and attacks the pawn again. Black cannot make progress.) 40.h6 ♖h5 41.h7 Just as in the 32...f5 line, White reaches the 7th rank. This always gives very good counterplay, since it restricts the mobility of the rook. 41...♔c3 (41...d5 42.♔f1 ⇒) 42.f4 b2 43.♖c7+! The same motif as before. 43...♔d3 44.♖b7 ♔c2 45.♖c7+ = and again, there is no way to progress.]

32...♔xd5?! This is an inaccuracy, which could have led to an immediate draw. [32...♖xb2 33.a6 h5! evacuating the 7th rank 34.♖b8 ♖a2 35.♖xb5 ♖xa6 Despite the material equality, Black still has chances because of the weak d5 pawn. 36.♖b7 Here we get the point of the 33...h5 move. Black can save all his pawns. 36...f6 37.♖g7 ♔f5 38.♖d7 h4 and Black still can press for a while, but the objective result should rather be a draw.]

33.a6 ♖xb2

34.a7? The most logical move, but it is a big mistake. We'll soon understand the subtle point... [34.♖b8! was the way to draw. The a-pawn threatens to promote, so Black has no choice. 34...♖a2 35.♖xb5+ ♔c6 (35...♔e6 36.♖b6 ⇒)

36.♖b7! = and this move is the point! In the game, with the pawn on a7, White did not have this option.]

34...♖b1+ [34...♖a2 is also good.]

35.♔h2 ♖a1 36.♖xb5+ [On 36.♖b7 ♔e6 sooner or later White has to exchange his a-pawn for the one on the b-file.]

36...♔c6 37.♖b2 ♖xa7 And Black is winning with the extra pawn, which is supported by the king.

38.g4 [38.♔g3 d5

39.♔f4 ♖e7! Very important move, to cut the White king along the e-file. Now the d-pawn is practically unstoppable. 40.♔g5 d4 41.♔f6 ♖d7 wins in similar fashion to the game.]

38...d5 39.♔g3 ♖e7 Again, the same cut, but Black could have delayed it by one move. The rest comes automatically. [39...d4 40.♔f4 ♖e7!]

40.♔f4 d4 41.♔g5 ♔c5 42.f4 [42.♔f6 ♖d7]

42...d3 43.f5 ♖d7 44.♖b1 d2 45.♖d1 ♔c4 46.f6 ♔d3 47.♔h6 ♔e2 48.♖xd2+ ♔xd2 Another instructive rook endgame. **0–1**

(16) Lahno, Kateryna (2546)
– Koneru, Humpy (2589) [A25]

4th WGP Kazan 2012 Kazan RUS (9), 20.06.2012

[Chess Evolution]

The position looks totally winning for Black, but is it so?! The only attacking point in the White structure is the pawn on f2, and it's really hard to get a triple attack on that square. An exchange of rooks would, of course, win the game on the spot, but it is hard to achieve. Koneru shows good technical play. Let's take a look at the winning plan.

43... ♖b4

44. ♔f1 ♘f6 45. ♔g2 The best White can do is to wait — every pawn move only creates weaknesses in the structure.

45... ♖b2 Of course, the Black rook belongs in b2! This is the right place for the rook.

46. ♖c4 ♘e7 The second step of the Black plan should be to bring the king to e1 or e2. This is the only way for Black to create some threats.

47. ♔f1 ♘d6 48. ♖c6 ♘b4 49. ♖a6 ♖d2 50. ♖b6 ♘c3 51. ♖c6 ♘e5 52. ♖a6 ♖d6 53. ♖a7 ♔f6 54. ♖b7 ♖a6 55. ♔g2 ♔e6 56. ♖b4 ♘c3 57. ♖c4 ♘e5 58. ♖b4 ♔f5 59. ♖b5 ♖a2 60. ♔f3 ♔e6 61. ♔g2 ♘c3 62. ♔f1

62... ♔d6 The last 15 moves were not too exciting and Black didn't make any progress, but now finally Koneru decides to move the king forward. Probably, Black wanted to keep the f7-g6 pawn structure, but this is not possible. Another option for Black is to put the pawns on f5-g4, but it would make the f5 pawn weak, so there is no sense in doing that either.

63. ♖b7 White uses the chance to put the pawn on f6, which can be useful in the future. The g6-pawn is getting

weak and White will have some ideas connected with ♖g7 g5, and now f4 trying to exchange as many pawns as possible.

63...f6 64.♖b3 ♖c2 65.♖b5 ♔c6 66.♖b8 ♔d5 Finally, the Black king crosses the 5th rank.

67.♖c8 The only move to fight. White can't take the king away from f1, because ♔e1 would win the pawn on f2 on the spot. With the move ♖c8, White finally gets the possibility of freeing the king.

67...♔e4 68.♔g2 ♔d3

69.♔f1 Again, the only move. In case of 69.♔f3, ♔e1 is winning.

69...♖c1+ 70.♔g2 ♔e2 Finally, Black managed to bring the king to e2. Half way is done! Now Black needs to get rid of the pin on the c-file and threaten to play ♔e1 or ♖f1.

71.♖c6 [71.♖g8 ♖f1 loses for White immediately.]

71...♔b2 Black is ready for the final action. ♖f1 and ♖c2-Ke1 are the main ideas.

72.♖e6 White is trying to get as ready as he can to face the ♖f1 move.

72...♖c2 [Anyway 72...♖f1! 73.f4 ♖f2+! 74.♔h3 ♔f3

The entrance of the Black king decides the game. Black is winning.]

73.f4 Black wanted to win the pawn on f2 by playing ♔e1.

73...♔e1+ 74.♔f3 ♔f1 Black slowly enters White's defense lines. Now Black wants to play f5, followed by ♖f2 mate.

75.g4 ♖f2+ 76.♔g3 ♔c3! A nice move. Suddenly, the White king is in a deadly mating net!

77.g5

77...f5! A great way to finish the game.

78. ♖xg6 ♜g2+ **79.** ♔h3 [79. ♔f3 ♙e1]

79... ♔g1 Black wants to mate by playing ♜h2-Be1-Rf2.

80.e4 The only chance, but nothing helps anymore.

80...fxe4 81. ♖e6 ♙e1! The last precise move. Black wants to play ♙f2 followed by e2. White has no moves. Against 82.g6, ♜g3 83. ♔h4 ♜xg6 is coming.

82.f5

82... ♜h2+ Followed by ♜h4 mate. What can we say about the endgame? It's quite easily winning for Black, but it's important to know the plan! **0-1**

Clash of the Titans

(17) Martinez,D – Steinitz,W [C45]

Philadelphia Philadelphia, 1883

[Balogh Csaba]

This week, we'll examine a game from the first undisputed World Champion, Wilhelm Steinitz. He was the one who established the positional play in chess. He was the first who outplayed his opponents in a mainly positional manner. However, in our present game, Steinitz decided to play in „19th century style“. ..

1.e4 e5 2.♘f3 ♘c6 3.d4 White goes for the Scotch. [3.♗b5 d6 was the favorite of Steinitz, and it was also named after him.]

3...exd4 4.♗xd4

4...♔h4 A tricky sideline compared to the two main moves: 4...♗c5 and 4...♗f6.

5.♗b5 [5.♗c3 is probably the reason why we don't see this queen rush on the highest level. Black has to play

concretely, otherwise the queen gets to be misplaced on h4. 5...♗b4 6.♗e2! A pawn sacrifice for development. 6...♔xe4 7.♗db5 ♗xc3+ 8.bxc3! and Black has serious problems with the c7 pawn, he has nothing better than 8...♔d8 but after 9.0–0 White has very strong initiative for the small material deficit. It's very important for White to have the bishop pair in such positions.]

5...♔xe4+?! A bit too greedy, but 139 years ago, theory was just about to develop. [5...♗b4+ is the right approach, and Black seems to be fine after every move. The main idea is to defend the c7 pawn with the bishop. 6.♗d2 (6.c3 ♗a5 7.♗e3 ♗f6 8.b4 a6! A nice in-between move, which solves Black's problems.; 6.♗1c3 ♗a5) 6...♔xe4+ 7.♗e2 ♔d8! 8.0–0 ♗xd2 9.♗xd2 ♔f4 and compared to the 5.♗c3 line, Black managed to exchange the dark squared bishops, which clearly improves his defensive chances. After one mistake by White, he might remain without any compensation.]

6.♗e3?! A logical developing move, White intends to play ♗1c3 and a quick 0–0–0, but after this, Black seems to be fine. [6.♗e2 is the critical move. 6...♔d8 7.0–0

7...a6 and here 8.♘1c3! At first sight, a slightly suspicious move, because the b5 knight has no retreating square, but who said it has to come back in any case?! 8...♙e5 Black pinned his hopes to this move, but... (8...♙g6 9.♘d4 would be very nice for White. Black has no time to consolidate.; 8...♙h4? 9.g3! and the queen has no square, it must move into the ♘d5 tempo.) 9.♘d5! axb5 10.♙f4 ♙d4 11.♙xc7+ ♙e8 12.♘b6 +- and the game is over. This could have been another very typical game for the 19th century.]

6...♙d8 It sounds a bit strange, but now Black seems to be all right.

7.♘d2 [7.♘1c3 was definitely more logical, but Black is alive after 7...♙b4 8.♙d2 (8.a3 forcing Black to give up his good bishop 8...♙xc3+ 9.♘xc3 ♙g6 10.♙d2 d6 11.0-0-0 ♘ge7 and undoubtedly White has compensation, but the Black king soon finds a safe shelter on c8.) 8...♙e7 9.0-0-0 ♘f6 and here again, it is not clear how should White continue...]

7...♙g6 8.♙d3 White plays in „Morphy style“! The legendary Paul Morphy has mated all his opponents in this style (giving away his pieces) in the middle of the 19th century, but at that time people could not defend very well. Against Steinitz, such kind of chess did not pay off. [8.♘f3 was an alternative, but Black can calmly finish his development 8...d6 9.♙d2 ♘f6 10.0-0-0 ♙d7 and the Black pawns are safely guarding the king.]

8...♙xg2! Steinitz is not afraid. He lures the bishop to e4, in order to develop his g8 knight with tempo.

9.♙e4 ♙h3 10.♘f3 [10.♙e2 ♘f6]

10...d6 A bit ugly, but effective defense. [10...♙h5 was the computer's suggestion 11.♘g5 (11.♘c3 ♘f6) 11...♙xd1+ 12.♙xd1 ♘h6 White doesn't have enough compensation.]

11.♘g5 ♙d7 That is why I called it ugly. All the White pieces look dangerous, but actually, Black threatens to send them away one by one. First a6, then h6 and then ♘f6.

12.♙d5 [12.♙d5 was probably the only chance to stay in the game, but Black has an advantage anyway after 12...♘e5 13.♘xa7 ♙e7 14.♘xc8 ♙xc8 15.♘xf7 ♘xf7 16.♙xf7 White won back both sacrificed pawns, but suddenly, his king gets in danger. 16...♘h6! with an advantage for Black.]

12...♘e5 With his last move, White made an aggressive move once again. One more time losing time in a number of ways, like c6 or ♘f6. At first sight, it might be hard to believe, but the objective evaluation of the position is that Black is completely winning.

13.0-0-0

13...Nf6 14. Qxe5 White goes for a forced line, after which the endgame clearly favors Black. [14. Qb3 was not much better either, but definitely with queens on board, White has more practical chances to set some tricks against the d8 king. 14...h6 15. Nf3 Nge4! After this strong defensive move, Black pushes back the remaining attacking pieces and comfortably enjoys his two extra pawns.]

14...dxe5 15. Nxf7+ [15. Qf5 is not better 15... Qxd1+ 16. Rxd1+ Qd6 17. Nxf7+ Qe7 and White has no good piece to take. 18. Nfxd6 (18. Nfh8 Qxf5; 18. Qxc8 Rxc8) 18... cxd6]

15...Qe8 16. Rxd7 Qxd7 17. Nfh8 Qxb5 [17... Nxe4?? 18. Nxc7+]

18. Qxb7 Rb8

19. Qf3 After the big melee, White managed to restore material equality, but his knight got trapped in the corner.

19... Qd6 Qe7 is the threat.

20. Rg1 [20. Qxa7 Rd8]

20... Qf8 Now Qg8 is the threat.

21. Qg5 [21. Qxa7 Rd8]

21... Qc4 [21... Qe7 was much easier. White cannot save the knight.]

22. Qxf6 gxf6 23. Qe4 Qc5 [Again, Black could have won in a more accurate way: 23... f5! 24. Qxf5 Qe7! and by getting rid of the f-pawn, Black has the Qf6 move against 25. Rg7. Black wins a piece.]

24. b3 [24. Qxh7 would have been more resistant, but Black is winning anyway. The following line nicely demonstrates the power of the bishop pair: 24... Qxf2 25. Rg2 Qe3+ 26. Qb1 Rd8 Black has good alternatives in each move, but this line seems to be the most straight forward. 27. b3 Rd1+ 28. Qb2 Qd5 29. Rg3 Qf2 White must be very careful not to lose immediately 30. Rg4 and here probably the easiest is to play 30... Rh1 31. h4 Qd4+ 32. c3 Rh2+ 33. Qc2 Qf3! 34. Rg3 Qe4]

24... Qg8 25. Rg2 Rd8! Qa3 threatens with mate.

26. c3 Rd7! The last strong move of the game. Rg7 is coming next and the knight falls.

27. Ng6+ Instead of resignation.

27... hxg6 28. Rxc6 Qh7 29. Rxf6+ Qg7 30. Re6 Qa3+ 0-1

Editorial Preface

As usual, we had quite an interesting week of chess. The Russian Semifinal tournament came to an end with one very big surprise: Daniil Dubov managed to qualify for the Super Final sharing the first place after losing his last game! The other 3 qualifiers are: N. Vitiugov, S. Sjugirov and D. Andreikin, all with 7.5/11.

The yearly and already traditional match between Russian and China has started. As usual, 5 men and 5 women from each country are participating in it. It's going to be exciting! We already have commented a game from this event.

As usual, in this issue we have nice puzzle and practical endgames for You. Sometimes things seem to be easy, especially when using an engine. In a practical game it is often much harder to make a decision. We would advise You to watch all the CEWN without any computer assistance. We try to explain the most critical moments as good as we can.

We want to get Your attention one more time: In case You **do not** receive the CEWNs till Saturday morning, please do not panic and just write an email to us. We will immediately resend it.

The PDF files are around 5 MB big, so sometimes they are getting blocked by the spam filters. There's nothing we can do about it.

Have fun with the CEWN Nr. 19!

4 best games of the past week

(1) **Alekseev,E (2677)**
 – **Dubov,D (2569) [B67]**

65th ch-RUS HL Tyumen RUS, 27.06.2012

[Balogh Csaba]

We are in the last round of the Russian Higher League, where the first 5 players qualify to the Russian Super Final. The young Russian talent Daniil Dubov (16 years old) surprisingly led the field with half a point, and already had a guaranteed place in the „Super Final“. However, to get the tournament victory, he still needed to make at least a draw, while Alekseev had to win at any cost to have some chances of qualifying. (Alekseev was 1.5 points behind the leader).

1.e4 c5 2.♘f3 d6 3.d4 cxd4 4.♘xd4 ♘f6 5.♘c3 ♘c6
 This is the starting position of the Sicilian Rauzer defense.

6.♙g5 e6 7.♚d2 a6 8.0–0–0 ♙d7 A very sharp and tactical line, where the Black king usually stays in the center. This is where White organizes his play, while Black tries to attack on the queenside.

9.f4 b5

10.♙xf6 White uses the fact that the queen cannot recapture. This is just the beginning of theory, with more than a thousand games in the database.

10...gxf6 [10...♙xf6? 11.e5 dxe5 12.♘dxb5+/-]

11.♙b1 A prophylactic move. The king stands safer on b1 and White wants to push f5, which would have been a mistake if played immediately. [11.f5? ♘xd4 12.♙xd4 ♙h6+! 13.♙b1 ♙f4 and Black obtains a powerful bishop on e5.]

11...♙b6 12.♘xc6 ♙xc6 In this line, White's main idea is to put pressure on the e6 pawn, forcing it to do something. Usually, when Black cannot hold his pawn anymore, he needs to push e5, which weakens the d5 square. In an optimal scenario for White, he can jump to d5 with the knight and after the bishop takes it, he has better prospects in the opposite colored bishop middlegame thanks to his stronger bishop.

13.f5 White follows his plan, which involves a pawn sacrifice. It is not advisable to accept it since it opens the center against the Black king.

13...b4 14.♘e2

14...e5 This is the right moment for Black to push e5 because the White knight has no way to occupy the d5

square. Otherwise, White would have played Nf4 , and e5 would be met with Nd5 , reaching the ideal position. [14... Nxe4 is a mistake. 15. Ng3 ! is probably the most precise. 15... Nb7 (15... exf5 ? 16. Nd3+/- Black is temporarily 2 pawns up, but his position will collapse soon.; 15... Nd5 ?! moves into a tempo 16. Nh5 Ne7 17. Nf4 ! with a big advantage.) 16. fxe6 fxe6 17. Nd3 0–0–0 The king must escape from the danger zone, but this gives White enough time to harass the e6 and f6 pawns, and if one of them falls, Black gets in trouble. A nice triangle by the queen is coming: 18. Qf4 ! Ne7 19. Qg4 ! White must act quickly. 19... f5 (19... Nd5 is nicely refuted by 20. Nf5!+-) 20. Qe2 and due to the pin on the e-file, White wins back the pawn in the next move.]

15. Ng3 White would like to play Nh5 and Nc4-d5 obtaining a good knight vs. bad bishop middlegame. Black has only one way to prevent both.

15... h5 ! Now the e4 pawn hangs after 16. Nc4 h4.

16. h4 ! White fixes the weakness on h5 and refreshes the threat of Nc4 . We are still in a theoretical position.

16... Qc5 17. Qe2 ! White wins a pawn now, because the queen protects the e4 pawn. In this line it's quite normal for White to win the h5 pawn, but Black usually finds strong counterplay on the queenside.

17... Ke7 ! The king defends the f6 pawn and connects his rooks after developing with Nh6 . This is the right place for the king in this line.

18. Nxf5 Nb5 We have reached an important position, where it's easy to go wrong...

19. Qg4 ! [Michael Adams went wrong with the logical 19. Qf3 Rc8 ! The rook cannot protect the pawn because

of Nh6 . 20. Nxb5 Qxc2+ 21. Ka1 axb5 22. g4 and White seemed to be in control, but after 22... Rc3 ! 23. Qf1 (23. bxc3 ? loses to 23... b3 ! 24. axb3 Nh6 and Ra8 mate.) 23... Rc5 24. Qd3 Qxd3 25. Rxd3 Rg8 26. Rhd1 Rxc4 27. Rxd6 Rc1+ 28. Rxc1 Qxd6 29. Rd1+ Qc6 30. Nxf6 Rxf4 the game finished with a draw soon in Adams-Czarnota, Germany 2009]

19... Nh6 [The same doesn't work now because of 19... Rc8 20. Nxb5 ! Qxc2+ 21. Ka1 axb5 and here is the key move: 22. Nxf6!+- and the knight reaches the excellent d5 outpost.]

20. Rd5 Actually, only this move is the novelty of the game, which seems to be very unpleasant from Black's point of view. White wants to consolidate his position with Qd1 in any move. [Earlier 20. Nd3 was played, but Black could have gotten strong counterplay with 20... Ne3 ! transferring the bishop to d4, followed by the a5-a4-a3 plan. This is a typical method to deal with the loss of the h5 pawn.]

20... Qe3 ? Dubov wanted to find counterplay against the e4 pawn (in this line, Black must always look for counterplay) and definitely missed the 24th move. [Otherwise, he would have played 20... Qc7 21. Qd1 ! White could not open the a-file. 21... Qc6 ! 22. Nc4 ! White should sacrifice an exchange instead of giving up the e4 pawn. 22... Rac8 (22... Nxd5 23. Qxd5) 23. g4 (23. b3 !? is also interesting, in order to be able to recapture with the queen on d5. 23... Nxd5 24. Qxd5 Rh7 25. g4 with strong compensation on the light squares, in exchange of a small material deficit.) 23... Nxd5 24. Nxd5 with very strong compensation again. White should play on g5. The d5 bishop has the value of a rook.]

21. Qd1 ! [21. Nxb5 ? is a mistake at this moment 21... axb5 22. Rxb5 Qa7 !]

21... ♖xe4 Dubov trusts his calculations that started from 20... ♖e3 and continues walking into Alekseev's trap. [Black cannot protect the d6 pawn, because of 21... ♖hd8 22. ♕xb5! axb5 23. ♖d3! This is the big difference. White is in time to play ♖b3 and enjoys a clear extra pawn. 23... ♖a7 24. ♖b3+-]

22. ♕xb5 axb5 23. ♖xd6 ♖ad8 This was Black's idea. He seems to be more than fine in all the lines. However, one move was missed in his mind...

24. ♖d7+!! After this excellent trick, White gets a winning endgame with two extra pawns. However, converting this advantage is still difficult. [24. ♗xf6 ♖xf5; 24. ♖xd8 ♖xd8 25. ♖f3 ♖xf3 26. gxf3 ♖d2 In both lines Black is more than fine! The two b-pawns blockade well the three pawns on the queenside. White has no chance to create a passer there, while on the kingside it's clear that only Black can be better.]

24... ♖xd7 25. ♖xd7+ ♖xd7 26. ♗xf6+ ♖c6 27. ♗xe4 White is two pawns up, but he has technical difficulties because of the e5 passer which is supported by the bishop and the king. Another problem for White is his king, which is cut off from the game.

27... ♖g8 [27... ♖d5 is not good immediately. 28. ♗f6+ ♖d4 29. ♖d1+ ♖e3 30. ♖d3+ and here Black cannot follow his plan of supporting the e-pawn with 30... ♖f4 because of the spectacular mate with (30... ♖e2 31. h5+-) 31. ♖f3#]

28.g3 ♖g4 29. ♖e1 ♗g7! Dubov fights very well. He temporarily goes to passivity with the bishop in order to be able to play ♖d5. The f6 square had to be taken under control.

30. ♖e3! White protects the g3 pawn after the retreat of the knight.

30... ♖d5 [30... ♗h6 is met with 31. ♗f2! and the endgame after 31... ♖xh4 32. gxf4 ♗xe3 33. ♗g4 is winning. 33... ♗f4 34. c3! White needs to bring his king to e4, and on 34... bxc3 35. bxc3 ♖d5 36. h5+- the pawn promotes.]

31. ♗f2

31... ♖d4 White played a perfect game until this moment, but now he starts to go wrong. Probably, time trouble was also affecting his play.

32.a3?! [32. ♖e1! was the precise technique in order to have 32... e4 33. ♗g4! with an easy winning position. Black cannot support his pawn.]

32...e4 33.♘g4? With the same idea as before, but now Black can occupy the d4 square with the bishop. Objectively speaking, despite being two pawns down, Black is completely fine after this mistake. [The most logical 33.axb4! was still winning. White wants to play c3 and bring his king, so Black must do something quickly 33...♙h6 34.♖e1 e3 35.♘d1 ♔e4 was probably what Alekseev was afraid of, but 36.g4! ♙f4 37.g5! ♔f3 (37...♔xf5 leads to a winning rook endgame with 2 vs. 1 by force. 38.♘xe3+ ♙xe3 39.♖xe3 ♖xh4 40.♖f3+ ♔xg5 41.♖xf7 ♖xb4 and here White collects the b5 pawn. 42.♖b7 ♔f6 43.c3+-) 38.g6 fxg6 39.fxg6 should be winning.]

33...♖d1+ 34.♔a2 ♙d4 35.♖b3 bxa3 36.♖xa3

36...♖d2? Black spoils his sudden chance. Actually, the superiority of the Black pieces and the dangerous e4 pawn give more than one way to draw. [36...b4 37.♖b3 and now

a) 37.♖a5+ ♔d6 38.♖a8 ♖g1=;

b) 37.♖a8 ♖g1!= and after Black takes on g3, he does not need to worry anymore. (Of course not 37...e3?? 38.♘xe3+ ♙xe3 39.♖d8+-);

37...♖d2 when c3 does not work anymore. 38.h5 (38.♖xb4 e3! 39.♘xe3+ ♙xe3 with 4 pawns for the piece, but they are not far advanced yet.) 38...♖xc2 39.h6 ♔c4 Black had other moves to draw as well. Strangely, it's already White the one that needs to secure the draw somehow. The d4 bishop and the e4 pawn dominate the game. 40.h7 ♔b5 41.♘e3 (41.f6 ♖c8) 41...♖h2 42.♘d5 ♖xh7 43.♘xb4 ♔c4 Only Black can be better.; 36...♖c1 is probably the „easiest“ draw. On 37.c3 e3! 38.cxd4 e2 and in comparison to the game, Black controls the promoting square. 39.♘e3+ ♔xd4 40.♘g2 ♖g1! 41.♘e3 ♖c1!= with a repetition.]

37.c3 ♙c5 [37...♙f2 38.♖a8+- with the unpleasant threat of ♖d8.; Now 37...e3? loses to the simple 38.cxd4 e2 39.♖e3+-]

38.♖a8 e3 39.♖e8 e2 Black still creates some problems for White to solve, but Alekseev does not let the win slip away.

40.h5 b4 The time trouble is over! White gets some time to avoid the last traps of his opponent.

41.♔b3! It's necessary to control the a1–h8 diagonal, to keep the bishop off. Now the h-pawn has the same value as the one on e2. [41.cxb4? would lead to another turn in the game. 41...♙d4! Black is fine again.]

41...♖d3 Black sets up a last clever trick...

42.♖xe2 bxc3 43.♘f6+! But Alekseev does not fall into it. White can protect his c3 pawn with ♘e4 now. [43.bxc3 was the last chance for a blunder. 43...♙d4 Black gets very good chances to survive. He starts collecting pawns, and the g4 knight is really poorly placed now.]

43...♙c6 44.bxc3 Now it is over!

44...♖xg3 45.♘e4 Alekseev decides to simplify the game into a winning rook endgame... [45.♖e8 ♖h3 46.♖c8+ ♙b5 47.♘e4+- was also good.]

45...♖h3 46.♘xc5 ♙xc5 47.♖e7 ♖xh5 48.♖xf7 And Black has no hopes against these two pawns.

48...♖g5 49.♖f8 ♙d6 50.f6 Black resigned. A nice fighting game. At the end, Dubov finished 2nd place with a worse tiebreak than GM Andreikin, and Alekseev finished in the most annoying 6th place. (1st-5th qualified to the Super Final.) [50.f6 ♙e6 51.c4+-] **1-0**

(2) Kamsky,G (2741) – Istratescu,A (2636) [A40]

40th TCh-GRE 2012 Achaea GRE (1.2), 30.06.2012

[Arkadij Naiditsch]

1.d4 In this game we will see how easily White outplays Black in quite a strange position. Gata Kamsky still remains one of the best chess players in the world, after he stopped playing chess in 1996, when he was number 2 in the world. He returned to professional chess in 2004.

1...e6 By playing 1...e6, Istratescu is ready to play the French after White's 2.e4, but it's clear that Kamsky is a 1. d4 player and most probably his choice will not be 2.e4

2.c4 ♙b4+ Here we see the little difference with the main lines, Black retains the possibility of playing f5 and only then ♘f6. Usually it is not a great setup in any case, so Black returns to the main lines by playing ♘f6.

3.♙d2 [3.♘c3 f5 Maybe this was the idea of Istratescu?!]

3...a5 [3...♙xd2+ 4.♖xd2! For White it's important to put the knight on c3, in case of 4. ♘xd2, the White knight will be badly placed. Black usually plays d6-e5 later, after

which White would give a lot to have the knight on c3, to be able to play ♖d5.]

4.g3 d5 5. ♖g2 dxc4 6. ♗f3 ♘c6 In case of 6... ♗f6 we would be back in the main Catalan. With the 6... ♗c6 move, Istratescu tries to make a difference by keeping the knight on g8, where it can still develop to e7 as well. We'll see if this is a good idea.

7. ♖c3!? Nice and logical. White protects the pawn on d4, and against 7... ♗f6, 8. ♗bd2! seems to be strong.

7... ♗ge7 8.0-0 [In case of 8. ♗bd2 b5!? Black needs to try to hold the pawn at any costs. 9.a4 Usually, such positions are better for White, but here it seems like Black has counterplay. 9... ♖xc3! 10.bxc3 b4 with a very unclear position.]

8...0-0 The Black knight, instead of his usual square on f6, is now standing on e7. Usually, White's play is connected with the e4 move, but here it doesn't seem to make much sense. So probably Gata is making the best choice: to try to win the c4 pawn.

9.a4!? White wants to play ♗bd2-Nxc4 and the position would be clearly better for White.

9...b6 10. ♖c2 Another typical move in the Catalan. White doesn't hurry with ♗bd2. First, he puts the rook on d1, to keep a wider range of options in the future. Maybe even the idea of e4-d5 could be dangerous eventually.

10... ♖a6 11. ♖d1

11... ♖e8 A logical move, but it gives White a chance to spoil Black's pawn structure on the kingside. [11...f6!? This move doesn't look great, but maybe it's not that bad. It's clear that White has enough counterplay for the pawn, but a pawn is a pawn. The next Black's moves could be ♖e8 and ♖d8.]

12. ♗g5!? I like this move a lot. It's clear that White's play should be on the kingside, and to weaken the pawn structure is definitely a good idea!

12...g6 [12... ♗g6 would be countered by a typical 13.h4! h6 14.h5 hxg5 15.hxg6 and Black's position looks very dangerous.]

13.e4 ♖d8 14. ♗a3 All the White pieces are developed, Black's king structure is weak and White has a strong and stable center. This is too much for just a pawn. We have to say that the experiment of putting the knight to e7 was

not successful. Black needs to do something now. White has a lot of useful moves like: h4-h5 or ♖d2-Rad1, with the idea of d5.

14... ♗xc3 And Black panics. After this move, White gets a big advantage. It doesn't matter what Black should do, he should not give up the c4 pawn — the only plus he has in the position. [14...h6!? was probably the best way to fight. 15. ♘f3 (15. ♘h3 would give Black a chance for 15... ♖d7 16. ♘b5

16... ♗xc3! This move is only possible with the White knight on h3. If the knight would stand on f3, White would have the move ♗e5. 17.bxc3 (17. ♖xc3 ♗b4! and White doesn't have ♗e5.) 17...e5 with a very unclear position.) 15... ♖d7 16. ♘b5 and White is doing better.]

15. ♖xc3 ♗b4 16. ♘xc4 The pawns are equal, White's position is clearly better.

16... ♗xc4 17. ♖xc4

17...c5 Black is trying to look for complications in a difficult position. [17... ♖c6 18. ♖e2! Of course, White should keep the queens on the board. 18... ♖c2 19. ♖d2+/-]

18.dxc5 [18.d5? This move would be a big positional mistake. 18...exd5 19.exd5 ♗f5! and the Black knight takes a perfect place on d6.]

18... ♖xd1+ 19. ♖xd1 ♖xa4 20. ♗f3! A good move. White had a couple of choices here: [20. ♖d6 This move looks nice, but it doesn't seem to bring anything for White. 20... ♖a1+ 21. ♗f1 ♖xb2 22.cxb6 ♗c8! Black is winning the b6 pawn, which almost means a draw. 23. ♖d1 ♗xb6 24. ♖b5 ♖c2! The last exact move. The position is a draw.]

20... ♖c6? After this move, White's attack will be decisive. [20...bxc5 21. ♖xc5 ♗bc6 22.e5 leads to a much better position for White.; 20...h6! This move is the only one for Black. It looks super dangerous but maybe it just works. In any case, Black had to try it. 21. ♗xf7 White needs to give a piece. In case of 21. ♗h3 ♖c6, Black is doing fine (21. ♗xe6 b5) 21... ♖xf7 (21... ♗xf7 22. ♖d6) 22. ♖d8+ ♗g7 23. ♖c3+ ♖f6 White has a lot of moves here. Here's one of the logical long lines that probably leads to a draw:

24.cxb6 ♖bc6 25.b7 ♔b5 26.e5 ♖xf3 All the moves are forced. 27.♔xf3 ♘xd8 28.♔f6+ ♔g8 29.♔xe7 ♘xb7 30.♔xe6+ ♔f8 31.♔f6+ ♔e8 32.♔xg6+ Maybe White is better, but I think the position should objectively be a draw.]

21.e5! White is going for a mate!

21...♔xc5 22.♔h4 h5

23.♘e4 Very good play by White! The knight is going to f6, the Queen to g5. [Of course it doesn't work to play 23.♙xh5? gxh5 24.♔xh5 ♔c2!]

23...♘f5 24.♔g5 ♔xe5 This move is losing immediately. [24...♔c2! A strange looking move, but probably the only one. 25.♘f6+ ♔h8 This is the critical position. Seems like White should mate somehow, but things are by far not that easy. Black wants to start some counterplay by playing ♘d3. 26.♔g2! A nice move, White is preparing to play ♙e4. (The direct 26.♙xh5 ♘d3 27.♖xd3 ♔xd3 28.♙g4 ♔b1+ 29.♔g2 ♔g7 30.♘h5+ ♔g8 31.♘f6+ ♔g7 seems to only lead to a draw.) 26...♘d3 27.♖xd3! ♔xd3 28.♙e4 Probably, every human player would stop the calculation saying: „Black is lost“, but in fact, White still needs to fight to get the full point.

28...♘e3+! What a move! 29.♔h3! (29.fxe3 After the logical 29...♔e2+ 30.♔h3 ♔g7 the position might even be close to equal!) 29...♔f1+ 30.♔h4 ♘g4 31.f3 and White is probably winning! A very nice line :).]

25.♘f6+ ♔g7 [25...♔h8 26.♘d7]

26.♘xh5+ ♔h8 27.♘f6 White wants to play ♘d7 and g4. There is no defense against this double threat.

27...♔xb2

28.g4! The Black knight is falling.

28...♔g7 29.♘h5+ ♔h7 30.gxf5 exf5 [30...gxh5 leads to a mate 31.f6 ♖g8 32.♙e4+ ♔h8 33.♔xg8+ ♔xg8 34.♖d8#]

31. ♖f4 The game is over. White is a piece up and has a deadly attack.

31... ♔g7 **32.** ♖d7 ♖e8 **33.** ♔g2 ♔g8 **34.** ♕d5 A very nice game by White. Slow opening, good positional play and an excellent mating attack! Gata Kamsky, like in his best years! :). **1-0**

(3) Motylev, A (2683)
– **Wang Hao (2733) [B94]**

Chinese league, 28.06.2012

[Balogh Csaba]

A very interesting theoretical battle, which should have finished in perpetual check, but ended with a blunder by Black.

1.e4 c5 2. ♖f3 d6 3.d4 cxd4 4. ♖xd4 ♖f6 5. ♖c3 a6 6. ♕g5 The sharpest and the most aggressive setup against the Sicilian Najdorf defense. Alexander Motylev is an excellent theoretician, who used to be the main second of the Russian team at the Olympiad, and is currently the second of GM Sergei Karjakin.

6... ♖bd7 A modern line, instead of the main 6...e6. Black waits for a while with his e-pawn, because in some lines, he can counter White's f4 with e7-e5, which could save a tempo. In this game, the Chinese Nr.1 gives a new idea for keeping the pawn on e7...

7. ♔e2

7...b5 Wang Hao is a real specialist of this rare move. In 2012, it's already his 3rd game in this position, except that once he was playing with the White pieces. For the players that

are interested in the Najdorf defense, I really recommend to use this setup with Black. It looks easy and it's good! [7...e6 8.f4 would transpose back to one of the main lines.]

8.♘d5 There was only one game with this move. We will see Motylev's deep preparation in the main line at 10...gxf6. [8.0-0-0 happened in the first Wang Hao game. 8...♙b7 9.♙xf6 (Here is an example where Black uses the tempo he saved by not playing e6. 9.f4 e5! 10.♘f5 ♖b6 followed by ♖c8 with the unpleasant threat of the typical Sicilian exchange sacrifice ♖xc3. Black is completely fine!) 9...♘xf6! Keeping the healthy pawn structure seems to be a strong improvement on Black's play. (9...gxf6 10.♖h5 ♖c8 11.♘d5 with a very sharp position in Kokarev-Wang Hao, Russian league 2012.) 10.e5 This was White's idea, otherwise there was no reason to give up the g5 bishop, but now Black has the calm reply 10...dxe5! and on 11.♘dxb5 ♘d7! At first sight, this looks dangerous, but White has nothing better than to retreat with the knight. 12.♘a3 g6! the right way to develop the bishop. 12...e6 would have weaken the d6 square after ♘c4. 13.♘c4 ♙g7=+ and Black already overtook the initiative.; Wang Hao as White played 8.a4 and according to computer analysis, a more or less forced line is coming, which was known by both players. 8...b4 9.♘d5 ♙b7!

10.♖c4! Trying to force Black to take the d5 knight, after which the d5 pawn would paralyze Black's development and the c6 square would be critically weakened. However, Black reacts with a powerful pawn sacrifice: 10...♖c8! 11.♖xb4 ♖b8! White should probably settle for a draw with 12.♖c4 ♖c8, because the concrete 12.♘xf6+ gxf6 13.♙e3 ♙xe4 seems to work well for Black. 14.♖c4 ♖a5+! 15.♙d2 ♖c5 16.b4 ♖xc4 17.♙xc4 ♙xg2 18.♖g1 ♙b7 Black had the initiative in Wang Hao-Le Quang Liem, Chinese league 2012.]

8... ♙b7 9. ♙xf6 ♘xf6 10. ♘xf6+

10...exf6!! A really unusual and unexpected recapture. The idea is simple, Black would like to play g6, ♙g7, 0-0 and ♖e8, putting pressure on the e4 pawn. Later on, Black can easily solve the problems of his pawn structure with d6-d5 or f6-f5, and the diagonals open for the bishop pair. White must do something concrete, otherwise Black gets a big advantage. [10...gxf6 happened before. 11.0-0-0 ♖c7 12.♖b1 0-0-0 and here Motylev prepared a great novelty instead of 13.g3. 13.h4! ♖b8 14.♖h3! with a dangerous attack. The bishop stands excellently on f1, it is going to be a strong attacker after an a2-a4 push.]

11.a4! White must act while the king is stuck into the center. [The most logical 11.0-0-0 would allow Black to obtain his dream position. 11...g6! 12.h4 Probably, this is not the best idea, Black is fine anyway. 12...g7 13.h5 0-0 14.hxg6 hxg6 15.g4 e8! and White's attack is easily neutralized by this move. Now the move h4 has no threat at all. After the check on h7, the king is going to be completely safe on f8! 16.f3 d5! Now the diagonals start to open for the bishops. 17.exd5 f5=+ followed by xd5 with an advantage.]

11...bxa4 12.c4! [12.Rxa4 gives enough time to continue the plan with 12...g6]

12...a3! An excellent decision. Trying to worsen White's pawn structure, otherwise the rook moves into the pin of the f8 bishop. [The e4 pawn is taboo 12...xe4? 13.c6! d5 14.xa4 d7 seems to hold, but 15.b5! is very strong.; 12...g6 leads to a worse endgame for Black. 13.xa4+ d7 14.xd7+ xd7 15.c4 White would like to play d5 and exchange the strong bishop, getting a big advantage, so the next move is forced: 15...xe4 16.f3 b7 17.xf7+= followed by 0-0-0, with a small advantage. The Black king and the d6 pawn are weak

and the bishops have no target. If White could exchange the light colored bishops, his advantage would grow to a very big one.]

13.Rxa3 Anyway, this is White's best option. [13.a4+ d7 14.xd7+ xd7 15.Rxa3 d5 transposes to the game.]

13...d5! 14.a4+ d7 15.xd7+ [15.b5? is spectacular, but it leads to a bad endgame for White 15...axb5 16.xa8+ xa8 17.Rxa8+ e7 18.Ra7! This was the point of the combination, but the knight is going to have problems to escape from a7... 18...xa7 19.c6+ d6 20.xa7 c5! 21.exd5 d6=+ and the knight escapes through c6, but Black preserves a positional advantage with the superior bishop after taking the d5 pawn.]

15...xd7 16.Rb3! The concrete fight continues...

16...c7 17.Rc3+ b6 18.Rb3+

18...a7?? Wang Hao got overoptimistic with the bishop pair and blundered a beautiful tactical blow. [18...c7 was the correct move with a perpetual check to follow. It could have been a flawless game.]

19. ♖xa6!! After this shocking move, Black resigned! [19. ♖xa6 ♔xa6 (19... ♖xa6 20. ♘c6#) 20.0-0 20. ♖e2 or 20. ♖d2 are equally good. Black cannot avoid getting mated. 20... ♖a7 21. ♘c6+!! This check was the point of the sacrifice! 21... ♖xc6 22. ♖a1+ followed by mate.] **1-0**

(4) Vitiugov, Nikita (2703) – Ding, Liren (2680) [E81]

8th RUS-CHN Summit Men Classical St Petersburg RUS (1),
02.07.2012

[Arkadij Naiditsch]

This is the first game of what has become almost a traditional yearly training match between Russia and China. We'll see a nice and typical attacking game by White. This is a good example of what Black should clearly avoid...

1.d4 ♘f6 2.c4 g6 3. ♘c3 ♖g7 4.e4 d6 5.f3 Lately, a few Russian players have started playing 5.f3 against the King's Indian. We can see a lot of games of Tomashevsky and Vitiugov in this line. Maybe they work together?

5...0-0 6. ♖e3 c5

7. ♘ge2 [7.dxc5 dxc5 8. ♖xd8 ♖xd8 9. ♖xc5 ♘c6 10. ♘ge2 ♘d7 11. ♖a3 with a fighting position.; 7.d5 are the other 2 main moves here 7...e6 8. ♖d2]

7...b6 To be honest, this move looks a bit strange to me. White wanted to play d5 anyway, and it's not clear how the pawn on b6 helps Black. Also, the knight on b8

doesn't look great at all, especially if we compare it to the 7...♘c6 8.d5 ♘e5 line, where it takes a central position. [7...♘c6 8.d5 ♘e5 9.♘g3 a6 10.a4 e6 11.♙e2 exd5 12.cxd5 h5 13.0-0 ♙d7

14.♘h1!? This is the game Vitiugov-Cheparinov from the ECC 2012, where after some sharp play, White managed to get the advantage and win the game. A few more moves of this exciting fight: 14...b5 15.♘f2 b4 16.♘b1 c4 17.♙d4 ♖c8 18.♘d2 c3 19.bxc3 bxc3 20.♘b3 ♘c4 21.♙c2 The c-pawn is blocked and the bishop on d4 is standing very well; White is doing clearly better.]

8.d5 A very logical move, why not to take the center if You can...

8...e6 9.♘f4 White switches from the usual 9.♘g3. [In case of the logical 9.♘g3 ♘a6!? and maybe this was Black's main idea when he played 7...b6. Now the Black knight goes to c7, where it can support the b5-push. 10.♙d3 exd5 11.cxd5 ♘c7 12.a4 a6 13.0-0 ♙d7 followed by b5. In my opinion, White should be doing better anyway.]

9...exd5 Black has to act. If White gets 2 more moves, he would play ♙d3 and 0-0 and Black's position could become clearly worse.

10.♘fxd5 Of course, White takes on d5 with a knight, using the fact that Black can't play 10...♘xd5 11.♙xd5! because the rook on a8 would fall.

10...♘c6 White has only one weakness in his structure, the d4 square. So, of course, Black is going to make use of it and place his knight there.

11.♙d2 This move is a play against Black's ♘xd5, now the pawn on b2 is not hanging anymore...

11...♘xd5 12.♘xd5 It's hard to say who is doing better here. Probably White has a very small advantage, but the position is very playable for both sides. From this moment on, Black starts making „positional” mistakes that lead to a deadly attack against his king.

12...♙e6 [Why not 12...f5!? This move looks much more logical to me. Black uses his better development and starts to play actively. 13.♙g5 White has many different moves here, but the position is very complicated. 13...

♔d7 14.exf5 ♕xf5 15.0-0-0 and we are in a very sharp and complicated position.]

13. ♖d3 ♖xd5? This move is a serious positional mistake. It looks like Black will have a huge knight on d4, but this gives White too much play on the kingside. Black had clearly better options: [13... ♖d4!? At first sight, this is a strange-looking move, but also quite a tricky one. In case of the logical 14.0-0 ♖xd5! 15.cxd5 ♖xe3+ 16.♔xe3 ♖d4

Black gets a great position! The bishop on g7 was exchanged for the e3-bishop, which is great. Now nothing can move the knight from d4 and all of White attacking chances on the kingside are not as effective without the bishops on the board. From a practical point of view, I would probably choose Black here.; 13...b5!? This tactical option is a good choice as well. 14.cxb5 ♖xd5 forcing White to take on d5 with the e-pawn, which is usually good for Black. 15.exd5 (15.bxc6 ♖xc6 looks like an equal position to me.) 15...♖e5! This is the key move! Not so easy to see during a practical game. In case of 16.0-0 ♖xd3 17.♔xd3 ♖xb2 or 17...♖e8 first, Black is totally fine. 16.♖e2 It seems like White defended everything,

but... 16...♖c4! Black uses the unfortunate position of the White king on e1. A nice tactical trick. 17.♖xc4 ♖h4+ 18.g3 ♖xc4 and only Black can be better here.]

14.cxd5 ♖d4 15.0-0 Now White's plan is clear: attack the Black king. Black's plan is clear as well: try to create something on the queenside while not getting mated.

15...b5?! Black clearly underestimates his opponent's plan. It was time to think about how to stop White from playing f4-f5. [15...f5!? This move is not as good as it was before, but it still leads to a slightly unclear position. Probably White is doing a bit better and can continue with 16.♖h1 threatening to play ♖xd4 and exf5 next, but the game remains quite unclear.]

16. ♖h1 White is preparing the deadly f4-f5 push.

16... ♖d7 17. ♖ae1! There is no need to hurry. Black's play on the queenside is clearly too slow. [17.f4?! The right move, but in this unprepared version, it doesn't work that well. 17...f5! Black cannot allow White to play f5. 18. ♖xd4 ♖xd4 19.exf5 gxf5 20. ♖ae1 ♖ae8 and Black is just in time to stop White from playing ♖e6. The position might be a bit better for White, but it's nothing special, and the game would probably end in a draw.]

17...b4? This move is a serious mistake. [17...♖ae8! Black prepares to counter White's f4 with f5. 18.b4!+/- This strong positional move gives White a clear advantage. Black's central pawns look shaky, and White's f4 move might become very dangerous now.]

18.f4! Finally!

18...h5 It's difficult to give an advice in such a bad position. [Doesn't work 18...f5 19.♙xd4! ♙xd4 20.exf5 gxf5 21.♖e6! and White is in time to put the rook on e6, which almost gives him a winning position.; If Black tries to „do nothing“: 18...a5 19.f5 ♙e5 20.f6 would also lead to a very bad position.]

19.f5 White wanted to play f6.

19...♙e5 20.♙xd4! It's never nice to give up such a bishop, but this move seems to win by force.

20...♙xd4 Now White can show his tactical skills. [In case of 20...cxd4 21.♖f3 White is going to mate the poor Black king with all his pieces... It's hard to imagine how Black would survive this.]

21.e5! A small and pretty final combination.

21...♙xe5 22.♖xe5 dxe5 23.f6 White wants to play ♙h6.

23...♙h7 24.♖f5! A beautiful last move!

White is mating Black. In case of 24...gxf5 25.♙g5 mate. We saw quite an instructive game; Black played badly and White played well. Let's hope that we don't make the same mistakes that the Chinese player Ding Liren made.

Endgame section

(15) Nepomniachtchi, Ian (2718)
— Li, Chao b (2687) [D10]

8th RUS-CHN Summit Men Classical St Petersburg RUS (1),
02.07.2012

[Chess Evolution]

Let's take a look at this practical endgame. The position seems to be winning for White, but the protected pawn on c4 and the fact that there are only 3 White pawns left make the task not that easy.

39. ♖c5! A good move by White. The exchange of bishops is very good for him and it follows a golden rule in chess: „Simplify the winning position as much as possible“.

39... ♙xc5 40. ♖xc5 ♘d6 What is the best chance for Black to survive?! Of course, an exchange of pawns would be nice, so the move f6-f5 is sort of a little threat. Can it be that Black also wants to play ♞e4 now?! In order to ex-

change the knight by giving away the c-pawn, let's take a look

41.f3 [This is not the best move, but we want to reach the position with Rook vs. Bishop. 41. ♖c6 ♞e4 42. ♞xe4 ♙xe4 43. ♖xc4 ♙d3 Is the position winning and what can be White's plan? Yes, this is quite an easy winning position and White has a couple of plans. The easiest one might be to put the pawn on f5, then to give a check on the 7th rank with the rook and finally bring the king to e6 and win the f-pawn. 44. ♖d4 ♙b1 45.f3 ♙c2 Black can't do much more than wait... On ♔g6, White always has ♖d6, not allowing h5. 46. ♔f2 ♙b1 47. ♔e3 ♙c2 48. ♖d6 ♙b1 49. ♖b6 ♙g6 50.g3 ♙c2 51. ♖b4 (51.f4 ♙d1 and the g4 pawn is going to fall.) 51... ♔g7 52.f4 ♔f7 53.f5 ♙d1 54. ♖d4 ♙b3 55. ♖d7+ ♔g8 56. ♔d4 and the White king is going to e7, the game is over.]

41...f5!? The best chance for Black. It doesn't make sense to wait, the White king could go to d4 and ♖c6 would decide the game.

42.gxf5 ♞xf5 43. ♞e4?! Not the most precise move, but still winning. [43. ♔f2 would be the easiest technical way. 43...h6 White wanted to play g4 and win the g5 pawn. 44. ♞a4! and the c4 pawn drops, and with it, the game. 44... ♞d4 45. ♞b2]

43... ♙xe4 44.fxe4 ♞d6! Another White pawn is falling.

45. ♖xg5 [45.e5? would be a serious mistake that would probably lead to a draw. 45... ♞f5 46. ♖xc4 ♔e6 47. ♖c5 g4! 48. ♔f2 h5 and it seems like the position is a draw. Black will exchange a pawn by playing h4-h3 next, then he'll play ♞e7-Ng6 and ♞xe5.]

45...♘xe4 [45...c3 46.♖c5 ♘xe4 47.♖c4 would lead to the same type of position.]

46.♖e5! A good move by White. The Black knight will be badly placed on d6 and any other knight moves would lose the c-pawn immediately.

46...♘d6 47.♖c5 ♔f6 48.♔h2 Is this position winning?! Probably it is, but it's simple at all. If White manages to win the c-pawn, the position is winning, but it's not an easy task. White's plan is not to play ♔h3-Kh4-Kh5 and eat away the h7 pawn. Black can never play ♔g6 because of ♖c6, winning the piece.

48...h5! A very inventive idea.

49.♔h3 ♔e6 50.♔h2 White is too afraid to go into a forced line, and this is easy to understand. In a long calculation it's not difficult to make a mistake. [50.♔h4! Anyhow, this move is winning by force. 50...♘f5+! This is Black's main idea, the knight is going to e3. 51.♔xh5 ♘e3 52.g4 ♔d6 53.♖a5! The White rook is going to a1 to hold the Black pawn. 53...c3 54.g5 c2 55.♖a1 and White is winning. But to go for this line in a practical game is a difficult decision.]

50...♔f6 51.g3 ♔e6 52.♔g2! White changed the plan and now tries to bring the king to f4.

52...♘f5 The Black knight is freeing itself, but this doesn't help.

53.♔f2 h4 The last chance. [53...♔f6 is not saving now. 54.♖xc4 ♔g5 55.♔f3 ♘g7 56.♖c5+ ♘f5 57.♖a5! and Black is in zug-zwang. 57...♔g6 58.♔f4+-]

54.g4 Of course, White doesn't exchange the last pawn.

54...♘d6 55.♔g2! And the king is going back to collect the h-pawn.

55...♘e4 56.♖xc4 ♘g5 57.♖f4! The last precise move. The next moves of White will be ♖f5 followed by ♔h3. The endgame must have looked like an easy winning one, but in a practical game it's not so simple! All in all, good technique by White. **1-0**

(16) NN – Balogh,Cs

Training blitz game, 30.06.2012

[Chess Evolution]

I got this incredibly difficult endgame in a training blitz game against my friend, who asked me to not reveal his name... We only had a couple of seconds left to finish the game...

1. ♔f4?! A mistake, which allowed me to hold the draw comfortably. [We had no idea about what is the correct evaluation of the critical move, sacrificing the knight for the pawns. It was very instructive to analyze this (probably theoretical) position. After all, it became clear that Black can hold the draw by extremely precise defense. 1. ♘xf5+! gxf5 2. f4!? A very tricky attempt, in order to prevent the ♔h6 move after 2. ♔xf5. (2. ♔xf5

2... ♔h6! The only way to draw! The Black king should try to get between the pawns. If it was his move, ♔h5 would easily secure the half point. (First, let's examine why other moves are losing... 2... ♘g6 3. f4 The waiting policy is not a good idea, White slowly advances his pawns. 3... ♘f8 (3... ♘e7+ 4. ♔e6 ♘c6 5. f5 ♘d4+ As we will see, this idea of going around with the knight is correct, but now Black gave too many tempi for White to advance his pawns... 6. ♔e5 ♘f3+ 7. ♔f4 ♘d4 8. g4+- followed by g5 and then h5.) 4. g4 ♘g6 5. h5 ♘h4+ (5... ♘f8 6. g5 ♘d7 7. h6+ ♔h7 and here the easiest is to transfer the king to h5, and the pawns promote automatically. 8. ♔g4+-) 6. ♔e6 ♘g2 The right strategy is to create a hole between the pawns and then occupy it with the king. Unfortunately for Black, he is already too late to arrange the correct setup. (6... ♔h6 7. f5+- Black cannot stop the f-pawn.) 7. f5 Black should play now ♔g5, but it is illegal. That is why it is so important to play 2... ♔h6! 7... ♘f4+ 8. ♔d6! ♔f7 has a very nice refutation. (8... ♘h3 9. ♔e7 ♘g5 10. f6+ ♔g8 11. h6+- and Black is in zugzwang!; 8... ♔f6 9. h6 ♘h3 is also late by just one tempo. 10. h7 ♔g7 11. f6+ ♔xh7 12. f7 ♔g7 13. ♔e7+-) 9. h6 ♔f6 (9... ♘h3 10. h7 ♔g7 11. f6+ ♔xh7 12. f7 ♔g7 13. ♔e7+-)

10.♔d7! and the king goes around to support the h-pawn. 10...♞d3 (10...♞f7 11.g5+-) 11.♞e8! ♞e5 12.♞f8! The king arrived in time to control the g7 square. 12...♞xg4 13.h7+-) 3.g4 (3.♞f6 ♞h5 White cannot make progress.) 3...♞g6! Another only move! As it was mentioned before, Black should try to create holes between the pawns and occupy it with the king! 4.h5 ♞h4+ 5.♞f4 ♞g2+ 6.♞g3 (6.♞e4 ♞g5= Black reaches the ideal blockading position.) 6...♞e3 7.f4

7...♞d5! This is a very important defensive method! Black must prevent the ♞h4, g5 plan... 8.♞f3 ♞f6! and using the fact that the pawn endgame is drawn, Black ties the king to his pawns. This motif also works well if we move all the pieces one rank up. 9.g5+ ♞xh5 10.gxf6 ♞g6 11.♞e4 ♞xf6=) 2...♞e6+! This and the following two moves are the only way to survive! 3.♞xf5 ♞d4+! The knight must disturb White's plan of pushing his pawns. 4.♞e4 (4.♞e5 ♞f3+! 5.♞e4 ♞h2! This is a nice achievement for Black. This way he gets enough time to rush with the king to h5. 6.f5 ♞h6 (But not 6...♞f6? because of 7.♞f4+- and the pawns are rolling.) 7.♞f4 ♞h5 The draw seems to be close, but White can still create some problems... 8.♞e5! ♞f3+ 9.♞d5 The king must control the d4 square. (9.♞e6

♞d4+=) 9...♞h6! and the White king got far from the h-pawn, so the Black king must also turn back to stop the f-pawn. I know that this is very difficult! 10.♞e6 (10.♞e4 ♞h2 11.♞f4 ♞h5= We already saw this.) 10...♞g7! (After the tempting 10...♞d4+? White gets his winning position again. 11.♞e5! ♞f3+ 12.♞f4+- and g4 next.) 11.f6+ ♞f8 and White cannot improve his position. 12.h5 (12.♞f5 ♞f7=) 12...♞d4+ 13.♞e5 ♞c6+ 14.♞f5 ♞f7 15.g4 ♞d4+ 16.♞e5 ♞c6+=) 4...♞b3! Probably the most difficult only move in this whole endgame. Of course, it would be amazingly hard to play it over the board without computer assistance. 5.g4 ♞d2+ 6.♞e3 (6.♞f5 would ease Black's defensive task. 6...♞f3 7.h5 ♞h6= with an easy draw. 8.♞f6 ♞h2) 6...♞c4+ 7.♞d3 White should try to keep the knight away from bothering his h-pawn. (7.♞d4 ♞d2 8.h5 ♞h6= The same as before.) 7...♞d6 8.♞d4 Everything seems to go well for White. He is progressing with the pawns step by step without making a hole, but Black has an amazing difficult only move again... (8.h5 ♞h6=)

8...♞f6! 9.h5 Trying to make use of the fact that Black has no ♞h6. (9.♞d5 ♞b5 10.h5 ♞c3+ 11.♞d4 (11.♞d6 White cannot let the pawns alone... 11...♞e2=) 11...♞b5+ transposes to the main line.) 9...♞b5+ 10.♞e3 ♞d6 11.♞f3

♞c4 All the Black moves have a goal. The knight is heading now to the e3 square... 12.h6 (12.♔g3 ♞e3 This is the ideal position for the knight. It attacks one of the pawns and prepares for the ♞g2 check after ♔h4.) 12...♔g6 13.g5 ♞d6 14.♔g4 and again, it seems to be over, but... 14...♞e4! (Of course not 14...♞f5? 15.h7+-) 15.f5+

15...♔h7 and just like in the 12.♔g3 ♞e3 line, Black has managed to get his ideal setup. The king is ahead of the h-pawn, while the knight attacks the g-pawn and prevents the ♔h5 move by ♞g3. 16.♔f4 (16.♔h5 ♞g3+=) 16...♞d6 17.♔e5 The last attempt to make progress. 17...♞f7+ 18.♔f6 ♞d6 and White must settle for a draw. 19.♔e6 (19.g6+ ♔xh6 20.g7 ♞e8+=) 19...♞e4 20.g6+ ♔xh6=; 1.h5?! Trying to win another pawn would lead to an immediate draw after 1...♞e6+ 2.♔h4 f4=]

1...♔f6 With the threat of ♞e6.

2.♞d5+ ♔e6 The knight must move now, and the king will retreat to f6, refreshing the threat of ♞e6.

3.♞c7+ ♔f6 ...White is practically in zugzwang, he must either allow me to play ♞e6 or exchange a pair of pawns. Black has quite an easy draw from now on. We continued blitzing, but the moves had no real value. **1/2**

Clash of the Titans

(17) Botvinnik,M — Makogonov,V [E06]

URS-ch semifinal Leningrad, 1938

[Balogh Csaba]

A nice positional masterpiece by Botvinnik. The game nicely illustrates his playing style.

1.♘f3 ♘f6 2.c4 e6 3.d4 d5 4.♘c3 ♙e7 5.g3 A rare system against the Queen's gambit, which usually transposes into the Catalan opening.

5...0-0 6.♙g2

6...c6 [6...c5 7.cxd5 exd5 is a transposition to the Tarrasch defense, which is only good for the players who like playing with the isolated pawn on d5.; 6...dxc4 is the right move against the 5.g3 system, and against 7.♘e5 Black can choose between two different setups: 7...♘c6! This is a known pawn sacrifice, we can meet it in other openings as well. (7...c5 8.dxc5 ♔xd1+ 9.♘xd1 ♙xc5 leads to a slightly better position for White, but with accurate

play, Black usually manages to equalize.) 8.♙xc6 bxc6 9.♘xc6 ♔e8 10.♘xe7+ ♔xe7 11.♔a4 White wins a pawn, but he gave up his strong bishop on the long diagonal, which gives Black strong compensation. 11...c5 12.♔xc4 cxd4 13.♔xd4 e5 14.♔h4 Otherwise, ♙h3 and the king is stuck in the center. 14...♖b8 Black prepares for the very unpleasant ♖b4 move. This theoretical position is objectively evaluated as even.]

7.0-0 We transposed to the closed system of the Catalan, with the difference that there the bishop is on d2 and the knight is on b1. This is obviously a better version for White. Now the bishop can develop to b2 and the d2 square is free, which allows the plan of ♘d2 and e4.

7...b6 This is an inaccuracy, which Botvinnik makes use of. [Black should have started with 7...♘bd7 to prevent ♘e5, and only then b6-Bb7. At that time, even strong players were sometimes unfamiliar with the subtleties of the move orders.]

8.♘e5! White immediately wants to open the long diagonal and break Black's strong center with e4!

8...♙b7 [8...♘fd7? would fall into a theoretical trap: 9.cxd5! ♘xe5 (9...cxd5 10.♘xd5! exd5 11.♙xd5 ♘xe5 12.dxe5+- and White wins.) 10.dxe5 exd5 and here again the same 11.♘xd5!+- wins a pawn.]

9.e4! dxc4 Black cannot be happy to give up the tension in the center, but the logical 9...♘bd7 would fall into another trap. [9...♘bd7?

10. Nxc6! This elegant trick was missed even by strong GMs. 10... Bxc6 11. exd5 exd5 12. cxd5 Bb7 13. d6! This is the point! White wins back the sacrificed piece and ends up with an extra pawn. 13... Bxc6 14. dxe7 Kxe7 15. Bxc6 Bg2+/-

10. Nxc4 Ba6 Black needs to take some concrete operations, otherwise, White's big space advantage in the center would tell.

11. b3 Nbd7 [Black could have won a pawn by playing 11... b5 but after 12. Ne3 b4 13. Ne2 Bxe2 14. Kxe2 Kxd4 15. Bb2 White gets more than enough compensation. Black destroyed his own pawn structure (created many holes in his camp) and gave up his strong bishop. 15... Kb6 16. Nc4 Kb5 17. Bxf6! White wants to squeeze Black with e5 , but it would have immediately given up the d5 square. 17... Bxf6 18. e5 Be7 19. Rad1 followed by doubling on the d -file. Black is doomed.]

12. Re1 White quits forever from the b5-b4 motif.

12... Bb4?! Makogonov realized he was in trouble and tries to confuse a bit the development of White's pieces. Objectively, unless Black has something concrete, such moves can never be good. [12... Rc8 13. Bf4 looks terrible

from Black's point of view.; 12... b5 was the only chance to fight for equality. 13. Ne3 (13. Ne5? would be a positional mistake, Black would immediately overtake the advantage. 13... Nxe5 14. dxe5 Nd7=+ Such Ne5 ideas can be good only with the pawn on e2 , when the long diagonal would be opened and the knight could jump to d6 through e4 .) 13... Kb6 Thanks to the b5 move, Black got some space to develop his pieces, but still after 14. Bb2 Rfd8 15. Kc2 followed by Rad1 , White should be better.]

13. Bd2 b5 Too late. The bishop on b4 got into tactical ideas.

14. Ne3

14... Nb6 [Now on 14... Kb6 White has e5! and Black must give up his important bishop, after which all the dark squares become weak in his camp. 15... Bxc3 16. Bxc3 Nd5 17. Kd2 will be similar to the game.]

15. e5! Black has the same problem as in the 14... Kb6 line.

15... Bxc3 [15... Nfd5 does not work because of 16. Ncxd5 Nxd5 17. Nxd5 Bxd2 18. Nf6+! This great in-between check prevents Black from consolidating his pawn struc-

ture with cxd5. 18...gxf6 19.♔xd2+/- White is close to be winning.]

16. ♖xc3 ♞fd5 17. ♔d2+/- [17. ♖a5 was also possible.]

17... ♞d7 This allows White to take the last triumph of Black, to get rid of the knight on d5. Anyway, his position was already critical. [17... ♖c8 18. ♖a5 ♔d7 19. ♖ac1 with a big antage. Black has only one good piece, the knight on d5, but White can easily maneuver around it with, for example, ♖c5-Rc1 or a4.; Taking the bishop does not solve any of the problems. 17... ♞xc3 18. ♔xc3 ♖b7 19. a4+/- It's easy to see that something went wrong for Black.]

18. ♞xd5 cxd5

19. ♖b4 ♖e8 20. ♖ac1 It's hard to find something positive in Black's position. White can do whatever he wants. Botvinnik converts his advantage with perfect technique.

20... ♖c8 21. ♖a5 ♔e7 [21... ♞b6 is not much better 22. ♖xc8 ♔xc8 23. ♖xb6! axb6 and White soon collects the weak b5 pawn 24. ♖c1 ♔d7 25. ♖f1! with the simple threat of ♔b4 and a4. 25... ♖c8 26. a4 ♖xc1 27. ♔xc1 White wins the pawn.]

22. ♖f1 After Black stabilized his center, the g2 bishop had no role anymore on the long diagonal. Botvinnik immediately improves it by pressing the b5 pawn. Another idea could be to play ♖d3-b1 and ♔d3 in the future, creating a very dangerous attack. [22. ♖c7 was equally good to transfer the bishop to d6.]

22... ♞b8 Black threatens with ♞c6, so Botvinnik quickly transfers his bishop to d6.

23. ♖b4 ♔b7 24. ♖d6

24... h6 Black has no useful plan, since the only idea of exchanging the rooks leads to the loss of a pawn. [24... ♖xc1 25. ♖xc1 ♖c8 26. ♖xc8+ ♔xc8 27. ♖xb8! ♔xb8 28. ♔b4+ followed by a4.]

25. a3 White enjoys the situation. He sees that Black is suffering, so he gives back the right to move. White has many other moves like h4-h5.

25... ♖c6 This leads to a concrete defeat. [On 25... ♞c6 I like the idea of 26. b4 ♞e7 27. ♖xe7! followed by installing a rook on c5. Despite the material equality, Black is completely lost.]

26. ♖xb8! A very strong and concrete move, which was not obvious at all. It exchanges the nice-looking d6 bishop-op for the poor knight on b8.

26... ♖xb8 **27.** ♖xc6 ♖xc6 **28.** ♖c1 ♖b6 On other moves, ♖a5 would have come.

29. ♖b4! Black is in zugzwang. He has nothing better than passing, but the outcome of the game is already decided.

29... ♖c8?! This quickens the resignation. [For example, on 29... ♖e8 White can improve his position on the kingside, but he can also win a pawn by 30. ♖c5 ♖xc5 31. ♖xc5 ♖b8 32. ♖c7 ♖b7 33. ♖xb7 ♖xb7 34. ♖xb5+-]

30. ♖e7! And the rook enters the Black camp, so he resigned. **1-0**

Editorial Preface

First, we have to say that this was a especially exciting week. The match between Russian and China came to an end. The Russian men managed to win their match, and the women lost. The overall match, with rapid and blitz games included, was won by Russia.

Now we come to the main events of the past few days, the World Rapid and Blitz Championships in Astana. The line-up was amazingly strong with Magnus Carlsen on the very top.

Rapid: After a lead of 1,5 points over his nearest rival, Magnus Carlsen suddenly started to lose games and found himself on the second place, leaving the gold for Sergey Karjakin who scored 4,5/5 in his last games. Congrats to the young and very talented Russian, second was Magnus Carlsen followed by Veselin Topalov.

The World Blitz Championship was dominated and finally won by Alexander Grischuk. The second place was for Magnus Carlsen again, who managed to win his last 8 games! Karjakin took the third place.

We saw a lot of very exciting and nerve-wrecking games — for those who like to see action on a chessboard, it definitely makes sense to download the games in a pgn and replay them.

In the special section of the newsletter we have a game from Paul Morphy for You! In my opinion, this is one of the greatest chess players in the history who, for many years, was ahead of his rivals, playing “almost modern” chess. As usual, we wish You a lot of fun with Your weekly CEWN!

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Svidler,P (2749)
– Carlsen,M (2837) [A10]

World Rapid Championship Astana KAZ, 06.07.2012

[Balogh Csaba]

A very interesting and high quality game. Both sides played great chess despite the 15 minutes time control.

1.c4 g6 2.♘f3 ♘g7 3.g3 c5 4.♙g2 ♘c6 5.0–0 In rapid chess, it is absolutely normal that top players try to hide their real openings and just play something harmless to obtain a playable middlegame.

5...♘h6 The knight is going to f5, where it controls the central action very well. Other setups are e6-Nge7, e5-Nge7 or ♘f6. All of them are playable and have different strategies.

6.♘c3 ♘f5 White's ideas connected with d4 are not possible. The e4 move would give up the d4 square, so he must play on the queenside.

7.a3

7...0–0 [7...b6 8.b4 ♙b7 is a very stable reaction by Black, in order to continue controlling the central squares.]

8.b4!? This is a well-known pawn sacrifice against which Carlsen prepared a very strong blow! White's plan is to take control over the center by giving a pawn. It would have been more careful to start with 8.♙b1.

8...♘xb4! Black accepts the sacrifice, but by doing it this way, he exchanges a pair of knights, which clearly favors him. [8...cxb4 9.axb4 ♘xb4 10.d4! This was Svidler's idea, trying to swap off Black from the board in the center with e4. 10...♘c6 11.♘b5!? e4 is coming next.]

9.axb4 cxb4 10.d4! White continues his strategy and occupies the center. [10.e4 is met with the very strong 10...♘d4! and Black will win the piece back anyway.]

10...bxc3 11.e4 ♘d6! [11...c2 would just help White to protect the c4 pawn with 12.♙d3]

12.♙d3 At this moment Black is two pawns up, but we cannot count the one on c3 to be a „long-living“ one... Despite the material disadvantage, it might look like the opening part has finished with a clear triumph for the White side, but Carlsen came up with a very strong plan.

12...b5! Black immediately undermines the central pawns. Slow development would have led to a quick defeat.

13.cxb5 [13.c5 looks tempting, but 13...♘c4 14.♙xc3 d6! and Black can put the pawns under pressure.]

13...♙b6 The game becomes really concrete now, but according to my analysis, the complications favor Black.

14.♙a3! The bishop stands excellently on a3, the pressure on the e7 pawn is really unpleasant.

14...♙xb5! 15.♙c2! [15.♙xb5? ♘xb5 16.♙xe7 ♖e8 17.♙c5 d6! and Black wins the key pawn on d4.; 15.♙xc3? ♘xe4 followed by d5! Black will end up with an extra pawn.]

15...♙a6?! Carlsen could not calculate the variations precisely, which would have been really difficult even with a normal time control. Now White gets the initiative. [The very suspicious 15...♙b7! was the right move. 16.♖fb1 (16.e5 ♙e4! is an important in-between move (16...♘f5 is wrong immediately because of 17.♖fb1 ♙c6 18.♘e1!) 17.♙xc3 ♘f5 Now the queen has a nice square on d5, Black is better.) 16...♙c6 17.e5 (17.d5 The a8-h1 diagonal

is closed after this move, but it opens the other one on a1–h8! 17...♙c8 18.e5 ♘c4 19.♙xe7 ♖e8 20.♙f6 ♘xe5 and Black is better thanks to his small material advantage.) 17...♘b5 18.♘e1 and compared to the 16.e5 ♘f5 line, Black has a very strong possibility:

18...d5!! 19.exd6 ♘xa3! 20.♖xa3 ♙xd6! and Black survives the loss of a piece with the counter-attack against the a3 rook. Black is much better.]

16.e5! ♘f5 17.g4! Very well played by Svidler, creating serious problems to solve. With the bishop on b7, Black could take on f3 and the d4 pawn is hanging.

17...♘xd4! Another great decision! Black gets many pawns for the piece (he already was 2 pawns up) and his bishops get alive. [After the passive 17...♘h6 18.♙xe7 ♖fe8 19.♙c5 ♘xg4 20.h3 ♘h6 21.♙xc3 White is better, because of the poor placement of Black's pieces.]

18.♘xd4 ♙xe5

19. Rfd1! White should keep his pieces on the board to be able to win back the pawns... [19. Qxa8 Qxf1 20. Rxf1 Rxa8 Four pawns would be too many to hold.]

19... Rac8 20. Qc1! White collects the a7 pawn. He would have a very big advantage if his pawn was on g3. Now, he must continue playing flawlessly. [20. Qb4 was more active, but it allows Black to play 20... Rxc4! 21. Qxc3 Qc5! creating strong counterplay.]

20... Qc4 21. Rxa7 d5 So far, things were going well for Svidler, but here he spoils his advantage. It was almost impossible to find the strongest move (especially with this time control)... White should have realized Black's very strong idea with Qd6 and e5.

22. Qe3 The most human move to stabilize the important blockading piece on d4. [22. Rd7!! to prevent Qd6 would have preserved White's advantage. 22... Rfe8 23. Qe3+= The Black pawns are less mobile now, the one on d5 is also under pressure.]

22... Qd6! Carlsen lives with the chance and prepares for e5-d4... White must prevent it at any cost.

23.f4! Of course! On the other hand, it leads to the exchange of a pawn.

23...e5 24.fxe5 Qxe5 [24... Qxe5 was also possible. 25.h3 Rfe8 The position is about even, the three pawns compensate for the piece.]

25. Qf2

25... Rfe8 26. Ra3! Svidler happily gets rid of the annoying c3 pawn.

26... Qf4! 27. Rxc3 Qe5?! [Black should have simply restored the „3-pawns against piece“ position. 27... Qxg4=]

28. Rg3! Maybe Carlsen overlooked this ugly move. Now he has only 2 pawns, so he must search for activity.

28... Ra8 Both players are in serious time pressure. The complex middlegame has taken all their time.

29. Ne2?! A very nice and natural move planning to transfer the knight to c3, where it controls the a2 square and attacks the pawn on d5. [The cold-blooded 29. Qe3 suggested by the machine, was better. 29... Qf6 30. Rf3 Qd6 31.h3 Ra2 32. Qc1+= and everything is under control!]

29... Qg5

30. ♖c3! ♙xg3 31. hxg3 Svidler was probably happy that he managed to neutralize all the concrete threats, and that he can slowly press the d5 pawn. On the other hand, after taking the exchange, Black should not be worse.

31... ♜ac8?! Carlsen creates some tricks on the c-file, but Svidler easily parries them with only seconds on his clock... [After the correct **31... ♜xg4! 32. ♘xd5 ♙xd5 33. ♙xd5 ♜a3** the game should end in a draw. Black wants to sacrifice on g3.]

32. ♜d4! ♜e5 33. ♚d2! Exchanging the queens to reduce the tension.

33... ♚xd2 34. ♜xd2 ♜d8 35. ♙d4 ♜e6 36. g5! Creating a blockade on the dark squares. Black has to suffer in an unpleasant endgame, but objectively it should be a draw due to White's limited number of pawns on the board.

36... ♜de8 37. ♙xd5 ♙xd5 38. ♘xd5 Black's main aim should be to exchange a pair of rooks, and White would not be able to create any serious threats with his minor pieces. But of course, this is not an easy task...

38... ♜c8 From now on, I don't want to comment the game in details, because the players had just seconds

on their clocks. [38... ♜d8 could be met by **39. ♘f6+ ♙g7 40. ♘d7+! ♙g8 41. ♙b2** followed by ♘f6, solving the problem of the pin.]

39. ♘f6+ ♙g7 40. ♘g4+?! This was the only serious mistake in the game. Svidler missed a small tactical trick... [40. ♘xh7+! ♙g8 (40... ♙xh7 41. ♜h2+ ♙g8 42. ♜h8#) 41. ♘f6+ ♙g7 42. ♙g2 with a very unpleasant endgame. Anyway, I'm not sure if it's objectively winning.]

40... ♙f8 41. ♙f2 ♜ec6 42. ♙f3 ♜d8 A deep trick by Carlsen to imitate a blunder...

43. ♙g7+ Svidler falls in the trap. [43. ♘f6 was still possible, to continue pressing.]

43... ♙xg7 44. ♜xd8 ♜c5 White cannot protect his pawn and after g5 falls, the game is a dead draw.

45. ♘e3 ♜xg5 46. ♜d7 h5 47. ♜a7 ♜c5 48. ♜b7 ♙f6 49. ♜b6+ ♙g5 50. ♜d6 ♜c3 51. ♜d5+ f5 52. ♜d6 ♜a3 53. ♜b6 ♜d3 54. ♜a6 ♜b3 55. ♜c6 ♜a3 56. ♜b6 ♜c3 57. ♜a6 ♜b3 A „cool“ fighting game. There were some mistakes of course, but we should not blame any of the players. The hard moves that both managed to find with so little time were rather remarkable. **1/2**

(2) Topalov,Veselin (2752)
– Radjabov,Teimour (2788) [E94]

World Rapid Final Astana KAZ (7), 07.07.2012

[Arkadij Naiditsch]

Another very exciting game from the World Rapid Championship. Shortly after the opening, it looked like Black had clearly managed to outplay his opponent, but then White found great counter-chances and managed to give mate. A very fighting and exciting game!

1.d4 ♘f6 2.c4 g6 3.♘c3 ♙g7 4.e4 d6 5.♘f3 0-0 6.♙e2 e5 7.0-0 As usual, we see Radjabov playing his favorite King's Indian! It's amazing but I think that for a couple of years he obtained a clearly positive score with Black, and this against the absolute elite!

7...exd4 The main move of Radjabov is usually 7...♘c6, but of course, the move in the game is not a surprise at all.

8.♘xd4 ♙e8 9.f3 c6 10.♙h1 Lately, this line has become quite popular. White is trying to get a position like: ♙e3, ♙d2, ♖ad1, ♖fe1, ♙f1, ♙f2, and Black usually tries to play

for a d5 push or to move his pieces in this manner: ♘bd7-a5-Nc5-Qe7, ♙d7-Rad8-Bc8.

10...♘h5!? This move is still theory. Lately, there was a game Gelfand-Grischuk 2011.

11.g4 The idea of Black was simple, to play ♙h4.

11...♘f6 Now it looks like Black has lost 2 tempi with ♘h5-Nf6 back, but in fact, things are not that simple. By playing g4, White created huge weaknesses in his structure, and right now, it's not easy for White to make use out of his better development.

12. ♙f4 White stops Black from playing the natural ♘bd7. Besides, a move like ♘b3 could be a threat now.

12...h5 This is still theory...

13.g5 ♘h7 14.♙d2 ♙e7 15.♖ad1

15...♘d7 So, I guess that from this moment, both players were out of book. Let's take a look at the position. First, I have to say that the position is very complex with many interesting ideas for both colors. White has a clear target, the d6 pawn. Black will clearly search for counter-play on the kingside, trying to get White's g5 pawn. The

Black knight maneuver ♖df8-Ne6 could be dangerous for White as well.

16. ♖g1?! A strange move, in my opinion. [An option was the natural looking 16. ♖c2 ♘e5 ...Very often this move saves the d6 pawn. 17. ♘e3 Of course, the exchange of bishops is good for Black. 17... ♖c5 18. ♖f2! with the idea on ♖e6 to have ♖g1! In my opinion, White should have good play here.]

16... ♘e5! Black shows very good understanding of the position. The Black knight is standing much better on e5 than on c5. Now, the other one could come into the game via ♖f8-Ne6. The only problem is the d6 pawn, but Black is just in time to protect it.

17. ♖c2 ♘e6 The White pawn is hanging on c4 and this gives Black enough time for ♖ad8.

18. ♘e3

18... ♖ad8 Black stands perfectly. All the pieces are in the right places. Now Black's idea is to start shaking the White central pawns. Usually, he does it by playing a6-b5, or by trying to break through with d5. The negative side for White is that he has no clear play. To play for the f4-f5

push is a very hard task because the e4 pawn e4 will become very weak.

19. ♖e1 White brings the queen to the kingside. All of this all is a preparation for the f4-f5 push, but is it a realistic plan...?

19... a6 Black wants to play b5.

20. ♖g3 This move was made to avoid Black's b5.

20... ♘c8 [20... b5 would be too early, due to 21. c5!]

21. h4 [If White would try to block the b5 move with 21. a4 ♖f8! he would get in big trouble. Black wants to play ♖e6 and ♖xf4 getting an obvious advantage. We can see how well Radjabov understands what he is doing! So, for the King's Indian fans, I think this game is very productive! (For now...)]

21... b5 Black's dream came true, the b5 move is made and White's center is falling apart.

22. cxb5 axb5 23. a3 It's already hard to give an advice for White! Suddenly, things are going very bad. White is still very far away from playing f4-f5 and Black has already begun to crush White's position.

23...♘f8! Radjabov brings the last piece that was standing a bit out of play. It's clear that Black is doing much better here.

24.♔h2 As I mentioned before, to give away the bishop from f4 is not an option.

24...♞e6 25.♙g3 ♞c5 Slowly, the Black pieces are taking perfect positions and White's f4 is still nothing more than a dream.

26.♔g2 What we'll see in the next 5 moves is horrible from White's point of view, but it's impossible to propose an improvement. The White pieces are very badly placed.

26...♙e6 Black wants to play ♞c4, or ♙b3 and d5.

27.b4 ♞b3 28.♙e1

28...♔a7! Black kicks another White piece away from the center. The a3 pawn is hanging.

29.♞c2 Until this moment, Black almost played a perfect game!

29...♞c4?! This gives White some theoretical chances. There was no need for that. [29...♙c4! This move would lead to a huge advantage for Black and much less attack-

ing chances for White. I guess it would be a nice conclusion to a very well played game by Black.]

30.f4! Finally, the pawn has moved. Better late than never.

30...♞xa3 The correct move. [30...♞e3 This move seems to lead to quite a forced line: 31.♞xe3 ♔xe3 32.f5! White has no time to waste! 32...♙xf5 Any other move leads to very unclear play. 33.exf5 ♙xc3 34.fxg6 fxg6 35.♔d3 ♔xe2 36.♔xe2 ♔xe2 37.♙xc3

and probably this endgame is about equal.]

31.♞xa3 ♔xa3 32.f5! Don't ask Topalov what to do twice in a dynamic position...

32...♙c4?! A very logical move, but a mistake. [32...♙c8 would have been the right option. Black needs the bishop on the c8-h3 diagonal to protect his king.]

33.♙xh5! Another great move by White. What a turn in the game. Instead of having a much better position without any risk of losing, suddenly things got very very sharp.

33...gxh5 34.f6! White is just playing great. The queen on g2 and the rook on g1 are standing perfectly.

34...♙h8 [34...♚a6 with the idea of ♚c8-Qg4 35.g6! would not change much in comparison to the game.]

35.g6 ♙xf6

36.♘d5!? And another very strong move by White. Especially in rapid chess, such a move is a killer! [Another option was the direct 36.gxf7+ ♔xf7 37.♚g6+ ♔e7! Only move. (37...♔e6 a mistake would be 38.♚xd6+! Pretty move! 38...♔xd6 39.♚xf6+ Now White is mating by force: 39...♔c7 40.♚g7+ ♚d7 41.♙g3+ ♔b6 42.♚xd7 And Black can't escape from the „multi-mating“ ideas of White.) 38.♘d5+! The usual knight sacrifice. 38...cxd5 39.♚h7+ ♔e6 40.♚f5+ ♔e7 41.♚h7+ ♔e6 42.♚f5+ ♔e7 with a draw.]

36...♙xd5?? [In case of 36...cxd5! 37.gxf7+ (37.exd5 ♘d4 Black is winning.) 37...♔xf7 38.♚g6+ ♔e7 39.♚h7+ ♔e6 40.♚f5+ ♔e7 we would return to the already known draw.]

37.exd5 [Also possible would have been 37.gxf7+ ♔xf7 38.♚g6+ ♔e7 39.exd5! with a mating attack!]

37...♚b2 This move loses, but nothing seems to save Black anymore.

38.gxf7+ ♔f8 [38...♔xf7 39.♚g6+ ♔e7 40.♚h7++-]

39.♚g8+ ♔e7

40.f8♚+! A pretty end to a slightly undeserved victory. Black managed to outplay his opponent in the first 30 moves and, by being imprecise, gave White great chances to attack. In chess, things can really turn very quickly and every move is decisive! **1-0**

(3) Morozevich,Alexander (2770) – Bologan,Viktor (2732) [B12]

World Rapid Final Astana KAZ (3), 06.07.2012

[Arkadij Naiditsch]

The World Rapid and Blitz Championships in Astana were clearly the 2 main events of the past week. The line-up was amazingly strong, with Magnus Carlsen leading the pack. We will now see a very exciting game in the Caro-Kann where Morozevich was the one who had the better insight. It's really great to see Morozevich playing „strange” positions!

1.e4 c6 2.d4 d5 3.e5 ♘f5 Right now, this is the most played line in the Caro-Kann. We saw an amazing amount of games lately, especially in games from the very top played by Anand, Karjakin, Grischuk, Morozevich...

4.h4!? This is not the main move, but it's quite a tricky one. For many years, it was one of the main weapons of Your CEWN author Csaba Balogh.

4...h6 [4...h5 5. ♘d3 ♘xd3 6. ♔xd3 is the main position in this line.]

5.g4 Now White starts looking for „space” domination.

5... ♘d7 [The logical 5... ♘h7 gives White quite an interesting chance with 6.e6!? fxe6 7. ♘d3 White wants to play ♘xh7 followed by ♔d3-Qg6. Another idea is to play ♘f3-Ne5 fixing Black's pawn structure. The position is quite dangerous for Black...]

6. ♘e3 Now the ideas of White and Black are clear. White will try to do everything to keep the center, and Black will try to rip White's central pawns apart with a dynamic play against the center, usually by playing c6-c5.

6...e6 7. ♘c3!? A really unusual move by Morozevich. He is not trying to protect the central pawns but wants to have ♘b5 against Black's c5 move. Interesting idea! [7.h5 is too slow now. 7...c5! 8.c3 ♔b6 and Black is starting the action on the queenside first.; 7.c3 h5! and again White gets countered with 8.gxh5 ♘h6 and probably Black is doing fine.]

7...h5!? The usual idea, Black destroys White's pawn structure.

8.gxh5 Of course not a nice move to do, but it was the only option...

8... ♘h6

9. ♖h3!? I guess a lot of players would have played 9. ♖d3 almost automatically, forgetting to fight against the main threat, the c5 move!

9...c5 [In case of 9... ♖xh4 10. ♖f3! White has this nice way of developing the pieces. It's especially important that the White knight goes to ♗ge2! where it will support his colleague on c3. 10... ♖d8 11.0-0-0 ♖a5 12. ♗ge2 and White is doing clearly better. The c5 push would lead nowhere for Black. White is too active and the Black center would fall after some sacrifice on d5.]

10.dxc5 [Another option was to play 10. ♗f3!? waiting for the Black move... 10... ♗c6 and now 11.dxc5 avoiding the tricky lines in the game.]

10... ♗c6!? Black uses this chance to put the bishop on c6 and the knight on d7!

11. ♖d4 [11. ♗f3! This is a hard move to make during a practical game, but it seems to work

11...d4 (In case of 11... ♗d7 12. ♖e2! White is preparing to castle long 12... ♗xc5 13.0-0-0 and White is doing better. The next move, ♖g1, will be very unpleasant for Black. Black still needs to think where to go with the king.)

12. ♗xd4 ♗xf3 13. ♖xf3 ♖xd4 14. ♖xb7 ♗xc5 15.0-0 A great move that's not easy to see at all... The position looks dangerous, but all seems to work out for White 15...0-0 16. ♖xa8 ♖xh4 17. ♖g2 White defended the kingside. The extra exchange should bring the full point home.]

11... ♗d7 12.b4 The only move to defend the c5 pawn, but now White is too „open“.

12...b6?! The right idea but a wrong way to use it. [The right move would have been 12...a5! Black loses a piece but gets a lot of pawns and very dangerous play.

13.b5 The only move... 13... ♗xc5 14. ♖d2 (Doesn't work 14. ♖f4 ♗b4! 15. ♗ge2 ♗xb5) 14... ♗xe3 15.fxe3 (Of course not 15. ♖xe3?? d4) 15... ♖xh4+ and here we can see why it's extremely dangerous to make too many pawn moves in the opening. All of them could fall if Black finds a way to play actively. 16. ♗f1 ♖xh5 17.bxc6 bxc6 Black got 3 pawns for the piece, and the White pieces are uncoordinated. The position is very unclear.]

13.cxb6 ♗xb6 Black wants to play ♗c4 or a5, White should act very quickly now.

14. ♖g5!? A logical move, taking the bishop from e3 with tempo.

14... ♖c7 15. ♘f3 And here we have probably reached the critical moment of the game. Black continued with the standard 15... ♘c4 and will soon get in big trouble.

15... ♘c4 [15... a5! and again, Bologan misses the a5 move. 16.bxa5 (At 16.b5 ♖d7 White has no decent defense against ♖b4 or ♖c5.) 16... ♖xa5! (Too slow is 16... ♘c4 17.0-0 ♖xa5 18. ♘e2 and White is in time to put the pieces all together.) 17.0-0 ♖c5 18. ♖f4

18... ♖a3 By making 5 very dynamic moves in a roll, we get to a very unclear position. Black has great play in exchange of the 2 pawns; all the pieces are active and the position of the White king could become very dangerous.]

16.a3! A cool and very strong move!

16... a5 The right idea, but it came too late.

17.0-0! Another strong move by White, taking the king away from the center. Suddenly, the Black king could become a target. Castling short is not an option because of

♖xh6 and staying on e8 forever might not be the best idea...

17... axb4 [Doesn't help 17... ♖b8 18. ♖fb1 axb4 19.axb4 ♖xb4 20. ♖xb4! A nice little combination. 20... ♖xb4 21. ♖c5 and White is winning]

18.axb4 ♖xb4

19. ♘b5! Nice tactic. White brings the knight from c3 to d6, creating a mating attack.

19... ♖d7 20.c3 [The easy 20. ♖xa8+ ♖xa8 21. ♘d6+! forces Black to give White a strong pawn on d6: 21... ♖xd6 22.exd6 0-0 23. ♘e5 ♘xe5 24. ♖xe5 An extra pawn, standing on d6. The coming kingside attack gives White a much better position.]

20... ♖e7 21. ♘d6+ ♖xd6 22.exd6 [22. ♖xa8+ ♖xa8 23.exd6 0-0 24. ♘e5 would lead to the already known better position for White.]

22...0-0 23. ♖h1! White is preparing a mating attack.

23... ♖h7 The Black king can't stay on the g-file. White wants to play ♖xh6 followed by ♖g1 and ♖g7 mate.

24. ♖xa8 ♜xa8 [24... ♙xa8 would lead to about the same.]

25. ♖g1 The g7 pawn is White's target!

25... ♜g8 26. ♙f4 White is a pawn up, and the Black pieces almost have no moves. The position is close to winning.

26... ♘xd6 This move allows White to end the game in a beautiful way. [Of course doesn't help 26...f5 27. ♜g6]

27. ♘g5+ A pretty move but there was no reason to go for it... [Simpler would have been 27. ♘e5 ♜b7 28. ♜c5 and White is winning a piece.]

27... ♔h8

28. ♘xe6 fxe6 [28... ♘df5! would have been the only move to fight here. 29. ♘xg7! A nice tactic. 29... ♘xd4 30. ♙xd7 ♙xd7 31.cxd4 ♘f5 32.h6! and White has good chances to win this endgame.]

29. ♙xh6 Now the game is over... The Black king is not going to live very long.

29... ♜f7 [29... ♔h7 30. ♙f4+-]

30. ♜g6! A nice final move..

30...e5 [30... ♙d7 31. ♙f4 and the rook is going to give mate on h6.]

31. ♜xe5 d4+ 32. ♔g1 Black's position is totally hopeless...

32... ♜a8 33. ♙xg7+ ♔g8 1-0

(4) Jakovenko,D (2736) — Yu Yangyi (2656) [E11]

RUS-CHN match, 04.07.2012

[Balogh Csaba]

Jakovenko nicely outplays his young Chinese opponent in positional style...

1.d4 ♘f6 **2.c4** e6 **3.♘f3** ♙b4+ The Bogó-Indian Defense. [3...b6 4.♘c3 ♙b4 5.♙g5 ♙b7 6.e3 h6 7.♙h4 is a huge main line of the Queen's Indian defense. In comparison to the game, the Black pawn stands on a5. As our game flows, we will understand who benefits from this difference.]

4.♙d2 a5 **5.♘c3** [5.g3 is the main line. Recently, strong players have tried 5...d6 6.♙g2 ♘bd7 and the theory is developing nowadays.]

5...b6 **6.♙g5** ♙b7

7.e3 h6 **8.♙h4** Here we are! In the Queen's Indian defense with an extra tempo: a5. In my opinion this clearly favors White, since all of Black's best setups are connected with 0–0–0, where the pawn on a5 is a serious weak-

nesses of the queenside pawn structure. Of course, despite this fact, the position remains very complex.

8...d6 Black tries to make use of the fact that the bishop is protected on b4. In the other line, ♙a4 would win a piece. [8...g5 9.♙g3 ♘e4 is the start of the lines without the a5 move.]

9.♙d3 ♘bd7 **10.0–0** After White unpins himself, Black must give up the bishop pair, otherwise, the c3 knight jumps away and the bishop is trapped.

10...♙xc3 **11.bxc3** ♙e7 [Another nice game that demonstrated well the ideas of this opening... 11...g5 12.♙g3 ♘e4 (12...h5 is not dangerous now, because of 13.h4!) 13.♙c2

13...♘g3 (13...f5 is usually met with the powerful 14.d5! breaking Black's pawn structure and freeing the d4 square for the knight. 14...exd5 15.cxd5 ♙xd5 16.♘d4 ♙f6 17.f3! ♘xg3 18.hxg3 and White is going to win back the sacrificed pawn.) 14.fxg3! This is another known motif in this opening. White can use the f-file effectively with his rooks. Note that if you want to study these positions in detail, it's better if you search for games with the pawn on a7. 14...♙e7 15.♙f2 0–0 Because of the a5 weakness,

Black did not dare to castle queenside. 16.g4! Fixing Black's pawn structure. 16...♘f6 17.h3 ♘e8 In such positions, there exists a strong re-grouping with ♘h2-f1-g3, but Navara decided to play another plan. 18.♖af1 ♘g7

19.♙h7+! ♔h8 20.♙e4 Exchanging the light squared bishops usually favors White. Black's standard reaction is c6-d5 in such situations, but now thanks to the pawn on a5, White could quickly attack the b6 weakness with ♖b1! 20...♙xe4 21.♖xe4+= 21...♖ae8? This allows a beautiful strike: 22.♘e5!! ♘f5 (On 22...dxe5 the best is the calm 23.dxe5!+- followed by ♖f6. Black can only avoid being mated by giving up huge material.(23.♖f6 would not be that clear, because of 23...♘f5! 24.dxe5 ♖xf6! 25.exf6 ♘g3)) 23.gxf5 exf5 24.♖c6 1-0 Navara-Polak, Czech Republic 2012.]

12.♘d2 White's strategy is to occupy the center with e4 and f3.

12...g5 13.♙g3 0-0-0 Black plays the position like his pawn was on a7.

14.f3 h5 [I would personally prefer 14...♘h5 15.♙f2 f5! We will understand how important is to have the pawn on f5 if we continue following the game.]

15.♙f2! A necessary prophylactic move against the h4-h3 threat.

15...h4 [15...g4? is always a mistake because of 16.♙h4! the bishop gets very strong on h4.]

16.h3! Black's attack is stopped now.

16...♘h5! Black would like to play f5, followed by ♖g8 and g4 with a very dangerous attack. White must do something against it!

17.e4! The only way to fight against f5, even if it gives up the f4 square.

17...♘f4 If it was possible, the bishop should go to f1, but White had no time to evacuate the rook from f1.

18.♙c2

18...♘f8 In my opinion, this logical plan to improve the knight is a mistake. It defends well against White's main idea with c5. On the other hand, it is very difficult to suggest something clever for Black. He can't attack on the kingside and White is clearly better in the center. The only useful plan seems to be to play on f5... [18...f6 with the idea of ♖f7 and f5. 19.♖e1! White prepares for the

typical maneuver ♖f1–e3. 19...♔f7 and now on 20.♘f1?! (20.♔b1! is definitely the right move. It continues fighting against f5. The queen stands well on the b-file because his main idea is to push c5 with an attack on the queen-side.) 20...f5! 21.♘e3 (21.exf5 exf5 22.♘e3 g4! Suddenly, Black got a pretty strong attack.) 21...fxe4 22.fxe4 ♖hf8 23.♘g4 (23.♔f1 ♔g6 By harassing the e4 pawn, White is forced to move his center, which creates holes in the position.) 23...♘f6=+ By opening the f-file, Black achieved a perfect position.]

19.♖e1! Jakovenko prepares for the regrouping of the knight.

19...♘8g6 20.♘f1! ♔d7 21.♘e3 Just in time. White achieved the maximum. Black is out of useful ideas, or at least I don't find any...

21...e5?! Giving up the control over the f5 and d5 squares can't be an advisable idea. Black wants to create some concrete tricks connected with ♘xh3, but White can easily neutralize them.

22.♔h2! ♔b8?!

23.♘a4! A strong concrete decision. By exchanging the light squared bishops, the Black king gets significantly weakened. White is in time to open the lines against it. [23.♖b1 was also good.]

23...♘c6 24.♘xc6 ♔xc6 25.♖b1 ♔c8 Now it became clear that the 22nd move was not the best... [25...♔a8 would have been met with 26.♖b5! followed by ♔a4.]

26.♖b5! An excellent place for the rook, where it supports the c5 breakthrough.

26...f6

27.♖b1! The last preparation for concrete actions. Jakovenko protected his rook on b5.

27...♔d7 [27...♘e7 can be met with the typical break 28.d5!? (28.♖d1 is also very strong.) 28...♔a8 29.c5! dxc5 (29...bxc5 30.♘c4+/- creating a powerful knight on c4. White will recover the a5 pawn soon.) 30.♘c4+/- and d6 is coming next, destroying the king's guards...]

28.c5! The game is practically over. Black cannot stand the pressure...

28...dxc5 [28...bxc5 is not better. 29.dxc5 ♖e8 30.♖d1
For example: 30...♔f7 31.cxd6 ♖xd6 (31...cxd6 32.♘f5+-)
32.♖xd6 ♔xd6 33.♘f5+- White can do whatever he
wants. The least is simply to take the a5 pawn.]

29.dxc5 ♔e7 [29...bxc5 30.♖d1+ ♔e8 31.♖xd8+ ♔xd8
32.♘d5+- followed by ♖xc5.]

30.cxb6 ♖d2 The last tricks, but of course, against a play-
er like Jakovenko, these are not serious attempts.

31.♘d5+! ♘xd5 32.exd5 ♔e8 The only square to pro-
tect the g6 knight.

33.b7 Jakovenko demonstrated very well the deep ideas
in this opening. **1-0**

Endgame section

(15) Carlsen,M (2837) – Bologan,V (2732)

World Rapid Championship, 06.07.2012

[Chess Evolution]

Carlsen obviously has a completely winning position with an extra pawn, and the days of the a3 pawn are also numbered. However, while converting the advantage, White allowed a miraculous escape to his opponent...

43. ♖f5+? In my opinion, Carlsen had already seen the final position of the game. Everything seemed to be quite forced, so the World's Nr. 1 had to be confident with his calculations. [43. ♖b4! was probably the easiest way to victory. 43... ♘a6+ 44. ♔xa3 ♘xc5 45. dxc5 ♖b8 46. ♖b4+- and there is nothing that can stop the pawn avalanche on the queenside, supported by the bishop and the king.]

43... ♔d6 44. ♖b4? Continuing with the wrong plan. [44. ♙d3! Repeating the moves would have been objectively better.]

44... ♘a6+ 45. ♔a5 ♘xc5 46. ♖xb6 ♘b3! Bologan finds the only chance to stay in the game. Black collects the d4 pawn. I don't think that Carlsen blundered this move, since after the coming moves, it all seems to be over.

47. ♖a7? Still following the wrong path... [47. ♖a6 should have been played, even tough after 47... ♘xd4 48. b6 ♘c6 49. ♙b1 ♘b4+ 50. ♖b5 ♘c6 I don't see the winning plan for White.]

47... ♘xd4 48. b6 ♘c6+ 49. ♖a8 This was Carlsen's idea when he played 43. ♙f5. White promotes the b-pawn soon and the bishop covers the a2 and f3 pawns, which might give some counter-chances for Black. I'm sure that at this moment, both players accepted that White won the struggle. But chess is a more difficult game...

49... d4? [49... ♘a5!! would have led to an amazing position... 50. b7 ♘xb7 51. ♖xb7 In my opinion, many players would just resign here after a short hesitation. Who would believe that Black is close to be winning in this position!!! At first sight, I thought it was a mistake of the computer. Then, after checking a few logical lines, everything became clear...

51... ♖c5! Let's summarize the main ideas: The White king has no access to the d-pawn, Black simply wants to pro-

mote the d-pawn with the help of the king. It seems like even if he manages to do it, White will sacrifice his bishop, capture the a3 pawn and his a-pawn will queen automatically. But in this case, Black is in time to collect the f3 pawn and promote his own f-pawn... 52.♔a6 Trying to catch the pawn and approaching to a3 seems to be the most logical attempt.

a) 52.♔c7 is a tricky option to rush to the e-file with the king. 52...d4 53.♙c2 ♔c4 54.♔c6 (54.♔d6 requires precise moves by Black. 54...d3 55.♙d1 ♔d4! in order to keep the king away from the e5-e4 path. Black wins an important tempo to push d2 in the next move, and only then he goes with the king. 56.h3 d2 57.♔e6 ♔e3) 54...d3 55.♙b3+

55...♔d4! Again, it is very important to prevent the ♔d5-e4 idea. (55...♔c3? is a mistake because of 56.♔d5! d2 57.♔e4 ♔b2 58.♔d3 ♔c1 59.♔e2+- just in time.) 56.♔b5 (56.♔d6 d2) 56...♔c3 and again White has nothing better than transposing to the main line with 52.♔a6.

b) 52.h3 d4 53.♙c2 White needs to move into this tempo to control the promoting square on d1. 53...♔c4 54.♔b6 d3 55.♙b3+ ♔c3 This is a transposition to our main line.

52...♔b4! A necessary move. The idea is to block to king's route on the a-file and save an important tempo to push d4. (52...d4? immediately is a mistake. 53.♔a5 ♔c4 54.♔a4 d3 55.♔xa3 ♔c3 56.♙e6+-) 53.h3! White must already understand that „this ship is gone” and try to defend the inferior endgame, where the pawn must stay on h3. (53.♔b6 d4 White can achieve the same queen endgame, but with his pawn on h2. Everything is forced from now on... 54.♔c6 (54.♙c2 ♔c3 55.♙b3 d3 56.♔b5 d2) 54...♔c3 55.♔c5 d3 56.♙e6 d2 57.♙b3 ♔b2 58.♔b4 ♔c1 59.♔xa3 d1♔ 60.♙xd1 ♔xd1 61.♔b4 ♔e2 62.a4 ♔xf3 63.a5 ♔xg4! That is why the pawn should be on h3. 64.a6 f3 65.a7 f2 66.a8♔ f1♔ with a winning endgame.) 53...d4 The next moves are ♔c3 and d3. White cannot do anything against it... 54.♙c2 ♔c3 55.♙b3 d3 56.♔b5 d2 57.♔a4 ♔b2 58.♔b4 ♔c1 59.♔xa3 d1♔ 60.♙xd1 ♔xd1 61.♔b4 ♔e2 62.a4 ♔xf3 63.a5 ♔g3 64.a6 f3 65.a7 f2 66.a8♔ f1♔ and in the coming endgame, Black's winning chances are better than White's drawing ones. Most probably, a ♔+1 pawn against a ♔ endgame will arise, which could continue for 100 moves. A shocking endgame which shows excellently how difficult chess is.; 49...♔d8! is also fine, with the same idea.]

50.b7 ♔c7 51.♙d3! The bishop is heading to b5 and the knight cannot hold the b-pawn.

51...♔b8 52.♙b5 Black is in zugzwang.

52...d3 53.♙xd3 ♔d7 54.♔a7! Black resigned in view of 54...♔b8 55.♙b5. Everything went like Carlsen expected, but there could have been a big surprise for him... **1-0**

(16) Carlsen,Magnus (2837) – Karjakin,Sergey (2779) [C65]

World Rapid Final Astana KAZ (10), 07.07.2012

[Chess Evolution]

34. ♖f7 This game could have been the most decisive in the tourney. Carlsen was leading the tournament and a victory would have given him a 1.5 points lead ahead of Karjakin. This endgame looks like a total draw, but Carlsen managed to win it quite easily. Let's take a look at how this could happen.

34... ♖d1+? This move is hard to understand. Why to bring the White king out of the corner?! [34... ♗d4! would have been the right decision here! The game is immediately a draw. Maybe Black blundered that White can't play 35. ♖xc7 (35. ♖d7?? ♖d1+ 36. ♗g2 ♖g1+! leaving Black a piece up. 37. ♗f3 ♗xc5) 35... ♗xc5 36. ♖xc5 ♖d1+ 37. ♗g2 ♖d2+ 38. ♗g3 ♖xa2 with an easy draw.]

35. ♗g2 ♖d2+ It wasn't too later for 35... ♗d4

36. ♗f3 ♖xa2 37. ♖xc7 And things are not as simple as before.

37... ♗g8

38.h4! White's idea is to bring the pawn to h6, and try to get the h7 pawn, winning the game.

38... ♖c2! This is a very good move by Black! Now White is pinned on the c-file and Black just wants to play ♗f8, or move the a-pawn.

39. ♖c8+ ♗f7 40. ♗e4

40... ♖c4+? Another very strange move by Black. [40...a5! followed by a4-a3 with a total draw.]

41. ♗f5 ♗d4 Again, it was not too late for 41...a5

42. ♖f8+! Could it be that Black blundered this move!?

42...♔g7 43.♙d6 ♖c6 44.♖d8! Suddenly, Black is facing some serious trouble. White wants to play ♖d7 or h5-h6 first.

44...♙c5?! Black should not remove the bishop from the long diagonal. [44...♔f7! would still hold the draw. 45.♖d7+ ♔e8 46.♖e7+ ♔d8 and Black is holding.]

45.♙e5+ ♔f7 46.♖d7+ ♙e7

47.h5! Black is clearly under pressure but the position is still a draw...

47...♔e8 48.♖a7 ♖h6?! Another little mistake that allows White to put the pawn on h6. [48...♔f7 A passive defense would have been a better choice, even if things are getting sharper than Black would have wanted. 49.♔e4! White finds a new plan, to play f5-f6. 49...♖h6 50.f5 ♔e8 The Black king needs to leave the 7th rank. 51.♔d5 ♖b6 52.♙d4! And the game would continue. The position is still a draw, but to hold this it not easy at all...]

49.♙g7! White uses this chance to put the pawn on h6.

49...♖c6 [49...♖xh5+?? 50.♔e6 and White is winning.]

50.h6 ♔f7 51.♔e4! With the already known idea of f5-f6.

51...♔e8 52.♖a8+?! Played a bit too quickly. [52.f5 would have put bigger pressure on Black.]

52...♔f7 53.♖h8

53...♖c4+? The losing move. [53...♙f6! would have been the only move to save the game. 54.♙xf6 ♔xf6 55.♖xh7 ♔g6 56.♖h8 ♖c4+ with an easy draw.]

54.♔f5! And Black's position is lost.

54...♖c5+ 55.♙e5 The h7 pawn is falling.

55...♙f8 56.♖xh7+ ♔g8 57.♖h8+ ♔f7 58.♖xf8+ Followed by 58...♔xf8 59.h7 ♖xe5 60.fxe5 ♔g7 61.e6. Probably, in the beginning of this endgame every club player would announce that he would hold this endgame easily, which would be a big mistake. Endgames tend to look very „easy“ and are not „easy“ at all! We just saw a 2779 player losing such an endgame, in a rapid game. White showed nice technique and good winning ideas which led, step by step, to a better and better position! **1-0**

Clash of the Titans

(17) Morphy, Paul – Muarian, C [C37]

New Orleans New Orleans, 1866

[Balogh Csaba]

This week we give a big jump in time. We'll examine a game from the strongest player of the mid 19th century, Paul Morphy. He is known as the first unofficial World Champion, since at that time this title didn't exist. Murphy has crushed the whole chess world, with his „romantic“ style. He sacrificed all his pieces and mated his opponents in very short games. We must admit that 150 years ago, the defensive abilities were quite poor. After a while, it was not a challenge for him to mate his opponents, so he started to play handicap matches, starting the games without the a1 rook and things like this. Still, his opponents were unable to resist against his incredible attacking fantasy.

1.e4 e5 2.f4 At the time, only two openings existed against 1.e4 e5. The King's gambit and [2.♘f3 ♘c6 3.♙c4 ♙c5 4.b4 the Evans Gambit.]

2...exf4 3.♘f3 g5 This is still the most popular setup from the Black side. He would like to preserve his material advantage for the future.

4.♙c4 g4 Not a bad move, but very risky. [4...♙g7 5.d4 d6 6.h4 h6 followed by ♘c6 is a solid and safe system for Black.]

5.d4!? This brave crifice is typical of Murphy. He tries to use the fact that Black is completely undeveloped and gaining 2 tempi (d4 and ♙xf3) is worth a piece for him. [A similar game was played by Alexei Shirov, who is also famous for his brilliant attacking skills 5.0–0 with the same idea as in 5.d4. 5...gxf3 6.♙xf3 ♙f6

7.e5!? Opening the central lines. Material does not matter anymore, the question is whether the attack breaks through or not... 7...♙xe5 8.♙xf7+! Shirov lures the king into the danger zone and his pieces join the attack with tempo. This is all nice and good, but it is already the 2nd piece... 8...♙xf7 9.d4! ♙xd4+ (9...♙f5 would have been a more tenacious defense 10.♙xf4 ♘f6 11.♘c3 d6 and Black has good defensive possibilities.) 10.♙e3! White cannot waste more time. 10...♙f6 11.♙xf4 This is what Shirov was playing for. The f-file seems really dangerous and the remaining pieces are also coming fast (Nc3 with the threat of ♘d5, and ♖ae1). 11...♙e8 12.♘c3 ♘c6 13.♘d5 ♙g6 Black has enough material to give back. The question is whether he can defend the mate. 14.♖ae1+

14... ♖e7? This loses nicely! (14... ♘ge7! 15. ♙xc7 (15. ♘xc7+ ♙d8 16. ♘xa8 d6 is rather good for Black.) 15...d6 and here I didn't find more than perpetual check. 16. ♘f6+ ♙f7 17. ♘d7+ ♙e8 18. ♘f6+= (18. ♘xf8 ♙f5 would be fine for Black.)) 15. ♙d6!! and Black has no good defense against the threat ♙f8! 15...♙d8 (15...cxd6 16. ♙f8#) 16. ♙f8+! ♙xf8 17. ♙xc7# A picturesque final position. 1–0 Shirov-Lapinski, Daugavpils 1990.]

5...gxf3 6. ♙xf3 ♘c6?! [Computers easily neutralize such attacks, but chess is a game of humans... 6...d6 7. ♙xf4 ♙h4+! 8. ♙g3 On other moves, ♙g4 would come. 8...♙f6 9. ♙d3 ♘c6 It is already a bad sign if Black can develop with tempo...]

7. ♙xf7+! With the same method as in the Shirov game. Murphy makes the king more vulnerable...

7...♙xf7 8. ♙h5+ ♙e7?! It's pretty hard to understand this move, unless Black was playing for a win, but I doubt it... [After the logical 8...♙g7 White has nothing better than settle for the draw with 9. ♙g4+ ♙f7 10. ♙h5+= (I am quite sure that Murphy would have played 10.0–0 and mate his opponent in a few moves, but against the correct defense, he cannot hope for a real attack. 10...♘f6 11. ♙xf4 d6 12. e5 (12. ♙h4 ♙g7 followed by ♙f8 and ♙g8.) 12...dxe5 13. dxe5 ♙d4+ Black exchanges the queens by giving back a piece, but he still has an extra piece.)]

9. ♙xf4 Suddenly, the ♙g5 threat is very unpleasant, but it was still not too late to save the game.

9...♘f6? This is the decisive mistake, Murphy cruelly punishes his opponent... [9...♙g7 should have been played, in order to meet ♙g5 with ♙f6. 10. ♙g5+ (10. e5 ♙e8! 11. ♙g5+ ♙f6! 12. ♙xf6+ ♘xf6 13. ♙h4 ♙g6 14. 0–0 ♙g8 15. g3 d5 and the king has avoided the main danger.) 10...♙f6 11. ♘c3 ♙e8!↵ An important defensive resource to free the d8 square for the king.]

10. ♙g5 ♙g7 11. e5 ♙e8! 12. ♙h4! Similar to the 9... ♙g7 line, but with the bishop on f6, it was more forcing for White to take on f6. Now White takes only when it hurts the most...

12... ♙g6 [12...♙d8 loses to 13.0–0! with the threat of exf6 13...h6 14. ♙xf6+ ♙xf6 15. ♙xf6+ ♘e7 16. d5!+- Crushing.]

13.0–0! White increases the pressure to the maximum.

13...d5 [13...♙f7 14. ♙xf6+-; 13...♙f8 leads to the nicest mate in this game... 14. exf6+ ♙xf6 15. ♘c3! ♙xg5

16. ♖ae1+ ♘e5 White can choose between many winning lines, but the nicest is definitely (16... ♔d8 17. ♙xg5 ♙xg5 18. ♖xf8#)

17. ♖xf6! ♙xh4 (17... ♙xf6 18. ♘d5++-) 18. ♘d5+! and mate in a few moves. 18... ♙e8 19. ♖xe5+ ♙d8 20. ♖xf8#]

14.exf6+ White wins the sacrificed pieces and the mating attack continues. The game is over.

14... ♙f7 15.fxg7+ ♙xg7 16. ♖f6 ♙f5 17. ♖xg6+ hxg6 18. ♙f6+ A nice victory, but this kind of chess would hardly pay out nowadays. **1-0**

Editorial Preface

The main story of the week is definitely the Dortmund Chess Festival. The system is back to a 10 players single round-robin, instead of the 6 players double round-robin. For the first time, 4 German players are participating in the event, exactly the 4 players that won the European Team Championship 2011.

As usual, many Top 10 players are invited as well, with Kramnik, Karjakin, Caruana, Leko, Ponomarev making the tournament super strong. M.Bartel, who qualified in the Aeroflot Open, seems to be in a bad shape. Until now, there have been a lot of fighting and exciting games, it's a clear must for a chess fan to have a look at a few of them. Of course, we comment games from the event for You.

Another female Grand Prix has started, Koneru is a clear favorite to take the first place.

The Turkish league is another chess event with a few super starts participating, like Adams, Mamedyarov and Polgar.

The Dutch Chess Championship has begun, Giri is dominating the tournament until now.

Instead of Arkadij Naiditsch, this week Kamil Miton commented the 2 games for You. He is the usual analyst in the Chess Evolution book issues, so we hope You will enjoy his comments as well. Also, we hope that you understand that Arkadij is playing the Dortmund Super Tournament, and in such events, full concentration is required.

Another important announcement, please keep around **6MB of free space** in Your email box! Every CEWN issue is around this size. In case there is no way to make this space free, please contact us. We will send out "Zip" files.

As usual, have fun with the new material included in the CEWN Nr. 21!

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Gustafsson,J (2629)
– Kramnik,V (2799) [E94]

Dortmund, 14.07.2012

[Balogh Csaba]

In this game, we can see the fruits of Kramnik's great re-search work.

1.d4 ♘f6 **2.c4** g6 **3.♘c3** ♙g7 What a surprise! Kramnik plays the King's Indian defense. He employed it in 3 normal time control games during his whole career (according to my database at least). The last time he used it was in 1997.

4.e4 d6 **5.♘f3** 0–0 **6.♙e2** e5 **7.♙e3** Gustafsson does not like deviating from his well analyzed lines. This, of course, made Kramnik's task much easier.

7...c6 **8.0–0** exd4 **9.♘xd4** ♖e8 **10.f3**

10...d5 A very concrete line, in which Gustafsson came up with a nice novelty in 2011, which was analyzed in many articles as the new way to go.

11.cxd5 ♘xd5 **12.♘xd5** cxd5 **13.♖c1!?** This is the „new way“. [13.♖b3 was the old line, but after 13...♘c6 14.♖ad1 ♘xd4 15.♙xd4 ♙xd4+ 16.♖xd4 ♖f6! Black solves his problems according to the theory.]

13...a5!! [13...♘c6 This natural developing move happened in Gustafsson's first game. 14.♘xc6 bxc6 15.♖xc6 ♙b7 16.♖c1 dxe4 17.♖xd8 ♖axd8 18.f4! and White got a small advantage. He has a great blockade on e3 and he can slowly use his pawn majority on the queenside. 18...♙d4 19.♙f2 ♙xe3+ 20.♙xe3+= Gustafsson-Maze, Aix-les-Bains 2011.; 13...dxe4 14.fxe4 ♖xe4 (14...♙xd4 15.♙xd4 ♘c6 After analyzing the game, it's an interesting question what White can do here...) 15.♘e6!! is White's point behind 13.♖c1, the bishop on c8 is hanging.]

14.♖b3 Objectively not a bad move, but from a psychological point of view, it was exactly what Kramnik expected. [14.♙b5 was my first idea, using the b5 square, but after 14...♙d7 Black develops comfortably. 15.a4 dxe4 16.♙c4 ♙xd4! As we will see, this is always Black's defensive idea. 17.♙xd4 (17.♖xd4 ♘c6 18.♖c3 ♖c8 19.fxe4 ♘e5 Black is fine.) 17...♙e6 18.fxe4 ♘c6 After exchanging the queens, Black does not need to worry about getting mat-

ed.; 14.♘b5 Black can easily parry the threats around the c7 square. 14...♘c6 15.♙f4 ♙e5 is the easiest. 16.♙xe5 ♖xe5 followed by ♙e6 and dxe4. ♔b6 check is also annoying in many lines.; 14.♖h1 is the machine's recommendation. Probably Kramnik prepared 14...dxe4 15.fxe4 (15.♙c4 is met with the usual 15...♙xd4 16.♙xd4 ♘c6) 15...♙xd4! 16.♙xd4 ♘c6 17.♙f6 ♔xd1 18.♖fxd1 ♖xe4 and Black holds the material balance in a miraculous way. 19.♖xc6 (19.♙f3 ♖e8 should be a draw after ♙xc6.)

19...♙f5!! Two pieces are hanging, and on 20.♖c2 ♖e6! Black recovers the bishop.; 14.♔d2 would be a very logical response. The idea is simple: to protect the e3 bishop. White wants to take on d5, followed by, for example, ♔xd5 ♙c4. 14...dxe4 15.fxe4 (15.♙c4 ♙xd4 16.♙xd4 ♘c6) 15...♙xd4 16.♙xd4 ♘c6 And in comparison to all the lines we examined before, White has a very dangerous alternative: 17.♖xc6! bxc6 18.♖xf7!! A really spectacular double rook sacrifice, unfortunately it only leads to a draw. 18...♙xf7 19.♔f4+ ♙f5! Only move! Black has enough material to give back. (19...♙g8 20.♙c4+! followed by ♔e5 after both possible blockading moves on e6...) 20.♙c4+ (20. exf5? is not good. 20...♖xe2 21.fxg6+ ♙xg6 22.♔g4+ ♔g5 23.♔xe2 ♔c1+! After this important check, White is forced

to exchange queens, which was clearly not his intention.) 20...♙e7! 21.exf5 The pair of bishops have an incredible power against the e7 king, but Black is lucky to save the game. (21.♙c5+ is also possible 21...♙f6 22.exf5 ♔d1+ 23.♙f1! (23.♙f2 loses to 23...♖e5! 24.♙d4 ♔e1+ 25.♙f3 g5!) 23...♖e1 24.fxg6+ ♙xg6 25.♔g3+ ♙f7 26.♔c7+ is probably a draw.) 21...♔d6! 22.♙e5! (22.f6+ ♙d7 The king is heading to safety.) 22...♔d1+ 23.♙f2 and here, according to the machine (I think, we can believe it in this kind of positions), Black has nothing better than to settle for a draw with 23...♔c2+ 24.♙g3 ♔xf5 25.♔d4! ♔g5+ 26.♙h3 ♔h5+ 27.♙g3= I am pretty sure that Kramnik has also analyzed until this moment, but his analysis were going much deeper and detailed.]

14...a4! 15.♔xd5 ♔xd5 16.exd5 White proves the point of his 13.♖c1 move again. The e3 bishop is not hanging.

16...a3!? [16...♘c6!? was an interesting alternative, after which White must be very careful not to stay worse. 17.♘c2! Only move. 17...♘b4! 18.♘xb4 ♖xe3 White is a pawn up, but the Black bishops start to work. 19.♙f2 ♖e8 20.♖fd1 The check on d4 had to be prevented. 20...♙xb2 21.♖c7 and the d-pawn gives enough counterplay for White to hold the draw. For example_ 21...♖d8 22.d6 ♙a3 23.d7 ♙xb4 24.dxc8 ♔ dxc8 25.♖xb7=]

17.b3? [Following the „less pieces, less problems” principle with 17.bxa3! would have been the right decision to try to make a draw. This was much more principled from a practical point of view as well, because Gustafsson has already spent all his time. He only had about 15 minutes, while Kramnik had around 1 hour and 30 minutes. 17...♖xa3 18.♙f2 ♖xa2 19.♖fe1 with a drawn position.]

17...♞c6! From now on Kramnik shows no mercy.

18.♞c2! Just as in the previous case, this is the only move. [18.♞xc6 ♜xe3; 18.dxc6 ♜xe3 19.♞fd1 ♞xd4 20.♞xd4 ♜xe2 21.♞d8+ ♔g7 might seem a bit suspicious, but Black is winning.]

18...♜xe3! Probably Gustafsson missed this move when he played 17.b3.

19.♞xe3 ♞b4 Black is going to take the a2 pawn and his a-pawn will be amazingly dangerous, thanks to the support of the dark squared bishop and the rook. In addition, the ♞d4 threat is also in the air.

20.♞c4 Gustafsson went under 5 minutes, not a good sign in such positions... He made the most logical move again, but it was bad once again. White prevented the ♞d4 threat... [The computer could still have saved the game by playing 20.♞c7! ♞d4! (20...♞xa2 21.d6 The d-pawn compensates again. Strangely, the computer shows a White advantage here.) 21.♞e7 ♞xd5 22.♞e8+ ♔g7 23.♞d1! This kind of chess is, of course, not for human beings. Especially with so little time on the clock. 23... ♞xe3+ (23...♞c3 24.♞f1 ♞xe3 transposes.) 24.♞f1 ♞c3

25.♞xe3 ♞xd1 26.♞xd1 ♞f5 27.b4! and White holds the draw after putting the bishop on b3.]

20...♞xa2 21.♞a4?! [21.♞c2 gave better practical chances, but still, after 21...♞c3 22.♞d3 a2 the position does not look great.]

21...♞xa4 22.bxa4 ♞d4 23.♞f2? The final mistake! Once again, White made the most obvious move (chess is sometimes a strange game). [The machine's 23.♞h1! would have forced Kramnik to show his excellent technique. 23...♞b4! (23...♞xe3 is not precise, because of 24.♞a1) 24.♞c4 ♞xe3 25.♞a1 ♞c5 26.♞xa3 ♞xd5 when Black is clearly better, but White has very good chances to get rid of the queenside pawns with a5-a6, which definitely increases his chances to survive.]

23...♞b4 Now the a-pawn promotes! It made a nice career in this game.

24.♞c1 a2 Kramnik was in sacrificing mood today. [24... ♞d7 was also good enough.]

25.♞xc8+ ♔g7 26.♞c1 ♞xd5! And White cannot avoid ending up with a huge material disadvantage...

27.♞d1 ♞xe3 It will be interesting to follow this line in the future, to see how the players try to refute the 13...a5 move. **0-1**

(2) Kamsky,G (2744) – Le Quang Liem (2693) [A31]

Amsterdam, 14.07.2012

[Balogh Csaba]

Recently, all the top players are varying their first moves. Theory is already so huge that they must bring the surprise factor in their games.

1.c4 c5 2.♘f3 ♘c6 3.d4 cxd4 4.♘xd4 ♘f6 5.g3

5...e5!? It was a forgotten sideline until 2011, when Grischuk successfully employed it against Kramnik. It gives up the d5 square, but in our computer era, the machines find concrete sense behind all the moves. It was impossible to meet such a move from a top player 20 years ago...

6.♘b5 ♘b4+ 7.♘1c3 [The point of the 5...e5 move excellently comes out after 7.♘d2 a6 8.♘5c3 d5! Despite that seemingly White did everything well, Black overtook the initiative. 9.cxd5 ♘xd5 10.♘g2 ♘e6↑]

7...a6?! A dubious novelty to the mentioned game. I hardly believe this was a prepared one by the strong Vietnamese GM, I think he mixed up something in his memory. [7...d6 8.♘g2 (8.a3!? could be Kamsky's improvement. 8...♘xc3+

9.♘xc3 (After the concrete 9.bxc3 0–0 10.♘xd6 ♔a5 Black gets very strong counterplay.) 9...♘e6 Black must act. He attacks the c4 pawn and prepares for the break with d5, which could solve his opening problems. At this moment, maybe Kamsky has prepared a pawn sacrifice, which would fit his style. 10.♘g5!? ♘xc4 11.♔c1 ♘e6 12.♘g2 creating very strong counterplay on the light squares. I don't think White can be worse, the question is whether he can be better if Black plays correctly. Probably future games will show us.) 8...a6 9.♘a3 ♘xc3+ 10.bxc3 0–0 11.0–0

11...h6 An interesting position. Both sides have their pluses and minuses. White is doing well on the light squares, but the doubled pawns on the c-file are weak. Black has a backward pawn on d6, but has a quick counterplay against c4 with ♘e6 and ♘a5. The a3 knight is standing poorly, White must waste some important tempi to improve it. 12.♘c2 ♔c7 13.♘e3 ♘e6 14.♘a3 ♔fd8 with a more or less balanced position in Kramnik-Grischuk, Kazan 2011.]

8.♘d6+ ♔e7 9.♘f5+! White wants to consolidate his position and organize his play around the d5 square. [9.♘xc8+ would allow a quick counterplay against the c4 pawn. 9...♔xc8 10.♘g2 ♘a5!]

9...♔f8

10. Nxe3! Otherwise, Black had the d5 break. Now, it's Black's turn to do something quickly, otherwise he'll get a much worse version than the Kramnik-Grischuk game. The White knight stands excellently on e3 and Black has lost the right to castle.

10... Nxe4 11. Nxd5 Nxc3 Black preserves his bishop and creates the usual weaknesses on the c-file.

12. bxc3! [12. Nxc3 would allow a quick counterattack against the c4 pawn. 12... d6 13. g2 e6]

12... Bc5 13. g2 d6 14. Be3! The right decision! White must exchange the strong dark squared bishops, after which the d6 and b7 pawns, and the b6 square, are more vulnerable. [14. 0-0 was also good, but the next move should be Be3 anyway.]

14... Bxe3 [On other moves, like 14... Be6 White wanted to play 15. Bxc5! dxc5 16. Bb1 Bb8 17. 0-0 followed by Bb3, Bfd1 with big pressure.]

15. Nxe3 Be6 16. 0-0

16... Ke7 [On 16... Na5 White probably prepared an intuitive sacrifice 17. c5! 17... dxc5 18. Ba4! and Black cannot avoid the invasion of the rooks on the d-file. 18... g6 19. Bfd1 Bc7 20. Nd5 Bxd5 21. Bxd5 Kg7 22. Bd7+/-]

17. Bd3! I really like this move, despite it's not the only one that gets a big advantage. White develops logically, and at the same time, sticks the h8 to defend h7, which will cost another important tempo to Black. [17. Bb1!? Bc7 18. Ba4 was in a completely different style, but also very good. 18... Rac8 19. Bfd1 with a big advantage. Black cannot finish his development with 19... Bhd8 because of 20. Nd5+! Bxd5 21. cxd5 Na7 22. Bh4+! and h7 falls. This kind of hidden checks are very easy to blunder.]

17... Rc8 18. Bb1! Developing with a tempo against the opponent's weakness is always nice.

18... Bc7

19.f4! This attack was in Kamsky's mind when he played 17.♔d3. For such decisions, you must have strong intuitions, because if the attack does not break through, White just creates weaknesses on his own camp. Now the concrete threat is f5, winning a piece because of ♘d5.

19...♘a5 [19...exf4 20.♘d5+ ♕xd5 21.♕xd5 will be similar to the game.; 19...f6 loses to the nice 20.♕h3! and Black has no move.]

20.♘d5+! ♕xd5 21.♕xd5 It will be bad for Black to neutralize the power of the d5 bishop. Note that the h8 rook is still paralyzed because of the ♔d3 move. Any kind of attempt to activate it with h6 or g6 would just create new weaknesses.

21...f6 22.♔f5! A very nice regrouping. Kamsky simply plays this game perfectly.

22...♔d7 23.♔h5! The new threat is fxe5 opening the lines against the Black king, against which Black cannot do anything. The game is practically over.

23...exf4 This had to be really hard difficult to make, since Black should have kept the position closed at any cost. But Le Quang could not find a way to deal with fxe5

and decided to open the position himself. [For example, after 23...♔d8 24.fxe5! and either the rook invades on f7 or the opening of the d-file decide the game.; On 23...♔e8 24.♔g4+- wins.]

24.♔xf4 ♔c5 [24...♔d8 in order to find shelter for the king on the queenside would be refuted by 25.♕e6! ♔xe6 26.♔xa5+ followed by ♔xb7. This is the reason why Black played 24...♔c5.]

25.♔xf6!! This beautiful tactical blow puts the point at the end of the game.

25...gxf6 [Black loses even more material after 25...♔xf6 26.♔f1+ ♔e7 27.♔f7+ ♔d8 28.♔g5+! The most accurate way to win. 28...♔c8 29.♔xd7 ♔xd7 30.♔xg7+-]

26.♔f7+ ♔d8 27.♔xf6+ ♔c7 28.♔xh8 The game is over! White has a huge material advantage and his pieces continue dominating.

28...♔e7 29.e4 It is always a pleasure for an 1.e4 player, to play e2-e4 in the later period of the game.

29...♔d7 30.♔f1 ♔b6 31.♔f7 ♔a4 32.♔d8+ ♔a7 33.♔xd6 ♔a3 34.♔g2! Of course, all the moves were win-

ning, but I like this a lot, to avoid giving the smallest hope of some kind of perpetual check.

34... ♔**xa2+** **35.** ♔**h3** ♖**c8** **36.** ♔**b4** An impressive victory by Kamsky, although it's a pity for him that it didn't count for the rating. **1-0**

(3) Karjakin, Sergey (2779)
– **Fridman, Daniel (2655) [B12]**

40th GM Dortmund GER (5), 17.07.2012

[Kamil Miton]

We are in the 5th round of the tournament. Lately, I would say that playing the Caro-Kann against Karjakin is similar to have a race at 1 km/hour against a Bugatti Veyron. He is simply winning all his games in it... We see another great attacking game of White! Bravo Sergey.

1.e4 c6 2.d4 d5 3.e5 ♙**f5 4.** ♘**f3 e6 5.** ♙**e2 c5** Another option is: [5... ♘e7 The favorite move of A.Karpov, with the idea of playing the thematic c5 a bit later.]

6. ♙**e3** ♔**b6** A very sharp move that leads to complex positions. The queen is very well placed on b6 because it immediately puts pressure on b2 and d4. The problem for Black is that White gets much better development. A more quiet alternative is: [6... cxd4 7. ♘xd4 ♘e7 but Fridman already tested it in the same tournament against Caruana with a bad result, so probably he wanted to change the line.]

7. ♘**c3** We know that usually in this structure the c3 square is reserved for the pawn to support the central pawns on d4-e5, but in this case, the development is more important.

7... ♘c6 8.0-0 If you said A you have to say B. Black has no choice and has to take the pawn because ♘a4 is a threat. After **8... cxd4 9.** ♘**xd4**, White gets strong activity.

8... ♔**xb2 9.** ♔**e1** [9. ♘b5

9...c4! 10.♘c7+ ♔d7 11.♘xa8 ♙xc2 ∞ The king can feel safer now because Black managed to close the position. Black will win the knight on a8 anyway, and thanks to the strong pawns on the queenside, he should have enough compensation.]

9...cxd4 [9...c4 The same idea in order not to allow the White pieces to get stronger activity. 10.♖b1 ♔xc2 11.♖xb7 Now, White should try to improve the pieces with ♙d1–Ba4 or ♔a1–Rb1, getting a guaranteed initiative.]

10. ♙xd4 ♘xd4 11. ♘xd4 ♙b4 12. ♘db5 In the previous games, White played: [12.♖b1 ♙xc3 13.♖xb2 ♙xe1 14.♖xe1 b6 15.♙b5+ ♔f8 16.♘xf5 exf5 17.♖b3 In this endgame, Gashimov and Svidler managed to score the full point, but objectively, after deep analysis, the position is probably drawish.]

17...♘e7 18.♖c3 ♖c8 19.♖xc8+ ♘xc8 20.♖d1 ♘e7 21.f4 g5 22.fxg5 h6 23.c4 hxg5 24.cxd5 ♘g6 25.♖f1 f4 26.d6 ♔g7 27.♖e1 ♘f8 28.♙d3 ♘e6 29.♙f5+= 1–0 Svidler,P-Postny,E/ Ningbo CHN 2011 (37).]

12... ♙a5 Logical move. Black avoids the ♘c7 threat and maintains the unpleasant pin. In the previous Karjakin game, his opponent played: [12... ♙xc3 13.♘xc3 but now, the problem is that Black will not castle on time. 13...a6 (13...♘e7 14.♖b1 ♔xc2 15.♖xb7+/-; 13...♘h6 14.♖b1 ♔xc2 15.♙b5+ ♔f8 16.♔e3+/-; 13...♔xc2 14.♖b1↑) 14.♖b1 ♔a3 15.♖xb7 ♘e7

16. ♙b5+! Thanks to this trick, Black will need to lose time in order to secure the king. 16...♔f8 17.♙d3 ♖c8 18.♘e2 ♙xd3 19.cxd3 g6 20.♔d2 ♔g7 21.♖fb1 ♖he8 22.h4+/- The Black position is very bad. 1–0 Karjakin,S-Tukhaev,A/ Plovdiv BUL 2010 (30).]

13. ♖b1 ♔xc2 14. ♖b3 ♘e7 [14... ♙g6 is too slow. 15.♘d4 ♙xc3 16.♖xc3 ♔b2 (16...♔e4 17.♔d1 ♔xe5 18.♔a4+ ♔f8 19.♔b4+ ♘e7 20.♖fc1+-) 17.♙b5+ ♔f8

18.f3 and the Black queen is trapped! 18...a5 19.a3+-]

15.♘d6+ ♔f8 16.♘xb7 ♙b6

17.♘d6 N [17.♙d1 This move was played a few weeks ago during the Greek Team Championship. I spoke about this interesting game with Postny (he played in my team). He told me that the engines show all the time an almost equal position, and that Black should be fine here, but of course, from a practical point of view, it's much easier to play with the White pieces. 17...♙c1 18.♘a4 ♙c7 The most human move. Finally, the Black queen escaped from the trap and found a safe place. (18...♙d4 Black saved the bishop and puts pressure on the e5 pawn. 19.♘d6 ♙f4∞) 19.♘d6 ♙g6 20.♙b4 ♔g8 21.♘xb6 axb6 22.♙c3 ♙d8

The strong knight on d6 and the time to play h6-Kh7 gives White compensation, but nothing more. 23.♙a4 h5 24.♙fc1 ♔h7 25.♙c7 ♘f5 26.♘xf5 ♙xf5 27.♙xf7 ♙c8 Finally, White recovered the pawn, but Black solved all his problems. 28.♙xc8 ♙xc8 29.h3 ♙c1+ 30.♔h2 ♙c8∞ 1/2-1/2 Caruana,F-Postny,E/Achaea GRE 2012 (40).]

17...♙a5 [17...♙g6 18.♙d1 ♙c1 19.♘a4 It's very important to eliminate this strong bishop for White to get pressure on the dark squares. 19...♙c7 Similar to the Caruana-Postny game. (19...h6 20.♙c3 ♙f4 21.♘xb6 axb6 22.♙c7↑; 19...♙d4 20.♘b5 ♙b6 21.♘xb6 axb6 22.a4↑ with the idea of ♙c3-Rc7-Qb4.; 19...♙d8!?) 20.♘xb6 axb6 21.♙b4 h6 (21...♘c6 22.♙c3 (22.♙f4

22...♙a5! Very nice move! The rook on the 5th rank is perfectly placed to create counterplay against the e5 pawn, and the knight on d6 after d4. Besides, it defends against the White pressure on the c-file, because after 23.♙c3, Black can play 23...♙c5.) 22...d4 23.♙c4 ♙a5 24.f4 ♙c5 25.♙a6 ♔e7 26.♘b5 ♙b8 27.♘xd4 ♘xd4 28.♙xb6+-) 22.♙xb6 (22.♙c3=∞) 22...♙xb6 23.♙xb6 ♔g8 24.a4 ♔h7=]

18.♙f3 Logical move. White is going to improve his pieces after ♙e3-Rc1. The threat against d4 is stopped

because the rook on a8 is hanging. [18.♔c1?! After the queen exchange, White still has some initiative but it's not as strong. 18...♕xc1 19.♖xc1 g5∞]

18...♕d3 This move forces White to exchange queens.

19.♔c1 ♕xc1 20.♖xc1 ♘g6? A mistake, Black immediately looks for counterplay on e5. I'm sure that Fridman saw the next Karjakin's move but I suppose he missed something in his deep calculation. He should play: [20...♕g6 escaping from the ♘xd5 threat. 21.h4 (21.♖b5 ♕b6 22.♘a4 ♕d4 It's not easy to exchange the bishop! 23.♘c5 ♖g8 24.♘d7 h5 A logical move that we saw already many times. The rook on h8 is also out of play. 25.♖b4 ♖d8 26.♖c7 ♕a1! ∞; 21.♖b7 ♕d3!? with the idea of keeping the possibility of taking out the rook from the 7th rank after ♕a6. 22.♕d1 ♕a6 23.♖d7? ♕c8 24.♘xc8 ♖xc8=+) 21...h5 (21...♘c6 22.♘xd5 ♘xe5 23.♘c7 ♘xf3+ 24.gxf3 ♖d8 25.♘b7 ♕xc7 26.♖xc7+/-) 22.♖b7 ♕d3 (22...♘f5!?) 23.♕e2 The bishop didn't play on f3. 23...♕xc3 24.♖xc3 ♕xe2 25.♖cc7 and now both options lead to a draw. 25...♘f5 (25...♕a6 26.♖xa7 ♖xa7 27.♖xa7 ♕c8 28.♖c7 ♕a6=) 26.♖xf7+ ♖g8 27.♘xf5 exf5 28.♖xg7+ ♖f8=]

21.♘xd5!+/-

21...♘xe5 [21...exd5 22.♖xd3 ♘xe5 23.♖xd5 ♘xf3+ 24.gxf3 ♕b6 The more active pieces and the badly placed king on f8 give White a strong initiative. 25.a4! White is going to take out the bishop from its nice square.

25...g6 26.a5 ♕d8 27.♖b5 (27.♖c8 ♖xc8 28.♘xc8 ♕c7 29.♖c5 (29.♘xa7

29...♕e7! Black gets good counterplay against the pawn. 30.♘c6+ ♕e6 31.♖d1 ♖a8=; 29.♖d7 ♕xa5 30.♘d6 ♕b4 31.♘xf7 ♖g8 32.♘g5 ♕e7 33.♘h7+ ♕e8 34.♖xa7 g5=X♘h7) 29...♕b8 30.♖b5 ♕f4 31.♘xa7 ♖g7 32.♘c6 ♖a8) 27...♕g7 28.♖b7 ♖f8 (28...♕xa5 29.♖xf7+ ♖h6 30.♖c4→) 29.♖c5+= The Black position is very passive, but he still has drawish chances.]

22. ♖f4 ♗xf3+ [22... ♖d8 23. ♗b7+-]

23. gxf3 ♕g6 [23... ♕d2 24. ♖c7 (24. ♗xd3 ♕xc1 25. ♗xc1 ♖e7 26. ♗e4 ♖hd8 ∞) 24... ♕xf4 25. ♖xf7+ ♖g8 26. ♖xf4 ♕g6 Maybe this was a better option for Black. Anyway, the White position is much better thanks to his very active pieces.]

24. ♖b7 ♕b6

25. ♖c8+! After this exchange, White can create additional threats on the 8th rank.

25... ♖xc8 26. ♗xc8 The next moves in the game are quite forced. Black is lost...

26... ♕d4 27. ♖b8 ♕e5 28. ♖a8 [28. ♗xg6+ hxg6 29. ♗d6+ ♖e7 30. ♖xh8 ♕xd6 31. ♖a8 ♕c5 If this end-game is winning for White, it's quite unclear...]

28... ♕xf4 29. ♗xa7+ ♖e7 30. ♖xh8 ♖d7 31. ♗b5 ♕e5 The two bishops are always strong pieces. In this case, a pawn guarantees the victory for White.

32. a4 ♖c6 33. ♗c3 Good move. White is going to play ♗e4 eventually, in order to limit the bishop on g6. The knight is not hanging because of ♖c8.

33... ♕c2 34. a5 ♕g6 [34... ♖b7 35. ♗e4 ♖a6 (35... h6 36. ♗c5+-) 36. ♖xh7 ♕d4 37. ♖h8 ♖xa5 38. ♗g5+- The Black king is too far away.]

35. ♗e4 ♖b5 36. ♖a8 h6 37. ♖g2 f5 Now the e6 pawn is weak. White can win in many ways, the rest needs no comments. We can watch and enjoy.

38. ♗d2 ♕d6 39. a6 ♕f4 40. ♗c4 ♕h5 41. a7 ♖a6 42. ♗a5 ♕c7 43. ♖c8 ♖xa7 44. ♖xc7+ ♖b6 45. ♖xg7 ♖xa5 46. ♖h7 An interesting game and the second Fridman lost with the Caro-Kann. We can see that 12. ♗db5 recently played in two occasions is an important theoretical moment, so probably You can expect more about this line in Your next Chess Evolution book! **1-0**

(4) Leko, Peter (2730) – Gustafsson, Jan (2629) [C84]

40th GM Dortmund GER (3), 15.07.2012

[Kamil Miton]

1.e4 In this game, we will see Leko demonstrating many useful motifs on how to play the great „Spanish“, and what should White try to reach, and Black to avoid!

1...e5 2.♘f3 ♘c6 3.♙b5 a6 4.♙a4 ♘f6 5.0-0! ♙e7 6.d3 The idea of this line is to slowly prepare the d4 move. For example, White plays first ♖e1–Nbd2–Nf1–Ng3 according to the Italian game and eventually takes advantage in the center with d4. The main line is 6.♖e1.

6...d6 More often black plays 6... b5 to disturb White so that he can't put the bishop on c2 in one move.

7.c3 0-0 8.♖e1 ♖e8 9.♘bd2 ♙f8 The idea of this thematic plan (Re8-Bf8) is to improve the bishop by g6–Bg7. Also, the rook on e8 is well placed to fight in the center (pressure on the e4 pawn) after White pushes d4.

10.d4 b5 11.♙c2 ♙g4!? The bishop on g4 is not perfectly placed, but the Black idea is to force White to start some

action in the center. It seems more logical to develop this way: [11...♙b7 which leads to very similar positions as the Zajcev Variation. The difference is that White didn't play h3. On the other hand, he played d4 in 2 moves. 12.d5 (12. a4 exd4 13.cxd4 ♘b4 14.♙b1 c5 15.d5; 12.♘f1 exd4 13.cxd4 ♘b4= Xe4) 12...♘e7 13.b3 c6 14.c4+=]

12.h3 Important move. If White plays 12.d5 first, then the Black bishop can go back to d7. [12.♘f1

12...d5! The Black pieces are ready to hit the center, now Black easily equalizes the position. (12...♙xf3 13.gxf3 ♘h5 ∞ Black should be fine thanks to the counterplay on the dark squares. Especially, the f4 square can be weak.) 13.exd5 ♙xd5 14.♘e3 ♙xf3 15.♘xd5 ♙xd1 16.♘xf6+ gxf6 17.♖xd1 exd4 18.cxd4 ♘xd4=+]

12...♙h5 13.d5 ♘e7 14.♘f1 After closing the center, White's idea is to gain a space advantage on the queen-side. Black should look for counterplay with f7–f5 (but in this case, the Black pieces are very badly placed to do it), or with c6.

14...h6 [14...♘d7 15.♘g3 ♙g6 16.a4+=; 14...c6 15.dxc6 (15.♙g5 cxd5 16.♙xf6 gxf6 17.♘g3 ♙g6 18.exd5 White wants to create a blockade on the light squares. (18.♘h4

dxe4 19. ♖xe4 ♗g7 20. ♖xg6 hxg6 21. ♖xd6 ♔f8= with the idea of f5-e4, activating the bishop.) 18...f5 19. ♖h4 f4 (19...e4

20.f3! ♔b6+ (20...e3 21.f4+= and the Black pawns on e3 and f5 are weak.) 21. ♖h2 exf3 22. ♔xf3 f4 23. ♖e4 ♗g7 24. ♔xf4 ♗e5 25. ♖f6+ ♗xf6 26. ♔xf6 ♖xd5 27. ♔f3 ♗xc2 (27...♖e3 28. ♖xg6 hxg6 29. ♗e4 d5 30. ♔xe3 dxe4 31. ♔xe4 ♔xe4 32. ♔xe4+=) 28. ♔xd5 White should be better thanks to his better structure.) 20. ♖e4 ♗g7 The Black position is fine, the next plan is f5-e4 with good play according to the Sveshnikov ideas.) 15...♖xc6 16. ♖g3 ♗g6 17. ♖h4 White can exchange the bishop on g6 or play the typical plan in this structures: ♖hf5-Qf3. 17...♖a5 (17...d5 18. ♖xg6 hxg6 19.exd5 ♔xd5 20. ♔xd5 ♖xd5 21. ♗g5+= White has an stable advantage thanks to the bishop pair.) 18. ♖xg6 hxg6 19. ♖f1+= After hxg6, there's nothing to do for the knight on g3. The White position is much more pleasant because of the two bishops and the weak d5 square.]

15.a4 Logical move, with the idea of creating some weaknesses on the queenside.

15...c6 Black has to make some space for his pieces.

16.dxc6 ♖xc6 17. ♖g3 ♗xf3 18. ♔xf3+=

18...b4 Black looks for some chance to get counterplay on the c-file against the c3 pawn.

19. ♖f5 bxc3 20. bxc3 It's obligatory for White to recapture on c3 with a pawn to control the important squares d4 and b4.

20...♖a5 Not a bad place for the knight, which doesn't allow to put the bishop on b3 (to pressure f7) and makes the c-file useful for the rook.

21. ♔d1 White starts creating pressure against the d6 pawn.

21...♔e6 22. ♗a3 g6 [22...♖c4! Why not this natural move? 23. ♗b3 (23. ♗b4 a5 ∞) 23...♔c8 24. ♖e3

a) 24. ♗b4 a5 Otherwise, White will play a5. 25. ♔e2 ♔c7 26. ♗xc4 ♔xc4 27. ♔xc4 ♔xc4 28. ♗xa5 ♖xe4 29. ♖e3 ♔c6 Thanks to the control over the d5 square, it's hard to improve the Black bishop. White's position is slightly better;

b) 24. ♔d3 ♔c7 25. ♖e3 ♖xa3 (25...♖xe3 26. ♗xe6 ♖xd1 27. ♗xc8 ♖xf2 28. ♔xf2 ♔xc8 29.a5+=) 26. ♗xe6 fxe6

27. ♖xa3 ♔c6 Black has compensation, the pawns on e4 and c3 are weak. Besides, d5 is a threat, but the most important factor is that the character of the position has changed, which can have a psychological meaning as well.;

24... ♘xa3! Probably, the German player missed this nice practical chance! 25. ♙xe6 fxe6 26. ♖xa3 d5 27. ♖aa1 (27. ♖b3 ♘xe4 28. ♔xe4 dxe4 29. ♖xd8 ♖xd8 30. ♖b6 ♖d3=) 27... ♘xe4 28. c4 ♘c3 29. cxd5 ♘xd1 30. ♖xd1 exd5 31. ♘xd5 White has some small advantage thanks to the weak light squares, but Black should draw this position without serious problems.]

23. ♘e3+/- The knight is very well placed on e3 because it controls the important d5 and c4 squares. Now Black is out of counterplay. The ♖c8 idea to pressure the c3 pawn is not really dangerous.

23... ♔g7 [23... ♖c8 24. ♙b4+/-]

24. ♙b4 ♖a7 25. ♖ab1 ♖e8 26. ♖d2 ♘c6 27. ♙c5 ♖d7 28. ♙b6 ♔a8

29. a5 Step by step, Leko improves his position. He doesn't need to hurry because Black cannot do anything. Now the a6 weak pawn is fixed and there's an additional useful square on a4 for the bishop.

29... ♖c8 30. ♖bd1 ♘b8 31. ♘d5 ♘xd5 32. ♖xd5 ♔c6 33. ♖5d3 ♖b7 34. ♙b3 ♔e8 35. ♙d5 ♖e7 36. ♔e2 White is dominating the whole board. He has a few winning plans: the c4-c5 break, penetrating on the b-file with the rooks, or just win the a6 pawn after, for example, ♖f3-Bc4.

36... ♘d7 37. ♖f3 ♘c5 Black activates his knight but this doesn't change the evaluation. We can agree that one of the reasons for Black to lose this game is the bishop on f8, which was very limited during the whole game. This kind of the bishops can be called „big pawn“.

38. ♖a1 [38. ♙xc5 would win as well... 38... ♖xc5 39. ♔xa6 ♔d8 40. ♖a1+/-]

38... ♘a4 39. ♔c2 ♘c5 40. ♔e2 ♘a4 41. ♔xa6 ♘xc3 42. ♔d3 ♘xd5 43. ♔xd5 ♔c6 44. ♖b3 ♔xd5 45. exd5 Finally, Black changes the structure, but it's too late now. The a-pawn is winning the game. A good technical game of Leko. 1-0

Endgame section

(15) Kramnik,V (2799) – Bartel,M (2674)

Dortmund, 15.07.2012

[Chess Evolution]

White is a pawn up, but the weakness of the d4 and a3 pawns give Black very good surviving chances... Black's queenside pawns seem to be pretty safe, while exchanging all of them and playing a 3 vs 2 on the kingside would be theoretically drawn. In this position, where Black felt to be close to a draw, Kramnik came up with a shocking idea!

32. ♖d3!! Kramnik would like to exchange his d4 weakness for Black's key pawn on b7, which holds the whole position together. If b7 falls, the life of the c6 pawn would be also limited. [After the passive 32. ♖e4 ♖a8 33. ♖a1 ♘d5 followed by doubling on the a-file, Black should objectively hold the draw.]

32... ♜xd4?! The most natural, but a bad decision by Bartel. His best chance would have been to win the a-pawn

and keep the d4 as a potential target in the future. [32... ♖a8! 33. ♘c5! (33. ♖e7 leaving the 2nd rank gives Black additional possibilities for an active defense. 33... ♘d5 34. ♖xb7 ♖xa3 35. ♖xc6 ♖xb3 36. ♘e5 ♖b2! Black is close to survive.) 33... ♖xa3 (33... ♖f7 34. ♖ce1 ♖xa3 35. ♖e8+ ♖f8 36. ♖1e7!+/- Exchanging a pair of rooks is always clearly in White's favor. This reduces Black's chances for a successful counterplay.) 34. ♘xb7 ♖xb3 35. ♖xc6 ♘d5 White must lose an important tempo because of the ♘e3 threat. 36. ♖g2 ♖b4 37. ♘c5! White is obviously better, but it is not clear if his winning chances or Black's drawing ones are better...; 32... ♖f7 would have been also logical, trying to save the important b7 pawn, but White has a concrete way to increase the advantage. 33. ♘c5! The d4 pawn is indirectly protected now. 33... h6 (33... ♖xd4? 34. ♖e8+ ♖f8 35. ♖xf8+ ♖xf8 36. ♘e6++-) 34. ♖ce1! and just as in the game, White manages to exchange d4 for b7. 34... ♖xd4 35. ♖e8+ ♖h7 36. ♖1e7!+/- White retains excellent winning chances.]

33. ♘c5 ♖b8 [33... ♖a8 is met with 34. ♖e7 ♖xa3 35. ♖xb7 ♘d5 36. ♘e6! Black collapses.]

34. ♖e7 The c5 knight is excellently placed. It not only attacks the b7 and threatens with ♘e6, but also prevents Black's main counterplay against the queenside pawns with ♜d3.

34... ♘d5 35. ♖xb7 ♖xb7 36. ♘xb7 ♘e7 [After 36... ♖d3 it is important to protect the b3 pawn. 37. ♘a5 (37. ♘c5 is also fine.; 37. ♖xc6?! would leave Black much closer to a draw. 37... ♖xb3) 37... ♘e7 38. ♖e2+/- White consolidated his position, he can start to slowly convert his advantage.]

37. ♖e2+/- If we compare this position to our initial one, it is clear that White has done a great job. He seriously increased his advantage. The next step is to create a passed pawn on the a-file, something that Black cannot really prevent.

37... ♜d7 38. ♞c5 ♜a7 39. ♜a1 Kramnik decided to delay the a4 pawn. First he wants to improve his king's position. [39.a4+/- was perfectly fine as well.]

39... ♞d5 40. ♔d3 ♞b6 It is not clear what was the aim of this move.

41. ♔d4 ♔f7 42. f4 White improves on his kingside pawn structure as well.

42... ♜a8?! [42...h6 43. ♞e4 frees the c5 square for the king **43... ♞d7 44.a4+/-** Black cannot resist long.]

43. ♞b7!+/- Great technique by Kramnik. [43.a4?! bxa4 44.bxa4 ♜a5! was Black's hope. White pieces are stuck to defend each other.]

43... ♞d7 [43... ♜b8 loses to **44. ♔c5!** Tactics are present even in endgames with a small amount of pieces. **44... ♜xb7 45. ♔xc6 ♜b8 46. ♔c7+/-** White wins back the piece.]

44.a4 bxa4 45.bxa4 Black cannot stop the pawn. It automatically goes to a6. The game is over!

45... ♔f6 46.a5 ♔f5 47.h3 It was not necessary at all, but Kramnik even prevented the ♔h4-h3 plan.

47...h5 48. ♞d6+ ♔e6 49. ♞e4 ♔f5 50.a6 Black resigned. **1-0**

(16) L'Ami,E (2615) – Sokolov,Ivan (2676) [C78]

ch-NED 2012 Amsterdam NED (3), 17.07.2012

[Kamil Miton]

65... ♖b5 Logical move. Black prepares ♖b2 with the idea of putting pressure on the h2 pawn and not allowing the White king to come to f6. [65... ♖f8 This move looks worse. 66. ♖e5 ♖e8 67. ♖f6 ♖d5 68. ♖f5 ♖e2 69. ♖f4 ♖xh2 70. ♖g6 ♖f3 (70... h4 71. gxh4 ♖xh4 72. ♖g5=) 71. ♖g5 ♖a2 72. ♖xh5=]

66. ♖c4 [66. h3 h4!]

66... ♖b2 67. ♖c3 ♖b7 68. ♖f4 ♖d5 The idea of this move is to put the bishop on f7 to protect the h5 pawn. If Black tries to attack the h2 pawn immediately, White will get counterplay attacking the h5 pawn (Bf7). [68... ♖a7 69. ♖g5 ♖a1 70. ♖f7 ♖h1 71. ♖xh5 ♖xh2 72. ♖f7 ♖d6 73. ♖d4=]

69. ♖d3 Of course, after the bishop exchange, the Black position is simply winning.

69... ♖b3+ [69... ♖c5 70. ♖e3+ ♖d6 71. ♖f4+ ♖e7 72. ♖g6 ♖f7 73. ♖e4 ♖b3+ 74. ♖c2 ♖f6 Black improves the position.]

70. ♖d4 ♖f7 71. ♖e4+ ♖d7 72. ♖c1 Not allowing ♖b2. An interesting alternative was to play with an active king. [72. ♖e5 ♖b2 73. h4 ♖e2 (73... gxh3 74. ♖f5+ ♖e7 75. ♖g5+ ♖e8 76. ♖xh3 ♖b3 77. ♖f4 (77. ♖f4 h4)) 74. ♖f5 ♖g6+ (74... ♖e6+ 75. ♖e5 ♖e7 76. ♖g5+ ♖f7 77. ♖f4 ♖c8 78. ♖d4 ♖b2 79. ♖d5+ ♖e6 80. ♖e4 To win this position, Black has to try exchange the light-squared bishops, but it's not an easy task.) 75. ♖xg6 ♖xe4 76. ♖g5 (76. ♖xh5 ♖xf4; 76. ♖b8 ♖b4 77. ♖e5 ♖e6 78. ♖c7 ♖b5 79. ♖f4 It's not easy to say how to improve the position.) 76... ♖e6 77. ♖xh5 ♖f5 78. ♖h6=]

72... ♖b6 73. ♖f5+ ♖e7 74. ♖g5+ ♖f8

75. h3 White reduces the material on the board. It's very logical to get rid of the weak h2 pawn, which was the main Black target.

75... ♖b4+ 76. ♖c5 [76. ♖e3 ♖b3+ and White loses the pawn.]

76... ♖c4+ 77. ♖d6 [77. ♖b5 gxh3 78. ♖xh3 ♖g7 The White king is cut very far from the kingside. Black has two ideas to win this position: to exchange the light-squared bishops, which is not an easy task, or win the g3 pawn and promote the h-pawn in the bishop endgame.]

77...♖d4+ 78.♔c6? [78.♔c7 More accurate to avoid the ♖d6 check (look at the line below).]

78...♔g7? Black missed an easy win after: [78...♖d5 79.hxg4 hxg4 80.♙h6+ ♔e7 White loses the bishop.]

79.hxg4 hxg4 80.♙f4

80...♖c4+ [80...♖xf4 81.gxf4 g3 82.♙h3 (82.♙e4 ♔f6 83.♔c5 ♙g6 84.♙g2 ♔f5 85.♔d4 ♔xf4 In this line, the Black win is even easier because White doesn't have ♔d2-Kd3. 86.♙c6 ♙h5 87.♙g2 ♙f3 88.♙f1 ♙b7) 82...♔f6 83.♔c5 ♙e6 84.♙g2 ♔f5 85.♔d4 ♔xf4 86.♔d3

86...♙g4 ! 87.♔d2 ♙f3 88.♙h3 (88.♙f1 ♙c6 89.♔e1 ♔e3 90.♙h3 ♙b5 91.♙g2 ♙d3 White will play ♙e4 next with

a simple win.) 88...♔g5 89.♔e3 ♔h4 90.♙f1 (90.♙e6 ♙g4 with an easy winning plan: the king goes to h2, then Black puts the bishop on g2 winning control of the h1–a8 diagonal.) 90...♔g4 91.♔d2 ♙d5 92.♔e3 ♙c6 Zugzwang, the Black king can get to f3.]

81.♔b5 This is the beauty of chess! Black's idea was very logical, to put the king farther and then get to the bishop endgame. Paradoxically, the White king will be on time compared to the 80...♖xf4! line.

81...♖xf4 82.gxf4 g3 83.♙h3 ♔f6

84.♔b4! With the king placed on c6, this move is not possible!

84...♙e6 85.♙g2 ♔f5 86.♔c3 ♔xf4 87.♔d2 And if now:

87...♙c4 [87...♙g4 88.♔e1 ♙f3 89.♔f1= and White is on time!]

88.♙c6 ♙f1 89.♙b7 Black can't improve the position because it's not possible to get the h1–a8 diagonal. The White king is very close and ♔e1–Kf1 always guarantees a draw.

89...♔g4 90.♔e1! White can't allow Black to put the king on h2.

**90...♘b5 91.♘g2 ♘c4 92.♔d2 ♔h4 93.♔e1 ♔g5
94.♔d2 ♔f4 95.♘c6 ♘a6 96.♘d5 ♘f1 97.♘c6 ♘h3
98.♔e2 ♘g4+ 99.♔f1 ♘f3 100.♘b5 ♔e5 1/2**

Clash of the Titans

(17) Capablanca,J – Chajes,O [C83]

New York New York, 1915

[*Balogh Csaba*]

A fine positional achievement by Capablanca. Curiously, the game was played 97 years ago, and it is still interesting from a theoretical point of view.

1.e4 e5 2.♘f3 ♘c6 3.♘b5 a6 4.♘a4 ♘f6 5.0-0 ♘xe4

The Opened Spanish variation, which has belonged to many World Champions' repertoire because of its complex middlegames. Nowadays, it went a bit out of fashion.

6.d4 b5 7.♘b3 d5 8.dxe5 ♘e6 This is basically the starting position in this opening. From now on, both players can choose between several playable continuations in each move.

9.c3 Currently 9.♘bd2 and 9.♘e3 are more popular. If somebody wants to play the 9.c3 system, it is advisable to start with 9.♘bd2 to avoid the complications of 9.c3 ♘c5, other lines usually lead to transpositions.

9...♙e7 [A very concrete and sharp line arises after 9...♙c5 10.♘bd2 0-0 11.♙c2 ♘xf2! 12.♖xf2 f6 13.exf6 ♙xf2+ 14.♔xf2 ♚xf6 when Black has a small material disadvantage, but the activity of his pieces, the undeveloped White queenside and the shaky king's position give very good compensation for Black. There are still hundreds of games in the database, for the ones who are interested, I recommend to check Jussupow's games.]

10.♘bd2 ♘c5 11.♙c2 d4 This is probably Black's best option, but it is pretty much about playing for a draw with simplifications in all the lines. 11...♙g4 was more often tried, but theory considers it to be better for White.

12.♘e4 [More precise is 12.♘b3 d3 13.♙b1 ♘xb3 14.axb3 ♙f5 is the start of the critical line about the correct evaluation of the variation. Currently, it is given to be equal, but the position is rich in resources.]

12...dxc3 White is back to the fight for the advantage after this move. [12...d3! is the right move, which almost leads to a draw by force. 13.♘xc5 dxc2 14.♚xd8+ ♖xd8 15.♘xe6 fxe6 16.♙e3 ♖d5 17.♖fc1 ♘xe5 18.♘xe5 ♖xe5 19.♖xc2 White is a tiny better because of his pawn structure, but it should not be enough for the full point.]

13.♘xc5 ♙xc5

14.♙e4! Very strong in-between move, which confuses the coordination of the Black's pieces.

14...♚d7! Black wins a very important tempo in comparison to the 14...♚xd1 move. [14...♚xd1 15.♖xd1 ♙d7 16.bxc3 is a much better version to the game.]

15.bxc3 ♖d8! Another strong move! [15...0-0-0 suggested to connect the rooks, but despite the fact that the queens will soon get off the board, White can launch a very dangerous attack with 16.♚xd7+ ♙xd7 17.a4! The e4 bishop plays a key factor in the position.]

16.♚xd7+ ♙xd7 17.♖d1 Capablanca played this twice, but maybe it is not the best... Black has a healthy position, the only problem to solve is the situation of his minor pieces (c6 knight and d7 bishop). Of course, it would be great for him to get rid of the e4 bishop, but it will not be easy. [17.a4 could be an improvement, to bring the a1 rook into the game. If White is better, the advantage is minimal.]

17...♘e7 [17...♘b8 happened in the 2nd game of Capablanca just one year after this one, but 18.♘d4 ♙e7 White could have get an edge with 19.♘f5! ♙xf5 20.♖xd8+ ♙xd8 21.♙xf5 pressing in the long-term with the bishop pair.; After connecting the rooks with 17...0-0! I could not find any way to fight for an advantage. It's important to mention that 18.♖xd7 does not work because of the mate on the back-rank. 18.♙g5 simply meets by (18.a4? in order to improve the a1 rook is a mistake now. 18...♙f5!) 18...♘e7! and Black can unpin himself by playing h6 next. For example 19.♘d4 h6 20.♙e3 ♙b6 Black is OK!]

18. ♖d4! The move is mainly against ♗c6, but it also creates the unpleasant threat of ♘b3 and the bishop retreats with ♗a3!

18...h6 This is a mistake. Black was afraid of the ♗g5 ideas, but the c1 bishop wants to develop in another direction... Black's position was already a bit unpleasant. [18...0-0 19. ♘b3! ♗b6 20. ♗a3! (20. ♗g5 Probably that is why Black played 18...h6, but it was not dangerous because of 20...f6! 21. exf6 gxf6) 20...♖fe8 21. ♗xe7 ♖xe7 22. ♗c6 and White doubles his rooks on the d-file.; 18... ♗f5 19. ♗f3! White must keep his strong bishop for the advantage!; 18... ♗g4 is a tricky move. The idea is to provoke f3, after which ♗f5 and the White bishop cannot retreat to f3 anymore. But White reacts calmly with 19. ♖d2! (19. f3 ♗f5) 19...0-0 20. a4 and he enjoys a small advantage.; 18... ♗c6 is the most principled move to exchange the bishops, but White has a strong tactical response 19. ♗xc6+ ♘xc6 20. ♗g5! ♘e7 21. ♘f5 !! 21... ♖xd1+ 22. ♖xd1 with a comfortable position.]

19. ♘b3! ♗b6 20. ♗a3 Suddenly, Black feels a bit uncomfortable, but he starts to defend resourcefully.

20...h5! Black wants to bring his rook along the 6th rank and also restrict White's pawn mobility on the kingside, where White has a majority.

21. ♖d3 White wants to double on the d-file, so the d7 bishop must move to exchange one pair of rooks. [On 21. ♘c5 the simple 21... ♗c8 and it's not easy to increase the advantage.]

21... ♗g4 I don't like this move. The passive 21... ♗c8 was clearly better, because White gets a very useful tempo by playing h3. [21... ♗c8 22. ♖xd8+ ♗xd8 23. ♖d1+ ♗e8 24. ♘c5 ♖h6 25. ♗f1 with the intention to play f4. White is a bit better, but it is playable for Black.]

22. ♖xd8+ ♗xd8 23. ♘c5 ♖h6! The idea of 20...h5 came out.

24. h3 [24. ♘xa6?! is a contradictory move, because it takes the bishop pair, but, on the other hand, it gives up the f2 pawn, which significantly worsens White's pawn structure. 24... ♗xf2+ 25. ♗xf2 ♖xa6]

24... ♗c8 25. ♖d1+ ♗e8

26. ♗f1! Capablanca prepares to play f4. First, he removes his king from the pin. After achieving f4, White could

28.exf6 ♖xf6

Editorial Preface

Another very interesting week full of high-class chess games.

The Dortmund Super Tournament came to an end, with Caruana and Karjakin sharing the first place with 6/9. Four players shared the 3rd-6th places with 5.5 points: Kramnik, Ponomarev, Naiditsch and Leko.

We saw a very dramatic last round with 5 players fighting for the victory of the tournament.

The ACP Chess Tournament, with adjournments, came to an end. Ivanchuk clearly dominated the event. It's hard to see the idea of the ACP with the adjourned games. This gives the players a chance to make very exact computer analysis.

The FIDE Woman Grand Prix is on the way, some interesting chess games were seen here as well...

The Biel Super Tournament has begun. Of course, the main focus is on Magnus Carlsen. Can he win this tournament as well?!

Next to the Super Tournament, we have a very interesting Open section, with a lot of GMs participating in it. It's going to be very interesting.

I think this week we have very exciting analyzed games for You! As usual, we wish You a lot of fun with the CEWN Nr 22.

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Naiditsch, Arkadij (2700) – Leko, Peter (2730) [B12]

40th GM Dortmund GER (9), 22.07.2012

[Arkadij Naiditsch]

We are in the last round of the Dortmund Super-Tournament. Five players with 5/8 are in the lead. What a dramatic last round! Among these 5 players are my opponent and me.

1.e4 c6 Usually, Leko is using the Marshall as his main weapon. I was a bit surprised with his opening choice...

2.d4 d5 3.e5 My main opening against the Caro-Kann is the Panov Attack, but I felt that I would not be able to create any problem for Black. It's very well known that Leko's preparation is extremely good.

3... f5 4. f3 e6 5. e2

5... e7 A relatively rare move. We see the line with 5...c5 more often.

6.0–0 c5 7.c4 Before this move I had to think a little bit and try to remember some lines. Luckily, I analyzed this position for one of my Chess Evolution books, but the funny thing is that the game on which I based my analysis was Leko-Roiz! During the game I really hoped that Leko didn't have a big trick in his pocket.

7... bc6 8. a3 This move is the idea behind the c4 push. Now 8... dxc4 9. xc4 d5 10. g5 probably leads to a slightly better position for White.

8... a6 9. dxc5 d4 10. a4 g6 11. d1 Until here, both Peter and me made our moves quite quickly and were still following the game Leko-Roiz.

11... d3!? And here comes the change that disappointed me. I expected Leko to repeat his own game, in which I had some improvement in mind. [11... xc5 12.b4 a7 (12... xb4 13.g4! seems to bring a serious advantage for White.) 13.c5 0–0 14. c4 e4 15. e3 d3 16. e1 d5 17. d6 gxe5 with a complicated, but probably equal position. Leko-Roiz, 2011 World Team Championship.]

12.b4 N I thought for a long time before playing b4. [12. e3!? could be another interesting choice...; 12. xd3 This move doesn't give White any advantage. 12... xd3

13. ♔b3 ♕xc5 14. ♖xd3 ♔c7 Black is winning back the e5 pawn, the position should be equal.]

12... ♕e7 Played quite quickly by Peter. So, my opponent was not really surprised by my move 12. b4, and it seems that 12.b4 is a novelty!. Amazingly deep preparation by Leko!

13. ♕xd3 The most logical move and the beginning of some exchanges. [13. ♔b3 This move gives away the e5 pawn and with it, probably any chances to be better. 13... ♖gxe5 14. ♗xe5 ♖xe5 15. ♕b2 ♕f6 and Black is doing perfectly fine.]

13... ♕xd3 14. ♔b3 White is winning back the piece.

14... ♖cxe5 15. ♗xe5 ♖xe5 16. ♕b2 ♔c7 17. ♕xe5 [Of course not 17.f4? ♕xc5+! 18.bxc5 ♔xc5+ 19.♔h1 ♖g4 and Black is winning.]

17... ♔xe5 18. ♖xd3 After a massive exchange of pieces, White seems to be a pawn up. But everything not clear at all. The Black bishop is a very strong piece and the White knight still needs to find a good place. Besides, Black will start to play against the White pawns on the queenside quickly.

18...0-0 19. ♗c2 Here I had no choice, I need to bring my knight back into the game.

19...a5 Black needs to open the a-file.

20. ♖e1!? It took me a while to realize that maybe I was not doing better at all. Take a look at the logical [Let's take a look at the logical 20.a3 ♖fd8! and Black brings the rook to the important d-file with a tempo. 21. ♔b3 Not a nice place for the White queen, but where else to go?! 21...axb4 22.axb4 ♖xa1 23. ♖xa1 ♕f6 I am still a pawn up, but what to do next? My queenside pawns are blocked and it seems almost impossible to mobilize them. The Black pieces are all very active and Black has a clear plan of improvement with h5-h4, starting to put pressure on my king. I think only White is in risk of getting in trouble here. Black is perfectly fine!]

20... ♔b2! A very strong move by Leko! The idea of this move is to bring the White rook from the a- to the b-file, in order to free the a-file for the Black rook. [20... ♔f6 would be a normal move too. 21.a3 ♖fd8 22. ♔e3 ♔b2 23. ♔e4 would maybe lead to the same position that we got in the game.]

21.a3 I had no choice. I needed to maintain my pawn structure.

21... ♖fd8 22. ♔e4 [In case of 22. ♔e2?! ♔c3! Black enters into the second rank. 23. ♖ad1 axb4 24. axb4 ♖a2 and probably Black is doing better.]

22... axb4 23. ♖ab1 Not a nice move to make, but a necessary one. [23. axb4? would have been a horrible blunder. 23... ♖xa1 24. ♖xa1 ♔xa1+! 25. ♘xa1 ♖d1+ and I would get mated.]

23... ♔f6 24. axb4 ♖a2 Another interesting moment. Where to put the White rook from e1, to e2 or to f1? The position is getting very sharp and every move could be decisive. It looks like I will get the b7 pawn, and Black is clearly going to base his counterplay on the strong rook on a2.

25. ♖f1 [25. ♖e2 ♔c3! This strong move gives Black great play. He wants to play ♖d2. 26. ♘e1 It looks like I have nothing better than this. 26... ♖xe2 27. ♔xe2 ♖d4 Black is winning the c4-pawn, getting a good position.]

25... ♖d2 Things start to look quite dangerous for White, but on the other hand, if I get the b7 pawn I might just be winning.

26. ♘e3 ♖xf2 27. ♔xb7 After some thinking I took the b7 pawn. I thought I needed one more move to be perfectly fine: to play ♔b8 followed by ♔g3 and it seems like all my pieces are protected. In case of winning this game I would share the first place in the tournament and get the first prize after the tie-break! However, Leko crushed my dreams with an amazing idea!

27... ♔f4!! what a fantastic move, with a very spectacular drawing idea.

28. ♔xe7 I played this with a slightly sad feeling, but what to do... [Doesn't get anything: 28. ♖xf2 ♔xf2+ 29. ♔h1 ♖e2! It's important for Black to push the White knight to f1 first. 30. ♘f1 and only now to play 30... ♖b2! Too many things are hanging in White's position, and probably, I will lose all my extra pawns on the queenside. It's clear that I have no chances to play for a win!]

28... ♖xg2+! The key move of Black's drawing idea.

29. ♘xg2 ♖xg2+ 30. ♔xg2 ♔g4+ My king can't escape from the checks on the 4th rank. What a beautiful draw.

31. ♔h1 ♔e4+

32. ♔g1 ♔g4+ 33. ♔f2 ♔f4+ 34. ♔e2 ♔e4+ 35. ♔d2 ♔d4+ 36. ♔e2 ♔e4+ 37. ♔d2 ♔d4+ 38. ♔e2 With this result, we both shared the 3rd-6th place.

1/2

(2) Kramnik,V (2799)
– Meier,G (2644) [A16]

40th Dortmund GER (9), 22.07.2012

[Balogh Csaba]

We are facing a spectacular victory by Kramnik from the final round. There is a funny part in the opening, because the same position might arise after 3 completely different move orders.

1.c4 [1.d4 ♘f6 2.c4 e6 3.♘f3 d5 4.♘c3 c5 5.cxd5 ♘xd5 6.e3 ♘c6 7.♙c4 cxd4 8.exd4 ♙e7; 1.e4 c6 2.d4 d5 3.exd5 cxd5 4.c4 ♘f6 5.♘c3 e6 6.♘f3 ♙e7 7.cxd5 ♘xd5 8.♙c4 ♘c6]

1...♘f6 2.♘c3 c5 3.♘f3 e6 4.e3 ♘c6 5.d4 d5 6.cxd5 ♘xd5 7.♙c4 cxd4 8.exd4 ♙e7 Here we are! :)

9.0–0 0–0

10.♙e1 This is the starting position of the line. A typical middlegame with the d4 isolani. Both sides have their own plans. White is generally aiming for active piece play in order to compensate for the d4 weakness, while Black wants to finish his development and secure a safe

blockade on the d5 square, in order to avoid White from getting rid of it with a d4-d5 push. In general, any kind of piece exchange that doesn't alter the pawn structure favors Black, because then, he can more comfortably organize his play against the d4 pawn. He does not need to worry about different kinds of active counterplay. Black has many different setups, but practice gives preference to two of them.

10...♙f6 Black has two ideas after this move. One is to quickly put pressure on the d4 pawn with ♘de7 and an occasional ♘f5 (of course in this case he must count with the d5 push), or to develop with ♘ce7 and b6-Bb7. The move's disadvantage is that it gives White the opportunity to obtain the bishop pair with ♘e4, taking the strong bishop. However, Black believes in the principle mentioned above (all exchanges favor him). [10...♘f6 11.a3 b6 is the alternative.]

11.♙b3 A very rare and tricky move by Kramnik, who definitely wanted to get his opponent out of his preparation. [There was a fresh high-level game on the main line: 11.♘e4 b6 12.♘xf6+ (12.♙xd5 exd5 13.♘xf6+ ♔xf6 is nothing.) 12...♘xf6 13.♙g5 ♙b7 14.♙c1 ♙c8

15.♖c3 Both sides developed logically and here comes a typical regrouping that we should remember. 15...♘e7! Of course, the move is obvious, but the point is that Black shouldn't worry about ♙xf6 gxf6, because if White is not able to launch a concrete attack, it only improves Black's position. 16.♙b3 (16.♙xf6 gxf6) 16...♚d6 17.♘e5 We were following the game Tomashevsky-Sasikiran from Sochi 2012, and here Black should have continued with 17...♖xc3 This move solves the problem of the d4 pawn, but creates another weakness on c3. The fact that he can exchange a few more minor pieces is more important for Black. 18.bxc3 ♘e4!= getting a comfortable equality. 19.♚f3 f6!]

11...♘de7! Meier chose the right plan! [11...♘ce7 is the other plan, but here Kramnik probably prepared a very strong idea. 12.♘e4 b6 13.♘e5! ♙b7 14.♚g4! This is how White should play, activity is very important for him. The idea is ♙g5, which can't really be prevented. 14...♘g6 15.♙g5! ♘xe5 (15...♙xg5 16.♘xg5 and the knights are looking very dangerous.) 16.dxe5 ♙xg5 17.♘xg5+= and White achieved an advantage. He kept his attacking possibilities, but the d6 square is more important, where the White knight is heading to. It's going to become really annoying there.; It's important to note that after 11...b6 Black seriously weakens his queenside if he can't take back on d5 with a piece. 12.♘xd5! exd5 13.♘e5+= Thanks to the b6 weakness, White has a small but stable advantage. Later, ♙a4 and ♖c1 may come, the knight has no stability on c6, while taking on e5 improves White's pawn structure. There is also no point in putting the bishop on b7 anymore.]

12. ♙f4!? This involves a very deep pawn sacrifice with long-term positional compensation! I don't think this gives any advantage, but as we will see, the shocking ef-

fect brought Kramnik a nice point. Black must accept the pawn. I think both captures are possible and good, it's hard to choose between them. [On 12. ♙e3 ♘f5 Black is fine.]

12... ♙xd4 Meier prefers to have a knight on d4, which cannot be disturbed by ♘b5, but on the other hand, it gives up the bishop pair. [12...♘xd4 White has two options: 13.♘xd4 (13.♘e4 Here, Black should take the correct piece 13...♘xb3! to make the d5 square safer for the knight. (13...♘xf3+ 14.♚xf3 White gets more than enough compensation here. For instance 14... ♙xb2 15.♖ad1 ♘d5 loses to 16.♖d2! and the bishop has no good square. 16... ♙f6 17. ♙xd5 exd5 18.♖xd5!+- White wins.) 14.♘xf6+ gxf6 15.♚xb3 ♙h8! to prevent the mating ideas with ♙h6 and ♚g3, followed by ♘d5. Black is fine.) 13... ♙xd4 (13...♚xd4 is a bit scary, but also possible. 14.♚xd4 ♙xd4 15. ♙d6 ♖e8 16. ♙a4 ♘c6 17.♘b5 The White pieces are coming dangerously. 17... ♙b6 Black holds his extra pawn. White will retreat his bishop from d6 to free the square for the knight, but the compensation should only be enough for a draw.) 14.♘b5 ♙b6

15.♚f3 Meier might have been afraid of something like this, which seems really dangerous for the human eye, but the machine, as usual, shows great defending possi-

bilities. 15...♔d7! 16.♖ad1 ♘g6! 17.♙g3 It looks like Black can't hold the pins, but 17...♚e7!! and Black sacrifices an exchange for activity and an attack. 18.♙d6 ♙c6!! 19.♚g3 (19.♙xe7 ♙xf3 20.♙xf8 ♙xd1=+) 19...♚f6 20.♙xf8 ♖xf8 21.♘d6 h5 with a huge attack. Both bishops are pressing, the knight will also join through f4, and h4 is the concrete threat. White is in trouble.]

13.♘xd4 ♘xd4 14.♙c4! This is really calm play. White preserves his two bishops. This shows the deepness of Kramnik's idea, he gives a pawn and then just continues the game like nothing happened...

14...♘ec6 Black wants to hold his d4 knight. [14...♘g6 was also possible 15.♙g3 (15.♙e3 leads to draw. I don't believe this was Kramnik's desire. 15...e5 16.♙xd4 ♚xd4 17.♚xd4 exd4 18.♘b5 ♙d7 19.♘xd4=) 15...b6 and Black tries to finish the development.]

15.♖c1! Keeping the calmness. Bringing the last missing piece to the game.

15...♚f6! [Trying to force a draw with 15...e5 leads almost to equality, but 16.♙xe5 ♘xe5 17.♖xe5 ♘c6 18.♖e1↑ and White still can press a little bit; his pieces are more active.]

16.♙c7! To prevent ♖d8.

16...e5? Very tempting move, but Kramnik was ready to counter it, thanks to the ♘d5 tempo. White can initiate concrete play to open the position. [16...♚e7 Black should have brought his rook to d8 first. 17.♙g3 ♖d8 18.♚h5 ♘f5! Trying to take the bishop and also to prevent the ♙h4 ideas. 19.♙f4 White must keep his main triumph. 19...♙d7! Black finally manages to connect his rooks, and after 20.♙g5 he manages to consolidate his position. 20...f6 21.♙f4 ♘cd4 with a complex position, but Black's chances are not worse.]

17.♘d5! ♚g5 The only place to defend the e5 pawn.

18.f4! There was no more time for calm moves, Black wanted to develop his c8 bishop. The move is justified by principles as well. White must open the position for the bishop pair and had to break the stronghold of the d4 knight as well. Without proper support, it might become a potential target for White.

18...exf4 19.♙xf4 White has freed the c7 square for the knight with tempo.

19...♚h4?! After this, there's no more equality for Black. [Exchanging the queens seems to be very suspicious as well, but it looks like Black could have kept his position together. 19...♚g4 20.♙d6 (20.b4!/? is also possible, trying to win a piece with b5. Black cannot prevent it with a6 because of the b6 hole, but still: 20...♚xd1 21.♖exd1 ♙g4! and on 22.b5 ♘xb5 23.♙xb5 ♙xd1 24.♖xd1 seems to be playable, even though White should be slightly better.) 20...♖d8 21.♘e7+ ♘xe7 22.♖xe7 looks like a win, but Black just survives after 22...♚xd1+ 23.♖xd1 ♙e6! 24.♖xd4 ♙xc4 25.♖xc4 ♖xd6=]

20. ♖g3 ♔d8? [20... ♖g5 was the last chance, but after 21. ♖e4! White achieves a better position. 21... ♖e6 22. ♖xd4! ♘xd4 23. ♖f4! to protect the c1 rook 23... ♖g4 24. ♖xd4 ♖ad8 25. ♖f1+= and Black retains practical chances.]

21. ♘c7! Kramnik already foresaw the final blow!

21... ♖b8 22. ♘b5! ♖a8 23. ♖d6! Finally, the dark squares caused too many problems for Black. He should have sacrificed an exchange, but the outcome of the game would have been clear anyway.

23... ♖e8 [23... ♘xb5 24. ♖xf8+-]

24. ♖xf7+!! ♔xf7 25. ♖h5+ The king must run into the center, but too many pieces are hunting him there.

25...g6 26. ♖xh7+ ♔f6 White can choose between many different wins. Kramnik found a spectacular mate. His opponent kindly allowed him to show it over the board.

27. ♘xd4 ♘xd4 28. ♖h4+ ♔f7 29. ♖c7+ [29. ♖xd4+-]

29... ♖d7 30. ♖h7+ ♔f6 31. ♖f1+ ♔e6 [31... ♘f5 32. ♖xd7 ♖b6+ 33. ♖h1+-]

32. ♖xg6+ ♔d5 33. ♖c5# Not an ordinary mate, which finishes a great game. **1-0**

(3) Bartel,Mat (2674) – Caruana,F (2775) [D85]

40th GM Dortmund GER (9), 22.07.2012

[Balogh Csaba]

The decisive game of the Dortmund tournament! With this victory in the last round, Caruana took the first place. This is probably the biggest success so far for the young Italian GM. His opponent, Mateusz Bartel, is a strong fighting player with a very sharp style, but when he is out of form he can run into some quick defeats.

1.d4 ♘f6 2.c4 g6 3. ♘c3 d5 In the Aeroflot Open in February, Caruana lost to Bartel in 22 moves in the Slav defense. This time, he decided to try the Grunfeld.

4.cxd5 ♘xd5 5.e4 ♘xc3 6.bxc3 ♖g7 7. ♘f3 c5

8. ♖b1 Bartel realized in his preparation that Caruana was suffering against the 8. ♖b1 system. In 2012, he already ended up twice in practically losing positions right after the opening. He managed to save both games, but it was mainly due to his tenacious defense. This time the Italian seemed to find a decent way to equality.

8...0-0 9. ♖e2 cxd4 [Against Li Chao in May he tried 9... ♘c6 10.d5 ♘e5 11. ♘xe5 ♙xe5 12. ♔d2 e6 13.f4 ♙c7 The point of this system is that White cannot stabilize his central pawns with c4 because of ♙a5. Actually, I find this setup a bit artificial, but many strong players use it. 14.0-0 exd5 15.exd5 ♙a5 This is the starting position of the line, where White can choose between at least 8 different moves... 16.d6 This is the new wave to follow with White. 16... ♖b8

17. ♖b5!! White wants to sacrifice the exchange and launch a very dangerous attack with f5. 17... ♙d7 (17... a6 is also met with 18. ♖xa5! ♔xa5 19.f5!+/- and the Black king is really missing the dark-squared bishops...) 18.f5!! It's really unpleasant to face such preparation over the board. 18... ♙xb5 19. ♙xb5 White threatens with f6 and ♔h6. The bishop stands excellently on b5, where it covers the e8 square. 19... ♔h4 20. ♖f4 ♔g5 21. ♔e1 ♔d8 22. ♔e5 ♔e8 23. ♔d5! White doesn't even want to win back the exchange, the light squared bishop has a very important role in the attack. 23... ♖e1+ 24. ♙f2 g5 (24... ♖xc1 25.fxg6+-) 25.f6! h6 26. ♔f5 and White was winning, because of the ♙d3 threat, but in the time-trouble, he failed to finish the game. Li Chao-Caruaa, Malmo 2012.]

10.cxd4 ♔a5+ 11. ♔d2 This is a solid sideline. [The main line is 11. ♙d2 ♔xa2 12.0-0 ♙g4 with several hundreds

games. Currently, theory considers it to be drawish. The only problem is that Black has to remember many forced lines until move 30 to hold the draw.]

11... ♔xd2+ 12. ♙xd2

12...e6! This is Caruana's new approach. [Just a month ago, he unsuccessfully tried 12... ♖d8 13.d5 ♘a6 14. ♖c1 ! White controls the movement of the a6 knight. 14...f5 This is a typical break of White's pawn chain, but now White can react with 15.e5! The d5 pawn is indirectly protected by ♙c4. 15...h6 16. ♙c4 ♔h8 17.0-0 g5 18. ♖fd1 f4 19. ♙xa6 bxa6 20. ♙a5 ♖g8 21.e6+/- and Black was lost due to his c8 bishop. The White rook invades on c7. Radjabov-Caruana, Moscow 2012.]

13.0-0 b6! The idea is the same, trying to put pressure on the central pawns, but this time with the pieces.

14. ♖bc1 This is the main move to penetrate with the rook on c7.

14... ♙b7 We are in the critical position of our game, White has plenty of choices to continue the game, but only one of them can create problems for Black.

15. ♖c7? A very concrete pawn sacrifice based on a concrete line, but Caruanacalculated one move further than

his opponent! [15.♖fe1!? I found this very deep alternative in order to fight for the initiative. Black must be careful. 15...♘a6! Black simply prevents ♖c7 and prepares to occupy the c-file.

a) 15...♖d8 is met with 16.♙g5! a typical move, after which it's not easy to find a good square for the rook;

b) In case of the greedy 15...♙xe4 White's idea is shown in a very nice variation. 16.♙b4 ♖d8 (16...♘c6 Maybe it was better to sacrifice an exchange: 17.♙xf8 ♖xf8 and Black has good chances to hold the draw.)

17.♙e7! The line gets very concrete now. 17...♖e8 18.♙b5! Everything is based on the undeveloped b8 knight. 18...♙c6 (18...♖xe7 19.♖c8+ ♙f8 20.♖xe4 Black can hardly survive the pin along the 8th rank.) 19.♖xc6! White seems to win now, but Black has a hidden resource. (19.♙xc6? ♘xc6 20.♖xc6 ♖xe7 is a pawn up for Black.) 19...a6! Suddenly, Black seems to be more than fine, but this time White comes up with a great response. (19...♘xc6? 20.♙xc6+-) 20.♖cxe6!! White protects the e7 bishop with the e1 rook. (20.♙a4 b5) 20...axb5 21.♖xb6 ♖xa2 22.♙f1! with serious initiative for White. The b-pawn is weak, while the d-pawn might cause real problems. (Not 22.♖xb5?! because of 22...♘c6); 16.♙b5 ♖ac8 17.a4 ♖xc1 18.♖xc1 ♖c8 19.♖xc8+

♙xc8 and the position is equal.; 15.♙d3 is too passive. 15...♘c6 16.d5 exd5 17.exd5 ♘a5!? The Black bishops are getting stronger, while the d-pawn is rather weak.; 15.e5 is a sign of success of Black's strategy. After this move, the White pawns lose their mobility and the holes on the light squares start to tell. 15...♘c6 followed by ♖fd8, ♖ac8, ♙f8 and ♘a5 or ♘e7. Black is fine.; 15.♙b4 is a concrete attempt to catch the rook. 15...♖d8 16.♙b5 with the idea of ♙e7. The position looks very suspicious, but Black is in time to play 16...♙a6! (16...♙xe4 17.♙e7) 17.a4 ♙xb5! 18.axb5 a6!= which solves all his problems.]

15...♙xe4 16.♘g5 Bartel follows his plan that started with 15.♖c7. [16.♙b4 is similar to the game, but Black is fine here as well. 16...♖d8 17.♙e7 (17.♘g5 ♙d5 transposes to the game.) 17...♖e8 18.♘g5 (18.♙b5 ♘c6! This kind of concrete tactical play is typical in the Grunfeld.) 18...♙d5 19.♙b5 ♘c6! 20.♙xc6 ♙xc6 and Black ends up with an extra pawn, or after 21.♘xf7 ♖ec8 22.♖xc8+ ♖xc8 23.♘e5 ♙d5=+ he ends up with an endgame with very good perspectives thanks the bishop pair and the occupied open file...]

16...♙d5 17.♙b4 ♖d8

18. ♖b5 This was the idea of the Polish grandmaster when he sacrificed his e4 pawn. White threatens to take with ♗xf7 or to trap the rook with ♖e7. The b8 knight still can't develop, Black seems to be in deep trouble, but Caruana has calculated one move further! [18. ♗xf7 ♖d7! 19. ♖xd7 ♗xd7]

18...a6!! With the same idea as in the 15. ♖fe1 ♖xe4 line, but what to do now?

19. ♗xf7 [19. ♖a4 b5]

19...axb5! 20. ♗xd8 ♗a6 This is the point! Suddenly White collapses! Right now he is an exchange up, but three of his pieces are hanging.

21. ♖xg7+ ♔xg7 22. ♖e7 This was the only way not to lose a lot of material, but Black is winning here as well.

22...b4 White cannot hold the a2-square for long, so the b-pawn will fall as well. The situation of White's minor pieces is not too fortunate either.

23. ♖c1 [23. ♖a1 ♗c7]

23... ♖xa2 24. ♖c6 b5 The rest is easy.

25. h4 [After 25. ♗xe6+ ♖xe6 26. ♖xe6 Black has many ways to win, but the nicest is the strongest as well: 26... ♗c5! 27. ♖e1 ♗d3 28. ♖d1 b3]

25...b3 26. ♖a3 ♗b4! And Black wins material.

27. ♗xe6+ [27. ♖xb4 b2]

27... ♔g8 0-1

(4) Muzychuk, Anna (2606) – Ivanchuk, Vassily (2769) [C45]

ACP Golden Classic Amsterdam NED (7), 22.07.2012

[Arkadij Naiditsch]

Here we will see Ivanchuk at his best! A short, very intense and beautiful game!

1.e4 e5 2. ♗f3 ♗c6 3.d4 Lately, the Scotch has become quite popular. We saw a couple of games played by Radjabov, Karjakin and Caruana. This might have something to do with the fact that people can't find any advantage for White in the Spanish game. It's hard to say... but it's a fact that the Scotch has returned to the highest level.

3...exd4 4. ♗xd4 ♖c5 [4... ♗f6 This is Kramnik's favorite move.]

5. ♗xc6 ♔f6

6. ♔f3 This line h as been played many times by Radjabov and Rublevsky. These players made it popular again.

6...bxc6 [6...dxc6 This is another possible move which leads to an unclear position. Once, I tried it to play it myself against the already mentioned Rublevsky. The game continued with 7. ♖c4 ♗e7 This move looks slightly strange, but it's the main one. 8. ♖xf6 gxf6 9. ♖f4 ♖b6 10. ♗c3

♘g6 11.♙g3 h5 12.h4 ♘e5 13.♙e2 ♙e6 14.♘a4 ♙a5+ 15.c3 0-0-0 16.♘c5 ♙b6 17.♘xe6 fxe6 with a quite complicated position.]

7.♘d2 d6 8.♘b3 ♙b6 9.♙g3 This move seems to be a novelty! The main moves are 9.a4 and 9.♙d2.

9...♘e7 A very logical reply by Black. The knight gets into the game and Black prepares to castle short.

10.♙e2 A normal move, but how can such an opening bring White any advantage? To me, the idea with ♙g3 remains unclear. [If White would try to save a tempo and develop the bishop to c3 as fast as possible, Black should remain cool and eat away all the pawns. 10.♙d2 ♙xb2 11.♙d3 (11.♙c3? ♙xc2 Two pawns up and ♙xf2 is being threatened!) 11...♘g6 12.0-0 ♙e5 Black is in time to return the Queen and remain a clear pawn up.]

10...0-0

11.♙d2 We can clearly see that White's opening was, at least, not great, not to say „non sense“. Black is fully developed and probably already doing a bit better. [On 11.♙g5? Black always has 11...♙xf2+]

11...a5!? Ivanchuk is famous for his creative and strong play. [11...♙g6 followed by f5 looks solid for Black.; 11...♘g6?! would be a clear mistake: 12.0-0! (12.♙c3 ♙e7 and

it's not easy to protect the pawn on e4.) 12...♙xb2 A very risky move, but if Black doesn't take on b2, the ♘g6 move makes no sense. 13.a4! A very strong reaction! 13...a5 and only after a5, White plays 14.♙c3 ♙xc2 15.♘d2

and the Black queen is trapped. Now we can see why the move a2-a4 is needed. White took away the a4 square from the Black queen.]

12.♙c3 ♙g6 13.♙d3 [I think it was time to think about safety and play 13.♙xg6 ♘xg6 Of course, Black is doing pretty well here, but White is solid as well. 14.0-0 ♙e8! A strong move, White doesn't have any nice way to protect the e4 pawn. Against 15.♙d3, ♘f4 is coming, and Black will have the advantage of the bishop pair.]

13...f5!? Black starts the action and, of course — why not? He's better developed and can put big pressure on White's position.

14.f3? One of the best female players in the world doesn't feel the danger coming. [It was the last chance to take away the queens from the board. 14.♙xg6 ♘xg6 The Black knight is going to f4 where it will have almost a perfect position. 15.0-0 ♘f4 Black wants to take on d3, after which Black is doing clearly better. Also, White needs to be careful,

in many lines, the a5-a4 push could be dangerous. 16. ♖c4+ ♙h8 17.e5 d5 and of course, Black is doing better.]

14...♙h6! After this move, the White king remains in the center under the attack of all the Black pieces. This can't be good...

15.♘d4 This move probably loses by force, but it's already hard to give White any advice.

15...f4! Usually, a move like 15...f4 is not a good one. It closes the position, but it can be made only in one case, if there's a concrete win! And Ivanchuk calculates a nice winning line until the end! Try to find it yourself! :).

16.♙f2 c5 17.♖c4+ The only move to avoid Black from playing c4 and winning a piece.

17...d5! Black prepared this move before playing 15...f4. [A big mistake would be 17...♙h8 18.♘e2 and White is back in the game.]

18.exd5 cxd4 A nice forced line.

19.d6+ White is winning back the piece, and will be even an exchange up, but...

19...♙e6! The quickest finishing move! Great play by Black.

20.dxe7 ♖xc4 21.exf8 ♙+ ♖xf8 Black is an exchange down, but White is under a mating attack. The bishop on c3 is hanging and a loss of material is unstoppable.

22.♙xd4 [22.♙d2 ♖e8+ 23.♙d1 d3 and the White queen on f2 has no squares! Rarely, we see a queen being caught so easily.]

22...♖e8+ The last exact move.

23.♙d2 ♖d8 24.c3

24...c5 White misplayed the opening, didn't feel the danger and got under a crushing mating attack. Don't make the same mistake in your own games! :) **0-1**

Endgame section

(15) Kramnik,V (2799) – Leko,P (2730)

Dortmund, 20.07.2012

[Chess Evolution]

White is currently two pawns up, but he must give back one of them. Still, his position remains completely winning. As the game proceeds, we will see many instructive motifs. We must say that the game was in progress for 7 hours, and both players spent most of their energy. At this moment, Kramnik had about 15 minutes, while Leko was living from the 30 seconds increments...

75. ♖g7+! Forces the king to the back rank, which is clearly an achievement for White. [The tricky 75. ♘e6 does not change much. 75... ♖xh4]

75... ♔c8 [75... ♔c6 loses more easily, White simply promotes his d-pawn. 76.d5+ ♔b6 77. ♖g6+ ♔b7 78.d6! ♖xh4 79. ♘f7! Black cannot stop the pawn.]

76. ♘e6 ♖xh4 77. ♖h7 Black is in a kind of zugzwang. If Black moves his rook along the h-file, White simply pushes his f-pawn. [77. ♖f7+- was also perfectly fine. After defending the f4 pawn, White simply wants to go to c6 with his king.]

77... ♔d6

78. ♔d5! Instead of the simple ♖f7 followed by ♔d5, Kramnik sacrifices his f-pawn. This was the strongest move in the position, but maybe from a practical point of view, it was more clever to keep the f-pawn. After Black takes on f4, one mistake by White can spoil the full point and after 7 hours of tough fight, we cannot blindly trust ourselves.

78... ♔xf4 79. ♔c6! This is the point! White creates a mating net with his pieces.

79... ♔b8 80. ♔b6 The sign of tiredness. White repeats moves in his opponents time trouble. [The most precise way to win was 80. ♖d7! and Black is simply unable to parry the threat of ♔b6 and ♖d8 mate. The Black rook should go down to be able to give checks, but it leaves the bishop unprotected... 80... ♖g4 81. ♔b6 White wins.; Of course, it was possible to miss ♖d7, it is not an easy

move at all. What was a bit strange to me is that Kramnik didn't go to the rook endgame, which is easily winning for him. We might have thought that players on Kramnik's level know this kind of theoretical positions „by heart“... 80. ♖xf4 ♜xf4 81. ♜h8+ ♔a7 82. d5 Black cannot prevent the winning method: 82... ♜c4+ 83. ♔d7 ♔b7 84. d6 ♜g4 85. ♔d8

85... ♜g7 (85... h4 86. d7 The king wants to leave from ahead of the pawn, and after 86... ♜e4 87. ♜e8 ♜g4 88. ♔e7 White wins.) 86. d7 ♔c6 87. ♜h6+ ♔b7 88. ♔e8+- The pawn promotes.]

80... ♔c8 81. ♔c6 ♔b8 82. ♜b7+ ♔a8 83. ♜b5

83... ♜g4! To be able to give checks on the g-file. [83... ♔g3 84. ♖c7+ ♔xc7 85. ♔xc7+-; 83... ♔a7 is refuted by 84. ♖c5! Now the threat is ♜a5 ♔b8 ♖d7 ♔c8 and ♜a8 mate. 84... ♔d2 85. ♖d7! and the same mate follows after every move: 85... ♜xd4 86. ♜b7+ ♔a6 87. ♖c5+ ♔a5 88. ♜b5#]

84. ♜a5+?? This check spoils the win. Black successfully escaped from the mating nets, but the rook endgame was still losing for him. [84. ♖xf4! ♜xf4 85. d5 ♜c4+ 86. ♔d7 White has the same winning strategy that we saw in the 80. ♖xf4 line, but Black has an extra option to defend.

86... h4! A very important moment, White has to find the only move to win. 87. ♜b3! As we already know, simply to wait is hopeless for Black, he must try to make use of his h-pawn. (The most logical 87. d6 would spoil the win because of 87... h3! 88. ♜h5 Usually, in rook endgames, the right place for the rook is behind the pawn, but here is an exception! 88... ♜c3 and the position is drawn. 89. ♔e7 ♔b7 90. d7 ♜e3+ 91. ♔d8 ♜g3 The winning idea would be to escape from d8, with the help of the rook (as we have seen in the 80. ♖xf4 line), but now the Black pawn is too far advanced. 92. ♜h8 ♜e3 93. ♜e8 h2! and Black holds the

draw.) 87...♖c1 (87...♖g4 88.d6 ♖g3 White has 89.♖xg3! which is the only win, otherwise the pawn reaches the 3rd rank. 89...hxc3 90.♔c6! Another only move. After other king moves there is simply no mate... 90...g2 91.d7 g1♗ 92.d8♗+ ♔a7 93.♗e7+ ♔a6 94.♗a3#) 88.d6 ♔a7 89.♔d8 ♖h1 90.d7

90...h3 Very often, we meet the following motif in practice. It's useful to remember it! 91.♖e3! White prepares for ♔e7 and prevents the checks. At the same time, it attacks the h-pawn, paralyzing Black's rook. 91...h2 92.♖e2! followed by ♔e7, White wins.]

84...♔b8 85.♖xh5 ♕g3 This position is quite an easy draw. There are no mates anymore, while Black will be able to sacrifice his bishop on d6, but there was one more big turn in the game!

86.♖h8+ ♔a7 87.♖h7+ ♔b8 88.♖b7+ ♔c8 89.♖f7 ♔b8 90.d5 ♖c4+ 91.♗c5 ♖c2 92.♖b7+ ♔a8 93.♖b5 We are in a critical moment again. Black's pieces are optimally defending, only the king is standing suspiciously in the corner...

93...♕h2?? [After 93...♔a7 we'll soon reach the position of the game. 94.d6 ♕xd6 95.♔xd6 ♖h2 96.♔c7 ♖h7+ 97.♗d7 ♔a6= The king escapes from the corner.]

94.♖b1?? Kramnik allows Black to correct his last mistake. [94.d6! ♕xd6 95.♔xd6 and White wins in a study-like way because of the unfortunate situation of the Black king. 95...♔a7 It's too late now... (95...♖h2 96.♔c7 ♖h7+ 97.♗d7+- Black should play ♔a6 for the draw...) 96.♔c7 and Black's rook is forced into passivity. 96...♖a2 White has the following winning strategy: to transfer his knight to c6, so that Black cannot prevent the mate either on b6 or on b8. There is one technical difficulty to prevent Black's check on the c-file, but White is able to solve this. 97.♖b4! ♔a8 (After 97...♖a5 there are no more checks on the c-file. 98.♗d7! ♖a2 99.♗b8!+- and the knight arrives to c6.; 97...♖a1 moves into a tempo. 98.♗b3! covering the c1 check. 98...♖a3 99.♗d4!+- wins) 98.♖c4!! Ugly, but effective! 98...♔a7 (98...♖a7+ 99.♔b6 ♖a2 100.♗d7! There are only two ways to prevent the mate: 100...♖a6+!? (100...♖b2+ 101.♔c7 ♖b7+ (101...♖a2 102.♗b8! ♖a7+ 103.♔c8+- The same as the 100...♖a6 line.) 102.♔c8 ♖a4 threats. 102...♖a7 103.♗b8+-) 101.♔c7! White simply ignores the stalemate trick. 101...♖a7+ 102.♔c8 ♖a5 103.♗b8!! and again, the knight arrives to c6. 103...♔a7 104.♔c7! in order to squeeze the king 104...♔a8 105.♗c6! and there are no stalemate ideas. 105...♖a6 106.♖b4+-) 99.♗d7! White wants his usual ♗b8-c6. 99...♔a6 100.♖c5! and the king is stuck in the mating net. 100...♔a7 101.♗b8! ♖a1 102.♖c2 (102.♗c6+ is also good 102...♔a6 103.♗b4+ ♔a7 104.♖b5+-) 102...♖a3 103.♖b2 ♖c3+ 104.♗c6+ ♔a6 105.♖b6#]

94...♔a7! 95.♕b7+ ♔a8 96.♖g7 ♔b8! Again, the right move, leaving from the corner!

97.♖g8+ ♔a7 98.♖g7+ ♔b8 99.♖g6 ♔a7 100.d6 ♗xd6 101.♖xd6 ♖c1 And the rest is easy for Black. There are many good defenses, in fact, it's impossible to go wrong. Kramnik continues playing on, because he hoped for a blunder after 7 hours and 30 minutes, or just couldn't accept that he managed to spoil the win...

102.♖d2 ♔b8 103.♖a2 ♖c3 104.♖b2+ ♔c8 105.♖e2 ♔d8 106.♔d6 ♖c1 107.♗b7+ ♔c8 108.♖e7 ♖d1+ 109.♔c6 ♖c1+ 110.♗c5 ♔d8 111.♖e2 ♖c3 112.♔d6 ♖c1 113.♗e6+ ♔c8 114.♖d2 ♖c3 115.♗c5 ♖c1 116.♖e2 ♔d8 117.♖e3 ♖c2 118.♗e6+ ♔c8 119.♖d3 ♖c1 120.♖d5 ♖c2 121.♖d1 ♖c3 122.♗f4 ♖b3 123.♖c1+ ♔b7 124.♗d5 ♖b2 125.♖c7+ ♔b8 126.♖h7 ♖b1 127.♗c3 ♖b6+ 128.♔c5 ♖b3 129.♗e4 ♖b7 130.♖h8+ ♔c7 131.♗d6 ♖b1 132.♖h7+ ♔d8 133.♗b7+ ♔e8 134.♔c6 The longest game of the tournament, which lasted 7 hours and 40 minutes. **1/2**

(16) Gustafsson, Jan (2629) – Ponomarev, Ruslan (2726) [D45]

40th GM Dortmund GER (8), 21.07.2012

[Chess Evolution]

This endgame looks like an easy draw. But... it's much trickier than it looks. We will see how quickly Gustafsson managed to lose it...

30.♔f1 Gustafsson decided to put the king on e2. I'm not sure if this was a good idea. It's clear that Black will start his play on the kingside, so there's no reason to move the king away to e2?! The White bishop has to control the knight — mainly the b4 square. The pawns on the queenside should stand on a2-b3 and, for example, the bishop on d2 or maybe on d6. Let's take a look at a few options. [30.♗e1 ♗e7 31.♗d2 ♗c6 32.b3 ♔f7 33.♔f2 Now Black 2 plans, to play with g5 or without it. Maybe another idea could be to play b5-a5-a4, but right now it wouldn't achieve anything at all. White would just keep on waiting... 33...♔g6 (33...g5 34.g3 ♔g6 35.♔g2 h5 seems to be the only way to break through... (35...f5 36.gxf5+ ♔xf5

37.♔f2! (37.g4+?! White has to be careful until the end. This logical-looking move could get White in some trouble. 37...♔g6 38.♔f2 h5 39.♔g2 hxg4 40.hxg4 ♔f7 The Black king is going to b5, and Black will try to play a5-a4, trying to create weaknesses in White's pawn structure. If the White king goes to b2, Black could react very fast with ♞e7-Ng8-Nf6, winning the g4 pawn. Probably, the position is still a draw, but it would get tricky...) 37...h5 38.♔e2 By keeping the pawns on g3-h3, White is ready to react against Black's g4 with h4, and against Black's h4 with g4. 38...g4 39.h4 ♔e6 40.♔d1 ♞e7 41.♙e1 ♞f5 42.♙f2 ♔d6 43.♙c2 ♔c6 44.♙b2 ♔b5 45.♙c3 with a draw.) 36.gxh5+ ♔xh5 37.g4+! (37.♔f2?! Now the waiting strategy could lead to a lost position. 37...f5 38.♙c3 ♔g6 39.♔e2 ♞d8! Black brings the knight to e6 before starting the action with f4. 40.♔f2 ♞e6 followed by f4 with good winning chances.) 37...♔g6 38.♔g3! White wants to play h4 trying to exchange both pawns on the kingside. 38...f5 39.gxf5+ ♔xf5

40.h4! g4 41.h5 with a draw.) 34.g3 h5 (34...f5 35.gxf5+ ♔xf5 36.♔g2 and we already know that White makes a draw just by waiting and keeping the pawns on g3-h3.) 35.gxh5+ ♔xh5 36.g4+! allowing Black to play f5. 36...♔g6 37.♔g3 followed by h4, with an easy draw..]

30...♔f7 31.♔e2 The White king goes in the wrong direction.

31...♔g6

32.♙g3? White is playing completely without any plan. [32.♙e1 followed by ♔f2, with a draw.]

32...h5 33.gxh5+ ♔xh5 And it's too late. g4 is no longer possible, so Black is in time to put the pawns on g5-f5.

34. ♖c7 ♞e7 There is no hurry to play f5 because against White's g4, Black now has ♔h4.

35. ♙d6 ♞c6 36.b3 g5?! A logical move, but not the most precise. [36...f5 37.♖f2 ♞d8 38.♖e2 ♞e6 39.♖f2 ♞g5!? Black could try to keep the g5 option in mind. In case of White's g3, Black would have the winning maneuver ♞g5-Nf3. 40. ♙e7+ ♖g6 41. ♙d6 ♖f7 The Black king is going to b5. In comparison to the game, the Black pawn is standing very well on g7 or g6. White has no h4 push, which would give him a free passed h-pawn in case of Black's g5.]

37.g3 f5 We can clearly see that it's not going to be easy to make a draw anymore...

38. ♖d2? [38.♖f2 White should not let Black play f4. 38... ♞d8 39.♖g2 ♞e6 40.♖f2 ♖g6 41.♖g2 It looks like Black doesn't have the f4 move, and to find another idea seems to be a difficult task. Probably the position is a draw, but a very tricky one. If Black manages to find an idea, White could simply be lost.]

38...f4! Of course! A very typical move.

39.gxf4 [39.exf4 g4! A very strong reaction! 40.hxg4+ ♖xg4 41.♖e3 ♖xg3 42.f5+ ♖g4 43.f6 ♞d8 Black is in time to stop the f-pawn. Now the Black king is going to e6, and White would lose the f-pawn. The position is lost for White.]

39...gxf4 40. ♙xf4 ♖h4 41. ♙d6 [Doesn't work: 41.♖e2 ♞b4! and White is probably lost.]

41...♖xh3 42. ♖e2 ♖g2! We have a very interesting position. Black's winning idea is clear: to bring the knight to g3 or g1, and the White king would have to move, allowing Black to get to f2, getting the full point. Can White stop the Black knight from jumping to g3 or g1? Let's take a look.

43. ♙c5 a6 44. ♙d6 Gustafsson tries to use the passive tactic, and of course, there's nothing else to do.

44...♞d8 The knight starts getting closer.

45. ♙e5! A very good defensive move. White cuts the knight with the bishop.

45...♞f7 [45...♞e6 46. ♙f6 ♖g1 47.♖e1 ♖g2 48.♖e2 ♖g3 49. ♙e5+ ♖g2 50. ♙f6 would bring nothing for Black.]

46. ♖f4 Again, the knight is cut.

46... ♞d8 47. ♙e5 ♔g1 48. ♚e1 ♞c6 49. ♙d6 It looks like Gustafsson managed to create a fortress...

49... ♞a7 The last try for Black. As we saw before, ♞d8 didn't achieve anything.

50.a4? What a terrible mistake... Why didn't White just continued with his „standing“ strategy? [50. ♙c5 ♞b5 51. ♙b4 b6 (51... ♞c7 If Black would try to go back, the position seems to be a draw. 52. ♙e7 ♞e6 53. ♙f6 ♔g2 54. ♙e2 ♞f8 The only attempt to do something new. 55. ♙e7 ♞g6 56. ♙d8 ♔g3

57. ♙c7+! kicking out the Black king from the control of the f2 square. 57... ♔h3 58. ♙f2 ♞h4 59. ♙d6 ♞f3 60. ♙c7 Black managed to put the knight of f3, but in exchange, had to give the f2 square. The position is still a draw. 60... ♞h2 61. ♙f4 ♞g4+ 62. ♙f1) 52. ♙e2 a5 53. ♙e1 ♔g2 54.a4! fixing the Black pawns on the squares b6-a5. 54... ♞d6 55. ♙h4 with an easy draw. Now the White bishop is not worse than the Black knight, the pawn on b6 is a nice target.]

50... ♞c6! Black provoked the White pawn to come forward...

51.b4 What else to do? Black wanted to play ♞a5 and against ♙c7, ♞b4 would finish the game.

51... ♔g2 52. ♙e2 ♞a7! What a great move! Black wants to play ♞c8 and the White bishop is hopeless. Black would have 2 threats, ♞b6 and ♞e7-Nf5-Ng3. The only way to avoid it is to keep the bishop on c5. In this case White is in zugzwang after Black's ♔g3. Probably, the position is lost!

53. ♙c5 ♞c8! 54.a5 ♔g3 And White is in zugzwang.

55. ♙f8 Nothing else to do...

55... ♖a7 **56.** ♕d6+ ♔g2 **57.** ♕c5 Full attention to the Black knight.

57... ♖b5 **58.** ♕f8 ♖a3 **59.** ♕e7 ♖c4 **60.** ♕c5 ♖b2 **61.** ♕e7 ♖d3 **62.** ♕d6 ♖f2 **63.** ♕f4 ♖h1 and the final destination has been reached!

64. ♔d2 ♔f3 **65.** b5 axb5 **66.** ♔c3 ♖f2 **67.** ♕g5 ♖d1+ **68.** ♔b4 ♖xe3 **69.** ♔xb5 ♖c4 **70.** ♔c5 e3 What an end-game...

0–1

Clash of the Titans

(17) Rubinstein, Akiba — Alekhine, Alexander [E16]

Semmering Panhans Semmering (8), 17.03.1926

[Balogh Csaba]

An interesting, but far from flawless, game by two great players.

1.d4 ♖f6 **2.c4** e6 **3.** ♖f3 b6 **4.g3** The 4.g3 system is, even nowadays, the most popular setup against the Queen's Indian defense.

4... ♕b7 **5.** ♕g2 ♕b4+ This check went a bit out of fashion. Recently, people prefer the main 4... ♕e7 or the tricky and sharp sideline with 4...c5. The point of the move is either to get rid of the dark squared bishops or to lure the White knight to an unfortunate place.

6. ♖bd2 This probably gives away the opening advantage. Generally, this knight belongs to c3, but now it would damage White's pawn structure. [White should play 6. ♕d2 I have recently seen a very nice game by Polugaevsky... 6... ♕xd2+ An interesting modern alternative for Black is 6...c5. 7. ♔xd2 0–0 8. ♖c3 White would like to occupy the center with d5 followed by ♖d4 or e4. This would give White a comfortable game with the space advantage. The bishop on b7 could be closed as well. 8... ♖e4 This is a typical move. Black fights for the center on the light squares, but now it runs into the strong

9. ♖d3! f5

a) The point is that 9... ♖xc3? is refuted by 10. ♘g5!! This is a comm on motif in this system, but still sometimes strong players might blunder this trick. Black cannot avoid losing an exchange. 10... ♖xg5 (10... ♖e4 is better, but White gets and advantage in this case as well. 11. ♕xe4 ♕xe4 12. ♖xe4 ♖xg5 13. ♖xa8 ♖c6 14. ♖b7 ♖xd4 and here, after 15. ♖d1!+= Black doesn't have enough compensation.) 11. ♕xb7+/-;

b) 9...d5 is the best, but after 10.cxd5 exd5 11. ♖e5 White is slightly better.; 10. ♖e5! A strong positional move based on tactical ideas. White tries to force a crucial weakening with d5, and the Black position stays with a lot of holes. 10... ♖c5 (This is the first move that White had to check before playing ♖e5, but he has 10...d6? 11. ♖xe4! fxe4 (11...dxe5 12. ♖f6+!+- The undeveloped b8 knight causes serious problems in all the lines.) 12. ♕xe4+- and again, the a8 rook is hanging at the end.) 11.dxc5 ♕xg2 12. ♖g1 After the d-file has being opened, d7 became a real target. It seems to be a nice achievement to gain control over the long diagonal, but in fact, the bishop does nothing there, White is playing on the dark squares. 12... ♕c6 (12... ♖c6 is refuted tactically: 13. ♖xd7! ♖xe5 14. ♖xe6+/-; 12... ♕b7 13.0-0-0+/-)

13.0-0-0 Now, ♖xc6 threatens to win a pawn that's very hard for Black to deal. 13... ♖f6 (13...bxc5 14. ♖xc6 ♖xc6 15. ♖xd7+/- The endgame with the weak c5 pawn looks terrible...) 14.f4! This great move leaves Black in some kind of zugzwang. (14. ♖xc6 looks good, but after 14...dxc6 and ♖a6 is coming next.) 14...bxc5 (Now on 14... ♖a6 White can simply take the pawn. 15. ♖xd7 ♕xd7 16. ♖xd7 ♖xc5 17. ♖xc7 ♖fc8 18. ♖e5 Black doesn't have enough compensation.) 15. ♖xc6 dxc6 A picturesque pawn structure! Black is a pawn up, but his position is close to being hopeless. Beside his pawns, he has real problems with the knight, which has no future in this game. (15... ♖xc6 16. ♖xd7 is a similar story to the 13...bxc5 we saw before. 16... ♖d4 17.e3+/-)

16.e4! White takes even more space. 16...♞a6 17.e5 ♔e7 18.♚f3 ♔e8 19.♚g2! Doubling the rooks. The a6 knight is just watching the events, Black is practically a piece down... 19...♞f7 20.♚gd2 h6 21.♞a4 ♔h7 22.a3! Further paralyzing the knight. 22...♞b8 23.♚c3! It's time to catch it with ♚a5, White can do whatever he wants. 23...♚c8 24.♚a5 ♞b3 25.♞d3! ♞xd3 26.♞xd3 The game is over, but let's see the conclusion... 26...♚b7 27.♔c2 ♞e7 28.♞d8 ♔g6 29.♚d2 ♔f7 30.♚d1! Polugaevsky changes the direction, creating mating threats, because the queen and the knight have no chance to defend. 30...♔g6 (30...g6 31.♞h8+- followed by ♚d8.) 31.g4 fxg4 32.♚xg4+ ♔h7 33.f5 exf5 34.♚xf5+ 1-0 A great game! Polugaevsky-Dokhoian, Beograd 1988.]

6...0-0 7.0-0 d5 8.a3 ♞e7! Of course, Black has to keep his bishop. It might seem like Black lost a tempo, but the bishop has done a great job! The knight on d2 stands poorly. White's ideal setup in such structures is the knight on c3 and the bishop on f4, but now he's far from getting this.

9.b4 c5 Black is well developed and is ready for the challenge in the center. [9...a5 10.b5 c5 is another standard reaction in such situations. Black equalizes here as well.]

10.bxc5 [It's important to mention that after 10.cxd5 ♞xd5 is the only way to take back! Black continues controlling the long diagonal and the e4 square, while keeping the tension in the center.(10...♞xd5 11.bxc5 bxc5 12.♞b2↑ White is ready for an e4 push.; 10...exd5 is the worst. 11.bxc5 bxc5 12.♞b1 followed by dxc5 and ♞b3 with a clear advantage for White against the isolated pawn.)]

10...bxc5

11.dxc5 [White should have played 11.♞b1 This move is very unpleasant. It is hard to hold the long diagonal with the bishop, because ♞c6 is met with ♞e5. In this particular case, Black has 11...♚c7! 12.♚b3 ♞c6! followed by ♞bd7. On 13.♞e5 dxc4! is coming with tempo. 14.♚xc4 ♞xg2 15.♔xg2 ♞bd7= with an equal game, but White should have played like this anyway.]

11...♞xc5?! This is an inaccuracy. [11...♞bd7 It was better to take with the knight on c5. A typical trick in such cases is 12.c6!? ♞xc6 13.♞d4 but now it doesn't lead anywhere... 13...♞b7 Black is fine.]

12.♞b2?! This allows Black to finish his development comfortably. [Rubinstein should have played 12.♞b1 ♚e7 13.♚b3 and the bishop must leave the diagonal. 13...♞a6 (13...♞c6 14.♞e5 works now.) 14.♞b2 looks slightly better for White.]

12...♞bd7 13.♞e5 ♞xe5 14.♞xe5 Things were developing more or less logically, but suddenly, Alekhine takes over the initiative with concrete tactical play.

14...♘g4! A quick attack against the f2 weakness creates unexpected difficulties for White.

15.♙c3

15...♖b8 Alekhine must have miscalculated something leave his plan. The move he made is also logical, after defending the b7 bishop. He wants to push d4 and e5, improving his pawn structure. [15...♙b6! 16.e3 (16.♙e1 is really ugly, but probably the only move. Black is more than fine after, for instance 16...♖ab8)]

16...♘xf2!! would have been the point. 17.♙xf2 (17.♖xf2 ♙xe3 18.♙f1 dxc4 Black is even materially ahead, but he has an attack as well.) 17...♙xe3+ 18.♙e1 (18.♙e2 is met

with the unpleasant 18...♙h6! with the threat of ♙e3 mate.) 18...d4! and on 19.♖b1 dxc3!! Great queen sacrifice! Black takes back the pieces one by one after this. 20.♖xb6 ♙xg2 Black wins. For example 21.♖d6 ♙xd2+ 22.♙e2 ♙xf1+ 23.♙xf1 ♖ab8 ♖b2 is coming next.]

16.♖b1 [16.cxd5 was more logical, to avoid d4. Black is fine, justified by tactical play. 16...♙xd5 and on 17.e4 ♘xf2! this is a worse version than the 15...♙b6 line, but the attack is still very dangerous. 18.♖xf2 ♙xf2+ 19.♙xf2 ♙b6+ 20.♙f3 An unpleasant necessity, to run with the king. (20.♙f1 ♙b7 ♙a6 is threatened. 21.♙f3 f5! with a huge attack.) 20...♙a8 followed by f5 looks more than fine!]

16...d4 17.♖xb7? A tactical oversight! Rubinstein did not feel the danger... [17.♙b4 was the right move. 17...♙xg2 18.♙xg2 ♖c8 Black has a healthier pawn structure, but probably the objective evaluation is rather equal.(Somehow, White can create a quick threat after the more logical 18...♙c7 19.♘f3! e5 20.♙c2 with the idea of ♙f5 and ♙e4, with counterplay.)]

17...♖xb7 18.♙xb7 Black can choose between two very nice ways to win.

18...♘xf2!! A great in-between move! [18...dxc3 is also good, if Black sees 19.♘e4 ♘e3!! Another pretty combination. The c-pawn queens in all the lines. 20.♙xd8 (20.fxe3 ♙xd1 21.♖xd1 ♙xe3+ 22.♙g2 c2 is the point!) 20...♖xd8 21.fxe3 (21.♘xc5 ♘xf1; 21.♖c1 c2 and ♖d1 next.) 21...♙xe3+ 22.♙g2 c2 23.c5 ♖d1!]

19.♙xf2 This is equal to resignation. [A „counter twin move” would have been really nice, but Black is winning if he finds the right moves... 19.♙a5!? ♘xd1! 20.♙xd8

d3+! Black wants to take on e2 with tempo, and take back the piece afterwards. 21.e3 (21.♔h1 dxe2 22.♖e1 ♖xd8 23.♖xe2 Black will end up with two extra pawns after taking the one on a3.) 21...♘xe3 A funny moment, the d8 bishop is trapped. 22.♙g5 (22.♙c7 ♘d5+) 22...♘xf1+ 23.♔xf1 ♖b8 and after every bishop move 24.♙e4 f6 25.♙f4 e5]

19...dxc3+ 20.e3 cxd2 The game is practically over! Black is a pawn up, has a strong attack and can preserve his d2 pawn.

21.♔e2 ♖b8 [21...♖g5 was even stronger 22.♖xd2 ♖d8 followed by ♖h5!]

22.♙f3 ♖d8 23.♖b1 ♖d6 24.a4 f5 25.♖d1 ♙b4 26.♖c2 ♖c5 27.♔f2 a5 28.♙e2 g5 29.♙d3 f4 0-1

Editorial Preface

Clearly, the main focus during the last week was on Biel. Carlsen and Wang Hao are crushing their opponents round by round. Giri is in the fight for the first place as well, but this is more due to luck than to his good play. Etienne Bacrot is playing a very sad tournament, losing a lot of positions with good perspectives. Nakamura is not having a great tournament either, a double 00 against Wang Hao was clearly not what he imagined. Morozevich had to leave the Biel Chess Festival after losing his first 2 games. Viktor Bologan joined the elite group to replace him. For Bologan, it's just a horror what's going on; from the first 6 games, he managed only to get a draw against Etienne Bacrot...

Only 2 rounds left, the situation is very exciting!

The traditional Biel Open is very strong as well. At the moment, two French players: Romain Eduard and his colleague in the National Team, Vachier-Lagrave have the best chances to get the 7 000 CHF first prize.

The Ukrainian National Championship is on the way with all the top players (except Ivanchuk) participating in it. A lot of good and fighting games were produced there. After the 5th round, Eljanov is on top.

Another very strong open is on the run, the Politiken Cup. Here, the number 1 ranked is V. Malakhov.

Another change in the FIDE rating list was made. Now, it comes out monthly instead of every 2nd month.

Probably the biggest story of the week is the suspension of S. Feller, Hauchard and Marzolo, who got banned for cheating during the 2010 Chess Olympiad. A very sad sto-

ry, especially for S. Feller, who cannot participate in any FIDE event for the next 2 years and 9 months. For a young player like him, it means the end of his chess career.

As usual, we wish You a lot of fun with the games from Biel and the Ukrainian Championship that we commented for You! And don't forget to make the weekly puzzle section, it'll keep Your brain alive!

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Bacrot,E (2713)
— Morozevich,A (2770) [D31]

Biel, 24.07.2012

[Balogh Csaba]

A very complex game! Morozevich introduced a novelty in a very sharp line, which seems to lead to a fine position for Black. Due to his opponent's time trouble, he was over-pressing and instead of getting a perpetual check, he allowed Bacrot to finish the game with a fantastic combination.

1.d4 d5 2.c4 e6 3.♘c3 c6 A complex setup, which might transpose to many openings. Black can usually decide between playing a Stone Wall structure with f5, or to transpose to the Meran with ♘f6...

4.e4!? This is the only way for White to avoid the transpositions to the main lines, but here White has to sacrifice a pawn and agree to play for compensation. Otherwise, White should play 4.e3.

4...dxe4 5.♘xe4 ♙b4+ 6.♙d2 ♚xd4 7.♙xb4 ♚xe4+ This is the starting position of the Marshall Gambit, who played this opening for the first time in 1902! White sacrifices a pawn for the bishop pair and the Black king usually has serious difficulties to find safety, mainly because of the strong dark-squared bishop. Of course, such kind of positions are ideal for modern computer chess. We have seen many great novelties for both sides recently. The materialistic machines stubbornly help Black to hold his advantage...

8.♙e2 [8.♘e2 was considered to be less dangerous, but after Ian Nepomniachtchi beat the specialist of this opening, Dusko Pavasovic, this move had to be taken seriously as well. The idea is 8...♘a6 9.♙f8! A really nice move, but this is just the beginning of the whole story...]

8...♘a6 9.♙d6 Bacrot goes for the second most popular continuation. [The mainline is 9.♙a5 ; 9.♙f8?! is still nice, but less effective here, because of 9...♚xg2 10.♚d6 with the idea of a quick 0–0–0. Black can calmly play 10...♙d7 11.0–0–0 0–0–0 and Black is better.]

9...♚xg2 10.♚d2! [10.♙f3 ♚g5 followed by ♘e7, is known as good for Black.]

10...e5!? This is practically a novelty, but of course, one of the computer's main advice. Black frees the way for his bishop in order to develop it quickly and play 0-0-0. [However, there were almost a hundred games with 10...c6 11. f3 g6 and Black's results are really good with it. It's rather White who usually avoids this line. I, unsuccessfully, tried to refute this line over many pages, but the computer holds for Black. The maximum that I could reach was a draw. It would be interesting to know what Morozevich and Bacrot knew here... In my opinion, Morozevich just wanted to try another move (with 10...e5), because it seems playable. The bigger question is why Bacrot went for this line, especially when he spent 40 minutes on c2?!; 10...c6? would be too greedy. 11.0-0! f3 threatens to trap the queen, and after 11...e4 12. e7! wins.]

11. e5 [11.0-0-0 is an interesting alternative, Black must react precisely with 11...e4! with two ideas. The main is to exchange the queens with f4, or develop f5 with tempo. 12. e5 The following moves are forced. (12. g5 f4+) 12... f5! 13. d3! cxd3 14. cxd3 exd3 15. xg7

15...b4! The critical position of this line. White seems to be better, he will be an exchange up after taking on h8, and the Black knight is intending to jump to a2, where it is questionable if it will come out. Despite all these facts, concrete variations show that Black is OK! (15...xc4 16. xh8 xa2 17. f3+= is probably slightly better for White.) 16.b3

a) 16.a3 b2+! 17. d2 0-0-0 Just in time! This solves all of Black problems. 18. f3 Otherwise e4. 18...xc4+ 19. c2 h6! 20. xh8 (20. xh6 does not work, because of 20...xd1 21. xd1 e2!; 20. e5 with the idea of taking on h6, but mainly, it avoids the e2 threat. 20...e6 21. xh6 f6! and the knight has no good square to retreat, since d3 is met with f5, while 22. f3 xd1 23. xd1 g4) 20...xd1 21. he1 d5 White will only be able to win the knight if he sacrifices the exchange on d5, but of course, then he can't dream about an advantage.;

b) White should not hurry with 16. xh8 b2+ 17. d2 xc4 getting two pawns for the exchange, and only Black can be better. The knight will be rescued via b4 later.; 16...e4 17.f3 f5 is the easiest. (17...d3+ is also possible. 18. d2 f2 19. f1 xh1 20.fxe4 0-0-0+ 21. e3 e7 22. xh8 xh8 23. e2 and the game should end in a draw.) 18. xh8 d3+ 19. xd3 xd3= with an even position.]

11... f5 12. f3 [12.0-0-0 e4 is a transposition to the 11.0-0-0 line.]

12... g6 13.0-0-0 White wanted to avoid d8, but it moves into some dangerous threats after c5. [13. e2 was possible, but it allows 13...d8 14. f4 (14. e3 e7 15. f4 h6 is a transposition.) 14...h6 15. e3 e7

Black is ready to castle kingside, White has to force a draw with 16.♘h5! (16.♖g1 is refuted by 16...♘b4!) 16...♔xe3+ 17.fxex3 f6 18.♘xg7+ ♔f7 19.♘xf5 ♘xf5 20.♙f4 ♘c5= After a couple of only moves from both sides, a drawn position arose.]

13...♘c5! Black must continue to play concretely! ♘d3 is the threat. [Calm developing moves like 13...♘e7? give enough time for White to build up an attack. 14.♘e2! f6 15.♙d6 0-0-0 16.♚f4+/- White is doing great here. Concrete moves don't save Black anymore. 16...♙b1 17.♖d2 ♙xa2 ♚b1 is the threat, but 18.♘c3!+/-]

14. ♔e3

14... ♖b1! A really spectacular move, creating the threat of ♔c2! [Of course, now 14... ♘d3+? doesn't work: 15. ♖xd3 ♙xd3 16. ♙xg7+-]

15. ♖d2 [15. ♕d6+!? ♞e6 16. ♚b3! was a very tricky alternative, because the most logical move for Black is a mistake. It's really hard to play the position correctly with both sides. Training to calculate such positions are very useful to improve our skills. 16... ♖d8! (I think most of us would be happy to finally leave with the king from the center, but White can get an advantage here after couple of very strong moves. 16... 0-0-0 17. ♕xc6! (17. ♞e2 seems to win,

because of the simple threat of ♖hg1, but 17... ♙xa2! An unexpected blow! 18. ♖xa2 ♖g5+ and Black wins the f3 bishop with ♖f5 check.) 17... ♘c5! (17... bxc6 18. ♖b8+ ♔d7 19. ♙c7++-) 18. ♙xc5 ♖xd1+ 19. ♖xd1! It's very important to have the ♖g4 resource. 19... ♖xc6 (19... bxc6 20. ♘f3+/-) 20. ♖g4+! f5 21. ♖xg7 and White has the same points on both lines. 21... ♙e4!? This in-between move doesn't help. (21... ♖xh1 22.f3!+/- protecting the knight on g1, to be able to take the rook.) 22. ♖c3 ♖xh1 23.f3! White is a rook down at the moment, but he is doing better.)

17. ♖h3!? (17. ♖e2 moves to the same trick. 17... ♙xa2! but here White has an extra option: 18. ♙xc6+! (18. ♔xa2 ♕g5+ and ♔f5 next.; 18. ♖xb7 loses to 18... ♖b1+ 19. ♙d2 ♔xd6+ 20. ♙c3 ♖xd1) 18... bxc6 19. ♖xa2 and, for example, after 19... ♘e7 20. ♙xe7 ♙xe7 21. ♖xa7+ ♙f6 the position is about even. Both kings are equally safe now.) 17... ♘f6! (The difference is that after 17... ♙xa2 White has 18. ♖xb7!! (18. ♖xa2 ♕h6+ would be fine for Black.) 18... ♖b1+ 19. ♙d2 ♔xd6+ 20. ♙c3! and the d1 k is protected in comparison to the position where the knight is on e2. 20... ♕f5 21. ♖b8+! ♔d8 22. ♖xd8+ ♘xd8 23. ♖e1+ ♘e7 24. ♙xc6+!+- „Doublepin“, and mate to follow.) 18. ♙a3 An interesting situation. The computer evaluates the first

4 moves as 0.00, but for human eyes, one mistake could decide the game... (18.♖he1 ♜xd6! 19.♞xd6 0–0 Suddenly, the White king became really weak.) 18...c5 seems to be the most logical to me, closing the bishop on a3. 19.♞xd8+ ♔xd8 20.♞d1+ ♜d7! White can force a draw by 21.♜f4 (21.♞d2 leads to draw as well. 21...b6 22.♞a4 ♜d4 23.♞xa7 ♞e8 White seems to be in trouble, but he can survive with 24.♞a8+! ♔e7 25.♞d5! with the threat of ♞xd4! 25...♜xf3 26.♜f4! ♞f5 27.♞d6+ ♔d8 28.♞b8+ ♔e7 29.♞d6+=) 21...♜xf4 22.♞xd7+! ♔xd7 23.♞xb7+ with perpetual check. Even after the brave attempt, White holds the draw 23...♔e6 24.♞c6+ ♔f5 25.♞xc5+ ♔f6 26.♞e7+ ♔f5 27.♞c5+=]

15... ♞xa2! Black creates the double-threat of ♞b1 and ♜b3. So, White has to play:

16. ♞d6+ ♜e6 17. ♞e4

17... ♞h6 Both sides have parried the concrete threats. Black is a pawn up, but his king is still in the center and 0–0–0 is always met with ♞xa7.

18.f4 Of course, White cannot exchange queens.

18... ♜f6 19. ♜f3! Strong play by Bacrot, even though he had only a few minutes on the clock. He calmly started to develop his pieces and intends to play ♞e1 and f5. [The bishop could not be trapped with 19.b3? ♜xe4 20.♞xe4 ♞xb3]

19... ♞xc4 [19... ♜xe4 leads to a perpetual check as well, if both players find the best moves. 20.♞xe4 0–0–0 21.♜e5 with the threats of ♜xc6 and ♜xf7. 21... ♞he8! 22.♜xf7! (22.♜xc6 leads to a slightly better endgame for Black after the forced line 22... ♞xd6! 23.♞xd6 ♞xf4+ 24.♞xf4 ♜xf4 25.♜xa7+ ♔b8 26.♜b5 ♞xc4↑ with some advantage.)

22... ♜d4! Another spectacular move! 23.♞xd4 (23.♞xe8?! ♜b3+ 24.♔d1 ♞h5+ 25.♞e2 ♞xf7 Black has a strong attack.) 23... ♞g6 refreshing the mate on b1 idea. 24.f5 ♞xf7! (Black should not be too greedy with 24... ♞xf5 25.♞f2! ♞b1+ 26.♔d2 ♞e4! 27.♞xb1 ♞xd4+ 28.♔e3 R8xd6 29.♜xd6+ ♞xd6 30.♞f8+ ♔c7 31.♞f7+ and White has some advantage.) 25.♞xa7 ♞xd6! The only move, and the game ends with a perpetual check. 26.♞a8+ (26.♞xd6? ♞xc4+) 26... ♔c7 27.♞a5+ ♔c8=]

20. ♖e1 White wants to win a piece with f5. Here, both players had just a few minutes left, which increases the tension to the maximum.

20... 0-0-0! [20... ♘d5? loses to 21. ♕xd5 ♕xd5 22. ♖xd5! cxd5 23. ♔c5! The Black pieces are unable to defend the king. For example 23... ♖d8 24. ♔b5+ ♖d7 25. ♘e5 ♔xf4+ 26. ♔b1+-]

21. ♕xc6! Excellent calculation and nerves! Now the game should end in a perpetual check again, but Morozevich got over-optimistic... [On 21. ♔xa7? Black has 21... ♖xd6! followed by ♔xf4.]

21... ♕a6? [21... bxc6! 22. ♔xa7 ♖xd6! 23. ♔a8+ and draw. The player who tries to avoid that, loses... (23. ♖xd6? ♔xf4+) 23... ♔c7 (23... ♔d7? 24. ♔b7+ ♔e8 25. ♔b8+) 24. ♔a7+ ♔c8]

22. ♘g5! This extremely strong move was missed by Morozevich! White is attacking on the queenside and suddenly he makes a move on the other flank. The point is to avoid the usual ♖xd6 and ♔xf4 check ideas! White is winning now. [22. ♔xa7? ♖xd6 23. ♖xd6 ♔xf4+ was again in Black's mind!]

22... ♘xg5 The final mistake, but it was over anyway. Now, there are many different way to win the game, but Bacrot played the most spectacular one!

23. ♕d7+! And mate to follow in all lines.

23... ♔xd7 [23... ♖xd7 24. ♔c5+ ♔d8 25. ♕e7+ ♔e8 26. ♔c8+-; 23... ♘xd7 24. ♔c3+-]

24. ♔e7+ ♔c6 25. ♔c7+ [25. ♔c7+ ♔b5 26. ♔c5+ ♔a4 27. ♔b4# A very hard fight with a lot of tension!]

1-0

(2) Moiseenko, Alexander (2711)
– Ponomarev, Ruslan (2726) [D58]

81st ch-UKR 2012 Kiev UKR (2.2), 28.07.2012

[Arkadij Naiditsch]

We will now see a great game with many typical ideas and nice tactics. Already, more than 10 years have passed since Ponomarev became the youngest FIDE World Champion — he was 18 years old. It's a little strange to me not to see him in the World Top 10...

1.d4 d5 2.c4 e6 [2...dxc4 Right now, the „Queen's Gambit Accepted" is super popular and hard to break.]

3.♘f3 ♘f6 4.♘c3 ♙e7 [4...dxc4 5.e4 ♙b4 6.♙g5 leads to the main lines of the well-analyzed „Vienna".]

5.♙g5 we are in the classical lines of the Queen's Gambit. This opening is very old and can be clearly considered to be one of the „classical" openings in chess. If we open any chess book from the 60s, 70s, 80s or even 90s, it's sure that we'll find some games on it.

5...h6 6.♙h4 [Another option is 6.♙xf6 ♙xf6 7.e3 0-0 8.♖c1 c6 9.h4!? This is sort of a „fashionable" move that

leads to an extremely unclear position. White's next moves are usually g4-g5, which makes the game extremely unbalanced.]

6...0-0 7.e3 b6 We are in the very main lines...

8.♙d3 ♙b7 9.0-0 ♘bd7 White has quite a wide range of choices here.

10.♙g3 [The main move is 10.♙e2 ♘e4 (10...c5 is another possible way of playing for Black 11.♙g3 cxd4 12.exd4 dxc4 13.♙xc4 a6 This position is very complicated. Only 2 pawns are exchanged, which gives a wide range of ideas for both sides. Usually, in a position with the isolated pawn, White should try to create some attack or to push d5, and Black should try to exchange as many pieces as he can and make a blockade on the d5 square. 14.a4 ♖e8 A few moves of a very interesting game: 15.♖ad1 ♙b4 16.♙d3 ♘h5 17.♙b1 ♘xg3 18.fxg3 ♙xc3 19.bxc3 ♙c7 20.g4

Cheparinov-Adams, ECC 2011. The game ended in a draw after a great fight.) 11.♙g3 (11.♙xe7 ♙xe7 12.cxd5 exd5 13.♖ac1 c5 probably leads to an almost equal position.) 11...♘xg3 (11...c5 is also possible.) 12.hxg3 and Black needs to be quite precise to equalize the position completely.]

10...♘e4 11.♙xe4?! A very rarely played move that I don't like. White gives his opponent a very concrete play. [11.♚e2 would take us back to the main lines.]

11...dxe4 12.♘d2 f5 The game is getting quite forced now! If White can't do something quick, Black will be simply better. In spite of the bishop pair, the attacking ideas on the kingside should be more than enough of a threat.

13.♘b5 This move is clearly the main idea of White, after he played 11.♙xe4.

13...e5! Strong and correct play. Actually, we are still in the game Gelfand-Topalov from 2000. It's hard to say if Moiseenko went intentionally for this line or just forgot something...

14.dxe5 [14.♙xe5 This is a very safe move, but clearly not to play for an advantage. 14...♘xe5 15.dxe5 c5 shouldn't give any advantage for White. Black will slowly capture the extra White pawn on e5, which would probably lead to some exchanges, and to a draw.]

14...♘c5 15.♘b3 This move is probably a novelty. [15.♘d4 ♚c8 16.♚h5 ♙h7 and I think Black has good play, Gelfand-Topalov, Monaco 2000.]

15...♘d3 Logical and good. [Of course not 15...♚xd1? 16.♚fxd1 ♘d3 17.♘xc7 ♚ac8 18.♘d5 and White is just 2 pawns up.]

16.♘3d4 White is not fighting against the main Black piece, the knight on d3. This will bring him a lot of troubles very soon. [16.♘c1!? would have been a decent move. White wants to play ♘d4 next. 16...♙c5!? This move stops White from playing ♘d4, and f3 as well. (16...g5 looks logical but is not the best. 17.♘xd3 exd3 18.f3! The position remains very complicated, but I feel White should be doing better here.) 17.a3! A cool move that makes Black think twice about what to do next. White wants to provoke Black's a6, to make the position of the knight on b5 safe — no more a6. If Black does nothing, White wants to play b2-b4.]

17...a6 (Doesn't work: 17...f4 18.♘xd3! exd3 19.♙xf4) 18.♘c3 a5! It's hard to say if White can be better here, maybe... But I think Black should be fine. (Black should not try to win the pawn back: 18...♘xb2 19.♚b3! ♘d3 20.♘xd3 exd3 21.♘d5 and White is doing better.)]

16...♚c8 A typical move. Actually, there aren't many options here... White wanted to play ♘e6.

17. ♔b3 ♕c5! We already know this idea, but anyway, it's a strong move. Black wants to play a6 now, and after ♖c3, to continue with ♕xd4 exd4 and f4.

18. ♘e2 [Maybe 18.f4 could be a possible move here, but it's hard to make such an ugly move...]

18...g5 Of course! Now f4 is a very serious threat. The game is getting very tactical.

19.e6 White accepts the challenge, and actually there is no choice. The Black pieces stand very dangerously and the f4 threat can be a killer.

19...f4! The tactical battle begins! [Another option was 19...c6 but of course, this move doesn't seem „right“ even if it leads to a very unclear play. 20. ♘c7 (Slow moves like 20. ♘bd4? f4 21.exf4 gxf4 22. ♕h4 ♕xd4 23. ♘xd4 c5 lead to a very bad position for White.) 20...f4 21. ♘xa8 fxf3 22. ♘xg3 ♔xe6 23. ♘c7 ♔e5 and it is hard to say who is doing better here. The position is very unclear]

20.exf4 a6 A good move. Black probably had another interesting option. [Of course not 20...gxf4 21. ♘xf4! and White is winning. 21...♘xf4 22. ♕xf4 ♔xf4 23. ♔g3+; 20...♔xe6! A crazy looking move, but probably a very strong

one as well. In a practical game, it's very difficult to calculate all the lines, but let's take a look at some of them: 21.fxf4 (21. ♘xc7 ♔g4! What a domination of the Black pieces! White is in big trouble... ♘e2 is hanging, gxf4 is a threat and all the Black pieces are looking in the direction of the White king...) 21...♘xf2!! Not an easy move to find! The idea is typical, but a very long and precise calculation is needed. 22. ♔xf2 (22. ♘ed4 ♘d3 23. ♔h1 ♔g6 and Black's initiative should be decisive.; 22. ♕xf2 e3! followed by ♔e4 with mate on g2!) 22...♔xf2 23. ♕xf2 e3! Black is opening the deadly bishop on b7. 24. ♘f4 Probably the only move. 24...♔e5 (24...exf2+ 25. ♔f1 ♔f5 should be better for Black as well.) 25. ♕g3 e2+

26. ♔h1 hxf4! looks like a computer line. Yes, it is! :) 27. ♘d5 ♔f8 and White can't stop Black from mating on f1. Of course, to see such a line is almost impossible — at least before playing 20...♔xe6.]

21. ♘bc3 [Doesn't help: 21. ♘bd4 gxf4 22. ♘xf4 (22. ♕h4 ♔e8 with a very strong attack.) 22...♔xf4! 23. ♕xf4 ♕xd4 Black has a clear advantage: 2 pieces for the rook plus a monster knight on d3. What else can be needed?]

21...gxf4 I think Moiseenko was very upset about his opening choice. And indeed, it's already quite unclear how to save the position...

22. ♖xf4 The only move to fight.

22... ♗xf4 23. ♕xf4 ♖xf4 24. ♖d5

24... ♖f5! A very precise move! [A less good move would have been 24... ♖f8 25. ♗g3+ ♔h7 26. ♗e5! White is getting the 3rd pawn for the piece. 26... ♗xd5 27. cxd5 ♗d8 The Black queen needs to come back to the game. 28. ♗xe4+ ♔g7 29. b4 ♗d6 30. f4 Black probably still has an advantage, but the fight would continue here!]

25. ♗h3 [25. ♗g3+ would bring nothing 25... ♔h7 26. ♖ad1 ♗d6]

25... ♗xe6! Black doesn't care about giving back some material. The amazingly strong bishop pair combined with big attacking possibilities will make Black's victory perfect.

26. ♖xc7 ♗g6 27. ♖xa8 ♗xa8 A logical human move, leaving Black with a very stable advantage. [27... e3 is a computer move, which is probably winning on the spot, but for a human, such a move is very hard to play. 28. fxe3

♖h5! This is the idea of the e3 push. The g2 square is very hard to protect. 29. ♖f6! (29. ♗g3 ♗xe3+! would lead to a nice finish of the game.) 29... ♗xe3+ 30. ♔h1 ♗g7 All this looks a bit scary, but it seems to be winning for Black. 31. ♗e6+ ♔h7 and White has no decent way to protect the g2 square.]

28. ♖ad1 ♖f8

29. ♖d7? This move loses immediately. [The best way to fight would have been to play 29. ♗g3 ♗xg3 30. hxc3 ♗c6 Of course, Black is much better, but there's still a lot of work to be done in order to get the full point.]

29... e3! And, of course, a nice finishing move!

30. ♔h1 [30. fxe3 ♗xe3+ 31. ♗xe3 ♗xg2#]

30... e2 31. ♖g1 ♗xf2 A very nice game by Ponomarev!

0-1

(3) Carlsen,M (2837) – Wang Hao (2739) [E32]

45th Biel GM Biel SUI (2), 24.07.2012

[Balogh Csaba]

1.d4 ♘f6 2.c4 e6 3.♘c3 ♙b4 4.♚c2 0–0 5.♘f3!?

5...b6?! The Chinese Nr.1 wanted to avoid theory and long preparation, so decided to get Magnus out of book with a strange move. I must say that this is not a clever idea in general. [5...c5! is the critical move. 6.dxc5 ♘a6 This was considered to be completely fine for Black, but in 2008 Morozevich introduced a very interesting novelty: 7.c6!?. There are many possibilities with playable positions for both sides. Ponomarev, who was facing this novelty, reacted really badly and lost in a few moves. 7...dxc6 8.a3 ♙xc3+ 9.♚xc3 ♘c5 10.♙e3! White is already slightly better, but just in two moves White won a piece! 10...♘ce4 11.♚e5 b5 12.g4!!+- and Black could, in fact, resign the game. Morozevich-Ponomarev, Moscow 2008]

6.e4! White achieved a much better version in comparison to the 5.e4 line. Now the knight stands well on f3, it protects the central pawns, while Black just gave a tempo

with b6, because he should have already put pressure on the center with d5 and c5.

6...c5 [6...d5 is the right move in the 5.e4 line, but now it's just bad, because of 7.e5 ♘e4 8.♙d3]

7.e5 ♘e8 Black's idea is to undermine the center with d6 or f6. White must play accurately. [7...cxd4 is an alternative, but White gets a dangerous attack here as well. 8.a3! This well-known idea works here as well, in order to unpin the knight! 8...dxc3 9.axb4 cxb2 10.♙xb2 ♘e8 Black is a pawn up, but his pieces are standing poorly. 11.♙d3 with the threats of ♙e4 and ♙xh7. 11...f5 12.exf6 ♘xf6

13.♘g5! This is the most effective way to increase the advantage. 13...h6 (13...g6 14.♙xg6+- wins.) 14.♘h7! ♘xh7 15.♙xh7+ ♚h8 We were following the Shabalov-Naumkin, Vilnius 1988 game, where White missed the direct win with 16.♙xg7+! ♙xg7 17.♚g6+ ♚h8 18.♚xh6 Black has no defense. 18...♙f6 (18...♚e7 19.♙e4+-) 19.♙g6+ ♚g8 20.♙a3! and the rook joins the attack and decides the game. 20...♚e7 21.♙g3 ♚xb4+ 22.♙f1+-]

8.d5?! I don't like this move. It allows Black to get a successful counterplay in the center. [8.a3! was the right move, after which Black is in a difficult situation. 8...♙xc3+

(8...♘a5 trying to keep the bishop. 9.♙e3 ♔e7 (9...cxd4?! 10.♘xd4 and Black must give up his bishop.) 10.dxc5! Not the only move, but I like this the most. The arising weakness on c5 is really annoying from Black's point of view. 10...bxc5 11.♙d3 f5 Now, either opening or keeping the position closed is very good for White. 12.exf6 (12.0-0 ♙b7 13.♙e2+= c5 is weak.) 12...♘xf6 13.0-0 ♙b7 14.♘e4! ♘xe4 15.♙xe4 ♙xe4 16.♔xe4 ♘c6 17.♖ad1+= White has clearly better perspectives.) 9.♔xc3 It's a nice achievement for White to gain the bishop pair, because nothing compensates for Black. For example 9...cxd4 10.♘xd4 ♙b7 11.♙e3! f6 (11...d6 12.♖d1+=) 12.♖d1! ♘xe6 threats 12...♔e7 13.♘b5! White takes the d6 square under control. 13...fxe5 14.♔xe5 ♘c6 15.♔g3+=]

8...exd5 9.cxd5 d6! Black came back to the game. The fight is open again.

10.♙g5 Black could have easily parried the concrete threats after [10.♘g5 g6 or; 10.♙d3 h6]

10...f6 11.exf6 White, at least, managed to hold his d5 pawn, which squeezes Black a bit. Also, the e6 hole might be weak later on.

11...♘xf6

12.0-0-0 Probably Carlsen put his hopes on this move when he played 8.d5. Black has to give up his b4 bishop, because of the ♘e4 threat. But I think he underestimated Black's counter-chances. [On 12.♙d3 ♔e7+! It's not easy to deal with this check. 13.♔f1 ♙a6! Black is OK!]

12...♙xc3 13.bxc3! It's important for White to control the b1-h7 diagonal, and also the b4 square. [On 13.♔xc3 h6 14.♙h4 ♘a6 (14...♙f5 is also possible.) 15.♙d3 ♘b4! 16.♙b1 ♙f5! Black solves all his problems by exchanging the light squared bishops. White cannot build up a successful attack without that. 17.a3 ♙xb1 18.♔xb1 ♘a6 with counterplay.]

13...♙g4 [Now on 13...♙a6 14.c4 White can preserve his bishop.; 13...♘a6 came into consideration, transferring the knight to c7.]

14.♖e1! A high-class move! By leaving the pin, Carlsen wants to play ♘h4 followed by an attack with h3 and g4. [The thematic 14.♙d3 helps Black to create counterplay. 14...h6 15.♙h4 ♘bd7 16.♖de1 ♙xf3 (16...b5!? is also interesting. 17.♙xb5 ♔a5) 17.gxf3 c4! This is the main problem of ♙d3. Black puts his knight to e5 and, suddenly, his attack starts to roll as well. 18.♙xc4 ♘e5⇐]

14...♙xf3 [14...♘bd7 would be met with 15.♘h4! h6 16.♙d2 Because of this, Wang Hao decided to take on f3.]

15.gxf3+ = White has worsen his structure, but the g-file is open, and the bishop has a nice square on e6. White has good attacking possibilities.

15...♘bd7 16.♙d3?! Carlsen wanted to create a weakness in the Black camp, with the threat of ♙xh7, but just like in the 14th move, it helps to create counterplay for Black. [16.f4! Controlling the e5 square, followed by ♖g1 and ♙h3-e6 was promising. At the end, the rook transfer ♖e3-h3 could be really dangerous.]

16...h6 17.♙f4 [17.♙xh6 is not enough. 17...gxh6 18.♖hg1+ ♔h8 19.♙d2 ♘h7! 20.♙xh6 ♖f7 Black has enough material to defend.; 17.♙h4 c4 transposes to 14.♙d3.]

17...c4!? [17...♘e5!? was another way to create counterplay. 18.♙xe5 dxe5 19.♖xe5 (19.c4 ♘h5 Black has very nice control over the dark squares. The game is unclear.) 19...c4! I like this move a lot, even if the computer suggests other move. Black has great play on the dark squares. 20.♙xc4 (20.♙f5 ♘d7 21.♙e6+ ♔h8 22.♖e3 ♘c5↗) 20...♙c7 21.♙e2 ♖fc8 with a double edged position.]

18.♙f5! [18.♙xc4 ♙c7 followed by ♘e5 and ♖ac8, and Black gets activity.]

18...♘c5?! Now White has some „handy“ moves. [The text move is slower than 18...♘e5! Even tough Black's position looks a bit shaky, it looks like he can still hold it together. Wang Hao was afraid of one of the following lines: 19.♙e6+ (19.♖hg1 ♔h8 20.♙d2 is very nice, but probably only leads to a draw after a forced line. 20...♘xf3 21.♙xh6! ♙c7! Only move! (21...♘xd2? 22.♙xg7+ ♔g8 23.♙xf6+ ♔f7 24.♙xd8+-) 22.♙xg7+! ♙xg7 23.♖xg7 ♘xd2 24.♖ee7 and here, two moves lead to a draw. 24...♘f3 (24...♖ae8 25.♙xd2 ♖xe7 26.♖xe7 ♘xd5 27.♖h7+ ♔g8 28.♖h5=) 25.♖g3 ♘e5 26.♖h3+ ♔g8 27.♖g3+=) 19...♔h8 20.♖xe5!? dxe5 21.♙xe5 This looks really scary for Black, but 21...♘xd5! 22.♖g1 (22.♙g6 ♖f6! Black happily gets rid of one of the powerful bishops. 23.♙xf6 ♙xf6 24.♙xf6 ♘xf6=) 22...♘f6 23.♙g6 ♙e7! 24.♙d6 ♙b7! After some only moves, it's not easy to break through for White, while taking the rook is not necessarily enough to win the game.]

19.♖hg1! ♔h8 20.♖g6! ♖f7 21.♖eg1 ♙f8 After some good attacking and defensive moves, we reached another critical position.

22.♙e3 Carlsen wanted to leave the dangerous f-file, and also to transfers his bishop to d4. But this allows Black to

get back to the game, once again. [22. ♔d2! was the right move! Because of the ♕xh6 threat, Black probably has to play 22... ♖d3+ 23. ♕xd3 cxd3 24. ♔xd3 and White is better now, because the Black pieces are pinned to the defense, and the knight can't leave from f6 because of the d6 pawn.]

22... ♖d3? This is the decisive mistake. Black's position was looking awkward, but in reality it was very far from clear. [22... ♖h5! 23. ♕e4 ♖f4! was the right plan. 24. ♕xf4 (24. ♕d4 ♖xg6 25. ♔xg6 ♔g8 Black can take on e4 any time he wants.) 24... ♔xf4 Black is compensating well on the dark squares. 25. ♔d2 (25. ♔xg7 ♔xg7 26. ♔xg7 ♔xg7 ∞) 25... ♔f6 After 26. ♔xg7 ♔xg7 27. ♔xg7 ♔xg7 I can't believe in White's advantage.]

23. ♕d4 [23. ♕xc5 dxc5 24. ♕e6+- was also good.]

23... ♖f6 24. ♔d2! ♔xg7 is too big a threat to deal with!

24... ♔e8 [Now it's too late for 24... ♖d3+ 25. ♕xd3 cxd3 26. ♔f4! and ♔xg7 is coming next!]

25. ♔xg7! ♔xg7 This was a must! [25... ♔xg7 26. ♔xh6+ ♔g8 27. ♕h7+!! was the point! 27... ♔h8 28. ♕xf6+-]

26. ♔xg7 ♔xg7 27. ♔f4! The d4 bishop is dominating the board. Black cannot even sacrifice his rook for it.

27... ♖d3+ 28. ♕xd3 cxd3 29. ♔d2+-

29... ♔g6 30. ♔xd3 ♔e6 31. h4! A brutal move with the simple threat of h5! Black cannot parry this. If he takes it with the king, ♔f5 comes, and in case of ♖xh5, ♔g4 wins a lot of material.

31... ♔fe7 32. h5+! Here again.

32... ♔f7 33. ♔f5 [There was nothing wrong with 33. ♔xh6+-]

33... ♔e5 34. ♔g6+ ♔e6 35. f4! Black resigned in view of [35. f4 ♔f5 36. ♕xf6! White only gives up his bishop when it's concretely winning. 36... ♔xf6 37. f5+ ♔e5 38. f4+ ♔xf4 39. ♔xf6+- A nice game, but a closer look showed us that it was not without mistakes!]

1-0

(4) Bacrot, Etienne (2713)
– Nakamura, Hikaru (2778) [D45]

45th Biel GM Biel SUI (9), 01.08.2012

[Arkadij Naiditsch]

Usually we try to comment a decisive game where a player works to get the victory from the beginning, or if there was a big fight. But let's take a look at a very normal thing in chess: „You play good, You outplay your opponent, You blunder-You lose“. Chess can be a very cruel game sometimes and I think here is an excellent example of it!

1.d4 Just the day before, Etienne Bacrot started his game with 1.e4 and lost in a winning position against A. Giri.

1...d5 I think this is a surprising opening choice of Nakamura. Usually, he prefers to go for a more dynamic opening, especially when he feels he can win. For example, he played 1...f5 many times.

2.c4 c6 An interesting psychological moment. White can make a draw now by playing 3.cxd5, which would not be a bad decision if we take into account the terrible tournament he had, but Etienne decides to go for a „full“ game, and I guess this is exactly what Nakamura hoped for.

3.♘c3 ♘f6 4.♘f3 And we are in one of the main lines of the Slav.

4...e6 5.e3 ♘bd7 6.♙c2 ♙d6 7.♙d3

7...dxc4 Why to take first with 7...dxc4 without castling? Actually, I have no idea. I think it should lead to about the same position if White wants too... [The normal move order would be 7...0–0 8.0–0 dxc4 with thousands of games played before. (8...e5)]

8.♙xc4 b5 9.♙d3 ♙b7 10.e4!? White tries to get an improved version of the line. [Would lead to normal lines: 10.0–0 0–0 11.e4 e5 and we are back to the known paths.]

10...e5 The only right reaction against White's e4 push. Black can't allow White to play e5.

11.dxe5 ♘xe5 12.♘xe5 ♙xe5 This is where the „real“ game begins!

13.f4 An interesting move, but I think it gives Black quite a good play. [13.♘e2!? I think this move could have made a difference! White wants to play the quick f4-e5 with a clearly better position. 13...♙c7 14.0–0 (Against the logical 14.♙e3 Black is in time to 14...♙a5+!) 14...0–0 15.♙d1 ♙e7 16.a4 The position is very normal but it might have been a decent try for White.]

13...♙d4 Of course, Black has to stop White from castling.

14.e5 White needs to act dynamically. [A slow move like 14.♘d2? ♘g4! and Black is doing great.]

14...♘d5 [Leads to a clearly better position for White: 14...♘g4 15.♘e4! 0-0 16.♘d6 The monster knight on d6 gives White a clear edge.]

15.♘e4 The White knight is going to d6, clearly the best place to be. [15.♘xd5 would lead to nothing. Black is in time to push c5. 15...♙xd5 16.♙e4 ♙d7! It's important to cover the bishop on b7, now c5 is unstoppable. 17.♙d2 c5 and Black is perfectly fine.]

15...♘b4! Nakamura takes an absolutely correct decision. [A normal move like 15...0-0 16.♘d6 ♘b4 gives White an extra option: 17.♙xh7+!? (17.♙b3 This would lead to the same position we got in the game. 17...♘xd3+ 18.♙xd3 ♙c5) 17...♙h8 18.♙e4 ♙h4+

19.♙d1! The key move of the line. White needs to protect the square c2. 19...♙xh7 20.♙xh7+ ♙xh7 21.♘xb7 ♖ab8 Probably, Black is doing fine here as well, but there's no need to calculate such a long line.]

16.♙b3 ♘xd3+ 17.♙xd3 0-0 18.♘d6 ♙c5! Black has to exchange the strongest White's piece, the knight on d6. [In case of 18...♙b6 19.♙e3 c5 20.0-0 I think White is doing clearly better. The knight on d6 is just standing perfectly! And White will develop a strong attack by playing f5-f6 soon, or bringing the rook to g3.]

19.♙e3 ♙xd6 20.exd6 We are entering a very interesting position. The main question is, can White be better here?! It's obvious that if Black does „nothing“, White will castle, play ♙c5 and ♖e1-Re7, with a big advantage. [Of course not 20.♙xd6? ♙h4+ 21.g3 ♙g4 22.0-0 ♖fd8 followed by c5 next. The light squares are terrible weak, which would give Black a great attack.]

20...♙h4+?! Nakamura chooses a risky plan... Probably, the American started to play for a win, but I don't see many reasons to do this. [20...c5!? In my opinion this was the objectively correct way to go. 21.0-0 Finally, White managed to castle... 21...c4 22.♙d2 ♖e8! If possible, Black

should aim to exchange the rooks! 23. ♖fe1 ♔d7 24. ♙c5 f6! Black wants to play ♕f7 next, followed by ♖xe1 and ♗e8, exchanging both rooks, which automatically leads to a draw. Probably, we can say that White's experiment with 13.f4 doesn't bring much.]

21.g3 ♗h5 Black should not allow White to castle long, which would make the d6 pawn much stronger immediately. [21... ♗h3?! 22.0-0-0! To castle long is a great present for White. 22...c5 23. ♖he1 and due to the very strong d6-pawn, White is doing clearly better.]

22. ♖c1?! [Why only not to play 22.0-0! c5 The last chance for Black to play c5 and free the bishop from b7. White wanted to play ♖c1, or b4, or f5. 23.f5 c4 24. ♗d1 White is trying to force an endgame.]

24... ♗xd1 (24... ♗h3 25. ♖f2 and I think Black is in some trouble! The Black queen should be on d7 and not on h3.) 25. ♖axd1 ♙c6 26. ♖fe1 White may try to win this — probably the position is closer to a draw — but in any case, White is playing with 0 risk and with some winning chances.]

22...c5?! Black misses a great opportunity! [22... ♗h3! This apparently shocking move is actually an extremely

strong one. White can't castle long anymore and the king is stuck on e1. 23. ♖c5 White has to try to stop the c5 move, but it's not easy to do it... (23. ♙c5 ♖fe8+ 24. ♕f2 ♙c8 and suddenly, the White king is in a lot of danger. Black will play ♙g4 next, followed by ♖e2. The d7 move is blocked. A draw would now be a fantastic outcome for White.) 23... ♗g2 (23... ♖ad8 24. ♕f2 and White is safe.) 24. ♖g1 ♗xb2 and I think only White is risking here.]

23. ♖xc5 Why not to take a pawn with tempo?

23... ♗h3 24. ♖g1 ♗xh2 take a look at this position. White has a free passed pawn but the opposite colored bishops clearly increase the drawing chances for Black. The king is badly placed on e1, but it can be quickly removed to a safer place on the queenside. If White manages to exchange the Queens, the endgame could be very bad for Black. All in all, White is clearly with a plus, Black has a tough defense ahead. But not today, the game will end in only 6 moves...

25. ♖c2! A very strong move. Before entering into the 7th rank, White pushes the Black queen from her nasty position on h2. [An attempt to reach the endgame with 25. ♗e2 ♗h6 would get Black back in the game.]

25...♔h3 26.♖c7 The rook on c7 is just perfectly placed!

26...♙f3

27.♔d2! Another very good move by White. The king is going to b2 where he will be in full safety. Slowly, Black is getting in trouble...

27...♔e6?! I don't see any idea behind this move. [27...♖fd8 with a tough defense, but it's clear that the position is very unpleasant.]

28.♙c5 ♙g4 [Another option was to play 28...♙e4 29.♖b3 (29.♖e1?! This interesting exchange sacrifice doesn't seem to work for White. 29...♙xd3 30.♖xe6 fxe6 31.♔xd3 ♖f7 32.♔d4 (32.♔e4? ♖xc7! Now, the White king is not in time to go to the c6 square. 33.dxc7 ♖c8 34.♙d6 ♔f7 35.♔e5 g6 and only Black can be better here.)

32...♖d8! A fantastic defensive idea! (A losing move would be 32...♖xc7? 33.dxc7 ♖c8 34.♙d6 ♔f7 35.♔c5 and the White king reaches the c6 square and gets the full point.) 33.♖c6 with quite an unclear endgame.(33.♔e5? ♖xc7 34.dxc7 ♖d5+)) 29...♙d5 30.♖e3! White doesn't care about the a2-pawn, it's much more important to reach the end-game. 30...♙xa2 31.♖xe6 ♙xe6 32.g4! and we can clearly see that Black is in big trouble! White's next moves are f5 and ♖e1–Re7. Things are really looking bad for Black.]

29.b3! As planned, White creates an escape road for the king to b2. ♖e1–e7 is the next move. It seems like Black is really bad.

29...♙f5 [Doesn't help much to play 29...♖fe8 30.♖e7! blocking the e-file. 30...♖xe7 31.dxe7 ♖c6 32.♖d8+ ♖e8 33.♖d6 and it's easy to see that White is clearly better.]

30.♖e1?? What a blunder after 10 great moves in a roll!

30...♖xe1+ Nakamura just says „thank you“. Such games give a chess player sleepless nights! You play good, get a better position step by step, and suddenly, blunder and lose... This happens much more often than it should, even to high class professionals! **0-1**

Endgame section

(15) Ponomariov, Ruslan (2726)
— Volokitin, Andrei (2704) [E60]

81st ch-UKR 2012 Kiev UKR (5.4), 31.07.2012

[Chess Evolution]

This endgame would not win a price for its precision, but it would clearly win a beauty contest. I think I never saw such an end position! Black is a pawn up and, of course, wants to win the game.

27. ♔d4

27... ♔xd4! A move based on good calculation. [The more silent 27...f6 28. ♔xe5 fxe5 29. ♔d3! is the only move to stay alive. (29.e4 g5 and the game is over.) 29... ♔f5 Black can't allow White to play ♔e4. 30.e4 ♔e6 31. ♔f2 It seems like the position is a draw, but the Black king has a different opinion. 31... ♔f7 32. ♔xf3 ♔e8! The Black king is going to c7-c6-c5. 33. ♔c2! not allowing the king to go to c6. 33... ♔xc4 34. ♔a4+ ♔d8 35.a3 ♔c7 36. ♔e3 It's hard to say if this position is winning or if it's a draw. I think White has good chances to hold]

28. exd4 g5 Of course, Black is not going to give away his f3 pawn.

29. ♔d3 g4 30. a3 [30. ♔e4 would not change much. 30... ♔c8 31.c6 b6 Next, Black would bring the king to d6 and get the pawn c6. If White plays d4-d5, Black would go with the king to c5. I think the position should be easily winning.]

30...f5! The beginning of a very nice plan.

31. ♔f2 ♔f6 32. h4 This move doesn't change anything because Black's idea is to play e5!

32... ♔d7 33. ♔c2

33...e5 34.d5 h6? It's not easy to understand this move...
[The logical 34...e4 35. ♖b3 (35. ♔e3 Now Black has a couple of winning ideas, which are focused on the f4 push, but the simplest one is: 35... ♗a4!]

36. ♗xa4 f4+! The Black pawns are unstoppable! 37.gxf4 g3 38.c6 bxc6 39.dxc6 g2 40. ♕f2 e3+ 41. ♕g1 e2 and queen!) 35...f4 36.gxf4 ♕f5 37. ♕e3 g3 38. ♗c2 f2 39. ♗xe4+ ♕g4 40. ♗g2 ♕xh4 and the future moment of the h pawn decides the game.]

35. ♕e3 e4 And Volokitin continues with the right plan.

36.c6 A move of desperation...but the game is lost.

36...bxc6 37. ♗a4 Black has a lot of winning moves here, but Volokitin chooses the most beautiful one!

37...cxd5 38. ♗xd7 d4+ Have You ever seen so many pawns around the White king?!

39. ♕d2 e3+ 40. ♕d3 e2 41. ♕d2 d3 42. ♕e1 ♕e5! And again, Volokitin is going for the beauty price!

43.c5 ♕d4 Just an amazing end position! Chess can be really beautiful!

0-1

(16) Eljanov,P (2693) – Moiseenko,A (2706)

Kiev, 29.07.2012

[Chess Evolution]

White is winning with his extra pawn and more active pieces, but right in the beginning, Eljanov makes a dubious decision. He decided to exchange his active rook, and the position still remains winning for him, but Black gets excellent chances to save the game.

65. ♖f7 [From a practical point of view, the best move was 65. ♖h8! ♔e7 66. ♕e4 ♖d6 (On 66... ♖g6 it's very important to take the king away from its good place with 67. ♖h7+! ♔f8 (67... ♔d6 68. ♖xh6 ♖xf4+ 69. ♕e3 ♖f6 70. h5+-) 68. f5! ♖xh4 69. ♕e6+- ♔e5 next.) 67. h5+- and the rook is coming out from the corner through g8. White should easily convert his advantage.; 65. ♖b7 is not good, because of 65... ♖g6!]

65... ♖xf7 66. ♕xf7 ♔e7 67. ♕c4

67... ♔f6 Suddenly, things are not easy at all. The two main problems are to deal with the concrete threats of the knight and the wrong color of the promoting square on h8. If Black takes the f-pawn, he only needs to sacrifice his knight for the b-pawn and run with the king to the h8 corner to secure the draw.

68. ♕e4 White probably still remains winning after this move, but there was a better solution... [68. h5! in order to prevent the counterplay with ♖g6. 68... ♕f5 (68... ♖d7 69. ♕e4 ♖b6 Black controls the squares of the breakthrough right now, but White can always try to make progress with zugzwang. 70. ♕b5 ♕e6 71. ♕e2 ♕f6 72. ♕g4+- and the White king will advance to e5 or d5.) 69. ♕a6 ♕f6 70. ♕e4 ♖e6 71. ♕c8 ♖c7 White can break the fortress with the help of zugzwang, once again. 72. ♕g4 ♕f7 73. ♕e5 ♕e7 The win is still not obvious, but after some maneuvering, Black cannot prevent the invasion of the king on d6 or on g6. 74. ♕f3 ♖e8 (74... ♖e6 75. f5 ♖d4 76. ♕d5+- f6 is next.) 75. ♕f5 ♕f7 76. ♕d5+ ♕g7 77. ♕e6 ♖f6 78. ♕f3+- White soon collects the c5 pawn.]

68... ♖g6 We reached nother critical moment, where the most obvious move could have cost the full point to Eljanov.

69.h5? I think White is not winning anymore, if his opponent creates a correct defense. The problem of this move is that Black is always in time to attack the f4 pawn, and after taking it, h5 is hanging. Of course, only deep and detailed analysis can show us the correct evaluation of the position. Over the board, we can only trust in our intuitions, which unfortunately sometimes lead us in the bad direction. [69.♔d5! ♖xf4+! This is more tenacious. (69...♗xh4 70.♔xc5+- In this case, sacrificing the knight for the b-pawn is not enough for Black to save the game.) 70.♔xc5 ♔e7 (70...♗g2 is too slow. 71.b4 ♗xh4 72.b5 Black can't stop the pawn... 72...♔e7 73.b6 ♔d7 74.♕e6+! ♔xe6 (74...♔d8 75.♔d6+-) 75.b7+-) 71.♔c6! Trying to keep the king away from the pawn... (71.b4 ♔d7) 71...♗g6 It's a nice moment to improve our calculation. The question is, which one is better, to take the pawn on h4 or on h5?

72.h5! (72.b4 would spoil the win 72...♗xh4 73.b5 ♗f5 74.b6 ♗d6= d6 is the best square for the knight. Black only wants to push his pawn and if the bishop leaves the f1-a6 diagonal, ♗c4 b7 ♗a5 draws the game.) 72...♗f4 73.b4 ♔d8 (73...♗xh5 Black is in time to catch the pawn, but it reaches the 7th rank, which is enough for the win. 74.b5 ♗f6 75.b6 ♗d7 76.b7 The Black pawn is not ad-

vanced enough. 76...h5 77.♔c7 h4 78.♕b5+- Just in time.) 74.♕a6! Another very precise move! 74...♗e6 (74...♗xh5 loses again, after 75.b5 ♗f6 76.b6 ♗d7 77.b7 h5 78.♕e2 h4 79.♕g4 ♗b8+ 80.♔b6 and Black is in zugzwang. 80...♔e7 81.♔c7 ♗a6+ 82.♔c8 ♔f6 83.♕h3!+- White keeps control of the h3 square and his next move will be ♕f1!)

75.♔d6! ♗g7 (75...♗f4 76.b5+-; 75...♗c7 76.♕e2) 76.♕e2! The last accurate move! White now simply wants to collect the h6 pawn. (76.b5? was the last moment to make a mistake. The game is drawn after 76...♗e8+! 77.♔c6 ♗c7= with the threat of ♗xb5 and ♔e7.) 76...♗f5+ (76...♔c8 77.♔e5+-) 77.♔e5+- It was really difficult to find this win over the board.]

69...♗e7 I think the position is objectively drawn now. White should try to create zugzwang, but each bishop move allows Black to activate his knight.

70.♕d5 [70.♕a6 is probably the most critical. 70...♗c6! (70...♗f5 is a mistake now, because of 71.♔d5 ♗d4 72.b4!+- In comparison to the 70.♕b5 line, the bishop is not hanging now.) 71.♕b5 (71.♔d5 ♗a5= 72.♕c4 transposes to 70.♕b5.) 71...♗b4! 72.♕d7

72...d2! A very important resource! White can hardly disturb the knight there, which either wants to pass on b4 (where it controls the d5 square), or after c5, is ready to play c1. 73.c3 (73.c5 d1 74.c4 is the same.) 73...c1+ 74.c4 e2 and here, the problem of the 69.h5 move becomes clear. Black wins a very important tempo by taking the f4 pawn, which allows him to make a draw... 75.xc5 dxf4 76.d6 (76.g4 e5!= is a draw, since b4 is met with d3, followed by dxb4 and f6.) 76...d5 77.b4 d3! 78.b5 (78.c6 d5+ 79.c5 e7 80.b5 d8=) 78...e4+ 79.c6 e7 80.b6 d6= and the knight reached the ideal d6 square. We have already met with this in the 69.c5 line.; 70.b5 d5! 71.c5 d4 72.c4 f5 73.xc5 dxb3+! 74.xb3 dxf4 Black is in time to get back to the corner. 75.d4 g5! An important tempo. 76.d1 f6=; 70.e2 d6 71.d5 d5 with the same draw as in the 70.b5 line.]

70...d5! 71.c4 d3+ [71...e7 was also possible. White wanted to improve on his play, but of course, taking the pawn should be easier.]

72.c5 d5 73.xc5 dxf4 [73...e7 was also possible. 74.f5 d3 75.e6 h5 76.b4 h4 77.b5 d4+ 78.d4 h3! 79.b6 d6= Everything is under control.]

74.c5d6! The bishop and the king give a perfect support for the b-pawn, but here comes the role of the h-pawn.

74...h5! 75.b4 h4 76. f1!

76...h3? [76...e6! was the only move. 77.b5 d8! is the only move, again. White cannot win... 78.g2 A last attempt to prevent the d7-a5 ideas, but...

a) 78.b6 d7+ 79.c7 (79.c6 d5+ 80.b5 d7=) 79...d5= A good place for the knight, where the bishop can't disturb it. The king is also far away;

b) 78.c7 d7 79.b6 e5 80.c7 d5=; 78...f7+! 79.c7 e7 80.b6 d6= and we reached the drawn position with the knight on d6.]

77. f3! White is winning now!

77...d3 [77...d5 78.b5 d3 79.b6 d4+ 80.c6!+-]

78.b5 The knight cannot be sacrificed for the pawn.

78...b2 [78...e5 79.e6+- Controlling all the squares!]

79.e6! d4 80.f3 d3 [80...b6 81.c7 d8+ 82.b7+-]

81.b6 d4+ 82.c6 Black resigned.

1-0

Clash of the Titans

(17) Tal, Mihail — Kolarov, Atanas 5 [B15]

EU-chT (Men) 04th Kapfenberg (3.6), 12.05.1970

[Balogh Csaba]

In this game, we meet with a typical intuitive exchange sacrifice in the hands of Mikhail Tal!

1.e4 c6 2.d4 d5 3.♘c3 g6 This is quite a passive system. White has two promising ways to fight for the advantage.

4.♘f3 This leads to an open position, where White is in time to develop his pieces ideally. [4.e5 is an alternative, followed by f4, when White obtains a position with a huge space advantage and a long maneuvering fight begins.]

4...♙g7 5.h3 An important prophylactic move against Black's active counterplay with ♙g4.

5...dxe4 6.♘xe4

6...♘d7 Black prepares for ♘gf6 to be able to recapture with the knight. [6...♘f6 immediately would leave Black with an unpleasant choice after 7.♘xf6+ exf6 is a bad structure, while ♙xf6 is clearly a bad place for the bishop.

Later on, the management of the Black pieces is going to be difficult... White can develop his pieces the same way as in the game.]

7.♙c4! Before I started analyzing this game, I thought for some reason that the right place for the bishop was on d3. Now I clearly see that Tal's setup is preferable.

7...♘gf6 8.♘xf6+ ♘xf6 9.0-0 0-0 10.♖e1 The Black position is worse than it seems. White has a space advantage with his d4 pawn. Besides, he has a very easy development, for example: c3, ♙e2, ♙g5, ♖ad1 and ♘e5. At the same time, Black will get out of useful moves. He should undermine the d4 pawn with a c5 push to gain more space for his piece play, but this always leads to an inferior position for him. The first question is, what to do with the c8 bishop?

10...♙f5 [10...b6 is the other option, but White achieves an advantage after a logical development. 11.♙e2 e6 12.♙g5 ♙b7 13.♖ad1 ♙c7 14.♘e5+= White is better. The two most obvious moves for Black are close to being losing... 14...c5 would ease Black's task, but... (14...♖ad8 is met with 15.♙f3! c5 16.♙f4+/- and Black loses material.) 15.♘xf7! ♖xf7 16.♙xe6+- and Black can't parry the simple threat of ♙xf6.]

11. ♖e5 Tal immediately starts to harass the f7 pawn. [11. c3 is more calm and also good.]

11... ♗e4 Black wants to neutralize the c4 bishop by playing ♗d5. [11... ♗d5 was possible, but White is better anyway. 12. c3 ♖c7 13. ♖f3 ♗ad8 14. ♗b3+= White has a clear plan with ♗d2, ♖e2 and ♖ae1, while it's very difficult to suggest something for Black.; 11... ♗d7? would close the bishop's way back. 12. ♗xf7! ♖xf7 13. g4!+-]

12. ♗g5!? Tal plays in his usual style, allowing his opponent to get different kinds of risky counterplay with ♖b6. [12. c3 was safer. 12... ♗d5 13. ♗d3! Just as in e game, White has to keep the pieces on the board to maintain his advantage. 13... ♗d7 14. ♗g4 ! Any exchanges would just give space for Black to maneuver. 14... ♗f6 15. ♗g5! ♗xg4 16. ♗xe7]

12... ♗d5 13. ♗d3! Without the light-squared bishops, Black would be fine. Now, he must always reckon with a potential c4 threat. The bishop is misplaced on d5.

13... ♗e6 [On 13... ♖b6 Tal probably wanted to reply with 14. c4 ♗e6 15. ♗e3 ♖xb2 (15... ♖a5 is the right move, but White is slightly better anyway.) 16. ♖b1 ♖xa2 17. ♖xb7+/- with a big advantage. The Black pawns are hanging and there is still no future for his minor pieces.]

14. c3 ♗d7

15. ♗f3! Black got seriously tricked! He cannot move with his e6 bishop because of the e7 pawn, and all the other moves are met with the same sacrifice...

15... ♖e8 16. ♖xe6! A great, but on the other hand, typical exchange sacrifice, which seriously weakens the Black king, and crushes his pawns structure. Black has no chance to create any kind of counterplay, his rooks are completely useless. I am quite sure that Tal took on e6 without any hesitation.

16... fxe6 17. ♖e2 White does not need to hurry. Calm moves simply smother Black.

17... e5 Black tries to breathe... [After the passive 17... ♗f8 White has a lot of good moves. I like the computer's suggestion: 18. ♗f4 (18. ♗c4 ♖d6 19. ♖e4 followed by ♗f4 and ♗e5 is also very good.) 18... ♖d5 19. ♗e5 followed by ♗c4 and ♖e1, or just h4-h5.]

18. ♗c4+ ♖h8 19. dxe5 White got a pawn, but materially he's still behind. His main triumph is still the superiority of the pieces.

19... ♖c7 [19... ♖f8 has a fantastic refutation. 20. ♖d1 ♖e8 and here

21. ♖f7!! White was better after other moves as well, but this is just great. 21... ♜xf7 22.e6 ♜f5 23.exd7 The d7 pawn decides the game, but some accurate moves are still needed. 23... ♖f6 (23... ♜fd8 24. ♜xe7+-) 24.g4! ♜b5 25. ♖xf6+ exf6 26. ♜e7 White is winning. His knight will arrive to e6 soon. 26... ♜b6 (26... ♜ad8 27. ♜d6 ♜c5 28. ♖d4+-) 27. ♖d4+-]

20. ♖f7! ♜f8 21.e6 The f7 bishop would not be necessarily strong, but in this particular case, it helps a lot in the attack. The game demonstrates it well.

21... ♖f6 [21... ♖e5 Exchanging some pieces would have been more logical, but it leaves the e7 pawn hopeless. Black will be unable to protect it from e8 or d7 with the rooks. So, White needs to slowly attack it. 22. ♖xe5 ♖xe5 (22... ♜xe5 23. ♜xe5 ♖xe5 24. ♖xe7+-)

23. ♜e3! Now, ♖xe7 is already a threat. (23. ♖xe7? would be a serious oversight. 23... ♖h2+! 24. ♖h1 ♜xe7 25. ♖xh2 ♜xf7! It's so easy to lose in 3 moves from a winning position.) 23... ♖g7 24. ♖h4! ♜ad8 25. ♜g5 and e7 falls, since after 25... ♖f6 26. ♜xf6+! exf6 27. ♖xf6#]

22. ♜c4! The queen is heading to h4, when ♖xg6 threatens to win on the spot.

22... ♜a5 [22... ♜ad8 23. ♜h4+-]

23. ♜e1 [There was nothing wrong with 23. ♜h4 ♜f5 24. ♜e1+-]

23... ♜d5 A desperate try either to exchange queens or to give back the exchange on f7, but Tal counters it nicely...

24. ♜h4 ♜xf7 [24... ♜f5 25. ♖e5+-]

25. ♖e5! Great tactical play, after which Black can practically resign. [25.exf7 ♜xf7 26. ♜b4 wins as well, but the text move was much stronger.]

25... ♖h5 [25... ♜ff8 26. ♖xg6+ ♖g8 27. ♖xe7+- and the queen falls. This was the point.]

26. ♖xf7+ ♖g8 27. ♖xe7+- White ended up with two extra pawns. From now on, many moves are winning in each position.

27... ♜e8 28. ♖d6 ♖f6 29. ♖xf6 ♜xd6 30. ♖g5 [30. ♖d4 c5 31. ♖e3 ♜xe6 32. ♜c4+-]

30... ♜xe6 31. ♜c4 White gave back one of the pawns, but the Black king became vulnerable with the absence of the dark squared bishops.

31... ♖g7 32. ♜b3! Preparing for ♜d1!

32...♔f8 33.♖d1 ♕e5 34.♗h6 ♖d6 35.♖xd6 Black resigned because of ♕xb7. An easy but instructive victory by Tal.

Editorial Preface

One of the main events of the week came to an end with a big surprise. Anton Korobov became the new Ukrainian National Champion with a score of 8/11, a full point ahead of Volokitin and Areschenko. There were disappointing results for the Top favorites: Ponomariov, Eljanov and Efimenko.

The Biel Tournament had a dramatic finish. At the end, Wang Hao made use of the tournament system (3 points for a win, 1 for a draw) winning his last game against his direct rival Giri, and finishing the tournament with 19 Points (6,5/10). Carlsen didn't manage to beat Etienne Bacrot with White and obtained the best score with the Classical Scoring System (7/10), but just got the second place with the Football Scoring System (18 total points). The 3rd-4th place was shared by Giri and Nakamura. After the dramatic last round in the Open Section, the tournament had 3 winners: Kurnosov, Movsesian and Edouard, all with 8/11.

The Russian Super Final is on the way with a lot of draws. It's hard to predict who is going to be the winner at the end.

In the female section, there are a lot of decisive results, and it's also hard to say who is the favorite, probably Pogonina and Gunina.

As usual, we wish You a lot of fun with Your new issue of CEWN!

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Eljanov,Pavel (2693)
— Areshchenko,Alexander (2691) [D70]

81st ch-UKR 2012 Kiev UKR (7.4), 03.08.2012

[Balogh Csaba]

A very sharp game following the real spirit of the Grünfeld defense.

1.d4 ♘f6 2.c4 g6 3.f3 Eljanov was a second in the Gelfand team during the WCC match against Anand. As Anand tried the 3.f3 system twice, Eljanov must be very well prepared for this variation. However, he fell against a nice novelty anyway.

3...d5 4.cxd5 ♘xd5 5.e4 ♘b6 6.♘c3 ♙g7 7.♙e3 0-0 8.♙d2 Gelfand played 8...e5 in the third game of the match, but Eljanov goes for the main line.

8...♘c6 9.0-0-0 A typical Grünfeld position, where White has a huge center and Black tries to create counterplay against it.

9...♙d6 This is the new „wawe“! Black wants to play ♙d8 to put quick pressure on the d4 pawn. Theory is just about to develop here. The biggest specialists play like this nowadays. The two main lines: 9...e5 and 9...f5 are in some crisis now.

10.♙b1 [The pawn sacrifice with 10.♘b5 ♙d7 11.♙h6 ♙xh6 12.♙xh6 a6 13.♘c3 ♘xd4 14.f4! followed by ♘f3 is a very interesting alternative.]

10...♙d8 White has to deal with the d4 pawn. He cannot protect it with 11.♘ge2 because of ♘c4.

11.♘b5! We are still following some high level games. [11.d5 opens the diagonal for the „Grünfeld bishop“. 11...♙b4! Black wants to play ♘e5-c4, and the tempting 12.♘b5? loses to a fantastic queen sacrifice...]

12...♘xd5! 13.exd5 (13.♙xb4 ♘cxb4! Only move, but good enough. 14.exd5 ♙f5+ 15.♙c1 ♘xa2+ 16.♙d2 ♙xd5+ 17.♙e1 ♙xd1+ 18.♙xd1 ♙xb2 and the queenside pawns start to march. The White pieces are „a bit undeveloped“.) 13...♙xd5! 14.♙xb4 ♙xd1+ 15.♙c2 and now 15...♙xf1!! followed by ♙f5 and ♙d8. Black has a winning attack; 11.e5 would give up the light squares. 11...♙f5+ 12.♙a1 ♙d7 Black is more than fine.]

11...♔d7 12.d5 Just now d5, because ♖b4 does not work anymore. White sets a nice trap with this move...

12...a6 [Mamedyarov fell into the trick against Anand in a rapid game. 12...♘e5? 13.♔c2! and Black is lost, because after 13...c6 14.♘xa7! wins. Anand-Mamedyarov, Corsica 2011.]

13.♘c3 Aronian scored a very important victory over Caruana a few months ago with this move. Areshchenko, as a big expert of the Grünfeld, had to be well prepared for this. That game was analysed by Arkadij in the CEWN Nr.17. [13.dxc6 leads to a draw after some complications. 13...♔xd2 14.♖xd2 ♖xd2 15.♙xd2 axb5 16.cxb7 ♙xb7 17.♙xb5 White is a pawn up, but Black can quickly activate his pieces, obtaining enough counterplay for a draw. 17...f5! 18.exf5 ♙d5 19.♘e2 ♙xa2+ 20.♔c2 gxf5= Vitiugov-Giri, Reggio Emilia 2011. This game was very deeply analysed by Kamil Miton in the January 2012 Chess Evolution edition.]

13...♘e5 The biggest drawback in Black's position is the pawn on a6. His ideal move would be c6, in order to undermine the d5 pawn, but this never works because of the b6 knight.

14.♙d4

14...c5! A great intuitive sacrifice by Areshchenko! This was the only way to preserve the strong bishop. I cannot recall, but I have seen somewhere the same idea before, so for a Grünfeld player such things should automatically come to mind. In the next few moves, we will get all the ideas behind the move. [14...e6 is another I attempt to undermine the center, but White achieves some advantage after 15.f4 ♘ec4 16.♔f2+=]

15.♙xc5 ♘ec4 16.♙xc4?! I don't like this move at all. I agree that White is undeveloped and this is a chance to get rid of one of the pieces with tempo. But on the other hand, he gives up the bishop pair and what is more important in this case, Black finally solves his problem with his b6 knight, which had no moves before. Suddenly, the c4 knight becomes powerful and it might be supported by a pawn on b5. [16.♔c1! was the right move in my opinion, to protect the c3 knight. 16...♔c7 17.♙d4 ♙xd4 (17...e5 is completely different to the game, because of the poor b6 knight. 18.♙f2+/-) 18.♖xd4 ♔c5 Black must play actively, otherwise he'll simply end up a pawn down. (I tried 18...e5 but the computer refuted it nicely with 19.♖d3! ♙d7

20.♘d1! Beautiful regrouping! The rook will stand perfectly on c3! 20...♖ac8 21.♖c3+/-) 19.♘ge2 ♘d7 Black needs to bring his pieces as fast as possible. Still, his main problem is the b6 knight, because this avoids him from launching an attack with b5-b4. It's not easy for White either, because his pieces are still undeveloped, but suddenly, he can start an effective attack. 20.h4! e5 (20...h5 just helps White. 21.g4! hxg4 22.h5! White wins. For example, after the greedy 22...gxf3 23.hxg6 fxe2 24.♖h8+! ♔xh8 25.♔h6+ ♔g8 26.♔h7+ ♔f8 27.♔h8#) 21.dxe6 ♘xe6 and now a hidden point of the 20.h4 move comes out with 22.♔g5!+= White has the advantage, but Black has compensation.; 16.♔f2 is countered by 16...♘xc3! 17.bxc3 ♘a4! A temporary piece sacrifice, which leaves the White king a bit „naked“. 18.♘xc4 ♔c7!♗ wins back the piece with counterplay.]

16...♘xc4 17.♔c1

17...♔c7!? Areshchenko found an interesting plan to preserve his dark-squared bishop. [17...b5 was also playable. 18.♘ge2 ♘b7 followed by ♖ac8 and b4, using the unfortunate situation of the c1 queen, with a very sharp posi-

tion. The game might continue with 19.b3 ♖ac8 20.♘d4 b4 21.bxc4 ♖xc4♗]

18.♘d4 e5! This is the point! Black does not want to exchange pieces. At first sight, this move „kills“ the g7 bishop, but it might easily join the fight in the future, from f8 or from h6.

19.♘f2 b5 White can hardly make use of his extra pawn, while Black has a very easy attack with ♘d7 and b4. White is forced to do something, otherwise he'll get crushed.

20.b3! A small weakening, but it pushes back the knight, getting some space for maneuvering.

20...♘d6 21.♔e3 White wants to occupy the c-file, and to create some threats connected with ♔b6 and ♘c5 could be also dangerous. Now, it's Black's turn to act!

21...f5! This is the way to play the Grünfeld! Actively! The e4 pawn seemed to be the safest square for White, but actually it's weak. Black wants to push b4, and after the knight moves, take twice on e4 and ♘f5!

22.♖c1 ♔e7 23.♔b6? A huge mistake in the calculation, which gets cruelly punished. [23.♘h3 It was time to finish the development. 23...♘d7! refreshing the threat of b4 and the double-take on e4. A double edged position. (23...b4 immediately did not work, because of 24.♘a4! fxe4 25.fxe4 and on 25...♘xe4? White has 26.♖xc8!)]

23...fxe4 24.♘xe4 A sad necessity. [Eljanov definitely wanted to take back with the pawn, but he missed something in the following line: 24.fxe4 ♘xe4! 25.♘xe4 ♘f5 26.♖e1 ♔b4! Only move, but strong! 27.♔e3 ♖xd5 and Black wins. For example, after 28.♘f3 ♘xe4+! 29.♔xe4 ♖d1+! ♔xe4 and ♖xh1 next.]

24...♙f5 It's clear Black is doing great now, but he still needs to play very strongly if he wants his attack to break through!

25.♖e3 Admitting the mistake of 23.♖b6.

25...a5! Because of the mistake on the 23rd move, Blacks get enough time to make use of the b3 weakness! It's very difficult to deal with the a4 threat.

26.g4 This loses, but it was hard to advice something clever.

26...♘xe4! [26...♙xe4+ 27.fxe4 a4 is also good.]

27.fxe4 ♙h6! Nice combo! Black wins an exchange!

28.♖xh6 ♙xe4+ 29.♖b2 ♙xh1 30.♙h4 ♖a7! 31.♘e2 [White cannot balance the material with 31.♙xd8 ♖d4+ This was the point of the combination. White gets mated. 32.♖a3 b4+ 33.♖a4 Black has only one winning move here! 33...♖xd5! and ♖c6! with mate to follow.]

31...a4! You must push until your opponent collapses! Black doesn't lay back with his material advantage, he continues playing for mate!

32.b4 Only move. Taking pieces was losing. [32.♙xd8 axb3; 32.♖xh1 axb3]

32...a3+ 33.♖a1 ♙f3! Black wants to get the d4 square for the queen.

34.♘c3 [34.♙xd8 ♙xe2 Double threat of ♖d4 and ♖xd8.]

34...♖d4! 35.♙xd8 ♖xd8 White resigned! Too many threats to parry. The main ones are ♖c8 and ♖xb4. A great game for the topic: How to play the Grünfeld!

0-1

(2) Korobov, Anton (2678) – Miroshnichenko, Evgenij (2621) [D43]

81st ch-UKR 2012 Kiev UKR (8.6), 04.08.2012

[Arkadij Naiditsch]

We'll follow a nice game played by the surprising winner of the Ukrainian National Championship, which was amazingly strong, with a rating average over 2660! All the best players participated, except Ivanchuk.

1.d4 d5 2.c4 c6 Like we've seen so often in the latest games, the Slav defense is played. I have no idea why, but this opening got extremely popular, especially in the last 2–3 years. Almost all the Top players have it in their Black repertoire.

3.♘c3 ♘f6 4.♗f3 e6 5.♙g5 h6

6.♙xf6 This move was very popular around 10 years ago, but it seems like Black found a way to get a good position afterwards. In the latest games, the 6.♙xf6 line is having a sort of comeback, showing new and fresh ideas! [6.♙h4 dxc4 7.e4 and we are in the very forced lines of the Meran.]

6...♙xf6 7.e3 ♘d7 8.♙d3 This move looks like a „tempo lost“, but in fact we are in a very well known line. White gets a strong center; Black gets the bishop pair and tries to react against his opponent central position. The game will get much sharper very soon!

8...dxc4 9.♙xc4 g6 This move is still the main line...

10.0–0 ♙g7 We are in a position where White gets a wide range of possibilities.

11.♙c2 With this move, White wants to put all the pieces in the center before playing the e4–e5 idea. [11.♖e1 0–0 12.e4 e5 was seen in one of the latest games between Kramnik-Aronian. This game was analyzed in a previous issue of the CEWN.]

11...0–0 12.♙b3 Another prophylactic move. Now, if Black pushes e5, White will be able to play d5 and Black will not have the move ♘b6, attacking the d5 pawn and the bishop on c4 at the same time.

12...♙e7 Black needs to do something with the bishop on c8. While the queen stands on f6, the b6 move is never possible because of White's ♘e4, and Black's e5 push would be countered by White's d5 counter-punch.

13.♖ad1 [13.e4 is still a bit too early. 13...e5 14.d5 ♘c5 and Black is in time to develop his pieces nicely.]

13...b6 14.e4 ♙b7 Black and White managed to fulfill their plans. White made the e4 push, while Black managed to develop the bishop to b7 and will start his play against the White center. Usually, Black's ideas are connected with the c5 push. White will try to develop an attack on the kingside by playing e5, using the idea of h4–h5. It's important to note that the Black pawn is stand-

ing on h6! A small but very important detail. If the pawn would be standing on h7, Black would be doing very fine.

15. ♖fe1 This move was only made to prepare the e5 push. But was it really necessary? [In case of the immediate 15.e5 c5! Most of the times, this is the correct reaction for Black. 16.d5 ♘xe5 17.♘xe5 ♙xe5 18.dxe6 c4! This is the trick! 19.exf7+ ♔g7 and Black is doing very good. In case of 20. ♙xc4?? ♚h4 Black is simply winning a piece. We can say that 15. ♖fe1 is, in fact, necessary.]

15... ♖ad8?! I have some doubts about this move, I don't see what's the idea behind it. It's obvious that White wants to play e5, so why not to try to act against it? [15... c5!? The most logical move in the position. 16.d5 White

doesn't have any other reaction. If he does „nothing“, Black will just play cxd4 and get a better position. 16... ♘e5! and Black uses the same idea once again, to play ♘e5. 17.♘xe5 ♙xe5 In this position, I would prefer to play with the Black pieces.]

16.e5! Obvious and strong!

16...a6?! Black reacts too passively, giving time for White to develop a strong attack. [Of course not 16...c5 17.d5 and White gets what he wanted.; 16...b5!? This move might be an idea for Black here. He wanted to play c5-c4, and sometimes b4 can be a good plan as well. 17.♘e4 c5! The position is not that clear. Of course, the idea behind the move 15... ♖ad8 remains a bit unclear.]

17. ♚e4 White chooses the right plan: to attack the Black king. The queen leaves the c2 square for the White bishop, and the „wall-breaker“ h-pawn will come into the action soon. But the move order is wrong. Clearly, to play h4 first would have been the right decision.

17...b5 Finally the b5 move, but it's clear that a6 was just a loss of tempo.

18.h4?! And here comes the h-pawn. What to do now for Black? The h5 threat is super unpleasant, and to play h6-h5 is definitely not a great idea because of ♘g5 followed by g4, with a mating attack. However, Black has an easy move which could totally change the whole evaluation of the position. [18. ♔f4 with the idea of ♘e4 next would have been the right solution for White, and only then to play h4-h5.]

18... ♘a8? Preparing the move c5, but giving White the possibility to push d5. [18... ♘b6! This easy-looking and logical move would have been clearly the strongest one. Black wants to play c5 and White can't stop black from playing it. 19. ♔e3 The only move, trying to avoid the c5 push. 19...c5! Probably Black missed this move in the game. 20.dxc5 ♖xd1 21. ♖xd1 ♙xf3 22.gxf3 ♘d7 and both White pawns, on c5 and e5, are hanging. Black is doing better here.]

19.h5! White is doing a good calculation job.

19...c5 20.d5 The game is getting very sharp.

20...c4 Black closes the bishop on b3 forever, but it finds a nice place on c2.

21. ♙c2

21...exd5 [21...b4 looks dangerous, but White can simply take with 22.hxg6 and Black is clearly too late.]

22. ♘xd5 It doesn't feel good to give away the bishop, but Black doesn't have any other choice. hxg6 is a deadly threat.

22... ♙xd5 23. ♖xd5 ♘c5 Sid Black solve his problems?! [Of course 23... ♘xe5 24. ♖xe5 ♙xe5 25. ♘xe5 is just losing for Black.]

24. ♖xc5! No, he didn't. A typical and strong exchange sacrifice crushes Black's hopes.

24... ♔xc5 25.hxg6

25...f5?! A clear miscalculation in a difficult position. [25... f6! would have been the only way to fight. 26.e6 (26.exf6 ♖xf6 Black is fine here.) 26...f5! The Black bishop is freeing itself. 27. ♔f4!? (27. ♔b7 brings nothing but a draw for White. 27... ♖b8 28. ♔d7 ♖bd8 29. ♔b7; 27. ♔e2 ♔e7 28. ♘h4 A nice tactic, but it's not clear if it'll bring the full point. 28... ♔xh4 29.e7 ♔f6 30.exf8 ♔+ ♖xf8 White is still better, but is it really enough to win the game? This is very unclear, the position should be closer to a draw.) 27... ♔d6 28. ♔e3 Even being an exchange down, the very strong e6 pawn plus the tactical ideas on the kingside give White a clear

edge, but Black is far away from resigning. The fight has just begun.]

26. ♔f4! Black can't defend the f5-pawn.

26... ♖b6 Black kills one of the biggest dangers, the g6-pawn, but loses more material while doing so. [In case of 26... ♖b4 27. ♙xf5 ♖xb2 28.e6 White would be winning immediately.]

27. ♙xf5

27... ♖xg6 The game is getting forced again. [27... ♖de8 would not lose on the spot, but would lead to a horrible position. 28. ♖e4 and Black is going to suffer before resigning.]

28. ♙xg6 ♖xf4 29.e6! White will get a full piece for the e-pawn.

29... ♙f6 Black has no other way to stop White from playing e7-e8 ♖.

30.e7 ♙xe7 31. ♖xe7 We can easily say that White is winning here. Korobok finished the game in a smooth way.

31... ♖d6 32. ♙c2! Good technical move, not allowing any of the Black rooks to enter through the d-file, in order to attack the b2 pawn.

32... ♔f8 33. ♖e2 [33. ♖e3 would have been a slightly better solution, but a tempo doesn't matter anymore.]

33...b4 34. ♔f1 ♖b6 35. ♖e3 White brings the king to e2 and the knight to e5. Black will lose some of his pawns or more material. The game is over.

35...a5 36. ♞e5 ♖d4 37. ♔e1 White wants to play g3, and f4 next.

37...b3 This move forces some exchanges, but nothing changes in the evaluation of the position.

38.axb3 cxb3 39. ♙xb3 a4 40. ♙xa4! The last simple tactic.

40... ♖xb2 [40... ♖xa4 41. ♞d7+-]

41. ♙d1 The first time trouble is over. White is totally winning. Actually, it's a good moment resign, but Black decided to make a few more moves.

41... ♖a2 42.g3 ♙g7 43. ♙b3 ♖b2 44. ♔f1 h5 45. ♞f3 Not a great game, but one with many typical ideas and nice tactics.

1-0

(3) Laznicka,V (2683) – Shirov,A (2706) [D47]

Shirov-Laznicka m Novy Bor CZE (4), 06.08.2012

[Arkadij Naiditsch]

In this mini-match of 6 games, the score was equal before this game, 1,5–1,5. We see another Slav, but this time a very sharp line. Shirov keeps a clearly superior perspective of the position and gets a perfect victory.

1.d4 d5 2.c4 c6 3.♘c3 ♘f6

4.e3 In the Slav, we often see many different move orders that lead to the same position.

4...e6 [4...a6; 4...♙f5; 4...♙g4 are other main moves.]

5.♘f3 ♘bd7 6.♙d3 dxc4 [6...♙d6 is another main move.]

7.♙xc4 b5 8.♙d3 ♙b7 Shirov chooses a very sharp line. [8...♙d6 and here, Black usually chooses this move.]

9.0–0 a6 Black's idea is clear: to play c5, getting a perfectly fine position.

10.e4 This is just the beginning of a very forced and sharp line.

10...c5 Black doesn't have time to waste and needs to play c5.

11.d5 The only move that makes sense for White. In case of moves like 11.e5 ♘d5, Black is doing perfectly fine.

11...♙c7! This is the key idea of Black's play. He's going to castle long! [11...e5? 12.b3! leads to a bad position for Black. The next White's move could be a4, in order to provoke Black's b4, and then to play ♘b1–Nbd2–Nc4 with a clear positional domination.]

12.dxe6 I think this is the best move order for White. [12.♙c2 is the other option in the position. It's hard to say what's the difference... Black has the option to play 12...♙d6 here as well, but other forced moves don't look bad at all either. 12...0–0–0!? 13.♘g5 (It's too late for White to take: 13.dxe6 ♘e5! with a fine position for Black.) 13...♘b6 14.a4 h6 15.♘xf7 ♙xf7 16.axb5 a5! The position remains very sharp, but Black should be doing better here. A. Giri-M. Ragger, Bundesliga 2012.]

12...fxe6 13.♙c2 [13.♘g5 This move was tried in a couple of games on a not very high level. It seems like Black has good play after 13...♙c6]

13...♔d6 All of this was played before. 14...♔d6 is made against the White threat of playing ♖g5. [The immediate 13...0-0-0 14.♖g5! with the double threat of ♖xe6 and ♖f7 14...♖e5 15.♔e2 leads to a better position for White.]

14.♖g5 White needs to act quickly, in order to avoid Black from castling long, which would make his position almost perfect.

14...♖f8 15.f4 And we are still following theory. It's easy to see how sharp the position already is, and it's going to get even sharper.

15...0-0-0 16.♔e2 Not so long ago, this position was seen in the game Mamedyarov-Esen in the Turkish league. I guess both players knew this game well.

16...h6 White wanted to play the deadly e5...

17.♖f3!? A move that leads to a super sharp position! [17.♖h3 e5 is another way to continue the game, but the White knight is now totally out of play, so Black should be doing good here.]

17...♔xf4 We can feel the tension increasing! And as we know, Shirov usually feels like a fish in the water in such crazy positions!

18.a4!? A very interesting novelty by Laznicka! [18.e5 This move been made by Mamedyarov. He managed to win the game but the position was very unclear. 18...♔xf3 (18...♔xc1 looks dangerous for Black as well. 19.♖fxc1 ♖d5

20.a4!?

A typical idea. White breaks the pawn structure with the a4 push. 20...b4 21.♖xd5 exd5 22.♔d3 and I think Black is in a lot of danger.) 19.♖xf3 ♔xe5 Black's position looks very dangerous, but the 2 extra pawns plus the solid central pawns make everything very complicated. 20.♖a8+ ♔d7 21.♖xa6 ♔e7 22.♔h1 Personally, I would choose White here. The Black king has a too dangerous position on e7!]

18...b4 Black doesn't really have a choice, axb5 was a very strong threat.

19.e5 And we see the exact same idea as in the Mamedyarov game, with the only difference that now the queen from e2 can take immediately on a6.

19...♔xf3 [The other main option in the position is 19...♔xc1 20.♖axc1 ♖g4 (20...bxc3?! looks bad for Black. 21.exf6 cxb2 22.♖b1 gxf6 23.♖xb2 followed by ♖fb1, with a mating attack.) 21.♖a2! Rarely, a move like ♖a2 is the

right one, but in this case, everything seems to work for White. The knight on g4 is very badly placed... (21. ♖e4!? is a possible option as well. 21... ♖xe5 22. ♖xe5 ♔xe5 23. ♕d3! A strong and important move. 23... ♔d4+ 24. ♖f2 ♔d6 25. ♖fd1 The position is not that clear, but White is risking nothing here.)

21... ♖b8 22. ♕e4]

20. ♖xf3 He takes with the rook on f3 now because he has the direct ♔xa6 next.

20... ♕xe5 21. ♔xa6+ ♖b8 [Doesn't help 21... ♔b7 22. ♔e2! and White's attack is going to decide the game.]

22. ♖xf6? A clear miscalculation by White in a very interesting position. A lot of time is needed to create a clear opinion about who is actually doing better here, but I think that from a practical point of view, it's easier to play with White. [22. ♖e4!? This is clearly one of the main moves to analyse. 22... ♖g4 (A wrong decision would be to get greedy with 22... ♕xh2+?! 23. ♖h1 ♖xe4 24. ♕xe4 ♔d1+ 25. ♖f1 ♖xf1+ 26. ♔xf1 ♖d7 27. ♕e3 and White gets a very strong initiative for the 2 pawns. It's always the Black king the one that is in big trouble.) 23. ♖f2! A great move! At the same time defending from ♕d4 and forcing

the exchange of the Black knight on g4. 23... ♖xf2 (Doesn't work 23... ♕d4

24. ♕f4! White is just in time. 24... e5 25. ♕e4 ♔a7 26. ♔b5+ ♔c7 27. ♔c6+ ♖b8 28. ♕g3 The knight on f2 is protected and the ♕e4+ ♔c6 combination is deadly.) 24. ♖xf2 The position is very forced again. (24. ♖xf2 ♕d4) 24... ♕d4+ 25. ♕e3 ♕xe3+ 26. ♖xe3 ♔d2+ 27. ♖e2 ♖xe2+ 28. ♖xe2 Another line that ends with an unclear position, but we can say that only Black is risking here.; 22. ♔b5+ A check on b5 is not stupid at all, but seems to lead to a forced draw. 22... ♖a7 23. ♕e3 White develops a piece with a tempo. 23... ♕d4 24. ♖e4 ♖8d7 Finally, Black brings the knight from f8 back into the game. 25. ♕xd4 cxd4 26. ♔xb4 This move leads to a draw, but does White have something better? It's quite unclear. 26... ♔xc2 27. ♔a5+ ♖b8 28. ♔b5+ ♖a7 with a perpetual check.]

22... gxf6 23. ♕e4 This is White's idea, but it doesn't work!

23... ♔a7 24. ♔b5+

24...♔c8! [Of course not 24...♔c7 25.♚c6+ ♔b8 26.♞b5 and White is winning.]

25.♙e3 White can't find a way to keep the attack, and goes „all in“ giving one more piece. [25.♚c6+ looks logical but doesn't bring much either. 25...♚c7 26.♚a6+ ♔d7 All the moves are forced but Black is „luckier“. 27.♞b5 (In case of an attempt to play slowly 27.♞e2 ♔e7 the king finds a very safe position on e7 and Black is just an exchange up.) 27...♙xh2+ 28.♔f1 ♚e5 29.♚b7+ ♔e8 ♙g6 would give mate, but the knight on f8 is covering this square. Maybe this is what Laznicka blundered?!]

25...bxc3 Why not to take a piece when you can...

26.bxc3 [26.♙xc5 ♙d4+! would end the game in Black's favor on the spot.]

26...♙d6! Cool and strong play by Black. The position looks totally winning, but Black still needs to be quite careful. The king isn't safe yet and the dangerous open b-file can be nicely used by White to get some action.

27.a5 [27.♚b1 would not save the game, but would give White some practical chances. 27...♚d7! The Black king escapes through ♔d8-e7 into safety. 28.♙c6 ♔d8 The

last precise move.(28...♚c7 This would be a horrible mistake. 29.♚d1! and White is back in the game!)]

27...♚d7! Making place for the Black king.

28.a6 ♔d8 And here we can clearly say that the game is over. From now, if Black doesn't make any big mistake, nothing should happen.

29.♚c6 f5 Making the move ♚h7 possible.

30.♙f3 ♞g6 All the Black pieces are out, and with an extra rook, it's too much even to continue the game. White could have resigned here, but Laznicka decided to make a few more moves.

31.♙e2 ♞e7 32.♚f3 ♞d5 33.♙f2 ♚b8 The Black pieces slowly take over, because they're just more in number. A full rook up!

34.c4 ♞f6 35.♚a3 ♚hh7 Super safe until the end.

36. ♖h4 ♗e5 37. ♔xc5 ♔a7 And finally, it was too much even for Laznicka. A very interesting game for the theory of this sharp line. I think that Laznicka's novelty 18.a4!? is very interesting and we'll see more games with it in the top level!

0-1

(4) Wang,Hao (2739) – Giri,Anish (2696) [A15]

45th Biel GM Biel SUI (10), 02.08.2012

[Balogh Csaba]

The decisive game of the Biel Tournament. The player who wins this game will finish in first place, ahead of Magnus Carlsen.

1. ♘f3 Wang Hao starts with the Anti-Grünfeld move order. Recently, it has become very difficult to find something against the Grünfeld on the highest level, so the White players are trying different opening move orders to trick their opponents. [We can reach the game's position from the „normal“ move order as well. 1.d4 ♘f6 2.c4 g6 3. ♘c3 d5 4. ♘f3 ♗g7 5. ♔b3 dxc4 6. ♔xc4 0-0 7.e4 a6 8. ♗e2 b5 9. ♔b3 c5 10.dxc5 ♗e6 and we are in the game.(However, in this move order, Black has an extra option: to play 10... ♗b7)]

1... ♘f6 Due to the huge amount of interesting possibilities for White, many Grünfeld players prefer to play 1...c5 against 1. ♘f3.

2.c4 g6 3. ♘c3 d5 4. ♔a4+ [The other option is 4.cxd5 ♘xd5 and here as well, White has many alternatives to keep the pawn on d2. 5. ♔a4+!? (5. ♔b3!?!; 5. ♔c2!?)]

4... ♗d7 5. ♔b3 dxc4 6. ♔xc4 a6 This is the precise move! [After the obvious 6... ♗g7 White gets a good position with 7.e4 0-0 8.e5! with many games in the database, however, the outcome is fine for White.]

7.d4 [If White wants to play the same as after 6... ♗g7, Black has 7.e4 b5 8. ♔e2 c5 taking quick control over the d4 square with ♘c6. 9.e5 ♘h5 Here are some games as well, and Black is doing fine.]

7...b5 8.♔b3 [Kramnik recently tried 8.♔d3 which is also very interesting.]

8...c5 As usual, in the Grünfeld, Black needs to undermine the center, even at the cost of a pawn. Active piece play should compensate for the small material deficit.

9.dxc5 ♘g7 10.e4 0-0

11.♘e2 ♘e6 Now we got the same position as in the 1.d4 line, but we avoided the ♘b7 setup. Until this position, you could see how many alternatives White had with the Anti Grünfeld, so it's easier to understand the players who play 1...c5. On the other hand, after 1.♘f3 c5, Black must be ready to play the Sicilian after 2.e4, which isn't necessarily in everybody's repertoire. [If Black puts his bishop on the h1-a8 diagonal, it would occupy the knight's square on c6. 11...♘c6 White gets an advantage after 12.e5 ♘fd7 13.♘e3 ♘xe5 14.♘xe5 ♘xe5 15.0-0 The knight cannot develop to c6 now. 15...e6 16.a4!+= with a clear initiative on the queenside.]

12.♔c2 ♘bd7 Recently, we have seen many high level games on this position. White can't hold his pawn, it's better for him to give it back and try to get the initiative with a quick development.

13.♘e3 [13.b4 is met with 13...a5! White's queenside collapses.; 13.c6 is an interesting try. 13...♘b8 14.♘g5 ♘xc6 15.♘xe6 fxe6 looks nice for White, but the holes on the dark squares are telling. ♘d4 is the threat and the concrete line leads to a draw: 16.♘xb5 ♖c8 17.♘c3 ♘d4 18.♔d3 ♘d7! Black has huge compensation, the Grünfeld bishop starts to work as well. 19.0-0 ♘c5 20.♔d1 ♘xe2+ 21.♔xe2 ♔d3 After the simplifications, a drawn end-game arises. 22.♖e1 ♔xe2 23.♖xe2 ♘d3 24.♙f1 ♘xb2 25.♘xb2 ♘xc3= Meier-Le Quang Liem, Dortmund 2011.]

13...♖c8 14.♖d1 Black must act urgently, because White wants to defend the pawn with b4! [White can get the bishop pair with 14.c6 ♖xc6 15.♘d4 ♖d6 16.♘xe6 ♖xe6 but Black creates quick counterplay 17.f3 ♔c7 18.♖c1 ♖c8 19.♔b1 ♖c6 20.0-0 ♘b6 Black has no problems. He can jump to c4 with his knight, or just open the diagonal for the bishop with ♘fd7, which is also good.; Now 14.b4 is met with 14...♘xe4!]

14...b4! 15.♘d5 ♘xd5 16.exd5 Black seems to collapse, but as it's usual in the Grünfeld, he has a tactical idea...

16...♘xc5! 17.0-0 This is the starting position of this opening. It's not clear yet if White can hope for an advan-

tage, or if Black has enough counterplay. The big plusses of White are the bishop pair and the c6 square, where a knight or a bishop could be really powerful. Black, on the other hand, is very active. [Black easily wins back the piece after 17. ♗xc5? ♔a5 18. ♖c1 ♘d7=+]

17...a5 A double-edged move. Black would like to transfer his knight to d6 and the pawn on a6 is not hanging anymore, but the drawback is that it gives up the b5 square, and the bishop could arrive to c6. The game becomes concrete now. .. [Recently, Svidler played twice 17... ♘ce4 but just one day after our current game was played, he got a slightly worse endgame against Jakovenko. 18. ♔d3 All the following moves are the recommendation of the computer. It's clear that both players were following their preparations. 18... ♔d6 19. ♔xa6 ♖c2 20. ♗d4 ♘c5 21. ♔xd6 exd6 22. ♗b5 ♘fe4 23. ♘e1

23... ♘d2! Of course, it's very hard to find all these moves without the machine... 24. ♗xg7 ♖xd1 25. ♗xf8 ♔xf8 26. ♘f3 ♖xd5 27. ♗c6 ♖d3 28. ♖a1 This is what the computer suggests to get an even position (yes, this is how the top GMs are prepared today — the first 28 moves without thinking, but actually, I think that White should be slightly

better. The bishop is better than the knight and he can create a passer with a4. 28...g5 29.h3 h5 30. ♖e1!+= White was doing better, but Svidler managed to hold the draw. Jakovenko-Svidler, Moscow 2012.]

18. ♗b5 White had other moves, but this one is the most principled.

18... ♘ce4 19. ♗c6 And here comes the very strong and deep novelty of Giri, which seems to solve all of Black's problems.

19... ♔c7! Black creates some concrete threats against the c6 bishop. He wants to play e6 now. The other point is quite hidden... As we will see, White has some problems with his dark squared bishop. Black took control over the h2-b8 diagonal, and the bishop has no good square if it gets attacked. We will soon understand what is going on... [19... ♘d6 was played before, but after the strong novelty 20. ♗f4! White seems to be better. 20... ♔b6 21. ♔a4!+= with the plan of ♘d2, playing against the a5 weakness.]

20. ♖c1! White had to defend the bishop against the e6 threat.

20...♘d6! Black creates another concrete threat: ♘xd5! It didn't work before, since the e4 pawn was hanging. The White queen must leave the pin now, but then, after ♘f5, White has problems with his bishop.

21.♔e2 Black must play concrete chess. If White manages to consolidate, he'll enjoy a stable advantage. [21. ♔a4 ♘f5! 22. ♕d2 (22. ♕c5 is met with 22...♘e4!) 22... ♔b6 and the bishop stands poorly on d2. It occupies the knight's „transfer square“. Black wants to play ♘e4 in the next move.]

21...♘f5 White is facing the same problem with the bishop, once again.

22. ♕c5! We are in the critical position of the game, where Giri makes a serious mistake, probably based on a miscalculation. [22. ♕d2 was worse 22...♔d6! and it's not easy to protect the d5 pawn, and e6 is also in the air to undermine the fortress of the c6 bishop. 23. ♔b5 ♘e4 Black is OK!]

22...♕h6? Black initiates concrete play against the d5 pawn with ♔fd8 and e6, but as we will see, the complications favor White here. Black had two good alternatives instead. [22...♘d7 was the easiest move, taking the c5

bishop next move, achieving equality easily. 23. ♕xe7? doesn't work, because of 23...♔fe8 24.d6 ♔xd6! A very nice combo! 25. ♕xd6 ♔xe2 26. ♕xd7 ♔xc1 27. ♔xc1 ♘xd6 Black ends up with a superior endgame.; 22...♔fd8 is objectively the strongest move, but it's more complex. 23. ♔fd1 (23. ♔a6 ♘d7) 23...e6 Black plays the same as in the game, without including the ♕h6-Rc2 pair of moves. White must show very strong chess to avoid getting in trouble. 24.dxe6! Black has two concrete possibilities: 24...♔xc6 (24...♔xd1+ 25. ♔xd1 ♔xc6 26.exf7+ ♔h8 and here 27.g4! the Black knight has no good square and the pawn can't be taken. In addition, White opens the back-rank. 27...♔d7!? Black must accept to lose the knight and should eliminate the dangerous f7 pawn. (27...♘xg4? loses to 28.f8 ♔+! ♕xf8 29. ♕d4+! This check is the point of the g4 move. 29...♘xd4 30. ♔xd4+-) 28.f8 ♔+ ♕xf8 29. ♕xf8 ♔xd1+ 30. ♔xd1 ♘xg4 31. ♕d6= with an even position.) 25.exf7+ ♔h8 26. ♔xd8+ ♔xd8 And here, just as in the previous line: 27.g4! An amazingly hard move to be found by a human brain. (27.♘g5 has a nice refutation, using the weakness of the weak back-rank. 27... ♔d5! 28. ♘e6 ♘d4! 29. ♘xd4 ♔xc5! Black is better. 30. ♔xc5 ♔xc5 31. ♔e8+ ♕f8=+) 27...♘xg4 28. ♔c4! This frees his c5 bishop to move, since the rook is protected now. Black has to give back the piece for the f7 pawn again. 28...♔d7 29. ♔xg4 ♔xf7 and Black is slightly better, but objectively, the game should probably end in a draw.]

23. ♔c2 ♔fd8 24. ♔d1 e6? [24... ♕f4 was the best chance, but White is better anyway. 25.g3 ♕d6 26. ♔dc1 ♕xc5 27. ♔xc5+= Obviously, it's a much better version for Black if he takes this bishop with the f6 knight (like in the 22... ♘d7 line) and enjoys the game with his strong g7 bishop.]

25.dxe6! Here, pure calculation was needed+ some intuition!

25...♖xd1+ [25...♔xc6 26.♖xd8+ ♖xd8 27.exf7+ ♔h8 White has other moves as well, but again, the strongest one is 28.g4! ♔d5 (28...♘xg4 29.♕e7+-) 29.gxf5 ♔xf7 and here White has 30.♘e5! followed by fxe6, with a winning advantage.]

26.♔xd1 fxe6 Of course, this was not Giri's intention... [But 26...♔xc6 loses to 27.exf7+ ♔h8 Giri has missed either the next move

28.♕e7! ♘xe7 (28...♔xc2 29.♕xf6+ Black must lose control over the f8 square. 29...♕g7 30.♔xc2 ♖xc2 31.f8♔#) 29.♖xc6 ♘xc6 or the following pretty combination:

30.♔d6! ♕g7 31.f8♔+!+- and one of the knights is falling.]

27.♕a4! Suddenly White is about to be winning. The c2 rook is protected, the concrete threat is ♕e3, and Black is positionally lost with his e6 pawn...

27...♔d8 28.♔e2! Black has no good way to deal with the e6 pawn. There is only one move to protect it, but it's really ugly.

28...♘g7 There was simply no other move.

29.♘e5!+- The domination continues! It's not easy to deal with the ♘c6-e7 threat.

29...♘e4 Black tries some desperate trick connected with the weak back-rank... [29...♔d5 loses to 30.♘c6! ♖xc6 31.♕xc6 ♔xc6 and White can choose which piece he wants to win. 32.♕e3+- (32.♕d4+-)]

30.♘c6! ♖xc6 31.♕xc6 ♘xc5 32.♖xc5 With this victory, Wang Hao won the tournament!

1-0

Endgame section

(15) Zubov,A (2617) – Ponomariov,R (2726)

Kiev, 04.08.2012

[Chess Evolution]

A very nice example, where Ponomariov outplays his strong opponent step by step from a dead drawn position.

29. ♔f6?! The first inaccuracy, which allows Black to occupy both open files. [29. ♔a5 with the idea of playing ♔b5 would have led to a quick draw.; If White sticks to his ♔f6 idea, he should have included 29.h4 h5 and now 30. ♔f6 ♔b6 The difference is 31.g4! White opens the king's position with a temporary sacrifice. 31...hxg4 32.h5 gxh5 33. ♔g5+ ♔f8 34. ♔xh5 with an equal position. On ♔b2, ♔xc5 hangs with check!]

29... ♔b6! White has definitely missed this move. Suddenly, he must be a little careful, since his rook cannot be activated. [29... ♔d2 30. ♔b1! was in White's mind.]

30. ♔a1?! [On 30.h4 Black is not obliged to the line above with h5, but he has 30... ♔d2! 31.h5 ♔b2! and Black has a better rook endgame due to his more active rook.; 30. ♔c3 was probably the right move, to prevent ♔b4. 30...a5! refreshing the threat of ♔b4. After ♔xb4 axb4, the rook endgame with the a2 and c4 weaknesses would be very bad for White. 31.a3! in order to control the b4 square again. Black is pressing a bit, but it's not easy to increase the advantage. 31...a4 32. ♔c2]

30... ♔b4! c4 is hanging after both rook moves (Rd1 or ♔b1). Just in two moves, Black achieved serious progress, but of course, the position is still close to a draw.

31.g4?! It's not easy to stop when a series of inaccuracies start. White wants to take ground on the kingside, but he makes serious weakening moves. [31.h4 h5 32. ♔c2 Trying to control the invasion on the 2nd rank. 32...a5 Black's best chance to improve on his position is to push the a-pawn to a3. 33. ♔c1! with the idea of ♔b2, after protecting the c4 pawn. 33... ♔b8 34. ♔d2 a4! Black keeps his initiative.]

31... ♔d2 The Black pieces are dominating. The concrete threat is ♔e2 and on h3, ♔f3! [31...a5 was also possible.]

32.h3 a5 By pushing the pawn to a3, all the endgames become unpleasant for White. The a2 pawn gets really vulnerable.

33.♔g2 a4 34.g5 As far as I remember, Steinitz said that every pawn move should be considered twice, because they cannot retreat anymore. In this case, White creates another small weakness. [White can only temporarily activate his rook, because after 34.♖b1 ♕d3 the rook should retreat to c1.]

34...e5! I like this move a lot! It prevents the only active plan with ♕f6. Now, if Black could transfer his queen to f5, the g5 pawn would fall immediately.

35.♕c3?! A mistake again, but the position was already very unpleasant. [35.♕b1 a3 White is too passive.; 35.♖b1 ♕c2 with the idea of ♕f5 and ♕xc4.]

35...♕xa2 Ponomarev happily exchanges his e-pawn for the one on a2, now the a4 becomes very dangerous. On the other hand, White at least got some activity.

36.♕xe5 a3

37.♕f6 [Quality is more important than quantity. The a-pawn decides the game after 37.♕xc5 ♕b2; White does

not have perpetual check after 37.♖d1 ♖xd1 38.♕e8+ The king escapes after plenty of only moves 38...♔g7 39.♕e5+ ♔f8 40.♕b8+ ♔e7 41.♕c7+ ♔e6! 42.♕c8+ ♔e5! One queen won't be enough to make a miracle this time. 43.♕e8+ ♔f5 44.♕xf7+ ♔e4 White will soon get out of checks. 45.♕f3+ ♔d3 46.♕xd1+ ♔xc4 and once again, the a-pawn wins the game for Black.]

37...♖d2 38.♔g3 ♕b2! Black transposes to a winning rook endgame! White cannot avoid the exchange of queens.

39.♕xb2 axb2 40.♖b1 ♔f8 It's time to bring the king. The Black rook is very active, it can harass all the White pawns.

41.♔f3 ♔e7 42.e4! The only way to have access to the b2 pawn.

42...♔d6 43.♔e3 ♖c2

44.h4 Black has the possibility to win a pawn. The question is, which is the most favorable moment to do it... [44. f4 ♖c3+ 45.♔d2 ♖xh3 leads to the same pawn endgame as in the 44.♖d1 line.; 44.♖d1+ ♔e5 45.f4+ ♔e6 ♖c1 is threatened. 46.♖b1 ♖h2 Black wins a pawn, since the

pawn endgame is winning for him. 47.h4 ♖xh4 48.♖xb2 ♖h3+ 49.♔d2 ♖h2+ 50.♔c3 ♖xb2 51.♔xb2 f6! Only this move wins! 52.gxf6 (52.♔c3 fxg5 53.fxg5 ♔e5 54.♔d3 ♔f4) 52...h5 The White king is too far away!]

44...♖c3+ [44...♔e5!? was an alternative, provoking the f4 move. 45.f4+ ♔e6 46.♔f3 f5 47.gxf6 ♔xf6 48.♔e3 and at this moment, winning the pawn with 48...♖c3+ 49.♔d2 ♖xc4 50.♖xb2 ♖xe4 looks quite good for Black.]

45.♔d2 ♖xc4 46.♖xb2 ♖xe4

47.h5 White loses another pawn now. [47.♖b6+ seems to be a better chance, but still after 47...♔e5 48.♖c6 c4! it's not easy for White. (48...♖xh4 is a mistake, because of 49.♖xc5+ ♔f4 50.♖c7 White reaches a 2 vs 1 endgame, which is drawn.) 49.♖c7 ♖f4 50.♔e3 Black seems to have problems with the defense of both the c4 and f7 pawn, but here comes the key move: 50...♔d6! 51.♖a7 ♖f5 with the idea of ♔c5 should be winning for Black.]

47...♖g4! 48.♖b6+ [48.hxg6 hxg6 49.♖b7 ♖xg5 50.♖xf7 ♖f5! is the point, f2 is hanging with check, while the pawn endgame is winning for Black. 51.♖g7 ♖xf2+ 52.♔d3 ♖g2 with the same position as in the game.]

48...♔d5 49.hxg6 hxg6 50.♖f6 ♖xg5 51.♖xf7 ♖f5! Black wins the pawn just as in the 48.hxg6 line.

52.♖d7+ ♔c6 53.♖g7 ♖xf2+ 54.♔d3 ♖g2! This endgame is completely winning. The two pawns are too far from each other, the White king cannot hold both of them. Black only needs to bring his king and help the opposite pawn, where the White king is.

55.♖g8 ♖g3+ 56.♔c4 ♖g4+ 57.♔d3 g5 58.♖d8 ♖g1 59.♖c8+ ♔d6 60.♖d8+ ♔e5 [White resigned in view of 60...♔e5 61.♖c8 ♖g3+ and now the Black king decides its direction. It depends on where White goes... 62.♔c4 (62.♔e2 ♔d4) 62...g4 63.♖xc5+ ♔f4 The White king is standing poorly, he cannot hope for a draw. It was nice to see how easily Ponomarev brought home the point from the initial position.]

0-1

(16) Moiseenko, Alexander (2711)
— Vovk, Yuri (2562) [E70]

81st ch-UKR 2012 Kiev UKR (9.4), 05.08.2012

[Chess Evolution]

We are in an interesting starting position. It's clear that White wants to try to win this game. A 150 ELO difference and the White pieces give at least a psychological advantage. But how to continue here?! Black wants to play ♖d7 followed by ♔e8, with a draw.

24.b6! The only chance to play for a win! White has no other idea in the position.

24...♙d7 [of course not 24...cxb6? 25.♘b5 The d6 pawn is falling, leaving White with a winning position.]

25.♘b5! A great idea of White — and probably the only way to play for a win! Another option was: [25.♘e6+ but this move simply leads to a draw: 25...♙xe6 26.♔xe6 ♖c8 ! A precise move which forces the exchange of pawns, making the result quite clear. 27.bxc7 ♖xc7 28.♔xd6 ♖xc4 with a clear draw.]

25...♙xb5 26.cxb5 cxb6 27.♔e6 And now we can see the main idea of 25.♘b5!?. White has no pawn on c4, which would fall after Black's ♖c8. The position on b5 is, of course, much better.

27...♖c8! Black is trying to find a way to escape with active play. Let's take a look at what would happen if Black would keep the passive defense. [27...♔d8 28.a4! White should not allow Black to play a4. 28...♙f7 29.♙f2 Black has no moves to improve his position. This is usually a bad sign. 29...♖d7 30.♙g3 h6 31.h4 followed by h5 or ♙h3, g4-h5. It's clear that Black's position is close to being lost.]

28.♔xd6 The critical moment of the endgame. Can Black hold this position?! There are no simple ways and a mistake could mean the loss of the game.

28...a4?! Not the best decision in an extremely complex rook endgame. [It looks like this move also leads to a very difficult position for Black. 28...♖c1+ 29.♙f2 ♖c2+ 30.♙f3 ♖xa2 31.♔xb6

31...♔e7! Black needs to get the king out of the 8th rank. (31...♖d2? To keep the Black king passive would be equal to resignation. 32.♖xb7 ♖xd5 33.♔e4! and it's the White king's show! 33...♖h5 34.♔d4! The White king is going to support the movement of the b-pawn and is just in time to stop Black from moving the a-pawn too far. 34...a4 35.♔c4 followed by ♖a7 and b6-b7. White is winning.) 32.♖xb7+ ♔d6 33.♖xh7 ♔xd5 Can Black hold this? I don't think so. The position is very forced and very complicated, with a lot of winning and drawing ideas. Let's take a look at a few lines. This is a great position for further analysis for the endgamefans! 34.h4! White has to start pushing his pawns. (If White tries to win the pawn immediately, Black has a nice drawing idea: 34.♖g7 ♖a3+! getting the White king away from the pawns. 35.♔f4 ♖a4+ 36.♔g5 ♖a2 Now, the White king on g2 is blocking his own rook... 37.g4 ♖xh2 38.♖xg6 ♔c5 39.b6 ♖b2 and Black is just in time to make a draw.)

34...a4 35.♖g7 ♔c5 36.♖xg6 ♔xb5 We have a move by move position. It looks like White is in time to win the game. 37.♖g8 ♖a1 38.h5 From now on, everything is forced! 38...♖h1 39.g4 a3 40.♖a8 ♔b4 41.♔g2! This moves win a tempo. 41...♖h4 42.♔g3 ♖h1

43.♖a6! White is in time to bring the pawn to h6, and then to g5! 43...♔b3 44.h6 a2 45.g5 ♔b2 46.♔f4 a1 ♖ 47.♖xa1 ♔xa1 48.♔f5 ♔b2 49.♔g6 ♔c3 50.♔h7 ♔d4 51.g6 ♔e5 52.g7 ♖g1 53.g8 ♖ ♖xg8 54.♔xg8 ♔f6 55.h7 White is winning,;

28...♖c5!? I have no idea whether this move leads to a winning or to a drawing position. A lot of drawing and winning ideas make this rook endgame extremely complex!

29. ♖xb6 ♜xd5 30. ♖xb7 ♜d1+ 31. ♔f2 ♜d2+ 32. ♔e3 ♜xa2 33. ♔d4 a4 34. b6 ♜b2 (34... ♜xg2? 35. ♜xh7 and White is winning.) 35. ♔c5 a3 36. ♜a7 a2 37. g3! An important move, Black is not in time to get both White pawns. (The beginning of a very forced line which leads to a draw! 37. ♔c6 ♜c2+ 38. ♔d7 ♜d2+ 39. ♔c8 ♜c2+ 40. ♔b8 ♜xg2 41. b7 (Doesn't change much 41. h3 ♜h2 42. b7 ♜xh3 43. ♔a8 ♜b3 44. b8 ♔+ ♜xb8+ 45. ♔xb8 and we are back to the main line.) 41... ♜xh2 42. ♔a8 ♜b2 43. b8 ♔+ ♜xb8+ 44. ♔xb8 g5 45. ♔c7 ♔e7 and here comes the Black king!

46. ♔c6+ ♔e6 47. ♔c5 ♔e5 48. ♜xa2 g4 with an easy draw!) 37... ♔e8!! What an amazing drawing idea! (37... ♜xh2 38. b7! forcing the Black rook to go back to b2. 38... ♜b2 39. ♔c6 ♜c2+ 40. ♔d7 ♜d2+ 41. ♔c8 ♜c2+ 42. ♔b8 ♜b2 43. ♔a8 and White is easily winning.) 38. ♔c6 ♜c2+ 39. ♔b7 ♔d8!= Black is in time to stop White from playing ♔b8 and b7. 40. ♔b8 ♜c8+ 41. ♔b7 ♜c2 An amazing draw.;

28... ♜c2 Another interesting option for Black, but it seems to lose. 29. ♖xb6 ♜xa2 30. ♖xb7 ♜b2 31. d6 ♔e8! Again, we see the typical idea. The Black king takes an active part in the defense. 32. ♜e7+! (32. b6 ♔d8 and draw.;

32. ♜xh7 It's quite unclear if this move is winning or not, but it's just a worse version than the move ♜e7, so it doesn't make a lot of sense for White. 32... ♜xb5 33. ♜g7 a4 34. ♜a7 ♜d5 35. ♜xa4 ♜xd6 36. ♜f4) 32... ♔d8 33. ♜xh7 ♜xb5 34. ♜g7 a4 35. ♜a7 ♜d5 36. ♜xa4 ♜xd6 37. ♜e4! Cutting the Black king from the g-pawn. The position is easily winning for White!]

29. ♜xb6 Now Black is not in time...

29...a3? This move is already clearly losing. [29... ♔e7 would be the best way to fight, even though the position is lost. 30. ♖xb7+ ♔d6 31. ♜xh7 ♜c1+ 32. ♔f2 ♜c2+ 33. ♔f3 ♜xa2 34. ♜g7 ♔xd5 35. ♜xg6 and as we saw already, White is winning here.]

30. ♜xb7 ♜c1+ [Black is too late for cutting the White king. 30... ♜c2 31. ♜xh7! White doesn't take the pawn... 31... ♜xa2 32. ♜a7 with an easy win for White.]

31. ♔f2 ♜c2+ 32. ♔e3 ♜xg2 33. ♜a7 [33. ♜xh7 would win as well.]

33... ♜xa2 34. ♔d4 and White wins with an already well-known idea.

34...♖d2+ 35.♔c5 a2 36.b6 As we saw in the lines above, the White king is going to a8! And the extra d-pawn of White gives him an easy win.

36...♖xh2 37.b7 ♜b2 38.♔c6 White wants to take on a2, so Black is forced to check.

38...♖c2+ 39.♔d7 ♜b2 40.♔c8 ♜c2+ 41.♔b8 ♜b2 42.♔a8 a1♚ 43.♖xa1 ♔e7 44.♖a6! The last precise move! What a complex rook endgame. Great play by Moiseenko, even though Black made it slightly too easy!

1–0

Clash of the Titans

(17) Simagin,Vladimir – Petrosian,Tigran V [E24]

Moscow-ch Moscow, 1950

[Balogh Csaba]

I consider the following game to be very important from a theoretical point of view. Petrosian showed the right way to play against the 4.a3 system of the Nimzo-Indian defense more than 60 years ago.

1.d4 ♘f6 2.c4 e6 3.♘c3 ♙b4 4.a3 A tricky setup, which should not be underestimated. The idea is to gain the bishop pair and to create a big center with bxc3 and f3-e4, which can be very dangerous if Black doesn't react correctly. The obvious drawback is the doubling of the pawns on the c-file. Black should quickly put pressure on the c4 pawn.

4...♙xc3+ 5.bxc3 ♘c6 Despite that it's a rare sideline, I believe this is the easiest and maybe the best way for Black could play. The idea is a quick b6, ♙a6 and ♘a5. The main move is 5...c5.

6.f3 [6.e4!? is an interesting alternative, even though it was only played once in a high-level game. Jobava beat Carlsen in 2010 in a nice game, but it was definitely not because of the opening. 6...♞xe4 7.♞g4! This double attack is the point. 7...f5 8.♞xg7 ♞f6 9.♞xf6 ♞xf6 I don't believe that in the endgame that arose, White could objectively hope for an advantage. 10.♞f3 b6 Black continues his plan against the c4 pawn. 11.d5 (On 11.♞f4 ♞a6! is very strong. 12.♞xc7 ♞c8 13.♞f4 ♞a5 Black wins back the pawn and overtakes the initiative.) 11...♞a5 (11...exd5 is also possible. 12.♞g5 (12.cxd5 ♞xd5 13.c4 ♞de7 14.♞b2 ♞g8 followed by ♞a6 and 0-0-0, White does not have enough compensation.) 12...0-0 13.♞xf6 ♞xf6 14.cxd5 ♞a5 Black is OK!) 12.♞d4 ♞f7 13.dxe6+ dxe6 14.♞f4 and here, for example, Carlsen could have forced a draw with 14...e5 15.♞xe5 ♞e8 16.f4 ♞g4 17.♞e2 ♞xe5 18.fxe5 ♞xe5=]

6...b6! 7.e4 ♞a6 Both players have accomplished their plans. White got the center, while Black is pressing the c4 pawn. It's time for White to develop his pieces.

8.♞g5 [8.e5 is the other move. 8...♞g8! A standard reaction, which might look a bit passive, but Black has no need to worry, the knight goes to e7 and he is still far ahead in development. 9.♞h3 (On 9.♞d3?! ♞a5 10.♞e2 c5 Black is better. He threatens to take on d4 followed by ♞c8 and after 11.d5? Black wins a pawn with a small combination: 11...♞xc4! 12.♞xc4 ♞h4+) 9...♞a5 10.♞a4 A sad necessity, but this was the only way to protect the pawn. 10...♞e7 11.♞g5 By transferring the knight to g5, White wants to counter the main counterplay with c5-Rc8, by occupying the d6 square with his knight. But there is another nice motif to increase the pressure on the c4 pawn:

11...♞c8! with the idea of ♞b7-c6. 12.♞e4 ♞b7 13.♞g5 ♞g6 14.h4 h6 15.♞e3 ♞e7 Black is ready to play ♞c6 again, and White can't avoid it anymore. 16.h5 ♞c6 17.♞xc6 ♞exc6 18.♞d2 d6 19.f4 ♞e7 20.g4 d5! Nice play on the light squares. 21.c5 ♞xf1 and here, suddenly, the game Jobava-Khairullin, Martuni 2011 ended in a draw, but Black was already slightly better.]

8...♞a5! Petrosian correctly realized that e5 is not a real threat, he can calmly continue his plan. [8...h6 9.♞h4 ♞a5! is the same.]

9.e5 [9.♞a4 meets with the same motif that we have seen before. 9...h6 10.♞h4 ♞c8! The queen goes to c6 again. 11.♞xf6 gxf6 12.♞h3 ♞b7=+ Black is better. He has the option to castle queenside as well.]

9...h6! We can meet this idea in many different openings. Black can solve the problem of the pin by attacking the bishop.

10.♞h4 Provoking a g5 weakening move, against which White can start to create counterplay. [10.exf6 hxg5 11.fxg7 ♞g8 Black is better.]

10...g5 11.♞f2 ♞h5

12.h4! Here it is! Finally, White also got a target. Black must react accurately, otherwise he might get into deep trouble.

12...f5! A very strong positional move, which restricts White's possibilities on the kingside. [The greedy 12...gxc4 would lead to the triumph of White's opening strategy. 13.hxg5 ♖xg5 14.♘h3 in order to control the f4 square to be able to push g4. 14...♔g6 15.♙xc4 ♘xc4 16.g4! ♘g7 This is a really sad place for the knight. It's a sign that something went wrong in Black's position. 17.♔e2 ♘a5 18.♘f4 ♔h7 (18...♔g5? loses to 19.♔e4 ♙h4 traps the queen.) 19.♙h4!+/- White installs the bishop on f6.]

13.exf6? A very bad decision which gives Black a big advantage. It helps in the development, but the biggest drawback is that it allows the h8 rook to be protected. Now on hxg5, Black has the „healthy“ recapture with the pawn. [The main 13.hxg5 has concrete problems. 13...♔xg5 Black wants to play ♘g3. 14.♘h3 ♔g6! 15.g4 fxg4 16.♙d3 (White's whole idea with 16.fxg4? is refuted by 16...♔e4+!) 16...♔f7 17.fxg4 Now the knight has a much better place than on g7. 17...♘f4! 18.♘xf4 ♔xf4 19.♙g6+ ♙d8! Looks ugly, but the next moves are ♙c8-b7... artificial castling. 20.♔e2 ♙c8 Black was better in Agrest-

Sokolov, St Petersburg 1993.; 13.g3 was met with very strong play. 13...f4! 14.hxg5 (14.g4 ♘g3 This might cost a pawn on g3, but Black will recover it soon on c4.) 14...♔xg5 15.♘h3 ♔g8 16.gxf4 and here after (16.g4 ♘g3 17.♙xc4 fxg3=+) 16...♔f7! Black could have obtained an advantage in Berkes-Almasi, Kazincbarcika 2005 game.]

13...♔xf6

14.c5 White gets rid of the doubled pawns, but he gives up the bishop pair and remains with his bad bishop on f2. His queenside pawns remain weak and new holes are created on the light squares. White's only hope could be on the kingside, but after a nice move by Petrosian, Black overtakes the initiative on that flank as well. [14.hxg5 hxg5 with the idea of 0-0-0. 15.g4 ♘f4 16.♔xh8+ ♔xh8 White cannot hold the c4 pawn for long.]

14...♙xf1 15.♙xf1

15...g4! White is in big trouble. All his pieces are poorly placed and without future, while taking the pawn would cost a rook.

16.♔d3 White threatens to take on g4 after controlling the g3 square, but Black protects it indirectly again, without changing the pawn structure. [16.fxc4? ♘g3+]

16...0-0! 17.♖e1?! Giving a free tempo in such a squeezed position cannot be a good idea, but the position was already quite hopeless. [17.♔e4 was probably the most resistant, but Black can choose between two good moves: 17...♔f5 transposing into a much better endgame. (Or keeping the queens on the board with 17...♔g7) 18.♔xf5 ♖xf5; 17.♖a2 refreshing the idea of fxc4. 17...bxc5 18.dxc5 ♖ab8! and now on 19.fxc4 ♘g3+! 20.♔xg3 ♖b1+ 21.♔e2 Black has many winning moves. One of them is 21...♘b3]

17...♘f4! 18.♔c2

18...♘c4! Petrosian brings his knights to the game. If you look at the position, it's easy to feel that the end is near!

19.g3 [19.fxc4 loses to 19...♘d3! 20.♖e2 ♘e3+! 21.♖xe3 ♔xf2+ 22.♔xf2 ♖xf2#; Probably 19.♘g3 was the best, but still after 19...♘d5 20.♔d3 b5 White has no moves. The next moves could be simply ♖f7 and ♖af8. Black can do whatever he wants.]

19...♔f5! Black takes full control over the light squares with the help of a fantastic mate.

20.♖c1 [20.♔xf5 ♘d2# Not bad. :-)]

20...♔d3+ Petrosian decides to win the game in the endgame... [A player with different style, for example Mikhail Tal, would have played 20...♘d3 21.♖d1 ♘xf2 22.♔xf2 (22.♔xf5 ♘e3+! is the point, White loses big material. 23.♔xf2 ♘xd1+) 22...gxf3 keeping the queens on the board and Black wins.]

21.♔xd3 ♘xd3 22.♖d1 ♘db2! Black wins a pawn and continues dominating.

23.♖a1 gxf3 In the whole game, cxb6 would have been met with axb6, leaving the a3 pawn alone.

24.♘h3 bxc5! 25.♔g1 [25.dxc5 e5 followed by e4-e3.]

25...♘d3 The game is practically over, White is two pawns down and has many weaknesses... The rest is a matter of technique....

26.♔h2 ♖ab8 27.♖a2 ♖b3 28.dxc5 e5 Nothing can stop the e-pawn.

29.g4 e4 White should have resigned showing respect to his opponent. It might be that Petrosian was in some small time pressure and his opponent decided to wait until the time control.

30.g5 e3 31.gxh6 exf2 32.♘xf2 ♘xf2 33.♖xf2 ♔h7 34.♖d1 ♖f7 35.c6 d6 36.♖d3 ♖b2 37.♔g3 ♖xf2 38.♔xf2 ♘e5 39.♖d4 ♘xc6 40.♖a4 ♔xh6 White resigned. A nice lesson by Petrosian. We must add that his opponent was a very strong grandmaster.

0-1

Editorial Preface

The main event of the past weeks came to an end, the Russian Super Final, with a very surprising conclusion. Six players shared the first place with only 5/9! I think it never happened before that it was only needed to score plus one to share the first place in the Russian Super Final.

On the next day, a tie-break that looked like a round robin — 5 rounds — was played: Andreikin managed to score 4/5 in the rapid games and was officially declared the Russian Champion of 2012. The 2nd place went to Sergey Karjakin with 3,5/5 and the 3rd place to Peter Svidler with 3/5.

The World Junior Championship came to an end. Rapport, Ipatov and Ter-Sahakyan dominated it. Ipatov ended up winning the gold medal.

The French National Championship is on the way with all the best players participating in it. It's a very interesting event with a lot of exciting games!

The next 2 weeks will be a bit more "silent", all the Top Nationals are preparing for the event of the Year, the Chess Olympiad in Istanbul, which starts on 27.08. We will see almost all the Top players participating in it, and of course, your 2 commentators as well. We'll write directly from the heat of the battles with the most interesting games and maybe even some stories.

As usual, we wish You a lot of fun with this edition of CEWN!

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Svidler,P (2749) – Vitiugov,N (2705) [C02]

65th ch-RUS Moscow RUS (8), 11.08.2012

[Arkadij Naiditsch]

In this game we'll see that even top players sometimes can miss a mate in 4 moves! Vitiugov, who is probably one of the current biggest experts on the French (although his results have not been that great lately), shows us how dynamic this opening can be. Svidler, evidently misunderstands the position from the beginning and falls quickly under a mating attack. Let's take a look at this very interesting game!

1.e4 e6 2.d4 d5 3.e5 Svidler tries a move that he hasn't played lately. [3.♘c3 ♘f6 4.e5 ♘fd7 5.f4 c5 6.♘f3 ♘c6 7.♙e3 This is clearly the most popular line at the moment. Vitiugov and Potkin showed that things here are by far not that clear. For those who are interested in the line, the game from the current Russian Championship Grischuk-Potkin is very interesting from the opening point of view.]

3...c5 4.c3 ♙b6 5.♘f3 ♘c6 We are in the main position of the 3.e5 line.

6.a3 The main move as well. The ideas of both White and Black are quite easy. White tries to be solid in the center, usually trying to push b4 and to hold the central pawns, while Black tries to play against the White center, especially against the pawn on d4.

6...♘ge7!? An interesting and rare move which leads to a very fighting position. [Black usually plays 6...♘h6 7.b4 cxd4 8.cxd4 ♘f5 9.♙b2 and the results show that White is doing a bit better here.; 6...c4 This is another option in this position, but I think that White should be doing better here.]

7.dxc5!? I guess Svidler was very surprised by 6...♘ge7 and tried to make use of it immediately. It would be interesting to see what Vitiugov had in mind against 7.b4 cxb4 8.cxb4. In case of 8...♘f5, we would be back to the main position with a slightly different move order.

7...♙c7! A strong reaction. [If he simply took: 7...♙xc5 8.b4! A typical move in these French structures. White quickly gets active with 8...♙b6 9.c4 ♙c7 10.♙b2 and White is in time for ♙b2, which is very important. We can

see that White is more active here and even though the position is far from clear, the advantage should be on his side.]

8. ♖b5 The only move for White to hold the pawn on e5.

8...♖d7!? Another strong move by Vitiugov. Black doesn't care about winning the pawn back immediately, but instead tries to play with a better development. [8...♘g6 This was the other choice Black had. Now the pawns on e5 and c5 are hanging... one of them is going to fall. 9.b4! It's very typical for this structures to hold on to the c5 pawn. If White allows Black to take with ♖xc5, Black would be perfect. (9.♙d4 An attempt to hold both pawns would end in nothing. 9...b6! At first sight, it's a very strange move, but a typical motif as well. Black uses the bad position of the White queen on d4 to develop all his pieces and have a flexible and accelerated play. 10.cxb6 axb6 Black creates a double threat: to play ♖c5 and win the c5 pawn, or to play ♖a6 and force White to play ♖xc6, after which all the white squares would feel very empty. 11.b4 ♖a6 12.♖xc6+ ♙xc6 And we reached a position where Black has good compensation for the pawn. The next Black's moves could be ♖e7 0-0 and f6! The White

king on e1 will feel quite uncomfortable very soon.) 9...♘gxe5 10.0-0! (Doesn't work 10.♖f4 ♘d3+! 11.♙xd3 ♙xf4 12.0-0 ♖e7 and Black has a nice position.) 10...♖e7

11. ♖f4 and I think White is more active.]

9. ♙e2 If you want to protect the extra pawn, then do it until the end! [The devolution of the pawn would lead to a not very comfortable position for Black. 9.0-0 ♘xe5 10.♖xd7+ ♘xd7 11.b4 g6! and the Black bishop finds a way out through g7. 12.♘d4 a6 Black is doing fine here, moreover, I think White needs to be quite careful to avoid getting in trouble. If Black manages to play ♖g7, 0-0 and e5, his center will be just huge!]

9...f6 Very creative play by Black, but I think that a simpler and more logical move would leave him with a great position : [9...♘g6! There's no reason not to attack the pawn on e5 one more time! 10.♖xc6 The only move to hold the e5-pawn. In all other cases Black would play ♘ce5 or ♘ge5 with a great position. 10...♖xc6 11.b4 ♖e7 12.0-0 0-0 13.♖b2 It seems that White is just a pawn up. Where is Black's play?! 13...f6! Black is crushing the rest of what's left of the White center. All the Black pieces are suddenly

standing on just the right positions. Black is clearly the one who is pushing here!]

10.exf6 gxf6

11.♘bd2?! The right idea, but clearly the wrong move order. [11.c4! This is the right way to act against the Black central pawns. 11...0-0-0 12.♘c3! and we can clearly see why the move 11.♘bd2 was wrong. The White knight on c3 is a beast! If Black pushes d4, White always has the maneuver ♗e4-Nd6.] 12.♘bd2 followed by ♗e4-Nd6. The position remains complicated, but in my opinion, the advantage should be on White's side.]

11...0-0-0 Black is going to play for the initiative.

12.c4 ♖g8! A very nice move by Black going against the White pawn structure in a very unpleasant way. The White knight on d2 is suddenly a very bad piece that only has one move: ♘b3, which looks quite senseless. To castle short is very dangerous, Black could counter with e5! We can see how, in 2 moves, White got in trouble out of a better position.

13.g3 [13.0-0 e5! The Black central pawns are very strong now. 14.cxd5 ♗xd5 15.♘b3 ♕h3 and White is on the edge of being very bad.]

13...e5! Of course! Black shows why he played 9...f6.

14.cxd5 Not a pleasant move to make, but there's no other way to defend against Black's e4 threat..

14...♗xd5 It's amazing to see what happened to White's position in merely 5 moves!

15.♘b3 ♕g4 Not a bad move, but Black had another nice attacking option. [15...e4! Black uses the bad position of the White king with immediate action. 16.♘fd2 (16. ♕xc6 Not making place for the knight on d4 doesn't work due to 16...exf3! 17. ♕xd7+ ♖xd7 18. ♖xf3 ♖e8+ and Black is winning.) 16... ♕h3! keeping the White king in the center. All the Black pieces are ready to attack. It's hard to imagine White surviving it.]

16.♖c2?! This was the last moment to think about castling. [A good move in a bad position. 16.0-0 a6 17. ♕c4 ♕xc5 18. ♖d1! and White is still in the game, even if the position is very dangerous. (18. ♗xc5 ♗d4)]

16...♘f4! Black had a lot of nice moves here, but Vitiugov chooses the most spectacular one, and probably one of the best options as well. [The simple 16...♖b8 17.♙e2 ♚f7 would lead to a horrible position for White as well.]

17.♘bd2 What a position! We can rarely see Black crushing White like this after just 17 moves! [17.♙xf4? would allow Black to play 17...♙xf3 and the game is over.; It isn't much better to play 17.♘fd2 ♘g2+ 18.♖f1 ♙h3 19.♖g1 ♚d7 and White is in a total bad situation. It's even hard to find a move for White! Black should be just winning here.]

17...♖xd2! „No mercy for White” says Vitiugov, in a position with at least 10 moves which lead to a clear advantage for Black!

18.♘xd2 ♘d4 It's really beautiful to see how the Black pieces dominate the game.

19.♖a4 ♙xc5 Black continues his very „pretty” play. Sometimes it's one of the hardest things to choose a move in a position where it looks like everything should win. [19...♘g2+! This move would finish White's suffering on the spot. 20.♖f1 ♙h3 21.♖g1 ♘f4! The mate on e2 decides the game. 22.♖d1 ♚c6! would be a fantastic finish of the game!]

20.gxf4 If the death is inevitable, then at least with a rook up!

20...exf4! Now Black wants to finish White with a check on the e-file.

21.♘e4 ♘f3+? This move let the whole advantage of Black slip away. [21...♚e7! following the correct plan of using the e-file. 22.♙d3 f5 Cool and strong. Black is winning some material back, and continues attacking the White king. 23.♙xf4 fxe4 24.♙c4 ♖f8 Just an exchange down for such an attack — a dream position for every attacking player. Objectively, Black should win very soon.]

22.♖f1 Only move.

22...♙h3+ 23.♖e2 Only move.

23...♘d4+ 24.♖e1 Only move.

24...♙g2 25.♖c4?? After 4 only moves, White makes a terrible mistake. [25.♘xc5! The only move to continue the fight! It looks very dangerous of course, but I think White should not think about cakes and candies.

25...♖xc5 (25...♖e5+ 26.♖d2 and it seems like White is doing good!; 25...♙xh1?? 26.♙d7+ ♖b8 27.♖xd4+-) 26.♖c4! Probably the only move that saves White. 26...

♖e8+ 27.♔d2 A rook move is a rook move, and this is what gives White just enough time to escape. 27...♕xc4 (27...♖e2+ It seems that White is doing fine in this forced line as well. 28.♔d1 ♕xc4 29.♙xc4 ♖c2 30.♙d3 ♙f3+ 31.♔e1 ♙xh1 32.♔f1 ♙d5 33.♙xf4 with about an equal endgame.) 28.♙xc4 ♙xh1 29.♔c3! and again, just in time to recover the pawn on f4, probably with a draw.]

25...♖d8! And the evaluation is: Black is winning! White can't escape from a deadly net around the White king. Besides, Black just wants to play ♙xe4 winning the material back.

26.♘xc5 The only move for White, but it gives Black a chance for a very beautiful mate!

26...♘f3+? Oh no! With only a few minutes on the clock, Vitiugov misses again how to finish his opponent! [26...♕a5+! Not a difficult but a very spectacular combination. 27.b4 ♕xb5 28.♕xb5 ♘c2+ 29.♔e2 f3#

Wow, what a mate!]

27.♔e2 ♘d4+ 28.♔e1 ♘f3+ And a double: oh noooo! Still, it was not too late for ♕a5.

29.♔e2 ♘d4+ 30.♔e1

An amazingly lucky draw for Peter Svidler. All in all, Black clearly dominated the game and played in a great style, but couldn't finish his opponent. I guess Vitiugov got a few extra gray hairs after he came back to his room, turning on his computer which told him: You missed a mate in 4! I can only repeat myself: Chess is a tough game! **1/2**

(2) Andreikin,D (2715) – Sjugirov,S (2635) [B17]

65th ch-RUS Moscow RUS (6), 09.08.2012

[Balogh Csaba]

A beautiful attacking game! We might think that computers have killed such kind of games from the highest level, but as we will see, they are still seen occasionally. White caught his opponent with a slightly forgotten line in the opening. Black made some normal-looking moves, which appeared to be decisive mistakes.

1.e4 c6 2.d4 d5 3.♘d2 dxe4 4.♘xe4 ♘d7 This was Karpov's favorite move in his best years. Recently, it went a bit out of fashion. Caro-Kann players prefer the 4...♙f5 line.

5.♙c4 Probably this move caught Black as a surprise. 5.♘g5 is considered to be the only critical line for Black, but of course, if somebody plays an opening, he/she must be familiar with the subtleties of the sidelines as well, otherwise he can face such painful defeats as in this game.

5...♘gf6 6.♘g5 e6 7.♙e2 Quite a concrete line, Black must react precisely against the direct threat of ♘xf7!

7...♘b6 8.♙d3 [8.♙b3 is another move with a huge theory, where Black should play the same way as in the game. 8...h6 9.♘5f3 c5...]

8...h6! Black should not take the poisoned pawn... [8...♙xd4 is very risky 9.♘1f3! with the idea of ♘e5 and Black cannot protect the f7 pawn. 9...♙d5 Only move! (9...♙b4+? has a nice refutation: 10.c3! and on 10...♙xc3+ 11.♙f1! An intermediate move, followed by bxc3 with a piece up.) 10.♘e5! At least Black can take another pawn here, but his position remains shaky... 10...♙xg2 11.♙f1 with a strong initiative. The game may continue with 11...♙e7

12.♘ef3! Due to the threat of trapping the queen with ♙g1, Black must move into another motif. 12...♙g4 13.♘xf7! ♙f8 (13...0-0 could have been Black's idea, but it doesn't work. 14.♘h6+! gxh6 15.♙g1+-) 14.♙g1 ♙h5 15.♘7e5→ Followed by ♙d2 and 0-0-0 with a strong attack. The e5 knight dominates the position, Black cannot get rid of it with an f6 push.]

9.♘5f3 c5 10.dxc5 ♙xc5 Probably Sjugirov knew the theory until this moment and thought Black was fine. From now on, he can play with his own mind, since they have reached a comfortable middlegame... But the subtleties are just about to come...

11.♘e5 0-0?! This most logical move is the first inaccuracy... As the famous saying of GM Evgeny Bareev says:

„Castling is a waste of tempo“. This should only be done if you cannot improve any of your pieces. Actually, in this case, that's exactly the situation. [I think we can believe Karpov that 11...♘bd7 is the most exact move, forcing White to castle kingside by pressing the e5 knight. White should hold it there at any cost if he wants to hope to get an advantage. 12.♘gf3 ♔c7 13.0-0 ♕d6 14.♖e1 and only now 14...0-0 followed by b6-Bb7 with an equal position. Note that ♕f4 is usually met with ♘h5. White cannot hold his e5 knight that way...]

12.♘gf3 a6? [12...♘bd7 was better again, but here White already has time to castle queenside. 13.♕d2 ♘xe5 14.♘xe5 I prefer White's position.]

13.g4!! Great move, which shows another drawback of Black's 0-0. White makes use of the serious weakening of h6, which helps White attack to roll. After this move, White has very easy play, while Black's defensive task is extremely difficult.

13...♘bd5 I have tried other moves as well, but they don't help either. [13...♘bd7 Black can eliminate one knight on e5, but the other one jumps to its place... 14.g5 hxg5 15.♕xg5 The open g-file hides too many threats

to hold.. 15...♔a5+ Against the check, White can always calmly respond with (15...♕e7 16.♖g1 ♘c5 17.0-0-0+- If Black eliminates the strong d3 bishop, the rook will join the attack along the 3rd rank.) 16.♔f1! The king is safe here, while ♖g1 is coming in the next move.; 13...♘fd5 trying to keep the g-file closed, but this brings other problems. 14.g5 h5 15.♔e4! with deadly threats again. 15...g6 16.♘xg6+- wins.; 13...♔c7 14.g5 hxg5 15.♕xg5 ♘fd7 16.♖g1 White is crushing.]

14.♖g1! This move is even more precise than the direct g5. White has not decided yet with which piece he wants to recapture on g5. Black cannot prevent the g5 threat anyway. [14.g5 hxg5 15.♕xg5 was also good.]

14...♕b4+ [I tried 14...♖e8 with the idea of hiding the king on f8, but of course it did not work in the end 15.g5 hxg5 16.♘xg5! is the strongest. (16.♕xg5 ♔f8 17.0-0-0) 16...♖e7 And here, similarly to the game, White wins with a great tactical firework.

17.♘h7!! Opening the g-file, the threat is ♕h6! 17...♘xh7 18.♕xh7+ ♔xh7 19.♔h5+ ♔g8 20.♖xg7+!! These moves are already automatic after ♘h7. 20...♔xg7 21.♕h6+ ♔h7 and here the fastest way to mate is 22.♕e3+! ♔g8

23. ♖g5+ ♔f8 24. ♜h6+ ♔g8 (24... ♕e8 25. ♜h8#) 25. 0-0-0! ♕xe3+ 26. fxe3+- and mate in a few moves.]

15. ♔f1! The king is completely safe here, while the attack continues with g5!

15... ♕e7 [15...g5 does not help. 16.h4! White is crushing anyway.; On 15... ♕d6 16.g5 hxg5 17. ♕xg5 b5 the strongest is 18. ♜d2! The idea is to take the queen to h6. Black has no good defense against the following threat: 18... ♕b7 19. ♕h6! ♖e8 20. ♕xg7! ♖xg7 21. ♜h6+- and mate.]

16.g5 hxg5 17. ♖xg5! This is even stronger now! Black cannot parry the fantastic threat that we have already seen in the 14... ♜e8 line.

17... ♕d6 [17... ♜c7 is refuted in the same way. 18. ♖h7!! ♖xh7 (18... ♜d8 19. ♕h6+-) 19. ♕xh7+ ♔xh7 20. ♜h5+ ♔g8 and the mate is forced after 21. ♜xg7+! ♔xg7 22. ♕h6+ ♔h7 (22... ♔g8 23. ♜g4+ ♔h7 24. ♜g7#) 23. ♕xf8+ ♔g8 24. ♜xf7+-]

18. ♖h7!! The usual motif. The simple threat is ♕h6. Black cannot prevent it...

18... ♜c7 [18... ♖xh7 leads to the same mate we saw in the 17... ♜c7 line. 19. ♕xh7+ ♔xh7 20. ♜h5+ ♔g8

21. ♜xg7+! ♔xg7 22. ♕h6+ ♔h7 (22... ♔g8 23. ♜g4+-) 23. ♕xf8+ ♔g8 24. ♜xf7+-; 18... ♜e8 19. ♕h6+-; 18... ♖e8 Black tries to survive with an exchange sacrifice, but actually, White can play for more... 19. ♖xf8 ♔xf8 20. ♖xf7! After this strike, Black has no chance to fight back in the game. 20... ♔xf7 21. ♜h5+ ♔e7 22. ♕g5+! and Black gets mated in both cases. 22... ♖ef6 (22... ♖df6 23. ♕xf6+ gxf6 24. ♜h7+- ♜g8 next.) 23. ♕xf6+ ♖xf6 24. ♜xg7+ ♔f8 25. ♜f7#]

19. ♕h6! ♖e8 Try to find the final blow of the game! Everything is forced, it only requires some spectacular calculation... [19...g6 Here the sacrifice on g6 screams for itself. 20. ♖xf6+ ♖xf6 21. ♖xg6! fxg6 22. ♜xg6+ ♔h8 and the easiest is 23. ♕xf8 ♕xf8 24. ♜xf6+- Material advantage and mating attack.]

20. ♕xg7! ♖xg7 21. ♜xg7+! ♔xg7 22. ♜g4+ ♔h8 [22... ♔h6 23. ♜g5#]

23. ♖f6!! Worthy finish to a great game! [Black resigned in view of 23. ♖f6 ♖xf6 24. ♜h4+ ♔g7 25. ♜g5+ ♔h8 26. ♜xf6+ ♔g8 27. ♜g5+ ♔h8 28. ♜h6+ ♔g8 29. ♜h7# Bravo!] **1-0**

[Balogh Csaba]

A huge duel between two „big guns“ in the last round of the Russian Superfinal. It's very nice for them, that despite being very good friends, Svidler and Grischuk always play „bloody“ games against each other. It happened this time again.

1.e4 e5 2.♘f3 ♘c6 3.♙b5 a6 4.♙a4 ♘f6 5.0-0 ♙e7 6.d3 The game had a calm start in the Spanish opening. Recently, the 6.d3 system became very popular, mainly because it avoids the Marshall gambit, against which nobody is able to prove anything. The 6.d3 system has no real theory, and it keeps all the pieces on the board. It allows the players to use their strength to play for the win with both colors. Black can choose between various setups. It's not clear yet which one is the best.

6...d6 7.c3 0-0 8.♖e1 White plays like in the standard Spanish games, he prepares for the transfer of the knight to g3 (Nb1-d2-f1-g3) and later on, when the time comes, he'll push d4.

8...b5 9. c2

10.  **bd2 dxe4** **11.dxe4**  **e6** Many games were played on the highest level in this position. Grischuk follows the latest attempt of White and plays...

12. ♔e2 White generally wants to play on the queenside, mainly against the b5 weakness, with a4 and ♗d3. For Black the optimal would be to hold his structure (b4 or bxa4 would be another weakening moves), but to do this he must concentrate his pieces on the queenside. This allows White two different kind of plans, either to continue pressing on the queenside, or quickly transfer the pieces to the kingside. Let's take a closer look...

12... ♔**8** I think this is the right plan! Black needs to transfer his queen to b7 in order to hold his b7 pawn.

13.a4 ♔b7 14. ♕d3 ♖ab8! We are in the critical moment of the game. White can either fix the b5 weakness with b4 or continue the knight's journey to g3. We often face this question in the Spanish and usually, it's very difficult to decide. [If Black pushes 14...b4?! White has more ways to get an advantage 15. ♕c4 (or 15. ♖c4 ♘d7 16. ♘g5+= gaining the bishop pair.) 15... ♕xc4 16. ♖xc4+=]

15.b4 In my opinion, in the current position, this is the less dangerous plan. [15.♖f1 Black also has different plans. At the end I found only one of them to be playable. 15...♖fd8

a) 15...♘d7 with the idea of ♘c5-b3 is met with 16.b4! and White can change his mind and play ♘e3 next, since the d5 square became weak.;

b) 15...♙d6 This is the standard plan. Black's idea is to play ♘c6-e7-g6, after which he can solve the problem of the b5 pawn with c6. If he achieves this, he is completely fine, but White can play aggressively here: 16.♘h4! with the idea of ♘f5 or ♙g5 first, and only then ♘f5. 16...♘e7 17.axb5 axb5 18.♙g5! ♘d7 19.♘f5! and White obtained a small advantage. 19...♘g6 (19...♘xf5 20.exf5 ♙d5 21.♘e3! White either takes the bishop or pushes f6 with a dangerous attack.) 20.♖a5! Concrete and strong play, Black cannot consolidate with c6. 20...b4 21.♘xd6 cxd6 22.♖b5+= and ♖xb4 next.;

16.♘g3 h6! Very useful move against the potential ♘g5 or ♙g5 moves. 17.h3 Another useful move. White wants to develop his bishop to e3 and prevent ♘g4. 17...♙f8 Black prepares against the ♘f5 threats. 18.axb5 (White needs to include axb5, since 18.♙e3 is met with 18...bxa4 ! and b2 is hanging.) 18...axb5 19.♙e3 and here comes another typical Spanish plan.

19...♘e8! Black transfers his knight to d6, trying to use the c4 square in the future. We could see many interesting maneuvers, and the fight is just about to begin, all the pieces are still on the board. The stronger player wins the game...]

15...♙d6 Svidler prepares for the ♘e7-g6 maneuverer, that we have already discussed in the previous note. [15...♖fd8 was also possible.]

16.♖a3?! The beginning of the wrong plan. The plan itself is very logical and looking nice, but he underestimates something... [16.♘f1 was even better.]

16...♖fd8! Svidler recognized White's idea and trickily improved his rook before starting the knight's trip... Grischuk falls to the trap. [After 16...♘e7 the previous rook move would get its point. 17.axb5 axb5 18.♘b3! followed by ♙e3. The c5 and a5 squares are weak.]

17.♘b3? This allows Black to grab the initiative with a nice sacrifice!

17...♘xb4! 18.cxb4 ♙xb4 Suddenly both rooks are hanging. I don't believe that Grischuk has blundered this, he rather underestimated the strength of the next move...

19.♘bd2 c5! Great play by Svidler! To mobilize the queenside pawns is much more important, than taking the rook. White is in trouble suddenly. [Grischuk probably expected 19...♙xa3? 20.♙xa3+= and despite having a small material disadvantage, White is better. He threatens to take on e5 and to play ♙e7. Black cannot use his pawn majority.]

20.axb5 axb5 21.♖a1 Black has only 2 pawns for the piece, but it's clear that the b- and c-pawns give more than enough compensation. The only thing he must be careful about is to avoid White's attempt to sacrifice one of the pieces for the pawns and survive with a draw.

21...c4 22.♙c2 ♔c7! Black does not need to hurry, White has no moves anyway. Svidler protected the e5 pawn. [The direct 22...♙c3 was not good, because of 23.♖a3 b4 24.♖xc3! bxc3 25.♘xc4 White gets a good blockading position.]

23.♖d1 ♙c5 Giving free way for the b-pawn. [23...h6! was even more circumspect, depriving White's from his only counterplay with ♘g5, and only the next move will be ♙c5. 24.♘f1 ♖xd1 25.♔xd1 ♙c5 with a big advantage.]

24.♖a6? Grischuk tries to sacrifice an exchange, but this is easily parried with a tempo. [24.♘g5!? ♙g4 25.♘gf3 Here the best is 25...h6! preventing ♘g5 after h3-Be6. 26.h3 ♙e6 27.♙b2 ♘d7 After consolidating the position, Black can start advancing his pawns.; On 24.h3 h6 is the best again, followed by b4.]

24...♔c8! Taking on h6 could have been a good business only if it would have destroyed the pawn structure. Now the rook must retreat.

25.♖a5 Here again, Black could have continued playing slowly with h6, but Svidler found a direct way to obtain a winning advantage.

25...♘g4! 26.♖f1 c3! Of course, this move only is good if it's winning. Otherwise, it gives White a perfect blockading position on b3.

27.♘b3 ♙c4 This was the point!

28.♔e1 ♙b6 Black preserves the bishop to prolong the problems around the f2 square.

29.h3 A desperate attempt to complicate matters. [29.♖a1 ♙xf1 30.♙xf1 ♔c4+ 31.♔e2 and here the best is 31...♖a8 White cannot avoid the penetration of the rook on a2. 32.♖xa8 (32.♖b1 ♖a2) 32...♖xa8]

29...♙xf1 30.♙xf1 [On 30.hxg4 the nicest is 30...♙xg2! 31.♙xg2 ♔xg4+ 32.♙f1 ♔xf3 with a huge material advantage and a mating attack.]

30...♙xa5 [30...♘xf2! was even stronger, but its beautiful point had to be foreseen... 31.♖xb5]

31...♔a6! (31...♔c4+ 32.♔e2 White is OK!) 32.♔e2 Only move and now: 32...♘h1!! This great move would have been the fair way to finish the game. 33.♔c4 All the moves are winning. For example: 33...♔a2]

31.hxg4 ♔c4+ 32.♔g1 [32.♔e2 ♘c7]

32...♘c7 The complications are over. Black ended up with a material advantage: 2 rooks and 2 pawns for 3 minor pieces. The pawns are temporarily blocked, but White has no active plan, while Black sooner or later will invade with his rook on a2!

33.♘g5 ♖d7 34.♘e3 ♘d6! Black does not give any chance for activity with ♘c5 and ♘b3. ♖a8-a2 is coming soon.

35.♔a1 ♔c6! Refreshing the plan, White cannot prevent it anymore.

36.g5 ♖a8 37.♔b1 b4 White has no moves. Black only needs some support to invade on the a-file.

38.g3 ♖dd8! Nice prophylactic move to control the back rank.

39.♔g2 ♔a6! ♔a2 is coming.

40.♔h1 ♔a2 41.♘e1 Grischuk still tries to hold the blockade, but with his next move, Svidler mobilizes his pawns.

41...♖a3! The knight must leave, sad news for White.

42.♘c1 ♔e6 43.f4 A last desperate attempt, but of course, Black has many ways to score the win. Svidler continued to play a bit for the spectators.

43...exf4 44.e5 [44.gxf4 ♔g4+ and ♘xf4.]

44...fxe3! 45.♔xh7+ White has only 2 checks there...

45...♔f8 46.exd6 ♖xd6 47.♘ed3 b3! A spectacular position with the pawns on the 3rd rank.

48.♘f4 [48.♘c5 ♖d2+ 49.♔g1 ♔d5]

48...♖d2+ 49.♔h1 ♔c6+ 50.♘e4 And the final blow was:

50...♖a1! Nice game!

0-1

(4) Rapport,R (2605) – Grandelius,N (2562) [E30]

51st World Juniors Athens GRE (11), 13.08.2012

[Arkadij Naiditsch]

We are in the 11th round out of 13 in the World Junior U-20 Championship. Around 10 years ago, the best Juniors stopped to compete in this event, which of course lost a lot of prestige. Nevertheless, a few of the Top Juniors still arrived and one of them is Rapport, who is just 16 years old. In the current game, he was leading the event with a half point, and a victory in this game would have put him as close to the gold medal as one can be. We'll see a very interesting game with a lot of tactical motifs!

1.d4 ♘f6 **2.c4** e6 **3.♘c3** ♙b4 The Nimzowitsch variation has remained as one of the main openings for at least 100 years!

4.♙g5 A relatively rare move which usually leads to quite a sharp game.

4...c5 The main move for Black. He starts to play against the White central pawns.

5.d5 ♙xc3+ I'm not sure about this move and as the game will show, it can turn out as quite a bad choice for Black in just a few moves. As we saw in the latest games, Black can play trickier moves. [5...exd5 6.cxd5 0-0 7.e3 d6 8.♙d3 ♘bd7 9.♘ge2 h6 10.♙h4 ♘e5 11.0-0

11...♘g6! 12.♙g3 ♘h5 with a very unclear position Moissenko,A-Bacrot, E 2012.; 5...h6 6.♙h4 0-0 7.e3 b5 8.cxb5 exd5 9.♙d3 ♙b7 10.♘ge2 d6 11.0-0 ♘bd7 and here Black is doing fine as well. Ivanisevic, I-Naiditsch,A 2011.]

6.bxc3 d6 We have a strategical position in which both sides have a clear plan. The White plan is to start some active play on the kingside; he has a bit more space in the center, and the bishop pair gives sort of a guarantee, that if the game opens up, he's clearly going to dominate. In case of Black, the plan is to hold the position as closed as possible, making White's bishop pair look „stupid”. Usually Black also tries to castle long making use of the bad White pawn structure: c3-c4.

7.e3! A good move! Rapport will show during the next moves exactly how White should play in this type of posi-

tions. The idea of 7.e3 is to keep the 2 development options for White: ♖d3, ♗e2 and f4; and ♘f3-Nd2 and f4

7...♗e7?! Black decides to force White to play ♘f3. I'm not sure if it was the best choice. In the game, it looks more like a lost tempo. I think the simple 7...e5, followed by ♘bd7-Nf8-Ng6, should be the right approach in this position.

8.♘f3 Black wanted to play exd5 and ♗e5.

8...e5 The e5 move needs to be done eventually — no choice here.

9.♗c2! Another good positional move by White which stops Black from castling long. [In case of the immediate 9.♘d2 h6 10.♖h4 g5 11.♖g3 ♖f5! followed by ♘bd7 and 0-0-0, Black gets quite a comfortable position.]

9...h6 This move should be questioned as well. I think it was better for Black to play ♘bd7-Nf8-Ng6, and only then h6. I guess White is doing a bit better but the game is quite open.

10.♖h4 ♘bd7 11.♘d2! White is again showing Black he understands the opening clearly better. Now against Black's 11...♘f8, White is ready for 12.♖d3!

11...e4?! And this is the move where we can say: never try it in Your own games! A big positional mistake. Now White gets an extra attacking spot, the d6 pawn! [11...g5 12.♖g3 ♘h5 13.♖d3 ♘df6 would lead to a forced, but quite decent position for Black.]

12.♖e2 White is preparing the devastating f3 or f4 push, and Black can only observe how his position gets crushed.

12...g5 13.♖g3 ♘f8

14.0-0! The safest and best for White. The next move f4 is unstoppable. Of course, optional moves like 14.h4!? were interesting as well, but why not to follow the main plan?

14...♘g6 15.f4! Until this moment, White has played great game!

15...exf3 [15...gxf4 16.♖xf4 and the Black position is falling apart.]

16.♖xf3! A correct decision by Rapport. Actually, White could take on f3 with any piece keeping an advantage, but 16.♖xf3 is the most forced and dynamic way of showing that there are big problems in Black's position.

16...♘g4 Only move, Black is trying to hold his position with the strong knight on e5.

17. ♖e4 ♜6e5 18. ♖af1! There is no stop sign for Richard Rapport. Really a fantastic game by the young Hungarian GM.

18... ♔d7 Grandelius is trying to escape with his king [In case of 18... ♖xf3+ White needs to calculate precisely, but the position is winning! 19. ♔xf3! ♜xe3 (19... ♜e5 20. ♔h5 and game over.) 20. ♖f2! Chess can be beautiful. 20... ♜xf1 21. ♔xd6 ♖d8 22. ♔h5

What a fantastic final position! White is winning even though he has a huge material deficit;

18...f5 is countered by 19. ♖xf5! ♔xf5 20. ♜xd6+ ♖xd6 21. ♖xf5 and Black is hopeless against ♔xg4. He'll start losing material from the next move. 21... ♖e7 (21... ♖d7 22.h3; 21... ♜xe3? 22. ♖xe5+ ♖xe5 23. ♖g6+-) 22.d6! and again we can see how nicely all the White pieces dominate the board.]

19. ♜xd6+?! This spectacular move is not the best. [Why not to simply play... 19. ♔xe5! ♖xe5 (19... ♜xe5 20. ♖f6) 20. ♖g3 and suddenly the knight on g4 is in trouble. 20...f5 21. ♔xg4 Maybe White has other choices, but this is the simplest one. 21... ♖xe4 22. ♖xe4+ fxe4 23. ♔xd7+ ♔xd7 24. ♖f7+ and we can clearly see that this rook endgame is easily winning!]

19... ♖xd6 20. ♖xf7 This was the White's idea of White, but Black is fighting.

20... ♜xe3! The only move! Like the saying goes: „If you suffer, at least get some material in exchange”. [Immediately loses 20...0-0-0 21. ♔xg4! Nice little tactic. 21... ♔xg4 22. ♖e4 with a double attack on e5 and g4. 22... ♖he8 23. ♔xe5 ♖xe5 24. ♖xg4+ and White's advantage of two pawns should be enough to win the game.]

21. ♖e4 Correct play by White [21. ♔h5 Funny-looking move that doesn't work. 21... ♜xc2 Cold and hungry move! (21...0-0-0 gives White quite a good play. 22. ♖e2 N3xc4 23. ♖f6 with a big initiative.) 22. ♖h7+ ♔d8 23. ♖xh8+ ♔c7 24. ♖xa8 ♜e3 and Black is clearly doing better.]

21... ♜xf1 22. ♔xe5 [It's not enough for White to play: 22. ♖xf1 0-0-0! and the Black king escapes. 23. ♔xe5 ♖he8 and Black's still an exchange up.]

22... ♜d2 23. ♖e3! Again, the only move that allows White to try to win the game. [It's not enough to play 23. ♔xd6+ ♜xe4 24. ♖e7+ ♔d8 25. ♖xe4 ♖e8! It's very important for Black to exchange the last White rook. 26. ♖xe8+ ♔xe8 27. ♔xc5 ♔f5 and we are in an endgame which is better for White, although I think it should be a draw.]

23...♔g6 24.♖f2 ♕b1+ The only move. [24...♕e4? loses by force. 25.♗h5+ ♖d8 26.♗f6+ ♖c7 27.♕xc5+ ♗c6 28.h3! and White starts to take away the material.]

25.♗f1 We are still in a forced line.

25...♞xf1 26.♞xf1

26...♕xf1+ 27.♞xf1 0-0+ 28.♞g1 The forced line that started with 19. ♞d6 finally ended with 28.♞g1! Almost 10 moves of forced action. Did Rapport calculate all until here? I think it's very doubtful. We can clearly say that White is doing better but Black has good chances to hold the position.

28...♞ae8 29.h3?? What a shocking move. If White wanted to make a draw, he could have played 29.♕d3 ♞xe5 30. ♕g6 with a perpetual check, but I think he should have tried to play for a win. [29.♕g3 The only move to continue the fight 29...b5 Black is searching for counter-play. 30.h4 ♞f5 31.♗b8! A typical computer move which is very hard to make during a practical game — leaving White some winning chances. With the Black king open, White should have no risk of losing, thanks to the perpetual check ideas.]

29...♞f5 Just winning a full piece!

30.♕xc5 ♞exe5 31.♕xa7

31...♞e2? Black seems to have so much respect for White that a draw seems to be the best possible result he can achieve. But why? To play for a win would be a normal choice here. [31...♞e1+! 32.♗h2 ♞b1 protecting the very important b7 pawn. 33.♕b8+ ♖g7 34.♕c7 ♞f7 Black managed to put all his pieces together. The White pawns don't have a clear way forward and Black will slowly start to get closer to the White king or to attack the White pawns. Maybe White can hold a draw here, but it's clear that Black is risking nothing at all and even might get a chance to get a full point.]

32.♕xb7 ♞ff2 33.♕xd7 ♞xg2+ A really interesting game. In the first 19 moves, White showed a really fantastic play which can be copied on any level! With a small miscalculation 19.♞d6?! White gave Black good chances for a draw, and then with a big blunder 29.h3, he should be happy to reach a draw.

Endgame section

(15) Karjakin,S (2785) – Alekseev,E (2673)

Moscow, 10.08.2012

[Chess Evolution]

At the moment, White is a pawn down, but his rooks on the 7th rank allow him to enter into a 2 vs 1 endgame practically by force.

32. ♖g7+ ♔h8 [32... ♕f8 will transpose to the game after 33. ♖xh7]

33. ♖xh7+ ♔g8 34. ♖dg7+! ♔f8 35. ♖xc7 The rooks have cleared the 7th rank, but now Black got the chance to get rid of one of the rooks, solving all the threats on the back rank this way.

35... ♖b4+! 36. ♔c2 ♖c4+ 37. ♔b2! Very good decision to allow Black to trade the rooks. [37. ♖xc4?! bxc4 would seriously increase Black's defending chances, because of the potential checks on a2.]

37... ♖xc7 38. ♖xc7 Here we are! Despite the small number of pieces, this endgame is very complex. It's very

hard to evaluate correctly the position. When I started to analyze, I was pretty sure that the game should be drawn, however, as I dug deeper into the position, the more I thought that this is winning for White. As the game proceeds, we will face the critical positions. The point of Black defense would be to sacrifice the b5 pawn and to get his king between the White pawns. We have already analyzed such kind of connected g-h pawns rook endgames in CEWN Nr.5.

38...b4 [38... ♖f3 will lead to more or less the same as in the game. 39. ♖c3 ♖f2+ 40. ♖c2 ♖f3 41. ♔a2! This is the right plan! White wants to play ♖b2 and then he can take on b5, given that the rook might retreat to the 2nd rank to protect the pawn. 41... ♔g7 42. ♖b2 ♖f5 43. ♔a3 White will win the pawn with ♔b4-a5 and ♖xb5.]

39. ♔b1! I like this move a lot. It frees the b2 square for the rook. The same plan could have been achieved with a different move order as well...

39... ♖b3+ [39... ♖e3 does not change much. 40. ♖c4 b3 (40... ♖e2 41. ♖c2 ♖e3 42. ♖b2 will be the same as the game.) 41. ♖f4+ ♔g7 42. ♖f2 ♔g6 43. ♔b2 will also transpose to the game.]

40.♔c1 ♖a3 [Black can try to hold his pawn more trickily: 40...♖e3 41.♖c4 ♖e1+ 42.♔b2 ♖e3 But now again, White has a subtle maneuver: 43.♔b1! Now the threat is to take on b4. 43...♖e1+ 44.♖c1! ♖e3 45.♖c2 followed by ♖b2, leads us to the game.]

41.♖c2 Finally the rook leaves the 7th rank, so it's time for Black to bring his king closer to the pawns...

41...♔g7 42.♖b2 ♖f3 43.♔b1! Black is forced to push his pawn, otherwise White will simply take it.

43...b3 44.♖e2 ♔g6 45.♔b2 ♔g5 46.♔a3 The game proceeded logically until now, and we have reached the critical position. White will soon win the b-pawn, while Black has some different options to stay between the pawns. I did not manage to find the right setup for Black, but I still have the feeling that I missed something. Maybe you can find a way to survive!

46...♔g4 This way the Black king does not reach the h3 square and will have to defend on the 5th rank... [46...♖d3 is also interesting, but... 47.♖b2 ♖d8 48.♔xb3 ♔g4 49.♖f2 ♔h3 White is winning in this position! Black cannot prevent the king reaching the f-file. With the help of the rook, White can bring it closer to the pawns.

50.♔c4 ♖d7 51.♔c3! White wants to play ♖d2 and come closer rank by rank with this technique... 51...♖d8 52.♖d2! ♖e8 53.♔d3 ♖e7 54.♖e2 ♖d7+ 55.♔e3 ♖f7 White has completed the first part of the plan! The next steps are the following: White occupies the ideal d2 square with the rook and then he can run forward with the king to the 6th or 7th rank. Black has nothing better than watching all this. 56.♖d2! ♖f8 57.♔e4 ♖e8+ 58.♔f4 ♖f8+ 59.♔e5 ♖e8+ 60.♔f6 ♖f8+ 61.♔e7 These would have been White moves even if Black does not give any checks. The 2nd step is done. The next one needs precise calculation. White has to improve his rook, using the fact that Black cannot take on h2 because the g-pawn is too fast. 61...♖a8 This defense is more tenacious than the continuous cutting of the king along the f-file. (61...♖f1 is met with 62.♖d4! followed by ♖h4, and on 62...♔xh2 63.g4! ♖g1 64.♔f6! White is easily winning.) 62.♖d5! White plays with the same technique, threatening with ♖h5, but now Black can complicate matters with side-checks. 62...♖a7+ (62...♔xh2? loses again to 63.g4) 63.♔f6 ♖a6+ 64.♔g5 ♖a4 This could be another blockade for Black, but White can break it through!

65.♔h5! With the threat of g4! Black cannot take it because of ♖d3. So the next move is forced. 65...♞a8! 66.♞b5 ♞c8 67.♔h6! Refreshing the idea of ♞h5. 67...♞c6+ 68.♔g7 ♞c7+ 69.♔f8 ♞c2 (69...♔xh2? is still hopeless. 70.g4; Black quickly loses the control over the h-file after 69...♞h7 70.♔g8 ♞h6 71.♔g7 followed by ♞h5.) 70.♞h5+ ♔g4

71.♞h4+ White made s by squeezing the king out from h3. Now the pawns become mobile, although they must be pushed carefully after both king moves. 71...♔f3 (71...♔g5 72.h3! ♞c3 73.♞g4+ ♔h5 74.♞g8 and this position is winning for White! It's important to mention that if both White pawns are standing on the 4th rank, the position is drawn. We will see it in the 72.g4 line. 74...♞b3 75.h4 White brings his king back and it has an important shelter on h3 against the checks. 75...♞b5 76.♔e7+-) 72.♔e7! White needs to active his king again! (The tempting 72.g4? would spoil the win. The defensive technique is quite instructive... 72...♔f4 73.h3 ♔g5 74.♞h5+ ♔g6 As we have seen, the position with the pawns on h4-g3 is winning. Let's see the difference... 75.h4 (75.♔e7 The king could have a shelter on h4, but it can't reach it now. 75...♞e2+ 76.♔d6 ♞e3 77.♔d5 ♞d3+ 78.♔e4 ♞c3 and White can't make progress. 79.h4 ♞c4+ 80.♔f3 ♞c3+ 81.♔e2 ♞c4

82.♞g5+ ♔h6 with a theoretical drawn position. We have examined a similar situation in the 5th CEWN. The big difference to the 71... ♔g5 line, when the pawns were on the 3rd rank, that now on 83.♞g8 with the idea of h5 and ♞g6, Black has 83...♔h7! 84.♞g5 ♔h6=) 75...♞c4 76.♞g5+ ♔h6 77.♞g8 ♞f4+ 78.♔e7 ♔h7 79.♞g5 ♔h6= As it was explained in the previous line.) 72...♞c6 73.♞d4 ♔g2 74.♔f7 and White simply wants to push his g-pawn. Black is helpless against it. 74...♔h3 75.♞h4+ ♔g2 76.g4+- and the king is not in time to go to f4.]

47.♞e4+! ♔f5 [47...♔h3 doesn't work now because of 48.♞h4+ ♔g2 49.g4 ♞f4 50.♔xb3 ♔f3 51.h3 and Black could only hold with his king on g6 and the rook on the 3rd rank, like we have seen before. Now he's too far to reach this position. 51...♞e4 52.♔c3 ♔g3 53.♞h5 ♔f4 54.g5 ♔f5 55.h4+- The pawns are too far advanced, ♞h6 and ♔d3 are coming next, followed by g6-h5.]

48.♞b4 ♞f2 [The tricky 48...b2+ does not change much 49.♔a2! and the pawn will be taken by the rook.]

49.h4 ♞g2 We have reached our next critical position. White needs to play precisely again!

50.♞b5+! To avoid the king reaching the g4 square.

50...♔e4 [50...♔g4 51.♖g5+ and the „se lf-pushing“ pawns are arising, when they are promoting even without the help of the king. Step by step, h5-g4 and ♖g6, then h6-g5 and ♖g7...; 50...♔f6 51.♖xb3 White wants to bring his king and after 51...♔f5 52.♖b5+! transferrin g the rook to g5, followed by bringing the king, is winning easily with the g3-h4 pawns.]

51.♖xb3 ♖c2 [On 51...♔f5 White again would play 52.♖b5+! ♔g6 53.♖g5+ ♔h6 54.♔b3+-]

52.♖b4+ ♔e5 [52...♔f5 53.♖b5+ will be the same as in the game...; 52...♔f3 53.g4+- is hopeless.]

53.♔b3 ♖f2 54.♖b5+! The rook goes to g5 again.

54...♔f6 55.♔c4 ♖g2 56.♖g5 White wants to get his king to f3. The only chance for Black is to cut it.

56...♖d2 57.♖g8! Using the fact that Black can't use his rook. White can advance his pawns by one rank, which is definitely an achievement!

57...♔f7 58.♖g4 ♔f6 [58...♖h2 59.♔d3+-]

59.h5! ♖h2 60.♖g6+ ♔f7 61.g4 Here we are! White wants to bring his king again, so Black needs to cut the way...

61...♖d2

62.♖g5 The White pawns are advanced enough to leave the g-file with the rook. The main idea is to advance one rank at a time with the same technique.

62...♖d1 An inaccuracy, which could have accelerated the loss.. [More tenacious was 62...♔f6 63.♖f5+ ♔g7

64.g5! White must always be careful with such moves, because the king can get between the pawns after 64... ♖h2 White is forced to push one of the pawns. Be careful, because only one of them is winning. We already know this from the 5th CEWN... 65.g6! (65.h6+ ♔g6 is the famous theoretical drawn position.) 65...♔h6 66.♔d5 Black must prevent ♔e6-f7 now 66...♖e2 and here 67.♖f8! Black cannot take the pawn. 67...♖e1 68.♖h8+ ♔g7 69.♖h7+ ♔g8 70.♖c7 followed by h6, while after 70...♖h1 we get the same final position as in the game...]

63.♖d5 Not the shortest win, but of course also good... [63.h6 was easier, but Karjakin had calculated the same win as we examined in the previous line. 63...♖h1 64.♖g7+ ♔f8 65.g5+-]

63...♖g1 64.♖f5+ ♔g7 65.♖g5+ ♔h6 66.♖g6+ ♔h7 67.♔d5! The king got one rank closer.

67...♖e1 and now the king is close enough to force matters.

68.g5! ♖a1 [68...♖h1 is met with 69.♔e6! ♖xh5 70.♔f7 and Black can't avoid the following threat: 70...♖h4 71.♖g7+ ♔h8 72.♖g8+ ♔h7 73.g6+ ♔h6 74.♖h8++-]

69.♖c6 ♖g1 70.♖c7+ ♔g8 71.g6! The final blow! White wants to play ♔e6-f6 and hide the king on h6 against the checks...

71...♖g5+ 72.♔e6 [Black resigned in view of 72.♔e6 ♖xh5 73.♔f6!+- Great technique by Karjakin!]

1-0

(16) Potkin,V (2651) – Vitiugov,N (2705) [B42]

65th ch-RUS Moscow RUS (7), 10.08.2012

[Chess Evolution]

61...♖xe6 After a fighting game where White was trying to win already for around 30 moves, we finally reached a rook endgame. White is a pawn up and the rook on b5 is standing very well. This should give White great winning chances.

62.♔g3! White is wasting no time. It's the first priority to bring the king into play! [In case of 62.h4? g5! would give Black good chances to save the game. Now Black is in time to bring his king out. 63.hxg5 ♔g6 64.♔h3 White is trying to get to the h4 square with his king — which Black, of course, tries to avoid. 64...♔xg5 65.g3! Zugzwang. Black needs to let the White king pass the 4th rank. 65...♔g6 66.♔h4 (It's not dangerous for Black: 66.♖d5 ♔g5 67.♖d6 ♖xe5 68.♖xb6 ♖d5 and even though White is a pawn up, Black has very good drawing chances.) 66...♖c6! The only move that saves the game. White wanted to play ♖d5-Rd6 next. 67.♖d5

67...Rc1! and Black is holding! Suddenly the mating threat on h1 forces the White king to go back to h3 — which obviously can only lead to a draw. In case of 68. Rd6+ Qf5 the mating threat of Rh1 gives Black enough counterplay to hold the draw.]

62...Rc6 The only move to continue the fight. Black is using the typical motif: to block the free pawn with the king to free the rook. [62...g5 now comes too late. The White king is in time to get to e4. 63. Qf3 Qg6 64. Qe4 Rc6 65. g4 and Black is hopeless. White's Qd5 is a deadly move.]

63. Qf4 White wants to play Qe4-d5.

63...Qf7 64. Qg5 Now Qe4 would be blocked by Qe6, so the White king takes another great place on g5. The idea of White is quite simple, to play Rd5-Rd6 forcing the Black rook to move from the 6th rank, which would lead to a loss of the g6 pawn... and the game.

64...Qe7 [Would give better chances for Black to play 64...Rc2 65. g4 hxg4 66. hxg4 Re2! The main enemy of Black. The e5 pawn is falling — but the position remains lost. 67. Rxb6 Rxe5+ 68. Qh6 g5 69. b4! The last precise move. White extra pawn plus the weakness of the g5 pawn give an easy win. 69...axb4 70. Rxb4 The next White

moves are simple: Rb8 followed by b4-b5-b6, which wins almost instantly.]

65.g4 A nice move. White controls the situation to 100% and there is no need for fast action.

65...hxg4 66. hxg4 Qf7 Black is totally paralyzed and the best he can do is to „wait“.

67. Rd5! White starts the final winning plan.

67...Qe7 [At 67...Rc2 68. Rd7+! finishes the game quite fast. 68...Qe6 69. Rd6+ Qxe5 70. Rxb6 Rxb2 71. Rb5+ Qe6 72. Qxg6 and we are in a theoretical easy winning position.]

68. Rd6 Of course Rd6: the key idea of everything White has been doing.

68...♖c5 69.♖xb6 ♖xe5+ 70.♔xg6 Two pawns up plus a free g-pawn is more than enough. Black is totally hopeless.

70...♖e2 71.g5 ♖xb2 72.♖b5 Great technique until the end. Black wanted to play a4.

72...♔f8

73.♖f5+! White forces Black to play 73...♔e7, after which 74.♖xa5 ♖xb3 75. ♔g7 gets the game into an easy theoretical winning position. Great endgame play by Vladimir Potkin! Things that look so natural and easy, and sometimes are far more difficult over the board, specially in rook endgames!

1-0

Clash of the Titans

(17) Spassky, Boris V — Foguelman, Alberto [B18]

Mar del Plata Mar del Plata, 09.04.1960

[Balogh Csaba]

A nice attacking game by Boris Spassky. The game was based on an intuitive pawn sacrifice in the opening.

1.e4 c6 2.d4 d5 Black chose the Caro-Kann defense.

3.♘c3 dxe4 4.♘xe4 ♕f5 5.♘g3 ♕g6 6.h4 h6 7.♘1e2
A tricky sideline, which could be dangerous if you don't know a lot of theory. And 52 years ago, these positions were not explored at all. [7.♘f3 is considered to be the only critical line nowadays.]

7...♘f6 8.♘f4 ♕h7 9.♕c4

9...e5!? In my opinion, this is an interesting move. Due to some nice victories that White has scored against it, mainly due to the big difference in strength. This line has very bad reputation. But in my view it's completely fine

for equality... [Recently all the games continue with 9...e6 followed by ♕d6, which is also an equalizer.]

10.♔e2! A fantastic pawn sacrifice, which shows great feeling for chess. White invites Black to take on d4, when the queen moves into some logical developing moves. Spassky follows the principle that 2 tempi in the opening have the value of a pawn. [10.dxe5 leads nowhere after 10...♔a5+! White should play 11.♔f1 now, but he is very far from penetrating with a rook on e1 after ♔xe5. (10...♔xd1+ is also tempting, but it's bad because of 11.♔xd1 ♘g4 Black wins back the pawn, but after 12.♔e1! ♘xf2+ 13.♔e2 White will push e6 and suddenly the e8 king gets into big danger despite the fact that the queens are off the board... 13...♘e4 (13...♘g4 14.e6!) 14.♘xe4 ♕xe4 15.e6! with an attack.) 11.c3 ♔xe5+ The position has simplified a bit. Black can calmly finish his development and achieve a good position.]

10...♔xd4 A calm response after the sacrifice. [4 years later, Foguelman improved on his play against Mikhail Tal with 10...♘bd7 11.0–0 And at this moment, Black should have played the normal developing move (On 11.dxe5 ♔a5+ works again.; 11.♕d3 ♔e7! is good now, because White must trade queens. 12.dxe5 ♔xe5) 11...♕d6! Black needs only one move to secure his king's position and obtain a completely fine position. White must do something urgently, until the king is in the center. (11...♔e7 This strange-looking move happened in the game, and after many mistakes by both sides, Tal managed to trick his opponent and win the game at the end...) 12.dxe5 ♘xe5 13.♕d3 This seems to be the best chance after all, creating some threats with the knight on the f5 square. (13.♘d3 could win the bishop pair, but the active e5 knight

fully compensates. 13...♙xd3 14.♙xd3 0-0 15.♙f5 ♖e8 Black has no problems at all. In this case, the h4 move became a huge weakening move as well.) 13...0-0 14.♙xh7+ ♔xh7 15.♖d1 White creates some concrete threats with energetic play, but Black can parry them. (On 15.♘f5 simply 15...♙c7 followed by ♚c8 or ♖e8.) 15...♙c7 16.♘f5 ♙c5 17.♘h5 and here Black has different options, but from a human point of view, the easiest seems to be 17...♘xh5 18.♙xh5 f6! followed by ♙f7! with equality.]

11.0-0! With the idea of ♖d1 and ♙e3, bringing the pieces with tempo. Black needs to protect the e5 pawn and should also hurry to castle.

11...b5? I believe this was a serious mistake, which deprives Black from castling queenside forever. White can always destroy the pawn structure with a4. [11...♘bd7 was the right move, which leads to a very unclear position after 12.♖d1 ♙c5 13.♙e3 ♙e7 14.♘fh5 ♘xh5 15.♘xh5 White definitely has serious compensation for the pawn, but Black has good defensive potential as well. For example 15...♙f5! with the idea of ♙e6 or g6-Bg7.]

12. ♙b3 ♙c5? Another mistake, which objectively speaking is the decisive one. It was already quite difficult to suggest something good, White has excellent attacking chances. [After 12...♙e7 White plays similarly to the game. 13.♖d1 ♙c5 14.♙e3 ♙b4 15.a3! to prevent the queen's „jump“ to the kingside along the 4th rank. 15...♙a5 16.♘fh5↑ with a huge attack.; 12...♘bd7 13.♖d1 ♙b6 (13...♙c5 14.a4! is very unpleasant.) 14.♘fh5 Black is in deep trouble, since he cannot finish the development... 14...♘xh5

15.♙xf7+! ♔xf7 16.♖xd7+ ♔e8 (16...♙g8 17.♙xh5 g6 18.♙f3 with mate to follow.) 17.♙g4! c5 18.♘xh5+- White won back the piece and continues attacking.]

13. ♙e3! ♙d6 14. ♖ad1! These two moves were the fruits of the d4 pawn sacrifice!

14...♙e7 15. ♙xc5 [It was even better to keep the bishops. It gives additional possibilities for White. 15.♘fh5! ♘xh5 16.♘xh5 0-0 and the difference is 17.♙xh6! White wins, due to the pin of the b3 bishop... 17...gxh6 18.♙g4+ ♙g6 19.♙xg6+-]

15...♙xc5 16. ♘fh5! The attack is breaking through here as well.

16...♘xh5 17. ♘xh5 0-0

18. ♔g4! Forces Black to a very sad move, since ♗g6 loses again due to the pin on the a2-g8 diagonal.

18...g6 As they usually say, the bishop on h7 is a strong pawn. It has no chance to be activated. White has no direct win, but he has all the time to bring all his pieces into the attack, since Black is totally undeveloped. The only good thing for Black is that he's up a pawn.

19. ♖d3! Spassky prepares for doubling his rooks on the d-file. [19. ♖fe1! was probably even stronger with the same idea: to use the last unemployed piece. Black cannot hold his e5 pawn, ♔g3 is one of the threats. 19...♔h8 (19...♔e7 20. ♔g3+-) 20. ♖f6 a5 The best chance is to bring the rook into play via a7. Black hopes that he'll win an important tempo with the a4 threat, but White stands so well that he can focus on his plans and ignore the opponent's ideas... (20...♔e7 Black is trying to provoke some exchanges, but this is elegantly refuted by 21. ♗f4! exf4 (21...♔g7 22. ♖xh7 ♔xh7 23. ♖xe5+-) 22. ♖xe7 Even without the queens on the board, Black is just lost. For example after 22...♔g7 23. ♖e8+- and ♖c7 next.) 21.h5! a4 loses nicely to (On 21...♔e7 22. ♗f4! again! 22...exf4 23. ♖xe7+-; 21...g5 22. ♖xh7 ♔xh7 23. ♗f5+ ♔g7 24. ♖xe5+-) 22. ♖xf7! ♖xf7 23. ♖d8+ ♖f8 24.hxg6! ♖xd8 25.g7# A picturesque mate.]

19...a5 Black tries to defend with the same ideas, as it was mentioned in the previous line. [19...♔h8 20. ♖f6 ♔e7 ♗f4 does not work now, but White can still keep his knight on f6. 21. ♖f3! a5 22.h5 Black cannot hold the attack. Some illustrative examples: 22...g5 (22...a4 23. ♖xh7 White only takes on h7, if it's winning on the spot! 23...♔xh7 24. ♖xf7+ ♖xf7 25.hxg6+-) 23. ♖d1 a4 and here again, this is the right time for the final strike!

24. ♖xh7! ♔xh7 25. ♔e4+ ♔h8 26. ♖xf7! ♖xf7 27. ♖xf7 ♗g6 is threatened, and on 27...♖xf7 28. ♖xe5+! ♔h7 29. ♖d8 the mate is coming soon.]

20. ♖fd1! Here again, White doesn't need to waste time on preventing a4.

20...♖a7 [20...a4 All the pieces are working, it's easy to feel that something works now. 21. ♖xf7+! ♔xf7 (21...♖xf7 leads to a forced mate. 22. ♖d8+ ♖f8 23. ♔e6+ ♔h8 24. ♗f6+ ♔g8 25. ♗g7#) 22. ♖f3+ Not the only way to win, but probably the easiest. 22...♔e7 (22...♔g8 23. ♔e6+ ♔h8 24. ♖f7 Here again, this is just one of many ways to win. 24...♖xf7 25. ♗xf7 gxh5 26. ♖d8+-) 23. ♖xf8 ♔xf8 24. ♗f3+ ♔e8 25. ♗f6+- with the double threat of ♖d8 and ♖g7.]

21. ♖d6! ♖xg6 is the new threat.

21...♔h8 22. ♖f6 a4 The time has come to finish the game. Spassky, of course, did it in style!

23. ♘xh7! Just because it's winning.

23...axb3 [23...♔xh7 24. ♕xf7! ♖axf7 25. ♔xg6+ ♔h8 26. ♔xh6+ with mate in a few moves.]

24. ♘xf8 bxc2 This is where Black pinned his hopes to, but of course, it does not save him...

25. ♘xg6+! fxg6 26. ♖d8+ ♔g7 [On 26...♔h7 simply 27. ♖c1!+- with a winning advantage.]

27. ♖g8+! ♔xg8 28. ♔xg6+ ♖g7 [28...♔f8 29. ♔f6+!+- followed by forced mate with ♖d8.]

29. ♖d8+ ♔f8 30. ♖xf8+ ♔xf8 31. ♔xc2 ♔g8 32. ♔c5
Nice attacking game. Spassky's excellent intuition has again paid off!

1-0

Editorial Preface

With this issue of CEWN, we are celebrating half a year of our Newsletter! In the beginning, it was not easy for us, but now it's almost a routine job which we do with great pleasure. We love to present the best games of the week and other great chess material. We hope You enjoyed the first 6 month with us, because we are not going to stop! 😊.

The main event of the past week is clearly the French National Championship. All the French elite players are participating in it. As expected, we see the usual players on the Top. The tournament is going to have a very exciting conclusion.

The Husek Wien Open was won by the "Austrian National Hero" Markus Ragger, who has more sponsor logos than his T-shirt can take!

Chess Olympiad: as we found out in the press, Morozovich and Gashimov canceled their participation due to health reasons. Also, Magnus Carlsen is not going to play.

With the usual "enjoy the CEWN Nr 26", we say goodbye. Our next report will come directly from Istanbul, Turkey where the Chess Olympiad will take place!

[Balogh Csaba]

We are facing a sharp battle, definitely not without mistakes, but full of nice and instructive motifs.

1.c4 ♖f6 **2.** ♘c3 e6 **3.e4 c5** **4.** ♘f3 ♘c6 **5.** ♙e2 This line enjoys quite a big popularity nowadays. Despite looking completely harmless, there is no obvious way for equalizing with Black. White's idea against random moves is to play 0–0 and d4, obtaining a slightly better middlegame with a space advantage.

5...e5!? In my opinion, this is quite a decent system. Black closes the position and normally a long maneuvering fight begins, where White's extra tempo does not count that much because of the symmetrical position. [5...d5 is the mainline, but I am not sure if the text move is a worse continuation.]

6.d3 h6 There is no need for this move... [Black should develop with 6...d6 and after 7.0–0 decide where he wants to put his f8 bishop... 7...♙e7 is the main, but 7...g6 and ♙g7 are also possible. Now White has two plans, either to initiate some play on the queenside with ♖b1, a3, b4 — Black has to prevent this with a5 -, or opening the position with f4, but Black is ready to face it. 8.♘e1 (8.a3 0–0 9.♖b1 a5) 8...0–0 9.f4 exf4 10.♙xf4 and here for example 10...♙e6 followed by ♘d7-e5. The game is about even.]

7.0–0 g6? [7...d6 should have been played again.]

8.b4!! A famous motif. Black is facing a difficult decision. He can exchange his central pawn for the one on the b-file, which is by principle not a great idea. The value of a central pawn could easily be the same as two side pawns (for example a- and b-pawns). The effect of cxb4 is also similar, Black takes out from the center, which gives White many possibilities. The analysis below demonstrates them well.

8...♘xb4 [8...cxb4 9.♘d5 White's main idea is to attack the b4 pawn and provoke an a5 weakening. Soon, he will manage to do so if Black wants to keep his extra pawn (otherwise, if White wins back the pawn, he is just better) and then with the a3 move, White creates many holes in Black's camp. His pieces are excellently prepared to be used. We must note that Black can hardly touch the powerful knight on d5, it always leads to serious difficulties after cxd5. 9...♙c5 The most logical move, playing on the d4 square with d6 and ♙g4 and also to keep the b4 pawn protected. However, it has a concrete refutation.. (After 9...♙g7 White can execute the basic ideas connected with the b4 pawn sacrifice. 10.♙d2 Black is forced to create

the weakness. 10...a5 11.♔a4! Provoking further weakening moves due to the threat of ♖xb4. 11...♖a7 (11...0-0 12.♗xb4+=) 12.a3! bxa3 13.♔xa3 This is a clear triumph of White's strategy. The game might continue with 13...d6 14.♕e3! ♖a6 15.♗fb1! 0-0 16.♕b6+/- with a clear advantage.) 10.♗xe5!! This is another famous motif that can be seen in many different openings. The idea is to avoid Black's consolidation in the center! 10...♕d4 is met with the fantastic (10...♗xe5 11.d4 White wins back the piece and the center pawns are rushing Black; f4 can also join them... An illustrative line is 11...♗xd5 12.exd5 ♕d6 13.c5! White does not need to hurry to take the knight. 13...♕b8 14.d6! closing the bishop. Black cannot save his knight with (14.♕b2!? is also possible, since the knight is trapped in the middle of the board.) 14...♗c6 15.d5! ♗e5 (15...♗a5 16.♔d4+- and 16...0-0 loses to ♕xh6.) 16.f4+- trapping the knight again.) 11.♗xc6 dxc6

12.♕e3!! Precise calculation was needed. 12...♗xe3 (12...♕xa1 13.♔xa1 cxd5 14.♕d4! This is the point. White wins back a piece, he still remains an exchange down, but the dark squared bishops and the strong central pawns give him more than enough compensation... 14...0-0 Only move. 15.♕xf6 ♔d6 16.cxd5+/- White has a strong attack,

for example with f4-f5. The ♕h8-Qg7 trick is also always in the air.) 13.♗xe3+= White has a clear advantage, since he won the fight in the center. Those pawns can easily swap off Black from the board...]

9.♗xe5+= White achieved his goal! The extra pawn in the center gives him a clear edge.

9...d6 [On 9...♕g7 White can simply retreat with 10.♗f3 0-0 (The tactical idea 10...♗xe4 does not work 11.♗xe4 ♕xa1 12.♕e3! followed by ♕xc5. White is winning.) 11.♖b1+= with a positional edge.]

10.a3?! Vachier plays the whole game with a very tactical style. The idea itself is correct, but White could have done it in a much more favorable version... [10.♗f3 Here again White could have retreated the knight and enjoyed a comfortable advantage. 10...♕g7 11.♖b1+=; Probably the best was 10.♔a4+ ♗d7 and here comes the same idea that White employed in the game... 11.a3!! This is an intuitive pawn sacrifice. Arises a similar position to the one we saw in the 8...cxb4 line. 11...dxe5 12.axb4 cxb4 13.♗d5 In order to keep the material advantage, Black needs to make the same huge weakness with 13...a5 14.♕e3! ♕b6 is threatened. 14...♖a6 15.f4!→ with a very strong attack. Black still needs a lot of time to secure the king's position.]

10...dxe5 11.axb4 cxb4 12.♗d5 The difference is that Black can exchange the knights, and then finish the development. Of course, White has very strong compensation in the center in this case as well, but with the absence of the knights, Black has more resources to defend...

12...♗xd5 13.cxd5 ♔b6?! [13...♕d7! was the right move, preparing for ♕g7 and to prevent ♔a4... The game should

continue with 14.d4! ♖g7 15.♗b2 ♔e7 with a double-edged position.]

14.d4!! Just fantastic! This mobilizes the center again. White could not allow his opponent to consolidate his position, because he would simply end up a pawn down.

14...exd4 [14...♔xd4 15.♗b5+! and the king must lose its right to castle. White will have a very strong attack after avoiding the exchange of queens.]

15.♗f4! ♗e5 is the threat.

15...♗c5! Black tries his best to hold his position. [The handy 15...♗g7 is met with the really unpleasant 16.♖c1! 0-0 17.♗c7! ♔f6 18.f4! and e5 next. Despite being two pawns up, Black is in trouble.]

16.e5! The power of the center is increasing! By developing the bishop to c5, Black must lose further tempi to castle kingside, since the h6 pawn is unprotected.

16...♗f5 [16...h5 is too slow, White can build up a very strong attack with 17.♗d3! 0-0 18.♔f3! With the idea of ♗h6 and e6, crushing Black's defense. Black would really need a bishop on g7 now. An illustrative line is 18...♗d7 19.♗h6 ♖fe8 20.♖fe1! to make the e6 break more

effective. 20...♗f8 21.e6! fxe6 (21...♗xh6 22.♔xf7+ ♔h8 23.♔xg6+- wins.) 22.♗xg6 ♖e7 and here for example: (22...♗xh6 23.♔f7+-) 23.dxe6 ♗xe6 24.♔xh5+- with deadly threats.]

17.♗c4 White prepares for the e6 move. [17.♗d3!? It was also possible to exchange the good defender and then again play for the e6 break. 17...♗xd3 18.♔xd3→]

17...g5 18.♗g3 h5 [18...0-0 Probably the most dangerous continuation is 19.d6 ♔g7 20.♔f3! ♗g6 21.h4 The attack should break through. Even for the stubborn computers this is too much. For a human, this is kind of impossible to defend.]

19.e6! White continues his plan and also prevents h4, trapping the bishop.

19...fxe6 [19...h4 is refuted by 20.♔a4+! ♔f8 21.♔d7! ♖h7 22.♗c7+- trapping the queen out of the blue.; 19...0-0-0 is a bit risky... White wins, for instance, after 20.♔f3 ♗g6 21.♖fc1+-]

20.dxe6 ♗e7 Black tries to create a blockade, but of course, any kind of check is going to be decisive.

21. ♔f3 [21. ♖e1 It was also good enough to bring another piece into the attack.]

21... ♜af8 22. ♔d5 Black must parry the ♔d7 threat and ♜d8 does not work because of the f5 bishop.

22... ♜c6 23. ♔e5! Very nice position. The direct threat is ♔g7, but there are also more hidden ideas to attack the Black king.

23... h4? This eases the job, since it allows ♔g7, but the game was already objectively over. [23... ♜f6 The easiest and most logical win is 24. ♜fc1! White needs the other rook on a1. The hanging a7 pawn is the key in many lines. (Now on 24. ♜a5 ♜c8 works, since the f5 pawn is protected in comparison to the 23... ♜h7 line.; 24. h4 should also be enough to win...) 24... ♔d6 (24... ♔d6 25. ♔xd4; 24... h4 25. ♔b5 ♔xb5 26. ♜xc5+-) 25. ♜xa7!! This is a very important point! 25... ♔xe5 26. ♜xb7+ ♔d6 27. ♜d7+ ♔c6 28. ♔xe5+-; 23... ♜h7 The strongest is 24. ♜a5! using the fact that b6 does not work because of the a7 pawn. 24... ♔b6 (24... ♔d6 25. ♔xd4+-) 25. ♜d5+- and ♜d7 decides the game.]

24. ♔d5 ♔b5 White can choose between many winning moves... [24... ♔c8 25. ♔xb7! ♔xb7 26. ♔g7+-; 24... ♔b6 25. ♔g7+ and mate on d7.]

25. ♔c7+ ♔f6 26. ♔e5+ ♔g6 27. ♔xh8 White already has a material advantage, but after ♔f7, Black will lose even more pieces.

1-0

(2) Bacrot,E (2713) — Istratescu,A (2647) [D10]

87th ch-FRA 2012 Pau FRA (6), 18.08.2012

[Arkadij Naiditsch]

We'll see an interesting game which was very important for the standings in the French Championship. Etienne Bacrot with White was a clear favorite. However, Istratescu is in quite a good shape, so he's not an easy opponent to beat.

1.c4 c6 This move takes the game into a Slav. It's amazing how often we've seen this defense lately.

2.d4 [2.e4 d5 3.exd5 cxd5 4.d4 would lead to the Panov attack of the Caro-Kann with a different move order.]

2...d5 3.♘c3 ♘f6

4.e3 A silent but tricky line in the Slav, and I think it's a bit strange to see Istratescu choosing to play this line with a6 against Bacrot, who's one of the biggest specialists in this opening with Black.

4...a6 5.♘f3 b5 [5...♙f5 would lead us to the „very main position“.]

6.c5 ♙g4 A rare move by Black. I don't think this is a serious try to equalize in the opening. Bacrot himself preferred to play 6...♘bd7, which is clearly the main move in the position.

7.♙b3 A very natural move with a few ideas in it. First, of course, White is forcing Black to take on f3, which could take Black to a very dangerous strategic position (we'll see it in the game) and the second idea is to start something on the queenside with a4 — which is a very standard plan here.

7...♙xf3 [7...♘bd7 8.a4 and Black will have to take on f3 anyway.]

8.gxf3 e5 This is the idea of Black's 6...♙g4 — to push e5 as quick as possible.

9.a4 Of course, White proceeds with the standard plan.

9...♘bd7 10.♘a2! A very good move! ♘b4 is almost a deadly threat in this kind of positions. Bacrot knew this knight maneuver from his game against Bologan where Black got in deep trouble very quickly.

10...♙c8 [10...♙e7 11.♘b4 ♙c8 would just lead to a different move order.]

11. ♔a3! Strong play by White! Black is not in time to keep his pawn structure in a solid order. [11. ♘b4 An interesting option for White as well. 11...a5! What else... (In case of 11... ♖e7 12. ♔a3 White can get back into the game. (12. ♘xc6!? This time, the knight sacrifice deserves some attention. 12... ♔xc6 13. axb5 axb5 and now comes the slightly unexpected 14. ♔xb5!? (14. ♖xb5 just leads to a draw. 14... ♖xa1 15. ♖xc6 ♖xc1+ 16. ♔e2 ♖xh1 17. ♔b8+ ♖d8 18. ♔xe5+ ♖e7

19. ♔b8+ With such a material disadvantage, White should be happy with a draw...) 14... ♔xb5 Other moves are possible for Black as well, but this one should be the main option. 15. ♖xa8+ ♔b8 16. ♖xb8+ ♘xb8 17. dxe5! Important move! 17... ♘fd7 18. b4 ♘xe5 19. f4 and we can clearly see that White is doing better here. Can Black can hold the position? Maybe...)) 12. ♘d3 (12. ♘xc6 A typical blow, but this time it's not the best. 12... ♔xc6 13. axb5 ♔e6 The strong c5-b5 pawns are not enough compensation for a full piece.) 12...exd4 13. exd4 b4 14. ♖g1!? Disturbing Black from developing in a normal manner. I think White should be better here — more space plus the bishop pair.]

11... ♖e7 Not a nice move to do, but it looks like other moves don't really help Black. [This move that tries to solve the problems in a tactical way doesn't seem to work. 11... ♘b6 12. ♘b4 ♘xa4 The pawn on a4 is not tasty... but what's left?! 13. b3 Now Black got 2 ways to give the piece. 13... ♘xc5 (13...exd4 14. bxa4 ♖xc5 15. ♔b2

Black has some counterplay, but I think the White pieces should dominate the game.) 14. dxc5 ♖xc5 15. ♔a5 Only move for White, and it leads to a better position for him. 15...0-0 16. ♘d3 ♖d6 17. ♖a3! It's very important to exchange the Black bishop so that the Black squares get highly weakened. White is better here as well.; 11...exd4 12. exd4 An attempt to be tricky, exchanging first on d4 and only then playing ♘b6 doesn't work. 12... ♘b6? 13. ♔e3+! winning a full piece.]

12. ♘b4 Black can't avoid the destruction of his pawn structure. To take back with axb5 is simply impossible.

12...0-0 13. axb5 cxb5 The first step for White is done — Black's pawn structure is destroyed. Now it's time to avoid some tactical tricks and bring the king to a safe place.

14. ♖h3 Easy and good. White develops the bishop and opens the possibility of castling.

14...a5 It's hard for Black to find a better move.

15. ♘d3 exd4 [15...e4 16.fxe4 dxe4 17. ♘e5 doesn't help Black at all...]

16. exd4 ♜b7 I think this was a good move by Black. It's clear that White is much better, but Black finds interesting ideas to fight.

17. 0-0 ♞b8! An excellent move. Black can't stand with the knights on f6 and d7 forever. The Black knight belongs on c6!

18. ♞e5

18... ♞d8?! The right idea, but why not to start with... [18... ♞c6 Black needs to avoid White from keeping the knight on e5. 19. ♞xc6 (19. ♞e3 is a possibility here, but somehow this move looks strange. Maybe Black can try to play 19... ♞d8.) 19... ♜xc6 20. ♜d3 ♜fe8 21. ♞d2 White is clearly better, but Black can fight!]

19. ♜d3! White recognizes very well what to do. However, White is not going to exchange the knight in e5, of course.

19... ♞c6 20. ♜e1 A solid move. [20. ♞f4 would have been another option.]

20...a4 21. ♜h1 This prophylactic move might be „too deep“. It was simpler to finish the development by playing 21. ♞f4.

21... ♜e8 Both players are putting their pieces on the center, which is definitely the right plan. The action will happen there.

22. ♞f4 ♞a5 23. ♜e3

23... ♞h5!? Black is using this chance to try to get rid of one White bishop.

24. ♖g3 I think this move is an inaccuracy. White is still better, but Black gets good chances for a draw. [24. ♘xc6!? White should have accepted Black's invitation see „who could eat more“. 24... ♘xf4 (24... ♖xc6 25. ♖d6 and Black is just completely pinned!) 25. ♘xa5 ♖a6! The only move, any other move loses material. 26. ♖f5 ♘xh3 27. ♖xe8+ ♖xe8 28. ♖xh3 ♖xa5 29. ♖d7 After a big „feast“, nobody got any material advantage. 29... ♖d8 30. ♖e7 and White dominates the only open file. 30...g6!? 31. ♔g2! White doesn't need to hurry. The passed c-pawn and the domination on the e-file give a clear advantage.]

24... ♘xg3+ Of course, you don't need to ask Black twice.

25. hxg3 ♘xe5 [To put more pressure on e5 doesn't work. 25... ♖c7 26. ♘xf7! A nice tactical blow. 26... ♖xe3 27. fxe3 ♔xf7 28. ♖xh7 White only has two pieces on the attack, but here it's more than enough. 28... ♘e7 29. ♖h5+! White is close to winning.]

26. dxe5 After two pieces have been exchanged, we have to take a sober look at the position. The material is equal, but it's clear that White's play is better. The e6 push can be very dangerous and as the chess saying goes: „If there are opposite colored bishops, the attack is always going to be stronger“.

26...d4!? Black is trying to force a draw by sacrificing the d-pawn and reaching an endgame! [In case of a passive move like 26... ♖c6 27. ♖d4 b4 28.e6! fxe6 29. ♖ae1 White gets a decisive initiative.]

27. ♖xd4 ♖ad8 28. ♖e4 White would have liked to keep the queens, but there is no place for them.

28... ♖xe4 29. ♖xe4 Black reached the endgame, but the troubles have no end.

29... ♖d2 [Doesn't help much to play 29... ♖c7 30.f4 ♖d5 31.c6 White is a clear pawn up, and the next move, ♖d7, is quite unpleasant for Black.]

30.b4! Everything just seems to work for White! If Bacrot calculated everything when he played 24. ♖g3, we will never know :).

30...axb3 Black is going into an endgame with an exchange up, but White's two extra pawns plus the pawn on c6 seem to be enough to win the game. [30... ♖c7 A double attack on e5 and f2 would probably give Black better chances to escape. 31. ♖f1! Both of the Black pawns, on b5 and a4, are going to fall. 31... ♖xe5 32. ♖xb5 ♖xe4 33. fxe4 ♖xf2 34.g4! This strange move gives White good chances to win the game.(34. ♖xa4 h5! and Black has some chances to escape!)]

31. ♖xa5 ♖d1+ 32. ♔g2 b2 33. ♖xb5 b1 ♖ 34. ♖xb1 ♖xb1

35. ♖c4?? What a blunder by White in an almost winning position. [It was not hard to see 35.c6 ♖c1 36. ♗d7 ♜b8 37.f4 followed by the f5-e6 push, or just by ♖a4-Ra7-c7, with an easily winning position for White.]

35... ♜b7? What a present for White! [35... ♜xe5! It's strange that Black could not find this 2-moves combination. 36.c6 ♜ee1! Black is threatening to give mate with ♜g1, and... 37. ♗f5 ♜bc1 38. ♗c2

38...f5! Protecting from the ♗h7 check and, at the same time, threatening to play ♜g1 with mate. 39.f4 and only now 39... ♜e8 and Black is just in time to get a draw. 40. ♜c5 ♗h8 41.c7 ♜c8 42. ♜d5 ♜g8! Black is holding!]

36.c6 ♜c7 37. ♗d7! ♜b8 [Black can't take on e5. 37... ♜xe5 38. ♜b4! threatening a mate on b8 and ♜b7 at the same time. 38... ♗f8 39. ♜b7 ♜xd7 40. ♜xd7 ♗e8 41. ♜c7 with an easily winning rook endgame.]

38.f4 We reached a position that I don't think Black can save. White will slowly improve by playing f5-e5, or g4 creating another weakness on the kingside.

38...f6 39.e6! Now White got a second passed pawn.

39... ♗f8 40.f5

40... ♜b5?! Another unlucky move by Black. Would give better chances just to wait with [40... ♗e7 and Black is still fighting...]

41. ♜a4! Forcing Black to go back, White wants to play ♜a8-Re8 and e7.

41... ♜b8 42. ♜h4! Creating a very important weakness in the Black structure.

42...h6 43. ♜a4 ♗e7 44. ♗h3! White shows a great way to win a winning position, which is not that easy sometimes. The White king is going to g6.

44...♖b2 45.♖g4 The last exact move, even though it didn't matter anymore.

45...♔f8 46.♖f4 ♖e2

47.♔h4 The White king finally gets into the game. It was too much for Black and Istratescu resigned the game. We saw quite a good game with a very interesting opening and middle game!

1-0

(3) Fressinet,L (2714) – Tkachiev,V (2644) [C15]

87th ch-FRA 2012 Pau FRA (3), 15.08.2012

[Balogh Csaba]

An important game from the French Championship where both players have a decent chance to fight for the top places... The game has started with a mutual surprise... Fressinet, who clearly became a 1.d4 player in the last few years started with.

1.e4 And Tkachiev, who almost always plays 1...e5, decided to go for the French defense.

1...e6 2.d4 d5 3.♘c3 ♖b4 4.exd5 A harmless looking, but very tricky sideline. [The main move is 4.e5]

4...exd5 5.♙d3 Here Black can choose between various setups. Tkachiev went for the one which was recently played by the expert of the French defense, GM Nikita Vitiugov.

5...♘c6 6.a3 ♙e7 [6...♙xc3+ is by far the most common move, but by all means not the best one...]

7.♙e3 Fressinet goes for the critical continuation. [In the mentioned game, White played 7.♘ge2 ♙f6! Black's best setup is to get his bishop to f6 and develop the knight to e7, then he wants to exchange the light-squared bishops with ♙f5. White allowed all of this, and Black equalized comfortably. 8.♙e3 ♘ge7 9.0-0 0-0 10.♔d2 ♙f5= Alekseev-Vitiugov, Moscow 2012.]

7...♙f6! [On 7...♘f6 White has a very strong plan: 8.h3! not only to prevent the ♘g4 and ♙g4 ideas, but also to prepare for the following idea... 8...0-0 9.♔f3! followed by ♘ge2 and ♘f4, putting unpleasant pressure on the d5 pawn. 0-0-0 and g4 could also be very good for White.]

8. ♖h5! White knows the subtleties of the position. By temporarily leaving the knight on g1, White can arrange a much better development of his pieces. Again, the idea is to play ♘ge2 and ♘f4 later. White wants to castle queenside in this line. I believe he managed to retain the initiative.

8... ♙xd4 Black tries to equalize directly, but White is better prepared for the simplifications... [8... ♙e6 9. ♘ge2; 8... ♘ge7 9. ♘ge2 In both lines, White has a small, but stable advantage.]

9. ♙xd4 ♘xd4 10. ♖xd5! A strong move due to the fact that the endgame is better for White. It's interesting that Fressinet already had a game in 2001 against Apicella... but in that game he offered a draw at this moment. Now the fight continues. [10. ♘xd5 with the idea of a quick 0-0-0 does not work, because of the concrete 10... ♙f5! 11. ♘e3 Only move! (11. ♙xf5? loses to 11... ♖xd5!) 11... ♙xd3 12. cxd3 ♘e7 and Black is slightly better.]

10... ♙e7+! Unfortunately for Black, he's forced to avoid the exchange of the queens, which should normally be his intention, since he is behind in development. [After 10... ♖xd5 11. ♘xd5 Black cannot solve the problems around the c7 pawn. 11... ♘e6 is met with 12. ♙f5!+/-; 10... ♙e6? doesn't work. 11. ♖xb7+/-]

11. ♘e4! The only way to fight for the advantage. The other move, 11. ♘ge2, would lead to equality after ♘xe2, followed by ♘f6. Now the d4 knight must retreat, which means an extra tempo for White.

11... ♘e6 12. 0-0-0 ♘f6 13. ♙b5+! This is the advantage of being ahead in development!

13... ♖f8 [13... c6? is refuted by 14. ♙xc6+!+- and the a8 rook hangs.]

14. ♘xf6 ♖xf6 15. ♘f3 White seems to be really fine, but actually he only has a small advantage. Black has no weaknesses and he wants to solve the problems of castling with an artificial maneuver: g6 and ♖g7. White cannot prevent this. As we'll see, the main problem of Black is his bishop on c8, which is very difficult to develop, because the e6 knight is forced to stay there for a while. This means that also the a8 rook can hardly join to the game.

15...g6 [15... c6 still loses to 16. ♙xc6! bxc6 17. ♖xc6 ♖f4+ Only move, but doesn't help. (17... ♖b8? 18. ♖d6++-) 18. ♖b1 ♖b8 This is already very suspicious, but the refutation is very nice. (18... ♖b8 and the point is 19. g3!+- Black cannot control the d6 square, his rook is going to be lost.) 19. ♘g5! h6

20. Rxe1!! This nice combo had to be foreseen before playing 19. Ng5! 20... hxc5 21. Rxd8+! Qe7 (21... Nxd8 22. Re8#) 22. Rxe8+-]

16.h4 Very logical move! Of course, Black can simply prevent this attack. White just wanted to improve his pawn structure.

16...h6 [16... Qg7 is not advisable 17.h5 Rxd8 and here 18.h6+! A very unpleasant move, after which Black's back-rank starts to tell. 18... Qg8 19. Qe4+/-; At first I thought that Black could solve most of his problems by 16... Rf4+ 17.Qb1! looks like a mistake, because of (17. Qd2 this would be a more favorable way to exchange the queen, in comparison to the game... But of course, White still keeps some initiative.) 17...c6 but White is still doing fine after the concrete 18. Qxc6! bxc6 19. Qxc6 Rb8 20. Qc3! This is the key move of the sacrifice. White had to prevent the Qg7 move. (Now on 20.g3? Black has 20... Qc7) 20... Qg8 21.h5 with a serious attack. Rf4 could be very unpleasant. White is materially behind, but the two pawns and the h8 rook, which has no chance to return to the game, fully compensate him.]

17. Qe5! Very well played! Psychologically a difficult move because White could have had the urge to punish Black's king somehow. Fressinet realized that in the endgame his advantage is bigger than in the middlegame.

17...Qg7 18. Rxe1 It's not easy for Black now. The c8 bishop and the a8 rook are stuck...

18...Rf8 A slightly mysterious move, but it's not easy to recommend something... [18...a6 19. Qc4 b5 White can simply take the pawn with 20. Qxe6 Qxe6 21. Qxc7 and Qe5 is coming next.; 18... Rxd8 19. Rxd8 Qxe5 20. Rxe5 Nxd8 21. Re8 doesn't look great for Black either.]

19. Re3 White continues improving his pieces. The rook is ready to harass the queenside pawns along the 3rd rank and to double them on the d- or e-file... [19. Qc4 was even stronger, the bishop had already nothing to do on b5.]

19...a5 [19... Qxe5 20. Nxe5+= is also better for White.]

20. Qc4! This is the best place for the bishop! Black is still without any useful plans, so White has time for maneuvering. However, Black's position is still very stable, it's not easy to create a weakness in it.

20...♖e8 There are two ways to treat the position: one is to press in a superior endgame, or White can also preserve the queens and launch a dangerous attack. [20...♙xe5 21.♘xe5+ =]

21.♙xf6+!? [21.♙g3+/- was probably even stronger with the idea of ♘e5 and ♖f3.]

21...♔xf6 22.♖de1 [22.♘e5 ♖e7 23.♖de1 transposes to the game.]

22...♖e7 Black defends against the ♘e5, ♖f3 threat, however, he should have done it with the rook on f8. Now Black moved into tactical motifs...

23.♘e5 [23.h5! would have pointed out the inaccuracy of the previous move 23...g5 (23...gxh5 24.♘d4! with the threat of ♖f3 and ♘f5.) 24.♘d4! and again it's not easy to parry the ♖f3 — ♘f5 idea.]

23...a4! A resourceful idea! Black wants to get his rook into the game through the 5th rank, but Fressinet manages to keep the rook in passivity.

24.♘g4+ ♔g7 25.♖e5! Not only prophylactic against ♖a5, but also preparing to play h5! Black was already in time trouble. Usually, defending such a bad position consumes a lot of time and energy...

25...c6?! This allows White to execute his plan. [25...h5 should have been played, but it doesn't solve all the Black problems either. 26.♘h2 ♖d7 27.f4! For example, after (27.♘f3 also gives a small advantage.) 27...♖ee8 28.f5! gxf5 29.♖xf5+ =; 25...♖d7 26.h5+ =]

26.h5! Black is in much bigger trouble than it might look at first sight.

26...b5 [26...g5 is met with 27.♘e3! The h6 pawn is weak. For example, ♘f5-Kh7 and ♖d3, or ♘d6 are winning threats.]

27.♖a2! Fressinet holds the pressure on the e6 knight. This makes the threat of hxg6 decisive. Despite the material equality, Black is probably lost.

27...♖aa7 [27...gxh5 was more tenacious, but after 28.♖xh5 the h6 pawn falls.]

28.hxg6 ♔xg6

29.f4! This wins on the spot! Nothing to do against f5.

29...f6 [29...f5 30.♖xe6+ -]

30.♖xe6! Some calculating job at the end of the game.

30...fxe5 [30...♖xe6 Now the most precise is 31.f5+! (31.♖xe6 ♖xe6 32.♖xe6 ♔f5 is also winning for White, but Black can prolong the resignation a bit.) 31...♖xf5 32.♖xe7 ♖xe7 33.♖xe7 ♖xg4 34.♖c7+ -]

31.♘xe5+ ♔f6 32.♖xc8+- White ended up with a huge material advantage.

32...h5 33.♖d1 ♖g7 34.♖h3 Nice positional game!

1-0

(4) Mullan,J (2404) – Fressinet,L (2714) [B04]

87th ch-FRA 2012 Pau FRA (5), 17.08.2012

[Arkadij Naiditsch]

Usually, we analyze games between two chess giants, but this time I want to make a small exception. We are in the game between the player who is in last place and the one with the lowest Elo rating in the tournament, Jean Baptiste Mullan (the boss of the French League Champion, Clichy), and one of the pretenders for the French Title, Laurent Fressinet, rated more than 300 Elo points higher. We'll see a game with the topic: „How to beat a much weaker opponent“, something that's very usual in any big open tournament.

1.e4 ♘f6 Fressinet doesn't play the „Alekhine“ very often, but for today's special situation, it's not a bad choice at all...

2.e5 ♘d5 **3.d4** d6

4.♘f3 White chooses the most solid line, which makes perfect sense. As a weaker player, you should try to be as solid as possible avoiding complications as far as possible. In an „easy position“, the 300 Elo points difference is less effective than in a position with a lot of different possible moves.

4...g6 We are still in one of the main lines, with many games that were previously played.

5.♘c4 c6 6.h3 ♘g7 7.0-0 0-0 8.♔e2 Not a bad move, but a bit usual here. [8.exd6 ♔xd6 9.♘bd2 leads to a normal slightly better position for White.]

8...dxe5

9.♘xe5? A bad move. Actually, almost a blunder. [9.dxe5 and we are in a very normal position.]

9...♘b6! Of course, Black tries to make use of the situation with a double attack. If White tries to defend the d4 pawn, Black will simply get the bishop pair after ♘xc4.

10.♘b3! What a great play by White. Not because the move is good — the move is bad -, but because this is the only move that gives practical chances. In case of 10. ♔d1 ♘xc4 11. ♘xc4, there is no way J.B.Mullan would save this position against such a strong opponent. A slightly worse position with a lot of play usually equals a slow and unpleasant death...

10...♘8d7?! What an interesting psychological moment. Black doesn't take on d4! He's afraid to blunder something. If Fressinet would be playing against an equal opponent, I have no doubts he would take on d4, but play-

ing the lower rated Mullon, Black thinks that he will win the game without risking anything. [10...♔xd4! It looks like Black can just win the pawn! 11.♘xf7 In case of any other move, Black is just a pawn up. 11...♖xf7 12.♖d1 ♔f6! The only square for the black queen. Black needs to have the e6 move in the future.

13.♖d8+ ♕f8 14.♕xf7+ Not a great move to do, but Black wanted to play e6 next. 14...♔xf7 15.♘c3 e5 Two pieces for the rook and an equal number of pawns, this should be enough to be better. Yes, White still has some tricks in the position, but objectively, the position is better for Black.]

11.♘d2 A bit too passive. 11.♘c3 would have been a better solution.

11...a5! A typical positional move. Black is provoking White to play a4. And to include the a5-a4 moves is definitely good for Black.

12.a4 ♘xe5 13.dxe5 c5?! An ugly move. [It's not much better to play 13...♖c7 14.e6! f5 15.♖e1 The bishop on c8 is completely blocked. This gives White very good chances for a future attack. In my opinion, White should be clearly better here.; 13...♘d5! This would be the most normal reaction for Black. 14.♘f3 Now we can see why

a5-a4 was so useful for Black. White has no c4 push anymore. 14...♖b6 with a very normal position.]

14.♘f3? White has too much respect for his opponent. [Why not to play the most logical? 14.e6 f5 (14...♕xe6 15.♕xe6 fxe6 16.♖xe6+ ♔h8 17.♘f3 After these obvious moves, we can clearly see that Black has quite a few problems. The pawn configuration with a5-b7-c5-e7 is just a disaster, the knight on b6 is badly placed and all that White needs to do is to play ♕g5. White is clearly better here.)

15.♘c4 If this would've happened in the game, I think Fressinet would have regretted a lot not having taken the pawn on d4 before... Black's position is just horrible and there's no risk for White at all.]

14...♖c7! And here comes the immediate punishment, Black wants to play c4 now.

15.e6 Too late for an active play. [A normal move like 15.♕e3 e6 16.c3 would still lead to a slightly more pleasant position for White, but of course, the best part of the advantage has already passed away.]

15...f5 Black doesn't take on e6 because this would give White a clearly better position. Now the game becomes very concrete.

16. ♖e1?! This move has the right intention, to keep the e6 pawn at any cost, but it doesn't seem to work tactically. [It was much better to play the simple 16.c3 The White bishop belongs on c2. 16...c4 17. ♗c2 ♖a6! We can see again how important was the a5 move for Black. The rook is attacking the e6 pawn. The position is very complicated.]

16...c4 Of course!

17. ♗a2 ♞xa4! This time Fressinet takes the „free” pawn.

18. ♗xc4? White totally lost control over the game. This move already leads to the loss of more than just a pawn, and it was not too late to start playing „normal chess”. [18. ♞e5! and the position is still totally unclear. Black has a lot of options here. To hold on to the c4 pawn doesn't work. 18...b5?! 19. ♗xc4! bxc4 20. ♖xa4 and even Black has the bishop pair. The defense of the c4 pawn is not an easy task. The position should be around equal here.]

18... ♞xb2 19. ♗b3 ♞c4! Strong move by Black. [In case of 19... ♞d3 20.cxd3 ♗xa1 21.d4! probably Black's position is winning, but White will get some counterplay on the kingside, which is really unnecessary for Black.]

20. ♗xc4 [20. ♖b1 b5 would lead to a position with a clear pawn up for Black. J.B. Mullon thought that here he had

zero practical chances and decided to sacrifice the exchange expecting to get some tricks in exchange.]

20... ♗xa1 21. ♞g5 b5 Black gives a pawn to develop the bishop from c8 — not a bad thing to do being a clear exchange up!

22. ♗xb5 ♗b7 Not the most precise move by Black. [22... ♗f6 23. ♞f7 a4 pushing the a-pawn as far as possible would give Black a winning position on the spot. The White knight on f7 is well placed, but it can't create any dangerous threats to the Black king. Also, just in case, Black has the move ♖a5 to protect the 5th rank.]

23. ♖d1?! The idea of ♖d7 is nice, but it's more like a dream for White... [The only chance to continue the game would have been to play 23. ♞f7 ♗f6 24.c4! protecting all the pieces. 24...a4 25. ♗b2! and White has some small hopes for tactical tricks — even if the position remains lost.]

23... ♗e5?! What is Fressinet doing? It seems like White managed to get Black to play badly by playing badly himself. [23... ♗c6 This simple move just gives Black a winning position. 24. ♖c4 White needs to play for tricks... 24... ♖ac8 25. ♗f4 (25. ♖h4 h5) 25... ♗xb5! It's not a difficult line to calculate for a 2700 ELO player. 26. ♖xc7 ♖xc7 27. ♗xc7

♙f6 28.♘f3 a4 and we are in quite an easily winning end-game for Black.]

24.♔f1! Easy and good, White is back in the fight.

24...♖ab8?! Another strange move by Black... but it seems like both Fressinet and Mullon just dropped their chess level to a minimum.

25.♙d7? [After the easy 25.♙a3 ♔f6 Black already needs to find „only“ moves. Luckily, it's good enough to keep the advantage. 26.♘xh7 ♔xh7 27.♖xa1 and we can clearly see that the game is by far not over. White got the bishop pair plus an extra pawn for the exchange.]

25...♔c7! In chess, it's very important to recognize the mistakes one has done, and Fressinet is doing it. The Black bishop belongs on f6 to cover the king. The Black queen should attack the White pieces.

26.h4 White is starting a suicidal attack, but there's not much else to do. Black wants to play ♙f6 followed by a4-a3-a2 and queen.

26...♙f6 Finally, the Black bishop has reached his destination.

27.h5

27...♔xc2! Black is back, playing cool and strong moves.

28.hxg6 hxg6 29.♙f4 ♙a6! Easy but nice tactic. Now the position is completely winning.

30.♔e1 ♔e2! The most technical way to end the game. There were many others winning moves, but Black decides to give away the exchange, leaving him in a totally winning endgame anyway. The a-pawn will be worth at least a full piece!

31.♙xb8 ♔xe1+ 32.♖xe1 ♖xb8 33.♘f7 [33.♘f3 ♖b4 would lead to about the same.]

33...♖b4 The a-pawn starts to move.

34.♖e3 ♖b1+ [Would lead to a nice winning line: 34...♙d4 35.♖a3 ♖b1+ 36.♔h2 ♙xf2 37.♖xa5 ♙g1+ Black starts to build a mating net around the White king. 38.♔g3 ♖b3+ 39.♔f4 ♔g7! What a nice mating motif! 40.♖xa6 ♔f6 and the mate is coming from all sides!]

35.♔h2 ♖b2 36.♖a3 ♖xf2

37.♙c6 [37.♖xa5 ♙b7 and the g2-pawn is gonna fall.]

37...♙c4 38.♖xa5 ♙xe6 Now it was a good moment to resign, but White decided to make a few more moves.

39.♘d8 ♖c4 40.♖a4 ♗e5+ 41.♔h3 ♜f1 42.g4 ♜f2!

A nice mate!

43.♔h4 ♗f4 44.gxf5 gxf5 45.♔h5 ♔g7

And finally the game has finished with a predictable result. What can we learn from this game? It happens very often, and to any kind of player: You drop Your level of play to the one of Your opponent. It's very important to stay focused even in a winning position against a much weaker opponent!

0-1

[Chess Evolution]

What an endgame! Rarely we see such a constellation: 5 pawns for a rook. It's clear that White is doing better, but is this position winning? And what's the best way to fight for a win with White? To leave the rook on the first rank, or to start attacking from „behind“ in order to allow the king to help on the queenside, or to leave the king controlling Black's f-pawns... Let's take a closer look.

58. ♔xd4 Black chooses the most natural move, but it actually leads to a very tricky draw.

58...b3 [58...f3! It seems that this move makes the easiest draw... The idea of Black is to leave the White king busy with the a- and b-pawns, and to start pushing the f-pawn together with the king as far as possible. 59. ♖g6+ White needs to try to get the Black king on a distance, any other attempt would lead to an immediate draw. (59. ♔e3? To

try to hold the f-pawn with the king would even lead to a losing position for White! 59...a3! 60. ♖a1 Black wanted to play a2-b3-b2 and queen. 60...♔d5! The Black king is on the way to help his pawns on the queenside. 61. ♔xf3 ♔c4 62. ♔e3 ♔b3 63. ♔d2 ♔b2 with an easy win for Black.) 59...♔f7 60. ♖g3!? The only chance to fight for a win. (60. ♖xh6 It could be important to help the h-pawn, but again White is just not in time to achieve more than a draw. 60...b3 The usual b3... 61. ♔c3 The White king has to get away from the f-pawn. 61...f2 forcing White's rook to leave the 6th rank. 62. ♖h1 ♔f6 and here comes the Black king.

63. ♖f1 f4 64. ♖xf2 ♔f5 White is clearly not in time to capture the a- and b-pawns and to return back with the king to help the rook in its lonely fight. 65. ♔b4 ♔g4 66. ♔xa4 ♔g3 with a draw.) 60...b3! This b3 that we see in almost all the lines tends to be the best move. 61. ♖xf3! White is holding the Black pawns for a second with the rook. 61...♔f6 (61...b2?! still leads to a miraculous draw, although it would be a bad move for the heart :). 62. ♖xf5+! The f-pawn is gone. 62...♔g6 63. ♖b5 a3 64. ♔c3! The White king is going for Black's a- and b- pawns. 64...h5 65. ♔c2 h4 66. ♔b1 ♔h6 67. ♔a2 ♔g6 and we have a very funny position. Black has no other moves than ♔h6-Kg6, but how

can White improve the position?! There is no way except to play ♔xa3, which leads to a „move by move” draw.

68. ♔xa3 b1♚! Black needs to cross the 5th rank with the king at any cost. 69. ♖xb1 ♔g5 70. ♔b3 ♔g4 71. ♔c4 ♔g3 The run of the king ends with Black being on time. 72. ♔d4 h3 73. ♔e3 h2 Draw.) 62. ♖f1 ♔g5 63. ♔c3 and again White can do nothing better than to play ♔c3... and this is exactly what Black wants... 63...f4 64. ♔b4 ♔g4 65. ♔xa4 f3 66. ♔xb3 ♔g3 67. ♔c3 ♔g2 68. ♖a1 f2 and once again, Black is just in time to make a draw.]

59. ♖g6+! Absolutely correct. White needs to cut the Black king on the 7th rank. [59. ♔c3 ♔d5]

59...♔d7? A natural move, which is a losing mistake! [59...♔f7! would be the right way to go. For a human this is not an easy move to make. It's very hard to calculate all the lines until the end, and this move has to be done more intuitively. 60. ♖b6! White stops the advance of the Black pawns with the rook, which gives White a chance to keep the king in the center — the f-pawn just can't move! (An attempt to capture the h-pawn ends in a draw as well. 60. ♖xh6 b2! As usual, Black gets the White king away from the center, which gives him time to bring his own king and to advance the f-pawn as far as possible. 61. ♖h1 (61. ♖b6 a3 62. ♔c3 f3) 61...a3 62. ♔c3 ♔f6 63. ♔b3 We have another move by move position. 63...f3 64. ♔xa3 ♔e5 65. ♔xb2 ♔e4 66. ♔c2

66...f2! It's a bit funny that the second Black pawn on f5 secures a draw. Without it, the position would just be lost. 67. ♔d2 ♔f3 68. ♖a1 f4! 69. ♖b1 ♔g2 70. ♔e2 f3+ and this is why Black needed the second f-pawn. What a nice line!) 60...h5! It's amazing but this is probable the only move that saves Black's position. And what else to do!? Against f3, White is always in time for ♔e3. 61. ♖b4 The rook can capture both pawns by itself! 61...h4 62. ♖xa4 h3 63. ♖a1 It looks like White has some winning chances, but the po-

sition is a draw. 63...♔f6! The Black king starts his movement. 64.♖h1 b2! forced White to move the king close to the b-pawn, which of course means a draw. 65.♔d3 (65.♔c3 We already saw many times that this leads to a draw. 65...♔g5 66.♔xb2 ♔g4 67.♔c3 ♔g3 68.♖g1+ ♔f2 69.♖g5 h2 70.♖h5 ♔g2 71.♖g5+ Draw.) 65...f3! It's very important to be careful until the end! (It was not too late to make a huge mistake by playing 65...♔g5 ?? 66.♔e2! and White is winning! The White king is getting to f3, and all the Black pawns are gonna fall!) 66.♔e3 ♔e5! The Black king is going to c2! 67.♖d1 cutting on the d-file. 67...h2 68.♔xf3 h1 ♕+! Typical, but anyway a nice move. 69.♖xh1 ♔d4 70.♔e2 ♔c3 The Black king reached the c2-square. Draw!]

60.♔c3! This is exactly why Black should not have played ♔d7?. Now White just wants to play ♖xh6-Rf6 and capture all the Black pawns. Black has nothing better to do than to lose a very important tempo and to go back with the king.

60...♔e7 61.♖a6! Very good play by White! The game is over, White is in time to capture both pawns and to go back with the king to stop the f-pawn.

61...f3 62.♖xa4 ♔d6 63.♖b4 ♔e5 Here the game was stopped with the result of 0–1. First I thought it must have been a mistake. White is completely winning! Later on I found out that White lost on time! With a 30 second increment per move, it's amazing! How unfortunate for the young French player. Of course, 64.♔d2 wins on the spot.

0–1

(16) Saric,I (2638) – Fischer,AK (2244)

Vienna Open, 15.08.2012

[Chess Evolution]

In the first rounds of an open tournament, a strong GM was facing a much lower rated opponent, but the game was always about even. Suddenly, they simplified the game to this amazingly complex pawn endgame. The position is full of fascinating motifs. One of the best ways to improve your calculating abilities is to solve pawn endgames. This is also an excellent example. First of all, let's try to find out who is better and why... Black has a seemingly more active king, but his pawns are squeezed down, they cannot move. The a5 pawn blocks excellently the queenside and if the Black king goes to take it, White appears to be faster to collect the kingside pawns and promote his own pawns. White's only winning attempt is the following: to play g5, ♔f5 and h4-h5-h6, making an „entrance square” on f6 for the pawns.

30.g5! Very strong move. Just like the a5-pawn on the queenside, the g5-pawn completely restricts the mobility of the kingside pawns. [Other moves with the same idea

were not so dangerous. For example: 30.♔f5 h6! Black prevents g5 and starts moving with his king on the d-file.]

30...♔e6! Only move! Black needs to create a passed pawn, he intends to play f5 next. [30...g6? is probably the most logical move to prevent ♔f5 and the h4-h5-h6 plan, but it has a huge drawback as well: it gives up the f6 square. The a5 pawn does such a good blockading job that White can lure the king to the queenside and he will be still ahead in time to promote his g-pawn... 31.c4+! ♔xc4 White gets a winning queen endgame by force after the big pawn race. (31...♔e6 This is too passive, it cannot lead to anything good for Black... 32.b4 ♔d6 33.♔e4 ♔e6 34.b5! White has a well-known breakthrough in this kind of 3 vs 2 situations, which he can comfortably execute here... 34...♔d6 35.♔d4 ♔e6

36.c5! with the idea of 36...axb5 37.c6! This is the point. 37...bxc6 38.a6+-; After 31...♔d4 32.h4!+- Black is in zugzwang. He must allow White to play ♔e5.) 32.♔e5 ♔b4 33.♔f6 ♔xa5 34.♔xf7 b5 35.♔g7 b4 36.♔xh7 ♔b5

37.h4! White will do up with a g5 pawn, which is clearly much better than the one with h3, after ♔xg6, and promoting the g-pawn. 37...a5 38.h5 a4 39.hxg6 a3 40.bxa3 bxa3 41.g7 a2 42.g8 ♔ a1 ♔ 43.♔d5+- with a theoretically winning endgame.; 30...♔d4? 31.♔f5 ♔e3 The active try had to be calculated precisely, but if we do a good job, we come to the conclusion that White wins by one tempo... (31...♔d5 The waiting policy of passing on the d-file is a very bad idea now. White can simply execute his winning plan. 32.h4 ♔d6 33.h5 ♔e7 34.h6 gxh6 35.gxh6+- and by pushing the queenside pawns, White lures the king and he can simply penetrate with the king.) 32.h4! ♔d2 33.h5 ♔xc2 (33...g6+ does not help. 34.hxg6 fxg6+ 35.♔f6 ♔e3 (35...♔xc2 36.♔g7+- The a5-pawn is an excellent blockader.) 36.♔g7 ♔f4 37.♔h6+- followed by pushing on the queenside again.) 34.h6 The usual winning technique. 34...gxh6 35.gxh6 ♔xb2 36.♔f6 ♔c3 37.♔xf7 ♔b4 38.♔g7 ♔xa5 39.♔xh7 b5 40.♔g6 b4 41.h7 b3 42.h8 ♔+-; 30...♔c5? is too slow. 31.♔e5 ♔b5 32.♔d6 ♔xa5 33.♔e7 f5! Black wins a few tempi with this, but still fails to save the game. 34.gxf6 gxf6 35.♔xf6 b5 36.h4 b4 37.h5 ♔b5 38.h6 a5 and here comes the key move: 39.b3!+- This stops the a-pawn. Black needs to go around with his king, but of course, White is much faster here.]

31.c4 White correctly advances the queenside pawns. Other moves like b4 and h4 will lead to the same positions as in the game.

31...f5! Principled defense! Black needs to make use of his pawn majority on the kingside. [The passive defense is not recommended here either, but the refutation is really difficult now: 31...♔d6? 32.b4 ♔e6 33.h4 f5! Only chance. (Black could not wait any longer with 33...♔d6 34.♔f5 ♔e7 35.h5+- and h6 next.) 34.gxf6 ♔xf6 35.b5 ♔e6 We are at another critical moment, where we really need to use our calculating skills.

36.b6!! Pure calculation is needed. With the help of the c5-c6 threat, White wants to enter in the opponent's camp. It's important to notice that if Black goes for the a5-pawn, it's enough for White to reach the c7-square with the king and he'll still queen faster with his b-pawn. 36...♔d6 37.♔f5 ♔e7 (37...♔c5 is not an option. 38.♔e6 ♔xc4 (38...♔b4 39.♔d6 ♔xa5 40.c5+-) 39.♔d6 ♔b5 40.♔c7+-) 38.♔e5 ♔d7 39.c5! Despite being with a plus on the kingside, Black cannot create a passed pawn. The move h6 is always met with h5, and he doesn't have enough time for g6 and h6, because of ♔f6... 39...♔c6 (39...h6 40.h5+- is easy.) 40.♔e6 h5! (40...♔xc5 41.♔d7+-)

41.♔e7!! A similar ending arises after 41. ♔f7, but there will be a huge difference... 41...g5 Black needs to play this move, otherwise White just plays ♔d8-c8. 42.hxg5 h4 43.g6 h3 44.g7 h2 45.g8♔ h1♔ and here White has the fantastic 46.♔d8!! The idea is simply to collect the b7 pawn. He can go with the king to a7 if it's needed and then the pawn automatically falls. 46...♔xc5 47.♔b3!! is the most precise, but not the only move here. Next is ♔c7 or in case of 47...♔c6 48.♔c4+ ♔d6 49.♔c7+ ♔e6 50.♔c8+- wins.]

32.gxf6! White has no choice of course. If Black manages to create a protected passed pawn with g6, he cannot have any more problems in this game... [32.b4? g6]

32...♔xf6 33.b4 And we have reached another critical moment, The most critical one, from the game point of view. After finding a few only moves, Black makes a mistake and loses. There was only one way to save the game...

33...g5+? [33...♔e6? will lead us back to the previous line with 31...♔d6. 34.h4! ♔e7 (34...♔f6 35.b5 ♔e6 36.b6+- We transposed to 31...♔d6.) 35.b5 ♔d6 36.b6! ♔e6 and here again, we end up in the same position after 37.c5! ♔d5 38.♔f5 ♔xc5 39.♔e6 h5 40.♔d7 g5 41.hxg5 h4 42.g6 h3 43.g7 h2 44.g8♔ h1♔ and again White has some good possibilities, but the strongest is 45.♔b3! ♔c6+ 46.♔d8+- with the threat of exchanging the queens. Black must allow the king to have access to the b7 pawn. The game is practically over.; 33...h6!! The only move to draw! Black's idea is to get rid of the kingside pawns, after which he can calmly walk to the other side with the king. At any moment, when White plays h4, he needs to push g5 and White is forced to take it. As we saw in the 31...♔d6 and 33...♔e6 lines, the key was that White managed to get his pawn to h4 and was ready to play h5 against h6... 34.b5 (34.♔e4 ♔e6; 34.h4 g5+!) 34...♔e6! Otherwise, the c5-c6 break works... 35.♔e4 (35.c5?? would be a terrible blunder. 35...axb5 36.c6 ♔d6! 37.cxb7 ♔c7 Black stopped the pawns and the passers on both flanks to win the game. 38.a6 g5+)

35...♔d6! Another only move! (After the other candidate move 35...g6 White wins again with subtle play. 36.♔d4! g5 (36...♔d6 loses by one tempo. 37.c5+ ♔d7 38.bxa6! bxa6 39.♔e5 ♔c6 40.♔f6 ♔xc5 41.♔xg6 ♔b4 42.♔xh6 ♔xa5 43.♔g6+- and both pawns are promoting at the same time, but White does it first and controls the a1 square...) 37.♔e4 h5 Black seemingly manages to finish his plan and exchanges the kingside pawns, but White is in time again. Now he wins even by two tempi... 38.b6! ♔d6 39.♔f5 g4 40.hxg4 hxg4 41.♔xg4 ♔c5 42.♔f5 ♔xc4 43.♔e6 ♔b5 44.♔d7 ♔xa5 45.♔c7 ♔b4 46.♔xb7 a5 47.♔c6 a4 48.b7 a3 49.b8 ♔++-) 36.♔f5 (36.♔d4 would ease Black's task. 36...axb5 37.cxb5 g5 Now the draw is clear. The two kings will remain alone on the board soon... 38.♔e4 h5 39.♔f5 g4 40.hxg4 hxg4 41.♔xg4 ♔c5 42.a6 bxa6 43.bxa6 ♔b6=) 36...♔c5 37.b6 (After 37.bxa6 it is White who needs to be very careful to hold the draw. The way he does this is very instructive, again! 37...bxa6 38.♔g6 ♔b4! By not wasting time on the c4 pawn, Black promotes his queen first and controls the h8 square. However, with a pawn on h7 and the king on g8 against the queen, the position is a theoretical draw, with a well-known stalemate trick. Yes, but this stalemate does not exist with the exist-

ence of the c4 pawn. After all, it's clear what White has to do... (38...♔xc4?? is a blunder 39.♔xg7 ♔b4 40.♔xh6+-) 39.♔f5!! (39.♔xg7? ♔xa5 40.♔xh6 ♔b4 41.h4 a5 42.h5 a4 43.♔g7 a3 44.h6 a2 45.h7 a1 ♔+ 46.♔g8 ♔a8+ 47.♔g7 ♔b7+ 48.♔g8 ♔c8+ 49.♔g7 ♔d7+ 50.♔g8 ♔d8+ 51.♔g7 ♔g5+ 52.♔f7 ♔h6 53.♔g8 ♔g6+ 54.♔h8 and here, due to the c4 pawn, Black wins with 54...♔f7! and there is no stalemate. 55.c5 ♔f8#) 39...♔xc4 (39...♔xa5 also leads to a draw. 40.♔e6! White goes to support the c-pawn. 40...♔b6! Only move. 41.♔d6 ♔b7! Only move again. Black wants to play ♔c8, so White is also forced 42.♔d7! ♔b6 43.♔d6= with a repetition.) 40.♔g6! After the c-pawn disappeared, White can go for the mentioned endgame, but the execution still needs precision! 40...♔b4

41.h4!! White has to push his pawn to h5 first! (41.♔xg7? loses to 41...h5! lures away the White king. 42.♔g6 ♔xa5 43.♔xh5 ♔b6 44.♔g6 a5 45.h4 a4 46.h5 a3 47.h6 a2 48.h7 a1 ♔) 41...♔xa5 42.h5! ♔b4 43.♔xg7 a5 44.♔xh6 a4 45.♔g7 a3 46.h6 a2 47.h7 a1 ♔+ 48.♔g8 ♔g1+ 49.♔h8= with a theoretical draw.) 37...h5! This is the most precise! (37...♔xc4 also leads to a draw, but Black needs to suffer for a long time. 38.♔e6! g5 39.♔d7 h5 40.♔c7 g4 41.hxg4 42.♔xb7 g3 43.♔xa6 g2 44.b7 g1 ♔ 45.b8 ♔ This is

theoretically drawn, but of course, I don't wish anyone to have this kind of queen endgame. Usually, it lasts for about 100 moves.) 38.h4 ♔xc4 39.♔e6! Only this direction! (39.♔g6 is too slow. 39...♔b5 40.♔xh5 ♔xa5 41.♔g6 ♔xb6 42.♔xg7 a5 The Black pawn arrives with check!) 39...♔b5 40.♔d6 ♔xa5 41.♔c7 g5! 42.hxg5 h4 43.g6 h3 44.g7 h2 45.g8♔ h1♔ = This is our final position! If both sides play flawlessly from this initial position, they will reach this position and agree to a draw soon. An excellent exercise for practicing calculation, but I believe that to find all these moves with a limited time control is only possible with some luck... (maybe even with an unlimited time control :-).)]

34.♔g4 ♔g6 35.b5 And White is breaking through!

35...h5+ 36.♔g3 ♔f5 37.c5! Black resigned because of 37...axb5 38.c6! A very instructive endgame!

1-0

Clash of the Titans

(17) Letelier Martner, Rene
– Fischer, Robert James [E70]

Leipzig ol (Men) Leipzig, 24.10.1960

[Balogh Csaba]

This week, we'll examine Fischer's immortal mate from the 1960's Olympiad. He was only 17 years old and already was the leader of the US Team.

1.d4 ♘f6 **2.c4** g6 **3.♘c3** ♙g7 The King's Indian defense was Fischer's favorite weapon against 1.d4.

4.e4 0-0

5.e5 White goes for it, but in my opinion it's better to avoid this kind of complications.

5...♘e8 Looks ugly. That's why White could not resist the temptation. However, the position is more tricky. White went forward with his pawns, which is very nice, but they should be supported by the pieces. Black's idea is to undermine the center, and he has various ways to do it. For

example d6, later c5-Nc6, or even f6 is possible sometimes. White must try to consolidate his pawns...

6.f4 d6 7.♙e3 This is the right way to develop. [The logical 7.♘f3 would allow Black to increase the pressure on the center by pinning the knight with ♙g4... 7...dxe5 8.fxe5 and here probably the best is 8...c5 and on 9.d5 ♙g4↑ followed by ♘d7. White's center collapses.]

7...c5! Consequent play, otherwise it's hard to „breath“.

8.dxc5

8...♘c6! Fischer knows that the number of pawns doesn't matter, he must open the files on his opponent's king. Black must play energetically to prove the compensation.

9.cxd6 exd6 10.♘e4? This is a bad decision! Making a second move with a piece, instead of developing. [10. ♘f3 should have been played, when it's not obvious if Black can reach more than equality. 10...♙g4 11.♙e2 ♙a5 (The problem is that after 11...dxe5 White has 12.♙xd8 ♖xd8 13.♙c5!) 12.0-0 (12.exd6 is met with 12... ♙b4! with a double attack on b2 and d6. Black is OK!) 12... dxe5 13.fxe5 ♘xe5 14.♘xe5 ♙xe5!= and the position is about even.]

11. ♖g3 [11. ♖xd6 White should have gone for the exchange of queens. 11... ♗xd6 12. ♔xd6 ♕xd6 (12... f6!? is also possible. 13. ♔xd8 ♖fxd8) 13. exd6 ♙xb2 14. ♖d1 ♖fe8 15. ♔f2 ♖ad8 16. ♗f3

11...♙e6 12.♘f3 Finally White takes out a piece.

12...♔c7 Trading queens was not Fischer's intention! [12...dxe5!? However, it would have probably been objectively the strongest move. 13.♔xd8 ♖xd8 14.♙c5 exf4 15.♘e4 and now (15.♙xf8 loses to 15...♙xb2! 16.♖d1 ♙c3+ 17.♙e2 ♙xc4+) 15...♙f5 16.♙xf8 ♙xf8 17.♘c3 ♘b4 18.♖d1 ♘c2+ 19.♙e2 ♖c8 Black installs a knight on

e3 and enjoys a big advantage, but his attack still needs some time to break through.]

13.♔b1 White wants to avoid the opening of the lines and intends to push f5 after dxe5. As we will see, he doesn't succeed. [13.exd6 ♘xd6 is kind of hopeless for White. All the lines and diagonals are open only for one pawn.; 13.f5! was the only chance for White. 13...gxf5

14. ♖d3 Here Black has several ways to achieve some advantage, but none of them is completely clear. I believe the best option is the elegant play. Probably, Fischer would have played it as well. 14... ♗xe5 15. ♗xe5 f4!! Nice intermediate move, which allows Black to occupy the center. 16. ♖xf4 dxe5 taking with tempo and f5 is coming next! Black must be better!]

13...dxe5 14.f5 Diagonal

14...e4! A great move again, probably arrived without thinking again. The e-file and the a1–h8 diagonal has to open up.

15.fxe6 [15.♔xe4 gxf5 and White cannot capture on f5, due to ♔a5!]

15...exf3 16.gxf3 Here Black has many tempting moves, one of them is better than the other... Fischer continued to play instyle!

16...f5!? 16...fxe6, 16...♘e5 or 16...♙e5 were also good.

17.f4 ♘f6! ♘g4 and ♖e8xe6 are in the air! The White king cannot find shelter, the end is near.

18.♙e2 ♖fe8 19.♙f2 ♖xe6 Game over! But the end is just fantastic!

20.♖e1 ♖ae8 21.♙f3 And here comes the fantastic blow!

21...♖xe3! Not the only way to win, but definitely the nicest!

22.♖xe3 ♖xe3 23.♙xe3 And...

23...♙xf4+!! White resigned! [23...♙xf4+!! 24.♙xf4 (24. ♙e2 ♘d4+; 24.♙f2 ♘g4+ 25.♙g2 ♘e3+ 26.♙f2 ♘d4 27.♙h1 ♘g4+) 24...♙h6# Amazing mate!]

Editorial Preface

The 40th Chess Olympiad in Istanbul, Turkey has begun! Almost all the teams came with their best possible line-up, including Kramnik playing for Russia on board 1. There are also a few that are missing: Anand, Carlsen, Gashimov and Morozevich.

Like most of the players, we are staying at the WOW Hotel, a good 4**** star hotel. The food is very average and if you want to have a coffee in the bar, you have to be ready to spend 6 Euro.

The opening ceremony was nice, with a lot of traditional music and dancers.

The first round of the Olympiad got very chaotic, the entry to the playing hall is much too small for 3000 people wanting to get inside at the same time, so the round was postponed to 15.20 to avoid the zero-tolerance rule (it means that when You are even 1 second late at your board, you get a 0 immediately). This rule makes no sense to me at all. Another rule is that both players are not allowed to agree to a draw before move 30! Why to have it in a team event?

The playing hall is quite big, so the playing conditions are quite good, but another big disadvantage is that it's impossible to get any water or coffee during the game.

While I am writing this, only the 1st round has passed, the favorites made their job, so the big fights will begin on the second round.

Already now, in the 4 commented games, You can find 2 games from the recent Chess Olympiad.

Stay updated with us, enjoy the games and in the next issue we will report about the chess activities, plus the famous traditional "Bermuda Party"!

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Jakovenko,D (2736) — Fernandez,F (2287) [B90]

Olympiad 2012, 28.08.2012

[Arkadij Naiditsch]

First round of the Olympiad and we already see a nice fighting game! Jakovenko playing board 4 for Russia with an ELO of 2736 managed to win in great style a typical Najdorf game.

1.e4 c5 2.♘f3 d6 3.d4 cxd4 4.♗xd4 ♘f6 5.♗c3 a6 6.♙e3 The Najdorf with 6.♙e3 has always been one of the main chess openings. Millions of hours of analysis have been made here and we still have no clear conclusion...

6...e5 [6...e6 7.f3 and we would go back to other main lines.]

7.♗b3 ♙e6 8.♙d2 Lately, White started not to hurry with the usual 8. f3 to keep in his pocket the immediate f4 move.

8...♘bd7 9.f4 Jakovenko is following the latest fashion...

9...♖c8!? An interesting move. More often we see Black playing 9...exf4 10.♙xf4 ♘e5.

10.0-0-0 [To hurry with f5 would be a mistake now: 10.f5?! ♙xb3! A very atypical move, but a very strong one in this concrete situation. (10...♖xc3? 11.fxe6) 11.axb3

11...d5! This is the key move! Black is crushing the White position in the center. In case of 12.exd5, Black will play 12...♙b4 and ♗e4. In case of 12.♗xd5, ♗xe4.]

10...b5 Black continues the attempts to create direct play against the White king combined with a pressure on the e4 pawn.

11.♙b1 Jakovenko stays cool!

11...♙e7 Probably the best move for Black... he will need to castle short in the future, and move likes 11... b4, of course, don't work because of 12.♗d5.

12.f5 White starts to play for the light squares.

12...♙c4

13.g4! This move is still theory! And it was even played on the highest level. White's idea is simple: by giving a pawn, he wants to create a quick play on the kingside and combine it with the weakness of the d5 square „bad“ Black bishop on e7. The position is very complex.

13... ♖xf1N This move is a novelty, but I think Black played it because he didn't know the position. [13... ♘xg4 is clearly one of the main moves here. 14. ♖g1 ♘xe3 15. ♔xe3 ♔b6 16. ♔g3 ♘f6 with a very unclear position.]

14. ♖hxf1 Black is following the plan he started with 13... ♖xf1.

14... ♖c4 15. ♔d3 A slightly strange-looking move. Why to give away the pawn when it was possible to keep it? [15. ♔g2! Simple and good. Never give away material if you don't really need to :). 15...b4 Probably, Jakovenko been a bit afraid of this move, but everything seems to work out very well for White. 16. ♘d5 ♘xd5 (16... ♘xe4 17. ♔e2! Important move. 17... ♖c6 18.g5! All the White pieces are in the attack and he has a very strong knight on d5. It's clearly too much play for just a pawn.) 17. ♖xd5 ♘f6 Maybe White stopped his calculation here, but it's one move too early. 18. ♘d2! protecting everything and attacking the rook on c4. White is doing clearly better.]

15... ♘xg4 Of course, Black takes the pawn. If there's no ♘xg4, White wanted to play g5.

16. ♖g1 following the usual ideas.

16... ♘xe3?! I think this move leads to big trouble. Black should have tried to play: [16... ♘df6! The only way to stay in the game. White now has a lot of moves, 17.h3, or 17. ♘d2 followed by ♘f1 and h3, or maybe just something crazy like 17. ♖a7! with the idea of h3 next. Everything is very playable and this is a nice position for future analysis.]

17. ♔xe3 Now Black is getting in trouble with the g7 pawn. How to solve it? To play g7-g6 looks very ugly, then the short castle will never be possible again...

17...h6 Black tries to cover the g-file with the bishop on g5. It's a try, but the pawn on d6 can become weak.

18. ♔e2 A preparation for ♖xg7. [On 18. ♖xg7 Black has prepared a little trap. 18... ♔g5 19. ♔d3 ♔f8! The White rook on g7 is falling, which leads to a very unclear position.]

18... ♔b6 A very difficult position for Black to play. White has a very simple plan and Black needs to be careful with

a lot of tactical motives. The move 18...♘b6 defends the pawn on d6 and, at the same time, Black acts against White's ♘d5 move.

19.♖d3! A very nice move by Jakovenko. White is not in a hurry to start action on the kingside — and why to be? Black can't solve his problems easily with the g7 pawn easily, and now in case of a move like ♕f6, White will always have ♖d1 with a very unpleasant attack on the d6 pawn.

19...0-0 This move is the start of a tactical battle which doesn't end in Black's favor. If Black can't castle short, his position with the king on e8 can't be promising. White is clearly dominating the game.

20.♖d3?! A logical move, but White is missing a nice tactic. [20.♘a5! After this, White's position is winning immediately. The key idea is that the Black rook doesn't have any good squares and White has a crushing move: De3, with a double attack on b6 and on h6. 20...♖c8 (A much better place for the rook would be on c7, but 20...♖c7 21.♕e3! and White is winning on the spot.) 21.♘b7 The knight is going to die, but this will give White a mating attack. 21...♖c7 22.♕h5 The queen is coming into the attack. 22...♗h7 23.♘xd6 ! and the game is over. By sacrificing the

knight on d6, White's attack becomes decisive. 23...♕xd6 24.♖xg7+ ♔xg7 25.♖g3+ ♔h7 26.♖h3 with mate.]

20...♕f6 The only way to defend g7.

21.♖g2 ♔h8 22.♖xg7 White managed to take the pawn and the holes around the Black king are very dangerous, but chess is a forced game and we are in a tactical position.

22...♕g5! And suddenly we see that White needs to give up an exchange. The game is sharp!

23.♖xg5 ♖xg5? This move loses by force. [The only way to continue would be 23...hxg5 24.h4! A small but nice tactic. 24...♖g8! leaving the Black king with the escape square f8. 25.hxg5 ♔g7 We can see that White is doing better, but there's still a lot to fight for in the position!]

24.♖f2 Attacking the knight on b6.

24...♖d8 25.♖e3 The pawn on h6 and the knight on b6 are under attack.

25...♔h7

26.f6! Black is losing material!

26...♖g8 Nothing else is left. Against 26...♖xf6, 27.♖xb6 and White has a simple winning position.

27. ♖xg8 ♔xg8 28. ♕g3+ The White queen is entering with a crucial effect.

28... ♖f8 29. ♕g7+ ♔e8 30. ♕g8+ ♔d7 31. ♕xf7+ ♔c8 Black is still an exchange up, but White is winning. The super-strong pawn on f6, plus the weakness of the Black king make it possible.

32. ♕a7! White quickly spots another weakness in Black's position. The a6 pawn! The Black position is falling apart.

32... ♖c7 Nothing helps anymore...

33. ♕xa6+ ♔d8 34. ♖xb5 And here comes the 3rd pawn!

34... ♕c6 35. ♖a5 I think this would be a great moment for resignation. What a nice position! All the light pieces are collected in 9 squares :).

35... ♕xe4 36. ♕xb6+ ♔d7 37. ♕xd6+ And this was too much even for Fernandez. An interesting game on the Najdorf, where of course, the 450 Elo points difference made Jakovenko a big favorite in any kind of positions!

1-0

(2) Edouard, Romain (2652) – Tkachiev, Vladislav (2644) [E47]

87th ch-FRA 2012 Pau FRA (9), 22.08.2012

[Balogh Csaba]

An instructive game with many mistakes.

1.d4 ♘f6 2.c4 e6 3. ♘c3 ♙b4 4.e3 The Rubinstein variation of the Nimzowitsch defense enjoys big popularity, after Gelfand successfully gained an advantage with it in 2 games in the WCC match against Anand. Black has plenty of different setups here, in this game he went for the Hübner variation...

4... 0-0 5. ♙d3 c5 Recently the main lines are considered to be the setups with d5. Here, Black has another idea in mind..

6. ♘f3 ♘c6 7. 0-0 ♙xc3 8. bxc3 d6 This is the initial position of the Hübner variation. Black would like to build up a safe wall in the center with e5 and then slowly create his counterplay against the c4 weakness, which is typical for the Nimzo Indian. White has the bishop pair and he should try to open the position to make it more efficient.

9.e4 e5 10.d5 ♞e7 After the position got closed, both sides start to organize their play on the kingside. White should definitely play f4 with the intention to push f5 followed by an attack with g4-g5. The exchange with exf4 ♟xf4 always favors White... Black must prevent this at any cost. His main resource is connected to ♞g6 and in the future the ♞e8 — followed by f5 — idea could yield the initiative for him...

11.♞h4! Well known motif! White prepares for the f4 push and gets ready to counter the ♞g6 move.

11...♔h8?! Black misses a tactical idea... [11...h6! is the right move, which was demonstrated in a very famous game... 12.f4 This move is already known as an inaccuracy...

12...♞g6!! This great move, which seemingly completely destroys Black's pawn structure gives a comfortable game for Black. White is forced to take on g6, otherwise Black takes twice on f4. 13.♞xg6 fxg6 14.fxe5 dxe5 15.♟e3 b6 This position arose in the Spassky-Fischer, Reykjavik 1972 game. It's instructive to follow how the game proceeded. 16.a4 a5 White has no chance to activate his light-squared bishop. 17.♞b1 ♟d7 18.♞b2 ♞b8 19.♞bf2 ♔e7 20.♟c2

After some defensive moves, Black overtakes the initiative. 20...g5! 21.♟d2 ♔e8! 22.♟e1 ♞g6 Black has clear targets on e4, a4 and c4, while White cannot improve his position. 23.♞d3 ♞h5 24.♞xf8+ ♞xf8 25.♞xf8+ ♟xf8 26.♟d1 ♞f4 and in this endgame where Black has a minimal advantage, Spassky horribly blundered and lost the game in one move: 27.♞c2?? ♟xa4 White resigned in view of 28.♞xa4 and ♞xe4.0-1 Spassky-Fischer, Reykjavik 1972.; 11...♞g6?! is met with 12.♞f5! This is a very important reaction, which deprives Black from any kind of counterplay. White can slowly continue with g3, ♞f3 and h4...]

12.g3?! White prepares for the f4 move, but he fails to make use of the mistake. [12.f4! would have pointed out the mistake of the previous move. 12...♞g6 and here comes the big difference, the idea of the 11...h6 move. (12...exf4 13.♟xf4 is not an option for Black.) 13.fxe5! ♞xe5 14.♟g5! This works now, as the legendary Svetozar Gligoric has demonstrated. He passed away last week. A strong attack follows: 14...h6 15.♟xf6 gxf6 16.♞d2 ♟g7 Gligoric-Keene, Hastings 1973 and now the easiest would have been to play 17.♞f2 +/- and doubling on the f-file.]

12...♟h3 13.♞e1 ♔d7?! Too slow. [Black should have prepared for the f5 move with 13...♞fg8 Suddenly avoiding the h6 move is a big advantage for Black, since there is no hole on g6 after f5... 14.f4 (14.g4? Trying to trap the bishop does not work because of 14...♞xd5! and h4 is hanging.) 14...♞g6! 15.♞f5 Black can take the advantage by playing (15.♞xg6+ fxg6 is an even better version for Black, since the h3 bishop is standing excellently.) 15...exf4 16.gxf4 ♟xf5! 17.exf5 ♞h4 followed by ♞f6 and ♞h6, winning the pawn.]

14.f3! Excellent preparation. White's general plan in such position is to play ♘g2 and then to execute the f4 break. Black must act quickly... [14.f4 would have been met again with 14...♘g6!]

14...♘fg8 The difference in comparison to the previous move is that White has

15.g4! Suddenly this anti-positional move traps the bishop on h3. Black must weaken his position in order to save it. White threatens to play ♔h1 and ♖g1–g3.

15...♘g6 White has a pleasant choice now. Both continuations lead to a promising position. [15...h5 is not good because of the simple 16.gxh5! and on 16...♘f6 17.f4! preserving the extra pawn. 17...♙g4 18.♙e2 +=; 15...♘f6! should have been played, with the idea of h5. 16.♔h1 h5 17.gxh5 ♘xh5 18.♖g1 Looks very dangerous for Black, but with a nice pawn sacrifice, he can obtain very good compensation on the f4 square. 18...♘g6! 19.♘xg6+ fxg6 20.♖xg6 ♖f6! with mutual chances. 21.♖g5 (21.♖xf6 gxg6 Opening the g-file is too risky for White.) 21...♙f7↗]

16.♘xg6+ [16.♘f5 was also good. 16...h5 (16...♘f4 was probably what Black was intending to play and White was afraid of, but after 17.♙xf4 exf4 18.♙d2! g6 both play-

ers probably missed (18...g5 19.e5! is very bad for Black.) 19.♙xf4! gxh5 20.exh5 +/- A temporary piece sacrifice, but Black can't save his bishop against ♔f2–g3 or ♙g3.) 17.gxh5 ♘6e7 18.♘h4 and we transposed to the 15...h5 line.]

16...fxg6 17.♔h1 h5 A sad necessity to save the bishop. [17...♙e7 18.♖g1 ♙h4 19.♖g3 also looks bad for Black.]

18.gxh5! The h3 bishop is safe now, but suddenly Black king is facing a strong attack.

18...♙f7 [18...gxh5 19.♖g1 will be similar to the game.]

19.♙e2 gxh5

20.♖g1! Black's position is much worse than it looks! He cannot prevent the upcoming plan with ♙e1–h4. The h5 pawn is the only reason for Black's bad position. If it was on h7, he could simple play ♘e7–g6 obtaining a small advantage.

20...♘f6 Black tries to consolidate his position, but the attack is rolling very fast. [20...♘e7 21.♙e1 ♘g6? does not work now, because of 22.♙g3!]

21.♙e1! ♘h7 22.♙h4 ♙d7 23.♙e3! Very well played! The idea is simple: ♖af1 and f4! Black has no good way to prevent it... The h5 pawn also restricts the mobility of the pieces.

23...g6 24.♖af1! ♔f6 The exchange of queens would solve all the problems. Of course, White is not going to accept it.

25.♔g3 ♖g8 26.h4! Excellent prophylactic move, depriving Black from his only counterplay. Black cannot prevent the f4 push anyway, so White pushes it when all his pieces have reached their ideal squares. [26.f4 h4! Black can decrease the pressure on the e5 pawn. Still, of course, White has the initiative after 27.♔g2 but the text move is much better.]

26...♔e7 [26...♖af8 27.f4; 26...♖ae8 27.f4]

27.f4! Black's position collapses now, but the mutual time trouble starts to affect the quality of the moves.

27...♖ae8 [27...exf4 28.♔xf4 ♔xe4+ 29.♔f3 ♔xc4 30.♔xd6 +- The loss of the d6 pawn means the end of the game. Black gets mated on the long diagonal.]

28.fxe5 dxe5 When I was watching this game live, I also came to the conclusion of the following move. [After 28...♔xe5 Black cannot save the d6 pawn. 29.♔d3! is the easiest, and ♔f4 is coming next. 29...♔xg3 30.♖xg3 +- Black can actually resign, because of ♔f4...]

29.♔h2!? A prophylactic move! The point is clear: White wants to play ♔h6, occupying the f-file and leaving the opponent without his potential counterplay that might appear after the direct ♔h6... [29.♔g5!? would have been in Karpov's style. 29...♔xg5 30.♔xg5 ♔xg5 31.♖xg5 ♖g7 32.♖f6 ♔h7 After reaching this position by force, Black has practically no other moves than passing with the rook on e8-e7. But how to break through with White?! 33.♔d1! ♖ee7 34.♔g2 ♖e8 35.♔f2 ♖ee7 36.♔e3 ♖e8 37.♔d2 ♖ee7 38.♔c1 ♖e8 39.♔b2 ♖ee7 40.♔a3 ♖e8 41.♔a4! ♔xa4 42.♔xa4 and White easily wins the endgame after ♔b5!; 29.♔h6 ♔f6!? was probably what White was afraid of. Black eases on the pressure by putting a piece on g4, and after 30.♔g5? ♔xe4 and the queen on g3 is hanging with check. This is the reason why White played 29.♔h2.]

29...b6 30.♔h6! ♔f6 does not work because of ♔g5, so White simply wants to double his rooks on the f-file. [30.♔g5 would lead to the same Karpovian win.]

30...♔a4 The last desperate attempt to create some counterplay.

31.♖f2 ♔c2 32.♖gf1! The attack is too strong, White does not need to worry about losing the e4 pawn.

32...♔xe4 [32...♔d7 trying to control the 7th rank with ♖e7 does not help. 33.♔g5! refreshing the ♖f7 threat. (33.♖f7 ♖e7) 33...♔g7 and here the easiest is 34.♔xh5! ♔xe4 (34...gxh5 35.♖xc2 +-) 35.♔g4 +- followed by ♔h6 and ♔e6.]

33.♖f7 ♔d8 White can choose between many winning moves.

34. ♖xh5 [The best and the nicest way to victory was 34. ♖xh7+!! ♗xh7 35. ♖f7+ ♗xh6 (35... ♗h8 36. ♖g5 +- wins.) 36. ♖e3+ g5 37. ♖xe4 Black can't prevent the threats! ♖d3 is coming in case of 37... ♖g7 38. ♖d3! ♗h7 is the threat! 38... ♖h8 (38... ♖xf7 39. ♖g6#) 39. ♖xe5! ♖xf7 40. hxc5+ ♖xc5 41. ♖xh8+ ♖h7 42. ♖xh7# But of course, finding this with around 2 minutes on the clock was not easy at all.]

34... ♖e7 [34... gxc5? 35. ♖g7+ +-]

35. ♖g4? This is the moment when White starts to go wrong... Usually, it's not easy to stop when a bad series starts... [35. ♖d1! was the hidden winning move. 35... ♖c7 and here comes out the difference that made the bishop retreat to d1 and not to e2. (35... ♖f5 does not work now, because of 36. R1xf5! gxf5 37. ♖g7+ +-) 36. ♖xe7 ♖xe7 37. ♖e1! +- wins.]

35... ♖f5! Suddenly the win is not obvious at all, but Edouard built up the winning advantage again with several precise moves...

36. ♖xe7 ♖xe7 37. ♖h3! White prepares to play ♖e1. [37. ♖e1 would be met with 37... ♖f6 and the g4 is hanging with check.]

37... ♖xh3 38. ♖xh3 g5! Tkachiev tries to use his best chance in the time trouble to confuse his opponent.

39. hxc5? This mistake could have spoiled the win. [39. ♖f5! was the winning move. 39... gxc4 40. ♖xe5+ ♖xe5 41. ♖xe5 +-]

39... ♖xc5+ 40. ♖xc5

40... ♖xc5? The last mistake of the time trouble belongs to Black... [40... ♖xc5 41. ♖xc5 ♖xc5 The big difference compared to the game is that the White king is cut along the g-file. This allows Black to hold the draw. His task is to take his king in front of the d-pawn (even if it costs a pawn), then his rook can start attacking the weak White pawns. 42. ♖h4 (42. ♖f7 ♖g8 43. ♖xa7 ♖f8 44. ♖a6 looks winning, but Black is just in time 44... ♖f5! 45. ♖xb6 ♖f4 Black collects the pawns.; The d-pawn can be easily stopped after 42. d6 ♖g8) 42... ♖g7 43. ♖f5 e4 44. ♖e5 ♖g8! 45. ♖xe4 ♖f7 The Black king is close enough, now he can start to activate his rook. Black should be able to hold the draw. 46. ♖g4 (46. d6? ♖f6 ♖d7 will be played next.) 46... ♖h7+ 47. ♖g3 ♖e7]

41. ♖h4+ ♖g8 [41... ♖g7? loses on the spot. 42. ♖f5! ♖g6 43. d6! ♖d8 44. ♖xc5+ +- and the d-pawn promotes.]

42. ♖f5! ♜g7 43. ♔xe7 ♜xe7 44. ♔g3! Now the White king has a safe path to the center, while the Black one is unable to get closer. Black collapses in a few moves, but he still could have put up some resistance.

44...e4 [44...♔h7 would have given some chance for survival. 45.♔f3 ♕h4 46.♔e2! After this subtle move, White is able to protect his pawns. 46...♔g7 (46...♕xc4? is untouchable. 47.d6 +-) 47.♕xe5 ♔f7 48.♔d3 +/- and White should be winning.]

45. ♔f2 ♖h7? This is equal to resignation. With the help of the king, the d-pawn easily promotes. [45... ♔g7 46. ♔e3 ♔g6 47. ♖f4 looks quite hopeless as well.]

46.♙e3 ♖h3+ 47.♙xe4 ♖xc3 48.d6 ♖xc4+ 49.♙d5 ♜d4+ 50.♙c6 c4 51.d7 Black resigned in view of ♜d5.

1-0

(3) Hertneck,G (2521) – Ganguly,S (2629) [D00]

Dresden Open, 23.08.2012

[Balogh Csaba]

2600+ GMs are rarely crushed in miniatures.

1.d4  **f6** **2.**  **g5** Ganguly is a known theoretician, one of the main member of Anand's team. His experienced opponent cleverly decided to avoid a long theoretical battle.

2...d5 3.e3 Not an ambitious line, but perfect to avoid preparation.

3...c6 Very solid reaction, I think the easiest one to achieve equality.

4. d3

4...h6!? How to punish the opponent is in Black's mind. He already wants to overtake the initiative. [4...♙g4 is the most common move. 5.♘e2 (5.f3 ♙h5) 5...♘bd7 6.0-0 (6.c4?? This incredible blunder happened on the highest level in a rapid game. 6...dxc4 7.♙xc4 ♔a5+ Black won a piece on move 7! Aronian-Radjabov, Monaco 2007.) 6...e5 Black is OK!]

5. ♖h4 [5. ♖xf6 exf6 is also fine for Black. He develops his pieces with ♖d6, f5 and ♘d7-f6.]

5... ♖b6 Very interesting play by Black. Such kind of ♖b6 or ♖b3 moves are quite unpleasant when the the c1 or c8 bishop leaves its initial position.

6.b3 ♘bd7 Another good move, Black prepares for the e5 push. [6...e5?! is a common trick in some openings, but it doesn't work well here. 7.dxe5 ♖b4+ This would be the point, but White gets a huge lead in development. 8.♘d2 ♖xh4 9.♘gf3 Black obtained the bishop pair, but his pawn structure starts to crumble. 9...♖g4 10.exf6 gxf6 11.0-0 and White opens the position with e4 or c4. 11...♖g8 12.g3↑]

7.♘f3 g5 Black wants to take the advantage of the bishop pair. This is absolutely correct, but he could have done it in a much better version, combining with great tactical play. [7...♘h5! Quite an unusual move, Black wants to play g5 now. White should try to prevent it by using the pin of the queen on d1. 8.♘fd2 (8.♘e5? doesn't work because of 8...♘xe5 9.♖xh5 (9.dxe5 ♖b4+) 9...♘xd3+)]

8...♘f4!! With this great move, Black overtakes the initiative. 9. ♖f1 is the best, but of course, such move can't be

good. (9.exf4? loses material after 9...♖xd4 10.♘a3 (10.0-0 ♖xa1 White has no chance to trap the queen.; 10.c3 ♖xd3) 10...g5! 11. ♖g3 gxf4 12. ♖h4 e6! This subtle move is the point! White can't do anything with his knight on a3.) 9...♘g6 10. ♖g3 e5↑]

8. ♖g3 ♘h5 Here White has an extra option to get compensation for losing the bishop pair.

9. ♖e5! ♘xe5 10.♘xe5 White got a very strong knight on e5 and he can think about a very dangerous attack in the near future with f4.

10...♘f6 11.0-0 ♘d7?! A logical move in order to get rid of the strong knight, using the fact that after 12.f4 gxf4, White can't take back ideally with the e-pawn. Everything seems to be great for Black, but he missed something... [11... ♖g7 should have been played. 12.♘d2 with mutual chances.]

12.f4! gxf4? Following the plan.

13.♘xf7!! A brutal blow, which was probably completely missed by Black. Or maybe he just blundered the upcoming silent move?!

13...♔xf7 14.♚h5+ ♔e6 [14...♔g8 loses after the forced line: 15.♚g6+ ♕g7 16.♚e6+ ♔f8 17.♕g6 ♘e5 18.♖xf4+ ♕f6 19.♖xf6+! is the best. (19.♚xe5 also wins.) 19...exf6 20.♚xf6+ ♔g8 21.♚xe5 +- with the threat of ♚e8-f7 mate or just the simple ♘c3 and ♖f1 is also decisive.]

15.c4!! With the idea to push c5, cutting the route of the king. [15.♚f5+ ♔d6 16.♚xf4+ looks winning, but 16...e5! 17.dxe5+ ♔c7! and Black saved his extra piece, because (17...♘xe5? 18.♚f6+ +-) 18.e6+? leads nowhere. 18...♕d6!]

15...♖g8? This is equal to resignation. Black had only one move to stay in the game... at least for a while. [15...♕g7 leads to the line above. The only difference is the pawn on c4, but it does not affect the evaluation. 16.♚g4+ ♔f7 17.♕g6+ ♔f8 18.♚e6 ♘e5 19.♖xf4+ ♕f6 20.♖xf6+ (20.♚xe5 +-) 20...exf6 21.♚xf6+ ♔g8 22.♚xe5 +- wins.; 15...♘f6 16.♕f5+ ♔d6 17.c5+ +- wins the queen with check!; 15...♔d6 16.c5+ ♘xc5 17.♚e5+ ♔d7 18.♚xh8 ♘xd3 19.♚xf8 +- is also hopeless for Black.; 15...♚b4! could set up resistance. White's win requires precise play. 16.c5! ♘xc5 17.♚e5+ (17.dxc5 ♚xc5 is not clear.) 17...♔d7 White must avoid a very hidden trap!

18.♕f5+! (The tempting 18.♚xh8? would fall into the trap 18...♘xd3 19.♚xf8 fxe3! 20.♚f5+ ♔c7 21.♚xd3 This is where most of the players stop their calculations before taking 18. ♚xh8, but the cold shower comes with 21...e2!! and Black suddenly has no problems. 22.♚xe2 ♚xd4+ ∞ A new game starts, with mutual chances.; 18.dxc5 ♖g8) 18...e6 19.♚xh8 White has a winning advantage, but Black can still hope to create some complications... 19...♕e7 20.♕g6 ♘e4 21.♕xe4 dxe4 22.exf4 +-]

16.♚f5+ ♔d6 17.♚xf4+ e5 18.c5+! Game over! The mate is more or less forced.

18...♘xc5 19.♚xe5+ ♔d7 20.♖f7+ ♔d8 21.♚f6+ ♔e8 22.♕g6! White had many other wins as well, but this is the shortest one.[Black resigned in view of 22.♕g6 ♖xg6 23.♖xf8+ ♔d7 24.♖f7+ ♔e8 25.♚e7#]

1-0

(4) Naiditsch,A (2712) – Dive,R (2337)

Olympiad 2012, 28.08.2012

[Arkadij Naiditsch]

First round of the Olympiad. Germany is playing New Zealand, and we are a big favorites to win the match. My opponent is an international Master, who lost a lot of ELO points during the last few years... which can be due to lack of chess activity. I could only find a few games of his in my database.

1.c4 I like to start with 1.c4 against opponents whose opening repertoires I'm not sure about.

1...c6 2.e4 e5 After this move White is already a bit better, but probably my opponent didn't want to play... [2...d5 3.exd5 cxd5 4.d4 would take us to my favorite „Panov”.]

3.♘f3 d6 4.d4 We are in a sort of King's Indian structure, but the move order is clearly a good one for White. Black still has the bishop on f8 and to put the bishop on g7 is not always possible.

4...♘d7 5.♙d3 5.♙d3 — a tricky move. Usually White develops his pieces with 5.♘c3 followed by ♙e2 but

I wanted to try a different idea, and a weaker opponent can sometimes become a good training-partner :).

5...♘gf6 The usual development, but I think it might be more interesting to play 5...g6 followed by ♙g7 creating pressure against the d4 pawn.

6.0–0 ♙e7 Black gets completely developed — but not in the best way...

7.♘c3 0–0 8.♖e1 A very usual way of developing pieces for White. The rook on e1 can be very useful in many lines.

8...♖e8 9.h3 Another useful move for White. Now Black will not have ♙g4 in the future.

9...♙f8?! I think this is already a small mistake. Now Black gets into a clearly worse position. [9...exd4 10.♘xd4 ♘c5 11.♙c2 Now we can see that putting the bishop on d3 was a useful move. 11...a5 and even though White is doing better, Black can still fight.]

10.d5! A good moment to close the center. The bishop on f8 is going to be now a bad piece, and all the White pieces are standing on the right places..

10...a6? This is a very serious mistake. [10...♘c5 11.♙c2 a5 Black needs to keep White from playing b4 at any cost.

12. ♖e3 and again we see how useful was ♖d3 instead of ♖e2 in the opening. The bishop is protecting the pawn on e4 which gives me the possibility of developing my other bishop to e3. Of course, White is doing clearly better here.]

11. ♖e3 The basic idea of White is to put the bishop on e3 and to play ♘d2, then to start playing on the queenside. In the usual King's Indian, Black would already push f5-f4-g5 so we can clearly see how much better I am in this game.

11... cxd5 Black continues a very wrong plan with b5...

12. cxd5 b5 13. b4! This is a dream for every White player in a closed position: to always have b4 against Black's — typical and strong. Black's position is already on the edge of being completely lost!

13... ♘b6 Nowhere else to go...

14. a4 [Another option was to play 14. ♘d2 ♖d7 stops White from playing a4. 15. ♖e2 and again White got a huge advantage, but with no direct play, that's why I thought 14. a4 looks simpler.]

14... ♘xa4 All the sacrifices on d5, of course, don't work.

15. ♘xa4 bxa4 16. ♖xa4 White's idea is very simple, to attack the pawn on a6 with all the army — it's going to be almost impossible to defend.

16... ♖d7 Black is using the fact that I can't take on a6 because my pawn on e4 is hanging, and bringing his bishop to b5 — but it doesn't help much.

17. ♖a5 ♖b8 18. ♖a1 [Also 18. ♖d2 ♖b5 19. ♖e2 forcing Black to take on d3 19... ♖xd3 20. ♖xd3 ♖b7 21. ♖ea1 would bring White a big advantage, but I wanted to bring my knight from f3 into the game, and the right square to do this is d2, which is not available now.]

18... ♖e7 [18... ♖xb4?? 19. ♖b1 and Black is losing a full queen.]

19. ♘d2 The easiest way to play for White. I continue putting my pieces in the most logical squares.

19... ♖b5 [Would not be much better to play 19... ♖d8 20. ♖xa6 I need to exchange the a6 pawn for the one on b4, which is usually not a good deal, but this time things are quite forced and I'm in time to create big troubles to my opponent. 20... ♖xa6 21. ♖xa6 ♖xb4 22. ♖b1! An easy but important move. The d6 pawn is very weak now. 22... ♖c3 23. ♖b3 and White is crushing on the queenside!]

20. ♖xb5 axb5 21. ♖c1 last free file. My next moves are simple, to play ♖c6 followed by ♖c3 and to force Black to take on a5. Then, after bxa5, get a passed a pawn and probably a winning position.

21...♘d7? A mistake in a bad position. [21...♔b7 22.♖c6 ♜eb8 23.♔c3 and Black could suffer a bit longer...]

22.♜xa8 The easiest winning move. I'm going into an endgame with a clear pawn up.

22...♔xa8 23.♔xa8 ♜xa8 24.♖c7 Forcing Black to go back to d8.

24...♖d8 25.♘b3!? I like this move, the right place for the White knight is on c6! [25.♖b7 Of course, I could have been greedy and just get the b5 pawn, it would be good as well, but I like when all my pieces are standing perfectly...]

25...♔f8 Black can't find a much better move.

26.♘a5 ♔e8 27.♘c6 Finally, my knight got from the starting g1 square to c6! What a beautiful place for a knight!

27...♖a8 28.♖b7 And now it's time to collect the b5 pawn. The game is over, but my opponent kept on playing for many more moves.

28...g6 It's too late to look for any counter-chances...

29.♖xb5 ♜a1+ [29...f5 30.♖a5 and Black can't even get an active rook.]

30.♔h2 f5 31.♜a5 The simplest win. I didn't want to calculate other moves in detail.

31...♖b1 32.♘xe7 Again, I chose the simplest solution which leads almost by force to a 2 pawns advantage for me — I thought it should be enough, at least for one game :).

32...♔xe7 33.♙g5+ ♔e8 34.♜a8+ ♔f7 35.♜d8 And I am winning the second pawn.

35...♘b6 36.♜xd6 ♜xb4 37.exf5 [37.f4 would have been the most beautiful solution, but at this moment of the game, I just wanted to win and go back to the hotel. I don't enjoy much playing totally winning endgames, and I was a bit surprised that my opponent didn't want to resign the game.]

37...gxf5 38.♜f6+ ♔g7 39.♜xf5 White is 2 pawns up, Black has no chance to get a draw, or to create any kind of counterplay...

39...♘d7 [39...♘xd5 40.♜xe5 is completely hopeless for Black.]

40.♙e7 ♜d4 41.d6 The winning plan was easy to me. I need to get the kingside pawns as far as possible,

then bring the rook to c7, which would force the Black king to stand on e6. Afterwards, I have to create another free pawn on the kingside. I did this very smoothly in the game.

41...h6 42.g4 I need to put my pawns on g4-h5.

42...♔g6 43.♔g2 ♖d3 44.h4 ♖d4 45.h5+ ♔g7 46.♔g3

The first stage of the plan is done, now comes the second part.

46...♖d3+ 47.♖f3 ♖d4 48.♖c3 I'm threatening to play ♖c7, so the Black king has no other choice than to go to e6.

48...♔f7 49.♖c7 ♔e6

50.g5! And my second passed h-pawn decides the game.

50...hxg5 51.h6 ♖d1 [Also loses 51...♖h4 52.♙xg5 ♖h1 53.♖c1 and one of the pawns is going to become a queen :).]

52.♔h2 I don't allow the Black rook to take the h-file.

52...e4 53.♖xd7 A very easy game for me this time, I almost had to make no calculations which is nice — saving energy for the next rounds. Also in this game, we saw

very clearly what Black should avoid in this kind of pawn structures!

1-0

Endgame section

(15) Fressinet,Laurent (2714)
— Bauer,Christian (2682) [E15]

87th ch-FRA 2012 Pau FRA (8), 21.08.2012

[Chess Evolution]

We are in the 8th round of the French Championship in a very important game for the medals. After a slightly strange game, Black managed to achieve this „almost winning” endgame. Let’s take a look at how good is Christian Bauer in a technical position.

51...h5 This move can’t be bad. The Black pawn structure is very good, the Queen on d4 is very powerful and the knight is clearly a better piece than the bishop. Everything is great, but how to win the position? An exchange of queens would lead most probably to an easy win, but how to take the ladies away from the board?

52.♔g1 With this move, White is showing that the next moves are going to be ♔g2-Kg1 — passive defense. Time for Black to show some play...

52...♞g8! A very nice move by Black. The knight has nothing else to do on f6, so Black starts a knight maneuver to the d6 square, and he is getting the option of playing f5-e4 in the future.

53.♔g2 ♞e7 Black brings the knight to d6. If Black would hurry with f5, it could lead to unnecessary complications. [53...f5?! The right idea, but executed too early. 54.♔a2! (To stand passively would be wrong because of 54.♔g1 ♞f6 55.♔g2 e4 followed by ♞g4-Ne5 and I think Black should be easily winning.) 54...♔d6 55.♞d5 and White is still fighting because of the relatively weak Black king.]

54.♞b7 White can’t do anything about it. Against 4. ♞e4, ♞c8 would come.

54...♞f5 55.♞d5 ♞d6 The knight is standing perfectly. Now Black wants to start moving the f-pawn forward.

56.♔a2 Fressinet can’t keep doing „nothing”, and he tries to bring the queen to a7.

56...♞e4! Another good move by Black. Now the exchange of light pieces is forced. White can’t allow Black to play ♞c3 followed by e4.

57. ♖xe4 ♜xe4+ 58. ♔g1 This queen endgame looks like a very easily winning one. Black got a super queen placed in the middle of the board, and a clear pawn up. Besides, the White king position can't be great and leads to the loss of another pawn...

58... ♜e1+ 59. ♔g2 ♜e4+ 60. ♔g1 Probably Black was in a slight time trouble, so he decided to repeat the moves once.

60... ♜d3 Black has to start moving the pawns, specially the e- one. So ♜d4 or ♜d3 are clearly the best moves.

61. ♜a4 e4 62. ♜b5 ♜d1+ 63. ♔h2 ♜d4 64. ♔g2 What to do next for Black? Can he win without playing e3? It doesn't seem so. In case of the f5 move, the Black king gets under White checks.

64... e3! Until here, Bauer is playing a great game.

65. fxe3 ♜xe3

66. ♜b2+ What is the next plan for Black?! Very often we see such a queen endgame without the c- pawns. It's a draw, but not an easy one. Black usually tries to bring the king to e2 and White gives a lot of checks hoping to get a perpetual. In our situation, the c-pawns are still on

the board, which makes a big difference. If Black could bring the king to d3, the game would be over immediately because White would lose the c-pawn. So, we can expect Black to go out with his king in the next moves.

66... ♜g8 67. ♔h2 White puts the king in a position with no checks.

67... ♜d3 [67... ♜e4 Before going with the king to the center, Black should try to put his queen to an optimal position, and this is usually in the middle of the board — e4 or d4. 68. ♜b3 ♜d4 followed by ♔g7-Kf6 with an easily winning queen endgame]

68. ♜b8+ ♔h7 69. ♜f4! A good move by White, who is not allowing Black to win the game „too easily“. Now the White queen took the best possible square on f4, which makes it a bit more complicated for Black.

69... ♜e2+ 70. ♔g1 ♜g7 71. ♔h1

71... ♜g4 Black has to start from the beginning. Getting the White queen out of f4 is the first step. Of course, all the pawn endgames are winning for Black.

72. ♜f1 ♜e4+ [72... ♜xg3?? 73. ♜xf7+ Draw...; 72... ♜d4! followed by a king walk should bring an easy victory to

Black, but it seems like Bauer, for some strange reason, tries to win without his king...]

73. ♔h2 ♕c2+ **74.** ♔g1 ♕f5 **75.** ♕e2 [The exchange of queens loses, of course! 75. ♕xf5 gxf5 76. ♔f2 ♔f6 77. ♔f3 ♔e5 78. ♔e3 f4+ 79. gxf4+ ♔f5 80. ♔f3 f6]

75... ♕g4 **76.** ♕e5+ ♔h7

77. ♕xc5?? White panicked! But only because... Black made no improvements at all in the last 15 moves. [77. ♕c3 and we are back in a position which we already saw. 77... ♕d4+?? would of course lose for Black. 78. ♕xd4 cxd4 79. c5 and White makes a queen...]

77... ♕xg3+ **78.** ♔f1 ♕xh4 This position is very easily winning. Probably White was hoping for the c-pawn, but even an exchange of the c-pawn for the Black h-pawn would lead to a lost endgame...

79. ♕d5 ♕f4+! Black is putting his queen in the best possible position!

80. ♔g1 h4 And here comes the Black pawn...

81. c5 ♔g7 **82.** c6 h3 **83.** ♔h1

83...g5! The second Black pawn decides the game immediately.

84. ♔g1 [It doesn't help to play 84. c7 ♕c1+ 85. ♔h2 ♕xc7+ and Black takes the c-pawn with check.]

84...g4 85. c7 g3 We saw a very nice play by Bauer in the endgame. We can learn a lot from it!

0-1

(16) Meier,G (2667) — Prohaszka,P (2562)

Dresden Open, 25.08.2012

[Chess Evolution]

White has a really promising endgame with the two bishops — probably in Karpov's hands we could say it is winning — , but Black had a concrete way to exchange the dark-squared bishops and achieve a drawish endgame. After he spoiled this chance, White nicely converted his advantage.

32...♖b4! [32...♗f6 with the idea of exchanging the bishops with ♗d4 fails to 33.♗e4! ♖b4 34.a3 White preserves both bishops.]

33.♗c4 ♗f6! Very well played! Even in such an „easy“ endgame, precise calculation is very important. White is forced to help his opponent. [33...♗c5 would achieve the main goal, but it's still bad, since it worsens the pawn structure. 34.♗xc5 bxc5 35.♖f2 ♖f8 36.♖e3 White is probably winning here. The threat is to play ♖e4, followed by a3 and ♖d5. 36...f5 is the only move to stop White's plan, but he still has access to the c5 weakness... (36...♖e7 37.♖e4 f6 38.a3 +/- ♖d5 is coming next.) 37.a3

♘c6 38.♗d5 Clearing the way for the king to c4. The bishop simply dominates the knight. 38...♘d4 (38...♘e7 39.♗e6 +/- ♖d3-c4 is coming.; After 38...♘b8 39.♖d3 ♖e7 40.♖c4 ♖d6 White suddenly wins the other weakness by 41.♗g8! h6 42.♗h7 +/-) 39.♖d3 ♖e7 40.♖c4 ♖d6 41.b4 +/- Black is in trouble.]

34.a3 A sad necessity by White, who could not play 34.b3 immediately. [34.♗e1 is met with 34...♘c2!]

34...♘c6 35.b3 We reached the first critical position, where Black successfully found a subtle move!

35...♗b2!! Black provokes the a4 push before exchanging the bishops. It's very difficult to feel that the b4 square has such a big importance in this endgame. [It's interesting to see that even after exchanging the bishops, White retains his initiative due to the dominance of the bishop over the knight. The chess principle is right again, that in case of pawns on both flanks, the bishop is stronger than the knight. We must add that the White king is closer to reach the important squares in the center. 35...♗d4 36.♖g2 with the idea of saving the bishop with ♗e1– 36...♗xf2 37.♖xf2 ♖f8 38.♖e3 ♖e7 (38...f5 can't really stop the invasion of the king. 39.♗d5 ♘b8 40.♖d4

♔e5 will be played next.) 39.♔e4 and here I have very bad feelings for the position. Maybe he could save the game with some amazing plan, but I don't see it. He must allow ♕d5, because ♕d6 would drop the f7 pawn. 39...f6 (39...g6 40.♙b5 ♘d8 (The pawn endgame is easily winning for White after 40...♕d6 41.♙xc6 ♕xc6 42.♔e5 +-) 41.♕d5 Black will get in zugzwang.) 40.♙g8 h6 41.♕d5 with good winning chances.]

36.a4 White had nothing better.

36...♙c3? But this is very strange! Why didn't Black continue his plan and played ♙d4? Even if it's losing, he must go for that, since suffering against the two bishops is pretty much hopeless. [36...♙d4! Let's see the difference with the previous line. 37.♕g2 ♙xf2 38.♕xf2 ♕f8 39.♕e3 ♕e7 40.♕e4 and here ♕d5 is not a threat, because of ♘b4. Black can play for instance 40...♘b4 followed by f6 and ♕d6. The endgame may continue with 41.g4 f6 This is not necessary, but it looks the most logical to me 42.♙g8 h6 43.h4 ♕f8 44.♙c4 ♕e7 and White cannot invade on the queenside, while on the other flank, Black can easily parry the threats... 45.♙f5 ♘c6 46.♕g6 ♕f8 The game should end in draw.]

37.♕g2! No more chances to exchange the bishops.

37...♙d4 Too late!

38.♙e1! I believe this endgame is objectively lost. Let's see how the game proceeds.

38...♙c5 39.♕f3 ♕f8 [39...♙b4 40.♙f2 ♙c5 doesn't work. The c5 pawn becomes too weak. 41.♙xc5 bxc5 42.♕e4 ♘b4 43.♕e5! +- and ♕d6 next.]

40.♕e4 ♕e7 41.g4! It's time to improve the pawn structure on the kingside. Black can only watch...

41...f6 42.♙c3 ♙b4 43.♙b2!

43...♘d8 [I tried another kind of defense with 43...♘b8 but it slowly fails. 44.♕d5 ♙d6 45.♙c1 ♙b4 46.h4 Black can only pass with the bishop. ♘d7 is always met with ♕c6. 46...♙d6 47.♙d2 ♙c5 48.h5 ♙d6 White has strengthened his position to the maximum, it's time to finish the game. 49.♙d3! h6 50.g5! +- White wins. Black cannot parry the simple threat of taking on h6, followed by f5!]

44.♙g8! Good technique! Creating a hole on g6, where the White king can penetrate soon.

44...h6 45.h4 [45.♕f5! would have allowed even less counterplay for Black. 45...♕f8 46.♙d5 ♘f7 (46...♙d6 47.h4! +- with the idea of pushing to g5, and after the exchanges, Black cannot prevent ♕g6 and g7 falls.) 47.♕g6 ♘h8+ 48.♕h7 ♘f7 49.h4! with the same idea again. White will play g5 next. Both ♙d2 and ♙e1 lose to ♙a3!]

45...♖b7 [45...♖f7 was probably more resistant, but still quite hopeless. 46.h5 (46.♔f5!? is also possible. 46...♔f8 47.♙h7) 46...♖d6+ 47.♔d5

47...♔d2! Black has more chances to survive, if he blocks one flank. 48.♙a3! (48.f5?! would allow Black's idea. 48...♔d7 preventing ♔c6. 49.♙e6+ ♔c7 50.♙a3 ♙f4 It seems like Black successfully built a fortress. He starts passing with the bishop, and ♙g8, with the idea of invading with ♔e6 is always met with ♔d7.) 48...♙xf4 49.♔c6 The White king has access to the queenside pawns. 49...♙e5 50.♔d5 ♙g3 51.♔c7 ♙f4 52.♔b8 ♔d7 53.♔xa7 ♔c7 54.♙b4 White simply wants to create a passer on the queenside. 54...♙e3 55.♙e1! with the idea of playing ♙g3, and on ♙f4, ♙f2 pressing the b6 pawn. 55...b5+ 56.♔a8 bxa4 57.bxa4 +/- The a-pawn should bring the victory for White.]

46.♔f5 ♖c5 [46...♙e1 with the same idea as before. Trying to block the kingside was a better practical chance, but 47.♙a3+ ♖c5 48.h5 ♔d2 49.a5! A small tactical trick to improve the pawn structure. 49...♙e3 50.a6! ♔e8 51.♙c4 and b4 is coming next. Black cannot stand the pressure.]

47.g5! The final phase of the game, collecting the full point.

47...hxcg5 48.fxcg5 ♖d3 [48...fxg5 loses a pawn. 49.hxcg5 ♔f8 50.♙c4 +- ♔g6 is next.]

49.♙d4 ♖e5 Black tries to escape to an opposite colored bishop endgame, but of course. White is not obliged to take the knight.

50.gxf6+ gxf6 51.h5 [51.♔d5! was more circumspect, and h5 only in the next move!]

51...♔d2 [51...♔f8! gave some practical chance. 52.♔d5 ♔g7 53.♙e3 ♖f7 would have at least stopped the pawn, but the upcoming endgame instructively wins for White.

54.♙xf7! ♔xf7 55.♔d4 ♙e7 56.♙c3! Black is in zugzwang! 56...a6

a) 56...♔d8 loses easily to 57.h6! ♙e7 58.h7 ♔g7 59.h8 ♔+ ♔xh8 60.♙xf6+ ♙xf6 61.♔xf6 +-;

b) 56...♔g7 allows 57.♔e6! ♙c5 (57...♔d8 58.♔d7 +- traps the bishop.) 58.♙xf6+ ♔h6 59.♔d5 ♔xh5 60.♔d4! The Black king is too far, White collect the pawns. 60...♙b4 61.♔c6 +-;

57. ♖d4 b5 58.a5! After fixing the a6 weakness, the White king can go to collect it... 58...b4 (58... ♖b4 59. ♖xf6 ♖xa5 60.h6! ♖g8 61.♖g6 +-) 59.h6 ♖f8 60.h7 ♖g7 61.h8 ♔+ ♖xh8 62. ♖xf6+ ♖h7 63.♖e6 Black cannot resist anymore. 63...♖g6 64. ♖d8 +-]

52. ♖d5 The game is over now. White nicely finishes the game.

52...♖d6 53. ♖c4 ♖e7 54. ♖b2! ♖a3 is threatened and on ♖b4, the h-pawn runs.

54...♖d6 55. ♖a3+ ♖c6 56. ♖e2 ♖d5 57. ♖e7 1-0

Clash of the Titans

(17) Toran Albero,Roman — Tal,Mihail [A21]

EU-cht (Men) 02nd Oberhausen (1.2), 21.06.1961

[Balogh Csaba]

In this game, Tal plays a sharp and risky setup against the English opening. White has different ways to get an advantage, but on the other hand, as the game shows, a few inaccuracies are enough to pass the initiative to Black.

1.c4 e5 2.♘c3 d6 3.g3 f5 This aggressive move is a clear sign that Black wants to win this game.

4.d4 I like this move a lot. It leads to an open position, where White's chances are preferable. [4.♙g2 is also possible. 4...♘f6 5.d3 g6 6.e3 ♙g7 7.♘ge2 with a different type of position.]

4...e4 I believe this is a mistake, because Black is unable to hold his pawn on e4. It's probably better to play 4...♘f6 or 4...♙e7 first.

5.f3 Sooner or later, White must undermine this pawn. Why not to do it immediately?! [Kramnik showed another promising way to play: 5.♘h3 ♘f6 6.♙g2 White finishes the development before playing f3. The only thing he must take care of is that if Black plays c6, with the idea of consolidating his central pawn with d5, White must always play d5 himself. 6...♙e7 7.0-0 0-0]

8.d5! Very nice and logical, creating problems around the e6 hole. 8...c5 9.♘f4 ♘a6 10.f3! exf3 11.exf3 ♘c7 12.♙e1 White got a huge advantage. The best that Black can do is to retreat the f5 pawn to f7. Now he must suffer. Black has managed to win this, but it only happened because it was a blitz game. Kramnik-Svidler, Moscow 2008.]

5...♘f6 [5...exf3 will transpose to the game.]

6.♙g2 Forcing Black to give up his main triumph in the center. [6.fxe4 could only be advisable if White would win the pawn. Black is ready to protect it now, 6...♘xe4! (Not 6...fxe4 because of 7.♙g2 ♙e7 8.♙g5 and the e4 pawn falls.) 7.♘xe4 fxe4 8.♙g2 d5! looks really suspicious, but Black is just in time to hold everything together. 9.cxd5 ♙b4+! 10.♙d2 ♙xd2+ 11.♙xd2 ♙xd5 12.e3 ♙g4! This is the key move! Otherwise, after ♘e2-c3, White gets a big advantage. 13.♘e2 ♙xe2 14.♙xe2 0-0 The plan is ♘d7-f6, with mutual chances.]

6...exf3 7.♘xf3 With this recapture, White wants to use his big lead in development. [7.exf3!? is also possible, with the idea of obtaining the same position that Kramnik had in his blitz game. 7...♙e7 8.♘h3 0-0 9.0-0 followed by ♘f4 and d5.]

7...g6 8.0-0 ♖g7

9.e4 The most tempting move, but an inaccuracy, after which Black solves all his problems. [The idea itself was correct, but White should have prepared it with 9. ♖g5! 0-0 (9...h6 10. ♖xf6 and e4 is next.) 10.e4! Black is forced to unpin... 10...h6 but this seriously weakens the g6 square, and White is ready to make use of it with the ♘h4 resource... 11. ♖xf6 ♙xf6 (11... ♖xf6 is met with 12.exf5 ♖xf5 13. ♘h4! with a big advantage, because 13... ♖xh4 loses to 14. ♖xb7 +/-) 12.exf5 ♖xf5 13. ♘d5 ♙d8 14. ♘h4! White not only takes the light-squared bishop, but also destroys Black's pawn structure. 14... ♘c6 Black's only chance to create some counterplay against the d4 pawn. 15. ♘xf5 ♖xf5 Black wins the pawn, but White gets more than enough compensation for it. (15...gxf5 16. ♖f4 +/-) 16. ♙d3! ♘xd4 17. ♘f4 +/- followed by ♖e4 with a big attack.]

9...fxe4 10. ♘g5 0-0 11. ♘gxe4 After this, the initiative passes to Black. [11. ♘cxe4 was more dangerous, but here Black is able to solve his problems with 11... ♘c6! 12. ♘xf6+ ♖xf6 and 13. ♖d5+ looks only scary, but 13... ♖g7 is safe.]

11... ♘xe4 12. ♖xf8+ ♙xf8 13. ♘xe4 ♘c6! White cannot continue playing actively, while Black's undeveloped kingside is coming out with tempo.

14. ♖e3! White must hold his d4 pawn at any cost. Of course, it would have been much better to do it with a c3 move, but it was not possible. [14.d5? closes the diagonal of the g2 bishop and allows Black to occupy nice squares with his pieces as well. 14... ♘e5 c4 is under attack and ♖g4, ♖e8 are coming.]

14... ♖f5 15. ♙d2 ♖e8 16. ♘g5! This allows a very nice tactical motif — of course, Tal did not miss it. Still, this is the best chance. [16. ♘f2 would be met with 16... ♙e7! and White is in trouble, since ♖e1 drops the d4 pawn.]

16... ♖xe3! The game is not over, it's just starting! [16...h6 17. ♘f3 would stabilize the d4 pawn.]

17. ♖d5+ ♙h8 18. ♘f7+

18... ♙xf7!! Tal sacrifices his queen and gets two pieces and a pawn for it, but the activity of his pieces give him a risk-less compensation. Objectively the game remains drawn, but it's much more difficult to find the correct moves with White. [18... ♖g8 White doesn't have more than draw.]

19. ♖xf7 ♖d3! A very tricky move that gives White a wide range of choices. Most of the moves are bad. You must

always give the opportunity to your opponentstogowrong! [Black could have forced a draw with 19...♙xd4 20.♖g2 ♙e4+ 21.♖h3 ♙f5+ 22.♖g2 ♙e4+ = with a perpetual check.]

20. ♔e2 The most logical move, but it objectively leads to a bad endgame... [20. ♔e1! was the right move, but I believe that for a human it's only possible to find this move with luck. 20... ♙xd4+ 21.♖g2 ♘e5! This is Black's main resource in all lines, the reason why Tal continued to play on instead of agreeing to draw. The knight joins the attack with tempo and the bishop has no good square to go... 22. ♙d5 c6 23. ♖d1! Black gets 3 pieces for the queen, with a seemingly big advantage, but somehow White gets very good counterplay with his single queen... (23. ♙e4? loses to 23... ♖e3) 23... cxd5 (23... ♖e3 is also possible, but it leads to a draw after a fantastic line. 24. ♔f1 ♙b6

25. ♙e6! Black seems to get in trouble, but... 25... ♙e4+ 26.♖h3 ♖f3 27. ♔e2 and now 27... ♖f2!! 28. ♔xe4 ♘f3! with a double threat of ♘g5 and ♖h2. White is forced to sacrifice his queen. 29. ♔xf3 ♖xf3 30. ♖xd6 =) 24. ♖xd3 ♙xd3 25. ♔b4 ♙e4+ 26.♖f1 White has good chances to save the game after taking either on d6 or on b7; 20. ♔f4? los-

es to 20... ♙xd4+ 21.♖h1 (21.♖g2 ♙e3 22. ♔h4 with the threat of ♖f6, but it suddenly leads a loss of the queen. 22... ♖g7! 23. ♙d5 ♖d4 Black wins.) 21... ♙e3! and White must move into a fork to control the e4 square. 22. ♔f3 (22. ♔h4 g5) 22... ♘e5!; 20. ♔g2? is refuted by 20... ♙xd4+ 21.♖h1 ♘e5! and White should give up his bishop, because 22. ♙d5 loses to the nice 22...c6 23. ♙e4 ♖d2! Black ends up with a winning material advantage.]

20... ♙xd4+ 21.♖g2 ♘e5!

22. ♖d1! [22. ♙d5 is also possible, but it leads to a worse position after 22... ♙g4! (22...c6 is similar to the 20. ♔e1 line... 23. ♖d1! cxd5 24. ♖xd3 ♙xd3 25. ♔d2! and the queens creates good counterplay for a draw. The problem is that 25...dxc4? doesn't work because of 26. ♔f4! and suddenly White wins.) 23. ♔f1 (23. ♔c2 ♖e3! It's not easy to parry the ♖e2 threat.) 23... ♖d2+ 24.♖h1 ♖f2 25. ♔e1 ♖xb2 with a very unpleasant position for White.]

22... ♖e3! We are in the critical moment of the game. The queen has 3 squares to go, but only one of them is good.

23. ♔f1? White miscalculates and fails... [23. ♔d2! was the only move 23... ♙e4+ 24.♖h3 ♘f3 25. ♔f2 White survives by miracle. 25... ♖d3!? A nice attempt to win. (25... ♘g5+

It's worth it to try to repeat the moves once. 26.♔h4! (26.♔g4? loses to 26...♙f3+ 27.♔xg5 ♖e5+ 28.♔f4 ♜f5#) 26...♘f3+ 27.♔h3) 26.♞e2 ♜xd1 27.♞xd1 Even without the rook, the minor pieces create nice threats. 27...♘g1+! 28.♔h4! Black has nothing better than (28.♔g4? Trying to escape into an opposite-colored bishop endgame after ♙f3, but Black has a much better continuation. 28...♙f5+! 29.♔f4 and now (29.♔g5 ♘h3+ 30.♔h6 ♙e3#) 29...♘h3+! 30.♔f3 ♙g4+! 31.♔xg4 ♘f2+ wins.) 28...♙f6+ 29.♔g4 ♙f3+ 30.♞xf3 ♘xf3 31.♔xf3 ♙xb2 As we know, in opposite-colored bishop endgames the defensive side has good chances to hold even with a big material disadvantage. I believe that White can successfully build up a fortress here... 32.♙e6 ♔g7 33.♙c8 b6 34.♙e4 ♔f6 White controls the light squares in order to avoid the Black king to access the pawns. White should be able to hold, but of course, there are still many moves ahead of him to achieve success.; 23.♞f2? loses in a fantastic line. 23...♘g4! 24.♞d2 (24.♞f1 ♜e7! It's easy to miss this retreat with both sides. It frees the e3 square for the knight.) 24...♙e4+ 25.♔h3

25...♜d3!! 26.♔xg4 (26.♞xd3 ♘f2+) 26...♙f5+! 27.♔f4 and here (27.♔h4 ♜xd2 28.♜xd2 ♙f6#) 27...♙e5+! 28.♔g5

♔g7!! and Black wins in both lines. 29.♞xd3 (29.♙xg6 ♜xd2 30.♜xd2 hxg6) 29...h6+ 30.♔h4 ♙f6#]

23...♙e4+! 24.♔h3 ♜f3! Black will end up with a big material advantage soon.

25.♞e2 [25.♞e1 does not change anything. 25...♙f5+ 26.♔g2 ♜f2+ 27.♔h1 ♘f3 and White is forced to give up his queen.]

25...♙f5+ [White resigned in view of 25...♙f5+ 26.♔g2 ♜f2+ 27.♞xf2 ♙xf2 28.♔xf2 ♘xf7]

0-1

Editorial Preface

Chess Olympiad, this is what it's all about now! The best teams of all around the world fighting for their goals.

After the 8th round, it seems like nothing is going to stop the Russian team from taking the gold medal. With an overwhelming team and 2 killing boards (2nd Grischuk and 3rd Karjakin), the Russian players seem to be simply unstoppable! It would be a great achievement for Russia since it's been quite a long time since they are very unlucky at team events. The fight seems to be much tougher for the second place. 4 teams are sharing it with 13 Points.

In the 8th round it came to a collusion between Hungary and Germany. Balogh Csaba didn't get more than a draw against Jan Gustafsson and I managed to win my game against Peter Leko, so the overall result was 2,5–1,5. These are sad news for the 4th seeded team of Hungary, who spoiled a great tournament in just 2 rounds by not winning against Philippines and losing against Germany.

In the female section, everything is still open. Probably it will be a fight between the Russian and the Chinese girls for the gold medals.

Side events of the Olympiad: This time the famous Bermuda party was clearly not a success. Everything started at around 22h and the party was over at around 1.30am. Somehow, the organizers in Turkey don't really care at all about the chess players. A very disappointing thing is of course that we have no water or coffee in the playing hall, and not even toilets! The organizers decided that "Dixie toilets" should be enough, well...

Still 3 rounds to go at the Olympiad and many things could happen! As usual, we wish You a lot of fun with the CEWN Nr28, which includes fresh games from the Olympiad.

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Kramnik,V (2797) – Aronian,L (2816) [D10]

Olympiad, 03.09.2012

[Csaba Balogh]

The game between the current World Nr.2 and Nr.3. I must say that Aronian clearly had a day off today, but it doesn't take anything from Kramnik's glory.

1.d4 d5 2.c4 c6 3.♘c3 ♘f6 Here comes the first surprise of the game...

4.cxd5 White goes for the exchange Slav, which is generally considered to be an opportunity to make a draw, however, as we'll see this is a dangerous weapon in Kramnik's hands.

4...cxd5 5.♙f4 ♘c6 6.e3 a6 [6...♙f5 is the other main move.]

7.♙d3

7...g6? This is a real shocking move by a player of Aronian's level. He probably wanted to avoid Kramnik's preparation, but the bishop has nothing to do on g7 in this opening.

Black has no chance to open the long diagonal and he can't put pressure on the d4 pawn. The best he could do is to transfer it back to f8-d6, exchanging the strong White bishop... [7...♙g4 8.f3 (8.♘ge2 e6) 8...♙h5 is the start of the lines. Kramnik definitely had some deep idea in mind, but anyway Aronian should have gone for this.]

8.h3 A prophylactic move against ♙g4 which also frees the h2 square for the bishop against ♘h5 in the future.

8...♙f5 A logical move to get rid of the bishop, but it could have had some direct problems. However, Kramnik prefers to lead the game to calm waters... [8...♙g7 9.♘f3 0-0 10.0-0+= White is better because of his superior dark-squared bishop. He's going to initiate his play on the queenside.]

9.♘f3 [9.♙xf5! This kind of move is always questionable, since it helps Black to bring a pawn towards the center, but White has concrete reasons to take it. 9...gxf5

10.g4! This is the point! Suddenly Black's position is really unpleasant 10...♙d7 (10...fxg4 11.hxg4+= The exchanges on the kingside clearly favor White. He wants to push g5, followed by developing with ♘f3.) 11.♙e5! Without this move, the whole idea would be wrong, but now Black

is in trouble. White wants to destroy the pawn structure with gxf6 , and on $11... \text{g7}$ loses a piece after ($11... \text{xe5}$ $12.\text{dxe5}$ e4 $13.\text{xd5}+/-$ with a pawn up.) $12.\text{g5}$ xe5 $13.\text{gxf6}!+/-$

9... xd3 10. xd3 $\text{g7}?!$ This is another strange decision by Aronian. [Black should have played $10... \text{e6}$ followed by exchanging the other bishops. Black is very close to equalizing. $11.0-0$ d6 $12.\text{h6}$ f8 $13.\text{g5}$ e7 The Black bishop always follows its counterpart.]

11.0-0 0-0 12. fc1 e6 13. a4 White plays in typical exchange-Slav fashion. He tries to make use of the weakened dark squares on the queenside.

13... e4 14. c5 [$14.\text{d2}$ was principled as well, to exchange the strong knight, but Kramnik did not want to allow any kind of counterplay. Aronian definitely wanted to react with $14... \text{f5}!$ on ($14... \text{xd2}$ $15.\text{xd2}+=$) $15.\text{f3}$ xd2 $16.\text{xd2}$ $\text{g5}!$ $17.\text{h2}$ f4 Black gets counterplay against the d4 pawn.; $14.\text{b3}!?$ was quite unpleasant as well.]

14... xc5 15. xc5 White secures the control over the only open file.

15... d7 [$15... \text{b6}$ was another defending option, but White keeps an edge here as well. $16.\text{c2}$ fc8 $17.\text{c1}$ f8 $18.\text{c3}$ with the idea of playing e5 next. Black cannot fight for the c-file with $18... \text{b4}$ because of $19.\text{b3}!$ a5 $20.\text{c3c2}+=$ White is better, the b7 pawn is also vulnerable.]

16. ac1 fc8 17. $\text{a3}!$ Depriving Black from any kind of counterplay connected to f8 and b4 , and the plan with b4-b5 might increase his advantage in the future as well.

17... f8 18. 5c2 f6 [$18... \text{d6}$ does not solve Black's problems either. $19.\text{xd6}$ xd6 $20.\text{b3}$ White has

a big pressure on the queenside. $20... \text{c7}$ $21.\text{b6}!$ ac8 $22.\text{e5}+=$]

19. $\text{d2}!$ Another excellent positional move. The knight has nothing to do on e5 anymore, Kramnik takes it to the c5 square.

19... d6 20. xd6 xd6 21. b3 c7 [$21... \text{b6}$ would be a serious weakening of the queenside. The knight loses its stability on the c6 square and the a6 pawn becomes very weak! $22.\text{d2}!$ After the knight provoked the weakness, it gives a freeway for the b-pawn. $22... \text{g7}$ $23.\text{b4}$ White is much better.]

22. $\text{a5}!$ With the threat of xb7 and on

22... ac8 Black is close to a draw, but...

23. ♖xb7!! Kramnik had a really good day! The pins on the c-file and the 6th rank allow White to gain a decisive advantage.

23... ♖xb7 24. ♔xa6 ♖bc7 25.b4! ♔d7 Only move, but it doesn't help...

26. ♔b6! This is the most accurate move, Black cannot prevent b5! [26.b5 was also good enough 26... ♖e7 (On 26... ♖d8 the point is 27. ♔xc8!! ♖xc8 (27... ♔xc8 28. ♖xc7 ♔b8 29. ♖c8 wins.) 28. ♖xc8+- The rooks and the b-pawn are dominating.) 27. ♖xc7 ♖xc7 28. ♖xc7 ♔xc7 29. ♔xe6+ White already has three pawns for the piece, but his pawns are also rolling. Black cannot create counterplay. 29... ♔f8 (29... ♔g7 30.a4+-) 30. ♔xf6+ ♔e8 31.a4+-]

26... ♔e8 Aronian has a fantastic creativity, but now it doesn't take him out of trouble... Other moves were hopeless as well. [26... ♔f7 27.b5 ♖b7 Now the best is 28. ♔xc6! ♔xc6 (28... ♖xc6 29.bxc6+-) 29. ♖xc6 ♖xc6 30.bxc6+- is easily winning.; 26... ♖b7 is refuted by 27. ♖xc6! ♖xb6 28. ♖xc8+ ♔f7 29. ♖1c7+-; 26... ♖b8 doesn't help either. 27. ♔xb8+! ♖xb8 28. ♖xc7 ♔b5 (28... ♔d6 29.b5+- The knight is trapped. White simply wants to play ♖b7 with a mate on the back-rank.) 29. ♖1c5 ♔b6 30. ♖e7+-]

27.b5! Kramnik calculates precisely!

27... ♖xd4 28. ♖xc7 ♖e2+ 29. ♔h1! It's important not to allow any checks.

29... ♖xc1 This was Aronian's idea, but...

30. ♖xc8 ♔xc8 31. ♔c6! The b-pawn promotes soon.

31... ♔d8 [31... ♔xc6 32.bxc6+-]

32.b6! White does not even need to take back the knight. Black cannot stop the pawn and it also promotes with check. [32. ♔xc1 was also good, of course.]

32... ♔f7 33. ♔c7+ [33.b7+- was also good.]

33... ♔e8 34. ♔a7! d4 35.b7 Nice game by Kramnik!

1-0

(2) Aronian, Levon (2816) – Ivanchuk, Vassily (2769) [E15]

40th Olympiad Open Istanbul TUR, 01.09.2012

[Csaba Balogh]

We are facing the decisive encounter between two potential medalists, Armenia and Ukraine.

1. ♘f3 The big advantage of the 1.d4 players is that they can confuse their opponent's preparation by starting with 1.c4 or 1.♘f3. A lot of times these first moves lead the same positions, just with a different move order. With 1.e4 there are no such transpositions.

1... ♘f6 2.c4 e6 3.d4 b6 We ended up in the Queen's Indian defense and Aronian played his favorite:

4.g3 ♘a6 5.b3 ♘b4+ 6. ♘d2 ♘e7 Ivanchuk goes for the old main line. Black has lured the bishop to d2, which is not a great place. It should normally develop to the long diagonal, but now the move ♘c3 would occupy the b1 knight's ideal square. [6... ♘xd2+ 7. ♔xd2 c6 is a modern approach for Black. We have analyzed the game Aronian-Grischuk, Moscow 2012, in the CEWN Nr.17.]

7. ♘c3 The critical line, and it's still not clear how to play with Black to equalize... He has a wide range of setups, but the solution is not obvious yet. [The most common move 7. ♘g2 is considered to be harmless nowadays after some very long theoretical lines. 7...c6 ...]

7... ♘b7 Black stops the e4 plan, which was the main idea of the previous move. [7...c6; 7...d5 and; 7...0-0 are also possible.]

8. ♘g2 0-0 9.0-0 ♘a6 [9...d5 is probably a better start, or at least it avoids the game continuation. 10.cxd5 exd5

This is an important theoretical position with hundreds of games. Personally, I slightly prefer White's position... 11. ♔c2 (11. ♘c1 transferring the bishop to b2 is another plan.) 11... ♘a6 12. ♔fd1 followed by ♘f4 and ♘e5 is the main line.]

10.d5!? This is a well-known idea in the g3 system of the Queen's Indian, however in this particular position, I found only one good game in the database. White wants to occupy the center with e4, so Black is forced to accept the challenge.

10... exd5 11. ♘d4 Usually, the d5 break comes after Black's c5 move, and ♘h4 is the usual way to recover the pawn. With the pawn on c7, Black can keep his pawn, at least for a while. Actually, he's forced to fight for it, since if White simply takes back on d5 and plays e4, he achieves the maximum from the opening.

11... ♘c5 [11...c6 happened in the earlier game, but White gets an advantage after 12.cxd5 ♘xd5 13. ♘xd5 cxd5 Black is temporarily a pawn up, but it cannot be long-lasting. 14. ♘f5! The idea is ♘f4 and ♘e3. After the d5 pawn falls, White obtains a better pawn structure because of the d7 isolated pawn. 14... ♔e8 15. ♘f4 ♘f8 16. ♘xd5

♙xd5 17.♚xd5 ♔f6 (17...♖xe2? did not work, because of 18.♚c4 Double attack.) 18.♘e3 White was better in Kanstler-Psakhis, Israel 1999. The knight was heading to d5.]

12.♘c2 As we have seen in the previous line, to win back the d5 pawn, White needs to take his knight to e3. [12.♙f4 was also possible. 12...c6 (White recovers the pawn after 12...♘e4 13.♘xd5! looks like a blunder, but... 13...♙xd5 14.cxd5 ♘c3 15.♚d3 ♙xd4 does not win the piece, because of 16.♚xa6+=) 13.cxd5 ♘xd5 14.♘xd5 cxd5 15.♘f5 followed by ♘e3 with the usual small advantage.]

12...c6 13.cxd5 cxd5 Actually it seems to be a slightly dubious decision to allow White his next move... [13...♘xd5 was more logical. 14.♘xd5 cxd5 15.♙f4 ♘c7 16.♘e3 ♖c8 (It's not advisable to keep the extra pawn with 16...♙xe3 17.♙xe3 Black must suffer with his passive pieces. White simply develops with ♚d2, ♖ac1 and ♖fd1 with an unpleasant pressure.) 17.♘xd5 ♘xd5 18.♙xd5 ♙c6 with a small but stable advantage for White.]

14.♙g5! Suddenly this pin becomes very annoying. That's why it would have been better to get rid of a pair of knights.

14...♘c7 15.♘e3 Black is facing a difficult choice now, but he can still fight for equality...

15...d4? Probably Ivanchuk pinned his hopes to this move when he took on d5 with the pawn, but he blundered one of the following moves... [15...h6 leads to a worse position after 16.♙xf6 ♚xf6 17.♘cxd5 ♘xd5 18.♘xd5 ♚e5 19.♘f6+! ♚xf6 20.♙xb7 ♖ab8 21.♙g2+= This opposite colored bishop position is unpleasant for Black, as lacks an active plan. White plays e3 and ♚e2 followed by doubling the rooks on the d-file.; This illogical move, giving up the bishop, was the best chance. 15...♙xe3! Ivanchuk was probably afraid of 16.fxe3 (16.♙xe3!? ♘e4 17.♖c1 gives decent compensation for White, but he must still fight for the advantage.) 16...♚e8! This is the key resource in Black's defense. (16...♘ce8 17.♙xd5! is good for White.) 17.♙xf6 ♚xe3+ 18.♖f2 gxf6 Black has some really ugly pawns, but at the moment he's two pawns up. 19.♘xd5 ♘xd5 20.♙xd5 ♙xd5 21.♚xd5 After the simplifications, Black has good chances to hold...]

16.♙xb7 ♖b8 Black wins back the piece, but his kingside pawn structure gets destroyed... [16...dxe3 17.fxe3! (Not 17.♙xa8? exf2+ 18.♙g2 ♚xa8+ Black is better.) 17...♖b8 18.♙xf6 gxf6 19.♙e4 The exposed Black king becomes vulnerable. A simple but strong idea is ♙c2 followed by ♚d3! 19...♙xe3+ 20.♙h1+/-]

17.♘g4! dxc3 [17...♖xb7 is also bad. 18.♘e4 ♘cd5 19.♘exf6+ ♘xf6 20.♙xf6! The knight causes much bigger problems on the holes around the king. 20...gxf6 21.e3! The most precise way to increase the attack. 21...dxe3 22.fxe3 ♙e7 Here comes a really spectacular way to win

23. Nf6+ Kh8 24. Nxf7+!! Rxf7 25. Qd5! wins an exchange with this unexpected double attack.]

18. Qxf6 gxf6 19. Qe4! White is a pawn down, but the exposed Black king gives more than enough compensation for the pawn.

19... d5 [19... Re8 is met with 20. Qf5 Black cannot prevent Qc1, which threatens with Qh6 and Qxc3 at the same time. 20... h5 doesn't change anything. 21. Qc1! Qf8 (21... hxc4 22. Qh6+- wins.) 22. Nf6+ Kg7 23. Qb1!+- This is the most precise, creating the decisive threat of Qc2-h7.]

20. Qc2 Qd3 is the threat. Black is forced to give back his pawn in order to gain some time to defend his king.

20... f5! Only move.

21. Nf6+! White retains the idea of Qd3 by taking the f5-pawn with the knight. [21. Qxf5 Qg5]

21... Kh8 22. Nxf5 Qf6

23. a3!! Just a fantastic move, opening a new front to battle! White wants to send the only Black active piece into passivity by b4. [23. Qd3 Rg8 24. a3 is the same.]

23... a5 The most logical move, but it supports White's idea. [23... Rg8 is also quite hopeless. 24. b4 Qf8 25. Qd3 The days of the c3 pawn are counted. 25... Rg6 Now the easiest is probably 26. e3 Qd8 27. Nd4+/- winning the pawn and keeping all the advantages of the position as well.]

24. Qd3 Rg8 25. b4! Aronian found the fastest way to bring his rook into the attack with this great pawn sacrifice.

25... axb4 [25... Qf8 26. Nd4+- wins the c3 pawn.]

26. axb4 Qxb4 27. Ra7! The game is practically over. Black cannot stand the attack.

27... Ne6 [27... Rbc8 also loses to 28. Ne7!+-]

28. ♖e7! White wins material now!

28... ♔g7 [28... ♖g7 loses even bigger material after 29. ♘xd5 ♕d4 30. ♕xd4 ♘xd4 31. ♘xb4+- protecting the c2 bishop.]

29. ♘xg8 ♔xg8 30. ♕xd5 Black could have calmly resigned here. Besides being an exchange up, White retains his attacking chances. The c- and b-pawns are perfectly neutralized by the bishop.

30... ♖c5 31. e3 Not giving any chance for counterplay.

31... b5 [31... ♖d8 32. ♖a8+-]

32. ♖a8 ♖xa8 33. ♕xa8+ ♕f8 34. ♕e4! Of course, White has no reason to exchange the queens, since he can continue his very dangerous mating attack.

34... ♕h6 35. ♖a1 b4 36. ♖a5 [36. ♖a8+ was even more precise. 36... ♘f8 (36... ♖f8 37. ♕xb4+-; 36... ♔g7 loses the queen after 37. ♕e5+ ♕f6 38. ♖g8+!) 37. ♖c8 ♖d6 38. ♖c6+- wins the bishop soon.]

36... ♖f8 37. ♕g4+ ♕g7 [37... ♔h8 38. ♖h5+- was the idea of 36. ♖a5.]

38. ♕h4 h6 39. ♖a8! Black cannot protect his hanging b4 pawn.

39... ♘c7 This allows an elegant little combination to finish the game.

40. ♖xf8+! White wins the knight in all lines. [40. ♖c8+-]

40... ♕xf8 [40... ♔xf8 is refuted by 41. ♕xb4+ ♔e8 (41... ♔g8 42. ♕b8+-) 42. ♖a4+ ♔d8 43. ♕b8+-]

41. ♕g4+ ♔h8 [41... ♕g7 42. ♕c8+-]

42. ♕f5! Ivanchuk resigned after this great quiet move, in view of the following lines: [42. ♕f5 ♕g7 (42... ♕g8 43. ♕e5+; 42... ♔g7 43. ♕e5+) 43. ♖c8+ With this nice victory by Aronian, Armenia won the match 2.5–1.5, taking a big step towards the medals.]

1–0

it. 15.g4 ♖xd3 16.♔xd3 Black can't stop f5. White will get a strong initiative. 16...♔d7

a) 16...♖e8 17.f5 (17.♘f3 b5 18.cxb5 c4 19.♔xc4 ♘exd5 with ♔b6-Rc8 next, Black gets some nice counterplay.) 17...g5 18.h4 gxh4 19.♔h3 ♖g7 20.♘f3→;

b) 16...h5 Black is fighting for the light squares. 17.♔g3 (17.f5 hxg4 18.hxg4 ♘xg4 19.♘e4 ♘xf5 20.♔h3 ♔h4 21.♔xh4 ♘xh4 22.♘xd6 ♘f5 23.♘xf5 gxf5 24.♔xf5 f6=) 17...hxg4 18.hxg4 ♔d7 19.f5 ♖g7 20.♘f3 ♖h8 21.♘g5 gxf5

22.♘e6++-;

17.f5 (17.♘f3 h5 18.g5 ♔xh3 19.gxf6 ♔g3+=) 17...♔h7 18.♘e4 ♘xe4 19.♔xe4 g5 20.h4 f6 21.♖d2+/- Black can't avoid the transfer of the rook to e6. After that, Black's position will be very unpleasant.]

15.♘f3 h5 Correct. The most important thing for Black is not to allow the g4-f5 break. The g6-h5 setup weakened the dark squares and White can't take advantage of this because the a1-h8 diagonal is not available for the bishop. [15...♖e8 Provoking the g4 move. Let's see if White's main task works at this moment. 16.g4 ♘g3 (16...♘e3 17.♖xe3 ♖xe3 18.♖xg6+/-) 17.♖f2 ♘fe4 18.♖g2 f5 An original idea. Black manages to stop f5, but the knight

on g3 is very badly placed. 19.♖e3 (19.♖h2 fxg4 20.hxg4 ♖xg4 21.♖xg3 ♘xg3 22.♖xg3 ♖xf3 23.♖xf3 ♔h4 24.♔g2 ♔h5+ 25.♖f2 ♔h4+ 26.♔g3 ♔xg3+ 27.♖xg3 ♖e1∞ and Black is not worse.) 19...fxg4 20.hxg4 h5 21.gxh5 ♖f5 It's very important for Black to get control of this square. 22.♖f2 (22.hxg6 ♔f6∞=) 22...♘xh5 23.♖h4 Finally the bishop comes into play this way. 23...♔d7 24.♘d2 and Black can't hold the e4-f5 squares. White is winning. 24...♘xf4 25.♘xe4+/-; 15...♘g3 16.♖e1 ♖f5 17.♖xf5 gxf5 18.♖e3 ♔d7 19.♖f2 ♘ge4 20.♖h4 ♖ae8 21.♖h2]

16.♖d2 ♖e8 17.♖fe1 ♖d7 18.♘h2 White is playing according to the main plan of activating the dark-squared bishop after the g4-f5 break.

18...♖xe1+ [18...h4 This was a promising option for Black. After h4, White is not able to advance the king-side pawns anymore. Probably Mchedlishvili was afraid that the pawn on h4 could become weak but it won't be easy for White to create pressure against it. 19.♖xe8+ (19.♘f3 ♘h5=) 19...♔xe8 20.♖e1 (20.♘g4 ♖g7 21.♖e1 ♔f8 22.♘e3 ♔c8 Again, fighting for the f5 square! If White manages to take out the Black pieces from f5 and push the pawn to this square, then his position will be very good. 23.♘xf5+ ♖xf5 24.♖xf5 ♔xf5 25.♔xf5 gxf5 26.♖e7 ♖e8 This is not the only move for Black, but it leads to an interesting endgame by force. 27.♖xe8 ♘xe8 28.♖e1 ♘c7 29.♖xh4 f6 Not allowing ♖e7. 30.♖f1 ♘a8 31.♖e2 ♘b6 32.♖d3 a5 This is very important. We'll understand why soon. 33.♖f2 ♘a4 34.♖c2 ♘b6 35.♖b3 a4+ This is the point. 36.♖a3 ♖g6=) 20...♔f8 21.♘f3 ♖e8 22.♔c1 ♘h5 23.♖xf5 ♖xf5 24.♘xh4 ♖d3∞=]

19.♖xe1 ♔f8 [19...h4 It was the last chance to disturb White's main plan.]

20.g4!↑ Now White starts putting pressure.

20...hgx4 21.hxg4 ♘g7 22.f5 gxf5 23.gxf5 Finally the bishop on d2 is happy.

23...♖e8 24.♖f1! Of course, White will need the rook to attack.

24...♙e7 [24...♘gh5 25.♖f2 ♙h8 26.♘f3 ♙e7 27.♘g5 ♖g8 28.♖e2 ♙d8 29.♖g2 ♖g7 30.♙d1+/- White improved his pieces step by step. The Black king is in danger.]

25.♙g5 [25.♘f3 This natural move gives Black some counterplay: 25...♘g4 with idea ♘e3 26.f6 ♘xf6 27.♙g5

27...♙h3! (27...♘gh5 28.♙h2+-) 28.♙h7+ (28.♖e1 ♙d7 29.♙xf6 ♙g4+; 28.♖f2 ♘gh5 and now White has no

♙h2.) 28...♙h8 29.♙h2 ♙xf1 30.♙h6 ♘g4 31.♙h4 ♘f6= This is a draw because of 32.♙xf6 ♙e3+ 33.♙h2 ♙e2+ 34.♙g3 ♙g2+ 35.♙f4 ♙h3]

25...♙e5 26.♙f4 ♙e7 White wins a tempo

27.♙g2 ♘fh5 28.♙d2 ♙h4 [28...f6 29.♘g4+-]

29.f6? White is winning but the position is still complicated and it's easy to make some mistake. [This option was a simpler way to win: 29.♖f3 and Black can't do anything! One threat is ♖h3.]

29...♙h3 30.♙f2 ♘g3?? The losing mistake! [Black missed a chance to save the game: 30...♙g3+ 31.♙xg3 ♘xg3 32.fxg7 (32.♖f3 ♘7h5 33.♙f2

33...♘h1+ Thanks to this move, Black survives. 34.♙g1 ♘1g3=) 32...♘xf1 33.♘xf1 ♙xf1 (33...♙xg7 34.♘g3+/- Thanks to the fact that the knight is still on the board, White is better.) 34.♙xf1 ♙xg7 35.♙f4 ♖d8= Usually a pair of bishops is much stronger than a rook, but in this case, without the knight and with the doubled-pawns, White doesn't have any chance to improve.]

31.♖e1 ♖xe1+ 32.♙xe1 ♙f5 33.♙xf5 N7xf5 34.♙e8+ ♙h7 35.♙xf7+ ♙h8 36.♙e8+ 1-0

(4) Naiditsch,A – Leko,P [E54]

Chess Olympiad, 2012

[Kamil Miton]

1.d4 ♖f6 **2.c4** e6 **3.♘c3** ♙b4 **4.e3** 0-0 **5.♙d3** d5 **6.♗f3** c5 **7.0-0** cxd4 Leko decides to play a line where White plays with an isolated pawn. The other option is: [7...♗c6]

8.exd4 dxc4 **9.♙xc4** b6 **10.♙g5** ♙b7 We know that the positions with an isolated pawn can occur in a lot of openings. In this case, compared to the Panov System, Black already managed to solve his main problem, he's controlling the d5 square. The disadvantage is that the bishop is placed on b4.

11.♖c1 In the next move Leko decides to put the knight on c6. More often the knight goes to d7. Let's see some examples. [11.♖e1 ♘bd7 12.♙d3 ♖c8 13.♖c1 ♖e8 14.♙e2 Both sides put the pieces on their optimal squares. 14... ♙xc3 Now the structure has changed. Black gives the bishop and helps White to improve his structure, but it wasn't easy to find a better option. (14... ♙e7 15.♙a6 ♙xa6 (15... ♖c7 16.♗d5+-) 16.♙xa6 ♙b4 17.♙f4+= Black has uncoordinated pieces and some problems with the a7-pawn.) 15.bxc3

15...♖c7 This setup is very solid. It's very hard for White to take advantage of the pair of bishops and his better center. Usually those pawns get under pressure. **16.♙h4** (16. c4 h6 17. ♙d2 ♖d6 18. ♙c3 ♗g4 19. h3 ♙xf3 20. ♙xf3 ♙h2+ 21. ♖f1 ♗gf6 22. ♙g3 ♙xg3 23. fxg3 ♖ed8 24. ♖ed1 ♖e8 25. ♖e1 ♖ed8 26. ♖ed1 ♖e8 27. ♖e1 1/2-1/2 Wojtaszek,R-Meier,G/Mulhouse FRA 2011.) **16...♗h5** 17. ♗g5 g6 Creates a weakness around the king, but now the White knight will be out of play. **18.♗h3** ♖d6 **19.♙g5** e5 **20.f3** ♗g7 **21.♙f2** exd4 **22.♖xe8+** ♖xe8 **23.cxd4** ♗e6 **24.♙e3** ♗f6 **25.♙c4** ♗d5 **26.♙xd5** ♙xd5= 1/2-1/2 Potkin,V-Harikrishna,P/Wijk aan Zee NED 2012 (66).]

11...♗c6 Usually the knight is placed on d7 to allow the bishop from b7 to control the important d5 square.

12.♖e1 I saw some games in the database where White plays a3. Well, I'm not sure if it's a good idea because Black has to play ♙e7 anyway, to solve the problems with the pin. You can say that the a3 move is made in order to avoid the typical maneuver ♗b4-Nbd5, but it doesn't seem to be very dangerous. [12.d5 The break doesn't work. 12...♗a5]

12...♖c8 **13.♙d3** ♙e7 **14.♙b1** ♖e8 [14...♗b4 15. ♗e5 ♗bd5 (15... ♗fd5 16. ♙d2) 16. ♙d3 g6 17. ♙h6 Yes, in the isolated pawn positions, the attack and the pressure should be done on the kingside! 17... ♖e8 18. ♙f3 ♗xc3 19. ♙xb7 ♗xb1 20. ♗c6 ♖xc6 21. ♙xc6 ♙xd4 22. ♖xb1+/-]

15.h4 This kind of moves always create some weaknesses.

15...g6 **16.a3** Finally White decides to play this move not only because of ♗b4-Nd5 but to make the a2 square useful for the bishop and just give Black the move.

16...Rc7 Logical, Black is looking for counterplay against the weak pawn. So White responds:

17.Rc2 Nf7 18.Ne4 Of course White keeps the pieces on the board in order to support attack. Black has less space, so for them it's good to exchange some pieces. [18.Nxd5 Qxd5 19.Rc3 Qxg5 20.hxg5 Qd6 (20...Rd8 21.Qe4 Qd6 22.Qc1 Rdc8 23.Rd1) 21.d5 Rd8 22.Qa2 exd5 23.Qxd5 Rcd7 24.Rd3 Qf4=]

18...Nb8 [18...Rd7 19.Qc1+/-; 18...f6 Of course this kind of moves are not easy to make during the game. This move weakens the king a bit but Black takes control over the important e5 and g5 squares. 19.Qh6 Qd7 With the idea of Nd8-Nf7 in order to bring the knight to the king-side to give some more protection to the king. 20.h5 (20.Nc3 Nd8; 20.Qd3 Nd8 21.Rxc7 Nxc7 22.h5 Nf7 23.Qf4 Qa6 24.Qc2 Nd5 25.Qg3 f5) 20...g5 21.Nexg5 fxe5 22.Rxc6 Qxc6 23.Ne5 Ne3 24.Nxc6 Nxd1 25.Nxe7+ Rxe7 26.Rxd1 Qd5=+]

19.Rd2 [19.Qa2 Rxc2 20.Qxc2 Na6 with the idea of supporting knight on d5 after Nc7. (20...Nd7? 21.Nd6+-) 21.Ne5 Nac7 22.Nc6 Qxc6 23.Qxc6 Qxg5 24.hxg5 Qg7=]

19...Qg7 [19...f5 20.Qxe7 Rxe7 21.Neg5 h6 22.Nh3 The knight on h3 is temporarily badly placed. The e6 pawn and the e5 square should be weak in the long-term. 22...Nd7 23.Qa2 N7f6 24.Ne5+=]

20.h5 Qxg5 21.Nexg5 Nd7 [21...Nf4 It's interesting that Leko didn't play this active move. Maybe because of:

22.d5 Famous motif. White gets rid of the pawn to activate his pieces (rook and queen). 22...exd5 (22...Qxd5 23.Qa4 Rxc4 24.h6+ Qg8 25.Qxc4 Qxc4 26.Rxd8 Rxd8 27.Ne5 f6 28.Nxc4 fxe5 29.g3 Nd5 30.Rxe6+/-) 23.h6+ Qxh6 24.Rd4 Rxe1+ 25.Qxe1 f6 (25...Nh5 26.Rh4 Qg7 27.Qe5+ Qg8 28.Rxh5 gxe5 29.Qxh7+ Qf8

30. ♖c2 Very nice trick. Otherwise, Black will play ♖c1 and ♖c7 exchanging the queens. 30... ♖xc2 31. ♖h7+ ♖g8 32. ♖f6+ ♖g7 White is a rook down but the knights and the queen create a killing team! (32... ♖f8 33. ♖g5+-; 32... ♖h8 33. ♖xh5+ ♖g7 34. ♖h7+ ♖f8 35. ♖h6+ ♖e7 36. ♖e3+ ♖f8 37. ♖g5+-) 33. ♖xh5+ ♖f8 34. ♖h8+ ♖e7 35. ♖f6+ ♖e8 36. ♖g7+ ♖d7 37. ♖xf7+ ♖c8 38. ♖f5+ ♖d7 39. ♖xc2+-) 26. ♖xh7 ♖c4 (26... g5 27. ♖fxg5 fxg5 28. ♖xf4 gxf4 29. ♖e6+ ♖g7 30. ♖g6+ ♖h8 31. ♖f6 ♖f8 32. ♖h5+ ♖g7 33. ♖e8+-) 27. ♖xf4 ♖xf4 28. ♖e3 ♖xh7 29. ♖xf4 ♖d7 White has the initiative thanks to his very active pieces. 30. ♖h4 ♖f8 31. ♖h2 ♖g7 32. ♖xg6 ♖xg6 33. ♖f5+ ♖g8 34. ♖h6 ♖f7 35. ♖g7+ ♖e6 36. ♖xg6 d4 37. ♖g4↑]

22. ♖c2 White decides to make this move because he needs to activate the queen.

22... ♖xc2 [22... ♖f8 The knight on this square is a good defender (it protects many potential threats like h7 or e6). 23. ♖xc7 ♖xc7 24. hxg6 hxg6 25. ♖d2 ♖f4=]

23. ♖xc2 ♖e7 [23... ♖f8 24. ♖d2 Good place for the queen. White controls f4 and eventually, the queen can join the attack though the dark squares. (24. ♖a4 ♖e7=) 24... h6 25. ♖xf7 We'll see this blow a few times! 25... ♖xf7 26. ♖xh6 (26. ♖xg6+ ♖xg6 27. ♖xh6 ♖g4 28. ♖g5+ ♖xg5 29. ♖xg5 ♖g8) 26... ♖f6 27. ♖xg6+ ♖g8 28. ♖e4 ♖xg6 29. ♖g4 ♖de7 30. ♖e5 ♖g7 31. ♖e3→]

24. ♖d2 ♖f8 Leko unders tands well which square is the best for the knight. Other options are worse. [24... h6 25. ♖xf7 Again! 25... ♖xf7 26. ♖xg6 ♖e7 27. ♖xe8 ♖xe8 28. ♖e2 ♖f4 29. ♖e3 ♖f7 30. ♖c1+=; 24... ♖5f6 After this move, White gets a huge initiative on the dark squares. 25. ♖e5 ♖xe5 26. h6+ (26. dxe5 ♖xh5 27. g4 ♖d8

28. ♖e3 h6 29. ♖h3 (29. ♖e4 ♖xe4 30. ♖xe4 f5 31. exf6+ ♖xf6=+) 29... ♖h4 and Black takes the initiative. 30. gxh5 ♖d2 31. ♖e4 ♖xe4 32. ♖xe4 ♖xh3 33. hxg6 ♖h5 34. gxf7 ♖xf7=+) 26... ♖g8 27. dxe5 ♖g4 28. ♖f4 ♖xh6 29. ♖h4 ♖g7 30. ♖e3 When I flip the board and see the position from the Black side, it looks really ugly! This might be good for an engine because Black is a pawn up. It's strange but I didn't find a win for White here. 30... ♖h8 31. ♖f4 (31. ♖h3 ♖g8) 31... ♖g8

a) 31... ♖f5 Bad move. White is winning by force now. 32. ♖xf5 exf5 33. e6 f6 34. ♖f7 ♖c8 35. ♖h6+ ♖g8 36. ♖h3 ♖xe6 37. ♖xh7+ ♖f8 38. ♖d8 ♖c1+ (38... ♖xd8 39. ♖h8+ ♖g8 40. ♖xf6+ ♖e8 41. ♖h8+-) 39. ♖h2 ♖d6+ 40. ♖g3 ♖xd8 41. ♖h6+ ♖f7 42. ♖xc1+-;

b) 31... ♖d5 32. ♖c3 ♖g8 33. ♖e4 h6 34. ♖f3 ♖xe4 35. ♖xe4 ♖d7=;

32. ♖e4 h6 33. ♖xe6+ ♖xe6 34. ♖xb7 h5]

25. ♖b3 White's idea is to eliminate the knight on d5 and bring the queen to the attack. [25. hxg6 hxg6 26. ♖e5 f6 27. ♖xg6 ♖xg6 28. ♖xg6 ♖xg6 29. ♖xe6 ♖xe6 30. ♖xe6 ♖xe6 31. ♖d3+ f5= and the three pieces are better than the queen.; 25. h6+ ♖g8 26. ♖e4 ♖d8 27. ♖b3 ♖d7 28. ♖e5 ♖5f6 29. ♖xf7 ♖xe4 30. ♖xe4 ♖xe4 (30... ♖xf7 31. ♖xe6 ♖xe6 32. ♖xe6+ ♖xe6 33. ♖e3+↑ In this case, the queen is stronger because White has extra two pawns, the Black pieces are not coordinated and Black has a weakness on h7.) 31. ♖xd8 ♖xd8 32. ♖xe6+ ♖f8 33. ♖xd7 ♖xd7 34. ♖f4+ ♖f5 35. ♖d6+ is only a draw. 35... ♖f7 36. ♖c7+=]

25...Rc8?! Very strange move! It's hard to say what was Leko's idea. [He could have played 25...h6!? with the idea of fighting for the dark squares. 26.♘e4 g5 Of course, you could say that black should not advance the pawns weakening the king even more, but in this case it's most important not to allow White to develop pressure on the dark squares. 27.♘e5 ♖d8↔]

26.♘e4 [26.h6+ ♔g8 27.♘e4↑]

26...♘d7 27.♘fg5 [White could develop a very promising attack after: 27.♘e5 ♘5f6 (27...♘7f6 28.♘g5 ♖f8 29.♘exf7 ♖xf7 30.♘xe6+ ♔h8 31.hxg6 hxg6 32.♘g5 ♖f8 33.♘xf7+ ♖xf7 34.♖g5+/-) 28.h6+ ♔g8 (28...♔f8 29.♘g5+/-) 29.♖g5 ♔f8 (29...♖e8 30.♘xd7 ♘xd7 31.d5+-) 30.♘c3 The d5 break is coming. 30...♘xe5 31.♖xe5 ♖d8 32.g4 (32.d5 exd5 33.♘b5 ♖c6) 32...♔e7 33.g5 ♘h5 34.d5 ♖d6 35.♖xd6+ ♔xd6 36.dxe6 fxe6 37.♖xe6+ ♔d7 38.♘e4 ♘xe4 39.♖xe4 ♖c5 40.f4 ♘g3 41.♖d4+ ♔e7 42.♔f2 ♘f5 43.♖d2+/- The weak h7 pawn should decide the game in White's favor.]

27...gxh5? This move can't be good! [27...♘7f6 28.h6+ ♔g8 29.♘xf6+ ♖xf6 30.♘e4 ♖h4↔ Black has counterplay, White can't play 31.♘d6 because of

31...♘f4 and if White wins the bishop, but after ♖g5, White is not able to stop both threats: ♖g2 and ♘h3.; 27...h6 28.♘xf7 ♖xf7 (28...♔xf7 29.♖xh6+-) 29.♘d6 ♖f4 30.♖xf4 ♘xf4 31.♘xc8 ♘xc8 32.♘xe6 ♔f6 33.♘c4+/- and Black can't take on h5. 33...gxh5 34.♖e8 ♘b7 35.♘b5+/-]

28.♘g3 ♔h8 The final mistake. Black could still fight after: [28...♔g8 Looks very an but compared to the game, the king now protects the f7 pawn. Anyway, White is very close to get a winning position. 29.♘xh5 (29.♘f5 ♖f8 30.♘xd5 ♘xd5 31.♖f4 exf5 32.♖xf5 ♘f6 33.♖xf6 ♖g7) 29...♔h8 30.♘xd5 ♘xd5 31.♖f4 f6 32.♘e4 (32.♘xe6 ♘xe6 33.♖e4 ♘f8 34.♘f4 f5 35.♖e5+ ♖g7 36.♘xe6 ♖xe5 37.♖xe5 ♘xe6 38.♖xe6 ♖c1+ 39.♔h2 ♖c2=) 32...♖f8 33.♘c3↑]

29.♘f5 ♖f6 [29...♖f8 30.♘d6 Anyway!]

30.♘d6 ♖g8 31.♘dxh7+ ♔g7 32.♖xe6 ♖f4 33.♖xf4 ♘xf4 34.♖e7 1-0

Endgame section

(15) Kramnik,V (2797) – Shirov,A (2706)

Olympiad, 30.08.2012

[Chess Evolution]

This easy looking endgame brings us many surprises even on the highest level. White has more active pieces, but of course, the limited material should allow Black to hold the draw...

40...b4 Logical move. Black either exchanges the queen-side pawns, after which there is no reason to continue the game, or creates a passed pawn for himself.

41.c4 White has a theoretical advantage. His king can support the c-pawn and be close enough to stop the b-pawn...

41...h5?! This is the first inaccuracy. Shirov probably underestimated White's reaction... [41...♖b1 was the right way to draw 42.c5 b3 43.♔d4 and here Black can execute Shirov's idea in a much better version. (43.♖b6 is noth-

ing after 43...b2 44.♔f5 ♖c1=) 43...h5! Not the only way to draw. 44.g5 (44.gxh5 ♔h6 with an easy draw.) 44...fxg5 45.fxg5 (In comparison to the game 45.hxg5 is risky now, because of 45...h4) 45...b2 46.♔c3 ♖h1 47.♔xb2 ♖xh4 Everything developed logically and the players should shake hands soon... 48.♔c3 ♖h1 49.♖e6 h4= The draw is inevitable.]

42.g5! fxg5 43.hxg5! This is what Shirov probably underestimated. Suddenly White creates very dangerous mating threats, which neutralizes the power of the h-pawn. From now on, Black must be really careful to avoid losing.

43...♖a3 Defending against the mate... [43...h4? leads to a forced mate after 44.g6+ ♔h6 45.♔f5! and Black is simply unable to prevent ♖c8-h8. 45...♖a3 46.♖c8 ♖a5+ does not help 47.c5+-]

44.♖b6! By realizing that Black can parry the concrete threats, Kramnik stops the b-pawn and frees the way for his c-pawn... [44.g6+ ♔h6 45.♔f5 ♖a8! This was the point behind 43...♖a3, Black solves all his problems. 46.♖b6 ♖a5+ 47.♔e4 h4= The game will soon end in a draw.; 44.♔f5 is also met with 44...♖a8!]

44...b3 45.f5 Squeezing the Black king into the corner. White has a tactical solution to stop the h-pawn.

45...h4 46.♖b8! Kramnik creates another kind of mating net: 47.g6 ♔h6 48.♔f4 and ♖h8 are inevitable. [46.♔f4 with the same idea as the game, but Black can play once again 46...♖a4; 46.♖b7 with the idea of f6 is too slow. 46...h3]

46...♖a4 Black has to lure the king to prevent ♔f4...

47.♔d4

47...♖a5? According to my analysis, this is the losing move. [47...h3? is also bad. 48.♖xb3+-; 47...♖a1! should have been played and the position is suspicious, but Black seems to hold in all lines. The move itself is pretty principled, since generally, in rook endgames, the weaker side should look for an active defense! 48.c5 (48.♖xb3 ♖d1+ 49.♔e5 ♖c1 Black starts to harass the pawns... 50.♔d5 ♖f1 White cannot improve because he must take care of the h-pawn as well.) 48...♖d1+ 49.♔e5 ♖c1 We'll see a typical defending technique now. 50.♔d6 ♖d1+ Black tries to force the king ahead of the pawn in order to block its way... 51.♔e6 (51.♔c7 ♖d3 followed by h3!) 51...♖c1 and the maximum that White can get is 52.♖xb3 ♖xc5 53.♖b4

♔g8 54.♖xh4 A pawn up, but of course, the game is easily drawn. 54...♖c6+=]

48.c5! It's objectively winning now, but it requires precise calculation and technique. ..

48...♖a4+ [48...h3 is the other attempt, but it also fails to hold. 49.♖xb3 ♖a4+ 50.♔d5 ♖h4 51.♖b1 White goes into passivity, but the c-pawn is even more dangerous... The main problem is the Black king, which stands awfully still.

51...♖f4 Black's only chance to save the game is to take the f- and g-pawns and sacrifice the rook for the c-pawn. Then, with the help of the king, to promote his own g-pawn. (51...h2 just helps White. 52.♖h1 ♖h3 53.c6 ♔g8 54.c7 ♖c3 55.♔d6 ♖d3+ Black must send the king in front of the pawn, but this does not help here. (55...♖c2 56.♖xh2!+- is a well-known trick!) 56.♔c6 ♖c3+ 57.♔d7 ♖d3+ 58.♔c8 ♖d2 59.♖b1!+- followed by ♔b8.) 52.c6 ♖xf5+ 53.♔d6 ♖f3 Black could not waste time on taking g5, this is his king's job. Now it's White's turn to find the way to win. White has two candidate moves, but only one of them is winning. It's very easy to go wrong...

54. **Rxc1!!** This move order wins the missing tempo in comparison to the 54.c7 line. (54.c7 fails to win by one tempo. The following couple of moves are forced... 54... **Rd3+** 55. **Qc6** **Rc3+** 56. **Qb7** **Qg6** 57. **Rh1** White must go for the h-pawn, otherwise it's just an easy draw. 57... **Qxg5** 58. **Rxh3!** **Rxc7+** 59. **Qxc7** **Qf4** Here we are! Black miraculously survives in all the lines.

60. **Qd6** **g5** 61. **Ra3** (61. **Rh8** is less dangerous. 61... **g4** 62. **Rf8+** **Qe4** 63. **Rg8** **Qf4** 64. **Qd5** **g3** 65. **Qd4** **Qf3** 66. **Qd3** **g2=**) 61... **g4** 62. **Ra4+** **Qf3** 63. **Qe5** **g3** and we reached a theoretical drawn position with the help of a stalemate idea... 64. **Ra3+** **Qf2** 65. **Qf4** **g2** 66. **Ra2+** **Qg1!** 67. **Qg3** **Qh1!** this is the point! 68. **Rxg2=**) 54... **Qg6** (54... **Rd3+** does not affect the result. 55. **Qe5** **Re3+** (55... **Rd8** 56. **c7**

Rc8 57. **Qf5!** transposes to 55... **Re3.**) 56. **Qf4** **Re8** 57. **c7** **Rc8** (57... **h2** 58. **Rh1+-**) 58. **Qf5!** Suddenly Black is facing different kind of mating threats again... 58... **h2** (58... **Rf8+** 59. **Qg4** **h2** 60. **Rh1+-**; 58... **Qg8** 59. **g6!** **Qf8** 60. **Qe6!+-** squeezing the king to the back-rank, followed by **Rb1-b8.**) 59. **g6+** **Qh6** 60. **Rh1!** **Rxc7** 61. **Rxh2#**) 55. **c7** **Rf8** 56. **Rh1!** **Qxg5** (56... **Rh8** 57. **Rxh3** **Rxh3** 58. **c8** **Q** White is winning here, because he can transfer his king behind the g-pawn. 58... **Rg3** 59. **Qb7!** This is the most precise way. 59... **Rxg5** 60. **Qe4+** **Qh6** 61. **Qe6+-** followed by **Qf7**. It's important to mention that if the Black king was on h8 and his rook could pass to the f6-h6 squares, the position would be a theoretical draw!) 57. **Rxh3** **Qf4** 58. **Rh1!** The key move! White is winning, because of the **Rf1** threat. This allows White to force the Black king closer to the g-pawn. 58... **Ra8** (58... **Rc8** 59. **Rf1+** **Qg5** (59... **Qe4** 60. **Rg1+-**) 60. **Qd7+-**) 59. **Rf1+** **Qg5** (59... **Qe4** doesn't work. 60. **Rg1** and **g7** falls.) 60. **Qd7+-** Black cannot push his pawn.]

49. Qd5 Rf4! Shirov tries the same idea, to eliminate the f-pawn followed by giving up the rook for the c-pawn... [49... **h3** 50. **Rxb3** **Rh4** 51. **Rb1** transposes to the 48... **h3** line.]

50. Qe6 Kramnik repeats once.

50... Re4+ 51. Qd5 Rf4

52.f6!! Brilliant calculation! In such kind of positions, there are no principles, pure calculation is needed. [52.c6 ♖xf5+ 53.♔d6 ♖f7! This is the point that White avoided by pushing f6. Black is in time to take the king to support his pawns... 54.c7 ♖xc7 55.♔xc7 ♔g6 56.♖xb3 ♔xg5 57.♔d6 ♔g4 58.♔e5 h3 59.♔e4 h2 60.♖b1 ♔g3=]

52...gxh6 53.c6 ♖f5+! Another great technical move! The White king must be sent as far as possible from the king-side pawns before sacrificing the rook. [53...h3 54.♖xb3+- wins easily.]

54.♔d6 ♖f1 55.c7 ♖c1 We are at the last critical position of the game, where Kramnik spoils the win after playing such an excellent endgame...

56.gxf6? [56.c8 ♖! would have won the game. 56...♖xc8 57.♖xc8 ♔g6 58.♔d5! White is simply ahead with this tempo in comparison to the game. Still the win is quite instructive.. . 58...b2 The best chance. This prevents White from squeezing the Black king to the h-file as we'll see in the other lines. (58...♔xg5 59.♔e4 ♔g4 60.♖g8+ ♔h3 61.♔f3+- is easy.; 58...h3 59.♖c1! ♔xg5 60.♔e4 ♔g4 61.♖g1+! ♔h4 62.♔f3 h2 63.♖b1 ♔h3 Black gets out of moves. White only needs to pass with his rook on the 1st

rank and when the moment comes, play ♔g2... 64.♖h1+-) 59.♖b8 ♔xg5 60.♔e4 ♔g4 61.♖xb2

61...h3 and White is winning only because of the appearance of the f6 pawn. Let's see why it is so... 62.♔e3 ♔g3 63.♖b8 ♔g2! Without the f-pawn, this move would lead to a theoretical draw! (63...h2 loses easily. 64.♖g8+ ♔h3 65.♔f2 h1N+ The only move, but the knight is trapped in the corner. 66.♔f3 ♔h2 67.♖g2+ ♔h3 68.♖g6 ♔h2 69.♖xf6+-) 64.♔e2 (64.♖g8+ ♔f1! would be the point without the f-pawn.) 64...h2 65.♖g8+ ♔h1 and now we see the difference. Black would be stalemated without the f-pawn, but now he gets simply mated in 3 moves... (65...♔h3 66.♔f2 h1N+ 67.♔f3+- wins as we saw in the 63...h2 line.) 66.♔f2 f5 67.♖a8 f4 68.♖a1#]

56...♔g6! 57.♖xb3 [57.c8 ♖! leads to a draw as well. 57...♖xc8 58.♖xc8 b2 59.♖b8 ♔xf6 60.♔d5 h3 61.♖xb2 Otherwise h2... 61...♔f5 The Black king blocks the route of the White monarch to approach the corner... 62.♖b8 ♔f4 63.♖h8 ♔g3 64.♔e4 h2 65.♔e3 ♔g2 66.♖g8+ ♔f1 67.♖h8 ♔g2=]

57...♔xf6 Black is safely in time to secure the draw, the rest is easy for him.

58. ♖b8 ♜d1+ **59.** ♔c6 ♜c1+ **60.** ♔d7 ♔f5 **61.** c8 ♜xc8
62. ♜xc8 h3 **63.** ♔d6 ♔f4 **64.** ♜c3 [64. ♜h8 ♔g3 65. ♔e5
 h2 66. ♔e4 ♔g2=]

64... ♔g4 **65.** ♔e5 h2 **66.** ♜c1 ♔f3 **67.** ♔f5 ♔g2 **68.** ♔e4
 h1 ♜ An instructive endgame with many nice motifs.

1/2

(16) Fridman, Daniel (2653)

65.♙c2 ♙d2 66.♖g7 ♙c3+ 67.♖g6 f6 is coming next and the White king will go to e6.

1-0

Clash of the Titans

(17) Savon,Vladimir A — Spassky,Boris V [B47]

URS-ch30 Yerevan (14), 11.12.1962

[Csaba Balogh]

We are facing a typical Sicilian battle, with a lot of nice tactical motifs.

1.e4 c5 2.♘f3 ♘c6 3.d4 cxd4 4.♘xd4 e6 5.♘c3 ♔c7
Spassy went for the Taimanov variation and his opponent chose a very safe setup against it.

6.g3 [6.♙e3 a6 7.♔d2 ♘f6 8.0-0-0 is definitely the sharpest and the most critical line for Black. Current theory shows that White's attack is faster on the kingside, but still, the opening hides many unexplored ideas...]

6...a6 7.♙g2 ♘f6 [7...d6 8.0-0 ♙d7 followed by ♘f6 and ♙e7 is considered to be the safest system for equality nowadays.]

8.0-0

8...♙e7 This is the old main line, however, it's facing some difficulties against White's best reaction now.

9.b3 Quite a common move in the g3 systems. White wants to fianchetto his other bishop too, and his plan in the future involves to play ♘ce2 and c4, obtaining a hedgehog type of position with a space advantage. [The concrete 9.♔e1! is followed by 9...d6 and this is met with 10.♘xc6! bxc6 11.e5! dxe5 12.♔xe5! White obtains a better pawn structure. 12...0-0 (12...♔xe5? 13.♙xc6+ 13.♙f4 White gets the initiative.)]

9...0-0 10.♘ce2?! White chooses the wrong move order, Spassky nicely makes use of it... [10.♙b2 should have been played 10...d6 (The difference is that now on 10...b5 White has 11.e5! ♔xe5 12.♘cxb5! and Black loses material 12...♘xd4 (12...axb5? 13.♘xc6 ♔xb2 14.♘xe7+ ♔h8 15.♙xa8+-) 13.♙xd4+/-) 11.♘ce2 and here, instead of going into a slightly inferior hedgehog with 11...♙d7 12.c4, Black has a strong move to counter White's idea: 11...e5! 12.♘xc6 (While the knight was on c3, White always had 12.♘f5 ♙xf5 13.exf5 and the knight would jump to d5. However now Black is in time to play 13...♔c8 With knight on c3, White could play g4! 14.♔d3 d5! Black is OK.) 12...bxc6 (12...♔xc6!? is also interesting here. 13.♔d3 ♙e6 with the idea of playing ♔ac8 and ♔fd8, and on 14.c4 (14.♘c3 ♔ac8) 14...b5! with counterplay.) 13.c4 a5 with a comfortable position for Black. His next move is going to be ♘d7 and continue the minority attack on the queenside. It's important to mention that if White plays f4, Black simply ignores it and follows his plans.]

10...b5! Black can develop his bishop to its ideal square on the long diagonal.

11. ♖b2 [11. ♘xc6 The bishop stays on c8, and Black always takes back by 11...dxc6 followed by e5 in the next move.]

11... ♖b7 12. ♖c1 White prepares to play c4, but of course, such move shows that Black has solved the opening problems. [12. ♘xc6 when the bishop is developed. 12... ♖xc6 is usually the right way to take back. Pressing the e4 pawn and preparing for the typical central break with d5.]

12... ♘e5! In the Sicilian, you must always play actively! Spassky immediately overtakes the initiative. White must accept the challenge and go for the complications, since he cannot really prevent the e4 pawn.

13.f4

13... ♘eg4! White must waste an important tempo on preventing ♘e3, which allows Black to execute a typical Sicilian break! Black had to calculate the next 3 moves precisely, otherwise if he gets an h3 and needs to retreat to h6, it would be a huge trouble for him.

14. ♖d3 e5! It looks like Black destroys himself, first he drove his knight to g4, than he gave up the f5 square, but the point is just coming...

15. ♘f5 [15.fxe5 leads to a very bad position for White. 15... ♘xe5 16. ♖e3 ♘eg4 17. ♖d3 ♖fe8! attacking the weakness on e4 and preparing for the d5 break. White is in trouble... 18.h3 ♘e5 19. ♖e3 d5!; 15.h3! was the right move! This way White can preserve his central pawns. 15...exd4 16.hxg4 ♘xg4 17. ♘xd4 Black anyway keeps some initiative. 17... ♖b6 18. ♖f3 h5! The knight is very well placed on g4, White cannot get rid of it with h3. Black needs to put pressure on the e4 pawn, trying to provoke the e5 push, after which he can start to undermine it by d6 or f6 in some occasions. 19. ♖g2 ♖f6 20.e5 (20. ♖h1 g6) 20... ♖e7 21. ♘f5 ♖c5 Black is objectively slightly better. He'll push back the knight with g6 next.]

15... ♖c5+ 16. ♖h1

16...d5! This was the whole point that Spassky had to foresee before playing 13... ♘eg4. Everything looked so well for White, but suddenly his position collapses.

17.exd5 [17.fxe5?! is met with 17...dxe4 18. ♖d1 (18. ♖c3 ♘d5) 18... ♘xe5 with a pawn up and a better position.]

17...e4! After the previous moves, this is already an obvious one. Black recovers the pawn.

18.♔d2 [18.♔c3 b4! Black sends the queen away from the dangerous diagonal.; 18.♕xe4 simply loses to 18...♖xe4 19.♔xe4 ♖ae8 20.♔f3 ♕xd5! 21.♔xd5 ♖xe2 wins.]

18...♔d7 Black wants to get rid of the annoying f5 knight, before taking back the pawn, but it allows a sudden chance to create counterplay. [After 18...♕xd5! Black has a big advantage. The game could, for example, proceed with 19.h3 e3! 20.♔c3 b4 21.♔e1 ♖f2+ 22.♔h2 ♕xg2 23.♔xg2 and here Black already has a direct win: 23...♔c6+ 24.♔h2 ♔e6! and the knight cannot move, because of ♔xh3, while on 25.g4, Black simply takes twice with the knight and plays ♔xf5.]

19.♖ed4 White fails to use the chance. [19.♖xg7! would lead to a big mess, but if Black finds the strongest moves, he can still keep some advantage. 19...♖xd5! (19...♔xg7? would turn the game. 20.h3! ♖f2+ (20...♖e3 loses to 21.♕xf6+ ♔xf6 22.♔c3+ ♔g6 23.f5+!+- and Black gets mated after freeing the f5 square.) 21.♖xf2 ♕xf2 and here comes the whole point of White's action! 22.♖c3! if White takes on f2, his amazingly strong dark squared bishop would give more than enough compensation for the exchange, while 22...e3 is met with 23.♔d4! with the idea of playing ♖e4. Black cannot stand the pressure.) 20.c4!? (20.f5 ♖f2+ 21.♖xf2 e3! 22.♔d3 exf2 A bit suspicious. Black is all right! 23.♖h5 f6! Black prevents the direct threats and enjoys a material advantage.) 20...♕e3! 21.♔d1 ♕xc1 22.♖xc1 (22.♔xc1? ♖de3) 22...f6! It's time to close the a1-h8 diagonal. (22...♖df6? 23.♔xd7 ♖xd7 24.♖f5! with the threats of ♖e7 and ♖d6, gives White the advantage. 24...♖fe8 25.♖d6) 23.cxd5 (23.♖h5 ♔f5!]

23...♔xg7=+ White has compensation, but I doubt that it's enough.]

19...♕xd5 e3 is coming in any case.

20.h3 [20.♔e2 e3]

20...e3!

21.♔c3 Black has two good ways to continue.

21...♖f2+ [21...♕xd4 was the other move. 22.♔xd4 (22.♖xd4 loses to 22...♖f2+ 23.♖xf2 Otherwise, ♕xg2 and ♔xh3 win, but now 23...♔xh3+! decides the game. We'll see this motif a few times in the game... 24.♔g1 exf2+ 25.♔xf2 ♔xg2+) 22...♕xg2+ 23.♔xg2 Now the strongest is 23...♔b7+ 24.♔g1 ♖ad8 and Black's attack is faster 25.♔c5 (25.♔c3 ♖d2) 25...♖f2! The attack should break through.(The tempting 25...♖d2 is not clear yet, because of 26.♖e7+ ♔h8 27.♖c6! with a double threat on f8 and g4.)]

22.♖xf2 A forced sacrifice. [22.♔h2 is refuted by 22...♕xd4 23.♖xd4 (23.♔xd4 ♔xf5) 23...♕xg2 and ♔xh3 next.]

22...♙xd4? A miscalculation, which led to a quick victory for Spassky. [22...exf2! 23.♙xc5 ♖fe8! was the way to go. ♜e1 is the direct threat. 24.♜f1 ♘e4! and after every queen move, the same sacrifice wins the game. For example 25.♙b4 ♘xg3+! 26.♘xg3 ♙xh3#]

23.♙xd4 exf2 24.♘h6+?? The GM playing with White pieces thought that he was winning with a great queen sacrifice, but right after he gave this check, he realized his blunder and resigned the game.[24.♘h6+?? gxf6 (24...♙h8 25.♙xf6 was Savon's idea, but here again Black has 25...♙xh3#) 25.♙xf6 but White missed 25...♙xh3# A painful blunder!; 24.♙xd5 is also bad. 24...♜ae8 25.♙h2 ♙xf5; However 24.g4! would have given a good chance for White to survive. 24...♙xg2+ 25.♙xg2 ♙xd4 26.♙xd4 ♜fe8 27.♙xf2 Black is obviously better, but White has one pawn, active pieces and no weaknesses, which give him real hopes for a draw. 27...♘e4+ (27...♜ad8) 28.♙f3 g6 29.♘h6+ ♙f8 30.g5=+]

Editorial Preface

The Chess Olympiad came to an end. And again it is the Armenian team who holds the gold! From the last 4 Olympiads, they took gold 3 times. Just an amazing achievement. Congratulations to them.

Second came Russia who had a little bit worse tie-break. The Russian team played great chess and only a very unnecessary lost in the round 9 against the Americans took away the gold medal. 3rd came the team from Ukraine who managed to beat China in the last round, a bit unlucky for the Chinese team-would they have won, they would have taken gold. The teams of Your 2 "hard workers" lost in the last round and became 9th and 12th. Sad results for Hungary and Germany... but what to do. The fight on the top is very tight, and the difference between a loss and win in the last round can mean more than 10 places in the standings.

In the female section, it was a fight between China and Russia. Both teams clearly dominated the event and finally Russia was the team with a clearly better tie-break to take the gold medal. As in the open section, the 3rd place goes to the team from Ukraine.

All in all, I think this Olympiad was a big disappointment for the majority of the participants. Playing directly at the airport was really not a good idea, but we are happy and look forward to 2014 when the Chess Olympiad will go to Norway!

As usual we give in this issue the freshest games from the Top matches! Have fun reading the CEWN Nr 29.

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Mamedyarov,S (2729) – Brkic,A (2587) [D45]

40th Olympiad Open Istanbul TUR (6.2), 03.09.2012

[Balogh Csaba]

A great attacking game by Mamedyarov, who made the highest performance of the Olympiad. He scored 8.5 point out of 10 games against a 2585 average rating, which was equal to a 2880 performance.

1.d4 d5 2.c4 c6 3.♘c3 ♘f6 4.e3 e6 5.♘f3 ♘bd7 We are at the starting position of the Meran.

6.♔c2 [6.♙d3 is the other main line.]

6...♙d6

7.e4!? This is a tricky sideline. If somebody is not familiar with its subtleties, that could easily end up in a bad position out of the opening.

7...dxe4 8.♘xe4 ♘xe4 9.♔xe4

9...e5!? Black decided to accept the challenge and went for the most concrete line. He's aiming for a simplification in the center, which would yield a completely drawn position. White must do something extraordinary if he wants something... [9...c5 is a more calm reaction, which usually continues with 10.♙g5 ♙e7 11.♙xe7 ♔a5+! 12.♔e2 ♔xe7 13.g3 White intends to castle artificially with ♙g2, ♖hd1 and if necessary ♔f1. 13...♖d8 14.♙g2 cxd4 15.♔xd4 ♘f6 This is just the start of the lines, but it's considered to be equal at the end.]

10.dxe5 0-0! This is the point! Black wants to take twice on e5, followed by ♖e8.

11.exd6! This queen sacrifice is the only chance to fight for the advantage. [11.♙d3 is met with 11...f5! 12.♔e2 (12.exf6?? ♖e8) 12...♘xe5 13.♘xe5 ♙xe5=; On 11.♙e2 the easiest is 11...♘xe5 12.♘xe5 ♔a5+ with equality.]

11...♖e8 12.♔xe8+ ♔xe8+ 13.♙e3 Let's summarize what we see. White has a rook, bishop and pawn for the queen. Additionally, the bishop pair and the dangerous passed pawn on d6 are also important factors. On the other hand, Black can build up an excellent blocking position on d7 and has very good chances to create

counterplay on the queenside. It's very hard to judge who is better objectively. The computer clearly favors Black's position, but for a human eye, things are much more complicated.

13...Nf6 14. Bb3? This is a rare, but clever move order. White wants to castle queenside in any case, but he prevents the bishop's development to f5 first. [14.0-0-0 Bf5 is a good alternative for Black, compared to 14...Be6 which would transpose to the game.]

14...Be6 15.0-0-0 b5 This is a double edged decision, since it allows White to protect d6 safely, with a pawn being given for another pawn. [A much safer choice is 15...c5 16.b3 (16. Bxc5 is not good because of 16...Kc8 and the exchange of the c-pawns is good for Black.) 16...Kc6 Black can later create his counterplay with a6-b5, for example. The position is unclear.]

16.c5! Bxa2 According to the computer, Black's advantage is close to be decisive, but I think that's very far from reality. Actually, it's clear that both players were following their preparations, since there were still some games played according to my database.

17. Bg5 Nd7 18. Rhe1 Be6

19. Be3! This is the novelty. Quite a logical one, White simply protects his c5 pawn, which was not possible with 19.b4 because of a5! [In the previous game 19.Nd4 was played, but Black was much better after 19...Nxc5 20. Bf5 Kd7 Ivkov-Panchenko, Sochi 1983. Still it was a nice achievement to reach this position 30 years ago without any computer assistance.]

19...h6 Black prevents Ng5.

20. Bc2 White prepares for the action that we'll see in the game.

20...Kc8! Leaving the pin on the e-file. [20...a5!? would have also made sense. The idea is to make use of the pawn majority by advancing with a4-b4-a3. Probably Mamedyarov planned to play in a similar style as in the game. 21.Nd4!? Nxc5 22.Nxe6 Nxe6 23.d7 Kd8 with a very unclear position. White should kick out the blockading e6 knight with f4-f5 in order to penetrate with the rook. (23...Ke7? 24. Bb6)]

21. Nd4 White tries to mobilize his d6 pawn even if it'll cost him the one on c5.

21...♖xc5 22.♘f5!? White wants to exchange the minor pieces, after which the d-pawn would become unstoppable. Black is forced to give up his knight because of the ♘e7 threat, but he can still keep his bishop.

22...♙xf5 23.♙xc5 ♙e6 Mamedyarov continues the game in brilliant style! [23...♙xc2? loses to 24.d7+-]

24.f4! With the idea of playing f5, followed by ♖e7.

24...g6 25.g4!! This is a really fantastic move. White had to foresee all the forthcoming complications. Black is forced to accept the sacrifice, otherwise White will play f5.

25...♙xg4 26.♖d4! The rook occupies the 4th rank, which is key in the game! The threat is ♖e7, and Black must react against it.

26...♙e6 27.f5!! Really energetic play! The number of pawns doesn't matter, Mamedyarov wants to explode the blockade.

27...gxf5? This is a decisive mistake. White can create crucial threats against the king on the opened g-file. [27...♙xf5 would have been the only chance. 28.♖e7 ♙e6 (28...♙xc2 is met with 29.d7 ♖f8 30.♙xc2) 29.d7 ♖d8 and White can obtain a superior endgame with 30.♖e8+ ♖xe8 31.dxe8 ♖+ ♖xe8 32.♖d6+= Black has a lot of pawns for the piece, but they are weak. White can start to collect them with the harmony of the bishop pair and the rook.]

28.♖g1+ ♙h7 [28...♙h8 is refuted with 29.♖h4! ♖f8 30.♙d4+ f6 (30...♙h7 transposes to the game.) 31.♖g6! Black can't hold the threats. For example: 31...♙h7 32.♖xf6 ♖g7 33.♖xf5!+- White ends up with a winning advantage.]

29.♖dg4! Now and in the previous line we can understand why the rook had to stay on the 4th rank! Black can't escape from the mating ideas.

29...♖f8 30.♙d4! f6 [30...h5 doesn't change much. 31.♖g7+ ♙h6 32.♙e3+-]

31.♖g6! Black is hopeless against ♖xf6.

31...♖d8 32.♖xf6 Black resigned in view of [32.♖xf6 ♖xd6 33.♙xf5+ ♙xf5 34.♖f7# White played like Mikhail Tal!]

1-0

(2) Ivanchuk,V (2769) – Wang Hao (2726) [E52]

40th Olympiad Open Istanbul TUR (11.1), 09.09.2012

[Balogh Csaba]

We are examining a very important game from the last round. The Chinese team was leading the tournament, but they were facing the 2nd seed Ukraine, and only a win would have given them the gold medal. However on the top board, Ivanchuk won a very nice game against Biel winner Wang Hao.

1.d4 ♘f6 **2.c4** e6 **3.♘c3** ♙b4 **4.e3** The Rubinstein variation of the Nimzowitsch Defense enjoys of a really high popularity now.

4...0-0 **5.♙d3** d5 **6.♘f3**

6...b6 This is quite a rare move, but by no means a bad one. I personally believe it's a good alternative if somebody doesn't want to learn theory and wants to obtain a playable position. [6...c5 is the main line.]

7.a3 Ivanchuk also reacts with a sideline. [7.0-0 is the most common move. 7...♙b7 8.cxd5 exd5 9.a3 ♙d6 10.b4 a6

11.♙b3 ♙e7 is the start of the critical lines, but recently Black achieved good results in some high level games.]

7...♙xc3+ 8.bxc3 c6 This move was played without thinking. Clearly a prepared novelty by Wang Hao, however after Ivanchuk's strong response, White retains the initiative. Black's idea is to play ♙a6, and after exchanging the bishops, to take back on d5 with the c-pawn. [I would personally prefer 8...♙a6 9.cxd5 ♙xd3 10.♙xd3 ♙xd5! 11.c4 ♙e4! as it was played in Aleksandrov-Tomashevsky, in Moscow 2012. If White has something, it's really symbolic.]

9.cxd5! Great prophylactic move by Ivanchuk! [After the natural 9.0-0 Black's novelty would reach its point. 9...♙a6! 10.♘d2 (10.♘e5 is met with 10...♘fd7! exchanging the strong knight.; 10.cxd5 ♙xd3 11.♙xd3 cxd5 12.c4 ♘c6 with equality.) 10...c5! 11.♙e2 ♘c6 12.cxd5 ♙xd3 13.♙xd3 ♙xd5= with a comfortable position for Black.]

9...cxd5 10.♙e2! The previous move was connected with this one. White preserves his strong light-squared bishop.

10...♘c6 Black changes his mind and tries to create an outpost on the c4 square, but I think he should have continued with his original plan. [10...a5 with the idea of ♙a6 is a huge weakening move. The b5 square and the b6 weakness will tell in the future... 11.0-0 ♙a6 12.♙xa6 ♘xa6 13.c4! followed by ♖b1, ♙d2, ♖fc1 and ♘e5. White has an advantage.; 10...♙b7 11.0-0 ♙c8 was the right move in my opinion, even though White can achieve some edge with energetic play. 12.a4! ♙a6 Black successfully exchanges the bishops, but he spent too many tempi doing it. White is in time to retain the initiative by play-

ing (The c3 pawn is poisoned 12...♔xc3 13.♙a3 ♖c8 14.♖fc1 ♔a5 (14...♙b3? 15.♙c2! Black loses material. 15...♖xc2 (15...♙c4 16.♙xh7+-) 16.♖xc2+-) 15.♖xc8+ ♙xc8 16.♙c2! White is penetrating on the c-file. It's easy to see that White has more than enough compensation for the pawn. 16...♙a6 (16...♙b7 17.♙c7+-) 17.♘e5 Black has serious problems on the back rank, so the following line is more or less forced. 17...♘bd7 (17...♙xd3? 18.♙c8+) 18.♘xd7 ♘xd7 19.♙c6! ♖d8 20.♙c7 White wins material. Black can still resist a bit with 20...♖c8 21.♙xd7 ♙c3 but it doesn't save him, because of 22.♙xa6! ♙xa1+ 23.♙f1+/-) 13.♙a3 ♙xd3 14.♙xd3 ♖e8 15.♖fc1 ♘c6 16.c4↑ White is slightly better, but Black still should have gone for this line.]

11.0-0 ♘a5

12.a4! White wants to activate his bishop by ♙a3.

12...♖e8 Black prepares for ♙a3, but I think it would have been more advisable to wait until White plays that move, because now he gets a strong alternative. However, other continuations were also quite unpleasant for Black. [12...♘b3 gaining the bishop pair. 13.♖b1 ♘xc1 14.♖fxc1 is also better for White. He has a big initiative on the queen-

side. His plans are connected to the a5 and c4 moves, which could be supported well by the knight transfer to ♘d2-b3, or by the simple ♘e5.; 12...♙d7 meets by 13.♙a3 ♖e8 14.♙b4+= is also better.]

13.♘e5! Ivanchuk activates the knight, using the fact that Black can't get rid of it by ♘d7, because the f7 pawn stays unprotected...

13...♘e4 Black wants to send away the knight with f6. [13...♘d7? is refuted elegantly by 14.♘xf7! ♔xf7 15.♙h5+ The king cannot stand the pressure of the bishops and the queen. 15...♔f8 16.♙a3+! ♖e7 17.♙xh7+- wins. If Black manages to parry the direct threats, f4-f5 is killing.]

14.f3 An inaccuracy! Actually the only one in the game by White. [14.♙c2! was much stronger, forcing the Black knight to go back to f6. 14...f6 (14...♙b7 is met with 15.f3 ♘f6 16.e4!+/- with a huge attack. ♙g5 is the main idea now.) 15.f3! is the key move! 15...fxe5 16.fxe4 Opening the position clearly favors White. The Black king becomes vulnerable!]

14...♘d6 [Of course not 14...♘xc3? and the knight has no way out. 15.♙c2+-]

15.♙a3! Great play by White! Ivanchuk found a very dangerous attacking possibility, which he managed to execute in the game. [15.e4 is not the same as before. Black can simply play 15...♘b3! 16.♖b1 ♘xc1 17.♖bxc1 ♙b7! with a double edged position. 18.exd5 is always met with exd5 and Black is ready to kick out the knight with f6.]

15...♙b7 [On 15...f6 Ivanchuk probably wanted to play the same as in the game: 16.♙xd6 (16.♘g4 ♘dc4 17.♙b4 is also possible.) 16...♙xd6

17.f4!! with the idea of ♖h5, while accepting the sacrifice leads to a crushing victory for White. 17...fxe5 18.♔h5! The following moves are forced. 18...g6 19.♙xg6! ♖e7 20.fxe5 ♕d7 and now, White can slowly build up his attack. Black is too passive to neutralize... 21.♙d3! ♖g7 22.♖f6 ♕e7 23.♖af1 ♙d7 24.♖1f3! bringing all the pieces. Black can't hold the attack. I am pretty sure, that Ivanchuk had foreseen this line. One illustrative finish could be 24...♖c8 25.♖h6 Black is hopeless against the threats. 25...♖xc3 (25...♖f8 loses to 26.♙xh7+ ♖xh7 27.♖xh7 ♕xh7 28.♖xf8+ ♕xf8 29.♕xh7+-) 26.♙xh7+! ♖xh7 27.♖xh7 ♖c1+ 28.♙f2 ♕xh7 29.♕g5+ White wins, for example with 29...♕g7 30.♕d8+ ♙h7 31.♖h3+ ♙g6 32.♖g3++-]

16.♙xd6! ♕xd6 17.f4! Suddenly there is a big difference between the minor pieces. The White ones are extremely well placed, while Black's are standing passively. Black must parry ♙xh7 now, followed by ♕h5-Qxf7 and ♖f3.

17...g6 Good move, but on the other hand creating a new weakness. Without the dark-squared bishop, the f6 and h6 squares might cause huge problems.

18.♕g4 White wants to continue his attack by playing f5!

18...♘c4? Black tries to open the c-file and gain counter-play there, but White is not obliged to accept the pawn, since ♘xe5 is not a threat for him because of fxe5 followed by ♖f6 and h4-h5. [18...♖ac8 allows 19.f5! exf5 20.♖xf5→; 18...f5!? would have been the only move. 19.♕e2 ♖ec8 followed by doubling the rooks on the c-file. White should continue the attack with g4! Black seems to be safe now, but actually the attack is rolling very fast. White takes on f5, when the opening of the g-file would be dangerous after the heavy pieces occupy it, while exf5 leaves the g6 pawn vulnerable. White will push h4-h5.]

19.♕g3 [19.♙xc4 dxc4 20.♕g5! was an alternative, with the idea of ♘g4!]

19...♕c7? This is the decisive mistake, but in a bad position there are no good moves! Ivanchuk finishes the game in style.

20.♙xc4 dxc4

21.f5! f6 The last try to kick out the knight, but it loses due to a nice combination. [21...exf5 does not change the outcome of the game. 22.♖xf5 ♙d5 23.e4! ♙e6 24.♖f6+- with a decisive attack after ♖af1 and h4-h5.]

22.fxg6! fxe5 23.♖f7! [But not 23.gxh7+? ♔h8 and the Black king is safe behind the h7 pawn.]

23...♔c6 [23...♔e7 loses to 24.gxh7+ ♔xf7 25.♖f1+ ♔e8 26.h8 ♔++-]

24.gxh7+! Small calculating job, which was perfectly done by White.

24...♔xf7 25.♖f1+ ♔e7 26.h8♔! A strong intermediate move, but it could have been played anytime in the following moves as well...

26...♖xh8 27.♔g7+ ♔d6 28.dxe5+! Black resigned in view of the forced mates in all lines...[28.dxe5+ ♔c5 (28...♔d5 29.♖d1+ ♔e4 30.♖d4+ ♔xe3 31.♔g3+ ♔e2 32.♔f2#) 29.♔e7+ ♔d5 30.♖d1+ ♔xe5 (30...♔e4 31.♖d4+ ♔xe3 32.♔g5+ ♔e2 33.♔d2#) 31.♔g5+ ♔e4 32.♔f4#]

1-0

(3) Movsesian,S (2698) – Almasi,Z (2713) [C84]

40th Olympiad Open Istanbul TUR (11.2), 09.09.2012

[Balogh Csaba]

The most decisive game of the last round. We are examining the second board of the Armenia-Hungary match. Armenia had to win for the first place, while my teammate Almasi was fighting to bring the bronze for Hungary. The stakes were really high!

1.e4 e5 2.♘f3 ♘c6 3.♙b5 a6 4.♙a4 ♘f6 5.0-0 ♙e7 6.d3 We can say that this is the „main line” of the Spanish opening nowadays. All the top players prefer this to the real main move 6.♖e1. The idea is simply to avoid long theoretical battles and the computer hasn't been able to suggest a clear way for Black to equalize, while White can use more or less the same plans that he learned from the complex Ruy Lopez structures.

6...d6 7.c3 0-0 8.♘bd2 Black has many different setups here. Almasi follows the one that looks for the most direct way to equality.

8...b5 9.♙c2 d5 10.♖e1 dxe4 11.dxe4 ♙e6 The big drawback of Black's position is the pawn on b5. It's a clear target for White in this opening.

12.a4 Movsesian immediately tries to make use of the b5 weakness. [The game Grischuk-Svidler continued with 12.♔e2 and we have analyzed it in details in the 25th CEWN.]

12...b4?! Black gives up the c4 square... It's very strange that the same mistake was made by Ivanchuk against Kamsky last year. Black got rid of the b5 weakness, but created a new one on a6, which could be attacked by ♕e2 and ♖d3. [Black must try to hold his pawn on b5, even if it decoys his heavy pieces. 12...♔c8! 13.♔e2 ♔b7 14.♖d3 ♖ab8 is the right way to play with Black, as it was shown in the afore-mentioned Grischuk-Svidler game.]

13.♔e2 ♔c8 14.♖c4 ♖d7

15.a5 This is a typical move in the Spanish, when Black has played b4. It has two main ideas: one is to fix the weakness on a6, and the other is to create the threat of ♖a4 which can be very annoying in a lot of situations. [Kamsky played 15.♖g5 and gained the advantage of the bishop pair. 15...♖xg5 16.♖xg5 ♖b6 17.♖d2 and White was slightly better.; 15.♖e3 and the same idea we'll see in the game also came into consideration.]

15...f6 16.♖e3! Very well played! White transfers his knight to d5.

16...b3 A questionable move. Black wants to win some space on the queenside, and this pawn could be very disturbing in many endgames. However, White has many potential ways to attack it, by for example ♖d3-c4, ♖d2, ♔d1, ♖d5 (closing the defender bishop), or sometimes ♖a3... In my opinion, this pawn is rather a weakness. But other moves also lead to better positions for White. [16...♖c5 17.♖d5+= followed by ♖e3.; 16...♖d6 17.♖d5 ♖b8 18.♖e3 White has a much easier play in all the lines.; In general, Black should wait as long as he can with 16...bxc3 since the opening of the b-file usually disfavors him. 17.bxc3+=]

17.♖b1 [17.♖d3!? had its point of exchanging the light-squared bishops. 17...♖c5 18.♖c4 White has the advantage, because 18...♖xe4 ?! doesn't work. 19.♖d5! ♖d6 (19...♖c5 20.♖e3! ♖xe7 threatens to win a piece and on 20...♖d6 21.♖xc5 ♖xc5 22.♖xc7! ♔xc7 23.♖xe6+ ♔h8 24.♖xb3+/- with a clear pawn up!) 20.♖d4! White had to foresee this, when he played 17.♖d3. 20...♖xd4 (20...exd4 21.♖xe7++-) 21.♖xe7+ ♔f7 22.cxd4 ♖xe7 23.♖d3!+/- The Black king ended up in the center and has to face a strong attack now.]

17...♖d6 18.♖d5! ♖xd5 This move is definitely a mistake, but the position was already worse for Black. [18...♖e7 suggested itself, but White gets an edge after 19.♔c4! ♖c5 20.♖e3 c6 21.♖xe7+ ♖xe7 22.♔e2! White's next move is the same in any case, for instance 22...♔b7 23.♖xc5! ♖xc5 24.♖d3+= followed by ♖c4 and ♖d2, b3 is a real weakness.]

19.exd5 ♖e7 **20.♗d3!** Almasi has missed this plan. White transfers his bishop to c4, the d5 pawn is indirectly protected. [20.c4 ♖c5 was in Black's mind, when he took on d5. Black is doing well in the dark-squares. Even if White wins the b3 pawn after ♗e3-c5, the Black bishop will compensate well for the material deficit.]

20...♔b7 [20...f5 21.♗c4 Black's main problem is that he can't use his nice looking center, since he just creates holes in his own camp. For instance 21...e4 is met with 22.♘d4 and the knight jumps to e6.]

21.♗c4 ♖xd5 [21...♔h8 22.♖d1 ♖c5 23.♗e3+= followed by ♘d2 is also better for White.]

22.♘d4!! It's possible to blunder such moves. White is penetrating on the light squares, demonstrating well the drawback of 18...♗xd5.

22...exd4 [If Black leaves the pin 22...♔h8 the idea was 23.♗e4! c6 24.♘xc6 !+/- with a big advantage.]

23.♗e6+ ♔h8 24.♗xd5 c6 25.♗xd6 cxd5 26.cxd4 After a couple of forced moves, the position has simplified a bit. White is close to being winning. Black's main problem is the poor knight on d7, which can't move, while all

the efforts to activate it will cost some material as the game will show...

26...♖fe8 27.♗f4 Black has 3 critical weaknesses on a6, b3 and d5.

27...♔b5 [27...♘f8 is always met with 28.♗b6!+/-]

28.h3! Opening the back rank!

28...♖ac8 [28...♘f8 29.♗b6 ♗d3 30.♖ac1+/- is also horrible for Black.]

29.♖xe8+! ♖xe8 30.♖c1! White is dominating, Black has no chance to create any kind of counterplay.

30...♘f8 31.♗b6! As usual.

31...♗d3 32.♗c6! Suddenly Black's back rank got into serious trouble.

32...♗e4 [Black had to leave the a6 pawn, since after 32...♗d8 33.♗c7! ♖c8 34.♗b7! ♖e8 35.♗d6! ♗f7 and ♖c8 is the double threat. Black loses a lot of material. 35...♘g6 36.♖c8+-]

33.♗e3 ♘g6 Finally the knight is activated, but White will soon destroy all hope...

34.♗xa6! ♘h4 35.♗f1! As easy as that, there is no way to continue. The game is practically over.

35...h6 [35...♘f5 is met with 36.♖c3 ♘xd4 White can choose between two ways to win. 37.a6+- (or 37.♗d3+- with a winning endgame.)]

36.♖c3! White prepares his next two moves...

36...♖a8 37.f3! and ♗f2 is coming next, sending back the pieces. [The last trick was 37.a6? ♖xa6]

37...♔e6 [37...♖g6 38.♙f2+-]

38.♙f2 ♘g6 39.♖b5 ♘f4 Black tries some new tricks, but the bishop neutralizes them easily once again.

40.♙e3! ♖f5 41.♔h2 ♘g6 [41...♖g5 is refuted with 42.g3+-]

42.♖xb3 [42.a6 would have won as well.]

42...♘h4 43.♙f2 ♖g5 44.♙g3 White does not even want to exchange his bishop.

44...♘f5 45.f4 ♖g6 46.♖xd5 Finally all three weaknesses are falling.

46...♖e8 47.a6 h5 48.a7 h4 49.♙f2 With this victory, Armenia won the match 2.5–1.5, taking the 3rd gold medal from the last 4 Olympiads! Congratulations forthem!

1–0

(4) Ivanchuk,Vassily (2769)

– Vachier-Lagrave,Maxime (2686) [B96]

40th Olympiad Open Istanbul TUR (9.1), 06.09.2012

[Arkadij Naiditsch]

A game between two players as creative as these is always exciting. And this time as well, !we won't be disappointed!

1.♘f3 c5 2.e4 We are back in the Sicilian. It's hard to say why did Ivanchuk decide to start the game with 1. ♘f3?!. Vachier-Lagrave is playing exclusively the Sicilian against 1.e4.

2...d6 3.d4 cxd4 4.♘xd4 ♘f6 5.♘c3 a6 6.♙g5 e6 7.f4 We are in one of the main position of the Sicilian Najdorf. Thousands of games have been played here. The position is very sharp and was analyzed for generations without any concrete results!

7...♖c7 Lately, this move went out of fashion. Black has been trying more often to play 7...♖b6, or 7...h6 8.♙h4 and ♖b6 now. Of course, one of the main moves is 7...♘bd7.

8. ♗xf6 This is the main option to „punish“ Black. White is losing the bishop pair, while getting a very clear plan: to play against Black’s central pawn structure. Usually, they play f5-g3-Bh3 applying maximum pressure.

8...gxf6 9. ♔d2 Another move can be 9. ♔d3 with the idea of bringing the Queen to h3, where it would increase the pressure against the e6 pawn, plus the ♗e2-Bh5 maneuver could be unpleasant for Black.

9...b5 Quite a risky move by Black. [9...♘c6 10.0-0-0 ♗d7 leads to well known positions.]

10. ♗d3!? Very creative play by Ivanchuk. I think almost everyone would castle long without thinking much! To put the bishop on d3 is very unusual in these structures. More „main stream“ would be ♗e2, forcing Black to play h5 — Black can’t allow White to put his bishop on h5, it’s a well known rule in the Najdorf.

10... ♗b7 11.0-0 The key of hite’s idea — to castle short. It’s difficult to say if the idea gives some advantage — but it’s clear that it’s very interesting. Black doesn’t have his usual play on the queenside anymore.

11...♘c6 [Of course not 11...♔b6?! 12.♔h1! protecting the knight on d4 indirectly. 12...♔xd4 13. ♗xb5+]]

12.♘b3 White needs to keep as many pieces on the board as possible to support his future attacking plans. Another plan for White could be connected with playing a4.

12...h5?! I don’t like this move too much, even though it’s a „standard“ plan for Black. Why not to hurry with h5 now? White’s bishop is on d3 and not on e2. I think that moves like 12...♗e7 followed by b4 or ♖c8 would be a better reaction here. The position is very complicated of course, but I think Black should be doing fine.

13.♔h1 h4 14.h3 Of course, White doesn’t allow Black to play h3.

14... ♗e7 15.♖ae1 White prepares everything for the action in the center.

15...b4 Black says with this move: either You play ♘d5 now, or you’ll never do it.

16.♘d5!? A very interesting and sharp sequence is beginning. The White pieces are standing almost at their

maximum best, but Black has a full extra piece, which is huge material advantage. Let's see how things develop.

16...exd5 Anything else than taking on d5 would just lead to a bad position, 16...♔d8 17. ♘xe7 and White is much better.

17.exd5 ♘a7! Nice move by Black. The knight from a7 can always jump to c8 if there's a need to protect the bishop on e7 urgently.

18.♘d4! I like this move a lot. White doesn't care about giving away the d5 pawn for immediate action. This is the way to play the Sicilian — no slow play!

18...♙xd5 Black needs to take the pawn on d5. [In case of a passive defense with 18...♔f8 19.♘f5 ♘c8 20.♖e3 White creates extra pressure on the e-file by doubling the rooks. 20...♙xd5 21.♖fe1 ♙e6 22.♖xe6! A strong and typical sacrifice on e6. 22...fxe6 23.♘d4 Even though White is a full rook down, White's attack is more than dangerous here. Black can't stop White from playing ♘xe6, and White will combine the threats against the Black king with the weakness of the white squares to create some super-dangerousplay!]

19.♘f5 Where will the Black knight go now? To c8 or c6...

19...♘c6?! [19...♘c8! Sometimes the more passive move can be the better one — but a move like ♘c8 is very hard to play. 20.♙xb4 (20.♖f2 doesn't bring much now. 20...♙c5! The Black queen is perfectly placed. 21.♖fe2 ♖a7 The e7 bishop is very well protected as well. Black should be doing better here.)

20...♔f8 21.♖f2 ♙c5 and I think that Black is fine. Of course, the position is stills complex with a lot of tactical motifs, which always give White good practical chances.]

20.♙e4 [Another option was 20.♙b5!? axb5 21.♙xd5 A lot of Black pieces are hanging, but Black has a defensive move: 21...♖d8! protecting from a lot of threats at the same time. 22.♖e2 ♔f8 23.♙f3 with quite a similar position to the one in the game, except that the rook on e2 is better placed than on e4. There's no d5 push with tempo.]

20...♙xe4 21.♖xe4 Black is a full piece up, but the position remains very unclear. The White knight on f5 is worth at least „half a piece“.

21...♔f8 The Black king finally escapes from the dangerous position on e8 — now the Black rook is going to stand there.

22.♖fe1 ♜e8

23.♕e2 White brings the Queen to g4, where it will create additional threats.

23...♖h7 [23...d5 24.♕g4 ♜h7 25.♖4e2 would lead to the position in the game.]

24.♕g4 d5 25.♖4e2 We are facing a funny position. White has no „direct“ threats, but Black has no „direct“ plan to get rid of the nasty pin on the e-file either. It's sort of a double-zugzwang position. The question for Black is: What can I do to get out of the pin? For White: How can I improve my position?

25...♕b6?! This move already gives away the material, but strangely enough, Black seems to have no plan! Very rarely we see someone with a piece up, having an almost hopeless position — but that seems to be the current situation. White's idea is to play g3 next, getting the g-file to have some extra mating threats. [25...♕d7 Black is

preparing to give away a full knight in order to exchange queens — but I could not find a better defense. 26.g3! Opening the g-file. 26...♘d4 It's never great to give the full piece for „nothing“. 27.♘xd4 ♕xg4 28.hxg4 hxg3+ 29.♔g2 ♜h2+ 30.♔xg3 ♜xe2 31.♜xe2 with a very big advantage for White in the endgame.]

26.g3 Following the already known idea, but why not to win the piece back immediately? [26.♘xe7 This move is too simple not to see it. It's strange that both players thought the position is fine for Black. I think White is doing much better. 26...♘xe7 27.♜xe7! Easy but nice 27...♜xe7 28.♕c8+ ♔g7 29.♜xe7 ♕f2 30.♕g4+ ♔f8 31.♜d7! With this horrible pawn structure, it's hard to imagine Black surviving here.]

26...♘d4 Black's only hope [26...hxg3 27.♕xg3 and Black has no defense against ♜g2-Qg8 mate.]

27.♘xe7! Nice calculation by White! Now everything is forced.

27...♘xe2 28.♕g8+ ♔xe7 29.♜xe2+ ♔d6

30.♜xe8! [30.♕xe8? ♕d4! And Black is back into the game. It's very difficult to mate the Black king, and the

White king is suddenly open as well. Of course, White's still better, but the game could end very easily with a draw.]

30...hxg3 31.♔f8+! The only winning move! [The logical looking 31.♖d8+? leads to nothing more than a draw. 31...♔c7 32.♖c8+ ♔d6 33.♖d8+ ♔c7]

31...♔c6 32.♖c8+ ♔d7 33.♔e8+! White is playing just perfectly.

33...♔d6 34.♖d8+ ♔c5 35.♔e3+ And finally Black loses his Queen.

35...♔c6 36.♖d6+

What an interesting game! Great play by White. We saw a typical knight sacrifice on d5 followed by the „usual“ attacking motifs with the great additional idea of opening the g-file by playing g3! Let's hope we can use some of these principles in our own games!

1-0

Endgame section

(15) Hansen,S (2577) – Leko,P (2737)

Olympiad, 07.09.2012

[Chess Evolution]

Black has a winning advantage, but converting it requires very good technique. Normally Leko makes no mistakes in such positions, but at this moment both players were living from the 30 seconds increments, which made their tasks much more difficult.

61...♞d8!! Leko would like to take his knight to e5, which was the only way to improve his position. [The same idea with 61...♞f8 was less effective, because of 62.♙d4 ♞e1 63.♙b2! White collects the a2 pawn. 63...♞xe4+ (63...♞e2 64.♞xa2 White holds, because if Black brings his knight to e6 or d7, the rook can leave the unpleasant pin on the 2nd rank by attacking the knight.) 64.♙f3 ♞c4 65.♞xa2 ♞c2 66.♞a8! White is again able to leave the pin. Objectively the position is drawn, but of course, Black can still create some problems...]

62.♞a6 White tries to restrict the knight and prepares the ♞xf6 or ♙d4 ideas. [In comparison to the previous line, now on 62.♙d4 Black has 62...♞e1 63.♙b2 ♞e2! 64.♙a1 (64.♞xa2? ♞f7! This is the difference. Now the knight is protected, White cannot leave the pin with ♞a7. ♞e5-d3 is coming next. 65.♙f3 ♞c2 66.g4 ♞e5+ 67.♙g3 ♞d3) 64...♞c6 65.♞a6 ♞c2 Black has good winning chances, anyway this would have been the only try for White.]

62...♞c6! This great move was probably missed by Hansen. White is forced to take the knight.

63.♞xc6

63...♞d1?! I thought this move spoils the advantage, but as we'll see, it just makes it much harder to convert it. [The study-like 63...♞e1!! would have won on the spot. 64.♙d4 (64.e5 is probably the best practical chance, but it also leads to a theoretical losing position after 64...a1 ♞ 65.♞xf6+ ♙h7 66.♙xe1 ♞xe5! 67.♞f5 ♞xe1 68.♞xg5 ♞e4+ 69.♙h3 ♙h6 Black has a long-term winning position, by using zugzwangs in the future...; 64.♙xe1 a1 ♞ White should be able to hold the draw here, if his king was not in a mating net. 65.♙c3 ♞d1+ 66.♙h3 ♞h1+

67.♔g4 ♚h5#!) 64...♖xe4+ 65.♔f3 ♖xd4 66.♖a6 ♖d2 is hopeless for White.]

64. ♖d4! Only move.

64...♖xd4 65.♖a6 ♖d2! [65...♖xe4+ is much weaker 66.♔f3 ♖b4 67.♖xa2 White has an easy draw here.]

66.e5 Any exchange of the pawns generally favor the defending side, but now it doesn't help White to survive.

66...a1 ♚! 67.♖xa1

67...♖d4+? This is a mistake, which could have cost him the victory... [With only 30 seconds on the clock, Leko missed the opportunity to play 67...f5+! 68.♔f3 g4+! 69.♔e3 ♖g2! Black wins the g3 pawn, and obtains a winning rook endgame. 70.♔f4 ♖f2+ 71.♔e3 ♖f3+ 72.♔d4 ♖xg3 White's last chance is to create counterplay with the e-pawn, but both attempts fail as we will see. 73.♖e1 (73.♖a8 ♔g5! 74.e6 ♔f6 Black wins.) 73...♖b3! 74.e6 ♖b8 75.♔e5 (75.e7 ♖e8) 75...♔g5! Both sides are focused on his own pawns. 76.e7 f4! 77.♔d6 and now (77.♔d4 ♖e8 is hopeless.) 77...g3! 78.e8 ♚ ♖xe8 79.♖xe8 f3! As the rule says, if two pawns reach the 3rd rank, the rook can't stop

them. This case is not an exception... One of the pawns promotes. 80.♔e5 f2 81.♖g8+ ♔h6]

68.♔f3 g4+ 69.♔e3 fxe5 We have reached a very drawish rook endgame. White has various defensive options...

70. ♖f1?! White tries to cut the king, but this was not the most accurate move. [Probably the easiest would have been 70.♖a8 trying to keep the g4 pawn under attack. 70...♖b4 71.♖g8+ ♔f5 72.♖f8+ ♔e6 73.♖g8= Black can't improve his position.]

70...♖a4 71.♖f8 ♖a3+ 72.♔f2! Only the passive defense saves the game! [72.♔e4? ♖xg3 wins for Black, because after 73.♖g8+ (73.♔xe5 ♖e3+! Black cuts the king with two files from the pawn, which means an easy win for him. 74.♔d4 (74.♔f4? ♖f3+) 74...♖e1) 73...♔f6 74.♖f8+ ♔g7 75.♖f5 ♔g6 76.♖xe5 ♖f3! This is a known position from rook endgame books. The winning line is the following: 77.♖a5 White tries to cut the king along the 5th rank, otherwise the Black king goes ahead of the g-pawn and wins with the „bridge building“ method. 77...♔f6 78.♖b5 ♖f1! 79.♖a5 g3! Black wins because of the g2 threat, which forces White to allow the king to come with ♖a2 and ♔g5...]

72...♖a2+ 73.♔f1! Generally it's not a good sign if the king is squeezed to the back rank, but here this is the only move to survive. [73.♔e3? ♜g2]

73...♖a6 Leko frees his king from the cut, with the idea of ♜f6...

74.♔e2 ♖a2+ Black makes some time-winning random moves. This is the right technique when we play with the 30 seconds increment time control.

75.♔f1 ♜b2 76.♔g1 ♜b6 77.♔g2 ♜d6 78.♔g1 ♜f6 79.♖a8 ♔f5 Finally the king is out, but the position is still drawn...

80.♖a4 [The idea introduced in the 70th move was good enough here as well. 80.♜g8 ♜d6 81.♔f2 ♜d2+ 82.♔f1 ♖a2 with the idea of playing ♔e4! (Would be the winning move, but here White has the concrete 82...♔e4 83.♜xg4+! ♔f3 84.♔e1!= avoiding the mate on the back rank.; 82...e4 83.♜e8= Black can't make progress.) 83.♔g1! Avoiding the trap of ♔e4 ♜xg4 ♔f3! The only try for Black is to give up the pawn with 83...♔e4 84.♜xg4+ ♔f3 85.♜g8 e4 but White makes a comfortable draw after 86.♜f8+ ♔e3 (86...♔xg3 87.♔f1=; 86...♔e2?? 87.♜f2+) 87.g4 ♔d3 88.♜d8+ ♔e2 89.♔g2! The idea is to sacrifice the rook for the e-pawn and promote the g-pawn with the help of the king. Black has nothing against it. 89...e3 90.♔g3 ♔e1 91.g5 e2 92.♜e8=]

80...♜d6 81.♔f2 ♜d2+ 82.♔f1 ♜d4 [82...e4 83.♖a5+ ♔f6 Without the king, Black can't make progress. 84.♜b5=]

83.♜a2 ♜d3 84.♔f2 ♔e4 85.♜a4+ ♜d4 86.♜a2 White found a very safe defensive setup. Black can't really break it, but of course he can try as long as he wants.

86...♜c4 87.♔e2 [87.♜e2+ ♔d5 88.♜d2+ ♜d4 89.♜a2= was completely fine.]

87...♜b4 88.♜c2 ♜b3 89.♜c4+ ♔f5 90.♔f2 ♜f3+ 91.♔g2 ♜d3 92.♔f2 ♜d2+ 93.♔f1 ♜d4 Leko is trying to confuse his opponent by maneuvering, and suddenly, after a stubborn defense, Hansen decides to defend differently... It was a slightly strange decision...

94.♜c3?! [94.♜c2 was the right move!]

94...♜b4 [94...♔e4 95.♔e2]

95.♔e2? Black is winning after this move. [95.♜c2! was still the right move. Probably the only one to save the game.]

95...♜b2+ 96.♔f1 ♔e4 Black wants to play ♜d2-d3, followed by penetrating with the king on the 3rd rank. White can't avoid this threat.

97.♜a3 [97.♜c4+ is met with 97...♔e3! (97...♔f3 98.♜c3+ Black has to retreat.) 98.♜c3+ (when the pawn is untouch-

able 98. ♖xg4? because of 98... ♔f3) 98... ♔d4 and e4 is the next.]

97... ♖d2 98. ♖a4+ ♖d4! Black gets his king to e3 in any case, then he can calmly advance his e-pawn.

99. ♖a2 [99. ♖a3 ♖d3 100. ♖a5 ♔f3! wins.; 99. ♖a5 ♖d5! 100. ♖a4+ ♔e3! We already know this trick well, e4 is coming next. 101. ♖xg4 ♔f3]

99... ♖d3? This is a strange mistake, which would never happen if the players had more time or if the game would have been played for less than 6 hours already. Now the game is drawn again! [99... ♔e3! would have easily won.]

100. ♔f2 ♖f3+ 101. ♔g2 ♖c3 102. ♖a4+ ♔d3 Leko tries his last attempt, giving up the g-pawn...

103. ♖xg4 e4 104. ♖g8 ♖c2+

105. ♔f1!! Excellent move! I must say, pretty much an illogical one. Most of us would have gone with the king to h3, where it can support the g-pawn. [However Black is winning after 105. ♔h3 e3 106. ♖d8+ ♔c3 107. ♖e8 e2 108.g4 (108. ♔g4 ♔d2 109. ♔f5 e1 ♔ 110. ♖xe1 ♔xe1 111. g4 This is very similar to the final position of the game. The huge difference is that the rook is on the 2nd rank,

which leaves the g3 square free for the Black king. The only win is 111... ♖f2+! 112. ♔e6 ♖g2 113. ♔f5 ♔f2! 114.g5 ♔g3! 115.g6 ♔h4 116. ♔f6 ♔h5 117.g7 ♔h6) 108... ♔d2 109. g5 (109. ♔g3 transposes to the previous line. 109... e1 ♔+ 110. ♖xe1 ♔xe1 111. ♔f4 (111.g5 loses to 111... ♖c4! An important motif, cutting the king and when White pushes his pawn, the Black rook attacks and wins it.) 111... ♖g2! 112.g5 ♔f2 113. ♔f5 ♔g3 114.g6 ♔h4 115. ♔f6 ♔h5 116. g7 ♔h6) 109... ♖c3+ (109... ♖c4 cutting the king works as well. 110.g6 e1 ♔ 111. ♖xe1 ♔xe1 112.g7 ♖c8 and ♖g8 next.) 110. ♔g4 ♖e3 wins.]

105... ♖c1+ 106. ♔g2 e3 107. ♖d8+ ♔e2 108. ♖a8?! This is just a waste of time, but not a decisive mistake. [108.g4 leads to an easy draw. 108... ♔e1 109. ♖e8 e2 Here White has different ways to draw. The easiest one is 110.g5 ♔d2 (110... ♖c5 is met with 111. ♔f3! ♖f5+ 112. ♔g4=) 111. ♔f3 e1 ♔ 112. ♖xe1 ♖xe1 113. ♔f4! and Black must give up his rook for the pawn. 113... ♖g1 114. ♔f5 ♔e3 115.g6=]

108... ♔e1 At this moment, White lost on time, but right after it happened, Hansen admitted that the game was over anyway. However, White has a study-like way to draw..[108... ♔e1 109. ♔f3! (109.g4? loses to 109... e2 110.g5 ♔d2 111. ♖d8+ ♔c3 112. ♖c8+ ♔b2 113. ♖b8+ ♔a3 The Black king seems to be very far from the g-pawn, but it's still on time to catch it. 114. ♖e8 e1 ♔ 115. ♖xe1 ♖xe1 116. ♔f3 (116.g6? ♖e6) 116... ♖g1 117. ♔f4 ♔b4 118. ♔f5 ♔c5 119.g6 ♔d6 120. ♔f6 ♖f1+ 121. ♔g7 ♔e7 122. ♔h7 ♖g1 123.g7 ♔f7) 109... e2 110. ♖e8 ♖c3+ 111. ♔f4 ♔f2 This is the position that both players had foreseen. Unexpectedly, White can save the game with

112. ♖xe2+! (Not 112.g4? because of 112... ♜f3+! 113. ♔g5 ♜e3) 112... ♔xe2 113.g4! The following line confirms the evaluation: 113... ♜f3+ This is generally the principled method.

a) 113... ♜c4+ 114. ♔f5 ♔f3 115.g5 ♜c5+ 116. ♔f6 ♔g4 117. g6 ♜c6+ 118. ♔f7 ♔h5 119.g7 ♜c7+ 120. ♔f8=;

b) 113... ♔d3 114.g5 ♔d4 115.g6 ♔d5 (115... ♜c1 116. ♔f5 ♔d5 117.g7 ♜g1 118. ♔f6=) 116.g7! ♜c8 117. ♔f5=;

c) 113... ♔f2 114.g5 ♜g3 115. ♔f5;

114. ♔e5 ♜g3 115. ♔f5 ♔f3 116.g5 and now, compared to the 105. ♔h3 line, Black doesn't have ♔g3, he must waste a decisive tempo on it. 116... ♜g2 117.g6 ♔g3 118. ♔f6 ♔h4 119.g7 ♔h5 120. ♔f7= White is just on time!]

0-1

(16) Gustafsson, Jan (2610) – Stupak, Kirill (2523) [A40]

40th Olympiad Open Istanbul TUR (10.4), 07.09.2012

[Chess Evolution]

After a long fight, Gustafsson could reach nothing more than this knight endgame. This game was very important for the match outcome — so there was no choice for White, he had to win. It was a must! Let's take a look at how Jan managed to do this.

52. ♔h3 ♔f6 Black can't do much more than just keep waiting.

53. ♘g3 White is threatening to place the knight on f5, attacking the pawn h6.

53... ♘h4 And of course, Black doesn't allow him to do it.

54. ♔h2! The beginning of the right plan!

54... ♔e6 55. ♔h1! White is preparing to play f3.

55... ♔d7

56.f3! Here comes the breakthrough. Black still can't play Nxf3 because of Nf5 , with an easily winning position.

56...exf3 57.Kg1 White is going to collect the f3 pawn now.

57...Kd6 58.Kf1 This move makes no sense. Of course, Kf2 was possible immediately.

58...Kd7 59.Kf2 Kc6! Black needs the king on b4!

60.Nf1 Kb5! 61.Ng3 Gustafsson repeats moves to win some time — they got 30 seconds every additional move.

61...Kc6 62.Nf1 [Of course not Nf5 Nxf5?? gxf5 g4]

62...Kb5 63.Nd2

63...Kb4! Now the question is: if White plays Nxf3 , will he have a winning or a drawn pawn endgame? Let's take a look:

64.e4! [Nxf3? would have been a terrible mistake! $\text{64...Nxf3 65.Kxf3 65...Kc4!}$ Only this move gives Black a draw! The White king can't get to the d2 square. 66.Kc2 Kc3 and White can't do anything. Against e4, Black always has Kxd4 .]

64...dxe4 [64...Kc3? 65.e5]

65.Nxe4 Kc4 Black did the maximum he could. The pawns are still equal and every exchange of pawns gets closer to a draw.

66.Kc3

66...Ng2+? A terrible mistake, and the draw was so close. [66...f2! would give Black the result he expected. $\text{67.Kxf2 at 67.Nf2 Ng2}$ with an immediate draw. $\text{67...Kxd4 68.Nf6 Ke5 69.Ng8 Kf4 70.Nxh6 Nf3 71.Nf7 Nh2!}$ Probably Black blundered the move Nh2 in this long forced line. But now the position is a complete draw!]

67.Kxf3 Ne1+ 68.Kg3! Black is losing both pawns now.

68...Kxd4

69. ♖xg5! And Black, unfortunately, will lose the h6 pawn as well.

69... ♔e5 **70.** ♖f7+ [Of course not **70.** ♖f3+? ♖xf3 **71.** ♔xf3 ♔f6 **72.** ♔f4 ♔e6 and this pawn endgame is a draw.]

70... ♔f6 **71.** ♖xh6 ♖d3 **72.** ♔h4 he rest needs no comments. It's too easy, the h- and g- pawns are just too much to give Black any chance for a draw.

72... ♖e5 **73.** g5+ ♔e6 **74.** ♔g3 ♖d7 **75.** ♔f4 ♖e5 **76.** ♖g4 ♖d3+ What an interesting endgame with a dramatic finish! I guess both players will remember this game because of its importance...

77. ♔e3 1-0

Clash of the Titans

(17) Pirc,Vasja – Alekhine,Alexander [D32]

Bled Bled, 31.08.1931

[*Chess Evolution*]

A classical attacking game by Alekhine.

1.d4 d5 2.c4 e6 3.♘c3 c5 4.cxd5 cxd4 A tricky sideline of the Tarrasch defense, where Black sacrifices a pawn right in the 4th move in order to gain some tempi in the development. At that time, without the computers, it had the shocking effect even on such good players as Pirc.

5.♔a4+!? [5.♔xd4 leads to the game by transposition after 5...♘c6! 6.♔d1 exd5 7.♔xd5 ♕d7]

5...♕d7 6.♔xd4 exd5 7.♔xd5 ♘c6 This is the starting position of the line. Black's next move is ♘f6, followed by a quick development with ♕c5 and 0–0. Sometimes castling queenside is also possible.

8.♕g5?! This logical developing move is already a big mistake, after which Black probably already has enough

compensation for the pawn. [As practice showed later, White should play 8.♘f3 ♘f6 9.♔d1 ♕c5 and here a new generation top GM, Wang Yue, came up with a strong novelty 10.a3 The idea is to have ♘a4 against the ♔b6 attempts in order to prevent the ♕b4 check. 10...0–0 (10...♔b6 11.e3 ♕e7 Black had to retreat with an active piece to prevent ♘a4. (11...0–0–0? loses to 12.♘a4) 12.♕e2+= White successfully finishes the development.) 11.♕g5 (The computer's suggestion 11.♕f4!? is also good 11...♔b6 12.e3 and White is better. 12...♔xb2? 13.♘a4+-) 11...♔b6 12.e3 ♕e7 (12...♔xb2? 13.♕xf6 gxf6 14.♘a4 traps the queen.) 13.♕d3 ♕g4 14.♔c2 h6 15.♕h4 ♖fd8 16.0–0 ♕xf3 17.gxf3+= White had a healthy extra pawn. The game showed well that such kind of chess doesn't work anymore in the 21st century.]

8...♘f6 9.♔d2 h6! Leaving White in a very difficult situation. Both possible continuations have their big drawbacks...

10.♕xf6 White decided to gave up the bishop pair and help Black to finish the development with 0–0–0. [However 10.♕h4 is not much better either. Black plays 10...g5 11.♕g3 ♔a5 followed by 0–0–0, with strong counterplay.]

10...♔xf6 11.e3 0–0–0! We can clearly see that Black won the opening battle. His position is clearly worth a pawn.

12.0–0–0? This is objectively the decisive mistake. White probably blundered the 14th move of the World Champion. However a move like 12. ♔c1 doesn't look much better either.

12...♙g4! 13.♘d5 This intermediate move was White's hope, but Alekhine nicely out-calculated his opponent.

13...♖xd5! 14.♙xd5

14...♙a3!! Probably came as a thunder from the blue sky for Pirc. The Black rook is coming to d8. White has to pay for his undeveloped pieces on the kingside.

15.♙b3 White starts to defend resourcefully, but his position is already hopeless. [15.bxa3 loses to 15...♙a1+ 16.♙c2 ♙xd1+ 17.♙xd1 ♙xa2+ 18.♙c3 ♖d8! Black is winning. A nice finish could be 19.♙d3 ♙xa3+! 20.♙b3 ♖xd3+!]

15...♙xd1 16.♙xa3 [16.♙xd1 doesn't help either because of 16...♙xf2 Black equalizes the material and his attack continues to roll. 17.♘f3 ♖d8+ 18.♙c1 ♙xb2+! 19.♙xb2 ♖d1+ 20.♙xd1 ♙xb2]

16...♙xf2! With the double threat of ♙c2 and ♙xf1, White has only one move to keep resisting.

17.♙d3 ♙g4 [On the most obvious 17...♖d8 White prepared 18.♘h3!; However 17...♙a4 was also winning. 18.♘f3 (18.b3 ♖d8 19.♙e2 ♙f6! penetrating on the weak-

ened diagonal.) 18...♖d8 19.♙f5+ ♖d7! Black wins.(But not 19...♙b8 20.♙f4+! and the bishop falls on a4.)]

18.♘f3 ♙xf3! No mistakes in the attack by Alekhine! [It was not too late to spoil the advantage with 18...♖d8 19.♙e2 forcing the exchange of queens.]

19.♙f5+ [19.gxf3 ♙xf3 20.♖g1 ♖d8 is equally hopeless.]

19...♙b8 20.♙xf3 ♙e1+ 21.♙c2 [21.♙d1 was objectively better, but 21...♙xe3+ 22.♙d2 Black has an extra pawn and keeps his attacking chances with 22...♙e5]

21...♖c8! Blundering White's idea?!

22.♙g3+ ♙e5+!! Of course not! Alekhine prepared this great counter-check! White gets mated soon.

23.♙b3 ♙d1+ 24.♙a3 ♖c5! It was enough for White. Too many shocking moments in only 24 moves.

0-1

Editorial Preface

The week after the Olympiad seems like an empty one. But of course, this is not true. Many exciting tournaments are going on all around the world.

From the main events, the female Grand Prix is definitely the most important. Once again, the best female players are fighting for prizes and the possibility to qualify to the WCC match against the current World Champion Hou Yifan.

The Balkan Grand Prix Final is a new event and immediately got a lot of attention. The first seed, Baadur Jobava, had a bad tournament, but the Bulgarian Ivan Cheparinov showed some really great chess!

During the next week, a lot of league events are starting: the Bulgarian league, the Serbian league, the Croatian league (where both of Your commentators are playing).

The Bilbao Final Masters starts on September 23rd and in a little more than 10 days, the male Grand Prix begins in London.

A lot of events where we will certainly see very exciting games!

As usual, we wish You a lot of fun with the current issue of CEWN!

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Jobava,Ba (2734) – Malakhov,V (2700) [C53]

Black Sea Countries Burgas BUL (1), 12.09.2012

[Arkadij Naiditsch]

Baadur Jobava is a very creative and aggressive player, especially when he has the White pieces. On many of his games we can find new ideas and some great fighting middlegames. In this game, from a position that was about equal, Baadur tries to keep a lot of tension in the center and blunders a great tactic by Malakhov. We'll see a short and very spectacular game.

1.e4 Jobava's main move is 1. d4, but he likes to play 1.e4 against players that mainly answer with 1...e5.

1...e5 2.♘f3 ♘c6 3.♙c4 Jobava's favorite Italian.

3...♙c5 4.c3 [4.b4 In a few of his previous games, Baadur tried this move, but it seems that he had enough of it, and instead goes for one of the main lines.]

4...♘f6 5.d4 exd4 6.e5 Probably the only try for White to get an advantage. [6.cxd4 ♙b4+ 7.♙d2 ♙xd2+ 8.♘bxd2

d5! 9.exd5 ♘xd5 and White has nothing better than to make a draw by playing 10.♙b3 ♘a5 11.♙a4+ ♘c6 12.♙b3 ♘a5]

6...d5 The main move for Black.

7.♙e2!? This move was tried before as well, by Vallejo. [7.♙b5 ♘e4 8.cxd4 ♙b6 This is the main line which is considered to be OK for Black.]

7...♘e4 8.cxd4 ♙b6 [8...♙b4+ 9.♙d2 ♘xd2 10.♘bxd2 0-0 11.0-0 Black got the bishop pair, but White's much better pawn structure gives him a slightly better position. This was seen in the game Vallejo,P-Ponomarev 2011]

9.♘c3 Jobava is improving on his own game that was played just a few months ago against Kamsky. [9.0-0 ♙g4 10.♙e3 f5! Typical and important move for Black in many lines. 11.exf6 ♙xf6 12.♘c3 0-0-0 and Black was doing fine, and even managed to win the game. Jobava, B-Kamsky, G. Amsterdam 2012.]

9...0-0 [9...♙g4 10.♙e3 and we can see a clear difference, Black doesn't have the f5 move because after exf6, Black can't take back with the queen due to the simple ♘xd5.]

10.0-0

10...♘f5 A slightly unusual play by Black. More normal is 10...♘g4 or maybe even 10...f5. [10...♘g4 11.♘e3 and now the very important! 11...f6! (The usual 11...f5 would be the wrong choice now. 12.♙c1! This is what White was hoping for! Now he's threatening to play ♘xd5 and at the same time stopping Black from pushing f5-f4. 12...♘xf3 The only chance for Black is to force matters. 13.gxf3! ♘xd4 14.fxe4 White is a piece and doing clearly better, but some tension still remains in the position.) 12.exf6 ♘xf6 I think this position should be close to equal. But here we find an important psychological moment: usually White has this position a tempo down, because instead of 7.♘e2, the main move is 7.♘b5, but I think that a tempo shouldn't matter much here and that Black should be doing fine.]

11.♘a4 As usual, Jobava is being very creative — the main idea for White is to try not to exchange the knight from c3 for the bishop on b6. The usual move 11.♘e3 would lead to about an equal position after 11...♘g6, followed by f5.

11...f6!? Of course! White takes away a piece from the center, to a4 — and Black immediately starts his play in the center.

12.a3 Wow, what a move! Baadur is telling Malakhov: „You don't have any move to improve Your position and I'm not afraid of fxe5". Well. .. of course, objectively, a move like 12.a3 can't be good, but from a practical point of view, it makes some sense — it's really hard to find the right continuation for Black. [12.exf6 ♙xf6 would just lead to some good play for Black.]

12...fxe5?! White's dreams are starting to come true. It would be very interesting to see what Baadur had prepared against 12...♙e7!, basically forcing White to play 13.exf6, after which White's position can never be better.

13.♘xb6 [Of course not 13.dxe5? ♘xf2+! 14.♙xf2 ♘xf2 15.♙xf2 ♘xe5 A rook and two pawns plus an attack are clearly more than enough to be very well here with Black.]

13...axb6 14.♘xe5 Black has to face his first small problems.

14...♘xe5 Malakhov is going for a very sharp position. [In case of the usual 14...♙f6 15.♘xc6 (15.f4 ♘d6 followed by ♘e4 and ♘f5 is good for Black.) 15...bxc6 16.♘f4 The White bishop is going to occupy a perfect square on e5. White will develop good play on the kingside in the future with g3 and f4. I think that White's position should be

better here. However, probably this better is just „a little better“.]

15.dxe5 ♞c5! The right place for the Black knight is on e6, but the question is: is Black in time to do it?

16. ♞e3 ♞e6 We are at a critical position. If Black doesn't lose anything during next move, his position will be very good, but it's still White's turn...

17.g4? White is starting the action, but on the wrong side! [17. ♞b3! would have been a very unpleasant move for Black. White wants to win the d5 pawn by playing ♞ad1 next. 17... ♞h8 It's hard to find a better way to defend the d5 pawn. 18. ♞ad1 d4! Now we see why ♞h8 was necessary. It's never good for Black to push d5-d4. Now the Black bishop will be under attack on e4. 19.f4 The position is very complex, but I think that White should be doing a bit better here. White's idea of playing g4 followed by f5 is strategically very dangerous for Black.]

17... ♞g6 [17... ♞e4 18.f3 ♞g6 19.f4 ♞e4 would lead to the same position as in the game.]

18.f4 ♞e4! White's center is dangerous, but at the same time, in danger. The Black bishop on e4 is a beast and any

weakening of the White king could almost lead to mate! White needs to be very careful now.

19. ♞b3? White doesn't feel the danger and doesn't realize he needed to stay „alive“. [19. ♞f3! To get rid of the bishop on e4 should be clearly the first priority. 19... ♞xf3 20. ♞xf3 d4 21. ♞ad1 ♞a5! The Black rook is coming into the game through a5. The position is very complex, but from a practical point of view, it's much easier to play for Black... White has a lot of things hanging and it's very easy to blunder a tactical blow.]

19... ♞h4! The beginning of White's end! Black is of course bringing his queen closer to the White king. Suddenly, the threat of playing ♞h3 has become deadly...

20. ♞f2 Nothing else to do, White can't stop Black from playing ♞h3 next. In case of 20. ♞d2?, ♞d4! almost finishes the game.

20... ♞h3! The Black queen takes a perfect position. The bishop on e3 is pinned. Black is just threatening to play ♞d4 or ♞xf4 next.

21. ♞d1 This logical move is already losing. White blunders a very nice tactic. [21. ♞c3 was the only way to con-

tinue the game — even if to do such a move is very difficult because it just leads to a bad position. 21...d4 Easy and good. 22. ♖xd4 ♘xf4 23. ♖f1 ♔xg4+ 24. ♔g3 Black is a pawn up, but White is still fighting. The bishop pair gives White good chances for a draw.]

21... ♖xf4! What a beautiful tactic!

22. ♖xf4

22... ♘xf4 White is completely paralyzed.

23. ♖f3 Giving Black a chance to finish the game in great style. [Of course, it doesn't help to play 23. ♔xh3 ♘xh3+ 24. ♖f1 ♘xf2 25. ♖xf2 ♔f8+ and Black is totally winning.]

23... ♘e2+! Malakhov is in good tactical shape and doesn't allow any chance to slip away from him.

24. ♖xe2 ♖xf3 And we can clearly see that Black is just destroying White. Just a few moves ago, the whole position was very unclear.

25. ♖f2 ♔xg4+ 26. ♖f1 ♔f8 Bringing the last piece into the game. Black has two pawns for the exchange plus a very strong attack. White is just hopeless.

27. ♖e1 ♔h3+ 28. ♖g1

28... ♖f4 What a final position! I think Jobava was very upset after losing this kind of game, but he had his chances. All in all, the line with c3-d4 is not a real attempt to get an opening advantage, and probably we won't see Baadur playing it again for a while...

0-1

(2) Kotic,D (2517) – Balogh,Cs (2668) [D05]

Hungarian league, 16.09.2012

[Balogh Csaba]

I played an interesting game in the Hungarian team championship. My opponent is a very safe, hard-to-beat GM, but today he was in sacrificing mood.

1.d4 ♘f6 2. ♘f3 e6 3.e3 My opponent's favorite opening. I have already lost a game against him, where I played 3...b6. This time I was much better prepared, and I believe I managed to find a very solid setup against this whole system.

3...d5 4. ♘d3 c5 5.b3 White's general idea is to develop with ♘b2, ♘bd2, 0-0, ♘e5 and f4, building an aggressive attacking position. I decided to allow all this.

5... ♘c6 6.0-0 ♘d6 7. ♘b2 0-0 8. ♘bd2 b6 9. ♘e5 ♘b7 10.f4 Here we are, both sides have finished developing, it's time to find good plans in the middlegame. In my preparation, I met with a great game played two years ago by the Russian Super-GM Evgeny Tomashevsky. When I saw the game, I immediately decided to follow it. A very important detail is that Black must keep the tension in the center, waiting for cxd4 until the right moment. We'll understand the subtleties soon.

10... ♖c8! Black threatens to take with cxd4 and on exd4, ♘b4, capturing the strong light-squared bishop. White must parry this by:

11.a3 ♘e7! Black plays on the weakened light squares, e4 and f5. The drawback of White's setup is that if Black installs a knight on e4, he can't kick it out with f3, while on the other hand, Black will be ready to play f6. So, the plan is to play ♘e4 and now we understand why it was so important not to include the moves cxd4 exd4. In that case, White could simply play ♖e2 or ♖f3, preventing Black's idea.

12. ♖e2 [The whole point of Black's strategy comes out after 12. ♖f3 b5! with the threat of c4, which forces White to make unfavorable exchanges. White generally would like to avoid changing the pawn structure in the center. 13. ♘xb5 (13.dxc5 ♘xc5 14. ♘xb5 Black wins a pawn and obtains a better position with 14... ♖b6!) 13...cxd4 14. ♘xd4 ♖xc2 =+ with a slightly more comfortable position for Black.]

12... ♘e4! Black successfully finished his plan.

13.dxc5 At this moment, it was already clear to me what was my opponent's intention, but I was not afraid of the attack. [13. ♘xe4 dxe4 14. ♘c4 happened in the „ideal game”, but Tomashevsky overtook the initiative with 14... cxd4 15.exd4 ♘f5! =+ Black is better, the e4 pawn is very strong. The White bishops are not well coordinated (if he had a pawn on c4 and a bishop on c2, White would enjoy a big advantage), while the knight will be soon sent away from e5. 16.a4 ♖e7 By protecting the e6 pawn, Black prepares to play f6 in the near future. First, he can activate his rook with ♖fd8 or ♖c7-Rfc8. 17. ♘g4?! This is definitely

not a good move, White should have waited until Black pushes f6, creating a small weakness on e6. Now Black has a „free hand“ on the position. 17...♖c7 18.g3?! White protects the f4-pawn in order to win the e4-pawn with ♘f2, but this seriously weakens the h1–a8 long diagonal. 18...♖fc8 with the idea of playing ♕d5 and the c2-pawn falls. 19.c3 ♖d8 20.♘f2 And here Tomashevsky obtained a decisive attack with

20...e3! 21.♘g4 ♖xc4! 22.bxc4 ♕a8! Followed by ♖b7 next. White is in deep trouble. 23.♖ad1 ♖b7 24.d5 ♕c5! White can't hold the e3 pawn and the bishop on c5. Black simply wants to take on d5. 25.♖g2 exd5 26.cxd5 ♖xd5 Black is completely winning, but the finishing line was also nice: 27.♖h3 ♖c8 28.♖xd5 ♕xd5 29.c4 ♕e6 30.♖g2 ♘h4+! 31.gxh4 ♕xg4 32.♖d3 ♕h3+ 33.♖f3 ♖g4+ 0-1 Cori-Tomashevsky, Khanty-Mansiysk Olympiad 2010.]

13...♘xc5! [13...♕xc5 was also possible 14.b4 ♘xd2 15.♖xd2 ♕d6 = with equal chances.]

14.♕xh7+!? This was the point of 13.dxc5, otherwise Black simply takes on d3, getting an obvious advantage with the bishop pair and a better pawn structure. [14.

♘df3 f6 15.♘g4 ♘xd3 16.cxd3 ♖d7 =+ with a dreamed position for Black.]

14...♖xh7 15.♖h5+ ♖g8 16.♖f3 At first sight, it looks scary, but there are many resources to defend.

16...f6 Black must give „air“ for the king on f7.

17.♖h3! Who says „A“ must say „B“ as well. [17.♘g4 is completely harmless after 17...♖e8! and the sacrifice doesn't bring anything. 18.♘h6+ gxh6 19.♖xh6 ♘f5! dealing with the ♖g3 threat.]

17...fxe5! [I gave an exclamation mark to the text move because during the game I thought 17...♕xe5 was also promising, but the machine found a brilliant idea: 18.fxe5 f5 This is the idea, closing the b2 bishop, and on ♘f3, with the threat of ♘g5, Black can simply play ♘e4. However, the computer found a really deep move:

19.a4!! Only move! Completely unexpected, but after all, it's very logical. White wants to play ♕a3. According to the machine, Black has nothing better than forcing a draw with 19...♖e8 Normally, Black should avoid playing this move, since it blocks the escape route of his king.

20. ♖h7+ ♔f7 21. ♖h5+ = and draw by perpetual check, since g6 is a selfmate after ♖h7.]

18. ♘f3?! Very aggressive, but objectively the losing move. Black found some cold-blooded defensive moves later. [The critical line starts with 18.fxe5

18... ♕c7!! The whole line is practically forced for White. (I'm pretty sure that 99 GMs from 100 would play 18... ♕b8 without thinking, keeping the c-file open for the rook. Of course, I would have also played this, but it probably spoils the advantage after 19. ♖h7+! (19. ♘f3 is White's other attacking idea, but this is less dangerous. 19... ♖e4 20. ♖f1 with the idea of ♖h8 and ♘g5 giving a double check. 20... ♖f5! and on 21. ♖h7+ ♔f7 22. g4 Black has a big enough material advantage to give something back from. 22... ♖g8! 23. ♖xg8+ ♔xg8 24. gxf5 ♘xf5 wins.) 19... ♔f7 20. ♖h5+! White wants to give a perpetual check... 20... ♘g6 The only try for the win. (20... g6? is bad in view of 21. ♖f1+ ♘f5 (21... ♔e8 22. ♖xf8+ ♔xf8 23. ♖h8+ ♘g8 24. ♖f3+ +/-)

22. ♖xf5+! White has no choice, he must sacrifice, but now everything works well for him. 22... exf5 23. ♖h7+ ♔e6 (23... ♔e8 24. ♖xg6+ and the rook penetrates on the h-file.) 24. ♖xg6+ ♖f6 25. exf6 White already has 3 pawns for the piece and his attack continues.) 21. ♖f1+ ♔e7 22. ♖xg6 ♖xf1+ 23. ♘xf1 During the game, I saw this position, but I stopped here because my intuition told me that White can't have enough compensation for the piece (also the b2 bishop is out of play). However, I was wrong... Black must protect the g7 pawn... 23... ♖g8 24. ♖h7 ♔f8 White still has energy to improve his position by 25. ♘g3! and against the computer's suggestion 25... ♖f7 26. ♖g5 ♔g8 27. ♖h4 ♖g6 A really nice defense, not afraid of anything, but... 28. ♖h8+ ♔f7 29. ♖xc8 ♕xc8 30. ♖d8! This is the difference. This is why the machine suggests 18... ♕c7!1 as the only move, which leads to an advantage. Just an incredibly deep calculation! 30... ♖xc2 31. ♖xc8 ♖xb2 32. ♖xb8 ♘d3 Black has a tiny edge, but the game should end in a draw.) 19. ♖h7+ ♔f7 20. ♖h5+ ♘g6! 20... g6 would have been bad, just as the 18... ♕b8 line showed. 21. ♖f1+ (After 21. ♖g3 Black preserves his extra piece with 21... ♖e8 22. ♖xg6+ ♔e7) 21... ♔e7 22. ♖xg6 ♖xf1+ 23. ♘xf1 ♖g8! 24. ♖h7 ♔f8! 25. ♘g3 The whole line

goes like the variation with 18...♙b8, but now the cold-blooded defense bares its fruits. 25...♚f7! 26.♚g5 (26. ♖h8+ ♙e7 27.♚g5+ ♙d7 28.♖h7 ♖g8) 26...♙g8! 27.♚h4 ♚g6! and White's counterplay has ran out of strength.]

18...♘e4! To prevent ♘g5.

19.♙xe5 Still, it looks a bit dangerous. White wants to take on g7 followed by mate, and ♙xe5 loses to ♘xe5, but the knights are excellent defenders now.

19...♘f5! In order to protect the g7 pawn. The knight also might go to h6 to close the h-file, in some situations.

20.g4 [20. ♙xd6 ♚xd6 21.♘e5 Black prevents the mate with 21...♘h6!]

20...♘f6! My opponent told me after the game that he had missed this move when he played 18.♘f3. The game is over now. White only has a few checks...

21.♚h8+ Other moves are equally hopeless: [21. ♙xf6 ♚xf6; 21.♚g6 ♚e8; 21.♚g5 ♘xe3]

21...♙f7 22.♘g5+ ♙e7 The queen is trapped. White is forced to give up one of his attacking piece to save it.

[But not 22...♙e8 because of 23.♘xe6! would complicate matters.]

23.♙xf6+ ♚xf6 24.♚h7 Black is two pieces up and completely winning. The last trick is that he should not be greedy and give back one of the pieces.

24...♙d7 [24...♚g8 25.gxf5 ♖xf5 is also winning.; However, it was not too late to blunder the game away with 24...♘h6?? 25.♚xg7+ ♘f7 26.♖h6!! +- and the game is over again, but suddenly White wins.]

25.gxf5 exf5 26.♚xg7+ ♙e7 White is forced to exchange queens.

27.♖h7 ♚xg7 28.♖xg7+ ♙e7 The rest is not interesting anymore. The extra piece decides the game.

29.♖c1 ♖c3! 30.♘h7 [On 30.♙f2 the best is 30...♖h6 31.h3 d4! 32.exd4 ♖h4 The king falls into a mating net 33.♖e1 ♖xf4+ 34.♙g1 ♖g3+ 35.♙h2 ♖g2+ 36.♙h1 ♖xg5+]

30...♖h6 31.♘f8+ ♙d6 32.♘g6 ♙f6 33.♖xb7 ♖xg6+ 34.♙f2 ♙h4+ 35.♙f3 d4 0-1

(3) Wojtaszek,R (2713) – Jakubowski,K (2511) [E42]

Polish league, 16.09.2012

[Balogh Csaba]

A real fighting game from the Polish league. Anand's second, Radoslaw Wojtaszek, nicely outplayed his opponent positionally, but Black resourcefully succeeded to create counterplay and save the game.

1.d4 ♘f6 **2.c4** e6 **3.♘c3** ♙b4 **4.e3** Wojtaszek definitely had analyzed this opening very deeply, because this was Gelfand's main weapon on the WCC match against Anand. He must have analyzed it over many sleepless nights. Black bravely goes for one of the sharpest lines...

4...b6 **5.♗ge2** c5 **6.a3** ♙a5 **7.♖b1** ♘a6 This is the initial position of the whole line. Both sides have made some artificial moves around the a5 bishop. Black needs to preserve it and quickly create tension in the center, otherwise his pieces get out of play.

8.g3!? This is the new direction. Earlier, ♙d2 was the mainline.

8...♙b7 **9.d5** A known temporary pawn sacrifice idea from the Queen's Indian with 4.g3.

9...b5! Black needs to undermine the strong central pawns. There is nothing new so far, they are following the theory. [9...exd5 leads to a better position for White. 10.♙g2 0-0 11.0-0 White wants to take on d5 with the knight and the a5 bishop is stuck out of play. Black is forced to take on c3. 11...♙xc3 12.♗xc3 ♘c7 13.cxd5 += White achieved the maximum, e4 is coming next.]

10.♙g2 bxc4 **11.0-0**

11...exd5 Black introduced this novelty here, but I'm not sure if it was a prepared one... [11...0-0 happened mainly in the previous games. 12.e4 d6 (12...exd5!? seems to be the critical move here. 13.e5 ♗g4 14.♙xd5 Looks very good for White with human eyes. He's going to protect the e5 pawn with f4 and the g4 knight is out of play, but on the other hand, the machine doesn't feel any danger for Black. I'm quite sure that the Anand team has a huge analysis in the position, and it means something: they preferred to play it with White.) 13.♙g5 exd5 happened in a Gelfand-Anand rapid game in 2011, but then, this was a quite unexplored territory. White could have gotten an edge with 14.♗xd5 ♙xd5 15.♙xf6 ♖xf6 16.♖xd5 +=]

12.♗xd5 ♗xd5 [12...♖b8 was the alternative, but White keeps his initiative with energetic play: 13.♗xf6+ ♖xf6

14. ♖xb7 ♜xb7 15. ♔d5 White wants to restore the material balance and create a blockade on the d5 square with ♘f4 and ♜d1. Black must try to do something against it. 15... ♖c6 16. ♔xc4 d5 seems to be great for Black, but a small tactical trick changes everything: 17. ♘d4! dxc4 18. ♘xc6 ♖c7 19. ♖d2! ♔d7 20. ♘a5 += with a better end-game for White.]

13. ♖xd5 ♖c8 Here again, White recovers the pawn.

14. ♖xb7 ♜xb7 15. ♔a4 ♖b6 16. ♔xc4 Black is facing a difficult decision, he must choose between two bad lines. One is to allow White to create a fortress on the d5 square, achieving his maximum potential, and the other is to push d5, losing the right to castle.

16...d5 I agree that in a practical game this is the correct decision. [16...0-0 17. ♘c3 ♘c7 18. ♜d1 += is also good for White.]

17. ♔a4+ ♔f8 18.b4! A strong positional move, creating weaknesses and holes in Black's position. The bishop will find its ideal place on the long diagonal. Another difficult choice for Black: to take on b4 or to push c4.

18...cxb4 [18...c4 is also ugly. 19. ♘f4 ♜d8 20. ♖b2 ♘c7 White can execute a brilliant regrouping idea.

21. ♔d1!! +/- First, White transfers his queen to g4 or h5 and only then puts pressure on the d5 pawn with his rooks.]

19.axb4 h5! Black pinned his hopes to this move when he played 16...d5. He tries to bring his rook to the game along the 6th rank.

20.h4 Obviously, the h4 threat had to be prevented.

20... ♜d8 21. ♖b2 ♘c7 White has a clear advantage. His minor pieces are standing perfectly, it's time to activate the rooks.

22. ♜bd1 ♜h6 23. ♜d2! White focuses his forces against the d5 pawn with ♜fd1 and, if necessary, ♔a2. Black must try to find some counterplay.

23... ♘e6 24. ♜fd1

24...g5! Black found his best chance. A passive waiting policy would have led to a slow defeat. He wants to open the king's position with gxh4. hxg5 would be met with ♘g5 and the f3-h3 squares are weak. Another idea could be to open the long diagonal with a d4 pawn sacrifice.

25.b5! Very nice move, neutralizing all the direct threats along the 4th rank.

25...♖g6 We have reached the critical position from White's point of view. Wojtaszek found the right plan, but executed a wrong version of it. White could seriously increase his advantage with hxg5 ♘xg5 and ♖f4, but this would be met with ♘f3 at the right moment. [The tempting 25...d4 doesn't work now because of 26.♘xd4 ♙xd4 27.♙xd4 and the original idea 27...gxh4 loses to 28.♙c5+! +-]

26.♙f1? Black's situation looks quite bad here as well, since 26...d4 doesn't work, and hxg5 ♘f4 is in the air. What can he do? [According to the machine, the strongest move was 26.♖d3! +/- and hxg5 ♘f4 is coming next with a big advantage.; In my opinion, a more human solution would have been 26.♙b4+! ♔g8 27.♙c3 and Black must try to close the diagonal, but 27...d4 28.♘xd4 ♙xd4 29.♖xd4! By sacrificing an exchange, White can preserve his battery! 29...♘xd4 30.♖xd4 ♖xd4 31.♙xd4 f6 The only defense. 32.hxg5 ♖xg5 33.♙xf6 ♙xb5 34.e4! +/- White is much better. Over the board, it's practically hopeless to stand the pressure with such a weak king.]

26...♙g8!! After this fantastic cold-blooded move, Black has no problem at all. The idea is to push d4 and

avoid the ♙c5 check... [26...d4 did not work immediately 27.♘xd4 ♙xd4 28.♙xd4 and White wins because of the ♙c5 threat!]

27.hxg5 There was nothing better already, but now

27...d4! 28.♘xd4 ♙xd4 29.♙xd4 ♘xg5! The Black king is completely safe, thanks to the great 26th move.

30.♙a1 White is forced to allow a perpetual check.

30...♙h1+ 31.♙e2 ♙f3+ 32.♙e1 ♙h1+ [Black can't dream with more after 32...♖e8 33.♖d8 and this is the last moment to finish the game with a perpetual check. 33...♙h1+ 34.♙e2 ♙f3+]

33.♙e2 ♙f3+ 34.♙e1 ♙h1+ Great escape by Jakubowski!

1/2

(4) Muzychuk, Anna — Ju, Wenjun

FIDE Women's Grand Prix Ankara, 16.09.2012

[Arkadij Naiditsch]

Anna Myzychuk is one of the few female chess players that managed to get an ELO rating over 2600 points. Her opponent is a young Chinese prodigy with an ELO already close to 2550. We can expect an interesting battle!

1.e4 I don't know why, but the most female players prefer 1.e4 than the more closed systems that arrive after 1.d4, 1.c4, 1.♘f3.

1...c5 2.♘f3 d6 3.d4 cxd4 4.♘xd4 ♘f6 5.♘c3 a6 We are in the Najdorf.

6.♙e3 is definitely one of the main moves.

6...♘g4 [6...e5; 6...e6 are the other two main continuations.]

7.♙g5 h6 8.♙h4 g5 9.♙g3 ♙g7 Until here nothing exciting has happened. But we can already see that both players are ready to fight! The position is very sharp, but there's still a lot of theory to come.

10.♙d2 Quite a rare move for White. 10.h3 was much more often played, and should be considered the „main“ choice here.

10...♘c6 11.♘b3 ♙e6 12.h4 White is following the game Carlsen-Grischuk from the rapid WCC 2012. [In case of 12.0-0-0 ♙b6 we could have a similar position to the game, but with the h-file closed, which is clearly favorable for Black.]

12...♙g8!? In the game, Grischuk played 12...gxh4 13.♙xh4 and had a worse position. I think 12...♙g8 is an interesting move which keeps a lot of tension.

13.hxg5 Of course, White opens the h-file. This can be useful before castling long.

13...hxg5 14.0-0-0 I think we arrived at the first critical position of the game. Black has a lot of moves...

14...♙b6 A standard move. The Black queen is standing nicely on b6, attacking the f2 pawn, defending from White's f3 because of ♘e3 coming. At the same time, Black can escape by castling long if needed... [Maybe an interesting option is: 14...♙xc3!? This paradoxical move is better than it looks. The usual rule of „never give up the Black square bishop“ is right of course, but chess is a tactical game, so rules can be broken sometimes :). 15.♙xc3 ♙b6 winning a tempo. Now the pawn on f2 is hanging and Black's next move could be ♙c8 followed by ♘b4 with a very quick attack.]

15.♘d5! This is the main reason why 14...♔b6 might not be the right move.

15...♙xd5 16.exd5 ♘ce5 Computers like a lot White's position, but things are much more unclear than they seem. The bishop on g7 is a very strong piece which could compensate a lot. Black's main problem is that both of his knights don't seem to be doing well. If Black manages to solve this problem, her position should be perfectly fine.

17.♖e1 White is preparing the f3 move. [17.♔b1!? Probably this simple move would put Black in front of some difficult decisions. White doesn't want to force anything, but in many lines ♔xg5 can be a real threat, or ♘d4-Nf5. 17...♘d7! Black is leaving the e5 square for the g4 knight. 18.♙d3 with the threat of ♙h7 and ♔xg5. I think White should have an advantage here even though things are far from clear!]

17...f5?! The wrong answer, as we saw in the previous explanation. Black should just play 17...♘d7 followed by ♘ge5.

18.f3? White misses a big chance to get an almost decisive advantage after. [18.f4! Of course, White shouldn't allow Black to play f4. 18...gxf4 19.♙xf4 (19.♔xf4 looks very strong. White wants to take on f5 or to give a check on a4, leaving Black's king without the possibility to castle, but Black has some counter-chances. 19...0-0-0! (19...♖f8 20.♔a4+ and White is clearly better.) 20.♔xf5+ ♔b8 21.♔b1 ♖df8 White is a pawn up, but all the Black pieces are in the game. The position seems to be very unclear.)

19...0-0-0 20.♔b1 Now things are different. White wants to play ♙d3 or ♘d4-Ne6. The position is complex, but I think that the advantage is clearly on White's side.]

18...f4! Absolutely correct! Strategically, it's very important for Black to exchange White's black-squared bishop.

19.fxg4 fxg3 Black managed to get rid of the main enemy, the bishop on g3. Now we can clearly see how much better is the bishop on g7, than White's on f1. I think that White needs to be very careful not to fall behind here.

20.♙d3! Development is first priority! [If White gets greedy: 20.♔xg5 ♔f2 21.♖e4 0-0-0 as we often see, castling long is a very strong idea in a lot of cases. 22.♔f5+ ♔b8 and I think only White risks being worse.]

20...♔f2 Of course, Black tries to reach an endgame — his main idea in this opening.

21.♖hf1 Already it's hard to find anything better for White. At least Anna is bringing her knight from b3 back into the game.

21...♔xd2+ 22.♘xd2 And we are at another critical moment. Can Black be better here? It's hard to say, the position is still very dynamic. White wants to play ♙f5 followed by ♘e4-Nxg3.

22... Nc4?! The Chinese talent doesn't choose her best possibility. [22... Nxd3+! Why not to create another doubled-pawn in White's camp... 23.cxd3 Rxc8+ putting the Black king on b1! 24.Rb1 Rxc5 and the Black rook comes into the game. 25.Rf5 Re5 The position is forced... 26.Nf3 Rxd5 27.Nxe5 (Doesn't work 27.d4? e6!) 27... Rxe5 28.Rxe5 dxe5 29.Rc2! The exact move that probably secures a draw.(It was not too late to make a mistake with 29.Rxe5? Rf8! and White would have a long fight ahead to reach a drawish result.)]

23. Re5 The White bishop is going to take a very nice position on e6.

23... Nf2 Blocking the f-file and not allowing White to play Nxe4 or Rh1–Rh7.

24. Nc4

24... Kd8! Important and good move. [24... Rxd8 25.Rxe3! would lead to nothing good for Black. The king on e8 is very badly placed and is a clear target for the White pieces.]

25. Nb6 Rf8! Probably the last precise move — reaching equality.

26. Re6 [26.Nxa8? Rxf5 Black already got a pawn for the exchange, plus she has a very strong knight on f2 and a great bishop. We have quite a typical position for the Sicilian, where Black sacrificed an exchange and this sacrifice was clearly a good one!]

26... Ra7 Black wants to play Rd4 or Rc7 with a clearly better endgame — White has nothing better than to make a perpetual attack against the a rook.

27. Nc8 Ra8 28. Nb6 Ra7 29. Nc8 Ra8

30. Nb6 Ra7 31. Nc8 An interesting fighting game in the Najdorf, with a funny ending!

(15) Rozentalis,E (2570) – Jaracz,P (2543)

Polish league, 16.09.2012

[Chess Evolution]

Obviously the position is dead drawn, but let's take a look at how easily it can be lost even on the GM level...

32. ♖a3 ♜e6 [Black has various ways to achieve the draw. One of them is 32... ♜e6+ 33. ♔d4 ♔d6 34. ♜a7 ♜g6 35. g4 and here Black can choose between two direct draws: 35... h5 (Or 35... ♜h6 36. ♜xg7 ♜xh3 ⇒) 36. gxh5 ♜g5 = and the kingside vanishes soon.]

33. ♜a7 ♜f7?? This could have been the decisive mistake, but the idea itself is already dubious. Why to take the unnecessary risk of transposing into a pawn endgame, where one possible calculation mistake could be crucial?!

34. ♜xf7! White feels his chance.

34... ♔xf7 35. ♔d4 ♔e6 36. ♔c5 ♔d7 We have reached a critical position. White is winning and it would have

been possible to find the solution with some logical thinking. White's only plan to make progress is to get his king behind the c-pawn with the help of zugzwang. White should play ♔b6, and on ♔d6 ♔b7 ♔d7, a3 puts Black in zugzwang. Black is forced to play ♔d6, which is met with ♔c8 ♔d5 ♔c7. The game will be forced to continue with c5 bxc5 ♔xc5 and ♔b7, and here again, Black will be forced to push b4, clearing completely the queenside, after which a race to collect the kingside pawns will begin. When we have foreseen this, we must think about how to improve our chances in the final stage of the game: the race to the kingside. If we reach this point, we easily come to the conclusion that both sides should aim to advance their pawns on the kingside before the action on the queenside begins...

37. ♔b6?? White is the first one who fails... [37.h4! +- was the winning move. All of Black's possible reactions will be discussed after 38.h4.]

37... ♔d6?? Black gives back the chance, but from now on, White plays perfectly... [37...g5! was the right move, as it was explained above. 38. ♔b7 ♔d6 39. ♔c8 (39.g4 ♔d7 40.a3 h6 = The same story as after 39.a3.; 39.a3 would

spoil White's extra tempo, and there will be no zugzwang anymore... 39...♔d7 40.g3 h5 => 39...c5 40.bxc5+ ♔xc5 41.♔c7 Now Black can reach a draw in different ways. One of them is 41...b4 keeping the decision open regarding which direction should the king take. 42.g3 h5 43.g4 hxg4 44.hxg4 ♔d5 ! is the right direction. (However 44...♔b5? loses very instructively. 45.♔d6 ♔a4 46.♔c5 ♔a5 Black seems to control the situation, but White can set him into zugzwang by triangulation. (46...♔a3 47.♔b5 +- is over.) 47.♔d4! ♔a4 (47...♔b5 48.♔d5 will be the same.) 48.♔c4! ♔a5 49.♔c5! ♔a4 50.♔b6! ♔a3 51.♔b5 +- White successfully finished his plan.) 45.♔b6 ♔e4 46.♔c5 ♔f4 47.♔xb4 ♔xg4 48.a4 ♔f4 = The pawns promote at the same time.]

38.h4! White has found the right idea! From now on he has a very easy task. The winning method is the same in all the variations!

38...h5 It's time for White to execute the winning method again, but the move order is really important! [38...♔d7 39.g4! ♔d6 40.g5 advancing the pawns as far as possible. 40...g6 (40...♔d7 41.h5 ♔d6 and now White can execute the usual plan: 42.♔b7 ♔d7 43.a3 ♔d6 44.♔c8 ♔e5 45.♔d7 ♔f5 46.♔xc6 ♔xg5 47.♔xb5 ♔xh5 48.♔c4! g5 White wins because his king is close enough to catch the g-pawn, while the Black one is too far away from the b-pawn. 49.♔d3 ♔g4 50.b5 ♔h3 51.b6 g4 52.b7 +-) 41.a3 ♔d7 42.♔b7 ♔d6 43.♔c8 c5 44.bxc5+ ♔xc5 45.♔c7 ♔c4 46.♔c6 +- White wins.; 38...g6 is met with 39.g4! h6 40.g5! Black has two choices, but both of them lead to the same result. 40...hxg5 (40...h5 41.a3 ♔d7 42.♔b7 ♔d6 43.♔c8 c5 44.bxc5+ ♔xc5 45.♔c7 ♔c4 46.♔c6 White wins.) 41.hxg5 ♔d7 42.♔b7 ♔d6 43.♔c8! (43.a3? ♔d7) 43...♔e6 (43...

c5 44.bxc5+ ♔xc5 45.♔d7 ♔b4 46.♔d6 +- is hopeless.) 44.♔c7 ♔f5 45.♔xc6 ♔xg5 46.♔xb5 ♔f5 (46...♔h4 47.a4 +- White queens first and he can exchange the queens with ♔h8 and ♔g8 at the end.) 47.♔c4 The White king catches the g-pawn. 47...g5 48.♔d3 ♔f4 49.b5 +- and b8♔ arrives with check.; 38...h6 is the worst, because after 39.h5 White preserves 3 extra tempi for the following fight. 39...♔d7 40.a3 ♔d6 41.g4 This is not necessary, but wins easily. 41...♔d7 42.♔b7 ♔d6 43.♔c8 ♔e5 Black loses by one tempo. (43...c5 44.bxc5+ ♔xc5 45.♔c7 ♔c4 46.♔c6 +- with the usual win.) 44.♔c7 ♔f4 45.♔xc6 ♔xg4 46.♔xb5 ♔xh5 The pawns seem to promote at the same time, but White has a well-known and instructive winning method:

47.♔c4 g5 48.b5 g4 49.♔d3! The White king threatens to catch the pawn. Black is forced to support it with his king. 49...♔h4 50.b6 g3 51.♔e3 Black must use his king again. 51...♔h3 52.b7 g2 53.♔f2! and after 53...♔h2 White promotes with check. 54.b8♔+ +-]

39.a3! This is the only way to win. [39.♔b7? with the same plan would spoil the win, because of 39...c5 ! 40.bxc5+ ♔xc5 41.♔c7 (41.a3 is not the same anymore. 41...b4 42.axb4+ ♔xb4 Black is a tempo ahead in comparison to the game, which is enough to save the game. 43.♔c6 ♔c4 44.♔d6 ♔d4 45.♔e6 ♔e4 46.♔f7 ♔f4 47.♔xg7 ♔g4 =) 41...b4! 42.♔d7 ♔b5 43.♔d6 ♔a4 44.♔c5 ♔a3 45.♔b5 ♔xa2 46.♔xb4 and the race ends with a draw. 46...♔b2 47.♔c4 ♔c2 48.♔d4 ♔d2 49.♔e4 ♔e2 50.♔f4 ♔f2 =]

39...♔d7 40.♔b7 ♔d6 [40...g6 does not change much after 41.g3 +-]

41.♔c8 Everything is easy and forced from now on...

41...♔e5 42.♔c7 ♔d5 [42...♔f4 is very slow now. 43.♔xc6 ♔g4 44.♔xb5 ♔xh4 45.a4 ♔g3 46.a5 +-]

43.♔d7 c5 44.bxc5 ♔xc5 45.♔c7 ♔c4 46.♔c6 b4 47.axb4 ♔xb4 48.♔d5 ♔c3 49.♔e6 ♔d3 50.♔f7 ♔e3 51.♔xg7 ♔f4 [51...♔f2 52.♔g6 ♔xg2 53.♔xh5 +-]

52.♔g6 [And Black resigned in view of 52.♔g6 ♔g4 53.g3! +- The final subtlety!]

1-0

(16) Zhao,Xue — Stefanova,Antoaneta

FIDE Women's Grand Prix Ankara, 16.09.2012

[Chess Evolution]

We are in the 1st round of the female Grand Prix. After the opening, White had a totally winning position, but somehow, Black managed to come back and get to this endgame.

28.f3 ♖e3 Black chooses a very forced continuation which doesn't lead to anything good. [28...♔c6 followed by ♔c7-b4-Re8-Rb8. It's important to bring the rook to the b-file, which would lead to about an equal endgame. If there's a side that can try to play for a win, it would probably be Black.]

29.♔f2! A very difficult move to make for White, and the right choice! It's hard to say if White was lucky or if Zhao Xue calculated everything until the end. In any case, a strong play by the Chinese! [Less good would be 29.♔d2 ♖b3 30.♖b1 (30.♔c2 c4! followed by c3 and Black can try to push a bit in this position.) 30...c4 31.♔d1! No fear from c3. 31...c3+ 32.♔c1 cxb2+ 33.♖xb2 ♖xa3 34.♖xb5 and the position should be a draw.]

29...♖b3?! [29...♖e7 It wasn't too late to return to e7 and play an almost equal position, but it seems that Stefanova had a positive attitude after surviving the first 20 moves of the game in a very critical position for her.]

30.♖d1+! White is taking the rook to d2, after which the Black rook on b3 is suddenly trapped!

30...♔e7 31.♖d2 White wants to play ♕d1.

31...b4!? The best try and actually everything still looks quite tricky! [31...c4? is of course very bad. 32.♕d1 ♖d3 33.♖xd3 cxd3 34.♔e3 with an easily winning bishop endgame.]

32.♕c4 [32.axb4? ♖xb4 and Black is OK.]

32...bxa3 33.♕xb3 axb3 34.bxa3 c4 Until here, every move was quite forced. Black has two very dangerous pawns, but White is in time to stop them!

35.♔e3! The White king has to support the rook.

35...c3 36.♖e2! Whites is playing very well. Her idea is to bring the rook to e1 and, by playing ♔d3 or ♔d4, start attacking the Black pawns.

36...♔d6 [36...b2 37.♔d3+ ♔d6 38.♖e1 +-]

37.♖e1 The last precise move! Now White's position is winning. Black is just one move too late to stop White from playing ♔d4 or ♔d3, which will easily block the dangerous Black pawns.

37...♔c5 38.♔d3 The White plan came to a successful conclusion.

38...c2 39.♔c3 ♕d5 40.h4 h5 41.♔b2 The White king is blocking both Black pawns, giving her a very easy winning position.

41...♔d4 42.♖e8 Combination of threats: the advance of the a-pawn, the attack on the h-pawn by playing g4, this is just too much for Black...

42...f5 43.♖d8 ♔c5 44.♖c8+ ♔d4 45.a4 Finally the a-pawn starts to roll.

45...♔e3 46.a5 f4 47.a6 ♔f2 48.♖c5 ♕a8 49.♖g5 This would be a good moment for resignation, but Black decided to continue the game. No more comments are needed from here...

49...♕c6 50.a7 ♕b7 51.♔c1 ♕c6 52.♔d2 ♕a8 53.♖g8 ♕d5 54.a8 ♖ ♕xa8 55.♖xa8 ♔xg2 56.♖h8 ♔xf3 57.♖xh5 ♔g4 58.♖h8 f3 59.♖f8 And again we saw how quickly an equal endgame can turn in one side's favor. That happens when the losing side starts to feel too safe and doesn't pay full attention to the opponent's possibilities.

1-0

Clash of the Titans

(17) Tolush, Alexander V — Botvinnik, Mikhail [D83]

URS-ch11 Leningrad (2), 1939

[Balogh Csaba]

A great game by Botvinnik, which shows that despite being considered a master of positional chess, he was a genius to attack as well.

1.d4 ♘f6 **2.c4** g6 **3.♘c3** d5 The Grünfeld defense. This is the first sign that we will see an exciting game.

4.♗f4 ♗g7 **5.e3** 0–0 **6.♖c1** White concentrates his forces in the center, where the fight will begin soon.

6...c5 At the time, this was a novelty. The move is in the true spirit of the Grünfeld. Black sacrifices a small amount of material to open the position, by breaking the solid central pawns. [White's setup went a bit out of fashion nowadays because of the 6...♗e6!? continuation. The critical line starts with 7.♙b3 c5! 8.♙xb7 ♙b6! and theory considers it to be equal in 25-30 moves lines.]

7.dxc5 ♙a5 A standard move in the Grünfeld. Black must play actively, otherwise, he'll end up in a bad position.

8.cxd5 ♖d8! White's already two pawns up, but if Black starts recovering the central pawns, White might collapse quickly because of his undeveloped kingside.

9.♙d2?! Black overtakes the initiative after this mistake. [9.♗c4! ♗e6! The d5 pawn must be re-captured before the one on c5. The move had to be carefully calculated, because at first sight it's tactically refuted by (Not 9...♙xc5 10.♗b3 and White consolidates his position.) 10.b4! ♙xb4 11.♙b3 White leaves the pin on the d-file with tempo. 11...♙xb3 12.♗xb3 ♘xd5 13.♘xd5

13...♖xd5!! This is the point! Black sacrifices an exchange, but the two bishops are dominating the board. Black will probably win the a2 pawn, and the a-pawn will start to run supported by all the Black pieces. White can hardly block it. (13...♗xd5? drops a piece after 14.♖d1 e6 15.e4 +-) 14.♗xd5 (14.♘f3 ♖d7 15.♗xe6 fxe6 =; 14.♗xb8 ♖xb8

15. ♖xd5 ♖xd5 16. ♘f3 ♖xa2 followed by the advance of the a-pawn.) 14... ♖xd5 15. ♘f3 ♘c6! This is an important detail! (On the direct 15... ♖xa2 White can neutralize the „Grünfeld bishop” with 16. ♖e5!) 16.a3 ♖b2 17. ♖d1 e6 18.a4 ♖a3↗ The position is objectively about even.]

9... ♘xd5 White seems to be in deep trouble, but Tolush had a nice idea in mind.

10. ♖c7! [10. ♘xd5 leads to a horrible endgame after 10... ♖xd2+ 11. ♖xd2 ♖xd5+ and b2 falls.]

10... ♖xc7 11. ♘xd5

11... ♖xd5!! Just brilliant! Botvinnik plays the whole game like the biggest experts of the opening, even though the Grünfeld never belonged to his main weapons. Black sacrifices an exchange for quick development of the pieces. The idea is to develop the pieces with tempo (Nc6, ♖e6, ♖d8) combining with the threat of the ♖a5 unpleasant check. White's undeveloped kingside guarantees Black the capture of the a2 and b2 pawns at least, which is already enough to restore the material balance. [11... ♖d7 12. ♖d1 ♘c6 was also possible. (But not 12...e6? because of the tactical blow 13. ♘c7! +-)]

12. ♖xd5 ♖e6 [Black should not be in a hurry to collect the pawns. 12... ♖xb2 13. ♖c2 White would get a free tempo to develop.; However, to start with 12... ♘c6! would have been a bit more accurate 13. ♖e2 giving a free square on f1 for the king. (13. ♘f3? is just bad, because of 13... ♖e6 14. ♖d2 ♖d8 and ♖a5 next.) 13... ♖e6 14. ♖d3 This is always the correct square to retreat, otherwise, Black gets too many tempi. (14. ♖d2 ♖d8 15. ♖c2 ♖a5+ 16. ♖f1 ♖d2 White collapses.) 14... ♖xb2 15. ♖d1 ♖a5+ 16. ♖f1 ♖xc5 17. ♘f3 ♖xa2 with better prospects for Black.]

13. ♖d2 This completely logical move to protect the b2 pawn is probably the decisive mistake. [13. ♖d3! ♖xb2 (On 13... ♘c6 the idea of ♖d3 comes to life. 14. ♖a3! After parrying the ♖a5 threat, White will be able to finish his development.) 14. ♖c2 ♖f6 15. ♘f3 ♘c6 16. ♖a3! White seems to survive, but Black can still increase the pressure with 16...a5! 17. ♖e2 ♘b4 18. ♖d2 ♖xc5 =+ Only Black can be better with such bishops.]

13... ♘c6 White cannot prevent ♖d8 and ♖a5 now. He can only try to focus on reducing its damage.

14. ♖d1 This is the best try, where Black has the biggest chance to go wrong... But of course, Botvinnik does not let his opponent out of the cage. [14. ♖c4 loses to 14... ♖d8 15. ♖c2 ♖a5+ 16. ♖f1 ♖d2]

14... ♖d8 15. ♖c1 Now, at least, the queen cannot be harassed by ♘b4 or ♖f5...

15... ♖a5+ 16. ♖d2 [16. ♖e2 is not better either. 16... ♖xd1 17. ♖xd1 ♖xa2 Even without the rooks, the attack is rolling. In the worst case, Black just takes on b2 with the bishop and pushes his a-pawn.]

16...Rd5!! Another great move! After taking on c5, the queen has no good square to leave.

17.Ne2 White always finds the best chance, but in this game it's not enough to save the day. He wants to put his knight on c3 in order to get rid of the dangerous g7 bishop.

17...Rxc5 18.Nc3 Other moves are even worse: [18.Qd1 Qxb2; 18.Qb1 Nb4]

18...Qxc3 [18...Qf5 was even more precise according to the machine. 19.Qe2 (19.Qd3 Qxc3 20.bxc3 Rxc3 and the bishop will fall on the next move.) 19...Qxc3 20.bxc3 Rxc3 21.Qd1 Rc2 This was the idea of Qf5. White can escape from the pin, while Black simply wants to play Qc3 and Rc1, or Rxa2 and Ra1. 22.g4 Qe4 23.f3 Rxa2 24.fxe4 Ra1 with a winning material advantage.]

19.bxc3 Rxc3 20.Qb2 Ra3 The game seems to be over because of the Rxa2 crucial threat, but White finds a chance again, at least to unpin his rook.

21.Qb5! Of course, White would be happy to get rid of the queens, but Botvinnik is not going to help with this.

21...Qc3 22.Qb2 Qc5! Refreshing the Rxa2 threat.

23.Qb1 [White can't chase the queen with 23.Qb5 anymore, because of 23...Qc1+ 24.Rd1 Qc3+; 23.Rd3 was recommended by the computer as the only move, but Black is winning here as well. 23...Rxa2 24.Qc3 It's a pleasant choice now: 24...Qxc3+ simplifying to a winning endgame (24...Qf5 or keeping the queens on board is also good enough.) 25.Rxc3 Ra1+ 26.Qd2

26...Na5! White can't prevent Qc4. **27.g3 Qd5!** First, sending the rook to a bad square in order to avoid Qg2. **28.Rg1** and only then **28...Qc4!**

23...Qxa2! The final little tactical shot!

24.Rxa2 [24.Qb2 Qe6! is equally hopeless for White.]

24...♔a5+ 25.♖d2 ♖a1 Black ended up in a completely winning endgame. The rest is a matter of technique. In this part of the game, Botvinnik never made mistakes.

26.♙d3 ♖xb1+ 27.♙xb1 ♘e5 28.♔e2 ♚b5+ 29.♙d3 ♘xd3 30.♖xd3 Black only needs to push his connected passed pawns. There's nothing that can stop them.

30...a5 31.♖hd1 ♚c4 32.♔f3 b5 33.♖d7 b4 34.♖a7 [34.♖xe7 is not an important pawn. 34...b3]

34...a4! 35.♖d8+ [35.♖xa4 ♚c6+]

35...♔g7 36.♖da8 a3 37.g3 ♚b5 White finally resigned. A great illustration of how to play the Grünfeld. You must always increase the tension to the maximum in the position. Otherwise, your opponent will slip away.

0-1

Editorial Preface

Chess, chess and chess! A crazy amount of strong tournaments are going on.

The first tournament of the new FIDE Grand Prix is going on with a lot of Top games, new ideas and very touching wins. We bring You a few examples from this great tournament in our analysis.

The Bilbao Chess Masters Final with Carlsen, Aronian, Anand... Do we need to say something else?! If you don't follow this tournament, You are not a chess fan!

The Chinese League with the best Chinese players, and some very good Europeans competing, is also going on.

Serbian, Bulgarian, Croatian leagues... (we are both playing in Croatia).

I guess we could find enough material to work on chess for the whole year in these events, but we are only able to take a small piece from them, with their most sparkling moments.

As usual we wish You a lot of fun with this edition of CEWN!

P.S. Again, for those who didn't receive or just got a full mail box: please don't panic, just write us an email and we'll resend You the issue of CEWN that is missing! :)

*Best regards
Arkadij Naiditsch & Csaba Balogh*

4 best games of the past week

(1) Avrukh,B (2596) — Naiditsch,A (2712) [E04]

Croatian Team Ch (1), 23.09.2012

[Arkadij Naiditsch]

We are in the 1st round of the Croatian league, and my opponent is the Israeli player Boris Avrukh. During the last few years, Boris dedicated to be a trainer and a book author... this is clearly visible on his ELO. Just 3 years ago he was over 2650. It's been a very long time since I haven't made a „Jackpot” opening, so here comes one finally. I knew everything until the 25th move! Welcome to modern chess.

1.d4 ♘f6 **2.c4** e6 In my preparation I guessed we would play a Nimzo, but this is another game on the Catalan. Luckily, just before the game, I had reviewed my lines...

3.g3 d5 **4.♙g2** dxc4 **5.♘f3** a6 This is my 3rd game in a roll with 5...a6. Actually, I tried almost all the lines for Black — suffering a bit in the worse positions I was getting, so maybe Boris expected some other line.

6.♘e5 And this is the 3rd time that I get the answer **6.♘e5**, which is strange to me. Clearly the main move is [6.0-0 ♘c6 7.e3 with thousands of games played...]

6...♙b4+ [6...c5 is another option for Black, but according to the current evaluation of this line, White is doing slightly better.]

7.♘c3 [Aronian once tried 7.♙d2 ♙xd4 8.♙xb4 ♙xe5 but two pawns were too much and Mamedyarov managed to win this game.]

7...♘d5 8.0-0 The beginning of a very sharp and forced line. Over the board, I was a bit scared that Avrukh had a big novelty in his pocket. Just a few months ago, I had already played this position against Fridman.

8...♘xc3 9.bxc3 ♙xc3 10.♖b1 ♙xd4 I have to take what I can...

11.♙a4+ [The exchange of queens brings doesn't give White any advantage. 11.♙xd4 ♙xd4 12.♘xc4 ♘d7 Black is ready to give away some of his pawns to fulfill his development. 13.♘a5 ♙b6 14.♘c4 ♙c5 15.♘a5 with a draw.]

11...b5 12.♙a3 This looks crazy, but it's all well analyzed with the help of our metal friends.

12...♔xe5 13.♙f4 ♔f6 14.♙xc7 b4 Both of us played quickly until here. We are at the first critical moment. White has two moves: 15.♔a5 and 15.♖xb4.

15.♔a5 N [This move lead to a forced draw in my game with Fridman: 15.♖xb4 ♙xb4 16.♔xb4 a5! An important move to remember. 17.♔b5+ ♙d7 18.♔xc4 ♘a6 19.♙xa8 ♘xc7 20.♔xc7 ♔d8! and Black is just in time to be fine. 21.♔a7 0-0 22.♙f3 ♙a4 not giving White the chance to play ♖d1 and ♔d2. The position is very close to a draw.]

15...0-0 Of course I knew the 15.♔a5 line. That's the first suggestion of the computer and I've been preparing this line of the Catalan for a while...

16.♙xa8

16...e5! Black has quite a few moves here, but 16...e5 is the best. It's very important to get the bishop from c8 into the game. For the fans of „long lines“, please push the middle button on Your keyboard :) .

17.♔d5! White's best chance to play for an advantage, which was quickly played by my opponent. I started to really hope that my lines were fine... The position is extremely forced and Black is „just“ holding.

17...♙e6 Please don't ask me why 17...♙e6 is the best move after my considerations. We are living in the computer Era, so we follow his suggestions :).

18.♔d6 Before playing the absolutely correct 18.♔d6, my opponent started to think a bit. I was very surprised and started to have some hopes that he didn't know the 17...♙e6 line. This is a little strange to me because it's clearly the main move, but sometimes wonderful things happen! :).

18...♙f5 Another move that I just had to remember.

19.♖bc1?! After a quite long thought, Boris plays „not the best move“. [19.e4 This was the main move on which I focused my attention during my analysis. 19...♙h3 20.♔xf6 gxf6 21.♖fc1 The position remains very forced, but it's clear that Black is fighting for a draw. (21.♖fd1 ♘d7 22.♙d5 ♘c5 and Black is perfectly fine.) 21...♘d7 22.♙d5 ♘c5 23.♙a5 ♘d3 24.♖c2 ♖c8 25.a3 ♙d4! Everything seems to work for Black. 26.♙xb4 c3 with the threat of ♙xf2 next. Black is holding the position.]

19...♙g4 I could remember this move only because I had repeated my lines just before the game — it seems like this was my lucky day :).

20. ♖c2 [20.f3 ♘h3 21. ♖fd1 ♔g5 looks dangerous for White.]

20... ♔f5 And this is the key move! Black's play looks so strange: the last 4 moves were ♘e6, ♘f5, ♘g4 and ♔f5, but probably they are the best! Does it have any logic? — NO!

21. ♖fc1 My opponent already spent around 45 minutes of his time here. I didn't spend anything until this moment.

21... ♘d4 I played 21... ♘d4 quickly because I remembered it was the right move. [Another option was to play 21... ♘d7 22. ♘b7! Very strong!(The logical 22. ♘c6 ♘f6 23. ♖xc3 White tries to give back the exchange hoping to return to a more normal position. 23... bxc3 24.f3 ♘h3 25. ♔xe5 ♔c8! Thanks to the crazy move 25... ♔c8, Black might still have some hopes of being better. Of course, the position remains very forced.)]

22.e3 [Of course 22. ♘xb8? ♔xf2+ 23. ♔h1 b3 and Black is just winning.]

22...b3 White can't hold the b-pawn and Black is getting the exchange back.

23.axb3 cxb3 24.exd4 bxc2 25.dxe5 The position seems to be close to equality. If White manages to get the c2 pawn, maybe the bishop pair could even give him some advantage, but Black has the very strong:

25... ♘e2! This was the last move I remembered with the evaluation of an equal position. During the game I started to think why the position was actually equal... I'm a pawn up, want to play ♔d3 and always have the option of playing ♘d3, protecting the c2-pawn. My opponent had only 30 minutes left, and he spent 20 in his next move:

26. ♔c5? This is already a mistake. [26. ♔g2! This computer move would crush most of Black's hopes to win the game. 26... ♔d3!? The best chance for Black to achieve something in a very slightly better endgame. 27. ♔xd3 ♘xd3 28. ♘d6 ♖c8 29. ♔f3 (29. ♘d5 ♘f5 not allowing White to play e6.) 29... ♘d7 30. ♔e3 ♘f5 31. ♘b7 How to play like this during a practical game?! Impossible! 31... ♖c3+ 32. ♔d2 ♖d3+ 33. ♔e1 ♖d4! and Black is still a little better, even though the position is close to a draw; 26. ♘xb8 loses to 26... ♔d3! and White can't stop Black from playing ♔d1. In case of 27. ♔xd3 ♘xd3, one of the White bishops on the 8th rank is going to fall, leaving Black in a winning situation.]

26... ♘d3 Of course I have to keep my c2 pawn. [26... ♘d7? would have been clearly the wrong choice. 27. ♔xc2 ♔xc2 28. ♖xc2 ♖xa8 29. ♖xe2 would lead us to a typical equal endgame. The passed Black a-pawn is compensated with a strong bishop on d6. Black still keeps some practical chances, but of course, the position is a draw.]

27. ♘d5 White is trying to play for the e6 push. This is the right plan if it works...

27...♞d7

28. ♞e7? With less than 10 minutes on his clock, my opponent makes the decisive mistake. [28. ♞d6 This was the only move. 28... ♞h5 Black wants to give mate by playing ♞d1–Kg2–Bf1–Kg1–Bh3. 29.f3 ♟f5! stopping the e6 push. Objectively, the position is still quite unclear, but it's very hard to play with White. The Black pawn on c2 is very annoying. (It doesn't help to play the logical 29... ♞g5 30.f4 ♞g4 31. ♟xf7+! ♜xf7 32. ♞xd3 and White is close to winning.) 30.e6? An immediate attempt to force a draw leads nowhere. 30... ♟xe6 31. ♟xe6 ♞xf3! Nice tactic. Black is winning]

28... ♞g4! No more f3 for White because of ♞d4 check. The position is lost.

29. ♟b3 Defending from ♞d1

29... ♞f3 With the deadly threat of ♟e4.

30. ♟xc2 [Nothing helps anymore. 30.e6 ♟e4 31.exf7+ ♜h8 32.♟f1 ♞h1+ 33.♟e2 ♞xc1]

30... ♟xc2 31. ♜xc2 ♞d1+ 32.♟g2 ♞xc2 33. ♞xd7 Black's exchange advantage and the passed a-pawn absolutely secure a win.

33... ♞e4+ 34.♟h3 [34.♟g1 ♞b1+ 35.♟g2 ♞b7+ 36.♟g1 ♜c8 and the bishop on c7 is falling.]

34... ♞f3 Fixing the Black king on h3. Now Black's plan is easy: to start pushing the a-pawn. White is completely hopeless. Against e6, Black always plays ♞f5+, followed by ♞xe6.

35. ♞d4 h5 36. ♞b6 ♜a8 37. ♟d6 a5 After the game I could not say I „won“ the game, because I just had to make 5 moves and my position was already winning. However, it was a good feeling that the work that mostly stays „undiscovered“, sometimes gets rewarded :).

0–1

(2) Aronian,L (2816) – Karjakin,S (2778) [E15]

5th Final Masters Sao Paolo Bilbao ESP (1), 24.09.2012

[Balogh Csaba]

Aronian scored another important win in his pet line. If somebody just goes through this game, he might think it was a very easy one. However if we take a closer look, we realize how difficult it was in reality. It would be interesting to know when the players left their preparations.

1.d4 ♘f6 2.c4 e6 3.♘f3 b6 4.g3 ♖a6 5.b3 ♖b4+ 6.♙d2 ♙e7 7.♘c3 Just as against Ivanchuk in the Olympiad, Aronian plays the 7.♘c3 line, which we have analyzed for you in a previous issue of CEWN. Karjakin was definitely well prepared.

7...0-0 That game continued with 7...♙b7, but Karjakin went for the main line.

8.♙g2 c6 A typical move in the Queen's Indian. Black would like to recapture on d5 with the c-pawn to achieve complete equality. [8...d5 9.cxd5 exd5 is a playable position, but White is considered to be slightly better.]

9.e4! This is the critical test of Black's setup and it also is the main idea of the 7.♘c3 move. [9.0-0 d5 would be fine for Black.]

9...d5 10.exd5 This was probably a small surprise for Karjakin, since it happened only once before according to my database. [10.♙e2 c5 This is how the games proceed usually. We can guess whom it's good for, given that Aronian avoided it, while Karjakin was ready to play it. They both definitely had huge analysis here.]

10...cxd5 This is the novelty. A very interesting one. [On the previous 10...exd5 Aronian probably had prepared the novelty 11.0-0! dxc4 12.♙e1! A very strong pawn sacrifice, based on the undeveloped Black queenside. The g2 bishop might become really strong after ♘e5. Accepting the pawn is very risky: 12...cxb3 (12...♙e8 13.♙c2 cxb3 14.♙xb3 Even with the rook on e8, Black is facing difficulties because of the approaching ♘e5.; On 12...♘bd7 White can win back the pawn with 13.♙e2 ♙e8 14.bxc4 ♙f8 15.♙d3 with an advantage.) 13.♙xb3 followed by ♘e5 promises excellent chances for White.]

11.♘e5! The only move to fight for the edge. Otherwise, Black finishes his development ideally with ♘c6 and ♙c8.

11...♘fd7!? This knight had to go to d7 to cover the c6 square. Black gets rid of the strong e5 knight. The idea involves a typical exchange sacrifice in many lines. [The alternative 11...♙b7 would lead to a slightly favorable game for White. 12.0-0 ♘bd7 13.♙e1 ♙c8 14.♙c1 White improves all his pieces, waiting for the best moment to trade everything on d5, achieving a better position with the strong e5 knight.]

12.0-0 Human decision! Aronian cares about the safety of his king. [The computer's suggestion might be objectively better. 12.cxd5!? but of course it's very risky to play materialistic chess and leave the king stuck in the center. 12...Nxe5 13.dxe5 exd5 14.Nxd5 (On 14...Qxd5 Nd7! is very strong, followed by Nc5 or Nxe5. Taking the exchange would be a kind of suicide with such a weak king.)

14...Nd7 Probably at this moment both players finished their calculations with the conclusion that Nxe5 or Nc5 are coming and that Black is fine. However the computer advises a cool defense! (14...Nc6 White defends calmly with 15.Qc3 Re8 16.f4!+/- It's very hard to increase the pressure with Black.) 15.Qb4!! Nc5 (15...Qxb4+? loses to 16.Nxb4 Qb5 17.a4) 16.Qxc5 Qxc5 17.b4! Re8 It still

looks very dangerous, but White continues with the cold-blooded moves: 18.f4! (18.bxc5 Rxe5+ 19.Ne3 Qg5! and Re3 is in the air, so Black still can increase the pressure with Qae8.) 18...Qf8 19.Qf2 After castling artificially, White has preserved his extra pawn. After this more or less forced line, I doubt that Black has enough compensation.]

12...Nxe5 Black has no choice, he must go for the complications, otherwise he will lose material on the h1-a8 diagonal soon.

13.dxe5 Nd7! 14.Re1 Unpinning the rook and protecting the e5 pawn. Black is forced to sacrifice the exchange, and it also looks very promising at first sight!

14...dxc4! [14...d4 is a much worse version of the exchange sacrifice. 15.Nb5! An important intermediate move. 15...Qxb5 16.Qxa8 Qxa8 17.cxb5 Qd5 18.Qe2! Black doesn't have enough compensation without the light-squared bishop.]

15.Qxa8 Qxa8 This looks very promising for Black. He has many different resources, for example Qc6-Bb7, Qb7-Bh1, or Rd8 and Nc5. White must find out something clever, otherwise he might quickly collapse. Aronian had to use his imagination!

16. ♖h6!! Very spectacular move. The only chance to generate counterplay.

16... ♖d8! Karjakin correctly keeps the tension! [16...gxf6 17. ♕xd7 ♖b4 18. ♕d4! White holds his advantage in all the lines after very precise moves: 18... ♖b7 (The other attacking idea is 18... ♕c6 19. ♖e4! ♖b7 (19... ♖xc3 20. ♖g4+ ♔h8 21. ♕xc3 ♖b7 22.f3 White preserves his material advantage.) 20. ♖g4+ ♔h8 21. ♘e4+/- successfully closing the long diagonal.) 19. ♕xc4 ♖h1 White should transpose into a favorable endgame by giving back the material: 20. ♕g4+ ♔h8 21. ♘e4! ♖xe1 22. ♖xe1 ♖xe4 23. ♖xe4+= The Black king is weak!]

17. ♕g4 ♖f8 18. ♖ad1 ♘c5! Both players show their best in a very difficult position. Calculation is the crucial factor in such kinds of positions. [18... ♖b7 was tempting, with the idea of ♖f3, but White has a very strong response: 19. ♖g5! ♖f3 20. ♕d4! ♖xd1 21. ♖xd8 with material advantage!]

19. bxc4 ♖b7! Finally the bishop appears where it belongs. Black doesn't even have a pawn for the exchange, but objectively this single bishop solves all his problems.

20. ♖xd8 ♕xd8 21. ♖d1 ♕c7 22. ♖f4 The less pieces there are, the better chances White has to convert his advantage.

22... ♕c6 23.f3 We have reached the most critical moment of the game. White finally seems to consolidate his position. The Black threats seem much less dangerous than before. I'm sure that Karjakin also had the feeling that he messed something up earlier, however, with a fantastic blow, Black could have saved the game.

23... ♘d7 [23... ♘d3!! Just amazing, giving a piece for nothing. 24. ♖xd3 ♕xc4 If Black takes on c3, he gets a fine position, so White must play ♖d8, ♖d7 but both moves are met with 25. ♖d8 ♖a6!! This is the whole idea! White must play (25... ♕xc3? loses to 26. ♖h6! ♕xe5 27. ♕b4+- wins.) 26.h4 allowing the perpetual check. 26... ♕f1+ 27. ♖h2 ♕f2+=]

24. ♘e4 Creating the threat of ♖xd7! Black collapses.

24... ♕a4? [24... ♕c8 controlling the d8 square. This still gave some practical chances, even though White is already doing well after 25. ♘g5!]

25. ♖xd7! ♖xe4 [25... ♕xd7 26. ♘f6++-]

26. ♖d8! That's why the queen should have gone to c8. Black can't even give a check, his back-rank is weak and his bishop needs to leave the h1–a8 diagonal to prevent the ♖h6 threat.

26... ♖g6 27. ♖g5?! The only mistake in the game by Aro-nian. He could have given unexpected practical chances for Black. [After 27. ♖e3 followed by ♕e3-d6, Black has to resign.]

27...Qa3? Karjakin thought that the game was over, but the machine still found some hidden idea... [Black could have tried 27...h6! 28.Qd4! This is the precise move! (Against the most obvious 28.Qe7 Qd3!! there's an incredible resource: 29.Rxd3 (29.Rxf8+ White is a rook up, but he must be satisfied with the draw. 29...Qh7 30.f4 Otherwise, Qd1. 30...Qc2 Qc1 Qf2 Qd2 is the threat. 31.Qf3 Qe4! 32.Qf2 Qd1+ 33.Qf1 Qd4+ with perpetual check.) 29...Qxe7 30.Rd2 White is better, but he must work hard to convert his advantage.) 28...h6 29.Qd6 Qh7 30.Qxf8 Qh6 and now White has to find 31.h4!! Qxc4 (The point of the previous move becomes clear after 31...gxh4 32.Qh8+ Qh7 33.Rd4!+- The rook delivers mate.) 32.hxg5+ Qxg5 33.Qd6+- with the threat of Qd2. White is ready to exchange the queens. If Black accepts this, then the endgame is winning for White.]

28.Qd4! The queen goes to d6 in any case.

28...h6 29.Qd6 Qh7 30.Qxf8 1-0

(3) Li Shilong (2549) – Ni Hua (2637) [D85]

Chinese league Hangzhou CHN, 23.09.2012

[Balogh Csaba]

A nice attacking game that was played in the Chinese league.

1.d4 Nf6 2.c4 g6 3.Nc3 d5 Black chose the Grünfeld defense.

4.cxd5 Nxd5 5.e4 Nxc3 6.bxc3 Bg7 7.Nf3 c5 8.Qb1 A very sharp system. Its point is to develop with Bg7, which is less accurate directly, because of Nc6! And on d5 Bxc3, the a1 rook is hanging.

8...0-0 9.Qe2 b6 A solid system, which tries to avoid the long computer lines after [9...cxd4 10.cxd4 Qa5+ 11.Qd2 (11.Qd2 is much safer. Black has to react with 11...Qxd2+ 12.Qxd2 e6 as Caruana played against Bartel in Dortmund this year. The game was commented in a previous CEWN.) 11...Qxa2 12.0-0 According to theory, Black is fine after all, but he must remember exactly some 25–30 moves in many lines.]

10.0-0 Bb7

11.d5!? A very interesting pawn sacrifice in order to get a strong center and create a dangerous attack. Black must accept the material, or otherwise White will consolidate his center with c4 and will achieve his dreamed position. [11.♔d3 is the mainline, and it continues with 11...e6 12.♘g5 ♕c7 13.♕e3 ♖d7 with a double-edged game.]

11...♙xc3 12.♙c4 White's main ideas in general are to strengthen his center, prepare for the advance with e5, exchange the dark-squared bishops because it's an important defender of the Black king, and launch an attack with, for example, h4-h5. Black usually exchanges the light-squared bishops with ♙a6 and if he manages to protect his king, to convert his material advantage.

12...♙g7 13.♕e2 A useful developing move, which prevents ♙a6 temporarily.

13...♕c8! Black also continues with his plan.

14.♙b2! GM Vitiugov had introduced this idea back in 2008 against Morozevich. I think it's much more logical than the previously played ♙g5.

14...♙a6 This is the novelty. [Morozevich played similarly with 14...♙xb2 15.♖xb2 ♙a6 but White got very strong compensation after 16.e5! ♙xc4 17.♕xc4 e6 18.d6 ♘d7 Black has pinned his hopes to this blockading position and wants to continue with ♕c6, followed by the mobilization of his queenside pawns. 19.h4 h6 and here White should have played 20.h5! g5 21.♖e2! protecting the e5 pawn, in order to execute the knight maneuver ♘h2-g4, followed by f4 with a strong attack.]

15.♙xg7 ♖xg7

16.♖fc1 A deep attacking plan. White prepares for the exchange of bishops and he intends to take back with the rook on c4 and to push e5, after which the rook switch to h4 could be very dangerous. I must say that the computer stubbornly defends Black's position and prefers it with his extra pawn, but with human eyes it's much better and easier to play with White. [16.e5!? seriously came into consideration with the same ideas as in the Vitiugov-Morozevich game.]

16...♖d8 Black prevents the e5 move by attacking the d5 pawn. [The freeing attempt 16...e6 creates a huge weakening. 17.♙xa6 ♕xa6 (17...♘xa6 18.dxe6 fxe6 19.♖d1 ♖d6 is coming next. The Black king becomes really vulnerable after ♕b2 and ♘e5-g4, for example.) 18.♕b2+ ♖g8 19.dxe6 fxe6 20.♘g5 with a strong attack.]

17.♙xa6 [17.e5? ♖xd5]

17...♕xa6 This is the right way to take back. The Black knight should try to defend his king via d7-f6.

18.♕b2+ ♖g8

19. ♔e5! White leads the attack aggressively. He transfers the queen to the kingside with tempo (attacking the e5 pawn). [19. ♘e5 was tempting as well, but Black can successfully defend with 19... ♘d7 20. ♘g4 (20. ♘c6 ♔e8 The knight is only looking nice on c6, but it should rather participate in the attack.) 20... ♘f6! (20... f6 is probably also possible.) 21. ♘xf6+ exf6 22. ♔xf6 ♔xa2 Black has no problems. The attack is not dangerous anymore without the knight.]

19... ♔b7?! This is a mistake according to the machine, who suggests some very deep defensive resources. [19... ♔e8 should have been played. White should play like in the game: 20. ♔f4 ♘d7 21. ♘g5 ♔f8 In comparison to the game, the queen stands on a6 and it could be transferred much easier to the defense as the following lines show: 22. e5 (The game's move 22. ♔b3 is less effective now. 22... ♔xa2! 23. ♔h3 h5! and Black plays ♔b2 next. The queen suddenly becomes an excellent defender.) 22... h6 23. ♘f3 ♔g7 with an unclear position. White definitely has compensation, but it's not easy to lead the attack.]

20. ♔f4! [Black was probably hoping for 20. ♔xc5 which leads to simplifications and a drawish endgame 20... ♘d7

21. ♔c7 ♘xe5 22. ♔xb7 ♔d7! This was his key resource to neutralize the rook on the 7th rank. 23. ♔xd7 ♘xd7=]

20... ♘d7 It's time to bring the knight.

21. ♘g5 ♔f8 Ugly, but only move!

22. ♔b3! White concentrates all his forces on the kingside! [The direct 22. ♔h4 h5 23. g4 could be easily parried with 23... ♘f6!]

22... ♔b8 This was Ni Hua's idea with 19... ♔b7, but he probably missed or underestimated the following two moves. [Black can't send the knight away with 22... h6 because of 23. ♔h3 ! 23... hxg5 24. ♔xg5 and the mate is coming soon after ♔h6.]

23. ♔h4 h5 24. f4! Very strong move. It's attacking and it's prophylactic against ♔e5 at the same time.

24... ♘f6 [The queen can't be driven to the kingside with 24... ♔d6 25. ♔g3 ♔f6 because of 26. e5! ♔f5 27. ♔e1!+/- with the simple, but strong threat of ♘e4 and ♔g5, trapping the queen.]

25. ♔g3 c4 Black's only chance is to create some counter-play on the queenside, but it's too slow. The White pieces

are well concentrated for the attack. [25...♘h7 Exchanging one of the main attackers doesn't help anymore. 26.f5! ♔e5 27.♘f3! Black is facing too many problems. 27...♔g7 (27...♔f6 is refuted with 28.♔xh5!) 28.e5 Black can't stand the pressure for long.]

26.♖f1 Bringing the last piece into the attack. [White should not be greedy with 26.♖xc4 ♖c8 Black achieved the counterplay he wanted.; However 26.f5! was the most precise move. 26...♔e5 27.♖e1! protecting the e4 pawn in order to move with the knight. The threats are ♘f3, or fxg6 and ♘e6. 27...♔d4+ (27...♔g7 protecting g6 doesn't help. 28.fxg6 fxg6 29.♘e6+ ♔h7 and White must keep his strong attacking knight and continue the attack with 30.♖g5! followed by e5, wherever the queen moves.) 28.♔h1 ♔f2 This tricky resource fails to 29.♘f3! creating a new threat of ♖xg6 besides e5.]

26...♔c7 This loses nicely. # White elegantly concludes the attack! [The only move would have been 26...b5 with the idea of having ♔b6 against the combination which was executed in the game. White's best option is to turn back to the previous line with 27.f5! ♔e5 28.♖e1! The b-pawn is advanced, but it doesn't save the Black king.]

27.e5! ♘xd5 28.♘e6!! ♔c6 [28...fxe6 loses to 29.♔xh5! with mate in a few moves.(But not 29.♖xg6+? ♔f7 30.♔xh5 ♔e8! and the king runs away.)]

29.f5! No mistakes by White. Obviously, the great e6 knight has much bigger value than the rook on f8.

29...♘c7 The last desperate attempt, but White nicely finishes the game. [29...fxe6 loses again to 30.♔xh5+-]

30.♔xh5! ♘xe6 31.fxg6 A nice attacking game by the Chinese GM!

1-0

(4) Mamedyarov,S (2729) – Giri,A (2730) [D11]

1st FIDE GP London 2012 London ENG (3), 23.09.2012

[Arkadij Naiditsch]

We will see a great win by Mamedyarov over the young Dutch talent Anish Giri. It's nice to see Shakhriyar back with his usual super-aggressive style!

1.d4 d5 2.c4 c6 Again and again, I can only say: „And another game on the Slav” :).

3.♘f3 ♘f6 4.♙b3 A relatively rare but tricky line. White wants to stop the development of the bishop on c8, protecting the pawn on c4 at the same time, while keeping in mind the possibility of playing ♗g5. A lot of positive ideas are connected with 4.♙b3, but there's one huge disadvantage: The queen will have to make at least 3 moves, and this in the first 8 moves — can this be good?!

4...e6 5.♗g5 h6 6.♗h4 dxc4 A logical move by Black, and probably the most critical one as well.

7.♙xc4 b5 Black's idea is simple: to play ♗b7, ♘bd7 and c5. Let's see how White will fight against it.

8.♙c2 ♗b7 9.♘bd2 White probably only has one idea in this position, to play e4 or Black is totally fine. [In case of the immediate 9.e4 g5 10.♗g3 g4 Black is winning the pawn on d4. The position remains dynamic, but a pawn is a pawn...; 9.♘c3!? I like this move a lot personally. I think that White's play should always be connected to the e4-d5 push, and of course, the knight supports this idea better from c3 than from d2. 9...♘bd7 10.e4 ♙b6 11.♗e2 A silent but nice move. White still keeps both options open: to castle short or long... 11...♘h5 12.d5! and White is doing clearly better, Jovaba-Potkin, ECC 2011.]

9...♘bd7 Black is ready for the c5 push.

10.e4 We are probably at the first critical moment of the game. [10.e3?! ♖c8 followed by c5 or a6, and then c5. Black solved all his opening problems.]

10...♖c8 N It's hard to say if Black had prepared this novelty or if he just played this logical move over the board... [10...♙b6 This move counts as the main choice here, 11.♗e2 and now Black has a lot of options. Let's take a look at the most concrete one: 11...c5 The situation is clear. White has to do something urgently, or position will become equal. 12.a4! Typical and very strong! It's hard for

Black to find the right reaction. 12...cxd4 (12...a6 13.axb5 axb5 14.♖xa8+ ♕xa8 15.0-0 White's advantage in development gives him better play.) 13.♗xb5 ♖c8 14.♙b3 with the threat of playing a5 or ♘c4 next. I think that White should be doing clearly better here.; 10...a6!? Maybe this simple move is the strongest one. Black wants to play c5 next and save a tempo on the „not really“ needed move ♖c8.]

11. ♗e2 Preparing to castle short. Black can't play c5 still.

11...a6 [It doesn't work to play 11...c5? 12.d5! exd5 13.♗xb5

and everything is hanging in Black's position. Let's not forget that White can still castle long on the next moves, in order to increase the pressure on the d-file.]

12.0-0 c5 Finally... but too late. White has already castled and is ready for:

13.d5! This move basically crushes the Black position.

13...exd5 Black is opening the e-file, and what else is there to do?! [13...e5 14.a4! White starts his play on the queenside. Black's position looks very bad.; 13...♗d6 doesn't look very dangerous, but it is dangerous! 14.a4

The usual push. (It would be a bit too early to start forcing things. 14.dxe6 fxe6 15.e5 ♗xe5 16.♘xe5 ♘xe5 17.♗g3 ♘f7 and Black is somehow holding.) 14...c4 15.axb5 axb5 16.dxe6 fxe6 17.♖fd1 Black's position is falling apart due to the huge amount of threats.]

14.e5! This is the exact way to play the positions with an advantage in development: fast, aggressive and in the center!

14...g5 The only move that saves the piece.

15. ♗g3 Good move! [The very tempting 15.exf6?! gxh4 16.♖fe1 ends with nothing after 16...♙xf6! and the Black king will feel more or less safe on d8.]

15...♘e4 [15...♘h5 16.e6! and the game is over.]

16.♘xe4 dxe4 17.♘d2! Mamedyarov hurry to finish his opponent and takes one step back to make a jump during the next moves. White wants to play the deadly ♘xe4 and Black is hopeless against it. [17.♖fd1!? could also be an option for White, with the idea of playing e6 next.]

17...h5 Black wants to bring the rook from h8 into the game, and at the same time to play h4. A good idea, but

it came too late. White has enough time to finish what he started.

18. ♖xe4 ♜h6 [18...h4 19.e6! What else?! 19...fxe6 20. ♘d6+ ♙xd6 21. ♚g6+ ♔e7 22. ♚g7+-]

19. ♜ad1 bringing one more piece into the attack. White wants to play ♘f6 next.

19... ♙e7 **20.** ♙xh5! And a nice tactic at the end!

20... ♜xh5 **21.e6** Now against 21...fxe6, 22. ♘d6+ is coming, followed by ♚g6 with mate. A great game by White, even though Black made it a bit too easy. The questions about the opening — regarding Black's options to equalize — remain. I guess that we'll see some games on this line in the future. It looks very interesting to me!

Endgame section

(15) Gelfand,B (2738) – Wang Hao (2742) [E10]

1st FIDE GP London 2012 London ENG (4), 24.09.2012

[Chess Evolution]

After a long and tiring defense, Wang Hao finally reached a rook endgame of 3 vs 2. As we all know, the rook endgames can be very tricky, but the drawing chances are pretty good! Let's take a look at White's and Black's plans. White: to get the king to g6 or d6. Maybe also to push e4-e5, followed by ♔g5-Kf6. This can be very dangerous for Black sometimes. Black: to keep the rook on the 5th rank or to start attacking the White pawns, not allowing the White king to move, or to force the White rook to leave the 7th rank, which would allow the Black king to leave the 8th rank.

43. ♔xf4 ♖b2 The beginning of a nice defensive idea!

44. f3 ♖h2! Great play by Black. Now against White's e4, Black always has a check on h4. On ♔g4, there's always

♖g2. At d5, exd5 ♔f5 ♖h3! and moves like ♔g3 don't bother much because of ♖h1.

45. ♔e4 White wants to play d5 or ♔d3-Kc4-Kc5.

45... ♖h3! Stopping all of White's attempts!

46. ♖b7 ♔f8 Black is waiting...

47. ♖d7 ♔e8 48. ♖c7 ♔f8 White sees no chances of improving his position and tries the last trick...

49. f4 f5+? What a mistake! [49... ♖h5 50. ♔d3! White wants to play ♔c4. 50... ♖a5 (50... ♖h3 51. d5!? using all the practical chances. 51... exd5 52. ♔d4 ♖g3 53. ♖c3 It's a pity to leave the 7th rank, but what else is there to do... 53... ♔f7 54. ♔xd5 The position should still be a draw, but White has some practical chances...) 51. ♔c4 f5 and I don't see how White wants to improve his position. It should be an easy draw.]

50. ♔e5! Gelfand's king is reaching his final destination. [50. ♔d3 ♖h1! This is Black's idea! White doesn't have any way to push d5 because of ♖d1, and on ♔c4, the check on c1 is always there. The position is a simple draw.]

50... ♖xe3+ 51. ♔f6 ♔g8 52. ♖g7+?? Once again a good example of how complicated rook endgames are. Even on the very Top level, such „easy looking“ mistakes happen a lot of times. [52. ♖c8+ ♔h7 53. ♔f7! should have been the right way to go on for White. The position is simply winning. Black can't do anything against ♖c1 in the next move. 53... ♖e2 54. ♖c1 threatening mate on h1. 54... ♖h2 55. ♔xe6 winning both Black pawns, and with it, the game!]

52... ♔f8 53. ♖h7 It was still not too late to come back to c7, or b8, or a7, or even d7 :).

53...♔g8 **54.**♖h1? Gelfand follows the wrong plan...

54...♖e4! And the position is a draw! But...

55.♖d1 ♔h7?? Do wonders happen?! :) [Why not just to take a pawn... 55...♖xf4! 56.♔xe6 ♖f2 57.d5 ♔f8 58.♔d7 ♔f7 59.d6 f4 with a simple draw. White is going to win the rook for the d-pawn, but Black's f-pawn supported by the king is going to be worth a full rook as well...]

56.♔f7 And the next move will be ♖h1 mate! An amazing endgame. I guess that after checking this endgame at home, both players were quite depressed...

1-0

(16) Wang Hao (2742) – Adams,M (2722)

Grand Prix, London, 21.09.2012

[Chess Evolution]

Black is a pawn up, but in the rook endgames, the defensive side has good drawing chances with active play. This happens in the following game as well. Adams tries his best, but Wang Hao safely holds the draw.

48.♖d7 White should exchange his a4 pawn for the b7 one. The rook is perfectly placed on the 7th rank, where it keeps g7 under attack. [48.♖d8 was also possible. 48...♖c4+ 49.♔g3 ♔h7 50.♖d7 This will transpose to the game.]

48...♖c4+ **49.**♔g3 ♖c3+ Black just repeats once to get closer to the 60 moves time-control.

50.♔g4 ♖c4+ **51.**♔g3 ♖b4 **52.**♖f7 White is passing now, until Black decides what he wants to do.

52...b6 53.♖f8! An important intermediate move to lure the Black king from the h5 square. [53.♖b7 ♖xa4 54.♖xb6? would lose after (54.♖b8! is still possible.) 54...♔h5!]

53...♔h7 54.♖b8 g6 Adams tries to rescue his king from the corner, but this reduces the material, which usually helps the defensive side. [The alternative was 54...♖xa4 55.♖xb6 ♖a1 (55...♖b4 is not a good try, because 56.♖a6 a4 57.♖a8 Black can't improve his position.) 56.♖a6 a4 This is a very tricky attempt, White has only one way to draw.

57.♔g4! White hides his king in front of his h-pawn against the threatened check. Then the pawn reaches the 2nd rank. (Passively waiting with 57.♖a8? leads to a defeat after 57...a3 58.♔g2 a2! 59.♔h2 g6! It's very important that Black ends up with an f-pawn, which is an easy theoretical win shown here: 60.fxg6+ ♔xg6 61.♔g2 f5 62.♔h2 f4 63.♔g2 f3+! and the White king must leave the key h2-g2 squares. 64.♔f2 ♖h1 If Black had an h- or g-pawn, the game would be theoretical drawn, even without White's h4 pawn, because White keeps his king on g2 or h2 and starts passing with the rook.) 57...♔h6 (57...a3 58.♔h5 with a draw. The maximum Black can do is to exchange his a-pawn for the f-pawn, but the arising 2 against 1 endgame is also drawn.) 58.♖a8 g6 White must still be very careful. 59.fxg6 a3 and now the unexpected (59...♔xg6 White can't hide his king now. He must use his h-pawn and de-

fend actively to hold the draw. 60.h5+ ♔h7 61.♖a7+ ♔h6 62.♖a6! taking the f-pawn with check. 62...a3 63.♖xf6+ ♔g7 Now the easiest draw is 64.♖a6 a2 65.♖a7+ giving thousands of checks. 65...♔f6 66.♖a6+ ♔e7 67.♖a7+ ♔d6 68.♖a6+ ♔c7 and when the king is far enough... 69.h6 ♖g1+ 70.♔f5 a1 ♖ 71.♖xa1 ♖xa1 72.h7= draw) 60.h5! a2 61.♖a7! A nice tactical solution even with a small amount of material. 61...♖g1+ 62.♔h4 ♖h1+ 63.♔g4 Black must give up his a-pawn to prevent the mate on h7. 63...♖xh5 (63...f5+ 64.♔xf5) 64.♖xa2=]

55.♖b7+ [55.fxg6+ was a bit more accurate to avoid Black's extra possibility in the 56th move. 55...♔xg6 56.♖b7 transposes to the game.]

55...♔h6 56.♖f7

56...gxf5 [I believe that both players had missed 56...g5!? which was objectively the best chance. 57.♖xf6+ ♔h5 White must be very careful now. 58.♖g6 !! Other moves with the rook on the 6th rank lead to the same. (However, the most logical 58.hxg5? is a decisive mistake. 58...♔xg5 The rook must move into another tempo. 59.♖c6 ♔xf5 60.♔f3 ♔e5 61.♔e3 ♔d5 This is the important tempo, and Black wins. 62.♖h6 ♔c4) 58...gxh4+ (58...♖g4+ is less dan-

gerous. 59.♔f3 ♖xh4 60.♖xb6 ♖xa4 61.♔g3 leaving from ♖f4. White has quite an easy draw, he can exchange his f-pawn for the g-pawn. 61...♖a3+ 62.♔g2 g4 63.f6 ♔g6 and now, for instance 64.♖e6 a4 65.♖e4 ♔xf6 66.♖xg4= This kind of theoretical endgames were studied in the 3rd CEWN.) 59.♔h3 ♖xa4 60.♖xb6 ♖a3+ 61.♔h2 ♔g5 62.f6 ♔g6 At first sight, this seems to be a win, but White can achieve another known theoretical drawn position by 63.♖c6 a4 64.♖c4! The right method of holding the draw is to keep the a-pawn under attack with the rook from the side. 64...h3 65.♖f4 ♔f7 White is in zugzwang, but it's not a problem if the f6 pawn falls. 66.♖c4 ♔xf6

67.♖d4 This is the so-called Vancura position, which we have studied in the 3rd CEWN. 67...♔e5 68.♖g4 ♖a1 69.♔xh3 a3 70.♔h2 White wants to attack the pawn from the side and when it reaches the a2 square, then go behind it. If the Black king goes to support the pawn, White can always give side-checks. Black has an extra option now to rescue his rook with 70...♖b1 (70...a2 71.♖a4=; 70...♔d5 71.♖g3!=) 71.♖a4 ♖b2+ 72.♔g3 a2 but the game is drawn after 73.♔f3 ♔d5 74.♔e3 ♔c5 75.♔d3 ♔b5 76.♔c3! ♖h2 77.♖a8=]

57.♖xf6+ ♔g7 The following moves are more or less forced.

58.♖c6 ♖g4+ 59.♔h3 Black can't improve his position. He must exchange the a4 pawn for the b6 one.

59...♖xa4 60.♖xb6 ♖a3+ 61.♔g2 a4 Adam's last attempt is to play ♖a1, push the pawn to a2 and advance his f-pawn. So, the waiting policy doesn't work. White must find an active plan.

62.♖b7+ The way Wang Hao played was a bit risky, but good enough for a draw. Anyway, it's a bit illogical to send the opponent's king forward, but he has calculated everything until the end. [Much less calculation was needed on 62.h5! ♖a1 (62...♖b3 is not dangerous. 63.♖g6+ ♔f7 (63...♔h7 64.♖f6 ♖b5 65.♖a6=) 64.♖a6 a3 65.♖a7+ ♔f6 66.h6= and Black gives up his a-pawn to stop h6.) 63.♖g6+ ♔f7 Now it's very important to play (63...♔h7 64.♖f6=) 64.♖g5! ♔f6 65.♖g6+! and Black must retreat to f7, otherwise the h-pawn runs quickly. 65...♔f7 66.♖g5=]

62...♔g6 63.♖b6+ ♔h5 64.♖b5 ♔g4 65.h5! White must sacrifice his h-pawn in order to force Black to exchange it for one of his pawns.

65...f4 [The last chance would have been 65...♖a2+ White must find the correct square.]

66.♔f1! Only move, but at this level it's not a problem to find. (66.♔g1? loses to 66...♔g3! 67.♔f1 (67.♖xf5 ♖a1+ 68.♖f1 ♖xf1+ 69.♔xf1 a3 Black is faster.) 67...♖a1+ 68.♔e2 a3 69.♖a5 a2 70.h6 ♖h1 Black is in time to promote a queen and to catch the h-pawn.) 66...f4 67.h6 White must give up his a-pawn. The best try is 67...♔f3 (67...♖h2 68.♖a5=) 68.♔g1 ♖g2+ 69.♔h1 ♖g8 70.♖a5 ♖h8 71.♖xa4 ♖xh6+ 72.♔g1= with an easy draw. White has the correct setup with the king on the shorter side of the board and the rook giving check from the long side. Such endgames were studied in our first issues.]

66.h6 Adams had to accept that Wang Hao defended well, but he found the most elegant way to finish the game.

66...♖h3 67.♖b4 a3 68.♖a4 a2 69.♖xa2 f3+ 70.♔g1 ♔g3 71.h7 ♖xh7 And now comes the famous motif!

72.♖g2+! fxg2 Stalemate!

1/2

Clash of the Titans

(17) Alekhine,Alexander — Wolf,Heinrich [A31]

Bad Pistyan Bad Pistyan, 14.04.1922

[*Chess Evolution*]

We'll examine a convincing victory by Alekhine.

1.d4 d5 2.♘f3 c5 At that time, the theory was just about to develop. Black wanted to simplify the position right from the beginning with the hope of getting a draw.

3.c4 cxd4 4.cxd5! White finds the best challenge to his opponent's play. He's ready to open the position, as he's ahead in development.

4...♘f6 Logically, k wants to take with the knight on d5, not allowing White to develop with tempo... [4...♙xd5 moves into 5.♘c3! ♙d8 6.♙xd4 ♙xd4 7.♘xd4 Black can't hope for equality even though he managed to exchange the queens.]

5.♘xd4 [5.♙xd4 ♙xd5 6.♘c3 ♙xd4 7.♘xd4 is another story in comparison to 4. ..♙xd5 line. Black would be a full tempo ahead here.]

5...a6?! The idea its elf is very clever: to make a useful waiting move and to take on d5 according to the circumstances in the next move. However, Black probably missed the following great move. [The drawback of 5...♘xd5 is 6.e4 Black wanted to prevent this move by playing 5...a6 and, for example, after 6. ♘c3 ♘xd5, White can't play e4. Now the game could continue with 6...♘f6 7.♘c3 e5 8.♘db5 White's lead in the development guar-

antees him a small advantage. 8...♙xd1+ (8...a6 9.♙xd8+ ♙xd8 10.♘a3 The king is unsafe on d8, White wants to play ♘c4 and ♙e3 occupying the b6 hole, and 10... ♙xa3 doesn't solve the problems 11.bxa3+= followed by ♖b1, putting pressure on the b7 pawn. Whenever Black plays b5, White gets rid of his doubled pawn with a4.) 9.♘xd1 ♘a6 Black had to prevent ♘c7, but this has a huge disadvantage: Black can't kick the b5 knight out with a6 anymore, because it paralyzes the pieces a lot. 10.♘dc3+=]

6.e4!! Excellent move! Alekhine realized that the d5 pawn causes Black a big headache, since it hinders his development.

6...♘xe4 7.♙a4+! White needs to secure his d5 pawn first. In order to do this, he lures a piece to d7.

7...♙d7 [On 7...♘d7 probably the strongest is 8.♙e3 g6 9.♘b3! Whenever Black plays g6 (since he can't develop his bishop to e6, because of the d5 pawn), he must reckon with the temporarily unprotected rook on h8. White can make use of this in many occasions. 9...♘d6 The knight belongs to this square, blockading well the d-pawn, but now this is met with (On 9...♘ef6 the simple 10.♘c3 ♙g7 11.♙e2 0-0 12.♖d1 and White is better. The d5 pawn is

very strong.) 10. ♖d4! forcing a huge weakness.; 7... ♔d7? loses nicely to 8. ♘b5!+/-]

8. ♔b3! It's not easy to deal with the b7 pawn.

8... ♘c5 [8... ♔c7 moves into the c-file. 9. ♖e3 followed by ♘a3 and ♖c1 is very unpleasant.; 8... ♘d6 is met with 9. ♖f4 The problem around b7 are still not solved.]

9. ♔e3! Great maneuvering with the queen. The knight on c5 is misplaced, and Black must be careful to avoid getting it trapped. It has no way back to d6...

9...g6 How else could Black finish his development?! But now, he must face the same problem on the long diagonal as before.

10. ♘f3! All the moves are very concrete and perfectly executed.

10... ♔c7 11. ♔c3!? [11. ♖d2 was also very strong, with the idea of 11... ♖g7 12. ♖c3! and the only „normal” move 12...0-0 drops a piece after 13. ♖xg7 ♔xg7 14. ♔c3+!+- and b4 next.]

11... ♖g8 Black could not be happy at this moment. At least he prevented 12.b4, because of ♖g7. [11... ♖f5 was

an interesting alternative, but White can get a big advantage here as well, with some powerful play. 12. ♖e3! (Not 12. ♔xh8? because of 12... ♘d3+! 13. ♖xd3 ♔xc1+ 14. ♖e2 ♖xd3+ 15. ♖xd3 ♔xh1)

12... ♘d3+ and now 13. ♖d2! is very strong. Black has serious problems to rescue the knight. 13... ♔xc3+ 14. ♘xc3! (14.bxc3 ♘b2 is not convincing.) 14... ♘xb2 15.a4!+/- and ♖a2 will trap the knight.]

12. ♖e3 b6 [Black ends up with a material disadvantage in the line with 12... ♖g7 13. ♔xc5 ♔xc5 14. ♖xc5 ♖xb2 15. ♖d4! The key move that had to be foreseen. 15... ♖xa1 16. ♖xa1+/- The minor pieces will dominate the rook.]

13. ♘bd2 ♖g7 14. ♖d4 ♖xd4 15. ♔xd4 Black has managed to hold the material balance, but he's still very far from finally laying back on his chair. New problems have come up. All his pieces are completely uncoordinated and his king is stuck in the center.

15... ♖b5? „Less pieces, less problems“ was probably in Black’s mind, but the doubled b-pawns become really vulnerable. This also helps White to finish his development. [15...a5 with the idea of developing the knight to a6 is also bad in view of 16. ♘c4 ♗ba6 17.d6! and Black collapses.; 15... ♙f5 was probably the best chance, but White is much better anyway if he can save his face. 16. ♙e2 ♗bd7 17.0–0! followed by ♖fe1.(White should not be too greedy with 17.g4 because of 17...e5!)]

16. ♙xb5+ axb5 17.0–0 ♖a4 [17... ♗bd7 18. ♖fe1 is also horrible.]

18.b4! The queen is excellently placed on d4, White wants to keep it there at any cost.

18... ♙d8 Black leaves the ♖ac1 threat.

19.a3 Alekhine is not in a hurry to finish the game. Of course, this move was not obligatory at all, ♖fe1 was probably slightly more accurate.

19... ♗bd7 20. ♖fe1 ♙f8 [20... ♗b7 doesn’t change too much. 21.d6 e6 22. ♙d5 ♖a7 23. ♗d4+- followed by sacrifices on e6, or just ♗c6.]

21.d6 ♗e6 This allows a small tactical blow, but objectively the game was already over. [21...e6 loses as well, for instance, to 22. ♙c3 ♗b7 23. ♙c6 ♖a7 24. ♗d4+-]

22. ♖xe6! This probably was played without thinking.

22...fxe6 23. ♗g5 ♙b8 24. ♗xe6+ ♙f7 25. ♗g5+ ♙f8 [25... ♙e8 26. ♖e1+- is equally hopeless.]

26. ♙d5 [There was nothing wrong with 26.dxe7+- and ♖e1 next.]

26... ♖g7 27. ♗e6+ ♙g8 28. ♗xg7+ ♙xg7 29.dxe7 The rest is a matter of technique. I think that Alekhine was disappointed because his opponent didn’t resign here, so he lost his concentration a little bit. Otherwise, he would have finished the game much faster...

29... ♗f6 30. ♙xb5 ♖a7 31. ♖e1 ♙d6 32.e8N+ ♗xe8 33. ♙xe8 ♙xd2 34. ♙e5+ ♙f7 35.h4 ♖xa3 36. ♙e8+ ♙g7 37. ♖e7+ ♙h6 38. ♙f8+ ♙h5 39. ♖e5+ ♙g4 40. ♖g5+ [Finally Black resigned in view of 40. ♖g5+ ♙xh4 41. ♙h6#]

1–0

Editorial Preface

We saw a lot of great games on the highest level during the past week. Almost every Top chess player is somewhere in action: Bilbao Final Masters, Grand Prix in London, Poikovsky. There are 30 GMs with a 2700+ Elo participating in these 3 tournaments!

Compared to these Top events, the Croatian league — where both of Your commentators were playing — looks pretty unimportant. Anyhow, the Team of Arkaidj Naiditsch (Liburnja Rijeka) won the Championship for 3rd time in a row. The team of Balogh Csaba was less successful and didn't manage to stay in the league.

The player of the week is definitely Fabiano Caruana. He is just smashing the Bilbao Masters having got some serious luck in some of his games. In the first round, he won his game against the World's Number 1 Magnus Carlsen in an endgame with a pawn down.

In the FIDE Grand Prix there were 3 winners: Mamedyarov, Gelfand and Topalov. All of them showed great chess and great fighting spirit. Mamedyarov was the sole leader for quite a while, but his peaceful play during the last round gave his opponents a chance to catch him. With wins in the last round, Topalov and Gelfand joined him on the podium.

In Poikovsky, the Russian Super GM Dmitri Jakovenko is dominating the event.

As usual, we bring You some games from the most recent events with great chess from the very Top! Enjoy the CEWN Nr 32.

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Jakovenko,D (2724) – Onischuk,A (2672) [D37]

Poikovsky GM Poikovsky RUS, 01.10.2012

[Balogh Csaba]

Dmitry Jakovenko continues his impressive performance this year. He's on the way to get back to his peak rating of 2760.

1.d4 d5 2.c4 e6 3.♘c3 ♘e7 4.♘f3 ♘f6 Onischuk chose the rock-solid Queen's Gambit.

5.♙f4 0-0 6.e3 c5 This is the most common move. [However, all the top players prefer 6...♘bd7 nowadays.]

7.dxc5 ♙xc5 8.♙c2 ♘c6 9.a3 ♙a5 We are still following the main line, with hundreds of games played. White goes for the fashionable positional move:

10.♖d1 Jakovenko himself is a great specialist of this opening, and plays it with both colors. [10.0-0-0 is the main line with very sharp continuations.]

10...♙e7 11.♙e2 White has more active pieces. He's aiming to finish the development and get a small advantage.

11...dxc4 [11...♘e4 is the other move, but it doesn't equalize either. 12.cxd5 ♘xc3 13.bxc3 exd5 14.0-0 ♙e6 15.♖b1! Black has problems with the protection of his b7 pawn, while after 15...b6 the queen might get into some danger. 16.a4+= The threat is ♖b5.]

12.♙xc4 ♘h5 This is how Carlsen tried to equalize against Kramnik in 2009.

13.0-0! A known motif from many 1.d4 openings that allows Black to take the f4 bishop. Black's main problem is the undeveloped bishop on c8. The White knights start to jump dangerously on the central squares (Ne4-d6 or ♘e5). [The only way to avoid losing the bishop pair is 13.♙d6 but it leads to a drawish position after 13...♙xd6 14.♖xd6 ♘f6 followed by ♖d8.]

13...♘xf4 14.exf4 g6 Black fixes the pawn structure in order to prevent any f5 plan in the future, which would open the diagonal of the c4 bishop and would free the d5 square for the knight.

15.g3

15...a6 This is Black's improvement, with the idea of b5 and ♖b7. [Carlsen played 15...♖d8 16.♖xd8+ ♔xd8 17.♖d1 ♕d7 18.f5!? A brave decision, which had its fruits in the game, but it leads only to a draw. (Objectively, stronger was 18.♘g5! ♔e8 (18...♖c8? is nicely refuted by 19.♘xf7! ♔xf7 20.f5! gxf5 21.♔xf5+ ♔g7 22.♔g4+ White wins in both lines. 22...♔f7 (22...♔h8 23.♖xd7! ♔xd7 24.♕xe6+-) 23.♔h3! decoying the king from the e6-pawn. 23...♔g7 24.♖xd7! ♔xd7 25.♕xe6+-) 19.♘b5! The knights are dominating the weak squares in Black's camp. 19...♖c8 20.♘e4!) 18...gxf5 (18...exf5 19.♔b3 with a double attack.) 19.♔d2 ♔b6?! Carlsen set a trap, but made a mistake. (After 19...♕e8 20.♔h6 ♔b8 with the idea of ♘e5, Black has no problems at all. 21.♘g5 ♔e5! is very strong 22.♔xh7+ ♔f8 Black starts exchanging pieces with ♔g7 or ♖d8. He's doing fine.) 20.♔h6! (Of course not 20.♔xd7?? ♖d8; The tempting 20.♘a4 is met with 20...♘e5!! was in Carlsen's mind.) 20...♕e8 21.♘g5 ♕xg5 22.♔xg5+ ♔f8 23.♔h6+ ♔g8 24.♔g5+ ♔f8 25.♖d6! ♔c7? (25...♔c5 was still playable according to Kramnik.) 26.♔h6+ ♔e7 27.♔h4+! ♔f8 (27...♔xd6? 28.♘b5+-) 28.♔h6+ ♔e7 White can play for more than a draw with 29.♘b5! ♔a5 30.b4! ♘xb4 (30...♔a4 loses in similar fashion. 31.♖xe6+! fxe6 32.♔xe6+ ♔d8 33.♔d6+ ♕d7 34.♕e6!+-)

31.♖xe6+! wins on the spot (31.axb4? ♔a1+ 32.♔g2 ♕xb5 ∞) 31...fxe6 32.♔xe6+ ♔d8 (32...♔f8 33.♔f6+-) 33.♔f6+ ♔c8 34.♔xf5+ ♔d8 35.♔f6+ ♔c8 36.axb4 Black resigned in view of 36...♔xb4 37.♕e6+ ♕d7 38.♔h8+ 1-0 Kramnik-Carlsen, Dortmund 2009.]

16.♘e4 The knight is heading to the holes again.

16...b5 17.♕e2 ♔b6 Black doesn't want to give up the control over the d7 square. He intends to consolidate his position first, but this allows White to increase the pressure. [17...♕b7 was suspicious, but possible. 18.♖d7 ♔b6 19.♔c3! The direct threat is ♖xe7 followed by ♘f6-d7, winning the queen. 19...♖ac8! Cold-blooded defense, counter-attacking the c3 queen. White has nothing better than (19...♖fd8 allows the combo: 20.♖xe7! ♘xe7 21.♘f6+ ♔f8 22.♘h7+ ♔g8 23.♘f6+ ♔f8 24.♘e5! ♘d7 is the threat, Black has to play

24...♔d4 25.♔c7! ♕d5 26.♘fd7+ ♔g7 27.♘b6!+- White wins material, since ♔e4 can easily be parried with ♕f3!) 20.♘f6+ ♕xf6 21.♔xf6 ♘b8! kicking off the rook, otherwise ♘g5 decides the game. 22.♖d2 ♔c6 23.♖fd1 White's chances seems to be preferable, but Black also has some potential. For instance, with ♔e4-f5.]

18. ♔c3! White immediately shows the drawback of the previous move.

18...f6?! With human yes, the weak dark squares looked too dangerous, but this seriously weakens the pawn structure, especially the e6 pawn. [18... ♖b7 should have been played. 19. ♘f6+ is less dangerous. (Probably Jakovenko wanted to play 19. ♖d7 which transposes to the 17... ♖b7 line.) 19... ♖xf6 20. ♔xf6 ♖ad8 Black wants to simplify the position with ♖xd1 and ♖d8, while the concrete threats don't break through. 21.h4 (21. ♔h4? with the idea of ♘g5, but 21... ♘d4!) 21... ♔c5 and ♔f5 next.]

19.b4! Black successfully solved the problem with the f6 hole, but the e4-knight has a new direction to c5, where it immediately attacks the e6 weakness. The critical test of the move is

19...a5 [19... ♖a7 was probably the best, but White is better anyway after 20. ♖c1 ♖c7 21. ♖fd1+; 19... ♖b7? is very bad now. 20. ♖d7 ♖ac8 21. ♖xe7! ♘xe7 22. ♘xf6+ ♔h8 23. ♔b2!+- Black can't hold the long diagonal.]

20. ♖c1! A subtle intermediate resource! It's very important for White to keep his b4 pawn in order to occupy the c5 hole with the knight! [20. ♘c5 didn't work, because of 20...axb4 21.axb4 ♘xb4!]

20...♖a6 Ugly, but what else?! [20... ♖b7 is met with the same 21. ♘c5 axb4 22.axb4+/-]

21. ♘c5 White successfully holds the b4 pawn.

21...axb4 22.axb4 ♖a7 23. ♔b3! White puts the maximum pressure on the e6 pawn.

23...♔f7 A sad necessity, but other moves to protect the pawn were even worse. [23... ♘d8 24. ♘d4! b5 is another

weakness. 24... ♖d7 25.f5! gxf5 26. ♘xf5 Black's position collapses.]

24. ♖fe1! All eyes on e6.

24...♖c7 25. ♖f1? Jakovenko prefers to hold the tension. [The direct 25. ♖xb5!? ♔xb5 26. ♘xe6 was also possible. The main idea is really fantastic. 26... ♖xe6 (26... ♔xb4 is the best, but White gets a clear extra pawn after 27. ♔e3! (27. ♔xb4 is less accurate. 27... ♖xb4 28. ♘xc7 ♖xe1 29. ♘xe1 ♘d4 Black has saving chances.) 27... ♖xe6 28. ♔xe6+ ♔g7 29. ♖xc6 ♖xc6 30. ♔xc6+/-) 27. ♖xe6 ♔g7 And here comes the point!

28. ♘d4!! Brilliant! 28... ♘xd4 29. ♖xc7 ♘xb3 30. ♖xe7+ White mates with the rooks. 30... ♖f7 (30... ♔h6 31. ♖xh7#; 30... ♔g8 31. ♖g7+ ♔h8 32. ♖xh7+ ♔g8 33. ♖cg7#) 31. ♖xf7+ ♔g8 32. ♖fd7+/-]

25...♘d8 26. ♘d2 White wants to stabilize his c5 knight and sets a very deep trick. Oniscuk falls into it.

26... ♖xc5? [26... ♔g7 27. ♘de4+/- is also very bad.]

27.bxc5 ♖xc5

28. ♖e3! Black loses a lot of material in all the lines. Jakovenko has calculated until the end!

28... ♘b7 [28... ♖c6 29. ♕xb6 ♖xb6 30. ♖xc8+-; 28... ♖xc1 29. ♕xb6 ♖xe1 30. ♕c7+- The bishop falls.]

29. ♘e4! ♖c6 30. ♖xc6 ♕xc6 31. ♖c1 ♕d7 The only place to control the c7 square, but it moves into another trick.

32. ♘xf6! Black resigned in view of [32. ♘xf6 ♕xf6 33. ♕e5+ ♔e7 34. ♖c7+-]

1-0

(2) Karjakin, Sergey (2778) – Caruana, Fabiano (2773) [C78]

5th Final Masters Bilbao ESP (2), 25.09.2012

[Balogh Csaba]

A very impressive game by Caruana, who overtook the initiative right after the opening and converted his advantage with a spectacular double exchange sacrifice.

1.e4 e5 2. ♘f3 ♘c6 3. ♖b5 a6 4. ♖a4 ♘f6 5. 0-0 b5 6. ♖b3 ♖c5 A very complex opening, which is excellent to play for the win. Its only problem is that weaker players have various different ways to force a draw with White in some long lines. But of course, top players try to play ambitiously.

7.c3 d6 8.d4 ♖b6 9. ♖e3 0-0 10. ♘bd2 This was considered to be one of the main options, but I believe that after this game it's better to forget about it as White. Caruana deviates with a sideline from his previous games.

10... ♖b7! [Theory suggested to play subtle chess with 10...h6 11.h3 ♖e8 12. ♖e1 ♖d7 but Hou Yifan introduced a strong novelty against Caruana: 13. ♕b1! This seemed

to give an edge. The game was analyzed in detail in the CEWN Nr 4.]

11. ♖e1 exd4 Another very rare move. Generally it's better to keep the tension in the center, but now Black seems to be excellently prepared to gain a strong counterplay. [11...h6 was the main line.]

12. cxd4 ♘b4 A typical reaction after exd4. Black must immediately put pressure on the central pawns.

13. ♔e2 This is the novelty. White prepares a pawn sacrifice that gives him more than enough compensation, but Black is not forced to accept it, he can calmly continue his plan. [The move 13.d5 must always be countered by undermining it: 13...c6! 14.dxc6 ♕xc6 with a balanced position.; 13. ♖b1 leads to a similar position to the game after 13...c5 14.a3 ♘c6 15.d5 ♘e7]

13...c5! [13...♘xe4?! is what Karjakin was hoping for 14.♘xe4 ♕xe4 15.♕d2 Black is forced to give up his strong bishop and his knight gets out of the game. 15...♕xf3 16. ♖xf3 c5 17. ♖g3!+= with a promising position.]

14.a3 White is forced to send away the knight, because it was threatening to occupy the d3 square after c4. [14. d5? c4!]

14...♘c6 15.d5 Karjakin plays the most ambitious way. If he gets to transfer his d2 knight to g3, he'll get a comfortable position. However, Black is just in time to put enough pressure against e4. [The most direct 15.dxc5 dxc5 16.e5 is always a question, but now Black is ready to play 16... ♘g4! trapping the bishop, since ♕f4 loses to c4.]

15...♘e7 16.h3 White must use an important tempo to prevent the ♘g4 threat. [16.♕c2 would be the princi-

pled move, protecting e4 followed by the knight maneuver, but Black has 16...♘g4! 17. ♕f4 c4! The dark squared bishop becomes really powerful. 18. ♕g3 ♘g6 19.h3 ♘f6 Black is fine!]

16... ♖e8 17. ♕c2 ♘g6 Probably it was all analyzed by Caruana, he's already slightly better. White must search for another plan than the knight transfer. It could only work on the queenside.

18.b3 White wants to play a4, but it allows Black to improve his position seriously. [18.a4 immediately, would have been met with 18...c4 Black is OK!]

18... ♕a5! Very well played! Caruana installs his bishop on c3, where it completely confuses the coordination of the White pieces.

19. ♖ab1 [19.a4 leads to a similar position like in the game. 19... ♕c3 20. ♖ac1 b4 Karjakin preferred to get his e1 rook out of the pin to free his play a bit.]

19... ♕c3 20. ♖ec1 b4! Stabilizing the bishop. White can't make use of the c4 square, because both the d2 knight and the c2 bishop must protect the e4 pawn.

21.a4 [21.axb4 is not much better. 21...♗xb4 22.♗d3 h6 The bishop is equally well placed on b4 and on c3.]

21...a5 Black wants to improve his bishop and White needs to prevent this.

22.♗d3 h6 A very useful waiting move. It's hard to suggest a plan for White.

23.♔d1? This is clearly a mistake, but in a bad position it's hard to be clever. White wanted to play ♔c2 to over-protect the e4 pawn in order to execute the knight transfer to g3. [On 23.♗b5 Black has two good options: 23...♖xe4! I like this exchange sacrifice a lot. According to the game, we can be quite sure that Caruana was also intending to play it. Black will collect the d5 pawn soon as well. (23...♖e7 is also good.) 24.♗xe8 ♔xe8 25.♖c4 ♔e7 26.♖d1 ♖f6 White's rooks have no future in this game.]

23...♗a6! Probably Ka rjakin underestimated this move. White can't exchange his bishop, since he will be unable to protect the e4 weakness.

24.♗c2 If we look at the White pieces, we get a terrible picture. It's all because of the monster on c3 and the weak e4 pawn. Everything goes perfectly for Black, but he must work hard to convert the advantage. [24.♔c2 ♗xd3 25.♔xd3 ♖a7! followed by ♖ae7. White collapses.]

24...♖a7! Activating the rook through e7. This is a famous plan from the Benoni structures.

25.♔h2 What else?

25...♖ae7 26.g4?! Of course, such a weakening move only helps Black, but White had no useful moves anyway. [Probably the best was passing with the king on g1 and

h1, but it would lead to the same result as in the game. 26.♔h1]

26...♖xe4! A great exchange sacrifice, using the fact the the White rooks are completely dominated by the Black bishops. White's position simply collapses. [Actually, Black could also have waited for a better moment, since 26...♔d7 27.g5 only helps Black. 27...hxg5 28.♗xg5 ♖xe4! 29.♖xe4 (29.♗xe7 ♖xf2 and h3 falls.) 29...♖xe4 30.♗xe4 ♖xe4 followed by ♔f5. The game is over.]

27.♖xe4 ♖xe4 28.♗xe4 ♖xe4 29.♔c2 ♔e7 What to do as White? Actually, Black wants to play the same against any move.

30.♖g1

30...♖xe3!! Just brilliant! Another exchange sacrifice destroys White's position.

31.fxe3 ♖xe3 32.♖bf1 White would like to get rid of one of the bishops, but their values are much bigger than the rooks, so Black increases the pressure.

32...♘e2! Caruana wants to break the stability of the f3 knight, since the ♘e5 check would be decisive.

33.♖f5 Black can already choose between many different ways to win.

33...♘d3 [33...♘h4 was also very nice. 34.♘xh4 ♘e5+! and mate is coming soon. 35.♔g2 (35.♔h1 ♖xh3#) 35...♖g3+]

34.♖d7 ♘e5+ Black only gives up one of his bishops because it leads to a forced win.

35.♔h1 [35.♘xe5 ♖xe5+ 36.♔h1 (36.♖g3 ♘xf1) 36...♘e4+ 37.♖g2 ♘f4 finishes the game.]

35...♘e4 36.♖e8+ ♘f8 A brilliant victory by Caruana. It's rarely seen that a player of Karjakin's level gets crushed this way.

0-1

(3) Caruana, Fabiano (2773) – Vallejo Pons, Francisco (2697) [C02]

5th Final Masters Bilbao ESP (4), 28.09.2012

[Arkadij Naiditsch]

Another crush by Fabiano Caruana, who seems to be in a great shape lately. After the opening, things in the game got quickly sharp and far from being unclear as the result shows us. Let's take a look at what exactly happened and why did Black lose in only 24 moves...

1.e4 e6 2.d4 d5 3.e5 Lately, Vallejo has started to play the French Defense more and more often, especially the line with 3.♘c3 ♘b4 4.e5 c5, going for very crazy lines. It seems like Caruana himself had been analyzing this — watch his game against Leko from Dortmund — and decided not to go for it, and played the more solid 3.e5

3...c5 4.c3 ♘c6 5.♘f3 ♖b6 5...♖b6 is the most played move, but maybe not the most popular one currently. A lot of games have been played lately in the 5...♘d7 line, with the slightly original idea 6.♘e2 f6!?

6.a3 ♘h6 The main move as well. One of the biggest French experts, Nikita Vitiugov, tried 6...♘ge7, but after

7.dxc5!?, he didn't get a great position against Svidler. Later on, Black was winning the game, but it was not because of the opening outcome.

7.b4 cxd4 8.cxd4 ♘f5 9.♙e3 Still thousands of games were played here. Black's idea is to act against the strong White center with f6 or a5. White's ideas, on the other hand, are to develop ♙d3, 0–0, and hope to keep a space advantage, which would certainly give him some edge.

9... ♙d7 [9...f6 10.exf6 gxf6 11. ♙d3 is probably the main line here.]

10. ♙d3 ♘xe3 11.fxe3 g6!? This move seems to be Vallejo's preparation, at least he is by far the strongest player that ever did it. And indeed, it mostly looks very bad from a logical point of view. Black creates a huge „hole“ on f6, and gives White time for development. But still 11...g6!? has a point. If Black is in time to play ♙e7, followed by 0–0 and f6, everything should be fine. Another idea could be to develop the bishop to h6 to stop White from playing ♙e1–Qh4 in the future.

12. ♘c3! I like White's move a lot! He's taking immediate action against Black's ♙h6 plan — White would just defend on e3 and play ♘a4–Nc5, which is strategically very important. [In case of the usual... 12. ♘bd2 ♙h6 13. ♙e2 0–0 14.0–0

14... ♙d8! A very strong move, Black is preparing to play b6 against White's ♘b3, and maybe to push f6 at the right moment. I think the position is unclear, but it could be very playable for Black.]

12... ♘xb4!? Black accepts the challenge. A brave choice, but not the best. It looks like White's play is just crushing! [12... ♙h6 13. ♙e2 and I think White is doing slightly better. The knight on c3 is better placed than on d2.]

13.axb4 ♙xb4 Of course it's not possible to keep the piece on c3. Black can attack it two more times if needed, with ♖c8 and ♙c7 or ♙a5.

14.0–0 ♙xc3 We are facing a very interesting position. White sacrificed two pawns for the initiative. White's play will be clearly connected with the ♘g5 move and an attack against the Black king, meanwhile Black should try to bring back the bishop from c3 to e7. A very interesting battle begins!

15. ♖c1 [The immediate 15. ♘g5 ♙xa1 16. ♘xf7 ♖f8 (It was also possible to play 16... ♙xd4) 17. ♘d6+ ♙e7 doesn't seem to work for White.; Too slow would be 15. ♖b1?! ♙d8! and Black has covered the g5 square.]

15...♖c8 Correct play by Black! [In case of 15...♙b4 16.♘g5 0-0! 17.♙g4 with ideas like ♙h3 followed by g4, or ♖f3-Rcf1. I wouldn't like to be Black here...]

16.♘g5 0-0

17.♙g4?! Probably Caruana made this logical move instantly, but a better choice would have been to think for a while. Black can now exchange a pair of rooks — which is very good for the defensive side, of course. [17.♖b1! would have been the right way to continue for White. Now against a future ♙d2 move by Black, White will not be obliged to the exchange on c8. 17...♙d8 18.♙g4 ♙d2 and now White got a nice tactical blow! 19.♘xh7! Quite typical and not too difficult, but pretty anyway! 19...♙xe3+ 20.♔h1 ♔xh7 21.♖xf7+ ♖xf7 22.♙xg6+ ♔h8 23.♙xf7 and White is close to have a winning position.]

17...♙d2! Of course Black uses his chance to exchange a pair of rooks! This can be very important. Now all of White's sacrifices will just be half as efficient.

18.♙h3 [An attempt to comeback to the ♖b1 line would fail. 18.♖b1 ♙xe3+ 19.♔h1 ♙xd4]

18...h5 [The interesting 18...h6? would give White a winning position after 19.♖xc8! (The incorrect move order:

19.♙xh6 ♙xe3+ 20.♔h1 ♙xg5 21.♙xg5 ♖xc1 22.♖xc1 ♙e8!) 19...♙xc8 20.♙xh6 ♙xe3+ 21.♔h1 ♙xg5 22.♙xg5 and White has a mating attack. The threat of h4 followed by ♖f6 or h5 is too much for Black to handle.]

19.♖xc8?! [Again, it would be a better choice to keep the rooks on the board. 19.♖cd1! ♙b4 White wanted to play g4 next. 20.g4 We are in a quite forced line that leads to a winning position for White. 20...♙e7 21.♖f6 ♙a3

22.♖xd2! Who cares about an exchange when you play for mate?! 22...♙c1+ 23.♙f1 ♙xd2 24.gxh5 and White's attack should finish the game quickly.]

19...♙xc8 20.♙f3 [It doesn't work to play 20.g4 ♙b3!]

20...♙d8?? A terrible blunder by Black when it seems that most of the danger is already in the past... [The easy 20...♙c7 would have been the right choice. 21.♙xg6 (21.♔h1 ♙b4 and Black protected the rook on f8.) 21...♙xe3+ 22.♙xe3 fxg6 23.♖f6

We face quite a strange position. Black is two pawns up, but White should still be doing a bit better. The queen and the knight are cooperating very well together and the Black bishop on c8 is not much more than just a pawn. From a practical point of view, clearly White is the side to choose, even if the computer would probably hold a draw here with the Black pieces...]

21. ♖xf7 And the game is completely over...

21... ♗xe3+ 22. ♔h1 ♕h4 23. ♗xg6 It's hard to say what did Vallejo blunder... The position is completely lost and it even seems that there are no tricks...

23... ♗g5

24. ♗h7+ Against 24... ♔g7, 25. ♕d3 finishes the game. I think this game might be important from an opening point of view. I doubt that anybody else will try 11... ♗g6 in the future. **1-0**

(4) Ponomarev,R (2729) – Short,N (2698) [E06]

13th Karpov GM Poikovsky RUS (5), 02.10.2012

[Arkadij Naiditsch]

Ruslan Ponomarev became the youngest World Champion in the World, with just 18 years. He definitely was one of the most talented chess players in history. Somehow, during the last few years he has not been fighting for the chess crown. In the current game, he shows once again how great his technique is. From almost a drawish looking position, he manages to create some pressure first, and then to secure a full point with a nice tactical blow. If we could all play like him... :)

1.d4 ♘f6 2.c4 e6 3. ♘f3 d5 4.g3 ♗e7 5. ♗g2 0-0 6.0-0 dxc4 7. ♕c2 We are in the very main line of the Catalan!

7...a6 8.a4 [8. ♕xc4 is the very main here.]

8...b6 Short is trying something new. [8... ♗d7 9. ♕xc4 ♗c6 leads us to a well known position with thousands of games. The latest Karjakin-Leko game could be important for the evaluation of this line...]

9. ♘e5!? I would say: if I were White, I would have played it too! [Black prepared a little trick: 9. ♙xc4 ♘b7 10. ♘c3 b5! and of course, Black is doing more than fine.]

9... ♖a7 10. ♙xc4 White is playing for a small plus, Black is trying to equalize. This is a very normal story for the Catalan. Black's main idea is usually connected with the c5 push, and White's with being prepared for it. White also hopes to get a small plus in some endgame. More often than not, the knight on e5 is Black's main enemy because of the weakness of the c6 square.

10... ♘b7 [Maybe 10... c5 11. ♖d1 and now 11... ♘fd7! getting rid of the knight on e5. I think Black should be very close to equality.]

11. ♘xb7 ♖xb7 12. ♘c3 c5

13. ♖d1 We face quite a typical position with a small plus for White. Black needs to play quite precisely to achieve complete equality.

13... cxd4 14. ♘e3 b5?! I think this is a small positional mistake. [14... ♙c8!? This move is quite typical. Again, I want to point that Black needs to get rid of the knight on e5. While knight is „alive“, White has objective chances

of being better. 15. ♙xd4 ♘c6! forcing the exchange of knights. 16. ♘xc6 ♙xc6 17. ♖ac1 ♖bb8! A cool and strong move! Black is recovering the coordination of his pieces. ♙b7 is to follow and then ♖fc8. I think Black should be very close to equal here...]

15. axb5 axb5 16. ♙xd4 White is doing slightly better and we'll soon understand why.

16... ♙xd4 [Again 16... ♙c8 with the idea of ♘c6 was probably a better choice for Black.]

17. ♘xd4 How to proceed now for Black?! The position is much trickier than it looks like. Some would say, it has to be a draw. I would say, not at all. White has a small plus, which is very unpleasant for Black.

17... b4 It's not great to allow the White knight to go to a4, but what else to do... [At 17... ♘fd7 18. ♘xd7 ♘xd7 19. ♖a7! and White would win a pawn.]

18. ♘a4 ♘fd7 Finally Black exchanges the White knight from e5, but the suffering continues.

19. ♖ac1 f6 [In case of 19... ♘xe5 20. ♘xe5 ♘d7 White has 21. ♖c7! ♖xc7 22. ♘xc7 ♘f6 23. ♘b6 and the draw is far

ahead again. White will play f3-e4 next. It's really an unpleasant endgame for Black.]

20. ♖c6 [20. ♖d3! I like this move better. Why to exchange a piece? The Black knights don't have enough squares! I think White should be doing clearly better here.]

20... ♗xc6 21. ♖xc6 It's not an easy job to equalize completely with Black here.

21... e5 [21... ♖f7 22. b3 ♖d8 23. ♖dc1 White is controlling the c-file, which gives him some advantage.]

22. ♕e3 b3?! Black allows the White knight to go to d5. This is clearly the wrong idea. It was better to play 22... ♖f7. This move is necessary in any case.

23. ♖c3! Of course, White brings his knight to d5.

23... ♖f7 24. ♖d5 ♖d8 25. ♖g2 White has no reason to hurry things up, Black has no counterplay at all.

25... ♖b8 26. ♖b6! A good move by White once again.

26... ♖dd7? And as it happens so often in chess, after some bad play, a blunder occurs. [26... ♖xb6 was probably the only move. 27. ♕xb6 ♖d7 28. e4 with an already very unpleasant position for Black. White will win the b3 pawn, sooner or later.]

27. ♖xf6!! What a pretty tactical blow! We don't see such a motif so often!

27... ♖xb6 [It doesn't help to play 27... gxf6 28. ♖xd7 ♖xb6 29. ♖xe7+ ♖xe7 30. ♕xb6 with a winning endgame for White.]

28. ♖xd7 ♖b5 White is winning, but there's still some job to do. Ponomarev shows us how things should be done.

29. ♖xb8 ♖xb8 30. ♖c1! White has a very nice plan. He'll put the rook on the 7th rank, after taking the bishop from e3 to c3.

30... ♕f6

31. ♕d2 Black wanted to play e4.

31... e4 32. ♖c7+ ♖e6 33. ♕c3 Now Black can't avoid the rook endgame.

33... ♖d8 34. ♖c6+ ♖f7 35. e3! Another nice technical move, fixing Black's pawn structure.

35... ♖d3 36. ♕xf6 gxf6 37. ♖b6! And the Black rook can't move from d3. Now White will just come to e2 with his king and play f3.

37...h5 38.♔f1 ♔g6 39.♔e2 ♔g5 40.f3 The game is completely over.

40...♖d5 [40...f5 41.h4# Nice checkmate :)]

41.fxe4 ♖c5 42.♔f3 It's strange that Black continues playing. With 3 pawns up, Ponomariov is very very strong :).

42...h4 43.gxh4+ ♔xh4 44.♖xb3 A great game by White on the Catalan!

1-0

Endgame section

(15) Vallejo Pons,F (2697) – Carlsen,M (2843)

Sao Paolo, 25.09.2012

[Chess Evolution]

Black has some space advantage, a better pawn structure and his bishop is stronger than the knight. However, White has built up a very solid defensive wall, which seems to be unbreakable. As a real number 1, Carlsen finds his only chance.

26...d4!! At first sight, it's slightly suspicious to open the e-file against his own king, but the knight doesn't have any good way to jump with discovered check. Black tries to create a passed d-pawn.

27.cxd4 ♖xd4 28.♖xd4? I believe it's a mistake to allow Black to obtain a strong d-pawn. Also, White will face problems to cover the c2 invading square. [Passively waiting with 28.♖de2 was better. 28...♙f6 Black's position remains preferable, but he must work hard to make progress. 29.♘d1! looks like a good defensive plan, trans-

ferring the knight to f2, followed by waiting moves with the rooks. White has good drawing chances.(29.g4 is always met with 29...h4 fixing the weakness on g2.; 29.♘c2 ♖d6)]

28...exd4 29.♘c2+ ♔d5 Black made serious achievements in comparison to the initial position.

30.♘b4+ ♔d6 31.♖c1? This logical move is objectively the losing mistake, although White's position was already very difficult. Black was threatening to push a5 and to penetrate with the rook on c2. [31.♖d1 should have been played, when Black must react precisely with 31...♙e5! (On the tempting 31...a5 White has a hidden resource: 32.♖xd4+ ♙e5 33.♖d8! This tactical trick seems to solve all problems. 33...♖xd8 34.♘c6+ ♙f6 35.♘xd8 ♙d3 Black regains the pawn with ♙f1, but White builds up a fortress with 36.♙c3 ♙f1 37.♙d2 ♙xg2 38.♙e3 The knight starts to harass the queenside pawns.) 32.♖e1+ ♙f6 Black is better. 33.♘d5+ leads nowhere. 33...♙f7 The c2 square and the d-pawn are very dangerous together.; 31.♘xa6 loses to 31...♖c2+ 32.♙a3 ♖xg2 Black gets too many passed pawns.]

31...♖xc1 32.♙xc1

32...h4! Excellent calculation by Carlsen, who had to foresee his 37th move. Black fixes the weakness on g2 and is winning now. The bishop dominates the knight.

33.gxh4 [33.♖c2!? could have been the last chance. 33...♔c5! keeping the minor pieces on the board. (Black should not be greedy and go for the pawn endgame with an extra pawn. 33...♙xc2 34.♔xc2 hxg3 35.b4! White blocks all the invading squares. All he needs to do is to meet ♔d5 with ♔d3, and hold the draw. 35...♔d5 36.♔d3

36...♔e5 37.♔d2=) 34.gxh4 gxh4 ♙d3-f1 is threatened. 35.♖e1 b4! fixing more weaknesses on the queenside. The king must cover the b1 square and the knight must cover d3, while Black simply wants to march with his king to g3.]

33...gxh4 Black threatens to play a5 and the arising pawn endgame is winning for him, since in comparison to the 33.♖c2 line, he has an invading square on g3 for the king.

34.♖xa6 [34.♖c2 ♙xc2 35.♔xc2 ♔e5 wins like in the 34.♔d2 line.; 34.♔d2 a5! 35.♖c2 ♙xc2 36.♔xc2 ♔e5 37.♔d3 ♔f4 Black wins the pawn race. 38.♔xd4 ♔g3 39.♔e5 ♔xg2 40.f4 h3]

34...♙d3 The bishop collects the g2 pawn and obtains a second passed pawn.

35.♖b4 ♙f1 36.♔d2 [After 36.♖c2 White can't stop the h-pawn. 36...♙xg2 37.♖xd4 h3]

36...♙xg2 37.♔e2 We have reached the critical position, where Black has to find the only winning move. Carlsen had seen it when he played h4.

37...♙h3!! Before making use of the two passed pawns, Black transfers his bishop to f5, where it excellently supports both pawns. [37...h3 38.♔f2 The bishop is stuck, White holds.]

38.a4 [38.♖d3 doesn't change anything. 38...♙f5 39.♖f2 b4! This is the most accurate, fixing the a2 weakness, followed by ♔e5-f4.]

38...♙f5 39.axb5 d3+ One of the pawns will promote.

40.♔e3 h3 [40...d2 was also possible. 41.♔xd2 h3 and a new queen is coming.]

41.♖xd3 ♙xd3 [White resigned in view of 41...♙xd3 42.♔f2 ♙xb5 43.♔g3 ♙d7 The Black king collects both pawns and the h1 promoting square matches the bishop's color.]

0-1

(16) Short,N (2698) — Rublevsky,S (2693) [A28]

13th Karpov GM Poikovsky RUS (1), 28.09.2012

[Chess Evolution Team]

After quite a dynamic game, we arrived to this bishop endgame. White is a pawn up, but the doubled a-pawn doesn't look too good. We can say, even though White is better here, that the game probably much closer to a draw than to a win.

33...♙xe4 34.c5! Very strong and probably the only chance to continue playing for a win. [Now it would be too slow to play 34.g4?! c5! It's very important to take the d4 square under control. 35.a4 b6 leaves White without any chance to win this game. The White king doesn't have the d4 square anymore, with the idea of going to e5 — which is the only plan in the position.]

34...♙d5 Black is winning a full pawn back — this can't be wrong.

35.♙c3 ♙xa2 36.♙d3 ♙e6 Black is acting against White's only idea — to play g4-g5 followed by ♙d4-Ke5.

37.a4 ♙d7 38.♙d4 ♙b3?! It's hard to understand why Rublevsky decided to go away with his bishop to b3 and not to keep it on the c8-h3 diagonal. [38...♙e7 39.a5 ♙d7 40.h3 ♙c8 41.g4 ♙d7 White still can't play g5 because the pawn on h3 is hanging. 42.♙f1 ♙c8 43.g5 Finally White managed to push g5, but Black keeps his passive defense. 43...♙d7 44.h4 ♙c8 White can't improve much more his position. The only try is to get the bishop to g8. 45.♙c4 ♙e6 and this seems to be a total draw.]

39.a5 ♙e6 Black continues with his incorrect plan, it wasn't too late to play ♙e7 followed by ♙e6-Bc8.

40.♙e4! Black wanted to play f5 with a draw. Now the threat of ♙xc6 forces the Black king to retreat.

40...♙d7 41.g4 The usual fight for the e5 square.

41...♙a4 [It was the last chance for 41...♙e6 42.g5 ♙e7 43.gxf6+ ♙xf6 44.a6 ! 44...bxa6 45.♙xc6 ♙c8 The computers can hold this position, but from a practical point of view, it can be very unpleasant. The position is on the verge of being lost...]

42.h4 There's no reason to hurry with the g5 push anymore. The Black bishop is very badly placed on a4.

42...♔e7 43.g5 ♘b5 44.♙g2! And here we see what Black may have underestimated. White is bringing his bishop to c8!

44...♔f7 45.♙h3 ♔g7 [The attempt to close everything doesn't work. 45...f5 46.♔e5 ♔e7 47.h5 followed by h6, and White's threat of ♙xf5 followed by g6, or to bring the bishop to the a2-g8 diagonal should be enough to win the game.]

46.♙c8 ♙a6 Black is completely paralyzed but it's not easy to break through still.

47.♔e4 White has all time in the world and is preparing to crush Black's position.

47...♔f7 48.f5! Pawns crushing pawns :).

48...♔g7 49.♔f4 ♔f7 50.fxg6+ hxg6 51.♔e4 ♔g7 52.gxf6+ ♔xf6 53.♔f4 The first zugzwang. Black needs to retreat with the king.

53...♔f7 54.♔e5 ♔e7 55.♙g4 White wants to combine the threat of playing ♙c8 and to bring the bishop to the b1-h7 diagonal.

55...♙c4 56.♙f3 ♙d3 Black doesn't allow it.

57.♙g4 ♙c4

58.♙d1! The second try on the d1 square.

58...♙e6? After this move the game is lost. The only attempt to continue was to play [58...♙d3 but after 59.♙f3! puts Black in zugzwang. In case of 59...♙b1, 60.♙xc6 is winning. In case of 59...♙c4, 60.♙e4 ♔f7 and 61.♔d6!.]

59.♙c2 ♙f7 60.♙d3! The last precise move. Black has no moves.

60...♙e8 And only now

61.♙e4 ♙f7 62.♙xc6 We saw a well played endgame by White and a wrong defensive idea by Black, which led the endgame from a close to drawn position to a losing one, step by step.

1-0

Clash of the Titans

(17) Smyslov,Vassily — Hort,Vlastimil [D64]

Leipzig ol (Men) fin-A Leipzig, 04.11.1960

[Balogh Csaba]

A real „heavy-weight” game. The 7th World Champion against one of the strongest player of the 1960s and 70s, Vlastimil Hort.

1.d4 d5 2.c4 e6 3.♘f3 ♘f6 4.♚g5 ♚e7 Black decided to play the Queen's Gambit.

5.e3 ♘bd7 Recently this setup went slightly out of fashion. [The players prefer 5...0-0 6.♘c3 h6 7.♚h4 and one of the following two continuations here. 7...♘e4 (or 7...b6 both with a huge amount of theory.)]

6.♘c3 0-0 A psycho logical fight begins over the dxc4 move. White would like to make as many useful developing moves as possible before „touching” the f1 bishop, in order to save a tempo on recapturing on c4. Black's idea is more or less the same, he wants to improve his position until the f1 bishop leaves its place.

7.♖c1 White focuses his forces on the central files to prepare for the dxc4 and c5 breaks.

7...c6 8.♙c2 ♖e8 One of the main equalizing ideas in this opening is dxc4 followed by e5. The last move supports this plan.

9.a3 Another very useful, multi-purpose move. White frees the a2 square for the bishop (the game demonstrates this well) and prepares to play b4 later in the mid-game stage.

9...dxc4 Finally, Black could not hold the tension. [9...a6 It was still possible to wait, but White would have improved his position anyway. 10.h3! opening the back-rank and saving the dark-squared bishop against the h6 ♚f4 ♘h5 ideas with ♚h2.]

10.♚xc4 ♘d5 This is Black's main resource in this line. White needs to react accurately, otherwise the advantage quickly disappears.

11.♚xe7 ♙xe7

12.♘e4! It's very important to save the knight and prevent Black's plan. [On the „normal” 12.0-0 Black imme-

diately solves his opening problems with 12...♘xc3!
13.♔xc3 e5!=]

12...h6 [The 12...e5? break is refuted tactically by 13.♙xd5!
cxd5 14.♘c3 ! White wins a pawn, since d5 can't be pro-
tected with the queen because of ♘b5, and on 14...e4
15.♘xd5! ♔d6 16.♘c7+- wins.]

13.0-0 b6 Black finishes his development, and starts to
prepare for the other break (after e5 was prevented) with
c5.

14.♙a2!? Here you can see one of the points of the 9.a3
move. Smyslov transfers his bishop to b1 to create di-
rect threats. [I believe 14.♘e5! was even stronger. 14...
♙b7 15.♙e2! ♖ec8 (Black must be careful with 15...♖ac8
16.♔a4! with a double-attack.; 15...♘xe5 16.dxe5 is never
an option for Black because of the d6 square.) 16.♙h5!
forcing a huge weakness. 16...g6 17.♙f3 White's pieces
are perfectly coordinated, he must have the advantage
here.]

14...♙b7 15.♙b1 ♘c5 is the threat. Black must cover the
h7 square.

15...♘5f6 16.♘g3 White consequently avoids the ex-
changes of knights and also prepares to play e4-e5, but
at the same time allows Black to free his position. [16.
♘xf6+!? might be a better option. 16...♘xf6 17.♘e5
♖ec8 18.♘d3 controlling both e5 and c5 breaks, with a
small advantage.]

16...g6? Hort preferred to execute the e5 move and took
control over the f5 square, but it was too slow. [However,
the other idea would have equalized. 16...c5 Probably

Black was afraid of 17.e4 but here he has a very strong re-
source: 17...♘f8! 18.dxc5 ♖ec8!= solving all his problems.]

17.e4! White is in time! The idea is e5 followed by ♘e4,
occupying the d6 square.

17...e5 18.♔d2!! Very deep move, which was probably
overlooked by Hort, otherwise he would have preferred
to play 16...c5. White wants to exchange everything on
e5, followed by f4 and e5, but first he takes control over
the d4 square with a tempo by attacking the h6 weak-
ness. [18.dxe5 ♘xe5 19.♘xe5 ♔xe5 20.f4 ♔d4+ 18.♔d2
was directed against this. 21.♙h1 ♖ad8 White should be
better here as well, but now Black always has ♘g4 against
the e5 move.]

18...♔f8 [18...♙h7 is even worse. 19.dxe5 ♘xe5 20.♘xe5
♔xe5 21.f4+/- and e5, f5 are coming next, destroying
Black's kingside pawn structure.]

19.dxe5 ♘xe5 20.♘xe5 ♔xe5 21.f4 ♖e7 22.e5 Clearly
something went wrong for Black, his counterplay is very
far away.

22...♖d8 23.♔c3?! I don't understand this move. Why
did White move into the ♘d5 tempo? [23.♔c2 was prob-

ably the best. 23...♘d5 24.♚f3→ covering the e3 square, followed by f5 next with a huge attack.]

23...♘d5 24.♚b3 White is ready to push f5, how should Black react?

24...h5?! Hort wants to generate counterplay with ♖h6, but it further weakens Black's kingside. [24...f5! was the only chance to stay in the game. Black wants to play ♖f7 and c5, so White should try to continue the attack with 25.exf6 ♕xf6 26.f5 g5 Black has a terribly suspicious position, but it's not clear yet how White should continue. For instance, after the straight forward 27.♘h5 ♖d4+ 28.♙h1 ♖e2 29.f6 Black plays 29...♖e3! 30.♖c4 c5! and suddenly it's not obvious who is better.]

25.♘e4 Smyslov is not in a hurry with f5. First, he installs a knight on d6. [25.f5 was also quite good. 25...♖h6 26.♖ce1 to prevent ♖e3. 26...h4 27.♘e4 with a big attack.]

25...♖h6 26.♖cd1 ♖f8 27.♘d6! The f4 pawn is indirectly protected by ♖e3, pinning the queen. This means Black is completely lost, he has no chance for counterplay, he can only wait and watch how Smyslov finishes the game.

27...♙h7 Black protects to queen to refresh the ♘xf4 idea, but it moves into other threats. [27...♙a6 28.♖f2 ♘xf4 29.♖e3+-; 27...♘xf4 28.♖e3+- and g5 doesn't work because of ♘f5.]

28.f5! ♘xf7 is threatened, followed by fxg6.

28...♙a6 [Exchanging the queens doesn't help. 28...♖e3+ 29.♖xe3 ♘xe3 30.fxg6+ fxg6 31.♖xf8 ♘xd1 32.♖f6! Black's position collapses, for instance: 32...♘xb2 33.♖xg6 ♙h8 34.e6+- and ♘f7 next.]

29.♖fe1 ♘f4 A desperate attempt to do something with ♖g5, but White keeps everything under control.

30.♖f3 In this practically hopeless situation, Black blunders a tactical blow and quickens his defeat.

30...♖d8?

31.♘xf7! Black loses a huge amount of material.

31...♖xd1 32.♖xd1 ♙e2 Instead of on. White has numerous ways to win, Smyslov chose the easiest. [32...♖xf7 33.fxg6+- wins.]

33.fxg6+ ♘xg6 34.♘xh6 ♙xf3 35.gxf3 ♙xh6 36.♖d6 1-0

Editorial Preface

Another week of great chess has passed, and once again we can enjoy a super-tournament, right after another super event. Poikovsky was won very convincingly by Jakovenko, who came close to reach a 2750 ELO. The second place went to Ponomariov, who showed yet another time his great endgame technique.

The second stage of the Grand Slam in Bilbao has begun with Magnus Carlsen taking his revenge on Caruana. This time, he won a slightly better endgame.

The European Club Cup in Elat is the main place of attention of the next week. As usual. the strongest teams of the World will be competing for the prestigious title. One of Your commentators is going to play for his traditional club, Baden-Baden.

The rapid super-tournament in Saint-Petersburg was won by Leinier Domínguez and Peter Svidler with 7,5/11. We comment two very exciting games from this great rapid event in this edition.

As usual, have fun with CEWN Nr 33!

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Rublevsky,S (2693) – Bologan,V (2712)

Poikovsky, 06.10.2012

[*Balogh Csaba*]

A typical Sicilian fight, where the players have castled on opposite sides and have launched dangerous attacks on both wings. As it often happens in this kind of positions, one side is just a tempo ahead. In this case, it was White.

1.e4 c5 2.♘f3 d6 3.d4 cxd4 4.♘xd4 ♘f6 5.♘c3 a6 6.♙c4 This very sharp line is relatively rarely seen on the top level nowadays. Sergei Rublevsky is probably the biggest expert on it as White.

6...e6 7.♙b3 ♘bd7 [Probably the main move is 7...b5 8.0-0 ♙e7 9.♙f3 ♙b6 10.♙e3 ♙b7 which is considered to be good and leads to a full of life double-edged position.]

8.♙g5 ♙a5 9.♙d2 In general, the main idea of the 6.♙c4 system is to put pressure on the e6 pawn by push-

ing f4-f5, forcing Black to weaken his d5 square — either by e5 or exf5 — and to occupy it with the knight.

9...♙e7 [Bologan already played a similar game this year, where he chose 9...h6 His opponent reacted badly with 10.♙h4. The critical is 10.♙xf6 ♘xf6 11.0-0-0 followed by f4-f5.]

10.0-0-0 ♘c5 11.♙he1 h6? This is a very strange mistake by Bologan in his preparation, since Rublevsky has already won a convincing game against Efimenko back in 2008, where he showed the drawback of this move. [From a theoretical point of view, the critical move is 11...0-0 12.♙b1 ♙c7 13.f4 h6 and here White has to choose between two setups: 14.h4!? (Or 14.♙xf6 ♙xf6 15.g4)]

12.♙xf6 ♙xf6

13.♘f5! In that game, Rublevsky improved his previous game against Ponomarev with this great novelty! We can say that this kind of piece sacrifice with ♘f5 or ♘d5 is very common in the Sicilian. White opens the central lines against the king. [13.♙b1 happened in the Rublevsky-Ponomarev, Elista 2007 game.]

13...0-0 [Accepting the sacrifice also leads to a worse position after 13...exf5 14.exf5+ ♙e6 This is the only move, other attempts lose instantly.]

a) 14...♔f8? 15.♖xd6+ ♔g8 16.♖e8+ ♔h7 17.♖xh8+ ♔xh8 18.♖f8+ ♔h7 19.♕xf7 ♕xf5 20.♖xa8+- refreshing the threat on g8, White wins.;

b) 14...♔d8? 15.♖xd6+ ♕d7 16.♘d5 An experienced Sicilian player stops calculating at this moment, knowing that the attack must break through. This is not the exception. 16...♖c8 (16...♘xb3+ 17.axb3 ♖a1+ 18.♔d2 ♖a5+ 19.b4+- with mate to follow.) 17.♘xf6 gxf6 18.♖xf6+ ♔c7 19.♖d6+ ♔d8 Now the strongest is 20.♕a4! Deviating the queen from the b6 square. ♖xd7 is the threat. 20...♖xa4 (20...b5 21.♖e5+-) 21.♖b6+ ♖c7 22.♖f6+ ♔c8 23.♖xh8+-; 15.fxe6 ♘xb3+ 16.cxb3 0-0 This is the lesser evil for Black. He's only a pawn down and the f6 bishop gives some compensation. 17.exf7+ ♖xf7 18.f4 ♖c8 19.♖e3+= ♔b1 is coming next, with an advantage.]

14.♘xd6 ♖d8 White must play accurately, otherwise Black gets enough counterplay.

15.f4! Trying to stabilize the d6 knight with e5. Black is forced to prevent it.

15...♘xb3+ 16.cxb3 Until the king doesn't get to b1, White has to take back with the c-pawn. It might look a bit ugly, but this phalanx gives very good shelter for the king.

16...e5 This is the deviation from the Rublevsky-Efimenko game, however, it was still commented for White a few more moves. [16...♕e7 happened before. 17.e5 ♕xd6 18.exd6 b5 and White reacted strongly with 19.♖d4! ♖b8 (19...b4? 20.♖e5! traps the queen.) 20.b4! ♖b6 21.♖c5! with a clear extra pawn. White went on to win.]

17.♖f2 White leaves the annoying pin and creates the ♘c4 threat.

17...exf4 18.e5! With this small tactical trick, White closes the diagonal of the powerful bishop, which was Black's main hope to get enough compensation.

18...♕e7 [18...♕xe5? drops a piece after 19.♘c4! ♖xd1+ 20.♖xd1 ♖c7 21.♘d5! ♖b8 22.♘e7+ wins one of the bishops. 22...♔h7 23.♖c2+ g6 24.♘xc8+-]

19.h4! Great multi-purpose move. White wants to take on f4 (preventing ♕g5) and is already preparing for his future an attack on the kingside.

19...♕e6 20.♖xf4

20...b5 This is the first new position for White. [Rublevsky, in his commentary, analyzed 20...♖d7 21.♔b1 ♖ad8 22.b4 ♖c7 23.♘ce4+= with an advantage.]

21.♔b1 A necessary prophylactic move to protect the a2-pawn.

21...b4 22.♘ce4 ♖b6 Black has found the most principled and straight forward plan to attack with a5-a4. He needs only two moves to reach the frontline. What to do for White? He has no resources to defend, so as the saying goes, the best defense is to attack!

23.g4! Launching the counter-attack, but who is faster?!

23...a5 24.g5 a4 [Black can't try to win some time with 24...h5 because of 25.♘f6+! ♔h8 (25...gxf6 26.gxf6+-) 26.♚f3! g6 27.♘h5! Black collapses. 27...a4 (27...gxh5 28.♚xh5+ ♔g8 29.g6+-) 28.♘xf7+-]

25.gxh6! Objectively, this is the strongest move, but it required a huge amount of calculations. [25.♘f6+!? leads to a winning position as well, but in much simpler lines. 25...♔h8 Only move. (25...♙xf6 26.gxf6 axb3 27.♚g1! Black's main problem is that he still needs two moves to generate real threats with ♚xa2 and ♚a5, but this is enough for White to win the game. 27...♚xa2 28.♚xg7+ ♔f8 29.♚g8+! ♔xg8 30.♚g3+ ♔f8 31.♚g7#; 25...gxf6 26.gxf6+- is over immediately.) 26.♘d5! This is the key move! The rest is not so difficult to find. 26...♙xd5 27.♚xd5 ♙xd6 (On 27...axb3 White can simply take material with 28.♘xf7+ and ♘xd8.) 28.♚xd6 ♚xd6 (28...♚a5 29.♚xf7! The queen defends the a2 pawn.) 29.exd6 axb3 and now 30.d7! is the way to victory. ♚e8 is the threat. 30...♚b5 (30...♚g6+ 31.♚e4+-) 31.♚d4! ♚d8 32.gxh6+-]

25...axb3

26.hxg7! This is a real fight! Black must act quickly, since White is already close to mate with ♚h6!

26...♚c6! How to prevent ♚c2? [26...bxa2+? is the worst. 27.♔a1 Black has no chance to continue the attack because of his own pawn. He would require a knight to jump to b3, otherwise there is not even a check.; 26...♚xa2 is too slow. 27.♚h6 Black has only a few checks before the resignation. 27...♚a1+ 28.♔xa1 ♚a5+ 29.♔b1 ♚a2+ 30.♔c1 ♚a1+ 31.♔d2 ♚xb2+ 32.♔e3+- The king has escaped.]

27.♚e2! Only move! White must keep the escaping route through c1-d2 free for his king. [27.♚c1? ♚a6; 27.♚d2? would be a decisive blunder. 27...♚xa2 28.♚h6 Black is faster now with 28...♚a1+! 29.♔xa1 ♚a4+ 30.♔b1 ♚a2+ 31.♔c1 ♚a1#]

27...♙d5! It's White's turn to make a „cool“ move! [Black only has a few checks after 27...♚a6 28.♚h6! ♚xa2+ 29.♔c1 ♚ac8+ 30.♔d2! ♚xb2+ (30...♚c2+ 31.♔e3 ♚xe2+ 32.♔xe2 ♚xb2+ 33.♔e3+-) 31.♔e1+- It's over.; 27...♚xa2 28.♚h6+-]

28.♘g3! Refreshing the ♚h6 threat. [28.♘f2! with the same idea as the text move was also winning. 28...♙e6!? A tricky move but it doesn't help. (28...♚xa2 29.♚h6 ♚a1+ 30.♔xa1 ♚a4+ 31.♔b1 ♚a2+ 32.♔c1+-) 29.♚h6! ♙f5+

30.♘xf5 ♖xd1+ 31.♘xd1 bxa2+ 32.♔a1+- The h6 queen is excellently placed. It doesn't only threaten with mate, but also covers the c1 square.]

28...♖xa2 There was nothing against ♖h6, Black must try a desperate attack. [28...♖a4 loses to 29.a3! bxa3 30.♖h6! ♖xh4 White has only one winning move. 31.♖h8+! ♖xh8 32.gxh8♖+ ♔xh8 33.♖xd5+-; 28...♖a6 is refuted by 29.a3! bxa3 30.♖h6!+-]

29.♖h6 ♖a1+ 30.♔xa1 ♖a6+ 31.♔b1 ♖a2+ 32.♔c1 ♖c8+ Black wants to give the opportunity for his bishop to join the attack on c5. [32...♖a1+ is similar to the game. 33.♔d2 ♖xb2+ 34.♔e3!! Just as in the game, White has to run forward for the win. (34.♔e1 leads to perpetual check. 34...♖c3+ 35.♖dd2 (35.♔f2 ♖f3+=; 35.♖ed2 ♖xg3+) 35...♖xg3+ 36.♔f1 ♖h3+ Black holds the draw with precise checks. 37.♖g2 ♔xg2+ 38.♖xg2 ♖h1+ 39.♖g1 (39.♔f2?? ♔xh4+) 39...♖f3+ 40.♔e1 ♖c3+ 41.♔f2 ♖d4+ Draw.) 34...♖c3+ (34...♖xe5+ 35.♘ge4+- No more checks.) 35.♖d3 ♖xe5+ (35...♖c1+ 36.♖ed2 ♖e1+ 37.♔f4+- The safest place for the king.) 36.♘ge4+-]

33.♘xc8 ♖a1+ 34.♔d2 ♖xb2+

35.♔e3!! The brave run is the only way to victory! Black runs out of checks very quickly in all the lines. [35.♔e1 leads to a draw again. 35...♖c3+ 36.♖ed2

a) 36.♖dd2 ♖c1+ 37.♖d1 (37.♔f2?? ♔c5+ wins.) 37...♖c3+;

b) 36.♔f1 ♖f3+=; 36...♖xg3+ 37.♖f2 ♖g1+ White must accept a draw with 38.♔e2! (38.♖f1??

38...♔xh4+! 39.♔e2 (39.♖xh4 ♖e3# Picturesque mate!) 39...♖g4+ 40.♔d3 ♔c4+ 41.♔e3 ♔g5+ 38...♖g4+ 39.♔d2 ♖d4+ 40.♔e1 ♖e4+ 41.♔f1 (41.♖e2?? would be too greedy. 41...♔xh4+! 42.♔d2 (42.♔f1 ♖h1#) 42...♖d4+ 43.♔c1 ♖a1+ 44.♔d2 ♖c3#) 41...♖h1+ with perpetual check.]

35...♖c3+ [35...♔c5+ 36.♔f4+-; 35...♖xe5+ 36.♔f2 ♔c5+ 37.♔f1+-]

36.♖d3 ♔c5+ [36...♖xe5+ 37.♔f2 ♔c5+ 38.♔f1 ♖a1+ 39.♖e1+-]

37.♔f4 ♖c1+ 38.♖ed2 ♖c4+ 39.♖d4 No more checks left- Black resigned! A really spectacular and amusing game!

1-0

(2) Movsesian,S (2699) – Matlakov,M (2665) [C84]

St Petersburg Rapid Cup 2012 St Petersburg RUS (6.2), 06.10.2012

[Arkadij Naiditsch]

Even though it was a rapid game, Movsesian shows some very nice play and a lot of nice ideas in the Spanish structures!

1.e4 e5 2.♘f3 ♘c6 3.♙b5 a6 4.♙a4 ♘f6 5.0-0 ♙e7 6.d3 The main move is 6.♖e1, but a lot of players are afraid of the Marshall, so the move 6.d3 has become very popular during the last couple of years. These positions look almost equal, but they are quite tricky and require exact play for Black to get complete equalization.

6...d6 This move is the new fashion. In previous games, much more often we saw the moves 6...b5 7.♙b3, and only then d6.

7.c3 Now after Black's b5, the White bishop is going to escape to c2, not allowing Black to play ♘a5 and c5. It's hard to say if this is good or bad. At least, according to the results, White often manages to create some trouble for his opponent.

7...0-0 8.♘bd2 White's plan is quite simple: to play ♖e1, ♘f1–Ng3 and maybe d4 afterwards. This time Black needs to decide whether to play with d6–d5 or without it.

8...b5 9.♙c2 Now we can see why did White play an early c3... The bishop goes directly to c2.

9...d5 Black decides to push d5. Other plan for Black could be to play ♘d7–Nb6–Bf6, or just the simple ♖e8–Bf8, h6, ♙b7. All of this is well known and was already tried in a lot of games.

10.♖e1 Now White wants to take on d5 because the e5-pawn is hanging.

10...dxe4 11.dxe4 ♙e6 Until now everything is more or less standard. White is starting a „standard“ plan as well.

12.a4 Of course, it would make no sense to play ♘f1 and go for the queen exchange. This would just lead to an equal position and the White queen would be very nicely placed on e2 — attacking the pawn on b5.

12...♙c8 A very playable reaction. Black frees the d8 square for the rook and at the same time brings the Queen to b7, where it will protect the b5-pawn. [12...b4 13.♙e2 ♙c8 14.♘c4 ♘d7 15.a5 f6 16.♘e3 b3 17.♙b1 ♙d6 18.♘d5 Movsesian-Almasi, Olympiad 2012, with some advantage for White]

13. ♔e2 ♚b7 Black tries to avoid weakening the c4-square, but now White goes for another plan.

14. b4! White fixes the Black pawn on b5, which will become a target very soon and will cause a lot of trouble for Black.

14... ♖fd8?! A „standard“ move, but not the best one. Black is acting against White's positional threat. [14... ♖ab8!? would have been a better move in my opinion. Black should not exchange a pair of rooks here, the rook on b8 would protect the pawn on b5, while the rook on d8 would take control over the file. The next Black moves could be h6, ♖fd8 and I think that if White is better, it should be a very small advantage.]

15. axb5! Another excellent reaction by Movsesian.

15... axb5 16. ♖xa8 ♖xa8 17. ♕d3 And White's idea is coming true. The b5-pawn is weak and it's not that easy for Black to find a good way to defend it.

17... ♖b8 18. ♘b1!? White follows his major plan! Another piece is coming to the attack Black's weaknesses. [18. ♘f1! would have been another very attractive option for White. The knight is going to d5 or f5 through e3. White is clearly better.]

18... ♕d6 In order to have ♘a7 next. The pawn on e5 is not hanging anymore.

19. ♘a3 ♘a7 20. ♕e3 c6 Black defends the b5-pawn, but the knight on a7 is very badly placed...

21. ♘g5!? When all the Black pieces are concentrated on the queenside, White starts his play on the kingside!

21... ♕g4 [21... ♕c8 22. ♖a1 gives White clearly better prospects.]

22. f3 ♕d7 [A clearly wrong direction for the bishop would be 22... ♕h5? 23. ♘h3 Black's bishop is out of play on h5, and White will continue his play on the queenside by playing c4 eventually. White's position is much better.]

23. ♔a2

23... ♖f8? A blunder, but it's hard to blame somebody for such a move in a rapid game. [23... ♕e8 A passive move, but Black is very solid. White keeps some small advan-

tage but nothing major is going on. In the future, White could try to take control over the a-file by playing ♖c2 and ♖a1. A small plus is guaranteed, but it's not clear if this is enough to win the game.]

24. ♘c4! A strong and unexpected tactic. White attacks a7 and f7 at the same time...

24... bxc4 [In case of the passive move 24... ♘c8 25. ♘xd6 ♘xd6 26. ♖c5 ♖a8 27. ♔b3 Black's position is very bad...]

25. ♖xc4 ♘b5 Black is using his practical chances by going into a position with two pieces for a rook and two pawns... This kind of resource is always useful in a rapid game.

26. ♘xf7 ♖xf7 27. ♖xf7+ ♔f8 28. ♖c1! Another strong move by White, who isn't trying to force things. White's small material advantage gives him a clear edge, so why to hurry?! Maybe White wants to play ♖b3 next, followed by c4, or maybe ♖c4, ♔b3 and ♖a1, winning control over the a-file.

28... ♖c7 29. ♖c4

29... ♖b6 The exchange of bishops doesn't help much...

30. ♔f2 ♖d8 The losing move, but it wouldn't have been much better to play: [30... ♖xe3 31. ♔xe3 ♔a7 32. ♔xa7 ♘xa7 33. ♔f2 with a very bad endgame. White will play ♔e3-Kd2 next, followed by ♖a1. I don't think Black has any real chances of holding this position.]

31. ♖c5+ ♔e8 32. ♔g3 g7 and e5 are hanging, one of the pawns is going to fall. It was clearly too much for Black. A great game by White, who showed us the basic ideas in this „tricky“ opening!

1-0

(3) Gelfand,B (2738) — Kasimdzhanov,R (2684)

London GP, 03.10.2012

[Balogh Csaba]

We are in the final round of the London Grand Prix, where Gelfand was in a must win situation in order to tie for first place. He chose a good opening, which gave way to a very sharp and complex middlegame. The big stakes affected the game a lot, but in the time trouble, Gelfand's nerves were better. Anyway, a very interesting game.

1.d4 d5 2.c4 c6 3.♘c3 ♘f6 4.♘f3 e6 5.♙g5 h6 6.♙xf6

This is White's alternative to avoid the Moscow variation, which starts with [6.♙h4 dxc4 7.e4 g5 8.♙g3 b5 The initial position, where both sides are full of resources. We can say that despite being a hundreds of top level games recently, the territory is still quite unexplored.]

6...♙xf6 7.e3 g6 A fashionable sideline. Kasimdzhanov has already drawn against Wang Hao in this tournament with it, and didn't have any problems against Aronian a few weeks ago. [7...♘d7 is the main line.]

8.♙e2 Gelfand deviated from the mentioned games.

8...♙g7 9.e4 White prefers to avoid including the 0-0 and 0-0 moves. However, it's not easy to find the difference. ...

9...dxe4 I don't like this move so much. [In my opinion, Black should react the same way as if 0-0 was included. 9...dxc4 10.♙xc4 0-0 and probably White should transpose to the main line with 11.0-0 ♘d7 12.e5 ♙e7 with a complex game, but theory considers Black to be all right.]

10.♘xe4 ♙f4 A concrete attempt to equalize. [After the calm 10...♙e7 White gets a comfortable position with 11.c5! This is White's general idea. The knight is going to be annoying on d6.]

11.♙c2 0-0 12.0-0

12...c5!? A very interesting pawn sacrifice. Black gets strong compensation after both captures. On other moves, White wanted to play c5 himself, securing a stronghold for the knight on d6. [12...♘d7 13.c5! also looks good for White. Black's break through attempt with 13...e5?! doesn't work right now. 14.g3! ♙f5 15.♘h4! Suddenly. White can launch a crushing attack: 15...♙h3 (15...♙e6 16.♙c4! and g6 is hanging.) 16.♙c4! ♙h7 (16...exd4 17.♘xg6+-) 17.f4! exf4 (17...exd4 18.♘f2! traps the queen.) 18.♙xf4! (18.♘f2 ♙xd4) 18...♙xd4+ 19.♘f2 and Black can't stand the pressure. The game could finish with 19...♙xf2+ 20.♙xf2 ♘e5 21.♘xg6! ♘xg6 22.♙xf7+-; Taking the d4 pawn is hardly advisable... 12...f5?! 13.♘c5 ♙xd4 White gets more than enough counterplay. 14.♘d3! ♙e4 (14...♙d6 15.c5 ♙d8 16.♘f4 with the double threat of ♘xg6 and ♙ad1. Black is in trouble. 16...g5 17.♙ad1+/-) 15.♙fe1! ♙f1 threatens to trap the queen. 15...c5 16.♙f1 ♙c6 17.♘xd4 cxd4 18.♘e5 ♙e8 19.♙ad1+/- Black deservedly collapses, as he destroyed his pawns structure and

gave up his important dark-squared bishop only for one pawn.]

13.dxc5! Correct decision! [Black has enough counterplay after 13.♖xc5 ♜c6 14.♘b3 a5! provoking a4, in order to create a hole on b4. 15.a4 ♜d8 16.♞fd1 b6 followed by ♙b7, ♞ac8 and ♘b4. Black has a very easy play against the central pawns, and any kind of advance by White involves the creation of big weaknesses in the position. This was Kasimdzhanov's very deep idea, which was perfectly avoided by Gelfand.]

13...♙d7 With the idea of ♙c6 and ♘a6, trying to win back the pawn. [On 13...♘a6 White probably wanted to play similarly to the game. 14.a3 ♞c7 15.b4! White gets huge compensation for the exchange. The phalanx on the queenside is very powerful, and the e5 and d6 — or f6 — squares will be occupied soon by the knights.]

14.b4?! Really ambitious and nice try, but objectively not a great move at all. [14.♞fd1! should have been played, avoiding Black's hidden idea, which could have occurred in the game. 14...♙c6 15.♘d6 ♘a6 and now White needs to find the very strong and concrete solution 16.♞ab1! ♖xc5 17.b4! ♙a4 (17...♘e4 drops material after 18.g3!)

18.♞c1! saves the exchange and transposes to a better endgame. 18...♞xc1 19.♞dxc1 ♘a6 Now the best is 20.♘xb7! ♞ab8 21.c5! with a pawn up.]

14...♙xa1? Now the idea of the exchange sacrifice perfectly pays out. [Probably both players missed 14...♙c6! and on 15.♘d6 Black has 15...♙xf3! 16.♙xf3 ♙e5! White should have played 14.♞fd1 to avoid this trick. In that case, he could simply take with ♙xb7, and ♞xh2 is just one check. 17.♞fd1 ♞xh2+ 18.♙f1 ♙xa1 The a1 bishop is protected by ♞h1! 19.♙xb7 ♘d7 20.♙xa8 ♞xa8 21.♘xf7 ♘f8! The last key move and Black is better.]

15.♞xa1 ♙c6 16.♘d6 White is doing perfectly now. He has only one pawn, but the queenside pawns might easily swap away Black. The Black rooks have no open files.

16...♘d7 17.♞c1?! [17.♞b2! was much better, with the idea of g3. ♞f6 is the only move, trading the queens and then ♘e5. The only active plan for Black now is refuted by 17...a5? 18.g3! ♞f6 19.♞xf6 ♘xf6 20.b5+- Black loses the b7 pawn... and the game.]

17...♞f6? Returning the favor. [17...♞xc1+ 18.♞xc1 ♞fd8! would have brought Black back into the game. The idea is to play a5, and b5 is met with ♖xc5! (18...a5 immediately doesn't work because of 19.b5! ♙xf3 20.♙xf3 ♘xc5 21.♘xb7! and the c-b passers decide the game.) 19.♘d4 a5! White is forced to play 20.a3 but Black gets serious counterplay on the a-file. 20...axb4 21.axb4 ♞a4 22.♞b1 ♞da8 Black is fine.]

18.♞b1! From now on, Black has problems again. h6 is hanging now.

18...g5 19.♔e3 White protects the c5 pawn in order to be able to play b5!

19...♖ad8 Black sets a hidden trap.

20.♘d4! Very well played! White keeps the tension and all his advantage. [20.b5 was very tempting as well, but Black has prepared 20...♙xf3 21.♙xf3 b6! 22.c6 ♘c5 and suddenly he is doing fine, as he manages to explode the d6 knight. 23.♖d1 e5!↗]

20...a6 Black parries the b5 threats. Both players were already down on time. They don't have enough time to find the most precise plans, but White has much easier moves to make just to improve his position slightly.

21.♖e1 ♘e5 22.h3! Opening the back-rank. A high level prophylactic move to avoid different kinds of tricks in the time trouble. White has many potential ways to improve his position, for example, to prepare with a4-b5 or by playing ♙d1, and when the knight leaves e5 ♘xc6 bxc6 and ♙f3.

22...♙a4 23.♔a3 ♘c6 Black tries to complicate matters, but comes out badly. [White is better after 23...♙c6 24.♘xc6 ♘xc6 25.♙f3 as well.]

24.♘f3! Suddenly, the a4 bishop gets in danger and can't go back anymore to protect the b7 pawn.

24...♙c2 25.b5! Exact calculation! [25.♘xb7 was too early still. 25...♖b8!]

25...axb5 26.cxb5 ♖a8 [26...♘d4 loses as well after 27.♘xd4 ♙xd4 28.♘xb7+- and the pawns are marching!]

27.♔c1 ♘b4 28.♔d2! White forces some favorable exchanges. Black has just one move to avoid losing a piece.

28...♙f4 [28...♖a4 loses to 29.a3!+-]

29.♙xf4 gxf4 30.♘xb7 ♖xa2 White has a winning advantage, but makes an inaccuracy by playing the most natural move in the time trouble.

31.c6 Of course, the pawn must be pushed, but first some preparations should have been done with [31.♘e5! and only now start pushing c6. ♙f3 could be followed by ♘d6 and c7 or b6... Actually, the pawns promote automatically. Black can only watch.]

31...♖fa8 Letting the practical chance slip away. Of course, in the time trouble without increments, it's impossible to play flawlessly. You can see now how good

it is for White that he doesn't need to worry about his back-rank thanks to his great 22nd move! [31... ♖e4 was the best chance, with the idea of giving up a piece for the b-c pawns and trying to hold that unpleasant endgame. 32. ♘d6 (On 32. ♘e5 ♖c2! refreshing the idea of sacrificing on c6.) 32... ♙xc6 33. bxc6 ♘xc6 34. ♙b5 ♘e7 35. ♘e5 Of course, White is clearly better, but the small amount of material gives Black chances to survive.]

32. ♘d6 Now it's difficult, since c7 is threatened and 32... ♘d5 is met with ♙c4, eliminating the blockader.

32... ♙d3 33. ♙xd3 ♘xd3 34. ♖f1 [34. ♖d1 was more precise. 34... ♘xf2 35. ♖d2 and the pawns promote.]

34... ♖c2 35. ♘d4! Protecting c6 to support the march of the b-pawn.

35... ♖c5 36. b6 Black's only hope would be to sacrifice the knight for the pawns, but he has no real chance to do it successfully.

36... ♘b4 37. c7 ♖f8 Otherwise, b7 would come with tempo.

38. ♖b1 ♘a6 The last try, but...

39. ♘4b5! Obviously Gelfand prevents ♘xc7.

39... ♖c6 40. b7! ♘xc7 41. ♘xc7 [41. ♘c8!+- could have been a nicer finish of the game with the double threat of ♘e7 and b8♔. Of course, there is nothing wrong with the text move either.]

41... ♖xd6 42. b8♔ ♖xb8 43. ♖xb8+ The rest is only a matter of time.

43... ♔h7 44. ♖b4 ♖d1+ 45. ♔h2 e5 46. ♘e8 Kasimdzhanov didn't want to suffer in this hopeless position and allows a quick finish.

46... f5 47. ♖b7+ ♔g6 48. ♖g7+ And mate in a few moves.

1-0

(4) Alekseev, Evgeny (2683) – Zvjaginsev, V (2678) [C11]

St Petersburg Rapid Cup 2012 St Petersburg RUS (7.1),
06.10.2012

[Arkadij Naiditsch]

In this game, we'll see a very good example on "what should Black be afraid of playing the French defense". In the beginning of the game, Black's position seems to be fine, but then step by step, clouds start to get darker...

1.e4 e6 2.d4 d5 3.♘c3 ♘f6 Another main move is 3... ♘b4, which often leads to very sharp positions. For example a good game to watch is Leko-Caruana from Dortmund 2012

4.e5 [4. ♘g5 dxe4 5. ♘xe4 ♘bd7 is another main line. For those who are interested, we advice you to watch games played by Meier or Grachev, they are both big experts in this line with Black.]

4... ♘fd7 5.f4 c5 6. ♘f3 ♘c6 7. ♘e3 cxd4 [7... ♖b6 8. ♘a4 (8. ♖d2 ♖xb2 9. ♖b1 ♖a3 leads to a very sharp and unclear position) 8... ♖a5+ 9.c3 b6 (9...c4 10.b4+=) 10. ♘d2! with the idea of b4 leads to a slightly better position for White.]

8. ♘xd4 ♘c5 9. ♖d2 0-0

10.0-0-0 Thousands of games have been played here and we still don't know for sure whether White is better or not. The position has quite a fixed pawn structure, which gives both Black and White a couple of standard ideas. Black usually tries to create some play on the queenside with a6-b5-Qa5-b4, and White tries to play h4-h5-h6, often using the ♖h3-Rg3 maneuver to defend the c3 knight (just in case) and attack the Black king. Another idea for Black is to exchange a few pieces on d4, then exchange the queens and try to survive the endgame. Personally, I would not advice this tactic. A good example is the game Navara-Meier where, after some suffering, Black finally lost the game.

10... ♘xd4 11. ♘xd4 ♖a5 I don't like too much what Black is doing now... This leads almost by force to a slightly worse endgame.

12. ♖b1 ♖b8 [12...a6 followed by b5 would still be a better choice in my opinion.]

13. ♘b5! Nice move by White. Now the exchange of queens is forced and White reaches a slightly better endgame.

13... ♖xd2 14. ♖xd2 a6

15. ♘c3?! What a strange move... [15. ♘d6 was of course the right reaction. Black's needs to act fast... If White can play g3-Bh3, or maybe just a simple move like ♙e2, Black's position could become very unpleasant. 15... ♙xd4 16. ♖xd4 f6 The usual idea in these structures... 17. exf6 ♜xf6 18. ♙d3 and we can clearly see that White got a small but very pleasant advantage...]

15...b5?! Gives White a chance to keep the bishop pair alive... [15... ♘xd4 16. ♖xd4 f6 17. exf6 ♜xf6 would still lead to a slightly better endgame for White, but now Black's chances to be OK are a bit higher. The White knight is badly placed on c3, and will need to go over the e2 square to d4. This will take some time and maybe Black will be able to prepare some play on the kingside by playing ♙d7-Bc7-Rbe8 and maybe e5, or even g5.]

16. ♙f2! Of course! Now White will continue the game with the bishop pair, which already gives him quite a solid advantage.

16... ♙b7 17. ♙d3 A safe move. It has a „big“ general idea: to bring the knight to d4. This can be done by playing ♘e2-d4. Now White is acting against Black's f6 push. When this move won't be possible anymore, White will bring the knight to d4 and get a big plus.

17... ♖bc8 Black brings the knight to c4. It's hard to advise something better...

18. ♖e1 Another prophylactic move against f6.

18... ♘a5 19. ♘e2 And finally the knight is going to d4. Even if the computers say that the position is close to equal, I think White is doing much better here. Black is

in big positional danger, which will become very clear in the game.

19... ♘c4 20. ♖dd1 ♖c7 21. b3 A possible move... [But why not to put the knight first to d4?! 21. ♘d4 ♘c5 22. ♘b3! Important move. Now the White bishop from d4 can defend the pawn on b2 in case of ♘a4. 22... ♘e4 23. ♙d4 White is doing a lot better. Black's position is going to fall apart very soon, the threats of playing ♙xe4 followed by ♘c5, or maybe g4-f5 are very strong.]

21... ♘a3+ 22. ♖b2

22... ♘c4+ 23. ♖c1! Of course. No draw!

23... ♘a3? Huge mistake. This is a very bad place for the knight, which will never be back into play. [23... ♖fc8 The knight not really hanging, so black can simply create some more pressure on the c-file. 24. c3 (24. bxc4 dxc4 25. ♙xc4 ♖xc4 (25... bxc4 Simplest. 26. g3 c3↗) 26. ♖xd7 ♖xc2+ 27. ♖b1 ♙e4 28. ♘g3 ♖c1+ 29. ♖b2 ♖1c2+ 30. ♖a1 ♙c6 31. ♖d6 ♖xf2 32. ♖c1 h6 33. ♖dxc6 ♖xc6 34. ♖xc6 ♖xg2 35. ♖xa6 ♖xh2 36. ♖b6 ♖f2 37. ♖xb5 ♖xf4 and probably Black's passed pawns can become dangerous.) 24... ♘cb6 25. ♙d4 (25. ♖b2 d4 This move probably doesn't equalize the position, but it makes Black's play much easier because

of the activity of his pieces. 26. ♖xd4 (26. ♘xd4 ♖xc3 27.f5 ♖d5 28. ♖b1+=) 26... ♖xg2 27.f5↑) 25... ♘c5 26. ♖c2 (26. ♔b2 ♘xd3+ 27. ♖xd3 ♘d7 28.g4 a5 Black must try to activate his pieces, especially the bishop. 29.f5 b4↗)

26...b4! 27.cxb4 (27. ♔b2 a5↗) 27... ♘e4 (27... ♘xb3+ 28.axb3 ♖xc2+ 29. ♔b1 ♖2c6 30. ♖c5 ♘d7 31. ♘d4 ♖6c7 32. ♖d6 ♖c3 33. ♔b2+/- Black's pieces are paralyzed and can't avoid the ♖c5 threat.) 28. ♖c5 ♘xc5 29.bxc5 ♖xc5 30. ♘d4 a5 31. ♔d2+= With the strong knight on d4, White's position seems to be better, although it's not so easy to improve it. a3-b4 is impossible because of the c4 square. Maybe White can try to gain space on the kingside (g4-f5).]

24.c3 b4 25. ♔b2 a5 This thematic pawn advance with the knight on a3 doesn't help Black. [25... ♖fc8 26. ♖c1+- Nothing changed.]

26.cxb4 axb4 27. ♖c1 ♖fc8 28. ♖xc7 ♖xc7 29. ♖c1 ♖xc1 30. ♘xc1 After the rook exchange, Black is not able to protect the b4 pawn.

30... ♘b8 31. ♖c5 ♘c6 32. ♘e2 f6 33. ♘d4 fxe5 34. ♘xc6 ♖xc6 35.fxe5 The game is over. Finally the knight will escape, but the two passers will easily win the game.

Endgame section

(15) Carlsen, Magnus (2843)
— Caruana, Fabiano (2773) [C00]

5th Final Masters Sao Paulo/Bilbao BRA/ESP (6), 08.10.2012

[Chess Evolution Team]

It's the second stage of the Final Masters, and we see the same situation as in the first round. Carlsen doing better in the endgame and Caruana defending. As we remember, Carlsen lost close to a winning endgame by overpushing. This time he makes things right!

41.f5! Strong move. White takes away the e6 square from the Black rook, and at the same time fixes the pawn on h6, which will soon be the main target. The Black bishop from c7 can't do much, his mission is to defend the pawn on b6. Let's take a look at the beautiful technique of the Nr.1 player in the world.

41...♖d6+ Of course. Black needs to keep the rook on the 6th rank. To include gxf5-gxf5 wouldn't make much

sense for Black, since it would give White the extra idea of playing ♖b1–Rg1–Bg7–f6.

42.♔e4 The threat is ♕e5.

42...♖c6 43.♖b1! The White rook is leaving its nice place on b5, to attack the Black pawns on the kingside. Besides, White is ready to play ♔d5–Kc4–Kb5.

43...♔e8 Now against White's ♔d5, Black can simply play ♔d7 followed by ♖d6 check and ♔c6.

44.hxg6 Carlsen starts the action.

44...fxg6 45.♖h1 The h6-pawn is a clear target now. White wants to play ♔d5, and of course, against Black's 45...♔d7, 46.f6! is very strong.

45...♔f7 46.♔d5 Rook to h1, king to b5. This is where the pieces will be perfectly placed.

46...♖d6+ 47.♔c4 gxf5 48.gxf5 Only 3 pawns left to exchange for Black to make a draw, but how to do it? White has two threats, to play f6 next or to play ♖g1.

48...♕d8 Did Black defend against everything? Against 49.♖g1, ♕g5 is coming.

49.f6! Carlsen finds the right winning plan. It's not a difficult move to see, but it isn't that easy to evaluate the outcome of the bishop endgame, even if White is two pawns up...

49...♙xf6 50.♖xh6 ♜e7 51.♖xd6 ♜xd6 52.♙b5 All that Black can do is to lose both pawns on b6 and a5, but if Black is on time to put the king on a8 and give the bishop for the c-pawn, the position would be a draw.

52...♙e6 53.♙xb6 ♙d7 Black brings the king to a8.

54.c4 ♙c8 55.♙xa5 ♙b7 The final stage of the game: White needs to move the c-pawn.

56.♙b4 Pushing away the Black bishop from the a3-f8 diagonal.

56...♙f4 57.c5 ♙a7 58.c6 White's c-pawn only has 2 squares to go, but Black still has some drawing chances. Carlsen demonstrates the perfect winning plan.

58...♙b8 59.a5 Bringing the White pawn to a6, to avoid giving Black a chance to hold the king on c8.

59...♙a7 60.a6 ♙a8 61.♙c5 Black can't move, and the White king is going to d7.

61...♙b8 62.♙c4 ♙c7 63.♙d5 ♙d8 64.♙e6 ♙c7 65.♙d7 Now White only needs to push the Black bishop away from the a5-d8 diagonal.

65...♙a5 66.♙e7 Followed by ♙d8. A really great endgame by White. Everything looks really simple. Usually, to play this well looks simple, but it's very hard to play like this during our own games :).

1-0

(16) Nakamura,H (2783) – Giri,A (2730)

London GP, 02.10.2012

[Chess Evolution]

After unexpectedly losing 4 games in a row, Nakamura didn't collapse and recovered with a brilliant endgame victory. White is clearly better with his more active pieces (especially the Black king and rook are squeezed in the 8th rank), but how to make progress? White can't exchange his a5-pawn for the d5-pawn and the rook has no open files to penetrate. Nakamura found a fantastic breakthrough!

47.g5!! Black is forced to accept the sacrifice, otherwise White takes on h6 and occupies the g-file with the rook. Black can never play $\text{K}e7$ because of the c5-pawn hanging with check.

47...hxc5 48.h6! gxh6 49. Rxe5!! The aim of the offers in the previous three moves was to create a passed f-pawn, which becomes unstoppable with the support of the bishops.

49...fxe5 50.f6! White wants to take on c5, followed by queening the f-pawn. Black has only one move to avoid it.

50... Kd7 [50...h5 51. Kxc5+-]

51.f7+ K e7 52. Kxd7

52... Kxd7?! This is practically the same as resigning, but the other continuation was also objectively losing... [52... Kxf7 Black is materially completely fine, he has 3 pawns and a rook for two minor pieces. Despite that, his position is hopeless, because of the huge power of the bishop pair and the a-pawn, which promotes automatically if the b7-pawn falls. 53. Kf5 White should immediately attack the b7 pawn. 53... Kf6 (53...h5 54. Ke4 Rb8 55. Kxc5 Ke6 56. Kg3 leads to the same position as in 53... Kf6.) 54. Ke4 Rb8

55. ♖xc5 By eliminating the c-pawn, White creates another way to obtain the a-passer, namely by threatening with ♖b6 and c5-c6. The direct threat is ♖d6. Black must deal with it. 55... ♖e6 (55...h5 is refuted by 56. ♖d6! ♖a8 57. ♖c7 ♖c8 and now 58. ♖xb7! 58... ♖xc7 59.a6+- wins.) 56. ♖g3 h5 57. ♖b6 Black has no chance to create counterplay with his kingside pawns. ♖c7 ♖c8 ♖xb7 ♖xc7 a6 is threatened again. 57... ♖d6 58. ♖f3! weakening the pawns, in order to be able to collect them with the king. 58...g4 (58...h4+ 59. ♖g4+-) 59. ♖d5 White wants to play ♖h4 and Black is also in a kind of zugzwang. He can only move with his king. 59... ♖d7 but this allows 60.c5+- wins.]

53. ♖xc5 Black loses a full rook and the connected h-g passers don't give enough compensation to survive.

53...h5 54.f8 ♖ ♖xf8+ 55. ♖xf8 h4 [The main problem is that Black can't support the pawns with his king, because if it goes too far, White creates an a-passer. 55... ♖e6 56. ♖h6 ♖f5 (56...g4 57. ♖g3+- wins easily.) 57.c5!+- followed by the break-through of c6 and a6.]

56. ♖h6! White employs the right technique. He's immobilizing the pawns by attacking them with the bishop.

56...g4 57. ♖g5 h3 58. ♖h4! The bishop occupies the g3 square, where it not only stops the pawn, but also attacks the e5 weakness. White gets a „free hand“ to use his king.

58... ♖d6 59. ♖g3 ♖e6 60. ♖e2 [60. ♖h2 with the idea of ♖g3 was even easier. 60... ♖f6 loses again to (60... ♖d6 61. ♖g3+-) 61.c5!+-]

60... ♖d6 61. ♖d2 ♖c5 62. ♖xe5 ♖b4 63. ♖c2 [63. ♖c7+- was also winning.]

63... ♖xa5 64. ♖b3 Black is in zugzwang! He must move into dropping the d4 pawn with check.

64... ♖b6 [64...b5 65.c5+- and; 64... ♖a6 65. ♖b4+- were equally hopeless.]

65. ♖xd4+ [Black resigned in view of 65. ♖xd4+ ♖c6 66. ♖e5 ♖d7 67.d4 ♖e6 68. ♖g3+- with an easy win.]

1-0

Clash of the Titans

(17) Rudakovsky, Iosif — Botvinnik, Mikhail [E33]

URS-ch14 Moscow, 1945

[Balogh Csaba]

A fantastic game on the topic of „how to overtake the initiative”. We’ll see many nice tactical ideas during the game.

1.d4 ♘f6 **2.c4** e6 **3.♘c3** ♙b4 **4.♙c2** d5 **5.a3** ♙xc3+ **6.♙xc3** This line is popular even nowadays, but Black reacts with a rare move.

6...♘c6 There are 4 other options that are more often seen in practice. Probably they are better as well, but in that time theory was not that well developed in this opening. [6...♘e4; 6...0–0; 6...dxc4; 6...c5 are all possible.]

7.♘f3 ♘e4 Very concrete variations are coming. Botvinnik has already played this once before. Now his opponent prepared an improvement.

8.♙b3! I believe this is stronger than the more common 8.♙c2. [On 8.♙c2 e5! is Black’s point and ♙f5 is coming next. White tried to solve the complications the simplest way, but Botvinnik easily equalized. 9.e3 ♙f5 10.♙d3 exd4 11.exd4 0–0 12.0–0 ♖e8 Black has no problems at all. In the next moves, he’ll manage to get rid of White’s only triumph: the bishop pair. 13.♙e3 dxc4 14.♙xc4 ♘d6 15.♙c2 ♘e7= with a comfortable game in Makogonov-Botvinnik, Leningrad 1939.]

8...♘a5?! Botvinnik tries to play dynamic chess, but objectively it was not justified yet. White made only logical moves so far, and Black has no reason to look for an

advantage immediately. [8...0–0 is better. 9.e3 a5 10.♙d3 a4 11.♙c2 f5 This position arises more or less by force. It’s playable for both sides, but I personally prefer White.]

9.♙a4+ c6 We have reached the first critical moment of the game. White went wrong with

10.cxd5 After this, Black has no problems. The bishop is ready to develop to f5. White can’t make use of the a5 knight at the edge of the board. [10.c5! would have been the right move, which is only justified by tactical means. 10...b6 seems to be fine for Black, as he successfully undermines the central pawns, but (10...b5 11.♙c2 White is better, his next moves will be e3 and ♙d3, to keep the a5-knight out of the game.) 11.e3! is very strong, and on 11...bxc5 12.b4! cxb4 13.axb4 Black is in serious trouble. 13...♘b7 14.♙xc6+/-]

10...exd5 11.e3 ♙f5! Black got a healthy position after all. He has equalized the opening part of the game.

12.♙d3?! After this small inaccuracy, Black starts to overtake the initiative. [12.♙d2 should have been played. By using the misplacement of the a5 knight, White gets rid of his strong colleague on e4. 12...♘xd2 13.♘xd2 0–0

14. ♖e2 with equal chances. (14.b4 doesn't win a pawn, because of 14... ♗c4! and b5 at the end.)]

12... ♖b6! Excellent move. Suddenly, the a5 knight becomes a very strong piece. It wants to jump to b3.

13. ♖c2?! White did not want his queen stuck out from the game after ♗b3, but anyway, it would have been a better idea to prevent it by: [13.b4 ♗c4 On the other hand, the b4 pawn became a target now. Black will push an unpleasant a5 soon.]

13... ♗b3 14. ♖b1 Botvinnik feels that his position is ready and he seizes the initiative, so he quickly opens the position, trying to make use of the temporary misplacement of White's pieces. It's very important to mention that now and in the following moves, 0-0 would be an important waste of time, which would drop the advantage.

14... ♗c5!! The move is based on accurate calculation. The direct threat is c4, after which the pin of the f5 bishop wins material.

15. ♗h4 The best chance. White sends away the bishop, but his knight gets to the edge of the board. [15.dxc5 ♗bxc5 is bad for White. 16. ♗d4 ♗xd3+ 17. ♖xd3 ♗g6!

White is in trouble because of the pin on the b1–h7 diagonal. Exchanging the queens doesn't help. 18. ♖b5+ ♖xb5 19. ♗xb5 ♗c5! 20. ♖a1 ♗b3 trapping the rook. 21. ♗c7+ ♗d7 22. ♗xa8 ♖xa8 23. ♖a2 ♗b1 would have been a really funny final position.]

15... ♗e6 16. 0-0 White leaves from the threatened ♖a5 check. [16. ♗xe4 dxe4 17. ♖xe4 would cost a piece after 17... ♖a5+ 18. ♖f1 ♖a6+ 19. ♖g1

19... ♖c4! Quite a unique way of trapping a piece. The c1 bishop is lost; 16.dxc5 is also bad. 16... ♖a5+ 17. ♖f1 ♗exc5]

16... ♖c8! Great dynamic chess. One imprecise move would have allowed White to survive.

17. ♗xe4 [17.dxc5 ♖xc5 18. ♖d1 0-0 is also terrible for White. The situation of the c1 bishop is quite sad, the b3 knight paralyzes the whole position. After ♗xe4 dxe4, the h4 knight can't return to the game.]

17... cxd4! An important intermediate move.

18. ♖d3 dxe4 19. ♖xe4 Finally, the time has come to play.

19...0-0! 20.exd4 White seems to be safe, but the real problems are just about to come. As we'll see, in every line White has problems with one of the rooks, the back-rank or the h4 knight. But of course, Black must continue to play energetically, a simple recapture on d4 would allow White to consolidate his position.

20...♖fe8 ♗c4 is the threat. [20...♗c4 is a good alternative suggested by the computer. 21.♖e1 The point is the completely unexpected 21...♙e6!! 22.♙xe6 fxe6 and the b1 rook is lost! 23.♗e3 ♗d3 24.♖bd1 ♗c2]

21.d5 ♗d7 The bishop is heading to b5.

22.♙d3 The only way to prevent ♗b5. [22.♙b4 loses to 22...♙xb4 23.axb4 ♗b5 24.♖d1 ♗d3! traps the rook again.]

22...♙b5 Also good, but missing a concrete win. [A very nice motif was missed by Black: 22...♘xc1! 23.♖fxc1 ♖xc1+ 24.♖xc1 ♙h6!! Probably Botvinnik didn't see this double attack. White loses a piece. 25.♙c4 ♗b5! 26.♙c5 (26.♘f5 ♗xc4 27.♘xh6+ gxh6 The weak back-rank tells.) 26...b6! White can't defend both hanging pieces.]

23.♙d1 [23.♙xb5 loses the b1 rook in the same way as before. 23...♗xb5 24.♖d1 ♗d3!]

23...♙c4 Again very strong, but not the best. White attacks the knight and if it leaves to f3, ♗f5 collects the rook. The same idea could have been achieved in a better version by [23...♖c4! 24.g3 (24.♘f3 ♗f5) 24...♗g4! Forcing a serious weakness 25.f3 ♗h3 and on both rook moves, the same finish arrives. 26.♖e1 (26.♖f2 ♖d4! 27.♗d2 ♙xd5) 26...♖d4! White can't control the back-rank. 27.♖xe8+ ♙xe8]

24.♗e3 White defends resourcefully. A very strong move is needed now!

24...♖e5!! Excellent! The threat is ♖xd5 and when the queen moves, the h4 knight is hanging.

25.g3 [25.♘f3 ♖xd5 26.♙e1 This is the only place for the queen. 26...♗b5! White can't prevent ♙xf1!]

25...♗g4! The same motif as in the 23...♖c4 line. The queen has no place to leave, so a huge weakness has been forced.

26.f3 ♗h3 27.♖e1 Black can choose between two ways to win now.

27...g5! With the idea of getting the f5 square for the bishop. [The simple 27...♖ce8! was also good enough. White can't protect his bishop, and on 28.♙f2 ♖xe1+ 29.♙xe1 ♔f1#]

28.f4 A desperate attempt. [28.♘g2 ♙f5 is also hopeless.]

28...♖xd5 29.♔f3 gxh4 30.g4 White still has hope, but Botvinnik doesn't let him go.

30...♘d2! 31.♙xd2 ♖xd2 32.♔xh3 ♔xf4 The White king is so weak that he can't stand the pressure after ♖cc2. The game is over.

33.♔xh4 ♖cc2! 34.♔g3 ♔d4+ White resigned! An outstanding game!

0-1

Editorial Preface

The European Club Cup came to an end with two great teams sharing the first place, and just thanks to a “half board point”, the winner is the number one seeded, the team from Azerbajdjan, “SOCAR”, that presented an amazing line-up: Radjabov, Mamedyarov, Topalov, Grischuk, Kamsky. The funny thing is that “SOCAR” started the tournament with a 0 against the team of “Ashdod”, and managed to win all their other matches with a very high score. The second place went to the team of Saint-Petersburg. The funniest thing was the paring system. It seemed more like a lottery. The parings made no sense.

The second main event of the week is the “Spice Cup”, where 6 young talented Super GMs (Vachier Lagrave, Ding Liren, So, Nguyen, Meier, Balogh Csaba) are comparing their chess knowledge. We are just half way in this tournament, and all the participants are very close to each other.

Already a few days ago, the “Final Masters” came to an end with an already usual victory for Magnus Carlsen, but this time he had to win a 2 blitz-games match against Caruana, who scored the same amount of points. 3rd place went to Aronian.

Right now, it seems like there’s nobody who can even compete with Carlsen... How long can the chess genius continue winning a game after game? I guess we’ll find out very soon in the super-tournament of London, which is going to take place in December.

As usual, we wish You a lot of fun with this edition of CEWN and these great games from the past week.

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Carlsen,M (2843) – Anand,V (2780)

Bilbao, 12.10.2012

[Csaba Balogh]

World's Nr.1 player Magnus Carlsen won the Sao Paulo-Bilbao Masters tournament by avoiding any kind of theoretical battles. He never looked for an advantage, and only wanted to get a playable position where he could slowly outplay his opponents. In this game, he was facing the World Champion.

1.e4 c5 2.♘f3 d6 3.♙b5+ Carlsen wanted to avoid the Sicilian Najdorf variation.

3...♙d7 4.♙xd7+ ♚xd7 5.c4 ♘f6 [Anand quickly got into some trouble against Caruana a few rounds before in the same tournament by playing 5...♘c6 6.♘c3 g6 7.d4 cxd4 8.♘xd4 ♙g7 9.♘de2 ♘f6 10.f3 0–0 11.0–0 This is what White is playing for. He has obtained a space advantage and a long-term initiative. If Black wants to equalize, he needs to execute a pawn break with a6-b5 or e6-d5, but White is ready to meet it now. 11...a6 12.a4 e6 13.♙g5! It's very important to attack the f6 knight to prevent the d5 breaks. 13...h6 14.♙h4 g5 would weaken the kingside too much. 14...♖fd8 15.♖b1 White has protected the b2-pawn to stop d5. Now it would be met with cxd5 exd5 ♙xf6 ♙xf6 and ♘xd5. 15...♚c7 16.♙h1 ♖d7 17.♖c1 White got a small edge, but Anand missed or underestimated a small tactical trick, and his position became crucial. 17...♖e8?! 18.♘d5! A well-known motif to use the pin on the

c-file. 18...exd5 19.cxd5 ♚b6 20.♙f2! ♚xb2 21.dxc6 bxc6 22.♖xc6 ♖dd8 23.♖xa6+/- White ad a clear extra pawn, although Anand managed to survive later on. Caruana-Anand, Sao Paulo/Bilbao 2012.]

6.♘c3 g6 7.d4 cxd4 8.♘xd4 ♙g7 9.f3

9...♚c7 This is practically a novelty. Black prevents White to achieve his standard setup by developing the dark squared bishop to e3 or g5... [9...0–0 10.♙e3 is the main line with hundreds of games.]

10.b3 ♚a5 11.♙b2 However, the bishop on b2 stands quite well too.

11...♘c6 12.0–0 0–0 [Black can't make use of the pin after 12...♘xd4 13.♚xd4 White will retreat his queen in the next move.]

13.♘ce2 White has stabilized his position. He obtained a slightly better position with a space advantage, but of course, converting it needs a lot of effort.

13...♖fd8 14.♙c3 This is an inaccuracy. [The prophylactic 14.♙h1! should have been played, when the d5 breaks are not effective anymore. 14...e6 15.♙c3 ♚b6 16.♚d2 White is better. Now on 16...d5 17.♘xc6! the principled

17...bxc6 is met with ♖a5! 17...♙xc6 18.♖fd1+= White is well prepared for these actions.]

14...♙b6 15.♙h1

15...d5! This great tactical idea seems to solve all the Black problems. However, Carlsen finds a way to keep the position complex.

16.♘xc6! [16.exd5 ♘xd5! 17.cxd5 ♖xd5 was Anand's idea. He wins back the piece and gets an advantage.]

16...bxc6 17.♙e1! White leaves the pin with the threat of ♖a5, and prepares for a pawn sacrifice.

17...♖dc8? It's hard to understand this move. The rook was well placed on d8. [Black could have parried ♖a5 with the most logical 17...a5! This is a useful move in any case, with the idea of a minority attack with a4. Black seems to be fine, since the idea of the game is less effective now. 18.e5 ♘e8 19.e6 because of 19...f5! Black wants to play d4, followed by c5. 20.♙xg7 ♘xg7 and Black is OK! He might play d4, c5. Also the e6 pawn might be a potential target later on, after ♖d6 and ♖a6.]

18.e5 ♘e8

19.e6! Suddenly, Black's position is slightly unpleasant. It's not easy to deal with the e6 pawn.

19...fxe6 Black accepts the sacrifice, but it's clear that he can't hold his material advantage for long. [19...f5 wasn't better. Now White has 20.♖d1+= and in comparison to 17...a5, Black doesn't have d4. He can't keep the tension of his d5 pawn. This means that his position is worse.]

20.♘f4 ♖xc3 21.♙xc3 d4 [21...♘g7 leads to the game by transposition after 22.♖ae1 d4 23.♙d2]

22.♙d2 c5 23.♖ae1 ♘g7 Carlsen finds a very nice idea to combine the pressure of the e6 pawn with a hidden attack against the king.

24.g4! White restricts the movement of the g7 knight. He prevents the ♘f5-e3 maneuver. [24.♘h3 immediately, would be met with 24...♘f5;

On 24.♖e5 Black should try to consolidate with 24...♖c6 25.♖fe1 ♖f8 It's not easy to break through with White.]

24...♖c6? [24...♙d6 was probably the only move to stay in the game. Now on 25.♘h3 Black has 25...e5! 26.♙h6 (However, White should be slightly better after 26.♙g5

winning back the pawn.; Or 26.♘f2 and ♘d3 next.) 26... ♘e6 just in time to prevent ♘g5.]

25.♘h3!! After this unexpected move, the game is practically over. Black can't prevent the ♖h6-Ng5 threat!

25...♘e8 Black transfers his knight to f6 to cover the h7 pawn, but it leaves the e6 pawn unprotected. [25...♖h8 was the alternative, but it's not much better. 26.♖h6 ♖d8 27.♘g5 ♖g8 28.f4! followed by ♗f3-h3.]

26.♖h6 ♘f6 27.♘g5 ♖e5-Rfe1 is coming next. The main problem is that Black can't play ♖d8-f8 because of ♘xe6.

27...d3 [27...♖a6 is too slow. 28.♖e5 ♖c8 29.♖fe1 ♖f8 White can choose between 30.♖h3+/- (And 30.♖xf8+ ♗xf8 31.♘xe6 ♗fc8 32.♘f4+/- White ends up with an extra pawn and a positional advantage.);

27...♗f8 28.♖e5+- Creating a new threat of ♘xh7 ♘xh7 ♖xg6 ♖h8 and ♗h5.]

28.♖e5 ♘xh7 is the threat. Black must waste a tempo to prevent it.

28...♖h8 [28...d2 loses to 29.♘xh7! ♘xh7 30.♖xg6+ ♖h8 31.♗h5+.]

29.♖d1 Black can't protect the d-pawn, because of ♘f7 check.

29...♖a6 30.a4 After this old-blooded move, the World Champion decided to stop resisting. His pawns start to fall one after another.[30.a4 ♖c8 31.♖xd3 ♖g8 (31...♖f8 32.♖xf8+ ♗xf8 33.♘xe6+-) 32.♗de3+-]

1-0

(2) Volokitin,A (2724)
– Mamedyarov,S (2748) [B94]

European Club Cup Eilat ISR, 11.10.2012

[Csaba Balogh]

A really spectacular game, even though a closer look shows mistakes by both sides.

1.e4 c5 2.♘f3 d6 3.d4 cxd4 4.♘xd4 ♘f6 5.♘c3 a6 6.♙e3 ♘g4 At the moment, this 6...♘g4 line against the ♙e3 system is doing very well. Volokitin, as a huge theoretician, decides to play another system.

7.♙c1 Black has nothing better than retreating the knight. [7.♙g5 h6 8.♙h4 g5 9.♙g3 ♙g7 is the starting position if White decides to challenge the 6...♘g4 variation.]

7...♘f6 White goes for the sharpest system of the Najdorf and plays

8.♙g5 ♘bd7 9.♙e2 e6 [9...b5 is a good alternative for Black if he wants to avoid the long theoretical battles with e6. We have analyzed the Motylev-Wang Hao game in the 19th edition of CEWN.]

10.0-0-0 ♙c7 11.f4 b5 We are still just at the beginning of theory, and White chooses a sideline.

12.f5 This is the principled idea to weaken the d5 square by putting pressure on the e6 pawn. [However, the main and probably better move is the prophylactic 12.a3 before pushing f5.]

12...b4! [12...e5 meets with a nice and typical response: 13.♘d5! ♘xd5 14.exd5 The knight is ready to occupy the c6 square.]

13.fxe6 bxc3 14.exd7+ ♘xd7! This is the stronger recapture. [White gets a better endgame after 14...♙xd7 15.♙c4! cxb2+ 16.♙b1 ♙xc4 17.♙xc4 ♙e7 18.♙he1 White wants to play ♘f5. Despite the fact that the queens have left the board, White has serious threats. Black needs to transfer his knight to e5 to reduce the pressure, but it doesn't solve all the problems either. 18...♘g4 19.♙f4! ♘e5 20.♙b3 White wants to play ♘f5 again, with the idea of gaining the bishop pair and improving his pawn structure (after ♙xf5 exf5). Black has to parry it with 20...g6 21.♘f3!+= and White has better prospects!]

15.♙c4 cxb2+ 16.♙b1 The b2-pawn gives a nice shelter for the king. This is a known motif in the Sicilian. The same happens often on the other side as well, when Black is castled kingside and White's attack arrives with g6. He takes with gxh7 and Black hides his king with ♙h8.

16...♘c5! [16...♙xc4 leads to a r position to the 14...♙xd7 line. White will be better here as well. 17.♙xc4 ♘e5 18.♙b3 ♙e7 19.♙f4!+=]

17.e5! White urgently opens the lines against the Black king, which still needs a few moves to get into safety. Both players have definitely studied this position, since it has already been played before.

17...♖b8! A strong novelty, recommended by the computer. [17...dxe5?! happened before, but White refuted it elegantly by 18.♘b5!! 18...axb5 19.♔d5! with a triple attack: ♔d8, ♔xa8 and ♙xb5. 19...♙e7 This loses immediately. (19...f6 is more resistant, but the attack breaks through after 20. ♙xb5+ ♔e7 21. ♙e3! Black has only one ugly move to protect the c5 knight and the a8 rook. 21...♘b7 22. ♙c4! ♘d6 (On 22...♔e8 23. ♙b6! wins. 23...♔xb6 24. ♔f7#) 23. ♙c5 with a huge attack.) 20. ♙xb5+ ♔f8 21. ♙xe7+ ♔xe7 22. ♔xa8+/- Guseinov-Benitah, Marrakesh 2010.]

18.exd6 ♙xd6 19.♔e1+! Depriving Black from the right to castle!

19...♔f8! Both kings are quite naked, but they are safe against the direct threats still. [19...♘e6? loses against the little combination 20.♘xe6 ♙xe6 21.♔xe6+! fxe6 22.♔xe6+ ♙e7 23. ♙c4+- Black can't hold the threats after the h1 rook joins the attack.]

20. ♙d3! With the idea of freeing the f1-square for the rook.

20...h6? This loses. Mamedyarov's idea was to open the back-rank in order to be able to take the d3 bishop, but he missed a fantastic tactical blow! [20...♘xd3? is refuted by 21. ♙e7+!! Black either loses his queen or after 21...♔g8 22. ♙xd6!+- wins because of the back-rank. This was the idea behind 20...h6, when after 21. ♙h4, this line works perfectly for Black!;

However, the great 20...♔b4!! seems to solve all the problems. 21. ♔xb4 ♘xd3 22. ♔a4 ♘xe1 23. ♔xe1 ♔d7 Black parries the concrete threats and wants to coordinate his pieces with h6, ♙g8-h7.]

21. ♙d8!! Beautiful! White sacrifices a bishop in order to win some tempi for the attack. [21. ♙h4? ♘xd3 22. ♙e7+ ♔g8 The king has „luft" on h7.]

21...♔xd8 22.♔hf1! The f7 square is the critical target! White has an extra option to increase the pressure...

22...♔b7 [22...f6 loses as well to 23.♘c6 ♔c7 24. ♙g6+-; 22...♔c7 23. ♙g6!+-]

23. ♖g6! Forcing a fatal weakness with f6.

23...f6 White is winning due to the strong g6 bishop, which creates threats on f7 and e8. But how to break through?

24. ♖d5? With the idea of ♖xd6, deflecting the queen, followed by ♖e8 mate. However, this allows Black to return to the game. [The easiest is probably 24. ♖e3!+- doubling the rooks on the e-file. Black has no acceptable answer against it;]

The nicest is 24. ♘c6! ♖d7 and now 25. ♖e3! again, with the idea of doubling the rooks, and on 25... ♖xc6 White wins by deflecting the queen from the e8 square. 26. ♖d5!! ♖d7 27. ♖xd6+! ♖xd6 28. ♖e8#]

24...♖e7! The game is unclear, thanks to the tactical resource:

25. ♘c6 ♖b7! Many pieces are hanging. Where to take? [25... ♖xe1+? 26. ♖xe1 ♖d7 would have lost again to 27. ♖xd6+! ♖xd6 28. ♖e8#]

26. ♖xc5! After dropping almost all the advantage, Volokitin starts to play extremely precisely again! [On 26. ♖xe7 ♖xe7! keeps Black alive.]

26... ♖xc5 27. ♘xd8 Black must move with his b7 bishop and also has to cover the e6 square against the threatened check.

27... ♖d5 [27... ♖xg2? loses to 28. ♘e6+! ♖g8 29. ♘xc5+-; 27... ♖c8 is met with the same move as in the game.]

28. ♖d1! Very well played! White creates different kind of threats around the d8 square. At the same time, he keeps the rooks on the board in order not to help Black to solve the problem of the h8 rook.

28... ♖e4 [28... ♖e5 was an alternative. Probably the strongest for White is 29. ♖f5 ♖xf5 30. ♖xf5 ♖c4 31. ♖d7 Black hasn't yet managed to solve the problem with his h8 rook;]

28... ♖c4? loses to the nice 29. ♘c6! wins.]

29. ♘f7! Another fantastic shot! Volokitin shows his best again! [29. ♖xe4 ♖xe4 and the rook escapes soon, Black is fine.]

29... ♖xf7? Decisive mistake. Black missed the upcoming blow! [Critical is 29... ♖xg6 30. ♘xh8 ♖e8 White is an exchange up, but suddenly, instead of the rook, another piece is trapped on h8. 31. ♖d8 with the idea of ♘g6. 31...]

♖e4 32.♘g6+ ♔f7 33.♘f4 White should be slightly better, although Black has strong counterplay with the bishop pair after 33... ♙b5 34.♘d3 ♙a3]

30. ♖fe1!! An unpleasant surprise! The back-rank decides the game. [Black expected 30. ♙xe4 and he probably wanted to save the opposite-colored bishop endgame after 30...g5 31. ♙d5 ♖a7 32. ♖xf6+ ♔g7 33. ♖c6 ♙e7 White will end up with an extra pawn, but Black has real chances to get a draw.]

30... ♙xc2+ [30... ♙xg6 31. ♖d8#;

30...f5 31. ♖d8+ ♔e7 32. ♖xh8 ♖f6 doesn't save Black because of 33. ♙xf5!+-]

31. ♔xc2 ♔g8 The most cruel part of the game is just ahead of us!

32. ♖d8+! White is not greedy by taking the rook. He rather enjoys the situation with the imprisoned h8 rook. [32. ♙xf7+ ♔xf7 is also a decent chance to win for White, but the text is much better.]

32... ♖f8 [32... ♙f8 33. ♙xf7+ ♔xf7 34. ♖d7+ ♔g6 35. ♖e8+- Black can't leave the pin.]

33. ♖xf8+ ♙xf8

34.g4!! A pictures que final position! Black is two pawns up, but he's just completely lost, since he has zero chances to rescue his pieces from the f8, g8 and h8 squares. The White king collects the b2 and a6 pawns, followed by promoting his own a-pawn.[34.g4 f5 (34...h5 35.gxh5 f5 doesn't help. The easiest is 36. ♖f1 ♙e7 37. ♖xf5 ♙f6 Black can't get out with his pieces because of 38. ♖c5!+-) 35.gxf5 h5 White blocks with 36.h4+-]

1-0

(3) Andreikin,Dmitry (2718) – Nakamura,Hikaru (2786) [E90]

28th European Club Cup Eilat ISR (1.3), 11.10.2012

[Kamil Miton]

1.d4 ♘f6 2.c4 g6 3.♘c3 ♙g7 4.e4 d6 5.♘f3 0–0 6.h3

The idea of this line is to keep the possibility of playing g4 eventually, especially after the center closes with e5–d5.

6...e5 7.d5

7...♘a6 Not the most popular, but a normal development move. Black can also follow other plans: [7...a5 8.♙g5 ♘a6 with ♙e8–Nd7–Ndc5 next (the other knight comes to c5), and f5.;

7...♘h5 This is a very interesting option because Black immediately tries to take advantage of the weakened kingside, after h3. 8.♘h2 not allowing f5. 8...♙e8 Black's preparing f5 because the knight on h5 will be protected. 9.♙e2 ♘f4 10.♙f3 f5 11.g3 ♘xh3 12.♙g2 ♙f7 and now many games finished with a draw after. 13.♙xh3 (13.♙f3 is possible to look for a fight.) 13...fxe4 14.♘g4 ♙xg4 15.♙xg4 ♙xf2+ 16.♙d1 ♙d4+ 17.♙e1 ♙f2+=]

8.♙e3 ♘c5 Black could try push the thematic f5 slightly faster after: [8...♘h5 9.a3 I think the best for White is to

try to limit the knight on a6. (9.♘d2 ♙e8 with f5 next.; 9.♘h2 ♙e8 10.♙e2 f5 11.♙xh5 gxh5 12.g4 hxg4 13.hxg4 fxe4 14.♙b1 ♙g6 15.♙xe4 ♙d7 16.♙e2 ♘b4 Black is totally fine 1/2–1/2 Grigoryan,A–Mamedov,R/Rijeka CRO 2010 (28).) 9...f5 (9...♘c5 10.b4

10...♘xe4 A fantastic idea! 11.♘xe4 f5 12.♘g3 f4 (12...♘f6!? looks very strange, but probably Black has compensation. It's only one pawn for the piece, but White's pieces are under pressure. The position can become really unclear. 13.♙g5 h6 14.♙xf6 ♙xf6∞=) 13.♘xh5 gxh5 14.♙c1 e4 15.♘d4 e3 16.♙a2 ♙h4 17.♙d3 White manages to defend.) 10.b4 (10.exf5 gxf5 11.♘xe5? ♙e8) 10...♘f4 11.♙b3 (11.g3?! Losing time! Usually, to take the knight on f4 isn't good. 11...fxe4 12.♘xe4 ♙f5 13.♘fd2 c6≤; 11.♘d2 ♘xg2+ 12.♙xg2 f4=+) 11...fxe4 (11...c5 12.dxc6 bxc6 13.♙d1 ♘c7 14.g3 with unclear play.) 12.♘xe4 ♙f5 13.♘fd2 c6 Black has to activate knight with this move, because the transfer over b8–d7–f6 takes too much time. 14.dxc6 bxc6 15.♘xd6 ♙xd6 16.c5+ ♙d5 (16...♙e6 17.♙c4 ♘d5 18.♙xa6+=) 17.♙c4 ♘xg2+ 18.♙e2 ♘c7 19.♙xd5+ ♘xd5 Only two pieces for the queen, but Black has some compensation.]

9.♘d2 a5 In three moves, Black will manage to save the knight and put it on c5. On the other hand, White re-

groups his pieces in an optimal setup. [9...♘h5 10.b4 ♖a6 11.a3 c5 12.♙b1 (12.bxc5 ♘xc5 13.♙xc5 dxc5 14.g3 ♘f6= with the typical ♘e8-Nd6.)]

10.♙e2 ♙d7 [10...♘h5 In many KID and Benoni positions, Black doesn't care about ♙xh5 because the most important task is to push f5. 11.♙xh5 (11.♙xc5 ♘f4 12.♙a3 ♘xg2+ 13.♙f1 ♘f4 14.♙g4 f5 15.exf5 gxf5 16.♙e2 ♙h8=) 11...gxh5 12.♙xc5 (12.♙xh5 ♘d3+ 13.♙e2 (13.♙f1 f5) 13...♘f4+ 14.♙xf4 exf4) 12...dxc5 13.♙xh5 ♖a6 14.0-0-0 ♙g6 15.g3 f5;

10...♘fd7 11.g4 (11.0-0 In this line with the pawn on h3, to castle short usually makes no sense. 11...f5 12.exf5 gxf5 13.f4 Now both moves are good for Black. 13...e4 (13...exf4 14.♙xf4 ♘e5↑) 14.♘b3 ♘xb3 15.axb3 b6=) 11...f5 (11...♙f6 with the typical idea of exchanging the bad bishop from g7. 12.♘f3 ♘b6 13.g5 ♙e7 14.♙c2 ♙d7 15.h4↑) 12.gxf5 gxf5 13.exf5 ♘f6 (13...e4 14.♘dx4 ♘xe4 15.♘xe4 ♙h4 16.♘g5 ♘c5 17.♘e6 ♙xe6 18.fxe6 ♙xb2 19.♖b1 ♙c3+ 20.♙f1 ♙e4 21.♖g1+ ♙h8=) 14.♙c2 e4! Other typical idea. Black doesn't allow a blockade on e4 and thanks to the sacrifice of the e-pawn, he activates his pieces.]

11.g4+= Multi-purpose move. White gains space on the kingside, not allowing ♘h5 and making it harder for Black to play f5.

11...a4 [11...h6 12.h4 ♘h7 Not allowing g5-h4. This looks very artificial. 13.♙c2 f5 14.gxf5 gxf5 15.♙xc5 dxc5 16.0-0-0 and White takes control of the light squares.]

12.g5 ♘e8 [12...♘h5 13.♙xh5 gxh5 14.♙xc5 (14.♙e2 f6 15.gxf6 ♙xf6 16.0-0-0 ♙h8=) 14...dxc5 15.♙xh5 f5 16.0-0-0 ♙e8 17.♙h4 ♙g6 18.♙g3 a3 19.b3 An interesting and unclear position where material is not important for White. It would be better not to allow the activation of the Black bishops.]

13.h4 Now the Black pieces are limited.

13...a3 [13...f5 14.h5 ♖f7 Only move. Otherwise, after h6-Bh8, Black will play without the bishop until the end of the game. (14...f4 15.♙xc5 dxc5 16.h6 ♙h8 17.♙g4+-) 15.♙c2 a3 16.b4 f4 17.♙xc5 dxc5 18.bxc5 ♙xg5 19.hxg6 hxg6 20.♙b3=]

14.b4 ♘a6 [14...♘a4 15.♙c2 ♘xc3 16.♙xc3 f5 17.f3 c6 with unclear play because Black is trying to open the position and get active.]

15.b5! Great idea. This shows deep strategic understanding. Normally, White plays on the queenside over c5. In this case, the Russian grandmaster is going to close this

side to make it safer for the king, and to fix the a3-pawn as well. [15.♔b3 c5?! Not the best. (15...f5 16.f3) 16.bxc5 ♘xc5 17.♙xc5 dxc5 18.♖b1 f6 (18...♘d6 19.♔b6 ♔e7 20.♔xc5 It's strange, but Black is not able to stop c5.; 18...♖b8 19.♔b6 ♔e7 20.♔a7) 19.♔xb7 fxg5 20.hxg5 ♘d6 21.♔b6+=]

15...♘c5 16.♘b3 b6? It seems like Nakamura is still in bad shape! In my opinion, this is a strategic mistake. Yes, I agree that usually in the KID, White creates pressure on the queenside and Black looks for counterplay on the kingside. Here the roles have been changed. [16...♘xb3 17.axb3 (17.♔xb3 f5∞ Black is faster to push f5 and still keeps the possibility of opening the position on the queenside after c6.) 17...f5 18.f3 ♙h8 with idea transfer knight to h5 (18...c6 19.bxc6 bxc6 20.dxc6 ♙xc6 21.b4 fxe4 22.fxe4 ♖f4) 19.♔c1 ♘g7 20.♖xa3 ♘h5 21.♙d2 ♘f4∞=]

17.h5 ♔e7 f5 seems to be the only option for Black, so it's strange that Naka, who is a very active player, uses this slow move. [17...f5 18.gxf6 (18.h6 ♙h8 19.♖g1 (19.f3 f4 20.♙xc5 dxc5 21.♖g1 ♘d6 and White has no time to save the g5 pawn.) 19...fxe4 20.♔c2 ♖f4 21.0-0-0 ♙f5∞ The bishop on h8 is out of play but White can't improve his position.) 18...♘xf6 (18...♔xf6 19.hxg6 hxg6 20.♙d2+/-) 19.♘xc5 bxc5 20.hxg6 hxg6 21.♙d2 Black's position is unpleasant anyway.]

18.♙d2 f5 19.gxf6 ♖xf6 [19...♘xf6 20.♘xc5 bxc5 21.hxg6 hxg6 22.♔g1 ♔f7 23.♔h2+-]

20.hxg6 It makes no sense to win the exchange, because it can only help Black to get activity (for example, on the dark squares.) [20.♙g5 ♘xb3+ 21.axb3 gxh5 22.♖xh5 ♔f8 23.♙xf6 ♘xf6+=]

20...♖xg6 21.♙h5 ♖f6 22.♙c2 The White king is very safe now. [22.♘xc5 dxc5 23.♔e2 ♘d6 24.♖ag1 ♖f4 25.♙c2 ♖af8 26.♙b3+/-]

22...♘a4 [22...♙h6 23.♙xh6 ♖xh6 24.♘xc5 dxc5 25.♙f7++-]

23.♔g1 ♘xc3 24.♙xc3 ♖f4 25.♔h2 Black is not able to create any threats. From a strategic point of view, White won't allow any counterplay and soon will start to crush over the h- and g-files.

25...♘f6 [25...♙f6 26.♖ag1+ ♘g7 27.♙g4 Not the only move. 27...♖xg4 28.♔xh7+ ♙f7 29.♖xg4 ♙xg4 30.♖h6 ♙f3 31.♔g6+ ♙g8 32.♘d2 ♙d1 33.♔xf6 ♔xf6 34.♖xf6+-;

25...♖xe4 26.♙xe8 Xh7]

26.f3 The most solid. [26.♘d2 ♖xe4 (26...♘xe4+ 27.♘xe4 ♖xe4 28.♖ag1 ♖a4 29.♙e2 ♙f5 30.♔h5 ♙g6 31.♖xg6 hxg6 32.♔xg6+-) 27.♘xe4 ♘xe4+ 28.♙b3 ♙f5↗]

26...♙e8 [26...h6 27.♖ag1 ♘h7 It was the last chance to try to close the pressure on the open files. 28.♙d2 ♘g5 (28...♖af8

29. ♖f7+ R8xf7 30. ♔xh6+-) 29. ♖xf4 exf4 30. ♔xf4 ♖f8
31. ♔e3 ♔e5 32. ♖d1+/- and Black has some play.]

27. ♖xe8 ♖xf3 28. ♔e2 ♘xe4+ 29. ♖c2 [29. ♖d3?? ♘g3]

29... ♔xe8 [29... ♔f6 There's no time to put pressure on
the a1-h8 diagonal. 30. ♖af1+-]

30. ♔xf3 ♔g6 31. ♔h5 ♖a4 32. ♔xg6 hxg6 33. ♘d2 1-0

(4) Gelfand,B (2736) – Williams,Sil (2496) [A96]

28th European Club Cup Eilat ISR (4), 14.10.2012

[Kamil Miton]

**1.d4 e6 2.c4 f5 3.g3 ♘f6 4. ♖g2 ♖e7 5. ♘f3 0-0 6.0-0
d6** We are on the beginning of one of the less popular
Dutch Systems. This is William's favorite weapon. He al-
ready had spectacular achievements in this opening.

7.b4 I suppose that Gelfand played this rare but very logi-
cal move because his opponent, in previous games, chose
to put the pawn on a5 in order to disturb the advance of
the White pawns. [7. ♘c3 An alternative plan for White is
to play in the center with the thematic e2-e4 break. 7...
♔e8

a) 7...a5!?;

**b) 7... ♘e4 8. ♘xe4 (8. ♔c2 ♘xc3 9. ♔xc3 ♖f6 10.b4+=) 8...
fxe4 9. ♘d2 d5 10.f3+=;**

8. ♖e1 ♔g6 9.e4 Anyway White is playing according
to plan, because the rook on e4 won't be hanging. 9...
fxe4 10. ♘xe4 ♘xe4 11. ♖xe4 ♖f6 (11... ♔xe4 12. ♘h4+-)
12. ♔e2 ♘c6 and we have some old theoretical position.

13.d5 (13. ♖d2!?) 13...exd5 14.cxd5 ♘e5 15. ♘d4 ♕g4 16.f3 ♕d7 17. ♘e6 ♕xe6 18.dxe6↑;

7. ♖c2 a5 8. ♘c3 ♘c6 9.b3 e5 10.dxe5 dxe5 11. ♖d1 ♖e8 12. ♘b5 ♖h5 and Willim as proved in a few moves that the attack is more important than the material disadvantage. 13. ♘xc7 f4 14. ♘xa8 ♕c5 15. ♖d5 ♘b4 16. ♖xe5 ♘xc2 17. ♖xh5 ♘xh5 18. ♖b1 fxg3 19.hxg3 ♘xg3 20. ♖b2 An amazing victory against one of the best young players of this generation. 20... ♕f5 0–1 Wojtaszek,R-Williams,S/ Mulhouse FRA 2011.]

7...a5 8.b5 ♘e4 9. ♖c2 ♕f6 10. ♕b2 [10. ♘bd2 ♘xd2 11. ♕xd2 e5 12.dxe5 dxe5 13. ♕c3 (13.e4 f4 14.gxf4 exf4 15.e5 ♕e7 16. ♖ad1↑) 13...e4 This is usual in these structures (as in the Leningrad System). If black manages to push e5-e4 to limit the g2-bishop, then the position is equal. 14. ♖ad1 ♖e7 15. ♘d4 c5 16.bxc6 ♘xc6=]

10...a4 11. ♘fd2 Gelfand's idea is to get rid of the knight from e4, and then play the thematic e2-e4.

11...d5 Black prefers to change the structure, but keeps the knight on e4. [11... ♘xd2 12. ♘xd2 ♘d7 (12...e5!? 13.dxe5 dxe5 14.e4↑) 13.e4 f4!? An interesting idea to weaken the White king. 14.gxf4 ♕e7 (14...e5 15.dxe5 (15.fxe5 dxe5 16.dxe5 (16.f4 a3 and if 17. ♕c3, cxd4 with tempo.) 16... ♘xe5 17.f4 ♘g4 18.e5 ♕e7 and Black has the initiative.) 15...dxe5 16. ♘f3 exf4 17.e5 ♕e7 18. ♖ad1 ♖e8 19. ♖fe1 ♘c5 20.e6 We have here an example of practical thinking. Instead of keeping the pawn longer, White sacrifices two pawns to get excellent piece activity.) 15.f5 exf5 16. ♖ae1 (16.exf5 ♘b6 17. ♕e4 d5=+) 16...fxe4 17. ♘xe4 ♕h4 Black wants to play ♘f6. The position is unclear.]

12. ♘a3 Somehow I don't like this move. Sometimes in these structures, the knight transfers through a3-c2-e1-d3 in order to fight for the important e5 and f4 squares, but in this case, it looks impossible. White had other simpler options. [12. ♘xe4 fxe4 13.f3 exf3 14. ♕xf3+=;

12.e3 ♕d7 13. ♕a3 with ♘c3 next.]

12...c6 13. ♖ab1 ♕d7 14. ♖fc1 ♕e8 Typical plan. In the „Stone Wall”, the light-squared bishop is very often limited and becomes the worst piece, so this is a logical way to activate it over h5.

15. ♘f3?! [15. ♘xe4 fxe4 16.e3 White should look for some initiative on the queenside.]

15...f4! Very good decision. White's pieces are bit far from the kingside, so Black can look for some pressure against the White king.

16. ♖d1 [16.gxf4 ♕g6 17.e3 Probably the best. (17. ♖d1 ♕h4 18. ♘xh4 ♖xh4 19.f3 ♖f2+ 20. ♕h1 ♘g3+ 21.hxg3 ♕xb1 and White has no time to recapture on b1 because of ♖f6-Rh6.) 17... ♘d6 18. ♖e2 ♕xb1 19. ♖xb1 For the exchange, White has one pawn and has solved his problems with the threats on the kingside.]

16...fxg3 17.hxg3 ♗g6 Thanks to his active bishop on g6 and the potential pressure over the f-file, Black's position is already very comfortable.

18.bxc6 ♖xc6 19.♖b5 ♗g5 20.♗a3 ♖f7 [20...♗xc1 21.♗xf8 ♗h6 22.♗a3 dxc4 23.e3 ♖a5 Black has a lot of weaknesses, but two pawns give him a bigger advantage.]

21.♗xg5?? Very bad move. Probably Gelfand missed something in his calculation because it's hard to explain why he's exchanging two pieces that protect the king. [21.♖c2 Maybe it doesn't look nice to put the rook on the second rook on this diagonal, but Black can't take advantage of this.]

21...♗xg5 22.♗xe4 White has no choice! The king is now really weak. [22.♗f3 ♗xg3;

22.♗d6 ♖xf2 23.♗xe4 ♖xg2+ 24.♗xg2 ♗xe4+ 25.♗f2 ♖f5+ 26.♗e1 ♗xb1 27.♖xb1 ♖h3+]]

22...dxe4 Correct. The threat now is e3, with a mating attack. [22...♗xe4 23.♗d6 ♖h6 (23...♖g4!? 24.♗xf7 ♖h3 25.f3 ♖xg3+ 26.♗f1 ♗f5 27.e3 ♗xb1 28.♖xb1 ♗xf7 29.♖xb7+ ♗g8 30.♖b2∞) 24.♗xe4 dxe4 25.e3 e5 (25...

♖d8 26.♖f1+= Not allowing ♗e5. White is better because of Black's weak pawns.) 26.d5

26...♖xf2! Probably leads to a draw by force. 27.♗xf2 ♖h2+ 28.♗e1 ♗d4 29.♖b2 ♖xg3+ 30.♗d2 ♖f2+ 31.♗c3 ♖xe3+ 32.♗b4 ♖f8 33.♖g1 ♖h6 34.♖f1 ♖c8 35.c5 ♖a6 36.♖f2 ♖b5+ 37.♗c3 ♖d3+ 38.♗b4 ♖b5+=]

23.♖e1 [23.♗d6 ♖xf2 24.♗xf2 e3+ 25.♗g2 ♖f8 26.♖g1 ♖f2+ 27.♖xf2 exf2 28.♖xb7 h5 and the White king is too weak.]

23...e3 24.f3 ♗xb1 25.♖xb1 ♖f6 Black won material, but it didn't decrease the pressure against the White king.

26.♗g2 ♖h6 27.g4 ♗e7?! Black is still winning, although after this move, it will be a bit harder. [27...♗xd4 28.♗xd4 ♖f4 29.♖g3 ♖xd4 30.♖xb7 e5]

28.♗xe7 ♖xe7 29.♖g3 Fortunately for him, White solved the problem with his king, and thanks to the weak Black structure, he'll get some practical chances.

29...♖d8 30.♖e5 Objectively, it was better to immediately put the strong knight on d6. The queen on g3 is well placed to protect the king. Maybe Gelfand decided to play ♖e5 because he was looking for some repeti-

tion. [30.c5 and now we'll see an amazing line given by the engines: 30...♖g6 preparing main idea h5 31.♘d6 h5 32.♙xb7 ♕f6 33.♘f7 hxcg4 34.♙h2 gxf3+ 35.♔f1 fxe2+ 36.♔xe2

36...♖g2+! 37.♙xg2 ♖xd4 38.♖b8+ ♔xf7 39.♙b7+ ♔g6 40.♙b1+ ♔g5 41.♙g1+ ♔f5 42.♙f1+ ♔e4 43.♙g2+ ♔e5 and the Black king should escape from the checks. 44.♙h2+ ♙f4 45.♙h5+ g5 46.♙h8+ ♔d5 47.♙h1+ ♙e4 48.♖d8+ ♔c6 49.♖c8+ ♔b7]

30...♙h4 31.♙g3 ♙e7 32.♙e5 ♖g6! Full respect for the Vice World Champion, but I want to play...

33.c5 [33.♙xe3 h5 34.♙e4 ♙g5;

33.♖h1 If white tries to prevent h5, then the queen will come from the other side. 33...♙b4]

33...♖g5 [33...♙h4 34.♙g3 ♙f6 35.♖h1 ♖g5 with h5 next.]

34.♙xe3 h5 35.♘d6 [35.♔g3!?!]

35...hxcg4 36.f4 ♖h5 37.♙g3 [37.♖xb7 ♙h4 38.♙xe6+ ♔h7 39.♙e4+ ♔h8 40.♘f7+ (40.♖e7 ♖f8 41.♖e8 ♙h1+ 42.♔f2 g3+ 43.♔e3 ♙xe4+ 44.♖xe4 ♖h4 45.f5 ♖xe4+ 46.♘xe4 g2 47.♔f2 ♖xf5+ 48.♔xg2 ♖f4) 40...♔g8 41.♘g5

This line gives White some chances, but to see that White doesn't get mated here was not easy. 41...♙h1+ 42.♔f2 g3+ 43.♔e3 ♙xe4+ 44.♘xe4 g2 45.♔f2 ♖xd4 46.♖b8+ ♔f7 47.♘g5+ ♔e7 48.♖b7+ ♖d7 49.♖b4 ♖d2=+;

37.f5 ♙h4 38.♙g3 ♙g5 39.fxe6 ♙d5+]

37...♙f6 38.♙xg4 [38.♖xb7 ♙g6 with the idea of ♖h3.]

38...♖h6 39.f5 exf5 40.♘xf5 ♖g6 41.♘e7+ ♙xe7 42.♙xg6 ♙xe2+ 43.♔h3

43...♖d5 Finally! The White king didn't survive. A great victory by Williams, and probably the biggest surprise in this event. We should note that in this line, Williams beat three top players already: Wojtaszek, Sokolov and Gelfand!

0-1

Endgame section

(15) Morozevich,A (2758) – Vitiugov,N (2691) [B40]

28th European Club Cup Eilat ISR (4), 14.10.2012

[Chess Evolution]

We face a very complex rook endgame. At first sight, it's hard to say if this is a winning position or a draw... White is a pawn up, but Black's rook is very active, and the limited amount of pawns gives Black good chances to escape.

37. ♖b6 a5! The only move! [A passive defense like 37... ♖d7 38.a5 followed by h4, just leads to a completely hopeless position for Black.]

38. ♖xb7 Of course. White is trying to keep one pawn alive on the queenside. The exchange of both pawns would lead to an easy draw. As we know, even a position with extra h- and f-pawns is a theoretical draw.

38...axb4 39. ♔e3 White is trying his best. [Of course 39.a5? ♖d3+ 40. ♔g2 ♖a3 would lead to an immediate draw.]

39... ♖c4 [at 39... ♖e4+ 40. ♔d3! would be very strong. The White king blocks the b-pawn, which gives White's rook the possibility to protect the a-pawn. 40...b3 41.a5 ♖a4 42. ♖b5 followed by ♔c3. White should be winning.]

40. ♔d3 ♖c3+?! [a move like 40... ♖f4 would be a more precise move. 41.a5 ♖xf2 42. ♖xb4 ♖f3+ and Black will get a very comfortable draw. 43. ♔e2 ♖xh3 44. ♖a4 ♖h7 45.a6 ♖a7 and it is a draw, of course.]

41. ♔d2 Still here the position is close to a draw, but Black has to make it! Sometimes, it can be much harder than it looks like during a practical game.

41... ♖b3 [41... ♖xh3 42. ♖xb4 f4! The only move for Black that leads to a draw. (42... ♖a3 43.f4+ followed by ♔c2-Kb2, and Black is lost.) 43. ♔e2 ♖a3 and the position is a draw. White can't improve his position and the a-pawn is blocked by the rook on a3.]

42. ♖b5 White puts a rook on the 5th rank to open the possibility of playing h4.

42... ♖b2+ Of course, Black still could have taken on h3.

43. ♔e3 ♖b3+ 44. ♔e2 ♖b2+ And again 44... ♖xh3, followed by f4, would lead to a draw.

45. ♔f3 ♖b3+ 46. ♔g2 ♖b1 47. ♔g3 White wants to play h4.

47... ♖g1+ 48. ♔f3 ♖b1?! This is already a mistake that could have cost a full point. [48... ♖h1 and we would come back to the already known position, but it looks like Vitiugov has blundered the possibility of playing f4.]

1/2

(16) Negi,P (2657) – Liu Guanchu (2214)

Chinese league, 07.10.2012

[Chess Evolution]

This very instructive and unique endgame arose in the Chinese league. Black seems to be completely winning, as he'll soon start to collect the weak pawns one by one. However, the Indian GM found an incredible practical chance against his young opponent.

45...♙e3 Maybe Black was expecting resignation, but...

46.f5!! [After 46.g3 Black wins easily with 46...h4! 47.gxh4 ♙xf4 Taking the e5 pawn secures an easy win with the connected e- and f- passed pawns.]

46...gxf5? It's incredible but after this logical move the position is drawn, despite the fact that Black will get the e5 pawn soon. [46...exf5! was the right move, but here as well Black's winning plan is far from obvious. First, let's get to the critical position... 47.♔d1 ♔d3 48.♙d6 ♙d4 49.♙e1 ♙e4 Black collects the second pawn. 50.♙e2 ♙xe5 51.♙e7 The main problem is the fact that the h1 promoting square doesn't match the Black bishop. White's pawns are excellently placed to meet with Black's

only idea of advancing the pawns... The upcoming position could be reached by many different move orders. 51...f4 52.♙c5 g5 53.♙e7 f6 54.♙d8 ♙d4 We have reached another critical position. Black has created a hidden threat, which we will discuss in 55.♙e7... (54...g4? would be a huge mistake, since after 55.hxg4 hxg4 Black's only attempt to create a passed pawn would be f3, but after gxf3 gxf3 ♔f1, Black can't progress with his doubled f-pawn.) 55.♙c7 To prevent the f3 sacrifice, but it allows another idea. (55.♙e7

55...f3+! is the right way to break White's defense. 56.gxf3+ ♔f4 Black wants to penetrate with ♔g3. 57.h4 and now (57.♙d6+ doesn't prevent it because of 57...♙e5) 57...g4! It's very important not to be too greedy. The connected passed pawns decide the game. (57...gxh4? would spoil the win. 58.♙xf6! h3 59.♔f1! ♔xf3 60.♙e5!! The only move to stop the pawn, but it is enough. 60...♙xe5 61.♔g1= and draw. Black even could have 6 h-pawns, he can't win with the wrong colored bishop.) 58.fxg4 hxg4 Black wins automatically.) 55...f5! Now Black can push g4, since after hxg4, he can recapture with the f-pawn, but of course White is not intending to help with hxg4... 56.♙d8 g4 57.♙g5 ♙e5 58.♙h4 Now the most precise way to win

is 58...♔d5! with the idea of pushing f3, and gxf3 doesn't come with check anymore. 59.♙e1 (59.♙f1 leads to the same after 59...f3! 60.gxf3 gxh3!)

59...f3+! 60.gxf3 gxh3 The White king is forced to stop the h-pawn, but it allows Black to win the f-pawn and, with it, the game. 61.♙f1 ♔d4 62.♙d2 ♔d3 63.♙g5 ♙g3 White can't hold the e2-e3 squares for long, because of the ♙e1-d2 threat! 64.♙g1 (64.♙h6 ♙e1! and ♙d2, ♔e3!) 64...♙e2 65.f4 ♙f3 66.♙h1 ♙xf4 67.♙e7 Black must only be careful not to allow White to give the bishop for his f-pawn, but this is already easily achievable in many different ways. One of them is 67...♙e4 68.♙f8 ♙b8 69.♙h6 ♙a7 70.♙h2 ♙e3 71.♙f8 f4 72.♙xh3 f3 73.♙b4 ♔d3 74.♙e1 ♙e2 75.♙h4 ♙f4! Black got into zugzwang. He must leave the diagonal.]

47.♔d1 ♔d3 48.♔e1 ♙d4 49.♙d6 ♔e4 50.♔e2 ♙xe5 51.♙c5 The game is quite an easy draw, but the young Chinese talent finds the only try to win and his much higher rated opponent fails to realize its point. The problem is the same once again, that the h1 square is wrong for the bishop. Black doesn't even have the chance to play f3, since he can only support it from e4 with the king

or the pawn. The only thing what White must be careful about is not to let the Black king get to g3, but this is a not-so-difficult task.

51...♙d4 52.♙d6 e5 53.♙e7! ♔f4 [53...f4 is a hopeless attempt. 54.♙h4 ♔f5 55.♙e7 e4 56.♙h4 White has an excellent blockading position. Black doesn't even have the smallest chance to improve his position.]

54.♙h4! When the Black king is on f4, White's bishop must be ready to pass on the h4, f2 and e1 squares. If the Black bishop leaves the g1-a7 diagonal to limit the places of his colleague, White can play ♙f2 as well.

54...♙c5 55.♙e1 ♔e4 56.♙h4 ♔f4 57.♙e1 ♙e7 58.♙f2 ♙b4 59.♙h4 ♙c5 60.♙e1 After trying for a while, Black finds his last chance!

60...♙g1! 61.♙h4 e4! The last critical position. Black found the excellent idea of pushing e3, followed by ♙f2 forcing White's bishop to allow ♙g3, since the pawn end-game would be winning for Black. White should have found the only move to hold the draw.

62. ♖e1? [62. ♖f1! The bishop must be sent away from g1 to prevent e3-Bf2. 62... ♗h2 (On 62... ♗d4 White returns to 63. ♖e2) 63. ♖e2 e3 This is very important now. Black has refreshed the threat of ♗g1-f2, so the only move is (63... ♗g3 64. ♗d8 Black has successfully sent away the bishop, but his own piece deprives Black from playing ♖g3. That's why e3-Bf2 is much more effective!) 64. ♖f1! using the fact that Black doesn't have ♗e3 anymore. 64... ♗g3 (64... ♗e4 65. ♖e2 Black can't break through.) 65. ♗d8 ♗f2 66. ♗c7+ ♖g5 67. ♖e2= with a draw.]

62...e3! Now Black is winning, and the technique to do it was well demonstrated by the Chinese player!

63. ♖f1 [63. ♗h4 ♗f2 64. ♗d8 (64. ♗xf2 The pawn end-game is equally hopeless. 64... exf2 65. ♖xf2 h4! 66. ♖f1 ♖g3 67. ♖g1 f4 and f3 next.) 64... ♖g3 65. ♖f1 e2+ will be the same as the game. 66. ♖xe2 ♖xg2]

63... ♗f2 64. ♗a5 ♖g3! 65. ♗c7+ f4! Black successfully installed his king on g3. The rest is easy...

66. ♗d6 h4 67. ♗c7 f5 68. ♗d6 e2+ 69. ♖xe2 ♖xg2 70. ♗xf4 ♗g3 71. ♗e3 f4 72. ♗c5 [Despite the corner

being bad, White's king can be squeezed out. 72. ♗xf4 ♗xf4 73. ♖e1 ♗g3+ 74. ♖e2 ♗f2]

72...f3+ 73. ♖d3 ♖xh3 0-1

Clash of the Titans

(17) Smyslov,Vassily — Steiner,Herman [A51]

Staunton Memorial Groningen (2), 1946

[Balogh Csaba]

This week we'll study a deep exchange sacrifice by Vassily Smyslov.

1.d4 ♘f6 2.c4 e5 3.dxe5 ♘e4 A brave decision by Black, going for the Budapest Gambit, but of course at that time it had no theory at all. It was not clear yet how White should play. Let's see how Smyslov reacted over the board.

4.♘f3 [According to current theory 4.a3! is the strongest move and White obtains a clear advantage in all the lines. One example is 4...♘c6 5.♘f3 d6 Black tries to sacrifice a pawn for quick development, but White can easily neutralize the initiative by 6.♔c2! and on 6...♙f5 7.♘c3! ♘xf2 (7...♘g3 8.e4 ♘xh1 9.exf5+/-) 8.♔xf5 ♘xh1 9.g3+/- White traps the knight and ends up with material advantage soon.]

4...♙b4+ Both continuations lead to the same position.

5.♙d2 [5.♘bd2 ♘c6 6.a3 ♙xd2+ 7.♙xd2 ♘xd2 8.♔xd2 We have transposed to the game.]

5...♘xd2 6.♘bxd2 ♘c6 Black must focus on winning back the pawn.

7.a3 ♙xd2+ 8.♔xd2 ♔e7 9.♔c3 0-0 Black is ready to recollect the pawn with ♔e8. What could White do

against it? Smyslov came up with an original plan, which was, at that time, a novelty.

10.♔d1! Quite a unique idea to protect the pawn with a rook on the 5th rank! I can't recall a similar plan in other openings. [The „normal” 10.e3 leads nowhere after 10...♔e8 11.♙e2 ♘xe5 12.0-0 d6= Black has easily equalized the game.]

10...♔e8 11.♔d5! Black must hard to restore the material equality, Steiner finds the only way.

11...b6! The bishop is heading to the long diagonal to annoy the rook.

12.e3 It's time to finish the development.

12...♙b7 13.♙e2 ♔ad8 The correct decision again! Black must protect the d7 pawn if he wants to win back the e5 pawn. [For instance, after 13...♘d8 14.♔d2 ♘c6 15.0-0 and d7 is also hanging.]

14.0-0 ♘b8 Black wants to take on f3 and then on e5. What to do as White? Just as before with ♔d1–d5, Smyslov finds a brilliant idea.

15. Rxc1 I don't know what's the correct mark to this move. Maybe „!!?“ Whitesacrifices an exchange. He has only one pawn for that, but his pieces are dominating. Black rooks have no opened files and in the future it will be hard to open one. The e5 and d5 pawns paralyze Black. The c7 pawn is a clear target and probably the most important factor is that the b8 knight is totally out of the game. This is of course all good and nice, but an exchange is an exchange. :) [I believe 15. Rxd2!? would have guaranteed a positional advantage. 15... Qxf3 16. Qxf3 Rxe5 It's very important to keep the queens on board, which will make White's game much easier. 17. Rc2! White wants to play on the queenside, with Rfd1 and b4-c5. The bishop is clearly better than the knight. 17... a5 Black should try to reduce the power of the b4 plans, but it's coming anyway (On 17... d6 18. b4 Nxd7 19. Qa4! is very unpleasant. It's hard to deal with the a7 pawn, while the counter-attack with 19... Rc3 only helps White. 20. Rfd1 Rxc4? 21. Rc2! and the c7 pawn will fall. Black's position collapses.) 18. b4! Nc6 White has a nice tactical opportunity to win a pawn.

19.c5! (The direct 19. Rxd7 is not good because of the counter-blow 19... Nxb4!) 19... axb4 and now (19... bxc5 20. bxc5 the d7 and a5 pawns are too weak to hold.) 20. Rxd7! Rxd7 21. Qxc6 White ends up with an extra pawn.]

15... Qxd5 16. cxd5 d6 Logical move. Black must sooner or later undermine the e5 pawn. [16... c5 was the alternative, with the idea of d6. Smyslov rightly pointed out in his analyses that the strongest move is 17. Qb5! a6 trying to unpin the e8 rook, but this weakens a lot the queen-side pawn structure. (On the other attempt to undermine White's center 17... f6 18. Rb3! seems to be very strong. 18... Qh8 19. exf6 Rxf6 20. Rc4! After this great move, suddenly White gets very serious attacking chances. An illustrative line, which shows the potential it has could be 20... a6 21. Rf4! Qe7 (21... Qd6 22. Qd3 Ng5 or Rf4 next.) 22. d6! playing on concrete threats. 22... Rxd6 23. Ng5! Rf8 (Luckily for White 23... Rxf4 isn't mate on the back-rank because of 24. exf4 Re1+ 25. Qf1!) 24. Rh4 h6 and Black gets mated after 25. Rc2!+-) 18. d6! Qe6 19. Qc4 Qf5 20. Qd3! White wins a tempo compared to Smyslov's analysis. (Smyslov suggested 20. Qd5 Nc6 21. Qxc6 dxc6 22. h3+= with an advantage.) 20... Qh5 (20... Qe6? loses to

21. ♖xh7+!) 21. ♖e4! ♘c6 22. ♖xc6 dxc6 The queen on h5 is out of the game. It should anyway come back to f5, but this give enough time for White to seize an advantage with 23.b4!+/- and Black collapses on the queenside.;

16...c6 is met with 17.d6! and ♖c4 next. Black is doomed.]

17. ♖b5! White sends away the rook from the action.

17... ♖f8

18.e4! Strong positional move, stabilizing the center, justified by a great tactical feeling. Smyslov had to foresee and evaluate well the consequences of the 18...dxe5 move.

18...a6 [18... ♘d7? doesn't work 19. ♖xc7;

18...dxe5 19. ♘xe5 f6 Black wins the e4 pawn, but 20. ♘f3! ♖xe4 21. ♖e1! The d5 pawn is always protected by ♖c4 and ♘d4-e6 is coming next. 21... ♖g6 22. ♘d4!+/- White doesn't even have a pawn for the exchange, but he's completely dominating. He enjoys a big advantage.]

19. ♖d3! Protecting the e4 pawn.

19...dxe5 [On 19... ♖fe8 Smyslov again correctly suggested 20.e6! fxe6 21.dxe6 with the direct idea of ♖xc7 and

the positional threat of ♘d4-f5. If Black prevents both with 21...c5 22. ♖c4+/- is very unpleasant. Black still can't use his knight on b8, because 22... ♘c6 is met with (22...b5 23. ♖d5+/-) 23. ♖xa6 and the bishop returns to c4.]

20. ♘xe5

20... ♖d6?! Black collapses in 2 moves, but such things often happen when the pressure is so strong. [20...f6 is also bad 21. ♘f3 and ♘d4 next.;

20... ♖fe8 was probably the best chance, but White has an advantage here as well. 21.f4! fortifying the e5 knight. The computer tries to solve Black's problem tactically with 21... ♘d7 22. ♘c6 ♖c5+ but White plays 23. ♖f1! (23. ♖xc5 ♘xc5 24. ♘xd8 ♘xd3 25. ♖c3 ♘xf4 would have been the point!) 23... ♖xc3 24. ♖xc3 ♖a8 25.e5+= White continues dominating. The rooks have no chance to improve.]

21. ♘c4! Smyslov transfers his knight to e3, where it's ready to jump to f5.

21... ♖h6? This is the decisive mistake. Such an attack can't be dangerous. [21... ♖d7 22. ♘e3 Black can prevent ♘f5 with 22...g6 but it weakens the dark squares on f6 and h6, where the knight will soon appear through g4.

23.e5!+/- This is the most precise with ♘g4 next. White is much better.(23.♘g4 f6)]

22.♘e3 The c7 pawn falls now, which means the end of the game. Black tries some direct threats, but White can easily parry with all of them.

22...♔h4 23.♔xc7! ♖f6 24.g3 ♔h5 25.e5 Black's pieces are totally uncoordinated and they have no chance to improve.

25...♖h6 26.h4 ♘f5 is in the air.

26...♔f3

27.♖c4! A cruel move. Smyslov transfers his rook to f4.

27...b5 28.♖f4 ♔h5 29.♘g4 The rook is trapped and the queen doesn't have too many squares either.

29...♖g6 30.♘xg6 ♔xg6 31.e6 ♔b1+ 32.♔h2 f5 33.e7 ♖e8 34.♔d8 White's strategy to play against the b8 knight with the exchange sacrifice has paid off. It couldn't leave its place after all.

Editorial Preface

Definitely the most important event of the past week was the Spice Cup. Six young Super GMs played a double round robin tournament in Saint Louis. Maxime Vachier-Lagrave managed to win the tournament with 6/10 after having a serious amount of luck in a few games. The 2nd and 3rd positions went to Ding Liren and Le Quang Liem with 5.5/10. Then came Wesley So with 5 points, and with 4, Georg Meier and Balogh Csaba — your unlucky commentator who missed a huge chance to score a full point against the tournament winner in a clearly winning endgame.

The German Bundesliga has begun with favorites making their first point, with the exception of one big scandal around the young German GM Falko Bindrich who was caught cheating. According to the spectators, Mr. Bindrich went almost after every move to the toilet and used a computer program on his smart phone. We analyze for You his endgame against Russian GM Pavel Tregubov, where Bindrich showed amazing strong play! Really a cool endgame.

The 16th Unive Chess Festival is on the roll. It's 4 players-double round robin. So far Nakamura convincingly scored 2,5/3, beating Anish Giri and Hou Yifan with White and making a draw against Tiviakov with Black.

As usual we wish You a lot of chess fun with Your new issue of CEWN!

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Meier,Georg (2646)

– Vachier-Lagrave,Maxime (2705) [A04]

6th SPICE Cup GM St Louis USA (5), 16.10.2012

[Csaba Balogh]

1. ♖f3 c5 **2.** c4 ♘c6 **3.** ♘c3 The game starts solidly, but it soon turns up...

3...e5 4.e3 ♘f6 5. ♖e2 [A few rounds later, Ding Liren deviated from the game with 5.d4 but Vachier introduced a strong novelty and got a perfect position again. **5...e4 6. ♘e5 g6 7. ♖e2 ♖g7 8. 0–0 0–0 9. b3** So far they were following the Kramnik-Neponiachtchi, Moscow 2011 game, and now **9...♘e7!** was very strong. Suddenly the e5 knight has some problems. Black wants to play d6, after which the only square is g4, and after the massive exchanges, d4 is hanging. The tactical explanation is **10.dxc5 ♘e8!** wins material on the long diagonal.]

5...d5 6.d4

6...cxd4 An ambitious decision! [6...exd4 is the most common move, but it leads to an endgame where only White

can win **7.exd4 ♖e6 8.cxd5 ♘xd5 9.0–0 ♖e7 10.dxc5 ♘xc3 11.bxc3 ♖xd1 12. ♖xd1 ♖xc5 13. ♘g5** With a good defense, Black can hold the draw, but he can only dream about more.]

7.exd4 e4 8. ♘e5 dxc4 9. ♖a4 ♖e7 We are still following theory.

10. ♘xc6 [10.d5 appears to be strong at first sight, but Black gets a good position after two strong intermediate moves. **10...♘xd5 11. ♘xc6 ♘xc3! 12.bxc3 ♖d7!=+** followed by ♖xc6 with an advantage.]

10...bxc6 11. ♖xc6+ ♖d7 12. ♖xc4 White is a pawn up and was considered to be better, but this game might change the evaluation. As the game will show, Black's compensation should be enough to secure even chances.

12...♖b8! The key move of the counterplay! Black is putting pressure on the b2 pawn, which makes the development of White's pieces very difficult. In addition, ♖b4 could be a threat later on to win the d4 pawn.

13.0–0 0–0

14.a3 Actually this is the novelty of the game, a very good one I must say. White parries the ♖b4 idea. [In the only

previous game, White decided to sacrifice the pawn back in order to finish the development, but it lead to complete equality soon. 14. ♖f4 ♜xb2 15. ♞ab1 ♙e6! 16. ♚a4 ♜xb1 17. ♜xb1 ♘d5 18. ♘xd5 ♚xd5 19. ♚xa7 ♚xa2 20. ♚xa2 ♙xa2 and they soon agreed to a draw in Nanu-Tregubov, Pamplona 2010.;

If White wants to preserve his pawn with 14. ♞d1 Black plays 14... ♜b4 15. ♚a6 ♚b8 followed by ♜c8. Black is OK, White's queenside is stuck.;

14.d5 is the alternative, but Black plays the same way as in the 14. ♞d1 line. 14... ♜b4 15. ♚a6 ♚b8 Probably the best for White is to give back the pawn. 16. ♙e3 (16.b3? with the idea of finally developing the bishop would drop a piece after 16... ♜b6! 17. ♚a5 ♙b4!) 16... ♜xb2 17. ♞ab1 ♜xb1 18. ♜xb1 ♚e5 Black is fine.]

14... ♚b6! White has parried the ♜b4-Qb8 idea, but Black has a similar way to create pressure. ♜fc8 is coming soon.

15. ♞d1?! This is a mistake. White is too greedy with his extra pawn, and suddenly the counterplay grows enormously. [It would have been more clever to give back the pawn with 15. ♙f4 ♜bc8 16. ♚a2 ♚xd4 and White gets a healthy development after 17. ♞ad1 ♚b6 18. ♙c4 The position should be objectively even, but now it's Black the one who needs to make some precise moves to equalize. A few moves later, White could only dream about such a position.]

15... ♜fc8 16. ♚a6 ♚d8! Very well played! Black sees that the queen on a6 is completely misplaced, it can hardly find its place on the board. It will be under attack by the rooks soon. White can't decrease the pressure on the b2 pawn with ♜b1 because of ♜xc3.

17.d5! White tries to make use of his extra pawn, but it has a drawback as well, it gives the important g1-a7 diagonal to Black. [17. ♚xa7? traps the queen. 17... ♜a8 18. ♚b7 ♜cb8]

17... ♙c5 18. ♙g5? Blundering a tactical idea. Actually. I don't know what happened to all of us in the tournament, but in each game somebody made similar blunder that is clearly under the level of the players' strength. [The last chance to maintain equality was 18. ♘a4! trying to simplify the position a bit. 18... ♙xa4 19. ♚xa4 ♚d6! I believe this is better than ♚b6, because Black has full compensation. The game could continue with an interesting line: (19... ♚b6 Now Black equalizes the material, but suddenly the d-pawn gets too dangerous. 20. ♙f4 ♙xf2+ 21. ♙h1 ♜a8 22.d6) 20.b4 ♙xf2+! 21. ♙xf2 ♘xd5 with ♚f6 threats. 22. ♙b2 (22. ♙g1 ♚b6+ 23. ♙h1 ♘c3 24. ♚c2 ♚f2 25. ♙b2 ♘xe2 26. ♚xe4 ♘g3+ 27.hxg3 ♚xb2 Black is marginally better with his superior pawn structure.) 22... ♚f4+ 23. ♙g1 ♚e3+ 24. ♙f1 ♚f4+= with perpetual check.]

18... ♜b6! White is forced to put his queen into a deadly pin.

19. ♚a5

19... ♖xf2+! The start of the fireworks. From now on, Black executes many nice tactical ideas, all of them connected to the pin between the two queens.

20. ♔f1 [On 20. ♔xf2 ♘g4+ 21. ♙xg4 (21. ♔g1 ♙xg5 22. ♙xg4 ♙xg4 followed by ♖xb2 with a winning attack.) 21... ♖xb2+ wins the queen.;

20. ♔h1 was objectively the best, but White ends up in a practically hopeless endgame. 20... ♖xb2 21. ♙xd8+ ♖xd8]

20... e3! The king got into a mating net.

21. ♘e4 White would like to eliminate the f2 bishop.

21... ♖c2! The Black rook starts his kamikaze career on the second rank.

22. ♘xf2 [On 22. ♙xf6 the simple 22... gxf6 is played. Black keeps all his threats as in the game.]

22... ♖xe2! The rook is untouchable because of the pin.

23. ♘d3 [23. ♔xe2 ♖xb2+]

23... ♖xg2! It's just fantastic how the desperado rook clears the second rank completely.

24. ♙xe3 ♙h3! The game is over, but the finish is also nice.

25. ♘f4 ♘g4! 26. ♙xb6 [26. ♘xg2 ♖f6+ 27. ♔g1 ♙xa5]

26... ♘h2+ 27. ♔e1 ♙h4+ A great attacking game by the tournament winner!

0-1

(2) Nakamura,Hi (2775) – Giri,A (2693) [C67]

16th Unive Crown Hoogeveen NED (1), 21.10.2012

[Kamil Miton]

1.e4 e5 2.♘f3 ♘c6 3.♙b5 ♘f6 4.0-0 ♘xe4 This choice seems to make sense against Nakamura, who has a very aggressive style.

5.♖e1 [5.d4 ♘d6 6.♙xc6 dxc6 7.dxe5 ♘f5 8.♙xd8+ ♙xd8 This endgame is the main line in the Berlin System, but it's hard to prove an advantage for White. Recently, many top players are looking for new ideas after 5.♖e1.]

5...♘d6 6.♘xe5 ♙e7 7.♙f1 [7.♙d3 This plan was popular many years ago. White's idea is to create pressure against king. 7...♘xe5 8.♖xe5 0-0 9.♘c3 c6 10.♙f3 ♘e8 11.b3 d5 12.♙b2 White's pieces are a bit more active, but the position is equal.]

7...♘xe5 8.♖xe5 0-0 9.d4 ♙f6 10.♖e1 ♖e8

11.c3 Lately, a more aggressive variation has become more popular: [11.♙f4 ♖xe1 12.♙xe1 ♘e8 (12...♙xd4 13.♙xd6 cxd6 14.♘c3+= Thanks to the doubled pawns and the problems with the bishop on c8, White is slightly better.) 13.♘c3 It's logical that the only chance for White

in this symmetrical structure is to play actively. 13...♙xd4 14.♘d5 d6 (14...c6!?∞) 15.♙g5 ♙f6 (15...f6∞ leads to very complex positions.) 16.♘xf6+ ♘xf6 17.♙xf6 gxf6 18.♙d3 Thanks to the weak king, White has compensation for the pawn. Probably, the position is unpleasant for Black in practice, because Kramnik wasn't able to defend in a game against McShane.]

11...♖xe1 12.♙xe1 ♘f5 The main Black's idea in these positions is to solve the problem with the development of his bishop from c8. In some other variations, we see moves like ♘e8 as well.

13.♙f4 c6 14.a4 The position is more or less equal. White is going to take some space on the queen side to create some potential weaknesses.

14...a5 Looks unnecessary. Black lost time, why not simply to develop the pieces? [14...d5 15.a5 ♙e6 16.♘d2 With the idea of ♘b3-♘c5. If Black plays b6, then a6. Maybe in the future the a7-pawn will be a target and the a6-pawn will be very dangerous.]

15.♙c7! Now White gets some hope to put pressure on the a5-pawn.

15...♙f8 [15...♙e7 16.♙xe7 ♙xe7 (16...♘xe7 17.♘d2 ♘d5 18.♙d6 b6 19.♖e1 ♙b7 20.♘e4+/-) 17.♘d2 and the

problem with the a5-pawn is serious- 17...d5 18.♘b3 b6 19.♘d2+/-]

16. ♖d3 d5 17. ♖b6 I have no idea regarding why did Naka lose time with this move. [17.♘d2 g6 18.♘f3 (18.♘b3 ♖d8) 18... ♖e6 19.♙d2+= and White has some edge. First, Black has some problems with the a5 pawn; then, there's an opportunity to create some play on the dark squares.]

17... ♘d6 18. ♘d2 ♖e6 19. ♙b1 g6 20. b4 axb4 21. ♙xb4 White is trying to put pressure on the b7-pawn. On the other hand, Black should have counterplay on the a-file.

21... ♖f5 Giri play seems to be very logical because usually, the exchange of light-square bishops is good for Black in this kind of structures. He had other possibilities as well. [21... ♖d8 22.♘b3 (22. ♖c5 ♖a5 23. ♙a3 ♖c7=) 22... ♖xb6 23. ♙xb6 ♙d8 24. ♙xd8+ ♙xd8 25.♘c5 ♙a8 White's next idea is to come with the king, for example, to c7. Black is fine.]

22. ♖c5 Naka's plan is to look for some play on the dark squares. [22. ♖xf5 ♘xf5 23. ♖c5 ♙c8 24. ♙b1 ♖g7 25.♘f3 h5 26.g3 and White can wait for the right moment to exchange the b7 and a4 pawns, and then attack c6. 26... ♙a6 27. ♙xb7 (27. ♖g2) 27... ♙xb7 28. ♙xb7 ♙xa4 29. ♙c7

29... ♙a1+ (29... ♙c4 30. ♙xc6 ♙xc3 31. ♖f8+-) 30. ♖g2 ♙a2±]

22... ♖xd3 23. ♖xd6 ♙e8 24. ♘f3 ♖a6 25. ♖e5 ♖e7 Of course Black keeps the pair of bishops and doesn't make the dark squares useful for White.

26. ♖d6 ♖f6 [26... ♖xd6 27. ♙xd6 ♙f8 28. ♙f4 ♙e8 29.h4 f6 and even here Black should be OK.]

27. ♙e1 ♙d7 28. ♖e7 ♖g7 29. ♘e5 ♙f5 30. ♙d6 White's pieces get some activity. The bishop on a6 is out of play, but Black doesn't have any weaknesses. The position should be equal.

30... ♙e8 31.h3 ♙e6 Giri exchanges the active queen and reduces the material, but now his structure will be worse. [31...h5 32.a5 (32. ♙e3 with ♙f3 next (Xf7). 32... ♖h6 33. ♙f3 ♖f4; 32.g4 hxg4 33.hxg4 ♖xe5=+) 32... ♖b5 33. ♙c7 ♖a6 White's pieces are optimally placed, but it's hard to improve the position and create some threats.]

32. ♙xe6 fxe6 33. ♖c5 g5 Good strategical move. It's natural that Black puts the pawns on dark squares in order to get more space for the light-squared bishop.

34. ♖b4 h6 [34... ♖xe5 Probably Black is not ready to play with opposite-colored bishops. 35. ♙xe5 h6 36. ♙e3 Not allowing the Black bishop to return to the game after ♖d3. (36.h4 gxh4 37. ♙h5 ♖g7 38. ♖d6 ♖g6 39. ♙h4 h5=) 36... ♖f7 37. ♖d6 ♖g6 (37... ♖c4 38. ♙f3+ with ♖e5 next, and Black is in trouble.) 38. ♖e5 ♙f8 39.g4 ♖c4 40. ♖g2 h5 41. ♖d6 ♙e8 42.a5 with long-term pressure.]

35. ♘d7 ♖f7 36. ♙e3 This is a good place for the rook, which doesn't allow ♖d3 and can be connected to play in the 3rd rank.

36...♔g6 [36...♙c4 37.a5 to fix the weak pawn on b7.]

37.♙d6 h5 38.♞c5 Very nice regrouping of the pieces by White. The knight on c5 attacks two weak pawns on b7 and e6, and the bishop on d6 is active. I already wrote about the e3 rook in the previous comment.

38...♙f6

39.g4 Fixing a potential weakness on g5 and gaining space to improve the king. Nakamura didn't want to win the e6-pawn because Black would get an easier defense. [39.♞xe6 h4 40.♞c5 ♜xe3 41.fxe3 ♙f5 42.♙f2]

39...hxc4 40.hxc4 ♙f7 41.♔g2 ♜a8 42.a5 White is not in a hurry to win material. This is a good practical decision. [42.♜xe6 b6 43.♞xa6 ♜xa6 44.♜e3 ♜xa4=;

42.♞xe6 b6 43.♞c7 ♜a7 44.♜e8 ♜xc7 45.♜f8+ ♔g7 46.♜xf6 ♙xf6 47.♙xc7 ♙e2 and Black is on time. 48.♙xb6 (48.♔g3 ♙d1=) 48...♙xc4 49.a5 ♙c8=]

42...♜e8 43.♜e1 An interesting option was not to allow ♙d8 too easily. [43.♙c7 ♜c8 44.♙e5 and now the rook on c8 is badly placed. 44...♙d8? 45.♜h3+-]

43...♙d8 44.♜a1 ♜h8 45.♙e5 ♜h7 Somehow Black manages to improve his pieces.

46.♙d6 ♜h8 47.f3 ♜h6 48.♙e5 ♜h7 49.♔g3 White slowly improves his position and Black has to wait.

49...♜h6 50.♜b1 It's time for concrete action.

50...♙xa5 51.♞xb7 ♙xb7 [51...♙xc3 52.♞d6+ ♔e7 53.♜b6 and White is winning.]

52.♜xb7+ ♔e8 53.♜g7 ♙d8 [53...♙xc3 54.♜xg5 ♜h1 (54...c5 55.dxc5 ♙xe5+ 56.♜xe5 ♔d7 57.f4 ♙c6 58.g5 ♜g6 59.♔g4 ♙xc5 60.♙h5+-) 55.♜g8+ ♙f7 56.♜c8 ♜d1 57.♜c7+ ♙e8 58.♜xc6 ♙xd4 59.♜xe6+ (But not 59.♙xd4? ♙d7) 59...♙d7 60.♙d6+ ♔e7 61.♙f4 White should win in this position.]

54.♔g2 Naka doesn't allow ♜h1. White had two other possibilities. One of them was really promising. [54.♜g8+ ♙d7 55.f4 gxf4+ 56.♙xf4 and now it's not easy to stop the promotion of the g-pawn. 56...♜h1 (56...♙f6 57.g5 ♙xe5+ 58.♙xe5 ♜h3 59.♜g7+ ♙e8 60.♜c7 ♜xc3 61.♙f6 ♜f3+ 62.♙xe6+-) 57.g5

57...♜g1 (57...♜f1+ 58.♔g3 ♜g1+ 59.♙f2 ♜xg5 Maybe Naka didn't see this trick. 60.♙xd8+-) 58.g6 ♙g5+ 59.♙f3 ♙h6 60.♙g3 ♙e7 61.♙f2 ♜f1 62.♙g2 ♜xf2+ 63.♙xf2 ♙d2 64.g7 ♙f7 65.♜c8 ♙xg7 66.♜xc6;

54.f4 ♖f6 55.♖c7 (55.fxg5 ♖xg7 56.gxh6 ♖xh6 57.♖f4 ♖f8=; 55.♖xf6 gxf4+ 56.♖xf4 ♖xf6+ 57.♖e5 ♖f3 58.g5 ♖xc3 59.♖c7 ♖f8 60.♖xe6 ♖e3+ 61.♖d6 ♖d3= In this case, Black is on time.) 55... ♖xe5 56.dxe5 (56.fxe5 ♖h1 57.♖xc6 ♖d7↗ Now the king is blocked. Black should have enough counterplay.) 56... ♖h1 Not allowing the activation of the king too easily. (56...gxf4+ 57.♖xf4 ♖h3 58.♖g5 White doesn't care about the pawns. The most important thing is to activate the king, as shown in the classical example Capablanca — Tartakower. 58... ♖xc3 59.♖f6+/-) 57.fxg5 ♖g1+ 58.♖f4 ♖f1+ 59.♖e3 ♖e1+ 60.♖f3 ♖f1+ (60... ♖xe5 61.g6 ♖f8 62.♖f4 ♖e4+ 63.♖g5+-) 61.♖g2 ♖c1 62.g6 (62. ♖xc6 ♖f7↗) 62... ♖f8 63.♖g3 ♖xc3+ 64.♖f4 d4 65.♖g5+- and finally the king comes in again.]

54... ♖e7 55.♖g8+ ♖d7 56.♖a8 c5 Black gets rid of White's target.

57.♖g8 cxd4 [57...c4 An interesting idea, looking for counterplay against the c3 pawn later.]

58.cxd4 ♖h7 59.f4 gxf4? Not accurate! Black missed good drawish chances after: [59... ♖h4 60.♖g3 gxf4+ 61.♖xf4 (61.♖xf4 ♖h1 62.g5 ♖d1 63.g6 ♖d3+ 64.♖g4 ♖xd4 65.g7 e5 66.♖a8 ♖xf4+ 67.♖h3 ♖f3+ 68.♖h2 ♖f5 black is survive thanks to this nice trick 69.g8♔ ♖h5+ 70.♖g3 ♖g5+=) 61... ♖h1 62.g5 ♖f1+ 63.♖e3 (63.♖g4 ♖g1+ 64.♖h5 ♖h1+ 65.♖g6 ♖xg5) 63... ♖d6 64.♖e2 ♖f5 The White king is too far. 65.♖f6 e5=]

60.g5 ♖d6 61.♖f6 White also missed a better move. More accurate was: [61.g6 ♖h5 62.♖f6 ♖h6 63.♖d8+ ♖c7 64.g7 ♖g6+

65.♖f2 Very important here. (65.♖f3 ♖e7 66.♖xe7 ♖xg7 67.♖f8 Compared to the 65.♖f2 line, Black now has a draw thanks to this check. 67... ♖g3+ 68.♖xf4 ♖d3=) 65... ♖e7 66.♖xe7 ♖xg7 67.♖f8 ♖g8 68.♖a8 ♖b7 69.♖e8 ♖c6 70.♖xe6++-]

61... ♖e7 Black could still fight after: [61...f3+ 62.♖xf3 ♖h4 White has temporary problems with the promotion of the g-pawn because after g6, ♖f4 comes. The king is also cut in the 4th rank. 63.♖d8+ ♖c7 64.♖a8 ♖f4+ 65.♖g2 ♖h4 66.♖g8+/-]

62.g6 f3+ 63.♖xf3 And the g-pawn wins the game.

63... ♖h5 64.♖e5 A good start by Nakamura in the Unive tournament, and his second win against Giri in a short period of time.

1-0

(3) Mamedyarov, Shakhriyar (2748) – Areshchenko, Alexander (2710) [A15]

28th European Club Cup Eilat ISR (7.1), 17.10.2012

[Csaba Balogh]

We are in the last round of the European Club Cup! The „Socar Azerbaijan” team has scored an impressive 5–1 victory against the pretty strong Russian team (with a rating average of around 2690), which was just enough to take the gold medal. With 4.5–1.5, St. Petersburg would have finished first. The series of wins was started by Mamedyarov, with a very impressive performance against a big specialist of the Grünfeld defense.

1. ♘f3 ♘f6 2. c4 Recently, the top players gave up the attempts to find an advantage in the main Grünfeld, and the so-called Anti-Grünfeld move order gives White many interesting possibilities.

2... g6 3. ♘c3 d5 4. cxd5 ♘xd5 5. ♔b3 ♘b6 6. d4 ♙e6 [We have already commented the game Le Quang Liem–Navara in a previous CEWN. That game continued with 6... ♙g7 which is also the main line.]

7. ♔c2 ♙g7 8. e4 Typical for the Grünfeld. White has built up a huge center, while Black must try to undermine it at any cost, if he wishes to equalize. I must say that I don't like the 6... ♙e6 move at all, since it only disturbs Black from creating his counterplay, for instance, with e5. But also, after the other break with c5, White has d5 with tempo.

8... 0–0 [8... ♙g4 would be the principled move, but now White has the very strong 9. ♘e5! and on 9... ♙c8 with the idea of c5, trying to make use of the e5 knight, White

plays 10. ♙f4! followed by ♖d1 and White consolidates his center. 10... ♔xd4? obviously doesn't work because of 11. ♘b5 ♔b4+ 12. ♙d2+- and ♘xc7.]

9. ♙e3 Very logical novelty! White needs to stabilize his center, and he wishes to do it with ♖d1.

9... c6 Such a move is a kind of admission that something went wrong in the opening. [The active-looking 9... ♘c4 doesn't help. 10. ♙g5 with the threat of d5 and the knight needs to retreat. The d4 pawn is taboo. 10... ♙xd4? 11. ♘b5!+- wins a piece.]

10. ♖d1! ♘d7 11. ♙e2 After successfully consolidating the center, it's time to finish the development. White achieved the maximum he could, now the space advantage will soon start to tell.

11... ♙g4 [Simplifying the position doesn't solve the problems. 11... ♙c4 12. 0–0 ♙xe2 13. ♘xe2+= Without the light-squared bishops, Black can't undermine the center with f5, because of the weakness of the e6 square. White would penetrate with ♘g5 or ♘f4. 13... ♔c7 is met with the very unpleasant 14. ♙f4! e5 15. ♙g3! Black's pieces don't find their places. 15... ♖fe8 16. ♖d3 doubling the rooks with a clear advantage.]

12.0-0 [Another known reaction in similar situations is 12.♘g1 ♕xe2 13.♘gxe2+= also guarantees an edge.]

12...♔c7 13.h3 ♕xf3 14.♕xf3 White had to be really satisfied with his achievement. Black remained with only one possible break, namely on e5, but now it just doesn't work because of a nice tactical idea.

14...♖ac8 [14...e5 15.d5! White creates a passed pawn. Actually this is not a guarantee of success yet. Black might blockade it with the knight on d6. 15...cxd5 16.exd5 ♘c8 The initiative would quickly pass to Black if the knight arrived to d6. Black could start his play with f5, but chess is a concrete game. 17.d6! The knight doesn't reach its destination, while 17...♘xd6? drops a piece after 18.♔d2!+-]

15.♕e2 White would like to play f4, leaving Black without any counterplay. The last chance for this move. [15.e5 was also possible with the idea of ♕g4 and f4. If Black plays e6, the d6 square would be critically weakened, and the c3 knight would quickly occupy it.]

15...e5 [15...♖fd8 16.f4+=]

16.d5 Mamedyarov uses the same trick as in the 14...e5 line. [Another very good, and we can also call, typical re-

action in similar positions is 16.dxe5 followed by squeezing Black with f4-e5. 16...♘xe5 17.♕c5 ♖fd8 18.f4! ♘ec4 19.e5+/- also looks pretty strong.]

16...cxd5 17.exd5 ♘c4 Black's happiness is only one move away, but the knight doesn't reach d6.

18.d6! ♔a5 [18...♘xe3 leads to a lost position as well. 19.dxc7 ♘xc2 20.♖xd7 ♘d4 21.♕c4+- Black can't move. The knight goes to e4-d6 or d5-e7;

18...♘xd6? drops a piece again after 19.♔d2!+-]

19.♕g5! White wants to install his bishop on e7 to paralyze Black's position.

19...e4 Finally a small achievement for Black to open the „Grünfeld bishop“, but it comes too late to save the game.

20.♕e7 ♖fe8 21.♔b3! Black loses material in any case. The e4 and b7 pawns are hanging and if the c4 knight leaves, ♕b5 also is very unpleasant.

21...♘xb2 [21...b5 is met, for example, with 22.♖d5+-;

21...♘ce5 22.♘xe4+- is hopeless as well.]

22. ♖xb2 ♘b6 A desperate attempt to confuse matters, but this doesn't help on this level. [22... ♖xc3 23. ♖xb7+- is over as well.]

23. ♖b5 The rook is trapped and the d6 pawn is still ready for promotion. [23.d7 ♘xd7 24. ♖xd7+- with a piece up was equally good.]

23... ♖xc3 24. ♖b3 ♖ed8 The rest is only a matter of taste.

25.d7 ♖a8 26. ♖xd8 ♖xd8 27. ♖c4 ♔g7 28. ♖xf7 ♘xd7 Mamedyarov finishes the game in style.

29. ♖g8! Black resigned in view of ♖f7. A nice example on the topic of how to play against the Grünfeld.

1-0

(4) Bacrot, Etienne (2705) – Kempinski, Robert (2602)

Schachbundesliga 2012/2013 (1.1), 20.10.2012

[Arkadij Naiditsch]

It's the first round of the German Bundesliga and my friend Etienne is playing White against Kempinski. Just a few days ago we finished our „very disappointing” participation in the European Club Cup, so in the BL we wanted to score at least a couple of points.

1.c4 c6 2.e4!? A nice trick that works again and again against „Slav” players!

2...d5 3.exd5 cxd5 4.d4 And we are in the Panov variation of the Caro-Kann, which many of the „Slav” players don't like at all.

4... ♘f6 5. ♘c3 e6 [5... ♘c6 6. ♖g5 is the other main line.]

6. ♘f3 ♖e7 This move is a bit strange. The normal move is 6... ♖b4 or 6... ♘c6.

7. ♖f4!? Interesting play by Etienne, who is going for White's main idea: to play c5 followed by b4 and consolidate on the queenside. More standard moves would be 7.cxd5 ♘xd5 8. ♖d3 or 8. ♖g5.

7...0-0 [To play with a different move order wouldn't help Black to avoid the move c5. 7...♘c6 8.c5 ♘e4 9.♖c1 A typical move which we see very often in many similar positions. 9...♙a5 10.a3 and White is in time to keep the pawn structure, while Black has no time for b6.;

7...dxc4 8.♙xc4 would just lead to a well known position with an extra move for White, ♙f4.]

8.c5?! This is White's main strategic idea. Let's see if Black can somehow react fast enough against it...

8...♘e4? Black misses his chance. [8...b6! would be the right way to start playing against White's pawn structure. 9.b4 (Of course 9.cxb6 ♙xb6 leads to a nice position for Black.) 9...♘e4 Black is in time to act fast, combining ideas of attack against the b4 pawn with the plan of bxc5-bxc5 and ♙a5. 10.♖c1 (10.♙c2 ♘c6 Winning a tempo again, by attacking b4. 11.a3 bxc5 and only now bxc5. 12.♘xe4 (12.bxc5 ♙a5) 12...dxe4 13.♙xe4 ♘xd4 and Black is better.) 10...♙b7! This calm move is very strong. Now Black wants to play a5 or to play f6 followed by e5. The position is very dynamic, although Black should be doing fine. (10...a5 This would be too early.

11.♘a4! Very strong. We see this motif in a lot of games. 11...axb4 12.♘xb6 ♖xa2 13.♙b3! That's the key move. Tactics are on White's side and the position is better for him.])

9.♙d3! Strong move. [Let's examine the logical-looking: 9.♙c2 ♘c6! (9...♘xc3 10.♙xc3 Here White's dream comes true. His position is safe and better.) 10.♘xe4 dxe4 11.♙xe4 It looks like White is just a pawn up, but here comes the unexpected 11...g5! followed by f5 and g4, with quite a complicated position.]

9...♘xc3 10.bxc3 ♘c6 It's hard to blame Black for such a logical move. [But maybe 10...b6 would be more dynamic and would force White to act.]

11.h4!? A very interesting move, even if computers say it's not the best one. Does White want to play ♙xh7 next?

11...g6?! Kempinski is afraid of ♙xh7, but does it work? [If Black ignores White's threat: 11...b6? 12.♙xh7+! is winning 12...♙xh7 13.♘g5+ ♙g6 14.♙d3+ f5 15.h5+ ♙f6 16.♙e5+! A very pretty finish!;

11...h6!? would have been a better choice. Black should not be afraid of White's ♙c2-Qd3 idea. 12.♙c2 (12.g4 Maybe White could try this „crazy” move, but now it's clear that things are very unclear :).) 12...b6 starting the

action immediately. 13. ♔d3 f5 with a very unclear position.]

12. ♔c2! Of course White should not lose any time now. The weak point in Black's structure is the g6-pawn. White wants to play h5 next.

12...f5 It's never nice to play a move like f5, but h5 was a serious threat.

13. ♔d2! Now the queen is going to d2 to support the h5 push (Black had g5 before) and if the h-file opens up later, a move like ♔h6 could be deadly.

13...b6 14. ♖b5 Winning control over the e5 square. We can clearly see that White's position is much better.

14...♗d7 15.h5 And the h-file is open!

15...gxh5 [It's not good 15...bxc5 16.hxg6 hxg6 17. ♗xc6 ♗xc6 18. ♗e5 Simple and strong. Black's position is falling apart.]

16. ♖xh5 bxc5 White has quite a big choice of good moves, but why not to choose the simplest one?

17. ♗xc6 ♗xc6 18. ♗e5! Very good play by White. Everything looks pretty simple, but over the board it's not

that easy to stay calm and give away the pawn on c5 for „nothing“.

18...♗f6 [It doesn't help to play 18... ♗e8 19. ♖h3!]

19. ♖g5 Logical. [But 19. ♗h6 ♗e7 20. ♖b1! would be even stronger. However, to find a move like 20. ♖b1 is super difficult. Black is practically completely paralyzed.]

19...cxd4 In an inferior position, Black opens the center expecting to find some chances due to the bad position of the White king on e1.

20.cxd4 ♗xe5 21.dxe5 ♗c7

22. ♗c3?! Not a bad move, but very impractical. [22. ♔f1! would decide the game on the spot. White gets the king to safety, after which White's attack is going to be deadly!]

22...d4! Complications are starting.

23. ♗c5 [23. ♗g3 is not winning because of 23... ♗a5+ 24. ♔f1 ♗c3 and Black is back into the fight.]

23...d3?! Black doesn't take his chance to return to the game. [23... ♗b7! 24. ♖xe6 (24. ♖xh7 ♗b2) 24... ♖fe8! with a very complicated position.]

24. ♖xh7 [24. ♖xe6 d2+! would lead to a very crazy position!]

24...♔b7 25.♔d4? What a mistake by White. [The simple 25.♔e3! ends the game. White's queen is joining the attack. 25...♔b4+ 26.♔f1 and Black has no hopes at all.]

25...♖ad8? Bad luck for Black! He chose the wrong rook. [25...♖fd8! This move leads to a forced draw. 26.♘f6+ ♔f7 27.♖h7+ ♔g6 28.♔f4 All is the same like in the game. 28...d2+ 29.♔d1 ♕a4+!! and here comes the difference. The pawn on a7 is protected by the rook on a8! 30.♔xa4 ♔b2 31.♖h6+ ♔g7 Comparing to the game, White doesn't have ♔xa7 now.

32.♖h7+ ♔g6 The position is a draw!]

26.♘f6+! White starts a forced and winning line.

26...♔f7 27.♖h7+ ♔g6 28.♖h6+ ♔f7 29.♖h7+ ♔g6 Both players had quite a small amount of time, so White repeated the moves once...

30.♔f4+-

30...d2+ 31.♔d1 And the game is basically over. Black needs to give away his queen.

31...♔xh7 32.♘xh7 ♔xh7 33.♖b1 White wants to play ♖b3, bringing the rook into the attack;

or to play ♖b2, capturing the pawn on b2.

33...♖d3? After this, Black could already resign. [33...♕d5 leads to a lost position, but at least we would see a fight.]

34.♔c4! As, I think, Smyslov once said: Chess is a game of double attacks.

34...♕e4 35.f3 The White bishop is caught.

35...♖xf3 36.gxf3 ♕xb1 37.♔xe6 ♔g7 38.♔xd2 What to say... Some people play here, some resign...

38...f4 39.♔e7+ ♖f7 40.♔g5+ ♕g6 41.e6 The new queen is running.

41...♖f5 42.♔e7+ ♕h6 43.♔xa7 And another pawn....

43...♖d5+ 44.♔c1 ♖d3 45.e7 ♖xf3 46.♔d4 ♖f1+

47.♔d2 ♕h7 48.e8♔ Now it was too much even for Kempinski. We saw an interesting fighting game with mistakes by both sides, an interesting opening and mid-dlegame, and some very unnecessary last 10 moves :).

1-0

Endgame section

(15) Meier,G (2646) – Balogh,C (2664)

SPICE Cup, 19.10.2012

[Chess Evolution]

Despite having a disappointing tournament, I had some interesting moments. White has all the hopes for an advantage because of his better pawn structure. He can easily create a passed pawn on the kingside, while Black's majority on the queenside is perfectly blocked by the White pawns. In addition, the bishop is stronger than the knight. However, I was lucky to calculate a long and forced line correctly to save the game. Fortunately, this time there was no hole in my counting, like in most of my games in this event...

32...♘d5! [32...♖e8+= was also possible, to prevent ♙f5, but Black has to suffer long in this case.]

33. ♙xd5 ♖xd5! At first, the pawn endgame might look completely lost, but...

34. ♖xe6 [34. ♖xd5+ cxd5 35. ♖xe6 (35.f5 is not dangerous because of 35...♖e5! 36. ♖xe5 fxe5 37.h4 ♙e7= Black's e- and d-pawns are equally strong to the h and g ones.) 35...♙xe6 White has a side passer, which could easily be enough to decide the game, but with an accurate defense, Black can hold the draw. 36.h4 Black needs to find the only move. (On 36.♙e3 it's very important for Black to stop White's attempt to create a passed pawn 36...g5! against h4. White is forced to repeat moves. 37.♙f3 ♙d6 38.♙e3=)

36...f5! (36...♙d6 loses to 37.h5! ♙e6 38.♙e3 ♙d6 39.♙d4 White breaks through with g5 and h6.) 37.g5 g6! Black has successfully stopped the pawns. The only way to progress in as h5 break, but the Black king is close enough to catch the g-pawn. 38.♙e3 Black needs to be careful to answer ♙d4 with ♙d6. 38...♙e7 39.♙d4 ♙d6=]

34...♖xc5 35. ♖xf6! My opponent thought the game was over, but...

35...gxf6! 36.bxc5

36...a5! This is the key move! Despite being a clear pawn down, White can't make progress because he needs his king to promote his kingside pawns, although it has the duty to stop the queenside pawns. [The move order was really relevant, since after any other move, for example 36...♔e6? White has 37.a4! avoiding to create a passer. 37...b4 (37...bxa4 38.♔d3+-) 38.a5!+-]

37.a4 This is the best chance, otherwise Black pushes a4 himself. Now the White king can go to e4 to stay in the square of the b-pawn. [On 37.♔e3 a4!= the White king must stay on the d-file, otherwise b4 will be played. The lines will be the same as in the game.]

37...b4 38.h4 ♔e6

39.g5 [39.♔d3 ♔f7 40.♔e4 ♔g7 Sooner or later, White has to advance one of his pawns;]

39.f5+!? is a tricky attempt. 39...♔f7 40.g5 ♔g7! It's very important to keep the f6 pawn on the board. (40...fxg5? 41.hxg5+- wins for White as the line 42...♔g7 will show us.) 41.♔d3 ♔f7= followed by passing on g7 and f7. White can't make progress.]

39...fxg5 [Actually 39...f5 also leads to a draw. 40.h5 ♔f7 41.h6 (41.♔d3 ♔g7 42.g6 ♔f6 43.♔d4 ♔g7 White can't improve his position.) 41...♔g6 42.♔d3 ♔h7 43.♔c4 ♔g6 44.♔d4 ♔h7 45.♔e5 and now it's very important not to hurry with the b-pawn. 45...♔g6! The White king needs to turn back to stop the pawn.(45...b3? loses to 46.♔f6! b2 47.g6+ ♔xh6 48.g7 b1♔ 49.g8♔+- The Black pawns start to fall one by one.)]

40.hxg5 [40.fxg5 ♔f5 41.♔d3 ♔g6 42.♔e4 ♔h5 is also a draw.]

40...♔f5 41.♔d3 ♔g6 42.♔e4

42...♔h5! This is the last key move, which had to be foreseen. White must settle with a draw, since any attempt to win leads to a defeat... [42...♔g7? loses instructively. 43.f5

♔f7 44.♔d4 ♔g7 45.f6+ ♔g6 46.♔e4 ♔f7 White can triangulate with his king in any case to reach this position, and now 47.♔f5! This might be the only winning motif in this type of endgames. Now it works well. Black queens first, but loses the game. 47...b3 48.g6+ ♔f8 49.♔e6! b2 50.g7+ ♔g8 51.♔e7 ♔b1 ♔ 52.f7+ ♔xg7 53.f8 ♔+ ♔g6 54.♔f6+ ♔h7 55.♔xc6+-]

43.♔d3 [43.♔f5? b3 Black promotes with check!;

43.f5? loses to 43...b3! (43...♔xg5 44.♔e5) 44.♔d3 ♔xg5 45.♔c3 ♔xf5 46.♔xb3 ♔e4]

43...♔g6 44.♔e4 ♔h5 45.♔d3 1/2

(16) Bindrich,Falko (2532) – Tregubov,Pavel V (2601)

Schachbundesliga 2012/2013 (1.7), 20.10.2012

[Chess Evolution]

After a big battle in the middlegame, the game has reached a very dynamic endgame. It's clear that White is doing better, but can he win this position?! After the match, the team of Pavel Tregubov made an official protest accusing Bindrich of having cheated during the game. Let's take a look at what made Pavel Tregubov think his opponent was cheating...

41.dxe4 ♖d8 The only move for Black, White wanted to play ♘d7.

42.♘ec4 White wants to set his second free pawn in motion — a very logical move. [Of course not 42.♘d7? ♘c6;

Another good choice in the position could be 42.♔g2!? There is no need for White to hurry, and to bring the king closer to the e4-pawn and the g4 square can be very useful. 42...♔g7 43.♘dc4 with the direct threat of playing ♘a5-Nc6 or ♘d7 next. 43...♘a6 Black is forced to put his knight on a very bad square — a6. 44.♘c6 and White

should be close to winning, even though it would be important to show some accurate play. If Black manages to give away the knight on a6 for the b and e-pawns, the position would be a draw.]

42...♔g7 43.e5 Of course. Now the knight on d6 is untouchable.

43...♞c6 44.♔g2! Very cool move. White is blocking all the Black pieces with his knight, and has enough time to centralize his king.

44...♔f8 Black is bringing his king to the battle-field as well.

45.♔f3 ♔e7 46.♔e4 ♔e6 Both White and Black have improved their positions to the maximum. Now it's time for action.

47.♞b5! The only move. [In case of the „waiting“ move 47.h4? ♞b8! followed by ♞xe5, with a draw.]

47...♞d1 Black is looking for counter-chances, it's the best he can do! [In case of a passive defense 47...g5 48.♞c7+! the White knights start to jump around the Black king with the idea of getting control over the e6 square. 48...♔d7 49.♞a6! The White knight is going to c5, where his

position will be perfect. 49...♔e6 50.♞c5+ ♔e7 51.♞d6 and of course Black can't hold such a position. The White king will go to g6 or to b6, finishing the game]

48.♞a5! Another great move by White! He is kicking out the Black knight from c6, and in case of 48... ♞b8, 49.♞d4! followed by ♞c6 is winning.

48...♞e1+ Black is forcing the White king to leave the pawn on e5 unprotected, in order to play ♞b8 next. Where should the White king go, to f3 or to d3?

49.♔d3! A very strong move by White, once again. [49.♔f3?! would have been the wrong solution. 49...♞b8 (49...♞xe5+ loses by force 50.♔f2 ♞d3+ 51.♔g3 ♞g1+ 52.♔f3 and Black can't stop White from making a queen.) 50.♞d4+ (Compared to the game 50.♞c6? is losing now. 50...♞xc6 51.♞d4+ ♞xd4+ Black takes the knight on d4 with check! This is not the case in 49.♔d3.) 50...♔d7 51.e6+ ♔c7 Probably White is still doing better, but the position is far away from clear.]

49...♞b8 [49...♞xe5+ 50.♔d2]

50.♞c6! Another great move by Bindrich! [To play 50.♞d4+ ♔d7 would lead to a much less clear position!]

50...♖d1+ This leads to a knight endgame with a pawn down, but Black doesn't have a better option. [The only other move that doesn't lose on the spot. 50...♖b1 51.♘bd4+ ♕d5 52.♘xb8 ♖xb7 53.♘bc6 White is on time to keep the e5-pawn. This is a winning position.;

50...♘xc6 51.♘d4+ ♘xd4 52.b8♔ I guess no words are needed here.]

51.♔c2 ♘xc6 52.♔xd1 ♔xe5 White is a clear pawn up, but the Black king is standing very strong on e5. There are only 3 White pawns on the board, which gives Black some drawing chances. White's idea to take the king to b7-pawn, which would force the Black king to give up his central position and allow the White king to dominate the board.

53.♔e2 h5!? Black is trying to at least exchange a pawn. [53...♔f4 Black is not in time for 54.♔d3 ♔xg4

55.♔e4 followed by ♔d5 with an easy win.]

54.♔f3?! What an unhuman decision. Everybody would prefer to keep the pawn un-exchanged, which would be the right choice of course. [54.g5! ♔f5 Black's only try ends in a forced losing position. 55.♔d3 ♔xg5 56.♔e4

♔f6 57.♔d5 ♘b8 58.♔d6 and Black is not on time. White is winning.]

54...♘b8 [Doesn't help 54...hxg4+ 55.♔xg4 ♔f6 56.♘d4 ♘b8 57.h4 followed by ♔f4, then ♔e4-Kd5 and ♘c6 with an easy win. Besides, White can win by playing ♔f4-Nf3-Nd2-Ne4 then ♔g5 and ♘g3-Ne2-Nf4, and the pawn on g6 is falling.]

55.h4 Of course a winning move, as 55.g5. All moves seem to bring White a full point.

55...♔d5 Desperation in a lost position. The Black king is going for the White pawn on b7, which of course gives him more than enough time to collect the g6 and h5 pawns.

56.g5 ♔c6 57.♘d4+ ♔xb7 58.♔e4! The White king starts his march to capture the Black pawns.

58...♘d7 59.♔d5 ♔c8 60.♔e6 ♔c7 61.♘f3 Super strong play by White — what else to say? Maybe even super-super strong... For Tregubov and his teammates, this seemed too strong and filed a protest for cheating. Since I know Bindrich, he usually plays fast and not very accurately, which of course would bring some doubts about his play. It was just too good, almost perfect!

1-0

Clash of the Titans

(17) Alekhine,Alexander — Yates,Frederick [D64]

London BCF Congress London, 1922

[*Balogh Csaba*]

A classical positional lecture by Alekhine, against one of the strongest players of that period. It's almost impossible to win such games nowadays.

1.d4 ♘f6 2.c4 e6 3.♘f3 d5 4.♘c3 ♕e7 The Queen's Gambit has been a solid and popular opening always.

5.♕g5 0–0 6.e3 ♘bd7 Yates plays exactly the same set-up as the Smyslov-Hort game analyzed in a few CEWNs before. [As it was already mentioned there, Black should rather go for 6...h6 and after 7.♕h4 ♘e4 (or 7...b6)]

7.♖c1 c6 8.♔c2! Just as in the Smyslov game, Alekhine knows that he should make all the useful moves before developing the f1 bishop.

8...♖e8 9.♕d3 This is the difference. [Smyslov played 9.a3 which probably is even slightly more accurate, but the game continuation has no problems either.]

9...dxc4 10.♕xc4 ♘d5 Black's standard reaction. After exchanging on c3, he wants to free his position with the e5 break. White must react precisely.

11.♘e4? Alekhine found the right idea to keep the knights on the board, but executed it in the wrong move order. [11.♕xe7 ♔xe7 12.♘e4! was the right plan as Smyslov has demonstrated before.(12.0–0 ♘xc3 13.♔xc3 e5! is Black's equalizing idea.)]

11...f5? A horrible positional mistake. It is hard to get its point. Black creates many holes in his own camp, and an especially painful one on e5. Black remains with his bad light-squared bishop — its movement is completely restricted by his own pawns. [Four years later, Yates improved on his play by 11...♔a5+! 12.♕e2 and again went wrong with 12...♘7b6 (However, after 12...♕f8! preserving the strong dark-squared bishop followed by opening the position on White's king with e5, obtaining a perfect position.) 13.♕xe7 ♖xe7 14.♕d3 White was slightly better in Gruenfeld-Yates, Merano 1926.]

12.♕xe7 ♔xe7 13.♘ed2! This is the shortest way for the knight to reach the weakened squares.

13...b5? Another terrible positional mistake, giving up the c5 square as well. This was clearly a day off for Yates, probably he was scared of his great opponent. [13...e5 never works because of the f5 pawn.;

Black's best chance would have been 13...♘f6 14.0-0 ♕d7 with a passive and bad position, but White must work hard to break it. 15.♖fe1 The right idea should be a well timed e4 move, so the rook stands perfectly on e1. 15...♖f8 White can decide to initiate direct actions with 16.e4 (Or can first improve his position with the idea that Black doesn't have a useful plan anyway. 16.♘e5 ♕e8 17.a3) 16...fxe4 17.♘xe4 ♖xe4 18.♔xe4 White is better in both cases.]

14. ♕xd5 [14. ♕e2+/- was also possible, followed by ♘b3-c5, but Alekhine had a clear plan in mind — to play against the c8 bishop.]

14...cxd5 15.0-0 We need great fantasy abilities to imagine a future for the c8 bishop. White's plan is clear, he wants to exchange one pair of knights and install the other one on e5. It's important for him to keep control over the c-file.

15...a5 16.♘b3 Continuing the plan with ♘c5. [16.♔c7 was slightly different to the game, but also very promising. 16...♕a6 17.♘e5 ♘xe5 18.♔xe5 ♖ac8 19.♘b3+/- with an overwhelming advantage.]

16...a4? After this move, the game is practically over. [The tactical 16...♕a6 was the last chance, but White can preserve his advantage in some very nice lines. 17.♘xa5

Black probably stopped here, but he can obtain some counterplay with 17...b4 18.♖fe1 ♕b5! The bishop is activated and Black wins back the sacrificed pawn. 19.♘c6! ♕xc6 20.♔xc6 ♖xa2 A very important moment to seize the initiative with

21.♖a1! With this pawn sacrifice, White takes control over the second open file as well. 21...♖xb2 Black is forced to take here, at least the b-pawn gives some hopes. (21...♖xa1 is bad 22.♖xa1 ♖a7 is coming next.; Black can't hold the a-file with 21...♖ea8 because of 22.♔xa8+ !+/- A very important detail!) 22.♖a7 ♖d8 Black has a really suspicious position, but there is no direct win, since 23.♘e5 is met with ♘xe5... The best is 23.♘g5! ♔xg5 24.♔xe6+ ♔h8 25.♖xd7 Black must waste a tempo to open his weak back-rank. 25...h6 We have reached the critical position of the whole line, where the computer suggests a fantastic idea...

26.h4!! It sacrifices a pawn in order to open the back-rank with tempo. 26...♔xh4 27.g3 White had to cover the f2 pawn before the action begins. 27...♔g5 28.♖xd8+ ♔xd8 29.♖c1! This is the point! White creates serious threats. 29...♔f6 30.♖c8+ ♔h7 and now White should accept to end up with only an extra pawn. 31.♔xd5 b3 32.♔g2 with the threat of winning the b-pawn after ♖b8, and on 32...♖b1 33.♔g8+! ♔g6 34.♔e8+! ♔h7 35.d5!! Black can't parry the idea of ♔g8 and ♖c6. 35...b2 36.♔g8+ ♔g6 37.♖c6 ♖g1+ 38.♔xg1 b1♔+ 39.♔h2+- with an easily winning pawn endgame. This is the end of our nice line that started with 16... ♔a6. :)]

17.♘c5 ♘xc5 18.♔xc5 ♔xc5 19.♖xc5 White achieved the maximum he could. He got the strong knight against the bad bishop endgame, with the control over the c-file. Additionally, Black has many weaknesses.

19...b4 20.♖fc1 ♔a6 21.♘e5 ♖eb8

22.f3! White doesn't need to hurry to convert the advantage. He can slowly improve all his pieces and pawns to the maximum. Black can only watch this.

22...b3 23.a3! Obviously, White doesn't intend to open another front for the battle.

23...h6 [Exchanging all the rooks leads to an easily winning endgame. 23...♖c8 24.♖xc8+ ♖xc8 25.♖xc8+ ♔xc8 26.♘d3 ♔d7 27.♘c5+- One of the pawns will fall.]

24.♔f2 ♔h7 25.h4! ♖f8 26.♔g3! Alekhine invades with his king on the dark squares. Black has nothing better than passing.

26...♖fb8 27.♖c7 ♔b5 28.♖1c5 ♔a6 29.♖5c6 ♖e8 All the Black pieces are sent into passivity.

30.♔f4 ♔g8 31.h5! ♔f1 32.g3 ♔a6 Black is almost in zugzwang in a full board. White has already reached the maximum activity, it's time to finish the game. Alekhine found a really beautiful way to do it.

33.♖f7 Doubling the rooks on the 7th rank.

33...♔h7 34.♖cc7 ♖g8 35.♘d7! ♔h8 36.♘f6! ♖gf8 And the final blow is

37.♖xg7! ♖xf6 38.♔e5!! A cool decisive move. To save the rook, Black must put one of his rooks on f8, but then mate is coming in two moves.

1-0

Editorial Preface

After a terrible play in the past events, Nakamura is winning very convincingly the Unive Chess Festival with 4,5/6 playing few very nice games. A nice game to watch is Nakamura-Tiviakov. After being so badly outplayed I guess Tiviakov had a few thoughts if actually chess is the right things to do ☺.

Chigorin Memorial has started, with a huge line up of Top GMs. Let's see who will be the lucky winner.

A lot of very strong rapid tournaments been nice to watch. Final French Rapid Grand Prix on Corsica, or the rapid before the open in Chigorin Memorial, same as Trophée Anatoly Karpov 2012 in which the World Champion himself is taking part and showing again great chess!

My partner Csaba is making at the moment holidays in the USA (good timing) with his girl friend Veronica, who is by the way a professional cook! (doesn't it sounds like a dream girlfriend?! ☺). But no worries, from the next week he is back to You with his "perfect and super" accurate analyses ☺, but this week You are all mine.

Have fun with the usual issue of CEWN Nr 36 and Happy Halloween!!

Arkadij Naiditsch

4 best games of the past week

(1) Bodnaruk,A (2425) – Almasi,Z (2707) [B32]

Chigorin Memorial 2012 St Petersburg RUS (2), 28.10.2012

[Arkadij Naiditsch]

How a strong female player can beat a Top GM. This is the story of this game. We'll see a lot of mistakes, the game is clearly very emotional for both players... I guess after the game, Almasi and Bodnaruk were in shock for some time :).

1.e4 c5 Of course Almasi is playing for a win in this game, by choosing the most aggressive opening, the Sicilian.

2.♘f3 ♘c6 3.d4 cxd4 4.♘xd4

4...♔b6!? This is a nice move to play for a win against a weaker opponent. There's not much theory here and objectively, the move is not bad. Polgar played it twice in a roll against Svidler, so that means something! The idea of ♔b6 is to get the knight away from d4 to b3, and then to play the usual Sheveningen set up. It has advantages and disadvantages...

5.♘b3 ♘f6 6.♘c3 e6 Until now all is theory...

7.♘d3 A very normal move. [7.♔e2!? I personally think this is the best move! The idea is to castle long quickly and then to play g4 and ♘g2. I think this is a very interesting setup for White.]

7...♘e7 8.♘e3 ♔c7 9.f4 d6 As we can see this is an usual Sheveningen Sicilian, but with a knight on b3 instead of d4.

10.♔f3 White keeps both option open, to castle short or to castle long...

10...a6 Almasi doesn't hurry to castle short either. a6 is always an useful move for Black in any case.

11.a4?! It's hard to imagine that this should be the right way to go for White. I think it was time to castle long and play g4-g5. We have a typical Sicilian position — things are very concrete and very sharp!

11...♘b4! Typical and strong. It's very important for Black to exchange the bishop on d3. With this, White's future attack on the kingside is much less effective.

12.0-0 0-0 13.a5?! This move is not really useful for White. If White wanted to play g4, it was the right time to do it immediately.

13...♘d7 I think that until now, Almasi was very happy with the development of the game. Black is clearly not

doing worse and the position is complicated. There are good chances to outplay a weaker opponent.

14.g4! Not strong, but very brave! Bodnaruk shows no respect for her much stronger opponent and looks for chances in the attack. I think a smart decision. If You'll die, then do it with a scream!! :)

14...♘c6 Giving a square for the knight on d7.

15.g5 ♘d7 16.♔h5 We have quite a typical position and White is at least 1 tempo down. Almasi continues making standard moves.

16...g6 17.♔h6 ♖fe8! I guess Almasi played this move too quickly, and I would have done the same. ♖fe8 is a standard defense against the direct attack on the king. Black is freeing the f8 square for the bishop, and at the same time, after White's f5, the rook on e8 will get directly into the game.

18.♖f3 ♘f8 19.♔h4 ♘g7 And Black is even on time for ♘f8.

20.♖h3 ♘f8 It seems like Black is doing very good. Everything is defended, the exchange on d3 can't be avoided.

21.f5! Bodnaruk is fearless! I think a preparation move like 21.♖d1 would have been a worse continuation. As I know

from my own games, it's much easier to play against an opponent who shows respect than against somebody who is „crazy“ and just goes for Your king. In most cases, Almasi would win such a position, but in some others, a 0 might be a deserved result :).

21...exf5 22.exf5 ♘xd3 23.cxd3 gxf5 Black doesn't allow White to play f6. So what we have: Black is a pawn up, has the bishop pair and White's king is weaker... but Bodnaruk is not stopping her attempts to mate the Hungarian Super-GM.

24.♖f1 ♔d7 No reason to give back the pawn.

25.d4 But Almasi makes the choice. [At 25.♘d4 ♘e5! is very strong. White has no play at all...]

25...♘e4?

26.♘d2! It's clear that before 26.♘d2, Almasi was already sure that he had a full point, and suddenly he blunders this move... a very bad feeling. What to do now? Whites wants to play ♘dx4 followed by ♘d5.

26...♘c6 [At 26...♘d3 27.♘d5! and White is mating Black. 27...♘xf1 28.♘f6+ ♘xf6 29.gxf6 with mate in a couple of moves.]

27. ♘c4 White is completely back in the game. The threat ♘b6-Nd5 is very dangerous and psychologically, Almasi is feeling like a sheep in front of closed gates :). I know it all myself, it happened to me many times...

27... ♖e7 28. ♘b6 ♖ad8 Correct play by Black, avoiding any loss of material.

29. ♖xf5 [It's not winning to play 29. ♘bd5 ♕xd5 30. ♘xd5 ♖e4! and Black is OK.]

29... ♖e6 30. ♖f2 d5 31. ♖hf3 ♖e7 We have a very complicated position. It's hard to say who is doing better here, and I guess that by now both players were in a slight time trouble.

32. ♖g3 ♖de8? Black makes a mistake under pressure... I guess Almasi intended to give up his queen, but I don't think it was the right way to continue the game. [32... ♖g6 This move would have been the right choice. The position remains very complex.]

33. ♖f6! Forcing Black to give up the queen.

33... ♖xe3+ 34. ♖xe3 ♖xe3

35. ♘bxd5! In such a position it's very easy to go wrong, but Bodnaruk is playing very strongly, following the rule: if You don't know what to do, get some material.

35... ♘g6 36. ♖g4 ♖d3 Black's pieces are active and the position looks complicated, but in fact, Black has no real threats and White's material advantage is very big.

37. ♖f1 Solid move. [37.h4 Maybe this was another possibility for White, but in the time trouble it's risky to let the Black rook enter on e1.]

37... ♖d2 38.h4! Just a great move! Nothing to say, h5 is a deadly threat.

38... ♖d8 It's hard to advice something better for Black.

39.h5! White is not getting irritated.

39... ♕xd5 40. ♘xd5 ♖xd5 41.hxg6 The time trouble is over and with it, almost the game..

41...hxg6 [Would lose on the spot: 41... ♕xf6 42.gxh7+ ♖xh7 43.gxf6 with mate on g7, or Black will be forced to give up one of his rooks.]

42. ♖c8+ ♖h7

43. ♖f3! Another very good move. White is forcing further exchanges, simplifying the position into a technically winning one.

43... ♖xg5 The only move to avoid losing the game on h3.

44. ♖h3+ ♖h5 45. ♖xh5+ gxh5 46. ♔xb7 White is winning, but Black still has practical chances.

46... ♖xd4 47. ♔xa6 ♖f4+ 48. ♔e2 ♙xb2 If it would be possible to give the bishop for the a-pawn, the position would be a draw! K+R+pawn on f7 against K+Q is a draw.

49. ♔b5! The last exact move. White doesn't give Black a chance to play ♙d4.

49... ♙f6 [49... ♙d4 50. ♔xh5+ ♔g7 51. ♔g5+ and the rook on f4 is falling.]

50.a6 ♖e4+ 51. ♔f3 ♖e7 52. ♔b6 And Black cant stop White's move on the a-file... What a game! From move 26, White played a brilliant game, almost perfect, solving many difficult decisions in a great way. It's clear that Bodnaruk is very talented and has a lot of potential for improvement.

1-0

(2) Halkias,Stelios (2581)

– Lenderman,Aleksandr (2614) [D02]

Chigorin Mem Rapid St Petersburg RUS (7.4), 26.10.2012

[Arkadij Naiditsch]

This is a game from the rapid tournament during the Chigorin Memorial. The first 20 moves of the game are quite unclear, but then Halkias starts a very interesting mating attack with some sacrifices. All in all, a nice attacking win by White.

1.d4 ♘f6 2. ♘f3 d5 3.c4 e6 4.g3 ♙b4+ 5. ♘c3 [5. ♙d2 is of course the main move, but it seems that nobody knows at the moment how to get an advantage here. The line that Halkias chose is quite a practical decision, especially for a rapid game.]

5...0-0 6. ♙g2 dxc4 7.0-0 White sacrifices a pawn for a better development and the center. The position is very unclear.

7... ♘c6 8.a3! Of course this is still theory, and 8.a3 is clearly the most fighting move. [We can find a lot of games on 8. ♙g5 h6! 9. ♙xf6 ♔xf6 but I think White should not have big hopes to reach any kind of advantage here. Now, against White's a3, Black will just play ♙xc3 followed by e5.]

8... ♖e7 [To take with 8... ♗xc3 9.bxc3 could be dangerous for Black. White could follow the plan with ♔c2-e4-e5 and get a very dangerous kingside attack.]

9.e4 a6 The right move. Black is preparing to play b5 to protect the pawn on c4, and to develop the bishop to b7. [We can find some games on 9... ♘a5 10. ♔e2 a6 11. ♗f4 b5 12. ♖ad1 which leads exactly to the position in the current game — just with a different move order.]

10. ♗f4 b5

11. ♔e2! White should try to develop in the „best“ possible way, and this is to have a Queen on e2 and the a-rook on d1.

11... ♗b7 [11... ♘xd4 would be a very risky decision for Black. 12. ♘d4 ♔xd4 Now White has 2 options: 13. ♖ad1 (13. ♗e3 After this move, we face quite a strange position. 13... ♔d3 14. ♔xd3 Of course White can also try 14. ♔e1 — the position is very complicated. 14... cxd3 15.e5 ♘d5 16. ♘xd5 exd5 17. ♗xd5 ♖b8 18. ♗a7 ♗f5 19. ♗xb8 ♖xb8 A very difficult endgame to evaluate... but probably it should be around equal.) 13... ♔a7 14.e5 It's time to collect some material back. 14... ♘d5 15. ♘xd5 exd5 16. ♗xd5 ♗b7

17.e6! I don't know if White is doing clearly better, but for sure he's not worse. and Black needs to play quite precisely to get a draw here.]

12. ♖ad1 White's main idea is to play d5.

12... ♘a5 Now d5 can't be played, but in exchange the Black knight on a5 is out of the game.

13.h4 The right plan! White's play should clearly be on the kingside. Another option for White could be to play 13. ♖fe1 (preparing the d5 push) ♗e8 and 14. ♘e5 with unclear play.

13... ♘b3 14. ♗g5?! The next two moves by Halkias are hard to understand... It seems like he wanted to provoke Black to play h6, but is it worth losing a tempo? I don't think so. [To play 14. ♖fe1 ♗e8 15. ♗h3 with g4 next might be an idea.]

14...h6 15. ♗f4 [15. ♗xf6 ♗xf6 16.e5 ♗e7 White can't do anything concrete, but White still has hopes for an attack and I think it is a feasible option.]

15... ♖e8 16. ♖fe1 ♗f8 A normal move, but I think Black could have tried: [16...c5!? In general, this is Black's main idea in many lines. 17.dxc5 ♔c8 and Black is going to

recover the pawn on c5. With a bit of luck, maybe even ♖xc5-Nd3 could be possible. I think Black is doing clearly better here.]

17.e5! White needs to do something.

17...♞d5 18.♞e4 We can see that Black's h6 is quite useful for White, but again, it was reached with the high cost of one tempo.

18...c5 Black starts to crush White's position. White has his back against the wall... He needs to do something forced now, or the game is over.

19.♙g5 ♖b6 20.♞f6+!? I guess that in a normal game this kind of attack would not be successful, but in rapid it's a great move, especially if the position is bad anyway...

20...gxf6? Giving White good attacking chances. [20...♞xf6! This move seems to finish the game on the spot. 21.exf6 hxc5 22.♞xc5 gxf6 and I think White is pretty hopeless...]

21.exf6! If You say A, You must say B.

21...hxc5? Very greedy — but it's not easy to play with Black here.

22.hxc5 Black is two pieces up. It seems like it should be a clearly winning position for Black — but how?! White's „easy and deadly“ threat of playing ♞e5-Qe5 is very difficult to be stopped. I guess there aren't many players that would like to be Black here, especially in rapid chess.

22...♞e7 This is not a good move, but which one is the right one? [In case of 22...♞xd4? 23.♞xd4! White has nothing to lose! 23...cxd4 24.♞e5 White wants to play g5 or ♖h5. 24...♖c7 25.♖h5 with a mating attack!; 22...♙d6! Logical move, but anyway the position remains very sharp. 23.♞e5 ♙xe5 24.dxe5 The position is still not that clear. 24...♞e7! 25.♖h5 ♞d4 and it seems like Black's knights are holding the position, but... 26.♞xd4! cxd4 27.g4! and the deadly threat of ♖h6 gives White a full point.]

23. ♖e5 ♘g6 24. ♔h5 White is totally in a rush to attack!

24... ♘h8 After this move, White's position is winning!
[But also 24... ♖xe5 25. ♖xe5 bringing the rook into the attack 25... ♔c7 26.g6 wouldn't give Black any escape!]

25. ♖xf7! Very pretty. Black is 3 pieces up, and in a lost position!

25... ♖xf7 26. ♔g6+ ♔h8 27. ♖xf7 Black has no defensive ideas against White's g6 move.

27... ♕h6 28.g6 What a pretty attacking game. By playing 20...gxf6? instead of 20...♖xf6!, Black had to agree to get a 0 instead of a 1 in the cross-table!

1-0

(3) Popilski, Gil (2475)

– Grigoriants, Sergey (2578) [B12]

Chigorin Memorial 2012 St Petersburg RUS (3.11), 29.10.2012

[Arkadij Naiditsch]

Usually we comment games with „big names” and great play, but let's make a little exception this time. This game was basically over in just 11 moves! White used a great trick.

1.e4 c6 2.d4 d5 3.f3 Lately, we more often see 3.f3. The idea of this move is very simple, to keep the White center alive, which is good of course. However, with the f3 move, White's king is getting slightly more open and Black has a possibility to play quickly against White's center.

3...e6 [3... ♖b6 4. ♘c3 dxe4 5.fxe4 e5 I guess this is the most critical line, which leads to very sharp positions.]

4. ♘c3 b5?! It's hard to imagine that this kind of move can be good... [4... ♕b4 5. ♕d2 ♘e7 with very normal play for both.]

5. ♖d3 Good and natural move. Black wanted to play b4, and then dxe4 fxe4 followed by ♔h4+. The White pawn on e4 would fall.

5...b4 [5...♘d7 would still be a much safer option than what happened in the game. Black is clearly under-developed, and should not try to provoke actions on the board.]

6. ♘a4! The White knight is quite nicely placed on a4 and what is very important, it stops Black from playing c5.

6...♘d7 7. ♘e2 ♔a5 Black is following his plan, but this plan doesn't look good at all...

8.b3 ♘b6 This was Black's idea — hoping to provoke White to take with 9. ♘xb6 and then to take with axb6, but even then we can clearly see that White is much better developed and has a very simple plan to castle short and to play e5-f4-f5, or an immediate f4-f5. All of this looks quite dark for Black.

9. ♘c5! I like this move a lot. Popilski is completely crushing the idea behind Black's play.

9...e5 A desperate attempt to look for complications. [In case of 9...♖xc5 10.dxc5 ♔xc5 11.a3! is very strong

now! Black doesn't have a good reaction... 11...♘f6 (11...a5 12. ♖b2 ♘f6 13. ♖d4 and the knight on b6 is falling.) 12. ♖b2 and it's nice to see how White's pieces are dominating the game. White, of course, has more than enough compensation for just a pawn.]

10.a3! Great move by White! I guess Black missed completely White's idea, which we will see on the next move. This kind of trick can be often used in many different openings, when Black has his queen on a5.

10...exd4

11. ♖d2!! Just fantastic! Black can resign.

11...♔xc5 [11...♖xc5 12.axb4; 11...♘d7 12.axb4 just leads to a hopeless position.]

12. ♖xb4 The Black queen is trapped.

12...♔xb4+ 13.axb4 ♖xb4+ 14. ♔f2 ♘e7 With just two pieces for the queen, Black has no objective chances of saving the game. But let's anyhow take a look at the technique used by White. Often, to win an „easily“ winning position is a hard piece of work.

15. ♖xd4 0-0 **16.** ♔c1 White is giving some material back to simplify the position. This idea is often used, but it wasn't really necessary now. [To first play 16. ♖a2 wouldn't have been a bad choice either.]

16... ♗c3 **17.** ♘e2 ♗xa1 **18.** ♔xa1 Now Black already has a rook+knight for the queen, which gives some theoretical chances for a draw. If Black manages to exchange the pawns on the queenside, the position would be quite close to a draw.

18...c5? Black panics. [18... ♖e8 with a very bad position, but the sun doesn't always shine... it's also very important to defend in bad positions. In average, it can bring a lot of „bonus“ points.]

19. ♔a3! The finishing move! Black will lose one more pawn.

19... ♘d7 **20.** exd5 ♘xd5 **21.** ♗e4 And the c5 pawn is falling.

21... ♘f6 [21... ♗b7 22.c4]

22. ♗xd5 ♘xd5 **23.** ♔xc5 Now there aren't even practical hopes... Everything works for White and as we know, a queen and a knight cooperate very well together.

23... ♗b7

24.c4! White's pawns on b3-c4 are cutting the Black knight.

24... ♖fc8 **25.** ♔a3 ♘b6 **26.** ♖d1 The last White piece is in the game.

26... ♗c6 **27.** ♖d6 ♗e8 **28.** ♘d4 What a sad game for Black! It's a good example of how important it's in chess to first take care of the development of Your own pieces. This must be done before starting hard actions in the center... Things can go wrong very fast! And what a great idea by Popilski: to play a3 followed by ♗d2!

1-0

(4) Swiercz,Dariusz (2609) – Socko,Monika (2445) [E12]

M.Chigorin Memorial 2012 St. Petersburg (4.18), 30.10.2012
[Kamil Miton]

A game between two of my friends, which is a good example to learn interesting ideas. We can note that Swiercz, who is a young talented player, time to time cooperates with Socko. Let's see what happened:

1.d4 ♘f6 2.c4 e6 3.♘f3 b6 4.a3 The Petrosian System is not as popular on the top level as it was a few years ago, but it still shows many good examples to learn many strategic ideas in different positions.

4... ♗b7 5.♘c3 d5 6.cxd5 exd5 A rare answer that leads to a comfortable Carlsbad structure for White. The main move is [6... ♘xd5 7.♖c2 Other big lines are : (7.e3; 7.♗d2) 7... ♗e7 8.e4 ♘xc3 9.bxc3 0-0 10.♗d3 c5 11.0-0 ♖c7 (11... ♖c8 12.♖e2 ♗a6 13.♖d1 ♗xd3 14.♖xd3 ♘d7 15.e5 Black managed to exchange the light-squared bishops, but now the rook will join the attack on the 3rd rank.) 12.♖e2 ♘d7 A critical position. Black's position is very solid, without any weaknesses, but thanks to his better center and a potential pressure on the kingside, White has the advantage. One of the plans is to play h4-h5, with the idea of creating some weak squares around the Black king.]

7.♗g5 ♗e7

8.♖a4+ ♗c6 Strange move. Black agrees to lose a tempo. [8... ♘bd7 looks more natural. 9.e3 a6 (9...0-0 10.♗a6! (10. ♗b5 a6 11.♗c6? b5) 10... ♗xa6 11.♖xa6 White's position is very pleasant because Black's queenside structure is very weak after the bishop exchange.) 10.♗xf6 ♗xf6 11.♗d3 c5 (11...0-0 12.♗f5 and Black has problems with the knight on d7. 12...c6 13.♘xd5 b5 14.♘xf6+ ♖xf6 15.♖c2+-) 12.dxc5 bxc5 13.♗f5 g6 14.♗h3 ♖c7 15.♖d1 ♗xc3+ 16.bxc3 f5 The only way to castle, but now even after castling, the Black king will be weakened. 17.0-0 0-0 18.g3 ♗c6 19.♖b3 and white is bit better 1/2-1/2 Wang Yue-Adams, M/Liverpool ENG 2007/The Week in Chess 670 (30).; 8...c6 9.e3 0-0 10.♗d3 ♖e8 11.0-0 ♘bd7 12.♖ac1 a6 Typical preparation before pushing c5. 13.♖fd1 ♗d6 14.♖b3 h6 15.♗h4 White's pieces are optimally placed and on time. Now it's very hard for Black to play on c5. 15...♗c7 16.♖c2 ♗d6 17.♗h7+ Another typical trick. Before the bishop goes to f5, White puts the Black king on a worse square. 17...♔h8 18.♗f5 ♘f8

19.e4! A thematic crushing move! White doesn't care about the isolated pawn on d4 because Black is not able to take control of the d5 square. White gets a decisive initiative. 19...dxe4 20.♘xe4 ♗e7 21.♘e5 ♖g8 22.♗xf6 ♗xf6 23.♘xc6 ♗xc6 24.♖xc6 ♗g5 25.♖c2 g6 26.♗g4 ♖xe4 27.♖xe4 f5 28.♗xf5 gxf5 29.♖xf5+- and White is

easily winning. 1–0 Wang Yue-Ljubojevic,L/Amsterdam NED 2008 (38).]

9.♔c2 0–0 10.e3 ♘b7 11.♙d3 ♞bd7 12.0–0 c5 13.♖ad1 c4 [13...a6 14.dxc5 bxc5 15.♙f5 With a typical pressure against Black's central pawns. At some moment, White can try to push e4.]

14.♙f5 Very often, even without c4 and g6, the White bishop transfers to h3.

14...g6 15.♙h3 ♞h5 16.♙h6 Logical move. White will need pieces to put pressure on the kingside. [16.♙xd7 ♜xd7 17.♞e5 ♜e6 18.♙xe7 ♜xe7 19.f3 and after the exchanges, White doesn't have any more possibilities to put pressure against the Black king. The plan with e4 probably is not dangerous for Black, because after dxe4, his pieces get active: the bishop on b7 and the rooks on the d- and e-files.]

16...♜e8 17.♜a4 This move seems to be bad because the queen is badly placed on a4. It doesn't support the kingside and comes under attack after a6-b5, but Swiercz's idea is very concrete: he's going to get the e5 square for the knight. Paradoxally, he could play: [17.♞e5 ♞xe5 (17...f5 creating additional weaknesses, but probably is the only move.) 18.dxe5 ♙c5 The pawn on e5 is hanging. White can't play f4 or e4. Probably Swiercz missed

19.♞xd5! ♙xd5 20.♜c3 A very strong move which is hard to see. White simply protects the pawn and Black can't avoid e4. (20.e4 ♜xe5) 20...b5 21.e4 ♞f6 22.e6 fxe6 23.♖fe1 with a strong attack.; 17.b3!? cxb3 18.♜xb3 and this structure is usually pleasant for White, thanks to the weak d5 pawn.]

17...♞df6 18.♞e5 ♙d6 19.f4 White's position is improving. The knight is located well on e5. White slowly is getting ready to attack with g5-f5.

19...a6 [19...♙c8 Of course the idea to exchange the light-squared bishops and to take control of e4 and f5 doesn't work. 20.f5 White has a strong attack. 20...gxf5 21.♙xf5 ♙xe5 22.dxe5 ♜xe5 23.♙b1→]

20.♜c2 b5 Yes, it's normal that Black is trying to get some counterplay on the queenside, but in this case it looks too slow.

21.g4 White had other good moves as well. [21.♙g5 A very unpleasant pin. 21...♙e7 22.f5→]

21...♞g7 22.♜f2 White's queen already came back from a4 to the kingside, where it's connected to the attack.

22...♞e4 It's logical that the Black knight is escaping from the f-file, which will be open soon. [22...♞d7 23.f5 ♙xe5 24.fxg6 hxg6 25.♜xf7+ ♙h7 Black's idea was to recapture with 24. ..hxg6 in order to have this square for the king. 26.g5 ♜e7 (26...♜f8 27.dxe5 ♜xf7 28.♜xf7 ♜b6 29.♜xg7+ ♙h8 30.♜d4 ♞xe5 31.♜e7 ♞f3+ 32.♙g2 ♞xd4 33.♙g7+ ♙g8 34.♙xd4 and White's pieces are too strong.) 27.dxe5 ♞xe5 28.♜f4 White keeps a strong initiative, but Black gets some possibilities to get counterplay.]

23.♞xe4 dxe4 24.f5 ♙d5 To protect f7.

25.f6?! A concrete and risky move. It's strange that White is closing the f-file because his queen and rook were ready to put pressure there. Now White's idea is to look for mate on g7 or over the h-file. White had, at least, one better option: [25.fxg6 fxg6 26.♘f7 ♔e7 27.♘xd6 ♔xd6 28.♔h4 ♖f8 29.♙f4 Thanks to the control over the dark squares, White's position is better.; 25.g5↑ This also looks promising for White.]

25...♞e6 26.g5

26...♞c7? The decisive mistake. Black missed a good chance to get good counterplay. [26...♙xe5! 27.dxe5 ♞c5 The knight is coming to the strong d3 square. 28.♔h4 (28.e6 ♞d3 29.exf7+ ♙xf7 Without the pawn on f7, it's easier

for Black to parry the threats on g7.) 28...♞d3 29.♙g7 (29.♙f8 ♖xe5 30.♙e7 ♖xe7 31.♔h6 ♔f8 32.♔xf8+ ♙xf8 33.fxe7+ ♙xe7 and Black is winning.) 29...♔b6 30.♖fe1 ♖xe5 31.♔h6 This idea is only enough for a draw. 31...♔c5 32.♙h8 ♔f8 33.♙g7 ♔c5=]

27.♞xg6! Nice hit! Now White is winning over the h-file. [27.♞g4 The idea of giving mate on h6 is artificial. 27...a5 28.♙g7 h5 A typical nice trick that we can meet in many sharp positions. 29.gxh6 ♙h7 Now the White pawn on h6 becomes a helper of the Black king! 30.♔h4 b4 White's pressure is already stopped, and probably Black is better thanks to his initiative on the queenside.]

27...hxxg6 [27...c3 28.♞h4 cxb2 29.♞f5+- Without the pawn on g6, nothing can help Black.]

28.♙xe6 ♙xe6 29.♔h4 ♙xh2+ 30.♙g2 ♔g3+ 31.♔xg3 ♙xg3 32.♙xg3 Black is not able to avoid mate on the h-file.

32...♖ad8 33.d5 Not the only move, but the most practical. White doesn't allow his opponent to put the rook on d5, because after ♖h1-Bg7, Black has some defensive ideas with ♖xg5-Rh5.

33...♙d7 34.♙f4 ♙h3 35.♖h1 ♙g2 36.♙g7 A good logical game!

Endgame section

(15) Hou,Yifan (2623)

– Nakamura,Hikaru (2775) [B53]

16th Unive Crown Hoogeveen NED (5), 26.10.2012

[Chess Evolution]

At first sight, the position looks like a dead draw. Pawns are equal, just a few pieces are left on the board, and it seems like the exchange of rooks is unavoidable. But in fact, things are much trickier and Nakamura had a few long thinks before shaking hands with her opponent. Let's take a closer look at this endgame.

48...♖f2 49.♖xf2 White has no other choice. In case of 49.♖c1, ♗e3!; and in case of 49.♖c3, ♗d4! pushing the White rook away from the c-file.

49...♗xf2 So, what could be White's idea here?! I see only one, to bring the king to g6 and get the h6 pawn; then, to create a passed pawn on the kingside and probably win the game. Black wants to play h5, so White has 2 options: to play 50.g4 or 50.♗f7.

50.g4! [50. ♗f7 To keep the pawn on g2 could be useful for White, but can he avoid Black from playing h5, protect the pawn on b4 and go to h6 with the king? Not an easy task! 50... ♗g3 Here are different moves that make a draw, but all with the same idea. 51.♔d5 ♔b6 52. ♗e8

52...h5! That's the key move. Black is giving away the h-pawn to get his king to the b-pawn. 53. ♗xh5 (53.♔xd6 h4 54.♗e6 ♔c7 55.♗f5 ♗f4 and the bishop on f4 is holding both pawns, it's an easy draw.) 53...♔b5 54.♔xd6 ♔xb4 55.♗e6 ♔c5 56.♗f5 ♗f4 57.g3 ♗xg3 58.♔xg5 ♗d6 59.h4 ♗e7 The Black king is on time, so it's an easy draw.]

50...♗e1 51. ♗e6

51...d5+?! Is this rushed reaction really needed? Let's take a look at what would happen in case of a passive defense... [51...♙d2 52.b5 ♙e1 53.♚d5 ♙d2 54.♙f5 ♙e1 55.♚e6 ♙f2 56.♚f6 ♙e1 Black just keeps on waiting. 57.♚g6 ♙f2 58.♚xh6 ♙h4 59.♚g6 ♚b6 60.♚f6 ♚c7 61.♙e6 ♚b6 62.♚e7 ♚c7 63.b6+ White has nothing better than to exchange the b-pawn for the d-pawn. 63...♚xb6 64.♚xd6 ♙g3 65.♚e7 ♚c5 66.♚f6 ♚d6 67.♙b3 ♙f4 and of course, the position is a complete draw.]

52.exd5 The only chance to play for a win. [52.♙xd5 ♚d6 leads to an immediate draw. Black keeps the bishop on e1 until White moves b4-b5. Then, he'll put the bishop on b6. 53.♚b5 ♙d2 54.♚a4 ♙e1 55.b5 ♙d2 56.♚b3 ♙a5 57.♚c4 ♙b6 58.♚b4 ♚c7 59.♚c4 ♚d6 As we see, White can't do anything...]

52...e4 That's Black's idea: to exchange the e-pawn for White's b-pawn.. . but a pawn sacrifice is always risky. A passive defense is usually better if You can't see a clear winning plan for Your opponent.

53.♚d4 [At 53.b5 e3! 54.♙f5 (54.♚d3? This move gives Black a quick draw. 54...♚b6! forcing the White bishop to a very bad square on c6. 55.♙d7 ♚c5 56.♙c6 ♙d2 and

White can't improve his position.) 54...♙a5 Black is taking his bishop to b6. 55.♙d3 ♚d6 56.♚d4 ♙b6+ 57.♚e4 ♙a7 58.♙c4 ♙b6 Black just keeps on waiting... On White's 59.♚f5 ♚c5 he loses one of his pawns.]

53...♙xb4 54.♚xe4 It seems like Black is very close to the desired result...

54...♚d6 55.♚f5 The White king is going to collect the h6-pawn. Black still needs to fight for a draw.

55...♙a5! [Can Black hold the draw with a bishop on h4? 55...♙e1 56.♚g6 ♙h4 57.♚xh6 ♚e7 58.♚g6 ♚d6 59.♚f6 Black is in zugzwang and the Black king needs to leave the d6-square. 59...♚c5 60.♙g8 Before starting the action, it's important for White to bring the bishop to the a8-h1 diagonal. (60.♚e7 ♙g3 61.h4! A clear fact: An extra pawn does matter! 61...gxh4 62.g5 h3 63.♙xh3 ♚xd5 64.g6 ♙e5 but luckily Black is just in time to stop the White pawns.) 60...♚d6 61.♙f7 ♚c5 (To hold the king on c7 is losing as well: 61...♚c7 62.♚e6 ♙g3 63.♙g6 ♙f4 64.♙e4 The usual maneuver. White is bringing his bishop to the a8-h1 diagonal in order to stop Black's h-pawn and to protect the d5 pawn at the same time. 64...♙g3 65.♙h1 ♙f4 66.♚f5 ♙d2

67.h4 The usual winning plan. **67...gxh4 68.g5 ♖d6 69.♔f6 ♜c3+ 70.♔f7** and White is winning.) **62.♔e6 ♜g3 63.♜g6 ♜f4 64.♜e4 ♜g3 65.♜f3 ♜f4 66.♜g2 ♜g3** and finally **67.h4!** with an easy winning position for White.]

56.♔g6 ♜d8 57.♔xh6 White is 2 pawns up and h4 is coming next. Black's position is on the edge of being lost.

57...♔e5! A strong move by Black. If White manages to comeback with the king to e4, and then to bring the bishop to h1 and play ♔f5 followed by h4, Black would be lost.

58.♔g6 [White is not winning after **58.h4 gxh4 59.g5 ♜xg5+ 60.♔xg5 h3** and the exchange of the last pawn brings the draw,]

58...♜e7 Again, the only move.

59.♔f7 ♜b4 60.♔e8

60...♔d6! Exact move by Black, again. Of course Black shouldn't allow the White king to come in contact with the d5 pawn by playing ♔d7-Kc6.

61.♜g8 ♜d2 And it seems like Black saved the game. White can't improve her position.

62.♔f8 [62.♔d8 ♜f4 63.♔c8 ♜d2 64.♔b7 ♜e3 The Black bishop is not allowing the White king to play over b6 to c4. **65.♔a6 ♔c5!** and now the Black king is cutting the way. The position is a draw.]

62...♜a5 63.♔g7 ♔e5 64.♔g6 ♜d8 The rest of the game is not of interest anymore. The position is a draw. As we could see, from a close to drawn position, a Top 10 player had to find very precise moves to save the game. Opposite-colored bishop endgames can be very tricky!

65.♔g7 ♜e7 66.♔f7 ♜b4 67.♔g6 ♜e7 68.♜e6 ♜d8 69.♔f7 ♔d6 70.♔e8 ♜a5 71.♔f7 1/2

(16) Shimanov,Aleksandr (2599)
– Hayrapetyan,Hovik (2450) [D02]

Chigorin Memorial St Petersburg RUS (4.6), 30.10.2012

[Chess Evolution]

A very interesting endgame. It's clear that White is doing better, but the question is how much better. In fact I think that to defend this endgame is not easy at all!

25...♙xd4 26.♔f1 White is taking his king to d3, after which he will start pushing the pawns of the kingside. This is very logical.

26...♚f8 Black starts to move the king to c7 in order to protect the bishop on b7, a very normal plan. To play with the closed bishop on b7 forever is not an option.

27.♔e2 ♙e7 28.g4 ♚d7 29.♙g3 White is freeing the f-file for the f-pawn to go forward. In the best case, until it gets to f6.

29...♗c5 Black is putting the bishop in „defensive” mode on e7. Let's take a look at what would happen if Black keeps the bishop on the a1–h8 diagonal. [29...♗a1 30.♗e4 ♔c7 31.f4 c5 32.♔d3 ♗xe4+ 33.♔xe4 ♔d7 Until here, all the moves were more or less „standard”, and it's already too late for Black. 34.f5!

White wanted to play ♗f4 and f6. Another tactical way to go could be g5, and at Black's hxg5, to play f6! The Black bishop on a1 is very badly placed and doesn't help in the defense. Wrong choice!]

30.♗e4 ♗e7 Black is putting the bishop on e7 with the idea of stopping White from playing g5, and against White's f5, to play ♗g5.

31.f4 ♔c8 32.♗e1! Good move by White. Before starting the final action, White needs to take his bishop to the c1–h6 diagonal.

32...c5 Finally ...

33.♔d3 ♗xe4+ 34.♔xe4 ♔d7 35.♗d2 I think this is the critical moment. White wants to play f5, followed by f6. Can Black do something against it?!

35...♔e8? A terrible move! [35...♙d8 36.f5! Usually, this is the right way to break the Black defense. (36.g5 ♘e7 37.gxh6 gxh6 38.f5 ♙f8 and it looks like a draw.) 36...exf5+ 37.gxf5 could be met with 37...f6! In many lines, this is Black's only hope. 38.♙c3! (38.♔d5 only leads to a draw. 38...fxe5 39.♔xe5 ♙f6+ 40.♔d5 ♙a1 41.♙f4 ♙f6 and I think that Black can save the game. It's hard to find a way for White to improve his position. I see only on chance, to play: 42.♙e5 ♙xe5 43.♔xe5 ♔e7 and Black got the opposition. 44.a3 a6 45.a4 (45.b4 cxb4 46.axb4 a5) 45...a5 46.♔d5 ♔d7 47.♔e4 ♔e8 and Black is holding.) 38...♔c6 39.exf6 ♙xf6

40.♙e5! and it seems like White is winning! 40...♔d7 41.♙xf6 gxf6 42.♔d5 and this time Black is the one who is running out of tempos. 42...a6 43.a3 a5 44.a4+-; 35...g6!! This would have been the right move to save the game! 36.g5 (This doesn't give anything for White: 36.hxg6 fxg6 37.f5 gxf5+ 38.gxf5 exf5+ 39.♔xf5 h5 This looks like an easy draw.) 36...♙f8! The only move that saves Black, but one move is enough!]

36.f5! And we can officially say that the game is over. White can even choose amongst different ways to finish his opponent.

36...♙f8 37.g5! [It was not too late for 37.f6? g5! and Black is back in the game. 38.hxg6 fxg6 with a draw.]

37...exf5+ 38.♔xf5 hxg5 39.♙xg5 ♙e7 [It doesn't help to play: 39...♔d7 40.e6+! A nice and standard motif. 40...fxe6+ 41.♔g6 ♔e8 42.♙f4 and Black can't do anything about ♙e5-Bxg7. White is winning.]

40. ♙f4 The game is over...

40...♔f8 [40...♔d7 The usual 41.e6+ fxe6+ 42.♔g6 ♙f6 and 43.h6 The game is over.]

41.e6 ♙d8 42.exf7 ♔xf7 43.♙b8 Now Black is falling into a very easy zugzwang.

43...a6 44.a4 a5 45. ♙e5 White is waiting for the Black bishop to leave from d8 in order to play ♙c7 and collect all the pawns. What a nice endgame by White. From now on, we know that in similar positions with closed pawn structures, a move like g6! can save the game.

1-0

Clash of the Titans

(17) Smyslov, Vassily (2620)
— Penrose, Jonathan (D19)

Amsterdam ol (Men) fin-A Amsterdam (2), 13.09.1954

[Balogh Csaba]

An incredibly high quality game, where the 7th World Champion had to show his best to win the game because his British GM opponent fought extremely well. We must add that this game was the creator of the whole theory in this particular line. Theory still considers it as best until around move 23, but here the players found all the very hard moves over the board, which are confirmed by the strongest computers now.

1.d4 d5 2.c4 c6 3.♘f3 ♘f6 4.♘c3 dxc4 Black chose the Slav defense, which is very popular recently on all levels.

5.a4 ♗f5 6.e3 [6.♘e5 is the other main line.]

6...e6 7.♗xc4 ♗b4 8.0-0 0-0 9.♖e2 ♘bd7 10.e4 ♗g6 11.♗d3 This is generally the basic position of the 6.e3 line, where Black has a wide range of choices.

11...c5 A very sharp and suspicious move, but it seems to be playable if somebody carefully checks it with the machines. [11...♗h5 is the main move, which leads to a more calm play. 12.e5 ♘d5 13.♘xd5 cxd5 14.♖e3 and here again Black has various different possibilities. Probably the best is 14...♗e7! followed by the improvement of the knight with ♘b8-c6, where it will be perfectly placed. Here it controls the b4 hole and puts pressure on the d4 pawn.]

12.e5! This is the critical line. The complications arise now.

12...cxd4 13.exf6 [13.♘a2 does not win a piece because of 13...♘d5]

13...dxc3 14.fxg7 ♖xg7 Black has an extra pawn, but his king is weakened and his pieces are slightly misplaced.

15.♖d1 White must play actively to have enough compensation.

15...♖c7 Interesting statistics show that after this game nobody repeated this line for 46 years with Black. Now it's completely back, thanks to the machines.

16.bxc3 [The other line is 16.♗xg6 hxg6 17.♖d4! The rook is very useful on the 4th rank, it might win back the pawn with ♖c4 and can be switched to the attack with ♖h4. Theory already knows the best reaction for Black. 17...♗d6! It looks like blundering a piece after 18.♖d1 but Black has (18.♖c4 ♖a5 19.♖xc3 ♖ac8 20.♗d2 ♗b4 leads to a drawish position.)

18...c2! 19. ♔d2 ♕g8! Preventing the ♔h6-Rh4 threat. 20. ♖xd6 ♘c5! White must parry ♘b3. 21. ♖a3 ♖ad8! Black gets enough counterplay because of the back-rank. 22. ♖d4 (22. ♖xd8 ♖xd8 23. ♔xc2 is refuted nicely by 23... ♘b3!! and Black wins.) 22...e5! 23. ♖xd8 ♖xd8 24. ♔e3 (24. ♔xc2 loses again to 24... ♘b3!) 24... ♖d1+ 25. ♘e1 and here 25... ♘e4! is the key move, preventing the ♖c3 threat and the idea is ♔a5. The active black rook and the c2 pawn give Black an advantage.]

16... ♕xc3 17. ♕b2!? Smyslov tries to obtain positional compensation, but on the other hand, the exchange of pieces take Black closer to a draw.

17... ♕xb2 18. ♔xb2+ ♕g8 [Computer gives a good alternative with the illogical 18... ♘f6!? pinning his own knight, but White can't use this with 19. ♘e5 (19. ♖ac1 ♖b6 Black holds.) 19... ♖ad8 20. ♘g4 because of 20... ♔f4]

19. ♖ac1 ♘c5! Only move! The pin is not dangerous, because Black always has b6. [19... ♖b6 loses to the hidden

20. ♔a3!! The d7 knight is hanging and on 20... ♕xd3 this is the only move, but this seriously weakens the Black king, since the g6 bishop was a good defender. White can launch a winning attack now. (20... ♖fd8 21. a5!+- completely unexpectedly traps the queen.; 20... ♘f6 21. a5!+- traps the queen again.) 21. ♖xd3 ♖ad8 22. ♖b3 ♔a6 23. ♘g5! The rook joins the attack along the 3rd rank. 23... ♘e5 24. ♖g3 ♘g6 25. ♔f3!+- After White successfully regrouped his pieces on the kingside, Black can't hold the threats.]

20. ♕xg6 hxg6 21. ♖d4! The rook is perfectly placed on the 4th rank. It could be used on h4 and on c4 as well.

21... ♖ac8 22. ♖h4 e5! Black had to win some time to consolidate his position by giving back the pawn.

23. ♖hc4 [23. ♘xe5 was an interesting alternative. Black has to find 23... ♖b6 ! when the game will be drawn. If White keeps the queens on the board, then Black will play ♖f6 securing his king's position. (The tactical trick 23... ♘xa4 allows a counter-combination.

24. **Rf8+!!** It is possible to blunder such moves. 24... **Kh7** ! The only move. Otherwise, the knight gives a discovered double-check. (24... **Kxh8?** 25. **Nxg6+!** **Kh7** (25... **Ng8** 26. **Wh8#**) 26. **Nxf8+ Rxf8** (26... **Ng8** 27. **Rxc7+-**) 27. **Wb1+!+-** This is the point, and the queen falls.) 25. **Rxc7** **Nxb2** 26. **Rxc8 Rxf8** 27. **Rc7!** and here similar endgames to the one in the game arise.)]

23... Nd3? This is a mistake. Black has probably underestimated the forthcoming endgame... [23... **Ke7** was the right move. 24. **Wxe5** (24. **Nxe5** is bad because of 24... **fe8**) 24... **Wxe5** 25. **Nxe5** **b6=** and soon the players need to shake hands.]

24. Rxc7 Rxc7 25. Rxc7 Nxb2 26. Nxe5 Nxa4 [26... **Re8** White opens the back-rank with 27.f4 This leaves the f7 pawn unprotected.]

27. Rxb7 a6 28. f4 Nc5 29. Ra7 Here we are! Black probably thought that this is an easy draw with 3 against 3. Even if Black drops the a-pawn and exchanges the knights, the 3 vs 2 rook endgame is a clear theoretical draw. However, the situation is by far not easy. First of all, Black cannot exchange the knights. Then, he is deprived of any active counterplay because of the pressure on the

f7 pawn. Actually, I have found only one solution to solve this very difficult moment.

29... Kg7? Well, I am not 100% sure, but maybe after this logical move, Black is already lost in this endgame. At least I could not find any defense for him. [The way to draw was 29... **Rd8!!** White is forced to enter a knight endgame with and extra pawn. 30. **Nxf7 Rd7!** 31. **Rxd7** **Nxd7** 32. **Nd6** Black's a-pawn lures the knight from the kingside. 32... **a5** 33. **Nc4** **a4** 34. **Qf2** **Nb6!** sending the knight to passivity. 35. **Na3** **Nd5** 36. **Qf3** **Qf7** This position arises more or less by force after 29... **Rd8**. White has no real winning chances without the knight, and the if the king goes to the a-pawn, Black can attack the pawns...

37.♔e4 ♘f6+ 38.♔d4 ♔e6= and ♔f5 next saves the game.]

30.♔f2 White needs to activate his king and then start to squeeze Black by advancing the pawns. It's very instructive to watch how Smyslov increases his advantage.

30...♔f6 31.♔f3 [It was possible to start with 31.h4 depriving Black from his counterplay with g5.]

31...♔g7 Black prefers the waiting policy. [31...g5 Objectively, this doesn't help because of the subtle maneuver 32.♖c7! ♘e6 33.♖b7! ♘d7 is the threat. 33...♔g7 (33...♘c5 Now White has 34.♖b6+ Black only has bad moves.) 34.f5 White manages to keep the 3 pawns on the board.]

32.h4 ♔g8 [Even if Black tries to give up the a6 pawn in order to activate his rook with 32...♘e6 White can even allow Black to go ahead with his plan. He can simply continue his own with 33.g4]

33.g4! ♔g7 34.g5! The squeezing is getting more and more unpleasant in each move.

34...♔g8 35.♔g4 ♔g7 [On 35...♘e4 even 36.♖xa6 ♖d8 37.♘xg6!+- is about to be winning.]

36.f5! White exchanges one pair of pawns, but he keeps all the advantages he had before and wins the game with the h- and g-pawns.

36...gxf5+ 37.♔xf5 ♘e6 [37...♔g8 also loses to 38.h5 ♘e6 39.h6! ♘c5 40.g6! The Black king cannot escape from the mating net. One nice finish could be 40...fxg6+ 41.♔xg6 ♘e6 42.h7+ ♔h8 43.♖a8! Not the only, but the nicest way to victory. 43...♘f4+ 44.♔h6 ♖xa8 45.♘f7#]

38.h5 The game is over now. White's pieces are excellently cooperating with each other.

38...♘d4+ 39.♔e4 ♘e6 [39...♘b5 doesn't change anything. 40.♖d7+- The knight is cut from the game.]

40.h6+! ♔g8 41.g6! The pawn storm has reached Black. His pieces are disturbing each other. Different kinds of mating ideas are in the air.

41...♘d8 [41...fxg6 42.h7+ ♔h8 43.♘xg6#]

42.♘d7 ♖e8+ 43.♔d5 [Black resigned in view of 43.♔d5 ♖e6 Otherwise, ♘f6. 44.h7+ ♔g7 45.gxf7 A great lesson by Smyslov!]

Editorial Preface

The main event from last week was the Chigorin Memorial. A very big open in St Petersburg with A. Shirov as the number one seed. After a very fighting tournament, the 1st–2nd places were shared by A. Areschenko and B. Socko with 7,5/9 points. A really great result for such a strong field. With 7/9, there was a big group sharing from 3rd–11th places, with A. Shimanov being the lucky one to take the 3rd.

Another less strong German Open in Bad Wiessee was won by Livu Dieter Nisipeanu, who won the first 6 games and drew the last 3. It was a pity for him that these 3 draws gave another players the chance to catch him up, so finally 6 players had 7,5/9. The second place went to I. Khenkin and 3rd to I. Nyzhnuk.

The Spanish league has just begun, with a lot of 2 700 players participating in it.

And the main news of the issue!!! Csaba Balogh is back from his trip: China, America, Austria and Hungary. He's more or less in a normal shape (he just complains a bit about lack of sleep), but this of course doesn't stop him from giving You already "the usual" supreme analyses for the CEWN Nr 37!

Have fun
Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Shirov,Alexei (2718) – Cori,Jorge (2522) [C67]

Chigorin Memorial, St Petersburg RUS, 02.11.2012

[Balogh Csaba]

A nice crush of the Berlin defense by Alexei Shirov. We'll see that even in this really positional opening, which transfers immediately into an endgame, he plays true to his style and finds interesting tactical motifs. The game shows many typical ideas of this opening.

1.e4 e5 2.♘f3 ♘c6 3.♙b5 ♘f6 4.0-0 ♗xe4 5.d4 ♘d6 6.♙xc6 dxc6 7.dxe5 ♗f5 8.♚xd8+ ♚xd8 We have reached the famous Berlin endgame, which is very popular since Kramnik easily neutralized Kasparov's White games in their World Championship match in 2000. Usually, weaker players employ it to make a draw against strong GMs, but a deeper study shows that it's excellent for playing to win as well. A few normal-looking moves, but inaccuracies might quickly pass the initiative to Black.

9.♘c3 ♙e8 10.h3 This is the main line. A very useful move. Its idea is to use the kingside pawn majority in the future by playing g4. On the other hand, White must be careful with this move because if it comes too early, Black gets very strong counterplay with h5.

10...b6 A tricky sideline introduced by Kramnik on the highest level in some shorter time control games. [Definitely the main is 10...h5 which is very often seen nowadays.]

11.♖d1! A precise reaction, avoiding Black's trap. [The most logical 11.♙f4 would fall into the whole idea of the b6 setup. 11...♙b4! 12.♘e4 ♙a6! and White is forced to make some awkward rook move, since the obvious 13.♖fd1 is refuted by 13...♙e2!]

11...♙b7 [Now on 11...♙a6 refreshing the ♙b4, ♙e2 idea. White plays the prophylactic 12.a3! ♖d8 13.♙f4! with a small advantage. This is a known idea in the Berlin for White: to play for the e6 break and achieve a favorable pawn structure. The game also demonstrates this well.]

12.♙f4 ♖c8 Black prepares for the e6 break. This looks very ugly, but it was actually played twice by Carlsen, so it should not be underestimated. However, nobody has repeated it since 2010, which is a clear sign that something is wrong with it...

13.e6! It has been played only once before, but it seems to give a small but lasting advantage for White. We meet this sacrifice very often. It aims to improve White's structure. At this moment, White is only a little material down, since he can launch a quick attack to regain the pawn by Ng5 and Re1 .

13...fxe6 [13... Qd6 is another typical reaction by Black, but now it does not lead to equality. 14.exf7+ Kxf7 15. $\text{Ne5}+$! Black is facing an unpleasant decision. 15... Qe6 is met with 16. Re1 , while 15... Qf6 moves into Ne4 . 15... Qf8 (15... Qxe5 16. Qxe5 This endgame is very far from equality. White's bishop is stronger as it presses the c7 weakness. 16... Rhe8 17. $\text{Rd7}+$ Re7 18. $\text{Rad1}+=$) 16. $\text{Ne4}+=$]

14.Ng5 Qd6 Black tries to give back the pawn and solve his structural problems, however Shirov introduces a strong novelty! [A greedy move to hold the material advantage would lead to a nice defeat. 14... Qe7 15. Re1 Nd4 16. Rad1 ! and on 16...c5 17. Nb5 ! Suddenly the Black king is facing a pretty mating attack. 17... Nxb5 18. $\text{Rxe6}\#$]

15.Qxd6! Using the fact that Black cannot take back with the pawn. [15. Nxe6 happened before, but after 15... Qe7

16. $\text{Qxd6}+$ cxd6 Black had no problems anymore. Shyam-Gupta, Dubai 2010]

15...Nxd6 [15...cxd6? 16.g4± White collects the d6 pawn first and e6 will automatically fall after that.]

16.Rd3! Very strong! It's not urgent to take the e6 pawn back, it's more important to activate all the pieces first. The a1 rook is ready to come to e1 or d1.

16...Qa6 [King moves are equally bad. 16... Qe7 17. $\text{Re1}\pm$; 16... Qd7 17. $\text{Rad1}!\pm$ creating new threats with Nce4 or Nf7 .]

17.Rd3 Qd7 White must play precisely, otherwise his initiative quickly disappears. [17... Qc4 doesn't change much. 18. $\text{Rae1}\pm$ followed by b3 and taking on e6.]

18.Rd1! White keeps increasing the pressure. He's not in a hurry to restore the material balance. [18. Nxe6 Rhg8 19. Rae1 Rce8 would also be slightly better for White, but the advantage due to the kingside pawn majority is really minimal.]

18...Rcf8 It's difficult to tell whether the text move or the alternative is a better continuation. Both guarantee

an advantage, but it's not clear which one is bigger. [The passive 18...♖ce8 is met with another idea. 19.♘ce4! threatens with ♘f7 and on 19...♖e7 suddenly 20.♙a3! is very unpleasant. This shows well how useful was the 16.♖d3 move!]

19. ♖xe6 [19. ♗ce4 was also possible. Probably Shirov calculated the following line: 19... ♕c4 20.b3 ♕d5 21. ♗xd6 cxd6 22.c4 It looks like this wins a piece, but Black has 22...h6! and now the arising rook endgame is clearly better for White, but probably Shirov was afraid of the old rule that all the rook endgames are drawn. 23.cxd5 hxg5 24.dxc6+ ♔e7 (24... ♔xc6 25. ♖xe6±) 25.b4!± with the idea of ♖a3 looks quite promising.]

19...♖f7 20.♘e4! Shirov increases the pressure. Suddenly, many threats are in the air, one of them is ♘c5. Black finds the only move to stay in the game.

20... c4

21. ♖d4! Very well played again! Shirov prefers to keep the initiative, instead of transforming it into a rather drawish material advantage. [21. ♖xc7 ♔xc7 22. ♖xd6 ♕d7! This was Black's idea. White still has the tactical 23. ♖c3! but it probably leads to a draw after 23...b5 24.b3 ♖xd6

25.♖xd6 ♔xd6 26.bxc4 b4! followed by ♔c5 with very strong counterplay on the queenside.]

21...c5?? This is a horrible blunder. Black collapses under the pressure. [21...♙d5 is also quite bad because of 22.♘xd6 cxd6 23.b3! The d5 bishop does not find its place on the board. 23...♖f4 (23...b5 loses to 24.♘xb5!) 24.c4 ♙f7 25.♖de1! with the decisive threat of invading with the rooks on the 7th rank and on 25...♖e8 26.♖xe8 ♙xe8 27.♘xc6!+- wins a pawn.;

However, after 21...♘xe4 22.♖xe4 ♙d5 23.♖e5 ♔c8 Black is still in the game. White is only slightly better with 24.a3 because of his majority on the kingside. This is a known advantage, that in the long-term Black can't really create a passed pawn on the queenside due to his doubled c-pawns, while White has a healthy structure on the other side. Of course, to convert such kind of edge requires very good technique, but maybe Karpov at his best would call this already a winning position :). The following moves could be f3, ♔f2 and h4, slowly improving the pawns.]

22. ♖f3! This easy retreat was probably completely missed by Black, who can't parry the simple threat of ♖e5.

22...♖e8 The small combination coming soon in the game was also winning, but Shirov prefers to include a pair of moves.

23.b3 ♟b5 **24.** ♘xd6 cxd6 **25.** ♞e5+!+- White wins an exchange and the game.

25...♖xe5 26.♖xe5 ♘c6 27.c4 a5 28.f3 White is not in a hurry. First, he improves his king and then he wants to advance his kingside pawns.

28...a4 29.♔f2 g6 30.♖d2 ♖f8 31.♗e3 ♗f7 [With 31... axb3 32.axb3 Black opens the a-file on himself. White threatens to play ♗a2, and on 32...♗a8 33.♗de2+- wins.]

32.bxa4! ♗f4 [32...♙xa4 loses to 33.♗a3+-]

33.♗ed3 White doesn't allow Black to create any counterplay. The game is over.

33...d5 34.cxd5 ♙xa4 35.d6 c4 36.♗e3 1-0

(2) Ivanchuk,V (2763) — Nisipeanu,LD (2668) [E32]

6th Kings Tournament, Bucharest ROU (1), 07.11.2012

[Arkadij Naiditsch]

This is the first round of the Kings Tournament with 3 chess Superstars plus Romania's best player Livi Dieter Nisipeanu, who not so long ago was a 2700 player and the European Champion! Usually, when we see the name Ivanchuk, we expect sacrifices and a slightly „crazy” but super strong play. This time, Vassily shows us that he can also win a game by playing great positional „dry” chess!

1.d4 To play Ivanchuk with Black is never easy, especially because You need to study almost Your whole opening repertoire because Vassily is well known for being able to choose any possible line after 1.e4, 1.d4, 1.c4 or 1. ♘f3.

1...♘f6 2.c4 e6 3.♘c3 ♙b4 4.♔c2 We are in a very fashionable Nimzo with 4.♔c2.

4...0-0 5.a3 ♙xc3+ 6.♔xc3

6...b5!? A rare move that is actually not that bad. I played a few games on this opening with Black — without big success :).

7.cxb5 c6 At first sight, this just looks shocking, but Black has a clear plan: he wants to start playing on the queen-side as soon as possible.

8.♔g5 This is the main move and probably the most critical. [It's just funny to know that 8.a4 a6! gives Black equality.]

8...cxb5 9.e3 ♘b7 10.♘f3 [10.f3 is another main move in this position.]

10...a6?! A standard reaction. However, I think this move is a bit too slow and it gives White enough time to develop all his pieces to the right places, being just a „bishop pair“ up with a small plus. [10...h6!? I think this move gives Black more chances than in the game. 11.♔h4 g5 12.♔g3 ♘e4 13.♔d3 f5 with quite an unclear position.]

11.♔d3! White is not afraid of moves like 11...♔xf3 which would be a big positional mistake. Black will not be able to make use of the slightly damaged White pawn structure, and the White bishop will control the whole board.

11...h6 12.♔h4 d6 [It's already too late for 12...g5 13.♔g3 ♘e4

14.♔xe4! The most simple move to fix White's huge advantage. 14...♔xe4 15.♔d6 ♔e8 16.h4 White is just crushing his opponent.]

13.0-0 ♘bd7 14.♔b4! A great move by White. Black's only idea is to play ♘b6 followed by ♔c8 and ♘bd5 or ♘c4. By playing 14.♔b4, White is stopping Black from achieving this plan. Now, he must leave the knight on d7 in a very „stupid“ position.

14...♔b6 Nothing else left to do... [14...♘b6 15.♔xf6 and Black has no future here.]

15.♔g3 Another nice move. Now Black has to decide whether to push d5 or to take other protecting measures for the d6 pawn.

15...♔e4 Of course the right choice. To play 15...d6-d5 would leave Black in a really bad position. White could start his play with ♔fc1 followed by a4 or ♘d2-♘b3, with quite a serious advantage.

16.♔e2 White keeps the bishop pair, of course.

16...♔fc8! A good defensive idea by Black. Using the weakness of the second rank, Black is in time to take the rook out from f8, before playing ♘e8.

17.♔fc1 [Of course not 17.♔xd6? ♔xd6 18.♔xd6 ♔c2 and Black is back!]

17...♘e8

18.♘d2! White is playing very good chess. In a better position with a lot of options, it's not an easy task to choose which way to go. Ivanchuk is taking his knight to a5 — the best place for the knight!

18...♙c2 Blocking White's maneuver, but now Black's pieces start to hang...

19.h3 Quite a tricky move. The usual question is: why does White need the h3 move? Probably there is no answer to it. There is no need for h3, but it can be useful, and what is actually Black's plan? White is keeping the position flexible and wants to play e4 in the future, or maybe ♙f3 followed by ♘e4. Another typical idea for White is to play b3 followed by a4, creating another weakness in Black's position. [Doesn't work 19.♘b3? a5! and White will lose his knight on b3.]

19...♖ab8 This move gives White the chance to play a nice tactic, but it's hard to blame Nisipeanu for this... The position is already very unpleasant.

20.a4! White strikes at the right moment. I would say that after this move the game was almost over. Black's pieces start to „hang“ very seriously.

20...bxa4 [In case of 20...♘df6 21.axb5 axb5 22.♙a5 White is going into a much better endgame, and actually the move h3 is now quite useful... White doesn't have any problems in the 1st rank;]

20...♙xa4? 21.b3 and the bishop on a4 is lost.]

21.♙xb6 ♘xb6 [21...♖xb6 22.♘c4 winning an exchange.]

22.♙xa6 ♖c7

23.♙b5! I think this is the move that Nisipeanu blundered. White simply attacks the knight on e8, after which the d6 pawn is falling, and Black has no defense against it! Chess can be really simple — but so difficult during our own games.

23...f6 Nothing helps anymore...

24.♙xe8 ♖xe8 25.♙xd6 ♖c6 26.♙c5 White is just a pawn up, but a second Black pawn is going to fall soon...

26...♙g6 27.♘c4! Another precise and good move. What to do against an opponent who simply plays strong chess? White is winning another pawn.

27...♘xc4 28.♖xc4 ♖a8 29.♖cxa4 ♖xa4 30.♖xa4
Black's only chance is the opposite-colored bishops end-game, but of course, two pawns down is just too much. Even if we would take away White's b2 pawn, Black's defensive task would be very difficult.

30...♙d3 31.♖a3 ♙e2 32.♖a8+ ♔f7 33.♖a7+ ♔g8 34.♖b7 White is regrouping his pieces, there is no need to hurry at all.

34...♖a6 35.♙b4 ♖a1+ 36.♔h2 ♖c1 37.h4 The h4 move is typical. It can be very useful in many setups.

37...h5 38.♙c3 ♙c4 Black just keeps on waiting, but White already has a clear plan...

39.♖c7 ♙d3 40.♖c5 ♖c2 41.♔g3 ♙e2

42.e4! And here we see White's plan. Of course, other moves would win as well, but Ivanchuk chooses the „cleanest“ way, in my opinion. The bishop on c3 is protected by the b2 pawn, ♔g3 is protecting the f2 pawn, and White is starting to crush Black's pawn structure.

42...♔f7 43.d5 exd5 44.♖xd5! This is the key move. Usually it's not a good choice to exchange pawns but it's the right way. White wants to play e5, or maybe first ♖d7+

and then e5, opening the bishop from c3 and at the same time attacking the g7 pawn. There is no defense for Black.

44...♙g4 45.f3 ♙e6 46.♖xh5 ♙c4 Nisipeanu is trying his last trick to get the g2 pawn...

47.e5! And the game is over...

47...♔g6 [47...♙f1 winning a pawn back, but not helping the position. 48.exf6 ♖xg2+ 49.♔f4 gxf6 50.♖f5 ♖g6 51.h5 putting Black's rook on a terrible square. 51...♖h6 52.♖c5 With two pawns up and a much more active position, White will have no trouble at all to win the game.]

48.♖h8 ♙f1 49.exf6 What a great positional game by Ivanchuk! A start-to-finish victory...

1-0

(3) Shimanov,A (2599) – Hovhannisyan,R (2610) [D10]

Chigorin Memorial, St Petersburg RUS, 31.10.2012

[Csaba Balogh]

An interesting game, where Black got cruelly punished for not finishing the development on the kingside. The game is important from a theoretical point of view as well.

1.c4 c6 2.d4 d5 3.cxd5 The exchange Slav is considered to be an approach by White to make a quick draw, but actually there is also an ambitious way to handle it. Just remember how easily Aronian collapsed against Kramnik in the Olympiad, which we analyzed for you a few CEWNs before.

3...cxd5 4.♘c3 ♘f6 5.♙f4 ♘c6 6.e3 a6 7.♖c1 ♙f5 In my opinion this a good setup for Black to achieve equality.

8.♘f3 ♖c8 9.♘e5! This is the ambitious way to play, while 9.♙d3 and 9.♙e2 are going for a draw.

9...♗xe5 10.dxe5 White is initiating a concrete fight. [After 10.♙xe5 Black equalizes with 10...♘d7! 11.♙g3 (11.♖b3 ♖b6!= is an important point to remember.) 11...e6= and ♙e7, 0–0.]

10...♗e4 11.♘e4 ♖xc1 12.♖xc1 This is the critical moment where Black must take the right decision!

12...♙xe4?! [12...dxe4 is the right move, as it was recently played by the French Super-GM Laurent Fressinet. 13.♙e2 (On 13.♖c3 to avoid ♖a5, Black has to play 13...♙d7! Black prepares for e6, but first he retreats the bishop, otherwise it gets out of the game on f5. 14.♙e2 e6 15.0–0 ♙e7 16.♖d1 ♖b6= followed by ♙c6 and 0–0.) 13...♖a5+! 14.♖d2 (14.

♙f1 ♙d7! is important again, with the same idea as in the 13.♖c3 line.) 14...♖xd2+ 15.♙xd2 e6 Now the f5 and f4 bishops are equally bad. They have quite a small chance to improve, equality will be soon reached. 16.h4 h6 17.♖c1 ♙b4+ 18.♙c2 ♙d7 19.♙b3 ♙e7 20.g4 ♙h7 21.h5 ♖c8 22.♖xc8 ♙xc8= A draw was agreed soon in Battaglini-Fressinet, Bastia 2012.]

13.e6! A very strong intuitive pawn sacrifice with the idea of locking the Black pieces on the kingside.

13...♖a5+ [13...fxe6 14.f3 will lead to a similar position as in the game.]

14.♙e2! It's very important to keep the queens on the board to be able to obtain enough compensation for the pawn. The f1 bishop is just temporarily locked, since White is going to play f3 and ♙f2 in the upcoming moves.

14...fxe6 15.f3 ♙f5 16.♙e5 White continues his strategy to restrict the movement of his opponent's kingside.

16...h5 Black tries to gain some ground and avoid a possible squeeze with g4-h4. [16...♙f7 was probably more circumspect, in order to avoid the 17.♖c8 possibility.]

17.h4 [17.♖c8+!? looks like a good alternative for White. 17...♙f7 18.♖xb7 ♖xa2 19.♙f2 with a clear advantage. The f1 bishop and the h1 rook join the game.]

17...♔f7 18.♔f2 ♕xa2 Black, at least, grabs some material and hopes to get lucky on the kingside events.

19.♘e2! Mobilizing the pieces.

19...♖h7 [19...♖g8 with the same idea of playing g6-♘g7. 20.e4!! is decisive 20...dxe4 (20...♘h7 21.♕f4+- followed by ♖c1, and it's over.) 21.fxe4 ♘xe4 22.♕f4+ ♘f5 23.♘c4!+- is the point, and the queen and f5 bishop are hanging.]

20.g4 It's a good idea to send the bishop to g6 in order to prevent the g6 idea, but White had an even better possibility. [20.e4! would have worked again with the same ideas as in the 19...♖g8 line, but now it's a bit more complicated. 20...dxe4 (20...♘g6 21.♕f4+ ♔g8 22.♖c1+-) 21.fxe4 ♘g4 (21...♘xe4 loses again to 22.♕f4+ ♘f5 23.♘c4!+-) 22.♕f4+ ♔g8 23.♖c1! g6 Black seems to survive with ♖f7, but 24.♕g5! ♖f7+ 25.♔g1 ♔h7 looks like a double-threat of ♘h6 and ♘xe2, but White wins after 26.♘xg4! ♘h6 27.♖c8!+-]

20...♘g6 [Opening the f-file is not recommended. 20...hxc4 21.fxc4 ♘e4 22.♖f1 The penetration is coming after ♔g3-♕c8.]

21.♕c7! Very deep move! White obviously would like to bring his rook to c1, but the reason to put the queen on c7 will become clear in a few moves.

21...♕b3 22.♖c1! The h4 pawn doesn't count much.

22...hxc4 23.fxc4 ♖xh4

24.♘d4!! This was the hidden idea of ♕c7. Now the queen starts to penetrate on all the squares along the h2-b8 diagonal. The main threat is ♕f4 and ♖c8 now.

24...♔g8 [The nicest variation of the game arises after 24...♕a4 25.♕f4+ ♔g8 26.♖c8 ♘e8 This looks really suspicious, but the refutation is not obvious at all. 27.♕b8! ♔f7 28.♘d3! with the threat of ♖xe8 ♕xe8 ♘g6! 28...♖xg4

29. ♔h2!! This is the great winning move! Black can't deal with ♔h5. It's very nice how effectively the queen uses the h2-b8 diagonal. 29... ♖xd4 30. ♔h5+ ♕f6 31. ♖xe8!+- wins.]

25. ♔e5! The main threat is ♖c8 and ♔xg7, but ♔xe6 is also very unpleasant. [On 25. ♔f4 Black intended to play 25... ♗c2! closing the c-file.]

25... ♗c2 White has many ways to win here, but the one that Shimanov chose was probably the best.

26. ♖g3 ♖h6 27. g5 ♖g6 28. ♗g4! Creating the decisive threat of ♗e6. The end is near. [It was not too late to go wrong with the tempting 28. ♗h5 ♕d3! 29. ♗xg6 ♔xg6 and Black is alive.]

28... ♗f5 29. ♗xf5! exf5 [29... ♖xg5+ also loses. 30. ♔h4 ♖xf5 31. ♔xe6+ ♖f7 32. ♖f1+-]

30. ♔xf5 ♖c6 31. ♖f1 A nice victory by White and a horrible performance of the f8 bishop.

1-0

(4) Cheparinov, Ivan (2710) – Mchedlishvili, Mikheil (2639) [E11]

TCh-ESP CECLUB Div Honor 2012, Leon ESP (3.4), 07.11.2012

[Arkadij Naiditsch]

We will see a very interesting and crazy game with some great attacking play by White, who got a little bit of help by Black.

1. d4 ♘f6 2. c4 e6 3. ♘f3 ♗b4+ This is a move for „lazy” people who are trying to avoid the main lines. Not a bad opening choice against a very well prepared Cheparinov, who was for a long time one of Topalov's seconds.

4. ♘bd2 White chooses the very main line, which is not really a surprise...

4... 0-0 5. a3 ♗e7 6. e4 Lately we've seen a lot of games in this line, but until now nobody has been able to show a clear way for White to get an advantage.

6... d5 7. e5 ♘fd7 8. ♗d3 [8. b4 a5 9. b5 c5 This is the other main line.]

8... c5

9.h4!? This new move was introduced quite recently and leads to very sharp play. Black is crushing White's center, and White is trying to give mate.

9...g6 seems to be the main move. White wanted to play ♖xh7. In case of: [9...h6 10. ♖b1 followed by ♔c2, and it can get very dangerous for Black.]

10.h5 cxd4 11. ♔c2!? We are following the game Ding,L-Tomashevsky.

11...♘c5 A logical move. [11...♔e8 12. ♘b3 ♘c6 13. ♖f4 dxc4 14. ♖xc4 ♘b6 15. ♖d3 ♘d5 16. ♖h6 with a clearly better position for White. Still in the game Ding,L-Tomashevsky, E 2012.]

12. ♖f1 [12.hxg6 ♘xd3+ 13. ♔xd3 fxc6 and Black seems to have survived the attack.;

To sacrifice the bishop doesn't make any sense for White: 12. ♖xg6? fxc6 13.hxg6 d3! and Black is good again.]

12...d3! Black is forcing White to exchange his light-squared bishop, which could become a very dangerous piece if White is in time to play b4 next, and then come back with the bishop to d3.

13. ♖xd3 ♘xd3+ 14. ♔xd3 We are in a very interesting position. If Black manages to develop, he'll get a great position, but White's attacking chances don't look bad either.

14...dxc4 A very direct move. Black is giving away the e4 square for the knight. On the other hand, the exchange of queens would solve all his problems!

15. ♔e3 The White queen is trying to reach the h6 square. [Why not 15. ♔xc4!? I guess Cheparinov was a bit afraid of 15...♔d5 Where to go with the queen? 16. ♔f4! (16.hxg6 fxc6; 16. ♔g4 ♘c6 doesn't bring anything for White, of course.) 16...g5 It seems like Black is good, but 17. ♘xg5 ♔xg2 18. ♖h3! White's rook is going to g3, winning the piece back. It seems like White is doing better.]

15...g5! Of course Black does not allow White to play ♔h6.

16. ♘e4 h6 We are in a very unclear position, and White has a lot of different plans to proceed: ♘h2-♘g4-♘f6 looks quite tempting, as well as ♖d2 followed by 0-0-0, but Ivan chooses the most spectacular choice.

17. ♘fxg5!? I am not sure at all about the strength of this move, but from a practical point of view, it is very interesting

17...hxg5 18. ♔g3 ♔h8 Black needs to move the king away from the g-file.

19. ♖xg5 ♖xg5 [At 19...♖g8 20. ♖xe7 ♔xe7 21. ♔f4 White remains with a strong attack.]

20. ♘xg5 ♘c6 Black is playing very logically. He needed to develop the knight from b8.

21. ♖d1! A very good move based on a precise tactical calculation-

21... ♔c7 [On 21... ♔a5+ 22. ♕f1 and Black can't take the e5 pawn. 22... ♕xe5 (22... ♖xe5 23. ♕f4 followed by ♖h3, with a super dangerous attack.)

23. ♖xf7+! A very nice tactical blow. 23... ♖xf7 24. ♖d8+ ♖xd8 25. ♕xe5+ and White is winning easily.]

22. f4 At least Black got rid of the ♕f4 threat.

22... ♖g8 This looks like a very slow move, but it's a good one! [22... f6 seems to put Black in danger. 23. exf6 ♖xf6 24. 0-0 We can see a very strange position. White is a piece down for just a pawn, but Black's king is very weak, and it's not clear how to develop the bishop from c8. I guess this kind of position is much easier to play with White...]

23. ♕e3! Excellent place for the queen. f5 is a future threat.

23... b5 Very logical, Black develops the bishop from c8.

24. ♖d6 ♗b7 25. f5 And we are at the critical position. White has a lot of threats, for example, to play ♖e4 next. Can Black do something about it?

25... ♕e7?? This move is losing, but Black could have played: [25... ♖d4!! A very beautiful tactical possibility. Suddenly, Black is winning! White can't take the knight on d4, and if he doesn't take it, Black will simply play ♖xf5 next. 26. ♖xd4 (26. ♕xd4 ♖xg5 brings nothing for White.) 26... ♖xg5! That's the key... 27. ♕xg5 ♕xe5+ 28. ♕f1 ♕xd4 and Black is a full piece up!]

26. ♖e4! And now White is winning!

26... ♕f8 27. fxe6 Black is hopeless. White wants to play e7 next and there is no defense against it...

27... ♖xe5 28. e7 ♖d3+ 29. ♕f1 What a game! After the opening, White should have been better, then came a piece sacrifice, a good defense by Black who missed the very beautiful move 25... ♖d4!!. Finally, White reaches his target, the Black king. This was a real fighting game!

[Chess Evolution]

Here is an excellent example why it is useful to solve studies. They might appear in real games as well. White is close to be winning with his dominating pieces, especially the difference between the two bishops are telling. Who would believe that the poor e8 bishop wins the game soon for Black? White continues with the most tempting move, but it leads to a defeat...

66.c4?? This allows Black to play an evergreen!! [66. ♔f4! followed by opening the position with c4 should bring home the full point.]

66...♖xe5!! 67.dxe5 d4! Suddenly the White rook is out of the game, but it still looks like after the king catches the d-pawn, White will easily realize his material advantage, but...

68.♔f4

68...g5+!! Black needs to sacrifice all his pawns to support his d-pawn. First, he tries to deflect the king, so White is forced to play

69.hxg5 h4!! Another fantastic move! Black threatens with h3, so the next move is forced again.

70.gxh4

70...e3!! The final blow! Black cuts the king's way to the d-pawn.

71.fxex3 [71.♔f3 loses to 71...♔h5+ and e2 next.]

71...d3! 72.g6 [The whole point of the g5 and h4 sacrifices becomes clear after 72.♔f3 ♘h5+! The bishop joins the game! 73.♔f2 d2 Black wins.]

72...d2 73.g7 d1♔! [73...♘f7 was also good, but the text is nicer and better.]

74.g8♔ ♔f1+! The king is forced to move to the g-file and White loses his queen.

75.♔g5 ♔g1+ Just brilliant!!! Chess can be beautiful!

0-1

**(16) Lenderman,Aleksandr (2614)
– Shirov,Alexei (2718) [A07]**

Chigorin Memorial, St Petersburg RUS (8.3), 03.11.2012

[*Chess Evolution*]

Black is already trying for a long time to get the full point, but things are not that simple. White's pawns are quite dangerous, and the opposite-colored bishops give him an extra chance for saving the game.

45...♖c7 46.e5 White is trying his only chance, to push the pawns as far as possible and hope to get some counterplay. Also, if he could somehow get to e6 with a knight, it would be very nice. In general, it's clear that White's only chance is to play e5-d6 and somehow try to exchange the knight for the bishop.

46...♖c2 It's never bad idea to have a rook on the 2nd rank, especially now that Black could start attacking the White pieces from „behind” by playing ♖d2 next. [46...♖c3 47.♘e4 doesn't help Black at all.]

47.d6 White continues his play: to push the pawns as far as they can go.

47...b5?? A big blunder. Black forgets to be at least a little careful. [47...♖d2! This move leads to quite an easily winning position. 48. ♗e4 b6 Black is taking away the b7 pawn from the attack. 49. ♔f1 White has no other moves to improve his position and must just wait for Black's actions. 49...g4! The Black pawn is going to g2 in order to force the White king to go to g1, after which Black's ♖e2 will be possible. (49...♖xa2 is not winning due to 50.b4! The usual b4 push. 50...♗xb4 51. ♘xb4 axb4 52.e6 and Black doesn't have the winning idea ♖e2. 52...♖a7 53.e7+ ♖xe7 54.dxe7+ ♔xe7 with an easy draw.) 50. ♔g1 g3 51. ♔f1 ♖xa2 52.b4 ♗xb4 53. ♘xb4 axb4 54.e6 and now

54...g2+ ! Black is winning. 55. ♔g1 (It doesn't help to play 55. ♗xg2 ♖xg2 56. ♔xg2 b3 and the b-pawn will become a queen.) 55...♖e2 Black stops the White pawns from queening, and Black's b-pawn is going to queen pretty soon. Black is easily winning.]

48.b4! And here comes the shock for Black! The position is not even a draw... it's lost now! Let's take a slightly closer look.

48... ♗xb4 [Doesn't save the game 48...♖d2 49.e6! ♖xd3 50.e7+ ♔d7 51. ♗c6+ with a win for White.]

49. ♘xb4 axb4 50.e6 In the previous lines we had the same position, just without White's a2 pawn, which makes Black's position winning. With the a2 pawn on the board, White is winning!

50...g4 [Leads to about the same 50...♖e2 51.e7+ ♔d7 52. ♗f3 The White bishop is going to h5. 52...♖e5 53. ♗h5 and now the White king will slowly move to g4 and capture the g5 pawn, using the fact that Black can only make rook moves.]

51. ♗e4 ♖e2 52. ♗f5 White provokes Black into playing g3, which actually doesn't matter.

52...g3 53.e7+ ♔e8

54. ♗d3! Forcing the Black rook to leave the 2nd rank.

54...♖e1+ 55. ♔g2 ♖e5 56. ♗g6+ Putting the bishop in the right place...

56...♔d7 57. ♗f7 And Black is losing the g-pawn.

57...♖e3 58. ♔h3 Zug-zwang! Of course, in case of 58... ♔xd6 59.e8 ♖ ♖xe8 60. ♗xe8, Black's position is hopeless because the a8 square matches White's light-squared bishop. What a tragedy to lose such a game... but we see once again that in chess every move can be decisive! **1-0**

Clash of the Titans

(17) Botvinnik, Mikhail — Levenfish, Grigory [A28]

URS-ch12 Moscow, 1940

[Chess Evolution]

We are facing a nice crush in the English opening by Botvinnik. The funny part of the game is that the same players played the same game 6 years earlier, but with opposite colors. Botvinnik, on the White side, improved it in the 13th move.

1.c4 e5 2.♘c3 ♘f6 3.♘f3 ♘c6 Many Sicilian players like to play this as White, since they practically are a tempo up with reversed colors.

4.d4 Recently this system is out of fashion since it became clear how to equalize with Black. [The current main line is definitely 4.g3 after which Black can decide the character of the play. To play an opened game with 4...d5 (or some closed setup, for instance with 4...♘b4)]

4...exd4 5.♘xd4 ♘b4 6.♘g5 Here Black has a wide range of choices. Levenfish plays the most solid one as Botvinnik already showed him back in 1934.

6...h6 7.♘h4 ♘xc3+ Black creates weak doubled pawns on the c-file. The only drawback is giving up the bishop pair, but with a strong knight maneuver, he solves this problem as well.

8.bxc3 ♘e5! It's heading to g6 to unpin his colleague.

9.e3 [9.f4 is White's best try to get some advantage, but Karpov showed the way to neutralize the initiative against Kramnik. 9...♘g6 (Obviously not 9...♘xc4? because of 10.e4! with more than enough compensation.) 10.♘xf6 ♔xf6 11.g3 Black has a good position due to his superior pawn structure. His only problem is the knight on g6, which is out of the game. Instead of the „automatic“ castling, Karpov found a much better move.

11...♘f8! White can't make use of the uncastled king, so Black drives his knight to c5. 12.♘g2 ♘e6 13.0-0 0-0 14.e4 d6 15.♔d2 ♘c5 Black intends to finish the development with ♘d7, ♔fe8 and obtain a fine position. 16.♔ae1 ♔b8! Strong prophylactic move, typical of Karpov style. (On the direct 16...♘d7 Kramnik wanted to play 17.e5 dxe5 18.♔xe5 when Black has some problems with the stability of the c5 knight.) 17.♔e3 ♘d7 Now on e5, Black can simply protect his knight with b6. 18.♘b3 ♘xb3 19.axb3 ♘c6

20. ♔d4 a6! 21. ♖xf6 1/2–1/2 Kramnik-Karpov, Las Palmas 1996. 21...gxf6 A draw was agreed. Black has a perfect blockading position. He doubles his rooks on the e-file and starts to wait. White must also concentrate his pieces around the e4 pawn, so the result is justified.]

9... ♖g6 10. ♗g3 ♘e4 Black successfully gets rid of the two bishops, it means he has no problems at all.

11. ♖c2 ♘xg3 12. hxc3 d6

13.f4! This is the improvement over their first encounter. White tries to take control over the squares in the center. The plan is to have a setup with ♗e2-f3, ♖f2 followed by g4-g5 or e4 and central play. [Levenfish as White played 13. ♗e2 but he got slowly outplayed, even though he managed to save the game at the end. 13... ♘e5 14. ♖d1 ♗e7 15. ♖e4 a6 Black prevents the ♘b5 ideas forever. 16. ♖h5 ♘d7! Botvinnik improves his knight. 17. ♖f4 17... ♘c5 was also perfectly fine. 17... ♘f6 18. ♖a5 ♗d7 19. g4 ♘e4 Black was better in Levenfish-Botvinnik, Leningrad 1934. It's not surprising that Levenfish wanted to repeat this game, but he had to face 13.f4!]

13... ♖e7 14. ♖f2 Just as it was written in the 9.f4 line, Black has only one problem in his position, the misplace-

ment of the g6 knight. However in comparison to that line, Black should have taken care of his king first.

14... ♘f8?! [It was more circumspect to play 14...0–0 15. ♗e2 The bishop should stay on f3 to cover the weak light squares. 15... ♖e8 16. ♖d3 ♘f8! 17. g4 ♘d7 with mutual chances. I personally prefer Black, but it is playable for both sides.]

15.c5!! Excellently played! Botvinnik gets rid of his doubled pawns. Black bites the poisoned apple, which is objectively a decisive mistake.

15... dxc5? [It was very difficult to find the only strong move, which would keep the game completely unclear. 15... ♘h7! going to f6. 16. cxd6 cxd6 17. ♗b5+ ♖f8! Many players are afraid when they lose the right to castle, but actually sometimes the king stands quite safe in such places as well. 18. ♗e2 ♘f6 19. ♗f3 ♘g4+ 20. ♗xg4 ♗xg4 with approximately even chances.]

16. ♗b5+! ♘d7 [16...c6? is refuted by 17. ♘xc6!;

16... ♗d7 The forthcoming moves are more or less forced. 17. ♘f5 ♖f6 18. ♖e4+! ♘e6 19. ♗xd7+ ♖xd7 20. ♖hd1+ ♖c8 21. ♖ab1 ♖b8 We have reached the critical position of

the 15.c5 sacrifice. White has many tempting options, but he must also hurry to do something, since he is a pawn down. Probably the strongest is

22.♖d5! and on 22...g6 White has the beautiful blow (22...♖d8 23.♖bd1 ♖xd5 24.♖xd5 White has a winning attack. Two possible short ways to finish the game are: 24...♖d8 (24...b6 25.♖d7+ ♔b7 26.♘d6+ and mate soon.) 25.♖xd8+ ♘xd8 26.♘e7#) 23.♖e5!! ♖xe5 (23...♖xf5 24.♖xh8+) 24.♘e7#]

17.♘f5 ♖f6 18.♖ad1! It's more important to keep the b5-e8 pin than to prevent Black from castling with ♖e4. Black is basically lost now. The threat is ♖e4 and the d7 knight falls. Black can't unpin himself with c6 because of Rd6! [18.♖e4+ ♔f8]

18...g6 [18...c6 19.♖d6!+-]

19.♘xh6 White has restored the material balance and his decisive attack continues to flow.

19...♖f8 Black leaves from the ♘g4 threats.

20.g4 White had other moves as well. Botvinnik plays true to his style, he creates a fortress for his knight on f6.

20...a6 21.g5 ♖e6 22.♙e2 He prepares for transferring the knight.

22...♘b6 23.♘g4 ♔e7 This cannot lead to any good. [Black is not in time to castle queenside. 23...♙d7 24.♘f6+ ♔e7 25.♖xd7+ ♘xd7 26.♙g4+- wins.]

24.♘f6 ♖c6 25.♖h7! On each move, White improves one of his pieces and creates new threats. The newest one is ♖xg6.

25...♙f5 26.e4 ♙e6 27.f5 Black considered this to be enough. He got swept off from the board.

1-0

Editorial Preface

Let's start with the finished Event, the Kings Tournament in Bucharest, a four-players double round robin.

Ivanchuk and Topalov, with just a score of +1 shared the first place. Finally, Ivanchuk won the tie-break by 1,5-0,5. The 3rd place went to Caruana, who was very unlucky and obtained 6 straight draws. The last place went to Nisipeanu, who lost 2 games and made 4 draws, and got a rating performance close to his Elo.

The Female World Cup is being played. The winner is going to play the World Championship match against the current World Champion Hou Yifan. Most of the favorites are still in the game, and it's getting very exciting.

The Junior WCC is going on in Maribor, Slovenia, as well. It's a pity to see that this event is not getting the attention it deserves. The best young players are not participating in it anymore, and we can remember that even the great Gari Kimovich was once the Junior World Champion.

As usual, we wish You a lot of fun with the best games of the last week, the puzzles, the endgames and the studies sections!

Arkadij Naiditsch & Csaba Balogh

4 best games of the past week

(1) Janssen,Ruud (2483) – Shirov,Alexei (2718)

German league, 11.11.2012

[Csaba Balogh]

A very sharp fight in the German Bundesliga, where Alexei Shirov wanted to beat his lower rated opponent at any cost with the Black pieces, and in order to do it, he created irrational complications true to his style.

1.c4 e5 2.g3 ♘c6 **3.♘c3 g6 4.♙g2 ♙g7** This is basically a Closed Sicilian opening (1.e4 c5 2.♘c3 ♘c6 3.g3 g6...) with reversed colors, which means an extra tempo for White. There, one of the most popular setups is the one with e5 and ♘ge7 (in this game e4-♘ge2). Of course, other options like e3-♘ge2 or d3-♘f3 are also possible. This is just a matter of taste.

5.e4 d6 6.♘ge2 f5 Black chooses the most aggressive way to develop.

7.d3 ♘f6 8.0-0 0-0

9.♘d5! This is the strongest move, as it was already proved in many games. White activates his knight, since ♘xd5 leads to favorable exchanges for him.

9...♘h5 Shirov continues to play aggressively, which is very risky. Against a more experienced player, he might have gotten into some difficulties... The idea of this move is to push f4, so the next move of White is basically forced. [9...♘xd5 doesn't equalize either. 10.cxd5 ♘e7 11.♙e3 White intends to press the c7 pawn with ♖c1 and ♗c2, so Black sooner or later has to play 11...c6 12.dxc6 bxc6 13.♗d2+= with an advantage for White. The g2 bishop has a much better chance to join the fight than its colleague on g7. The next moves could be ♖ac1 and b4, or it could also be good to prepare for a d4 break.]

10.exf5! ♙xf5 This is the better recapture, keeping the position dynamic. [On 10...gxf5 the standard reaction is 11.f4!+= with better prospects for White. A logical development could be ♙e3, ♗d2, ♖ae1 and b4-b5. It's much harder to find a useful plan for Black.]

11.h3! Very well played. White has to prevent the ♗d7-♙h3 ideas to preserve the important g2 bishop, which is also a very good defender of the king. The threat now is g4 to win a piece.

11...♙e6

12. ♖b1?! White prepares the standard b4-b5 plan, increasing the power of the g2 bishop on the long diagonal, but he could have played more effectively. [12.g4! ♘f6 13. ♙g5! gives very good prospects for White, as it was already played in some games. 13... ♖d7 (On 13... ♘e7 14. ♘xf6+ ♙xf6 15. ♙xf6 ♖xf6 16. ♚b3! ♖b8 17.f4! is very strong. The idea of the ♚b3 tempo was to transfer it to c3, where it will stand excellently. White is clearly much better prepared for the opening of the position.) 14.f4+= also looks very good for White.]

12... ♖d7 13.g4 This would have been stronger one move earlier. [13. ♙h2 ♘d8 with the idea of kicking out the d5 knight with c6. The position is playable for both sides.]

13... ♘f6 14.b4 At least White plays consequently. [14.f4 is not that strong anymore. Black has 14...h5! creating very strong counterplay.; Maybe from a practical point of view, it would have made sense to take with 14. ♘xf6+ in order to reduce the power of Black's upcoming attack. 14... ♙xf6 15. ♘c3 and ♘e4 or ♘d5.(Or 15. ♙e3 followed by a d4 break in the near future.)]

14... ♙xd5!? Shirov already had the forthcoming attack in mind, but giving up the strong light-squared bishop has its drawbacks as well, as we'll see in the game. [14...h5 was also possible. Probably, White was intending to play something like 15. ♘xf6+ ♖xf6 16. ♙g5 ♖ff8 Of course, ♖f7 and ♖af8 are more logical at first sight, but if Black foresees his opponent's idea, then he should rather put his rook on f8. 17.b5 ♘d8 The only square for the knight that now is heading to f7. Therefore, probably White should take with 18. ♙xd8 ♖axd8 19.gxh5 ♙xh3 20.hxg6 followed by ♘g3, with mutual chances.]

15.cxd5 ♘e7 16. ♚b3

16...h5! Without this move, the whole Black strategy would make no sense. Now White has to deal with the g4 pawn, and he is forced to allow the Black knight to go to f5. However, things are not that easy...

17.g5! Very well played! Suddenly, Black is facing a difficult decision, where to go with the knight and what kind of future we can imagine for it.

17... ♘h7 [17... ♘e8 was the other option, but after the same moves as in the game: 18. ♙d2 ♘f5 19. ♚c4! preventing ♘h4. The Black knight on e8 plays a bad role in the game, though it might be improved with ♙h8 and ♘eg7, but this kills the h8 bishop and the knight can't go anywhere from g7...]

18. ♙d2 ♘f5 19. ♚c4! White had to prevent ♘h4. What to do as Black?! His knight on h7 is poorly placed, ♖f7 and ♘f8 are not improvements either. The g7 bishop is locked as well, while White has a clear plan to advance his pawns on the queenside. Shirov finds a beautiful idea to activate his pieces, but it involves many sacrifices which were not necessarily correct if the opponent defended well. But of

course, he was playing against a human opponent and not amachine!

19...♔d8 Forcing White to create a new weakness. [Maybe it would have been better to play 19...♖ae8 first, followed by the same ideas as in the game, which could be more effective with an active rook on e8.]

20.h4

20...e4!? This was Shirov's point! Now the board gets on fire, where he feels totally at home. Black wants to take the h4 pawn and open the „dead bishop“, but of course, this drops an important pawn and creates a huge weakness on e6, which White immediately attacks!

21.♘f4! [21.dxe4 was also very interesting. 21...♗xh4 22.f4 ♔d7 with the threat of ♕g4, but White has a cool defensive move: 23.♖b3! It goes to g3! 23...♗xg2 24.♔xg2 ♖ae8 ∞ It's very difficult to evaluate the position. Black's minor pieces are bad, but he can put pressure on the e4 pawn with the rooks.; 21.♕xe4? loses on the spot after 21...♖e8! 22.♕f3 ♗xh4 and e2 falls.]

21...♗xg5!? If Black was not Shirov, we could consider this move as a desperate attempt to create counterplay. [21...♗xh4 22.♗e6 ♔d7 23.dxe4]

22.♗xg6? White loses the thread. He probably missed the incredible 25th move! [22.hxg5 ♕xg5 We have reached the critical position. White has many interesting possibilities, but only one of them leads to a clear advantage.]

23.♕xe4!

a) 23.♗e3 Protecting the bishop to refresh the idea of ♗e6 also looks very promising, but Black has an amazing resource to save the game. 23...♗d4!! (23...♗h4? is directly met with 24.♕xe4!) 24.♗xd4 (24.♗e6 loses to 24...♕g4! and ♗h4 next.) 24...♗h4! The following moves are forced: 25.♕xc7 Counter-threat on g7. 25...♖f7 26.♕xd6 ♖xf4 27.♕e6+ ♖f7 28.♕xe4 looks winning, but Black has 28...♖f3!! 28...♖e7 and ♖f4 would have been refuted by 29.♗e3!. 29.♕e6+ ♖f7 30.♕e4 with a draw.;

b) 23.dxe4 ♗d4! is very important in order to prevent ♖b3. Black threatens with ♗f3 and ♖xf4. (23...♗h4 looks winning at first sight, but actually it leads to the opposite result after 24.♖b3! ♖xf4 25.♖g3 ♕f6 26.♗xf4 ♕xf4

27.♔c1+/- with a material advantage.) 24.♔d3 ♖xf4 25.♙xf4 ♙xf4 with strong compensation on the dark squares, ♙e5 is coming soon.;

23...♖ae8 24.♙f3 Now the queen plays an important defensive role. White wants to exchange some pieces with ♖e1 to realize his material advantage. It's not obvious how Black could continue his attack. 24...♘d4 (24...♙e5 25.♖be1 and ♖e4 next, White consolidates his position.) 25.♙g3 ♘e2+ 26.♘xe2 ♙xd2 Black almost trapped the knight, but there's still one square. 27.♘c1+/-]

22...♘f3+! White needs to give up the guard of his king!

23.♙xf3 exf3 24.♘xf8 [White probably could have still achieved a draw with 24.♙g5! ♔d7 25.♙e4! followed by ♙e6, exchanging the queens. (White should not be greedy with 25.♘xf8 ♖xf8 ♘d4 and ♙g4 are the threats. 26.♙e4 (26.♙h2 es met strongly with 26...♙e5+ 27.♙f4 ♘h6!! Black wins on both lines. 28.♙xe5 (28.♖g1+ ♘g4+ 29.♖xg4+ ♙xg4 30.♖g1 ♖xf4 31.♖xg4+ ♖xg4+) 28...♘g4+ and White is forced to sacrifice his queen, but he doesn't have enough compensation. 29.♙xg4+ hxg4) 26...♘d4 ♙h3 is coming next. 27.♙h2 ♙e5+) 25...♖f7 (25...♖ae8 doesn't work because of the intermediate move 26.♘xf8!; 25...♖fe8 26.♙xf3) 26.♙e6 with approximately even chances.]

24...♘d4! Locking the queen on c4, which deprives White from his main defensive sources. ♙xh4 is the main threat now.

25.♘g6 [25.♙g5 ♙xf8 followed by ♙f5 is hopeless.]

25...b5!! Brilliant! Completely unexpectedly, the main blow arrived on the queenside. The queen is trapped as both of its main squares move into ♘e2.

26.♙g5? White collapsed from the previous shock. [26.♙c1 ♘e2+; However 26.♙xd4 was still playable, as White has a rook, a knight and active pieces for the queen. 26...♙xd4 27.♖be1! White installs his rook on e6 and Black must play precisely to preserve some advantage. 27...♙f7 28.♖e6 ♙f6! The knight is trapped, but White still has a resource 29.♙h2! (29.♘f4? ♙g8+ 30.♙h2 ♙g4) 29...♙xg6 30.♙g5 and Black can only achieve a better rook endgame with 30...a5! 31.♙xf6 ♙xf6]

26...♙d7 White can resign now as the threats are still very strong.

27.♙xd4 ♙xd4 28.♘f4 [28.♙h2 ♙h7 29.♘f4 ♖g8 White can't resist for long.]

28...♙e5 29.♘e6 ♙f7 What an exciting game!

0-1

(2) Bodnaruk, Anastasia (2415) – Javakhishvili, Lela (2455) [B42]

FIDE WCh Women World Cup Khanty-Mansiysk RUS (1.28),
11.11.2012

[Arkadij Naiditsch]

Maybe some CEWN readers will remember the great Bodnaruk-Almasi game... Once again the young U-20 Russian Champion strikes in her very aggressive style, with a lot of nice sacrifices. We'll see a really great game!

1.e4 c5 2.♘f3 e6 3.d4 cxd4 4.♘xd4 a6 The Paulsen with 4...a6 has been a popular opening for at least 60 years!

5.♖d3 [5.♘c3 is the other main line.]

5...♖c5 6.♘b3 ♖e7 7.♔g4 Probably the most critical line. White is trying to provoke 7...g6 and only then to go back with 8.♔e2. Black's pawn structure would be much worse...

7...♖f6 This is quite a rare move and I think not the best one. Black is trying to develop the knight with ♘ge7, and then to play 0-0 followed by d5. But of course, White is taking actions against this plan.

8.♔g3 We are following the game Karjakin-Flores 2012.

8...♘c6 9.♘c3 ♘ge7 10.♖f4

10...♘g6?! N It's hard to say if Black has prepared this move. To me, it looks very risky. [10...e5 11.♖d2 d6 12.0-0 ♖e6 13.♔b1 ♔c8 14.h4 with better play for White, Karjakin-Flores, Olympiad 2012.]

11.♖d6! Of course. White should not allow Black to castle and, at the same time, the d5 move is blocked.

11...♖h4 Black is trying an active plan. [In case of 11...♖e5 12.♖xe5 ♘cxe5 13.0-0 followed by f4-f5, with a clear advantage for White.]

12.♔e3 A logical reply. White is preparing to castle long and against ♖g5, to have f4 available. [Another logical move would have been 12.♔h3 ♖e7!? Black is using the slightly unlucky position of the White Queen on h3, in comparison to g3. 13.♖xe7 ♔xe7 14.0-0 0-0 15.f4 d6 and White is still a bit better, but nothing too big has happened.]

12...♔g5? In general it's the right idea for Black to exchange the queens, but here it's just too risky. Black's bishop on h4 is almost trapped and the Black king on e8 could quickly get in trouble. [12...♖e7 would still give Black a worse position, but a fighting one.]

13. ♔h3! Brave and strong. In a K.O. tournament it's never easy to take the decision of sacrificing when You can choose a safer way. [13. ♔xg5 ♕xg5 14.0-0 just leads to a better endgame for White.]

13... ♖f4 And we are entering a forced line.

14. ♕xf4 ♔xf4 15.g3! This double exchange sacrifice was the point of playing 13. ♔h3!. The action starts!

15... ♔f3 16. ♔xh4 No way back.

16... ♔xh1+ 17. ♔e2! Not giving the f3 square for the Black queen.

17... ♖d4+ [In case of 17... ♔g2 18.e5! is very strong. White wants to play ♖e4-♖d6, or simply ♕e4 to catch the Black queen.]

18. ♖xd4 ♔xa1

19.e5! A multi-functional move. It stops Black from castling short and prepares the move ♖e4. [It's too early for 19. ♖f5? exf5 20. ♖d5 0-0! an easy move to blunder...]

19... d5 This move loses, but it seems like nothing helps. [19... ♔xb2 20. ♖e4 White is going against his target — the Black king. 20... ♔xd4 21. ♖d6+ ♔xd6 22.exd6 From

the material point of view, Black is doing fine, but he has one problem, all his pieces are undeveloped and White is starting a fast mating attack. 22...f6 23. ♔h5+ ♔f8 24. ♕g6! with the double idea of playing ♕e8 and ♔a5. White's position is winning.]

20.exd6 f6 Nothing else left...

21. ♕xh7 This move is winning as well, but would lead to a fast win: [21. ♔h5+! with the already known idea of taking the queen over the 5th rank to c7 or e7. 21... ♔f8 22. ♔c5 d7 is a deadly threat now. 22... ♕d7 23. ♔c7 ♔e8 24. ♖xe6 and Black is completely lost.]

21... ♔f8 22. ♖e4! Bringing the last piece into the attack. White wants to play ♖xf6 next and there is no escape for Black. We can clearly see how important it is to keep the queen in the game; Black's one on a1 is nothing more than a kibitzer...

22...e5? Black is resigning without a fight. [22... ♔xh7! was the only way to continue. 23. ♔xh7 ♔xb2 Finally, the queen is back in the game. 24. ♔d3! Very strong. Black is completely paralyzed and can only hope for a perpetual check, which is almost impossible to give because of the strong knights on d4 and e4. White's position is close to winning.]

23. ♖xf6! What a total crush!

23... ♔xh7 24. ♖xh7+ ♔g8 25. ♖g5 White wants to mate Black from all sides!

25... ♔xa2 Avoiding the mate threat ♔h7-♔h8 because of ♔g8.

26. ♔h7+ ♔f8

27.b3! Cool and strong, keeping the Black queen out of the game.

27...♗g4+ 28.f3 ♔e8 Any move is winning, but White chooses a very beautiful mate.

29.♔g8+ ♔d7 30.♔f7+ ♔xd6 31.♗e4# Wow, what a mate! Another great game by Bodnaruk. However, she received bad news already the next day; she lost her second game and later on the very dramatic tie-break.

1-0

(3) Topalov,V (2769) – Nisipeanu,LD (2668) [E15]

6th Kings Tournament Bucharest ROU, 12.11.2012

[Csaba Balogh]

A nice win by Topalov. He put a lot of pressure on Nisipeanu during the whole game, who defended resourcefully for a while, but later, in the time trouble, couldn't hold the tension.

1.d4 ♘f6 2.c4 e6 3.♘f3 b6 4.g3 ♖a6 5.♔c2 ♗b7 6.♗g2 c5

7.d5!? This pawn sacrifice was first played in 2006, but since then there were hundreds of great games on the highest level. However, as we will see, there are still a lot of unexplored territory. The main reason is that the machine always suggests many good defensive ideas for Black, but if somebody takes a look at the position without the computer assistance, White's position always looks better and it feels uncomfortable for the Black side.

7...exd5 8.cxd5 ♘xd5 9.0-0 ♗e7 10.♖d1 ♘c7 A rare but interesting move. [The main line clearly is 10...♘c6 Topalov's second, Ivan Cheparinov, came up with a new setup recently, which was based on exactly the same ide-

as as our present game. 11.a3 (11.♔f5 and; 11.♔a4 are the two most common continuations.) 11...♘c7 12.♙f4 ♘e6 13.e3 ♘xf4 14.exf4 0–0 15.♘c3 d6 16.♖d2 ♖e8 17.♗ad1 Topalov was aiming for exactly the same pawn structure and piece configuration. Black had to play very precisely to hold. 17...h6 The game turned into a sharp tactical struggle now. 18.♘e5 ♘d4! Only move! 19.♗xd4 ♙xg2 20.♖4d2 ♙h3 21.♘b5 ♔c8! 22.♘xd6 ♙xd6 23.♖xd6 White seems to keep the initiative with domination, but Black succeeds to „jump out” with a tactical idea. 23...f6! 24.♖xf6! ♔b7! After many g moves, the game should have finished in a perpetual check, but White decided to play on and badly blundered the game. 25.♔c4+ ♙h7 26.♔d3+ ♙g8 27.♔b3+ ♙h7 28.f3? gxf6 29.♖d7+ ♔xd7 30.♘xd7 ♙g7! Black parried the ♔f7 threat and the knight was trapped on d7. Black soon won in Cheparinov-Almasi, Porto Carras 2011.]

11.♘c3 a6!? This is basically our novelty. Its point will become clear two moves later.

12.♙f4 0–0

13.e3 Just like Cheparinov. White wants to double his rooks now.

13...♖a7 This is the point of the a6 move. Black is a pawn up, but it's very difficult to finish the development under such pressure. In general, one of the main ideas is to give back the d-pawn in order to simplify the position with many exchanges and obtain an equal game. However, many times (it also happens in this game), White should prefer to keep the tension instead of restoring the material balance.
